

Observation 1: Noise pollution

Our house is situated in very close proximity to four existing wind turbines which are a great deal smaller than the proposed six wind turbines. due to be erected close too our house.

As it stands we suffer greatly from the noise pollution given off by the existing four smaller turbines, adding another six at even greater height can only add to the intolerable noise generated by these turbines.

On a regular basis, especially summer nights, we are unable to keep our windows open at night due to the noise of the four smaller turbines as they keep us and our family awake.

We strongly oppose to the proposed planning of these six enormous wind turbines.

Observation 2: Shadow flicker

In relation to shadow flicker, we are greatly concerned of the effects on this issues affecting our house, the proposed positioning of these six turbines which are to the South / west of our house which greatly increases the risk of this issue and especially during winter time where the sun is alot lower in the sky coupled with the greater height of these six turbines.
