| Charlemont & Dartmouth Community Group MetroLink Submission - Dartmouth Road Submission 13 January 2023 |                                                                                          |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 50                                                                                                      | Section 4.9 Traffic and Transport<br><br>Section 4.9.1 Traffic Modelling and Assumptions | 39       | From a review of Appendix D of Appendix A9.5 local impact assessments of junctions around the stations using LinSing modelling was undertaken with the exception of Charlemont Station. Effectively, it appears as though the entire assessment was reliant on the strategic modelling exercise at this location. Notwithstanding this significant deficiency, certain conclusions can be drawn from the limited assessment which was undertaken.                                                                                                                                                                                                                   | <p>It is not correct to say that the entire assessment was reliant on the strategic modelling exercise at Charlemont. It is also incorrect to say that a limited assessment was undertaken.</p> <p>Please refer to response (9) in relation to the local junction modelling undertaken as part of Appendix A9.5 Scheme Traffic Management Plan. As indicated, local LinSig junction assessments were not undertaken at Charlemont Station as the design indicated it would not meet the criteria.</p> <p>However, local traffic modelling was undertaken to assess the impact of construction traffic and the proposed traffic management measures on the surrounding road network. Impacts to driver delay and traffic flows were assessed and presented. Please refer to response (20) in relation to the local traffic modelling assessments.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 51                                                                                                      | Section 4.9 Traffic and Transport<br><br>Section 4.9.3 Access, Loading and Parking       | 39 & 40  | Appendix A9.5 suggests that the impact upon loading, parking and access is either slight or moderate. This in our opinion under-estimates the impact upon the residents of the properties listed in this submission. There will be a very severe impact upon access to their properties which is reflected in the loss of parking, no access for deliveries or bin collection. Critically, no assessment has been undertaken in relation to fire, ambulance and other emergency access. The entire stretch of Dartmouth Road will be closed off to traffic, with a hoarding positioned to the back edge of the pavement preventing access in the case of emergency. | <p>As detailed in Appendix A9.5 Scheme Traffic Management Plan, traffic management plans for the construction of MetroLink have been developed to minimise the impact of the Project on road users, and to maintain access to properties. A hierarchical approach to traffic management has been adopted, with pedestrian, cyclist, public transport and commercial needs provisions taking priority over private vehicles, in line with the GDA Transport Strategy.</p> <p>As identified in Appendix A9.5 Scheme Traffic Management Plan, the impact on parking and loading, and local access has been assessed on the following parameters and key performance indicators:<br/>* quantum of on-street parking removed - removal of &gt;30% residential parking with 200m, or removal of &gt;10% commercial parking within 200m;<br/>* quantum of loading bays and taxi bays removed- reduction of on-street loading facilities within 200m; and,<br/>* additional distance travelled due to diversions - diversion of over 2km for commercial access.</p> <p>During the partial closure of Dartmouth Road, diversions will be indicated to ensure access is maintained. To mitigate the increase in journey length and U-turn needed to route northbound, removal of the right-turn ban at this junction will reduce the diversion distance.</p> <p>During the complete closure of Dartmouth Road, approximately 30 on street parking spaces will be lost during the main works, however there will be no impact to on-street loading bays. EIAR Chapter 05 (MetroLink Construction Phase) specifies the 5 residential properties that will be impacted during the works. The closure will be monitored to determine if it is required at all points, or if the spaces can be temporarily reinstated throughout the works. This commitment is detailed in Chapter 9 (Traffic and Transport) section 9.7.1.2.</p> <p>Traffic management measures and road construction works is based on the key principle (among others) of maintaining uninterrupted access for emergency vehicles. During the duration of the road closure along Dartmouth Road, access for emergency response vehicles will be maintained through the site to the edge of the excavation in front of No. 32 to 35 Dartmouth Road. The Outline Construction Environmental Management Plan (CEMP) referred to in Appendix A5.1 sets out the full requirements of the main contractor to protect the environment during the construction phase. The CEMP includes the requirement to provide an Emergency Response Plan, section 5.10. The plans for emergency access through the site will be developed by the contractor and agreed in consultation with the emergency services and documented as part of the detailed CEMP in advance of construction commencement for approval by DCC.</p> <p>Please also refer to responses (52) and (53) below.</p> |

| Charlemont & Dartmouth Community Group MetroLink Submission - Dartmouth Road Submission 13 January 2023 |                                                                            |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 52                                                                                                      | Section 4.9 Traffic and Transport<br><br>Section 4.9.4 Pedestrian Movement | 40       | Pedestrian movement in and around the construction compound will be severely constrained. A narrow footpath will be retained in front of the houses on Dartmouth Road. Pedestrian and HGV conflicts will be inevitable, particularly at the entrance and exit to the compound, which is immediately in front of the houses.                                                                                                                                                        | As indicated in EIAR Chapter 09 (Traffic and Transport), pedestrian access on Dartmouth Road will be maintained with a reduced footpath width measuring a minimum of 1.8m. Appendix A5.1 Outline CEMP details the proposed mitigation and monitoring measures that the contractor(s) will be required to adhere to during the construction phase. As detailed, there will be strict controls and regulations at the site entrances/exits for construction vehicles in order to ensure the safety of other road users. This is standard practice for all construction site accesses and egresses.                                                                                                                                                                                                                                                                                                                                                 |
| 53                                                                                                      | Section 4.9 Traffic and Transport<br><br>Section 4.9.5 Summary Assessment  | 40       | <p>The assessment provided in Appendix A9.5 in section 7.11.7.2 highlights that in relation to the main works the impacts are as follows:</p> <ul style="list-style-type: none"><li>• Severe impact upon traffic volume redistribution</li><li>• Moderate impact from HGV volume increase</li><li>• Moderate impact upon cyclists caused by diversions</li></ul> <p>This does not accurately consider the impact as detailed above in relation to access, loading and parking.</p> | <p>Section 7.11.7.2 outlines a summary of the impacts identified in the assessment of the main works. The summary outlines where moderate or above impacts have been identified in the Phase 2 impact assessment. Therefore, based on the assessment ratings, the impact on parking and loading was not noted in the summary.</p> <p>Please refer to response item (51) in relation to the methodology for assessing the impact to parking and loading. The loss of 30 spaces at this location is less than 30% of the available parking within 200m, and therefore is not considered significant. Parking will be restricted on Dartmouth Road however pedestrian access will be maintained to the properties, and therefore residents can utilise available parking in the surrounding area and walk to their property.</p> <p>Please refer to response item (51) in relation to the impacts to access, loading and parking at Charlemont.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 54                                                                                                      | Section 4.9 Traffic and Transport<br><br>Section 4.9.5 Summary of Assessment | 40       | <p>View of the Independent Engineering Expert (IEE) - RINA</p> <p>Our view is that while this would no doubt be convenient from a construction perspective, the reality is that the impact on the residents of the entire length of narrow Dartmouth Road will be very considerably negative, for a period of some years. The safety of this arrangement on all locals but particularly the elderly and young children and other vulnerable persons should be very closely examined.</p> <p>Given that 'through flow' construction sites are by no means the norm (most major construction sites will demonstrate the use of the single entrance and exit format), we suggest that TII consider this and accommodate both entry and exit from the site on Grand Parade, which is wider and actually entirely open on one side (facing the canal) with buildings on the other side a considerable distance away.</p> <p>As confirmed by the RINA analysis, the proposal of a HGV 'drive through' is done for the convenience of the developer and not to reduce the impact on residents. We agree with the opinion of the IEE suggests that the Applicant should accommodate both entry to and exit of HGVs from the site on the Grand Parade.</p> | <p>While acknowledging the comments received from RINA, it is not possible to limit construction traffic to and from Grand Parade only for the full construction period without resulting in major impacts to the efficient delivery of the works, including the duration of construction. Construction traffic flow to and from the site is evenly balanced between Grand Parade and Dartmouth Road during the construction phase limiting impacts on all road users around Charlemont.</p> <p>The site area and width restrictions as referred to in response (29) above constrain traffic management options within the site. During the completion of the roof slab across the whole site it will not be possible to connect through traffic between Grand Parade and Dartmouth Road. On the completion of the roof slab, and with Dartmouth Road reopened, the vast majority of the station is excavated from the south (adjacent to Dartmouth Road) in a mining technique under the completed roof slab. This is illustrated as Phase 3 on Charlemont Station Developer Alternative Construction Methodology Appendix A5.3, as referred to in response (31) above.</p> <p>From this stage until the works are completed the roof slab will allow a connection between Grand Parade and Dartmouth Road but limited to a single lane and subject to periodic closures to facilitate the station construction programme. To limit impact on Dartmouth Road from the excavation stage until completion, construction traffic will either arrive or depart the site via Grand Parade or Dartmouth Road, transiting the site one-way and exiting at the opposite end of the site to which they arrived. During the periodic closures of the one-way system referred to above, arrivals and departures from site will be at both access points. While it is essential that flexibility of construction operations is maintained as described above, from the mined excavation stage onwards priority will be given to use Dartmouth Road only for departing construction traffic, further lessening the overall impact for all users of this road.</p> <p>While maintaining two points of access from the Charlemont Station site the EIAR assessment has considered all users impacts, including vulnerable users as a consequence of the proposals (Please refer to Appendix A9.5, section 7.11.6.3 Main Works Phase 2 Assessment (Charlemont)). As referred to in Appendix A9.2 Overall Project Traffic &amp; Transport Assessment, TII have through pre-construction planning in advance of the Railway Order anticipated the implications of the planned works on the locality, particularly traffic and accordingly have provided mitigation strategies in the EIAR for the construction phase. While the works will attract additional traffic to and from this station location, the assessments of vehicle movement during the peak construction phase will generally add approximately 50 additional daily movements of construction vehicles each way to the existing traffic flows. As detailed in Appendix A9.5 Scheme Traffic Management Plan section 7.11.6.3, model outputs indicate this will result in a moderate increase in HGV movements during construction. The most significant increase, of just over 2% will be in both directions along Ranelagh Road/Charlemont Street, however elsewhere in the area, increases are significantly lower.</p> <p>Chapter 5 of the EIAR, MetroLink Construction Phase, explains that traffic management plans for the construction phase of the Project have been developed to minimise the impact on all road users at Charlemont, and to maintain access to businesses and other premises. The Scheme Traffic Management Plan Appendix A9.5 section 7.11 refers to the traffic assessment undertaken at Charlemont Station with the route to and from the site provided in Figure 7-56. The Plan will include measures such as the establishment of Local Community forums which will cover areas local to each station, where stakeholders will have an opportunity to inform the traffic management element of the project. Other measures include the control of construction vehicles in terms of their hours of operation and restrictions on vehicle size and weight, and all access and egress from sites will be controlled by marshals to ensure safety at all times.</p> <p>Prior to implementation, all traffic management measures will be agreed with DCC and where relevant, consultation with An Garda Síochána and other statutory stakeholders will be undertaken. The design of traffic management measures and highways works is based on achieving the key objective of maintaining continual access to all properties during the works. Where necessary, a safe alternative route will be provided for pedestrians and vulnerable road users, such as children, and persons with restricted mobility, to maintain pedestrian access. Where detour routes are required, these will be kept as short as possible and detour signage will be clear and easy to understand. All construction sites will be designed to be as unobtrusive as possible.</p> |

| Submission No.                                                                                          |                                      |          | 040                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| 55                                                                                                      | Section 4.10 Impact on Utilities     | 41       | It is evident that the diversion of utilities on Dartmouth Road and Dartmouth Square West will have a significant impact upon local access, including pedestrian, cycle and vehicular.                                                                                                                                                                                                                                                                                                                                                                                    | Please refer to response (48) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 56                                                                                                      | Section 4.12 Interactions of Effects | 41       | Again we consider it to be wholly inadequate as it fails to adequately address the interactions between air borne noise and vibrations, ground borne noise and vibrations, traffic impacts, visual impacts (e.g. of the hoardings) and human health. All of these effects come together in an interaction which significantly impacts upon the amenities of the residents listed as part to this submission. Moreover, the inadequacies of the assessments of individual effects, as highlighted above, are compounded when considering the interaction of these effects. | TII disagree with this statement. Chapter 29 of the EIAR presents a comprehensive and detailed assessment of a number of interactions of environmental topics. In Table 29.1 of the chapter the topics that are deemed to interact with each other significantly are set out. It is also worth noting that the Chapter states that "Some of the environmental topic assessments within this EIAR already address impact interactions. For example, Chapter 11 (Population & Land Use) provides an assessment of effects on community amenity, which relates to the interaction of impacts on air quality; visual amenity; traffic and transport; and noise and vibration. Furthermore, Chapter 10 (Human Health) describes and assesses how a combination of impacts on health determinants (air quality; noise and vibration; community amenity; traffic and transport) can interact and influence health outcomes." In the main it can be observed from the assessment presented in the EIAR that impacts are not predicted to significant once mitigation measures are in place with the exception of exceedences for noise during some limited construction phases. As a result, the potential for interactions is limited as outlined in Chapter 29 of the EIAR. However, having regard to noise, where residents consider that their circumstances merit additional mitigation measures, these can be applied for as per the process outlined in Appendix A14.6 Airborne Noise & Groundborne Noise Mitigation Policy. |

| 57                                                                                                                                                                                                                                                                                                                                | Section 5.2 Noise and Vibration                                      | 43        | The proposed over track ventilation system and smoke system gives rise to impacts that have not been properly assessed in terms of noise and air emissions. These systems are directly opposite nos. 34 and 35 Dartmouth Road.....                                                                                                                                                                                                                                                                                         | <p>Further to response (12) and (22) above, the EIAR Chapter 13, sections 13.2.3.2 and 13.5.3.2.3 recognise that ventilation systems if not designed and mitigated effectively are potential noise sources. Section 13.6.2.3 outlines the detailed considerations that will be included in the design to ensure that the ventilation systems do not exceed limits as per BS 4142, including:</p> <ul style="list-style-type: none"><li>• Reduction of induct flow rates;</li><li>• Reduction of elements in the airflow;</li><li>• In duct attenuators;</li><li>• Orientation of grilles and louvres away from sensitive receptors;</li><li>• Acoustic louvres; and</li><li>• Anti-vibration mountings and couplings will be incorporated into the design to control vibration.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 58                                                                                                                                                                                                                                                                                                                                | Section 5 Operational Impacts<br><br>Section 5.2 Noise and Vibration | 44 and 45 | 5.2.2 Ventilation Assessment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Further to response (57) above and as outlined in Section 13.5.3.2.3 of the EIAR the development of the ventilation design included consideration of noise emissions whereby potential noise sources from the ventilation systems were identified as the ventilation shafts and grilles at ground levels. During a tunnel emergency situation noise levels at the external grilles would be elevated. However these noise levels would be below 55dB LAeq at 10m distance. It was considered that in emergency cases this level of noise was acceptable. It should be noted that there is no "missing study" and that the reference to an acoustic study is part of the "preliminary design development " for the project which is summarised in Chapter 4 and Chapter 6 of the EIAR.</p> <p>The assessment of ventilation systems has been assessed in line with best practice for this type of fixed installation and as is normal will be further refined as the design develops. The observer has not identified any failure to adhere to best practice guidelines in the assessment, which has demonstrated that the the ventilation can be provided at this location within noise thresholds consistent with residential amenity. It is anticipated that adherence to those thresholds will be a condition of the RO as standard.</p> |
|                                                                                                                                                                                                                                                                                                                                   |                                                                      |           | Ventilation is an important element of the design and workings of the tunnel, for instance in relation to maintaining adequate levels of moisture in the air and to air quality. Yet it does not appear that it was subject of a full assessment. In fact, it will be subject to 'further design development'. Section 13.5.3.2.3 of the EIAR indicates that an acoustic study was undertaken to assess the proposed ventilation strategy. This important referenced study is not included as an appendix to the EIAR..... | <p>In that regard, Section 13.2.6.2.4 of Chapter 13 of the EIAR states that noise level from all fixed installations (which includes ventilation plant from stations) will be limited to not exceed an operational noise level of 50 dB LAeq,16hr during daytime periods and 45 dB LAeq,8hr at noise sensitive buildings to achieve acceptable internal noise levels with windows open. The section also notes that in areas where background noise levels (expressed using the LA90 parameter) are below the fixed noise limits above, there is potential for the operation of a new noise sources at this level to be audible and to generate potential significant effects, depending on the magnitude above the background noise level. Therefore, when considering the potential impact of the noise emissions from operational plant associated with the proposed Project consideration will also be given to the British Standard BS 4142 (BSI 2014 +A1 2019).</p>                                                                                                                                                                                                                                                                                                                                                                      |
|                                                                                                                                                                                                                                                                                                                                   |                                                                      |           | We would emphasise here that specific noise levels from ventilation from ventilation systems have not been assessed as part of this EIAR but rather would 'be calculated as part of the further design development.' Effectively the impacts upon nos. 32 to 35 Dartmouth Road of the ventilation systems illustrated on the figure above have not been assessed.                                                                                                                                                          | <p>Background noise levels measured at Location UT52 to rear gardens of Dartmouth Square. This value was used as a more conservative estimate of the background levels of noise in the area, which is representative of Dartmouth Road.. The measured background levels here are below the fixed limits above (Table 13.30, Chapter 9 of EIAR), and hence in line with the EIAR noise design criteria for fixed installations, the design of operational plant will also be undertaken in line with BS 4142: 2014 + A1 2019 to ensure no significant noise impact arises as a result of the operational phase plant items. The operational noise criteria for this source is therefore largely dependent on the most up to date and accurate prevailing background noise level. Given the fixed items of plant will not be installed until some 8 years post project commencement, the background noise environment will be resurveyed at the time of the design development to ensure the most up to date information informs the design, specific plant selection and mitigation to comply with the noise criteria set within the EIAR, which forms part of the Railway Order.</p>                                                                                                                                                           |
|                                                                                                                                                                                                                                                                                                                                   |                                                                      |           | 5.2.3 Ventilation - Observation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>This will be undertaken to determine the permissible increase above the prevailing background noise level to avoid any adverse noise impact in accordance with the standard. As discussed, this approach is set as part of the criteria proposed for the project and hence forms part of the proposed railway order.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|                                                                                                                                                                                                                                                                                                                                   |                                                                      |           | It should be noted that ventilation is also not an element considered under the alternative chapter. There are different technologies that could be used for ventilation, the location of fans and vents could be different, yet no alternative was considered.                                                                                                                                                                                                                                                            | <p>Due to ongoing design development of the systems under consideration here, it is premature to define the specific attenuation measures for noise control until the specific make, model and size of the units is procured. This information alongside the most up to date background noise levels will then inform the acoustic design study at each ventilation location in line with best practice. Notwithstanding, the resultant noise impact will be not significant at the closest noise sensitive locations.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| It is queried why noise that is continuous is not assessed as part of this EIAR and may be assessed as part of future iteration. There is no indication that this would be subject of a consultation with potentially affected parties unless this is clearly specified in a condition of a potential grant of the railway order. |                                                                      |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

Best practice design principles will be employed to minimise noise breakout at the surface from these systems via escalators, lift shafts and stairwells. There are no significant impacts associated with this source. |

                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 60                                                                                                      | Section 5 Operational Impacts<br><br>Section 5.2 Noise and Vibration 5.2.6 Train Operations - Observations | 47 & 48  | <p>5.2.5 Train Operations - Assessment</p> <p>While Dartmouth Square West is assessed, it is highlighted that Dartmouth Road is not assessed, notwithstanding that it is opposite the southern station entrance.</p> <p>5.2.6 Train Operations - Observation</p> <p>It is queried why only train rolling have been accounted for in the assessment of groundborne noise at operational stage. As demonstrated in the preceding section, there are other elements that should have been assessed, specifically ventilation. Ventilation, train rolling and the use of the PAVA system should be cumulatively assessed in accordance with the requirements of the EIA directive to provide a more accurate picture of operational noise levels.</p> <p>By way of comparison, we refer to the noise impact assessment prepared as part of the Crossrail Project.....We note the following project elements were considered as part of the assessment of noise levels arising from the operational phase.....</p> <p>In summary, there is a variety of potential sources of noise which could arise from the operational phase. Either these were overlooked by the applicants or scoped out. If the latter applies, an explanation should be provided.</p> <p>As a minimum, noise arising from ventilation and traffic should have been considered as these are measurable. Given that underground metro systems are common in Europe, where the EIA Directive also applies, it is hard to comprehend why the operational noise assessment is so scant and includes so little information.</p> <p>We query why the assessment of predicted noise levels at operational stage has been narrowed to include sole consideration for train rolling but no other sources of noise. (for example traffic, PA Systems, escalators, ventilation etc, and potentially in operation 19 hours per day). The results presented by TII are not realistic and do not comply with the requirements of the EIA Directive which require that impacts be assessed cumulatively. We also contend that by excluding much of the potential sources of noise, the results presented are misleading and inaccurate.</p> | <p>As per the response to Item (40) above, TII acknowledge that the text in the EIAR chapter is a little misleading in regard to the assessment of "Dartmouth Square West" in Table 14.29. Here it refers to the location where the highest modelled noise value was predicted in this general area (17 Dartmouth Square West). However it is not true to say that the analysis did not include for the properties on Dartmouth Road. These have been fully assessed with results presented in Appendix A14.5 and on Figure 14.2. For clarity a number of properties in the Dartmouth Square/Dartmouth Road area will experience temporary exceedances for approximately 2 weeks in groundborne noise levels during the passage of the TBM as per the results presented in Appendix A14.5. (Unfortunately there are no effective methods available to reduce groundborne noise from TBMs at source and therefore the principal mitigation measure is advance consultation and engagement to inform residents of the timing of the TBM passing to allow building occupants to prepare for the temporary elevated noise levels.)</p> <p>Section 13.5.3.2.4 of the EIAR notes that the majority of station structures for the proposed Project will be fully underground. Any breakout of noise from the station areas is likely to be via the access stairwells and escalators to ground surface.</p> <p>At Charlemont, the station platform is 22m below ground level and hence noise from PAVA systems at platform level will be significantly attenuated with distance and the screening by the intervening concourse and mezzanine levels between the ground level and the platform.</p> <p>The submission makes reference to the cross rail assessment of rail noise sources, the Cross rail document scopes out a specific assessment / calculation of noise from PA systems based on the following:</p> <p>"Noise from PA systems at Stations and Depots – This is scoped out on the basis that ..... where there is to be a new PA installation, where there was none previously, technology is available to avoid a significant impact or disturbance arising. This is also necessary as local authorities use nuisance control powers to limit noise from PA systems"</p> <p>Section 13.5.3.2.4 of the EIAR explains that the design of the PA system will follow the following requirements:</p> <ul style="list-style-type: none"><li>• The PA system shall be designed to minimise noise disturbance to the specific surroundings. An acoustic simulation shall be developed to check audio levels at a later stage of the design; and</li><li>• Audio levels shall be simulated to ensure correct intelligible levels and audio distribution throughout the stations.</li></ul> <p>The best practice design principles which will be employed as part of the PA system design will have full regard to minimising noise breakout from these systems to the surrounding environment.</p> <p>Specific noise calculations are not undertaken of this source as it will not generate any audible or significant noise impact once operational in line with best practice applied to other similar large scale rail projects, including Cross Rail.</p> <p>Airborne noise from trains within the tunnel and station will not be audible at ground level. The principal noise source associated with operational trains is groundborne noise which has been fully assessed in Chapter 14. No significant impacts are determined.</p> <p>As discussed above, noise from PA systems will be substantially screened due to the platform depth and the system design. There are no significant impacts associated with this source.</p> <p>Escalators will provide access between ground level to station platform level. Mechanical elements associated with escalators are housed below ground and are fully enclosed. The station entrance is enclosed by a roof structure and walls around the perimeter at ground level. The escalators set back into the station entrance and from Dartmouth Road. Notwithstanding, operation of escalators do not generate any notable noise sources during operation and will not be audible above the prevailing noise environment to the adjacent residential properties.</p> <p>Section 13.5.3 of Chapter 9 of the EIAR discusses the noise impact assessment associated with operational phase traffic on the surrounding road network. The change in road traffic noise is determined to be negligible and not significant as a result of the proposed development. Also please note that no 'drop-off' areas are provided with the exception of a proposed drop-off on Grande Parade for persons of restricted mobility only. Response (23) above explains how drivers will be deterred from using the through route to Grand Parade.</p> <p>In summary, the key potential sources of airborne noise associated with the operational phase is set out in Chapter 9 of the EIAR.</p> |

| Charlemont & Dartmouth Community Group MetroLink Submission - Dartmouth Road Submission 13 January 2023 |                                                                                                            |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 61                                                                                                      | Section 5 Operational Impacts<br><br>Section 5.2 Noise and Vibration 5.2.6 Train Operations - Observations | 48       | The drawings indicate drop-off points at the metro station and it is evident from drawing no. ML1-JAI-SRD- ROUT-XX-DR-Z-02090 - Proposed Street Level Design that cars dropping off users at the Dartmouth Road entrance of the station will be using the new through route as a means to return to Grand Parade or other drivers as a rat-run to avoid the Ranelagh Road / Grand Parade junction. It is queried why no traffic noise assessment was undertaken and was not considered in cumulation with other operational noise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>A traffic noise assessment has been undertaken for the full extent of the study area which includes the surrounding road networks of Charlemont Station. During the operational phase, Dartmouth Road will have a new pedestrian crossing, one of which is located towards Ranelagh Road. The provision of this crossing will also act as a traffic calming measure on Dartmouth Road. A drop off point will be available on Grand Parade, but will be restricted for use by people with disabilities. In this context, it is proposed that the number of drop offs will be minimal and as such will not impact traffic movements significantly.</p> <p>The drawing referred to presents a road across the finished station between Dartmouth Road and Grand Parade. The intent of this road is to provide access to the Union Development only and will not allow through access. Please refer to response (23) above.</p> <p>Chapter 13 Airborne noise and vibration includes the assessment of changes in road traffic noise resulting from the project in Section 13.5.3.1.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 62                                                                                                      | Section 5 Operational Impacts<br><br>Section 5.2 Noise and Vibration 5.2.7 PA Systems                      | 49       | <p>However residents are concerned that placing a second MetroLink entrance directly on their road will have... potentially very disruptive side effects[in relation to]:</p> <ul style="list-style-type: none"><li>• Placing the entrance directly on the road will cause considerable extra noise and light pollution to the houses directly facing the entrance for very extended periods every day.....</li></ul> <p>...It is the view of the IEE that the EIAR documentation clearly does not provide assessments that cover the noise that would arise from passenger surface movements, or from the noise of escalators or lifts, PA announcements, local traffic and car parking and not just rail noise or ventilation and this is a serious omission that should be rectified (actually at all of the underground stations, not just Charlemont).</p> <p>It is not clear if any assessment has been made of light pollution that might arise from the station entrance....</p> <p>We agree that these are 'serious' omissions and must be rectified by the applicant. This fact renders the EIAR inadequate and incomplete.</p> | <p>Please refer to response (30) above that explains the reasons for the location and orientation of the southern entrance and the treatment of the lighting design.</p> <p>Please refer to response (60) above that explains the reasons why there are no significant noise impacts that will arise from the mechanical plant, PA announcements or traffic.</p> <p>TII do not agree with the observation "that the EIAR documentation clearly does not provide assessments that cover the noise that would arise from passenger surface movements, or from the noise of escalators or lifts, PA announcements, local traffic and car parking and not just rail noise or ventilation". The above responses have addressed these particular elements and provides no basis for the statement made that the "EIAR inadequate and incomplete".</p> <p>With regards to stations entrances, these are transient areas for passengers entering and exiting the station. These activities are not the source of significant noise generation and form part of the existing soundscape in the existing prevailing environment. It is acknowledged footfall numbers will increase in the vicinity of the station entrance, however this activity does not translate to significant noise impacts. Further, as noted above, TII have deliberately designed the Station with minimum set down space (with the exception of a drop-off on Grand Parade for persons of restricted mobility only) or room for taxi ranks so that it does not encourage the Station to be used as a terminus and pick-up point.</p> |
| 63                                                                                                      | Section 5 Operational Impacts<br><br>Section 5.3 Hours of Operation                                        | 50       | <p>MetroLink is planned to operate 19 hours per day, 365 days a year. It is planned that there would 20 trains per hour at a frequency of three minutes between trains. Stations would be opened from 5.30 am to 00.30 every day of the year.</p> <p>Open access and anti-social behaviour are likely to arise from this arrangement.</p> <p>It is also not clear how the station concourse area will be physically closed to the public outside of operating hours. Metallic rolling shutters are noisy. Both of these could affect the residential amenities of nearby neighbours.</p> <p>There is no justification to operate the interchange for an extra hour when there is no Luas to interchange to. The inevitable result is that cars will pick up passengers between 23.00 and 00.30 on Sundays. This increase in traffic is not assessed.</p> <p>The inevitable result is that cars will pick up passengers between 23.00 and 00.30 on Sundays. This increase in traffic is not assessed.</p>                                                                                                                                  | <p>This misalignment with Luas Green timetable is worthy of further consideration. Alignment of the operaing hours of Luas, Bus and Metro services will be a matter for the National Transport Authority".</p> <p>Whilst the station offers interchange with the Luas Green Line at this location, this is not the only option. Passenger modelling also indicates that there will be passengers with origins and destinations in the surrounding area via other means of transport, and therefore the MetroLink service will provide a mode of transport for those wishing to access these areas. As previously noted, no drop off / pick up areas are provided for private cars or taxis, with the exception of a single drop-off on Grand Parade for persons of restricted mobility only.</p> <p>As detailed in Chapter 09 (Traffic and Transport), the East Regional Model (NTA) provides a detailed representation of travel demand of four peak time periods. Off-peak travel, which is antedated to be much lower than peak travel times, such as late Sunday nights, have not been individually assessed as it is considered that all potential significant impacts have been captured during the peak time periods. Impacts occurring in the off-peak times are expected to be much lower.</p> <p>The station entrances are enclosed with gates, there are no roller shutter doors proposed at the station entrances.</p> <p>With regards anti-social behaviour, please refer to response (67) below.</p>                                                                                   |

| Charlemont & Dartmouth Community Group MetroLink Submission - Dartmouth Road Submission 13 January 2023 |                                                                                           |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 64                                                                                                      | Section 5 Operational Impacts<br><br>Section 5.4 Traffic and Transport                    | 50       | <p>No local area modelling is undertaken of the impact upon the road network around the Charlemont Station. The assessment done as part of the EIAR (Appendix A9.2-B Traffic and Transport Assessment- Charlemont Station) fails to have regard to the most up-to-date bus connects plans. As with the construction phase, the assessment relies on a strategic assessment that does not take into account the local impacts.</p> <p>The development creates a significant new link in the road network through the site linking Grand Parade with Dartmouth Road and Ranelagh Road. This creates a rat-run which will effectively bypass the Ranelagh Road/Grand Parade signalised traffic junction. This traffic movement has not ben assessed.</p> | <p>It is not correct to say no local area modelling has been undertaken. A VISWALK local model has been developed for this station, assessing the impact of the new pedestrian crossing on Grand Canal on the road network. The model demonstrates that it will have a minimal impact on driver delay on this road. In overall terms, the Charlemont station will provide for improvements to the public transport network resulting in decreases in private car usage/trips, as evident in the forecasted modal shift, and as such further local traffic or junction modelling was not undertaken.</p> <p>Additionally, as detailed in Appendix A9.2-B Traffic and Transport Assessment - Charlemont Station, the Project has been assessed in two alternative future scenarios.</p> <p>Scenario A: includes (but is not limited to) Bus Connects Dublin Area Bus Network Redesign, and Bus Connects Fares and Ticketing.</p> <p>Scenario B: includes (but is not limited to) Bus Connects Core Bus Corridors (planned 16 corridors).</p> <p>The anticipated future receiving environment at this location with Bus Connects Network Redesign services in place, is presented in section 3.2 of this document, with the assessment of impacts during the operational phase presenting impacts in both Scenario A and Scenario B.</p> <p>Please refer to response (23) in relation to the internal street between Grand Parade and Dartmouth.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 65                                                                                                      | Section 5 Operational Impacts<br><br>Section 5.4.3 Pedestrian Movements on Dartmouth Road | 51       | <p>Given that a major station entrance is proposed on Dartmouth Road, a significant volume of pedestrian movements is likely to be generated. However, there is a complete failure to assess this in the application and Appendix A9.2-B only assesses the northern entrance to the station. It does not illustrate the station entrance on Dartmouth Road.</p>                                                                                                                                                                                                                                                                                                                                                                                       | <p>TII disagree with the statement that there is a failure to assess the impact of pedestrian movements at the southern entrance of Charlemont Station on Dartmouth Road. As detailed in Appendix A9.2-B Traffic and Transport Assessment - Charlemont Station, a static pedestrian comfort assessment has been undertaken to assess the footway provisions following the increased volumes of pedestrians on the network in the design years. The results show that at Charlemont Station in both 2050 and 2065 , the comfort level on Dartmouth Road is rated as 'Comfortable' for the anticipated volume of pedestrian movements, and meets with the guidelines identified in the DCC Public Realm Masterplan. The results of the static assessment are presented in section 6.1.3 Pedestrian Impact Assessment of Appendix A9.2-B Traffic and Transport Assessment - Charlemont Station.</p> <p>Further examination of the performance of the street network surrounding Charlemont Station was undertaken using a microsimulation VisWalk model. The simulation model covers the full extent of the publicly accessible station entrances, including the immediate vicinity of the station entrances at street level on both Grand Parade and Dartmouth Road. With the proposed pedestrian infrastructure in place, the model indicates that at the northern entrance, the footways will operate at an acceptable level of service. A reduced level of service is only observed at the pedestrian crossing whilst pedestrians are waiting for the green phase at signals. The model indicates that the strongest flow of passengers will be going west from the northern entrance, towards the Luas interchange and Charlemont Street, with lower flows of pedestrians utilising the southern entrance on Dartmouth Road to travel east towards Dartmouth Square West. Therefore, the level of service of the pedestrian network at the southern entrance will be higher than that of the northern entrance.</p> |

| Charlemont & Dartmouth Community Group MetroLink Submission - Dartmouth Road Submission 13 January 2023 |                                                                         |          |                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 66                                                                                                      | Section 5 Operational Impacts<br><br>Section 5.4 Traffic and Transport  | 52       | View of the Independent Engineering Expert (IEE) - RINA<br><br>EIAR documentation does not include a local model of the extra vehicular and pedestrian traffic generated from the use of the Dartmouth Road entrance as the drop off and pick up point for passenger journeys to the Airport.               | TII would first of all note that the Station is intentionally designed with only one drop-off / pick-up on Grand Parade for persons of restricted mobility only. MetroLink is not designed as a terminus station with drop-off and pick-up points for passenger journeys to the Airport and instead forms part of an integrated public transport network. The system is designed in an integrated manner so that people travelling from the area south of Dublin to access locations north of Charlemont, such as Dublin Airport, Mater, Swords etc. will utilise public transport to interchange with the MetroLink, or will walk or cycle to access their local station. The system is not designed to encourage people to drive to stations within the City and TII actively discourage people from doing so other than the Park & Ride station at Estuary.<br><br>Please refer to response item (65) in relation to the static and microsimulation pedestrian modelling undertaken at Charlemont Station, which includes the southern entrance at Dartmouth Road.<br><br>Local modelling was not undertaken at Charlemont Station as the strategic Eastern Regional Model indicates a reduction in car trips to and from the model zones at Charlemont Station, including the zones containing Dartmouth Road. As presented in Appendix A9.2-B Traffic and Transport Assessment - Charlemont Station, over the 12hr period, the zones within a 2km radius of Charlemont Station see a reduction of over 830 car trips between the Scenario A 2065 Do Minimum and Do Something scenarios. Figure 6.6 (within Appendix A9.2-B) presents the Changes in Car Mode Share in Scenario A 2065 AM Peak Hour, demonstrating that the zones at Charlemont Station see a reduction in Car mode share of up to 5 percentage points, including the zones at Dartmouth Road. Therefore, as fewer car trips are seen in the operational phase than in the baseline at this location, a further local modelling assessment was not undertaken. |
| 67                                                                                                      | Section 5 Operational Impacts<br><br>Section 5.5 Anti-Social Behaviours | 53       | The residents have significant concerns that this major interchange will attract anti-social behaviour for up to 19 hours a day during its operational times, and also when the station is closed.                                                                                                          | The interchange will certainly increase the number of people passing through the area, however it is important to note that people will be using MetroLink, similar to Luas as a transport hub, moving quickly in and out of the area. The station will not be a destination attracting people to the area. Furthermore as outlined in Chapter 6 of the EIAR, CCTV will be installed at all stations including Charlemont with monitoring of each station being managed from the Operational Control Centre. This means that in the unlikely event of antisocial behaviour, MetroLink security staff and /or An Garda Siochana will be notified immediately to manage the situation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 68                                                                                                      | Section 6 Property Issues<br><br>Section 6.2 CPO                        | 54       | We would point out that this submission highlights that there will be a significant loss of amenity of the properties which are the subject of the CPO and hence there will be a diminution in the value of retained land.                                                                                  | The loss of amenity referred to is temporary. TII do not agree that the development will have a long term and permanent negative affect on the value of property. In fact there is evidence to suggest that property values will in fact increase in close proximity to public transport infrastructure and that local residents will greatly benefit from having a world class metro system providing access to the city centre, airport and north city at their door step.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 69                                                                                                      | Section 6 Property Issues<br><br>Section 6.3 Properties                 | 54       | This submission has highlighted that No.35 Dartmouth Road has not been identified in the Book of Reference. It appears to be referred to as 11 Cambridge Terrace. The owners of no.35 Dartmouth Road did not receive relevant papers from the Applicant and this is, therefore, an error in the Rail Order. | Please refer to response (26) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Charlemont & Dartmouth Community Group MetroLink Submission - Dartmouth Road Submission 13 January 2023 |                                                                        |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 70                                                                                                      | Section 6 Property Issues<br><br>Section 6.4 Devaluation of Properties | 54 and 55 | <p>During the construction stage, there will be a severe impact upon property values.</p> <p>There is no assessment of the impact upon value of properties.</p> <p>.....we strongly reject the general conclusion that property values will increase. This is due to all the reasons outlined in this submission. The Planning and Development Act specifically links the loss of amenity and the devaluation of property as a reason for refusal. It is only properties that are purchased as a result of the CPO associated with the Rail Order that can benefit from compensation. The State is not in a position to grant permission for development which will devalue property, as there is no mechanism for compensation in these circumstances. To grant permission where there is a loss of amenity, and an associated devaluation of property, would be impinge upon individual property rights which are protected under the Constitution.</p> | <p>For the reasons noted by response (68) above, evidence indicates that the long-term the value of property will increase.</p> <p>The provisions of the Planning and Development Act referred to deal with reasons for refusal for which the property owner cannot claim compensation (Section 191 and Fourth Schedule). They are not applicable to the consideration of Railway Orders, because TII is not entitled to compensation where a Railway Order is refused. The impact of the proposed railway on amenity and devaluation of properties is a relevant consideration in ABP's consideration of the Railway Order application, but as outlined elsewhere, TII do not agree that the the proposed railway works will cause anything other than a temporary loss of amenity and will not cause the devaluation of properties.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 71                                                                                                      | Section 6 Property Issues<br><br>Section 6.5 Temporary Relocation      | 55        | <p>Some, or all of the residents listed in this submission may have to be temporarily relocated at Til's expense. Indeed, given the 9 year duration of the construction programme, this would effectively be a permanent relocation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>As set out elsewhere in this response and in accordance with the Noise and Vibration Mitigation Policy (see Appendix A14.6), TII will accept and consider applications for additional mitigation measures on a case-by case basis, including short term relocation during peak construction (for example TBM passage) for residents significantly affected by the works.</p> <p>TII can confirm that relocation is an available option for Dartmouth Road residents immediately adjacent to the construction site during peak construction. TII however do not consider relocation would be necessary for 9 years, and for residents on Dartmouth Road would instead be for the period that Dartmouth Road is fully closed to construct the station beneath. TII are available to discuss this option if that is something the property owner would like to explore and consider.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 73                                                                                                      | 7. Conclusions                                                         | 56        | <p>The submission supports the request made in the general area submission to omit from the Railway Order the section from Tara Street Station to Charlemont Station and associated onward tunnel extension and intervention tunnel. In addition to the strategic planning reasons for the omission of this section of MetroLink, this submission Cleary highlights that the EIAR fails to adequately assess impact of the development upon the houses on Dartmouth Road. The project would seriously affect the residential and other amenities of the residents of Dartmouth Road both during the construction and operational phases.</p>                                                                                                                                                                                                                                                                                                              | <p>TII do not consider it is correct or appropriate that the MetroLink alignment south of the proposed Tara Station should be omitted for the reasons explained by response (1) above, noting also that a scheme which terminates at Tara Street would not be consistent with the Transport Strategy for Greater Dublin Area (2022-2042). In addition any decision to terminate the scheme at Tara will significantly impact on the overall viability and benefits of the scheme.</p> <p>However, while there is a strategic need for a MetroLink station at Charlemont, TII recognise that the short-term implications for local residents on Dartmouth Road will be significant as the scheme progresses through the construction stage. TII are committed to working closely with local residents to ensure the required mitigation measures are put in place, but while TII are of the view that the construction environmental impacts can be mitigated, relocation is an available option for Dartmouth Road residents immediately adjacent to the construction site during peak construction. TII are available to discuss this option if that is something the property owner would like to explore and consider.</p> <p>Finally, TII note that throughout this submission MacCabe Durney Barnes have frequently referred to the Railway Order application, and in particular the EIAR as being inadequate. TII do not accept this, and consider that the level of detail not only submitted as part of the Railway Order application, but the particular responses provided above to individual statements and observations made demonstrate the detailed consideration that has been applied to the submitted MetroLink Railway Order application. TII note that MacCabe Durney Barnes have not identified any instances where the assessment fell short of the level of detail required by the guidelines in the EIAR, nor have they identified any alternative guidelines that required a greater level of assessment.</p> |

| Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                         |          |                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1                                                                       | 1.2 Strategic Planning Issues           | 1        | That submission concludes the link between St. Stephens Green and Charlemont cannot be justified in planning terms. Furthermore, it undermines the business case for the entire project. For this reason the associated submission requests that the section between Tara Street and Charlemont be omitted from the railway order application for the section between Tara Street and St Stephen's Green be submitted. | <p>The business case for the Project is a matter for the Oireachtas, the Government, NTA and TII to be approved in accordance with the Public Spending Code. ABP role is only to determine whether the project should be approved by reference to the proper planning and sustainable development of the area and the impacts of the project on the environment, including the carrying out of an EIA and AA.</p> <p>A scheme which terminates at Tara Street would not be consistent with the Transport Strategy for Greater Dublin Area (2022-2042).</p> <p>Tara Street and Charlemont are specifically identified as locations for stations in the GDA Transport Strategy 2022-2042. ABP is required to have regard to those requirements as policies and objectives for the time being of a public authority whose functions have a bearing of the proper planning and sustainable development of Dublin (Transport (Railway Infrastructure) Act 2001 and 143 of the Planning and Development Act 2000). The transport strategy is also a consideration material to the proper planning and sustainable development of the area (Section 31 J of the Planning and Development Act 2000).</p> <p>ABP has to give considerable weight to the GDA Transport Strategy, given its elevated role in the statutory scheme relating to proper planning and sustainable development, including that:</p> <p>*the NTA is required to provide a report to planning authorities making regional spatial and economic strategies, development plans and local area plans ("relevant plans") with recommendations on the optimal use, location, pattern and density of new development taking account of the Transport Strategy and stating whether there is inconsistency between the relevant plan and the Transport Strategy;</p> <p>* relevant plans are required to be consistent with the Transport Strategy;</p> <p>*the Office of the Planning Regulator is required to evaluate relevant plans to ensure that they address consistency with the Transport Strategy;</p> <p>*the Minister for Housing can direct variations to draft relevant plans to ensure that they are consistent with the Transport Strategy;</p> <p>*landowners are not entitled to compensation where permission is refused due to inconsistency with the Transport Strategy.</p> <p>The responses to the observations made in this submission explain why TII, by reference to Transport Strategy and project level assessment data that supports the conclusions of the Transport Strategy, do not consider it is correct or appropriate that the MetroLink alignment south of the proposed Tara Station should be omitted.</p> <p>Any decision to terminate the scheme at Tara street will reduce the overall benefits of the scheme by €1.5BN euro (Preliminary Business Case Page 68)</p> |
| 2                                                                       | 3. AREA CONTEXT<br>3.2 Property Details | 10       | The book of reference does not differentiate between the affected properties in the permanent acquisition of the laneway.                                                                                                                                                                                                                                                                                              | The book of reference details the extent of permeant and temporary land acquisition required to construct the scheme.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 3                                                                       | 4.2 Noise and Vibration<br><br>4.2.1 Methodology                   | 13       | <p>It appears as though the EIA is being the subject of further assessment, which the applicant is suggesting to be undertaken post determination of the Railway Order application. We contend that this is appropriate and that the EIAR does not properly assess the impacts of the development.</p> <p>.....The assessment of the effects upon residential amenities is different between the construction stage and the operational phase. In the construction stage, there is no assessment upon the internal noise levels.</p> | <p>Noise and vibration assessments have not been deferred until after an enforceable railway order is granted.</p> <p>The EIAR presents a comprehensive and detailed assessment of both groundborne and airborne noise and vibration in Chapter 13 and 14 of the EIAR in accordance with best practice and the guidance cited in those chapters of the EIAR. The assessments includes for predictive modelling in order to identify the potential impacts on sensitive receptors during both the construction phase and the operational phase. Where necessary, mitigation measures are proposed to reduce any identified effects. Section 13.2.6.1.3 simply identifies that the project will develop within the confines of the consent as contractors are appointed and translate the designs and methods developed for the purpose of the Railway Order and EIAR into detailed designs and methods. The EIAR proposes monitoring and mitigation measures that will ensure that the proposed construction and operation of the proposed Project is in line with that presented in the EIAR. The Board can also impose any requirements of an enforceable Railway Order if it considers it necessary.</p> <p>The assessment of noise levels at building facades is normal best practice for this type of analysis noting the assessment criteria generated from best practice guidance (BS5228) all refers to noise levels at building facades. This applies to both construction and operational phase noise assessments.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 4                                                                       | 4.2 Noise and Vibration<br><br>4.2.2 Airborne Noise and Vibrations | 16       | <p>Noise impacts on Dartmouth Square West are predicted to range from moderate to very significant. Notably, the hours working are specified as 07:00 hrs to 19:00 hrs. The passage of the Tunnel Boring Machine (TBM) through the station will be 24 hours, 7 days a week. In addition, HGV deliveries will be ongoing over a lengthy period of time. Evidently the impact upon Dartmouth Square West will be very significant. Table 13.68 of the EIAR includes the following predicted dB and predicted impacts.</p>              | <p>Table 13.68 shows the predicted noise impacts before mitigation. Potential noise impacts identified due to airborne noise &amp; vibration are presented in EIAR Chapter 13. Mitigation proposed includes 4m high noise barriers and further proposed mitigation in line with the Airborne and Ground borne Noise Mitigation Policy at 10 &amp; 11 Dartmouth Square. On the implementation of these measures the residual impacts are predicted to be moderate. However, as outlined in Transport Infrastructure Ireland (TII) Airborne and Groundborne Noise Mitigation Policy (Appendix A14.6) there is a process proposed whereby further mitigation measures including temporary relocation can be implemented at individual properties should this be merited.</p> <p>Proposed Working Hours are outlined in Section 5.2.4 of Chapter 5 of the EIAR. Standard working hours will generally be the norm for all above ground works i.e. Monday to Friday 07:00 to 19:00 and Saturday 07:00 to 13:00. HGV deliveries will not be permitted outside of these hours. Only tunnelling and other works underground will be undertaken 24 hours a day. The only exception to this is the requirement for other noisy work above ground outside standard working hours for events such as concrete pours, abnormal deliveries etc. TII and their Contractor will engage with the local community and local authority to advise of any such upcoming events such as this, and will do their best to minimise any such occurrence so far as practicable.</p> <p>All planned night-time work activities will have to be undertaken, controlled and mitigated under the detailed Construction Environmental Management Plan to maintain impacts below the agreed construction noise thresholds. Examples of mitigation measures that can be used to reduce impact are detailed within Chapter 13, section 13.6, including the use of enclosure structures for planned activities outside of the standard working hours.</p> <p>The rationale for 24/7 working on underground activities such as Mechanical Electrical Power (MEP) installation, TBM strip out, and tunnel clean and track laying, is that they can be managed underground without causing disturbance at night. While activities below ground are progressed on a 24/7 basis, site level activities such as deliveries etc will be limited to standard working hours (Chapter 5, Section 5.5.17.3 refers). In addition progressing this work 24 hours a day will ensure that the construction phase is completed much more quickly, thereby reducing the duration of effect on nearby sensitive receptors.</p> <p>Owing to the nature of the sprayed concrete intervention tunnel construction and to ensure a safe and stable method of excavation, and minimising settlement impact, the sprayed concrete intervention tunnel construction will be undertaken 24 hours per day, seven days per week. The groundborne noise and vibration arising from mechanical excavation of the tunnel will not exceed threshold limits. During night-time support works at the surface, an acoustically clad steel framed temporary building located above the access to the SCL work site on the south east corner of the compound will control airborne noise breakout to surrounding sensitive properties. All concrete to support the sprayed concrete tunnel lining operation will be batched on site within the acoustic enclosure and will not require night-time delivery.</p> |

|                                                                         |                                                                    |          | Response (4) continued.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>The predicted level of groundborne noise during TBM passage will result in a significant impact for a relatively short 2-week duration of the TBM passage. Unfortunately there are no effective methods available to reduce groundborne noise from TBMs at source and therefore the principal mitigation measure is advance consultation and engagement to inform residents of the timing of the TBM passing to allow building occupants to prepare for the temporary elevated noise levels.</p> <p>Therefore with the exception of some temporary disturbance (c. 2 weeks) resulting from the TBM passing. All other activities are not predicted to cause significant impact after mitigation.</p> <p>As outlined in Transport Infrastructure Ireland (TII) Airborne and Groundborne Noise Mitigation Policy (Appendix A14.6) there is a process in place whereby further mitigation measures can be implemented at individual properties should this be merited.</p>                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 5                                                                       | 4.2 Noise and Vibration<br><br>4.2.2 Airborne Noise and Vibrations | 16       | The advice attained from RINA, however acknowledges that the noise levels will be very significant at times outside at this location. In addition, impacts are expected for noise levels inside rooms with open windows during most of the construction phases. This is wholly unsatisfactory for residents' to experience for approximately 9 years.                                                                                                                                                                                                               | Potential noise impacts identified due to airborne noise & vibration are presented in EIAR Chapter 13. Mitigation proposed includes 7m high noise barriers and further proposed mitigation in line with the Airborne and Ground borne Noise Mitigation Policy at 10 & 11 Dartmouth Square. On the implementation of these measures the residual impacts are predicted to be moderate. However, as outlined in Transport Infrastructure Ireland (TII) Airborne and Groundborne Noise Mitigation Policy (Appendix A14.6) there is a process proposed whereby further mitigation measures including temporary relocation can be implemented at individual properties should this be merited.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 6                                                                       | 4.2 Noise and Vibration<br><br>4.2.2 Airborne Noise and Vibrations | 16       | Given the underwhelming engagement experienced by residents to date at Dartmouth Square West, significant concerns rightly have emerged for residents in the capabilities of contractors to effectively engage and communicate with residents on inevitable noise disturbances. The implementation of 'quiet times' for residents would also be considered appropriate given the significant disturbances incurred during the construction phase.                                                                                                                   | <p>TII would note that as set out by EIAR Chapter 8 Consultation, section 8.9.3 Construction Phase. Subsequent to the planning stage and in the event of a grant of approval of the RO the project will progress to the construction phase (subject to funding approval). It is anticipated that the construction period would progress for approximately 9 years, with the proposed Project becoming operational by 2035. Engagement will continue throughout this period to ensure that the public, stakeholders and interested bodies are informed of progress on the construction of the proposed Project and to allow for members of the public to submit complaints/queries or other communications with the project team.</p> <p>The proposed working hours for the construction phase of the proposed Project (as per Section 5.2.4 of Chapter 5 of the EIAR) will be for all above ground works to progress Monday to Friday 07:00 to 19:00 and Saturday 07:00 to 13:00. This means that there are already significant "quiet times" built into the construction phase programme. However, as previously noted, the Transport Infrastructure Ireland (TII) Airborne and Groundborne Noise Mitigation Policy (Appendix A14.6) provides a process whereby further mitigation measures including temporary relocation can be implemented at individual properties should this be merited.</p> |
| 7                                                                       | 4.2 Noise and Vibration<br><br>4.2.2 Airborne Noise and Vibrations | 16       | It is contended that the level of piling is not adequately assessed in the Railway Order and they only address blasting vibration. The EIAR includes some data and mitigation measures regarding blasting, but vibration is also derived by deep piling and yet, there is no data to show the impact of that in the construction phase. The extensive depth of the excavations proposed will be within 14m of the rear walls of three storey Victorian houses on Dartmouth Square which are protected structures located within an Architectural Conservation Area. | <p>This is incorrect. Piling has been assessed in both Chapter 13 and Chapter 14 where relevant. Please refer to Tables 13.5/14.11 and 13.6/14.12 for details of how secant piling and D-walling have been assessed and in which chapter they are assessed. The EIAR assessment concludes that for Dartmouth Square West properties there is no significant effect once mitigation measures are implemented. These mitigation measures include the installation of a noise barrier along the eastern perimeter of the site.</p> <p>For the assessed impact of ground movements on Dartmouth Square West properties please refer to response (15) below.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 8                                                                       | 4.2 Noise and Vibration<br><br>4.2.2 Airborne Noise and Vibrations | 16       | We would contend that the impacts identified above on very sensitive residential properties are profound and not merely very significant. We submit that, with reference to the EIAR guidelines definitions, the noise effects would be profound as an effect which "...obliterates sensitive characteristics" (residential amenity), rather than merely a very significant which by "...its character, magnitude, duration or intensity, significantly alters most of a sensitive aspect of the environment."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | The assessment undertaken in chapter 13 of the EIAR, as explained above, is undertaken in line with best practice and is in line with all relevant guidelines and policy requirements as laid out in Section 13.2.2 of the EIAR. The analysis identifies the sensitivity of the "sensitive receptor" and considers in the context of the level of noise that is predicted. The level of noise predicted is considered in the context of British Standard BS 5228 which defines widely accepted Construction Noise Thresholds (CNT) for the assessment of impacts. It is important to note that as per Table 13.13 of the EIAR, the definition of a profound effect (Derived from the DMRB guidance (UKHA, 2020)as modified by the EPA EIA guidelines (EPA 2022) is where noise levels increase by 20dB or more. This is not the case here.                                                                                                                                                                                                                    |
| 9                                                                       | Section 4.2.2 Airborne Noise and Vibration                         | 17       | Critically, the EIAR does not assess the night time impacts of the construction compound, notwithstanding the fact that the EIAR itself as highlighted above, indicates that it will be operating on a 24/7 basis. This in itself would trigger a profound impact which has not been assessed. The EIAR is therefore fundamentally inadequate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | There is limited assessment of noise & vibration arising from compounds and above ground work sites because as outlined in Table 13.6 of Chapter 13 of the EIAR, the standard working hours will not entail night-time working. Where there are night-time works these will be managed as explained by response (4) above and therefore no works will result in a profound effect.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 10                                                                      | 4.2.2 Airborne Noise and Vibration                                 | 17       | <p>It is considered the mitigation measures proposed are unacceptable as they currently stand. Further consideration is required on how noise impacts will be mitigated against at every stage of construction for Dartmouth Square West residents. the monitoring measures proposed under ANV8 includes:</p> <p>"A full monitoring and auditing programme will form part of the CNVMP which will be agreed with the Local Authorities prior to the commencement of the Construction Phase. As a minimum the monitoring programme will include an alert system for threshold exceedances, remote access and a platform for sharing monitoring results between the contractor, TII, DCC and FCC."</p> <p>No mitigation measures have been included which explicitly requires the continuous real time monitoring of noise impact of construction activity or the impact upon internal noise environment in houses affected. Additionally, while ANV8 mitigation measures is noted, such monitoring and auditing must also be transparently shared and accessible to members of the public.</p> | <p>Having regard to mitigation measures proposed there are a combination of measures that will be implemented at each construction area and specific measures required where screening is needed. The mitigation measures proposed are explained by response (5) above.</p> <p>TII confirm that monitoring will be undertaken in accordance with the CNVMP. Monitoring and auditing will be transparent. It is envisaged that monitoring data and audit results will be presented and shared in community forums. TII will consider options for sharing that data and results with the public and stakeholders in a timely and transparent way which may include the use of online portals and tools. It proposes that this is not fixed by way of condition so that the content and manner of can be adapted to the changing circumstances of the project over time.</p>                                                                                                                                                                                     |
| 11                                                                      | 4.2.3 Mitigation                                                   | 17       | The mitigation measures were remodelled on the basis of localised screening as applied to surface level breakers and drills; and enclosures to compressors, generators, pumps, motors and ventilation fans. Table 13.90 of the EIAR refers to the impacts upon certain properties. However, the properties on Dartmouth Square West are not identified in the assessment. The EIAR goes onto state "At all other locations construction noise impacts are not significant to moderate to significant ". No details of the outputs of this assessment are given in the main EIAR or the appendices. Just broad parameters are given and no details of the precise location of the hoardings, or details of the enclosures are provided. This is a critical issue for our clients, given the potential impacts. The mitigating measures in The EIAR must be deemed inadequate in relation to the detail provided.                                                                                                                                                                               | <p>Please refer to Section 13.6.1.2.4 for specific screening requirements which as outlined in Table 13.85 does require a 4m tall site hoarding to mitigate the predicted noise here. In addition to these measures please also note that primary mitigation measures entails the control of noise at source as outlined in Section 13.6.1.2. Furthermore, the document Transport Infrastructure Ireland (TII) Airborne and Groundborne Noise Mitigation Policy (Appendix A14.6) sets out the further mitigation measures and supports which will be available to those who meet the eligibility criteria.</p> <p>Construction phase modelling has been undertaken along the entirety of the alignment and is detailed in EIAR Appendix A13.7 and includes Dartmouth Square West properties. The EIAR main document summarises the potential for significant effects and the required mitigation measures. Table 13.85 outlines the specific locations of noise barriers (site hoarding) and this includes locations surrounding the Charlemont compound.</p> |

|                                                                         |                                        |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 12                                                                      | 4.2.4 Ground-borne Noise and Vibration | 18       | <p>The EIAR takes Dartmouth Square West as the location for this element of the assessment (Table 14.28). It does not however indicate where on Dartmouth Square West the impacts are going to vary between nos. 1 and 17 Dartmouth Square. However, the tunnel and works associated with it, do not pass under the houses on Dartmouth Square West.....</p> <p>There will be significant excavations works, including blasting and drilling associated with the start of the intervention tunnel in the area immediately to the rear of house nos. 1-17.</p>                                                                                                                                                                                                                                                                                                                                                                                           | <p>Please refer to Figure 13.2 Sheet 30 where all noise assessment locations including those on Dartmouth Square West are identified. The results as they relate to each individual property are contained within Appendix 13.7 Construction Phase modelling (pages 17 - 28).</p> <p>Please note that there is an error in Table 14.13 of the EIAR where it is outlined that drill and blast will be used at "all underground stations and intervention tunnels". A number of amendments were made to the proposed construction methodology for the intervention tunnel and these were assessed in the EIAR. The intervention tunnel alignment has been dropped to mitigate impacts and the tunnel will be excavated by mechanical means only and blasting will not be required at this location. Both of these interventions were proposed to reduce potential effects arising from the construction of the intervention tunnel.</p> <p>Section 13.6.1.2.4 discusses the proposed steel clad building, in the fourth bullet point under Table 13.85. To reduce reverberant noise build up, the requirements of this building are that it will be suitably clad to achieve a minimum sound reduction index of 24dB Rw.</p> |
| 13                                                                      | 4.2.5 Mitigation                       | 18       | <p>Given the deficiencies in the EIAR, it is difficult to judge whether the mitigation measures are adequate. There is little that can be done in terms of mitigation to render the impacts non-significant, particularly where these have not even been identified in the first instance.....Only 6 locations have been identified for pre-construction surveys in relation to noise and vibration arising from project, these excluded the properties on Dartmouth Square West. While the Charlemont station new oversite development is identified, the properties on Dartmouth Square West are not.</p>                                                                                                                                                                                                                                                                                                                                             | <p>All potential impacts have been identified in EIAR Chapter 13 (Section 13.5) and associated appendices as referenced above. Furthermore, required location specific mitigation measures are identified in EIAR Chapter 13 (Section 13.6). Residual impacts i.e. those remaining after mitigation measures have been adopted are presented in Section 13.7 of EIAR Chapter 13.</p> <p>While we are not clear on the observation referring to "to 6 locations have been identified for pre-construction surveys....." we can confirm that multiple locations will be monitored in advance of and during the construction phase and this monitoring will include a number of locations in the areas of Charlemont compound.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 14                                                                      | 4.2.5 Mitigation                       | 18       | <p>Condition 15 of the previous metro north railway order specified that the airborne construction noise levels that should be applied at the facade of any residence. (ref. Table 3)</p> <p>From the evidence submitted, it is apparent that it will not be possible to achieve these thresholds, particularly when the cumulative impacts of noise and vibration, both air borne and ground borne, are taken into account.</p> <p>Condition 12 and 13 of the aforementioned Metro North relate to vibration impacts. They reference German Standard DIN 4150-3:2016 "Vibrations in buildings - Part 3: Effects on structures". The ability of the project to comply with any such standard needs to be fully explored by the Board and at any oral hearing held.</p> <p>For this reason, we request that the Board appoints specialist noise and vibration consultancy advice in order to assist it in conducting this element of the assessment.</p> | <p>The assessment undertaken in EIAR were completed by internationally recognized specialist consultants and is in line with best practice and with all relevant guidelines and policy requirements as laid out in EIAR Chapter 13 Airborne Noise and Vibration, section 13.2.2. The assessment of noise levels at building facades is normal for this type of analysis as the assessment criteria generated from best practice guidance all refers to noise levels at building facades as referred to in response (3) above.</p> <p>As per "Old Metro North", the assessment has been presented in Chapter 13 of the EIAR in terms of the potential effects at the façade of all properties potentially impacted (as detailed in other responses above). As also stated it is generally possible to achieve the criteria at the majority of facades. The exceptions are presented in Section 13.7 Residual Impacts. Having regard to groundborne vibration, the DIN 4150 standard is also utilised to determine the potential for building damage in the assessment presented in Chapter 14. (Please refer to Table 14.5 of Chapter 14).</p>                                                                              |

| Submission No.                                                          |                             |          | 041                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                             |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 15                                                                      | 4.3 Settlement & Subsidence | 20       | <p>From a review of the EIAR and associated appendices, it is evident that a very limited assessment of settlement and subsidence has been carried out. It can be seen from the above diagram that the houses on Dartmouth Square West fall within the 10mm to 30mm settlement zone. This is defined as "slight" risk category. However, given all bar one of the buildings covered by this submission are protected structures, they should be classed as damage category 3 (moderate).....</p> <p>However, the protected buildings on Dartmouth Square West are excluded.</p> <p>Appendix A5.17 provides an assessment of 'representative' buildings. It is unclear why these buildings were selected. There is no map illustrating the location of reference numbers/properties. The presentation of the information is opaque and unclear and does not facilitate a full and proper examination of the true impacts upon the houses on Dartmouth Square West. Again, this is a significant inadequacy in the EIAR.</p> <p>The assessment effectively defers most of the assessment of subsidence and settlement to a further assessment. Such an assessment if undertaken after the railway order is issued, removes property owners' rights to review the actual impact of the development on their properties.</p> | <p>TII do not agree that "a very limited assessment of settlement and subsidence has been carried out". The assessment undertaken covers the whole route of the proposed Project. In addition, as is standard with a long linear project, buildings were selected to provide a representative sample and coverage to inform the EIAR, and TII can confirm that the protected buildings on Dartmouth Square West were not excluded from the assessment. Please refer to Figure 20.16 in Appendix A5.17 where the settlement contours can be examined to identify the predicted level of ground movement for each property.</p> <p>The approach taken by TII for assessing the impact of construction generated ground movements reflects the industry standard three-phased ground movement impact assessment process that is undertaken on tunnelling and underground projects around the world, that includes Channel Tunnel Rail Link (CTRL), Dublin Port Tunnel, Crossrail and High Speed 2.</p> <p>The purpose of the Phase 2 Assessment is to study in more detail the response of buildings and infrastructure (identified during Phase 1) to predicted ground movements, and where appropriate consideration of possible mitigation measures. All buildings carried through from the Phase 1 Assessment are individually assessed using the limiting tensile strain approach. Buildings are modelled and assumed to follow the greenfield settlement profile of the ground. This approach is conservative since it neglects any interaction between the stiffness of the buildings and the ground and is therefore appropriate for this stage of the Project to inform the Railway Order application. The maximum tensile strains resulting from predicted differential settlement and horizontal displacement of the foundations are calculated and the corresponding levels of risk are determined in accordance with Appendix A5.17, Table 4-4: Building Risk Categories (Boscardin and Cording with Rankin Criteria).</p> <p>The EIAR has assessed the impact of settlement on the houses on Dartmouth Square West and has taken into account the Protected nature of these properties. EIAR Appendix 5.17 refers. The Phase 2 assessment of the damage for these buildings is "Slight" - please refer building B150 (15 Dartmouth Square West) in table 5-2 of that appendix. This property is the closest property on Dartmouth Square West to the excavation. It is also important to note that the Property Owner Protection Scheme (POPs) scheme (as outlined in section 5.4.11.4 of the EIAR) is available. The Property Owners' Protection Scheme is in addition to the existing legal rights of property owners and is in place to provide a simple and prompt way of rectifying any damage caused under the project up to the ceiling of €45,000. If the sum should exceed this amount the normal claims process would be used with the insurance companies for TII and/or the contractor.</p> <p>The protected nature of a building does not alter the classification of damage from slight to moderate as stated. The protected buildings along Dartmouth Square West, within the zone of influence of the works, will be subject to a further Phase 3 refined assessment (despite the impact only being assessed as 'slight') to take account of final design and construction methodology details, most likely utilising advanced numerical modelling techniques and further surveys of the building. The results of this refined assessment typically show that earlier assessments are conservative and overestimate the likely impact of construction generated ground movements.</p> |

| 16                                                                      | 4.3.2 Tunnel Driving and Secant Walls | 21       | <p>Stretching the whole length of the Charlemont site, the excavation will be up to 50m wide and approximately 30m deep. It is proposed to advance this excavation within a containing secant wall construction, following which will be constructed the station box for the proposed MetroLink Charlemont station.</p> <p>Following completion of the station box, it is proposed to drive a TBM through the north east end of the box, and, exiting through the south west corner, continue the tunnel boring activity for 350m further south, to behind Ranelagh Village.</p> <p>Ground settlement following the construction of both secant walls and TBM tunnelling is inevitable. It is unavoidable, and it will occur. It will occur to varying degrees, across a settlement zone around the excavation of the tunnel centre line, and behind all the secant walls.</p> <p>Compounding the alarming settlement projections of between 10mm and 30mm caused by deep secant wall, and subsequent excavations, wall deformations, and disturber water table, the whole of the residential stock within the established slump zone will be subjected to further compounding settlement disruptions with the arrival, and departure, of the TBM tunnelling process, some two years later.</p> <p>Engineering research experience has shown that projection of accurate expected settlement is usually unreliable, and results usually fall within certain ranges above or below expected. This is an important point in the consideration of settlement impacts associated with the proposed development.</p> | <p>EIAR Appendix 5.17, section 4.2 explains the methodology, empirically based and industry recognised approach to estimate the predicted ground movements generated by tunnel, and cut and cover construction, taking account of the design, construction methods and ground conditions. Both cut and cover, and tunnelling generated construction ground movements have been taken account of at this location. TII agree with the observation that ground movements can be challenging to predict and hence the parameters used by TII to predict ground movements are intentionally conservative, and are based on documented empirical data.</p> <p>Settlement and horizontal movements for retaining wall construction and bulk excavation associated with the station box and retaining walls have been undertaken based on the case history data documented in CIRIA Report C760 “Embedded retaining walls – guidance for economic design”, taking account of the ground conditions, proposed design and construction methodology. Further details for which can be found in EIAR Appendix 5.17, section 4.2.5.</p> <p>The TBM will be of the type that maintains positive pressure to the face and surrounding ground while the segmental tunnel lining is installed, thereby allowing ground movements to be closely controlled and minimised. TII would also note that TBM entry and exit from the station box will be sealed, with possible ground treatment to further stabilise the ground if required, to manage ground movements within acceptable limits.</p> <p>The prediction of tunnelling generated ground movements has been undertaken in accordance with the volume loss methodology outlined in CIRIA PR 30. This is an empirical method based on the percentage of tunnel volume excavated that is over and above that required for the tunnel itself. The calculation of the resultant settlement trough requires the derivation of a number of ground factors, these are explained in EIAR Appendix 5.17, sections 4.2.2. to 4.2.4. Similar to the cut and cover ground movement predictions, conservative volume and trough width parameters have been selected to ensure the ground movements predictions at this stage are robust.</p> <p>Please also refer to response (15) above that summarises the results of the construction generated ground movement impact assessment.</p> |
| 17                                                                      | 4.4 Hydrogeology                      | 21       | <p>The impact upon hydrogeology can be significant, and given the depth of the works and proximity to older buildings they are likely to be impacted. No detailed specific localised groundwater modelling has been undertaken as part of the EIAR. Water depth reading from boreholes some 550m from the proposed station are used in the broad assessment (Table 19.15). The data on which the assessment is undertaken is not related to the site concerned.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>TII have undertaken localised and specific groundwater modelling, and TII can also confirm that hydrogeological information along the line of the underground elements has been collected.</p> <p>Please refer to Figure 19.6 of the EIAR which identifies the location of a boreholes at Charlemont. Pump tests were undertaken here and groundwater samples were taken (from 3 boreholes here) and analysed in order to inform the baseline conditions presented in the EIAR. Furthermore calculations were undertaken to estimate the effects of excavations on the groundwater for every station including Charlemont (refer to Table 19.35 Table 19.41 and Charlemont subsection under section 19.5.3.6.</p> <p>As explained by EIAR Appendix 5.17, section 4.7, no external dewatering (outside of the site boundaries) will be permitted during the construction of the station boxes, that increases the impact due to settlement on others, beyond the natural ground water fluctuation. Any settlement due to the short-term lowering of the water table outside of the station box will therefore be constrained to within the site boundaries.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                           |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 18                                                                      | 4.5 Phasing & Programme   | 21       | <p>The length of time that the residents of Dartmouth Square West have to endure is not temporary with reference to the EIAR Guidelines (EPA 2022). The EIA Directive requires a project to describe the likely significant effects, including the duration and frequency of effects. Table 3.4 of the EIAR Guidelines sets out definitions, which the introduction and project description suggests have been used. See table below.</p> <p>It is clear the duration of the impacts fall within a medium-term effect as they last between seven to fifteen years. This is length of time is intolerable for any resident on Dartmouth Square West.</p> <p>We also contend that this is a significant inadequacy in the EIAR. The duration of the effects in accordance with the guidelines are not given in any of the relevant chapters in so far as they relate to Dartmouth Square West.</p>                                                                                                                                                                                                                                                          | <p>TII do not agree that the duration of impacts have not been assessed. As described elsewhere, the works are undertaken in a series of stages to construct the station, while reducing the impact on Charlemont residents. The assessment undertaken in the relevant chapters of the EIAR is detailed and comprehensive and reflects the different stages of construction and the effects resulting. As a result, effects are described in terms of the duration of these effects, rather than an overall duration for the whole of the construction phase which would be inaccurate. The most impactful construction activities at Charlemont in terms of settlement, noise, vibration and traffic (piling, station build and excavation) will occur in the first 4 to 5 years of the scheme and therefore TII do not agree that the "duration of the impacts fall within a medium term effect as they last between seven to fifteen years". All of these impacts, including the planned closure to vehicle traffic along Dartmouth Road have been assessed and mitigation proposed in the EIAR.</p> <p>Please note that for each of the impact assessment chapters in the EIAR, the likely significant effects, including the duration of these effects are presented as per the EIAR Guidelines definitions. Further descriptors of the works, including a programme of the construction phase for each construction compound is presented in Appendix A5.2.</p> |
| 19                                                                      | 4.6 Hours of Operation    | 23       | <p>It can be seen that there will be significant 24 hour working 7 days a week involving the TBM activities, construction of the evacuation tunnel and associated SCL lining and station works themselves. There will also be weekend working, which is all in addition to the standard 5.5 day working week. This standard working day is Monday to Friday 07:00 hrs to 19:00 hrs (12 hours) and on Saturdays 07:00 hrs to 13:00 hrs (6 hours). It is quite evident that the works undertaken outside of this standard work week are going to be extensive and ongoing given the extent of works required in relation to station construction, site clearance, tunnel construction and MEP station works. This is effectively going to a 24/7 construction for a significant period of time over the 9 years of the project.</p> <p>Given that the development is within a settled residential neighbourhood and very close to all the houses on Dartmouth Square West, this will be an intolerable level of interference in amenities with a loss of sleep, general disturbance and psychological impacts resulting in a detriment to human health.</p> | <p>Please refer to response (4) that explains with the exception of some temporary disturbance (c. 2 weeks) resulting from the TBM passing, all other activities are not predicted to cause significant impact after mitigation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 20                                                                      | 4.7 Construction Compound | 23       | <p>The laneway to the rear of the houses on Dartmouth Square would be taken into the construction compound for a period of 9 years. This will bring all noise and construction activity right up the rear boundary walls of the residents' properties. This relationship alone will result in significant and profound impacts arising from the construction phase.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>The laneway will not be taken in to the construction compound for the a period of 9 years. Access to the laneway to the rear of the Dartmouth Square West properties will be maintained with the exception of a 33m long section which will be occupied for a period of up to 6 months to facilitate construction of the station box.</p> <p>Please refer to response (4) that explains with the exception of some temporary disturbance (c. 2 weeks) resulting from the TBM passing, all other activities are not predicted to cause significant impact after mitigation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 21                                                                      | 4.7 Construction Compound | 24       | <p>The above sequencing diagram illustrates how the project accepts that the station box constructed as part of the Two Grand Parade development (Hones Phase 1) is an integral and essential part of the project. Issues in relation to legality of this are considered in further detail in the General Submission prepared on behalf of Dartmouth and Charlemont Community Group.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>Please refer to TII response to the General Submission referred to.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                          |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 22                                                                      | 4.8 Traffic and Transport<br><br>4.8.1 Traffic Modelling and Assumptions | 25       | From a review of Appendix D of Appendix A9.5 it is apparent that local impact assessments of junctions around the stations using LinSing modelling was undertaken with the exception of Charlemont Station. Effectively, it appears as though the entire assessment was reliant on the strategic modelling exercise at this location. Notwithstanding this significant deficiency, certain conclusions can be drawn from the limited assessment which was undertaken. | <p>It is not correct to say that the entire assessment was reliant on the strategic modelling exercise at Charlemont. It is also incorrect to say that a limited assessment was undertaken.</p> <p><u>Local Junction Modelling</u></p> <p>As part of Appendix D of Appendix A9.5 Scheme Traffic Management Plan, the initial criteria used to determine whether local junction modelling was undertaken was as follows:<br/>* Station construction requires new site access onto a key road;<br/>* Station construction would result in a significant alteration to the receiving road environment;<br/>* Station construction would result in a &gt;10% increase on traffic on existing road volumes, special consideration was given to where roads/junctions were subject to the cumulative impact of multiple construction sites (i.e. R108 for example).</p> <p>Local LinSig junction assessments were not undertaken at Charlemont Station as the design indicated it would not meet the criteria.</p> <p>As presented in Appendix A9.5 Scheme Traffic Management Plan, analysis has been undertaken to assess the impact of the traffic management measures on the local road network surrounding Charlemont Station, following a 2-stage assessment process as identified in section 2.4. At the local level the following parameters have been used to assess impacts on general traffic:<br/>* Increase in driver delays at junctions;<br/>* Changes in traffic flows on surrounding streets; and,<br/>* Additional distance travelled due to diversions.</p> <p>Local traffic impacts have been assessed against key performance indicators, including the removal of one or more lanes of traffic, increase in traffic flow of +10% (PCUs), where there is predicted to be a permanent increase in journey length of 500m, or a new signalised junction. Local modelling undertaken at this location indicates that the increased volume of traffic on Grand Parade and Northbrook Road does not translate into any significant increase in driver delay. The largest increase in diver delay of 12 seconds is registered on the westbound approach on Grand Parade to the Ranelagh Road signalised junction.</p> <p><u>Local Traffic Modelling</u></p> <p>Local traffic modelling was undertaken to assess the impact of construction traffic and the proposed traffic management measures on the surrounding road network. Impacts to driver delay and traffic flows were assessed and presented. EIAR Appendix A9.5 Scheme Traffic Management Plan presents the analysis undertaken to assess the impact of the traffic management measures on the local road network surrounding the proposed Charlemont Station during the construction phase. At the local level the following parameters have been used to assess impacts on general traffic and on pedestrians:</p> <ul style="list-style-type: none"><li>• Increase in walking distance/quality of service for pedestrians (through removal of footpath, reduction of quality of service, removal of a pedestrian crossing or relocation of crossing by more than 100m);</li><li>• Increase in driver delays at junctions;</li><li>• Changes in traffic flows on surrounding streets; and,</li><li>• Additional distance travelled due to diversions.</li></ul> <p>The analysis undertaken at this location indicates that the increased volume of traffic on Grand Parade and Northbrook Road does not translate into any significant increase in driver delay. The largest increase in driver delay of 12 seconds is registered on the westbound approach on Grand Parade to the Ranelagh Road signalised junction.</p> <p>During the construction phase, pedestrians will experience a reduction in quality of pedestrian infrastructure and space. The construction site boundary will encroach upon footways in the local area, including the northern side of Dartmouth Road, and the southern side of Grand Parade. However, a temporary signalised crossing will be provided west of the Luas to maintain pedestrian access to and from the Stop. Whilst there are partial closures on Dartmouth Road and Grand Parade, pedestrian movements will be maintained on appropriately sized footways through the area.</p> |

Routing from the site is mainly via the R111 and R110, and routing to the site is via the R810 and R110. Alternative routing options via the R110/Kildare Road and the R110/R811 are also considered, all of which are part of the regional road network. As detailed in Appendix A9.5 Scheme Traffic Management Plan, access will be provided either from Grand Parade or from Dartmouth Road. The localised construction traffic routeing to and from the various site accesses will require consideration of the local traffic restrictions along Grand Parade and the junctions which intersect it. Due to banned movements on Grand Parade, inbound movements to the south site will need to route via the R114 gyratory to the north. When the full closure on Dartmouth Road (lasting up to 30 months) is in place, inbound and outbound traffic will route via Dartmouth Road, R138 and Grand Parade. Local modelling undertaken at this location indicates that the increased volume of traffic on Grand Parade and Northbrook Road does not translate into any significant increase in driver delay. The longest delay occurs eastbound on Dartmouth Road during the AM peak of 14 seconds.</p> <p>Model outputs indicate that there will be a moderate increase in HGV movements during construction at this location. The most significant increase, of just over 2%, will be in both directions along Ranelagh Road/Charlemont Street, which is part of the regional road network. Elsewhere in the area, including local residential streets, increases are significantly lower.</p> |
| 24                                                                      | 4.8 Traffic and Transport<br><br>4.8.3 Access, Loading and Parking | 26       | Appendix A9.5 suggests that the impact upon loading, parking and access is either slight or moderate. This in our opinion under-estimates the impact upon the residents of the properties listed in this submission. The construction sequence drawing illustrates that there would be a lorry holding area on Grand Parade during stages 2-4 of the project. This has the potential to give rise to noise and disturbance, particularly for properties at the northern end of Dartmouth Square West. | <p>As detailed in Appendix A9.5 Scheme Traffic Management Plan, traffic management plans for the construction of MetroLink have been developed to minimise the impact of the Project on road users, and to maintain access to properties. A hierarchical approach to traffic management has been adopted, with pedestrian, cyclist, public transport and commercial needs provisions taking priority over private vehicles, in line with the GDA Transport Strategy.</p> <p>As identified in Appendix A9.5 Scheme Traffic Management Plan, the impact on parking and loading, and local access has been assessed on the following parameters and key performance indicators:</p> <ul style="list-style-type: none"><li>* quantum of on-street parking removed - removal of &gt;30% residential parking with 200m, or removal of &gt;10% commercial parking within 200m;</li><li>* quantum of loading bays and taxi bays removed- reduction of on-street loading facilities within 200m; and,</li><li>* additional distance travelled due to diversions - diversion of over 2km for commercial access.</li></ul> <p>Response (22) and (23) above explains the assessed impact on traffic and pedestrians, and response (4) explains the assessed noise impacts.</p> <p>The lorry holding area referred to is an area that will be temporarily closed off with traffic management during mainly off peak periods as and when required to off load major items of plant and equipment. It is not a permanent holding area and will only be used by exception for the reasons noted.</p>                                                                                                                                                                                                                                                                                                                              |
| 25                                                                      | 4.8 Traffic and Transport<br><br>4.8.4 Pedestrian Movement         | 26       | Pedestrian movement in and around the construction compound will be severely constrained. It appears as though the footpath on the southern side of Grand Parade will be lost, with the HGV lorry holding area. There does not appear to be any pedestrian management proposals to manage this interface. Pedestrian and HGV conflicts will be inevitable, particularly at the entrance and exit to the compound, which is immediately in front of the houses.                                        | <p>Response (24) above explains how the lorry holding area referred to will be used. Safe access to the footpath will be maintained for pedestrians.</p> <p>Appendix A5.1 Outline CEMP details the proposed mitigation and monitoring measures that the contractor(s) will be required to adhere to during the construction phase. As detailed, there will be strict controls and regulations at the site entrances/exits for construction vehicles in order to ensure the safety of other road users and pedestrians. This is standard practice for all construction site accesses and egresses.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Submission No.                                                          |                                                              |          | 041                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| 27                                                                      | 4.9 Impact on Utilities                                      | 26       | It is evident that the diversion of utilities on Dartmouth Road and Dartmouth Square West will have a significant impact upon local access, including pedestrian, cycle and vehicular.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | TII's response to 'Submission 2 (Dartmouth Road)' referred to by section 1.1 of this submission refers to Dartmouth Road. Responses (22) to (25) have covered traffic and transport impacts with regards to Dartmouth Square West.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 28                                                                      | 4.10 Human Health                                            | 26       | <p>Section 10.5.1.2 states in relation to Charlemont:</p> <p><i>"there are a number of residences which are predicted to have significant adverse effects from construction noise during the day as outlined in Chapter 13 (Airborne Noise &amp; Vibration), particularly in relation to the upper floors. Significant mitigation including 4m high hoarding is proposed. While residual effects are possible, these would be during the day and will not apply to night-time and therefore will not affect the potential for sleep. Consequently no human adverse effects are expected and although limited noise impacts are predicted near this receptor no significant adverse effects to human health are predicted".</i></p> <p>This is the only assessment of the impact upon human health. The houses on Dartmouth Square West are not even identified as very highly sensitive receptors. It appears as though this section to the EIAR has not fully reviewed or had regard to the construction phasing with night-time working, ground borne noise and vibrations and other matters raised above. This is considered to be wholly inadequate assessment of the impact upon human health in so far as it relates to the properties on Dartmouth Square West.</p> | Response (4) above explains how the impacts from night-time working will be controlled. With the exception of some temporary disturbance (c. 2 weeks) resulting from the TBM passing all other activities are not predicted to cause significant impact after mitigation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 29                                                                      | 4.11 Interaction of Effects                                  | 27       | Again we consider it to be wholly inadequate as it fails to adequately address the interactions between air borne noise and vibrations, ground borne noise and vibrations, traffic impacts, visual impacts (e.g. of the hoardings) and human health. All of these effects come together in an interaction which significantly impacts upon the amenities of the residents listed as part to this submission.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | TII disagree with this statement. Chapter 29 of the EIAR presents a comprehensive and detailed assessment of a number of interactions of environmental topics. In Table 29.1 of the chapter the topics that are deemed to interact with each other significantly are set out. It is also worth noting that the Chapter states that <i>"Some of the environmental topic assessments within this EIAR already address impact interactions. For example, Chapter 11 (Population &amp; Land Use) provides an assessment of effects on community amenity, which relates to the interaction of impacts on air quality; visual amenity; traffic and transport; and noise and vibration. Furthermore, Chapter 10 (Human Health) describes and assesses how a combination of impacts on health determinants (air quality; noise and vibration; community amenity; traffic and transport) can interact and influence health outcomes."</i> It can be observed from the assessment presented in the EIAR that impacts on Dartmouth Square West properties are not predicted to be significant once mitigation measures are in place for the construction phase. As a result, the potential for interactions is limited as outlined in Chapter 29 of the EIAR. However, having regard to noise, where residents consider that their circumstances merit additional mitigation measures, these can be applied for as per the process outlined in Appendix A14.6 Airborne Noise & Groundborne Noise Mitigation Policy. |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 30                                                                      | 5.2 Noise and Ventilation<br><br>5.2.1 Ventilation - Description | 29        | The proposed over track ventilation system and smoke system gives rise to impacts that have not been properly assessed in terms of noise and air emissions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | EIAR Chapter 13, sections 13.2.3.2 and 13.5.3.2.3 recognise that ventilation systems if not designed and mitigated effectively are potential noise sources. Section 13.6.2.3 outlines the detailed considerations that will be included in the design to ensure that the ventilation systems do not exceed limits as per BS 4142, including:<br><br>• Reduction of induct flow rates;<br>• Reduction of elements in the airflow;<br>• In duct attenuators;<br>• Orientation of grilles and louvres away from sensitive receptors;<br>• Acoustic louvres; and<br>• Anti-vibration mountings and couplings will be incorporated into the design to control vibration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 31                                                                      | 5.2 Noise and Ventilation                                        | 30 and 31 | 5.2.2 Ventilation Assessment<br><br>Ventilation is an important element of the design and workings of the tunnel, for instance in relation to maintaining adequate levels of moisture in the air and to air quality. Yet it does not appear that it was subject of a full assessment. In fact, it will be subject to 'further design development'. Section 13.5.3.2.3 of the EIAR indicates that an acoustic study was undertaken to assess the proposed ventilation strategy. This important referenced study is not included as an appendix to the EIAR.....<br><br>We would emphasise here that specific noise levels from ventilation from ventilation systems have not been assessed as part of this EIAR but rather would 'be calculated as part of the further design development.' Effectively the impacts upon the houses in Dartmouth Square West of the ventilation systems illustrated on the figure above have not been assessed.<br><br>5.2.3 Ventilation - Observation<br><br>It should be noted that ventilation is also not an element considered under the alternative chapter. There are different technologies that could be used for ventilation, the location of fans and vents could be different, yet no alternative was considered.<br><br>It is queried why noise that is continuous is not assessed as part of this EIAR and may be assessed as part of future iteration. There is no indication that this would be subject of a consultation with potentially affected parties unless this is clearly specified in a condition of a potential grant of the railway order. | As outlined in Section 13.5.3.2.3 of the EIAR the development of the ventilation design included consideration of noise emissions whereby potential noise sources from the ventilation systems were identified as the ventilation shafts and grilles at ground levels. During a tunnel emergency situation noise levels at the external grilles would be elevated. However these noise levels would be below 55dB LAeq at 10m distance. It was considered that in emergency cases this level of noise was acceptable. It should be noted that there is no "missing study" and that the reference to an acoustic study is part of the "preliminary design development " for the project which is summarised in Chapter 4 and Chapter 6 of the EIAR.<br><br>The assessment of ventilation systems has been assessed in line with best practice for this type of fixed installation and as is normal will be further refined as the design develops. The observer has not identified any failure to adhere to best practice guidelines in the assessment, which has demonstrated that the ventilation can be provided at this location within noise thresholds consistent with residential amenity. It is anticipated that adherence to those thresholds will be a condition of the RO as standard.<br><br>In that regard, Section 13.2.6.2.4 of Chapter 13 of the EIAR states that noise level from all fixed installations (which includes ventilation plant from stations) will be limited to not exceed an operational noise level of 50 dB LAeq,16hr during daytime periods and 45 dB LAeq,8hr at noise sensitive buildings to achieve acceptable internal noise levels with windows open. The section also notes that in areas where background noise levels (expressed using the LA90 parameter) are below the fixed noise limits above, there is potential for the operation of a new noise sources at this level to be audible and to generate potential significant effects, depending on the magnitude above the background noise level. Therefore, when considering the potential impact of the noise emissions from operational plant associated with the proposed Project consideration will also be given to the British Standard BS 4142 (BSI 2014 +A1 2019).<br><br>Background noise levels measured at Location UT52 to rear gardens of Dartmouth Square. This value was used as a more conservative estimate of the background levels of noise in the area. The measured background levels here are below the fixed limits above (Table 13.30, Chapter 9 of EIAR), and hence in line with the EIAR noise design criteria for fixed installations, the design of operational plant will also be undertaken in line with BS 4142: 2014 + A1 2019 to ensure no significant noise impact arises as a result of the operational phase plant items. The operational noise criteria for this source is therefore largely dependent on the most up to date and accurate prevailing background noise level. Given the fixed items of plant will not be installed until some 8 years post project commencement, the background noise environment will be resurveyed at the time of the design development to ensure the most up to date information informs the design, specific plant selection and mitigation to comply with the noise criteria set within the EIAR, which forms part of the Railway Order.<br><br>This will be undertaken to determine the permissible increase above the prevailing background noise level to avoid any adverse noise impact in accordance with the standard. As discussed, this approach is set as part of the criteria proposed for the project and hence forms part of the proposed railway order.<br><br>Due to ongoing design development of the systems under consideration here, it is premature to define the specific attenuation measures for noise control until the specific make, model and size of the units is procured. This information alongside the most up to date background noise levels will then inform the acoustic design study at each ventilation location in line with best practice. Notwithstanding, the resultant noise impact will be not significant at the closest noise sensitive locations. |

| 32                                                                      | 5.2.5 Train Operations - Assessment | 33       | The assessment indicates that there is no significant impact upon Dartmouth Square West. However, the precise point of assessment is not provided. | <p>With regards to the noise of operating rail infrastructure, EIAR Chapters 13 and 14 present a comprehensive and detailed assessment of operational airborne and groundborne noise and vibration. No residual noise impacts are identified at this location during operation. The calculated rail noise levels across the proposed Project are not significant in terms of any widespread community disturbance and result in a not significant to slight impact when added to the prevailing noise environment.</p> <p>Appendix A14.5 provides building specific outputs of noise and vibration modelling, for Dartmouth Square West refer to pages 95-98.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 33                                                                      | 5.2.6 Train Operations - Observation | 33       | <p>It is queried why only train rolling have been accounted for in the assessment of groundborne noise at operational stage. As demonstrated in the preceding section, there are other elements that should have been assessed, specifically ventilation. Ventilation, train rolling and the use of the PAVA system should be cumulatively assessed in accordance with the requirements of the EIA directive to provide a more accurate picture of operational noise levels.</p> <p>By way of comparison, we refer to the noise impact assessment prepared as part of the Crossrail Project.....We note the following project elements were considered as part of the assessment of noise levels arising from the operational phase.....</p> <p>In summary, there is a variety of potential sources of noise which could arise from the operational phase. Either these were overlooked by the applicants or scoped out. If the latter applies, an explanation should be provided.</p> <p>At a minimum, noise arising from ventilation and traffic should have been considered as these are measurable. Given that underground metro systems are common in Europe, where the EIA Directive also applies, it is hard to comprehend why the operational noise assessment is so scant and includes so little information.</p> <p>The drawings indicate drop-off point on Grand Parade. There is a further one indicated on the new internal link road. It is evident from drawing ML1-JAI-SRD- ROUT-XX-DR-Z-02090 - Proposed Street Level Design that cars will use this new link as a rat-run to avoid the Ranelagh Road / Grand Parade junction. It is queried why no traffic noise assessment was undertaken and was not considered in cumulation with other operational noise.</p> <p>We query why the assessment of predicted noise levels at operational stage has been narrowed to include sole consideration for train rolling but no other sources of noise. The results presented by TII are not realistic and do not comply with the requirements of the EIA Directive which require that impacts be assessed cumulatively. We also contend that by excluding much of the potential sources of noise, the results presented are misleading and inaccurate.</p> | <p>Section 13.5.3.2.4 of the EIAR notes that the majority of station structures for the proposed Project will be fully underground. Any breakout of noise from the station areas is likely to be via the access stairwells and escalators to ground surface.</p> <p>At Charlemont, the station platform is 22m below ground level and hence noise from PAVA systems at platform level will be significantly attenuated with distance and the screening by the intervening concourse and mezzanine levels between the ground level and the platform.</p> <p>The submission makes reference to the cross rail assessment of rail noise sources, the Cross rail document scopes out a specific assessment / calculation of noise from PA systems based on the following:</p> <p>“Noise from PA systems at Stations and Depots – This is scoped out on the basis that ..... where there is to be a new PA installation, where there was none previously, technology is available to avoid a significant impact or disturbance arising. This is also necessary as local authorities use nuisance control powers to limit noise from PA systems”</p> <p>Section 13.5.3.2.4 of the EIAR explains that the design of the PA system will follow the following requirements:</p> <ul style="list-style-type: none"><li>• The PA system shall be designed to minimise noise disturbance to the specific surroundings. An acoustic simulation shall be developed to check audio levels at a later stage of the design; and</li><li>• Audio levels shall be simulated to ensure correct intelligible levels and audio distribution throughout the stations</li></ul> <p>The best practice design principles which will be employed as part of the PA system design will have full regard to minimising noise breakout from these systems to the surrounding environment.</p> <p>Specific noise calculations are not undertaken of this source as it will not generate any audible or significant noise impact once operational in line with best practice applied to other similar large scale rail projects, including Cross Rail.</p> <p>Airborne noise from trains within the tunnel and station will not be audible at ground level. The principal noise source associated with operational trains is groundborne noise which has been fully assessed in Chapter 14. No significant impacts are determined.</p> <p>As discussed above, noise from PA systems will be substantially screened due to the platform depth and the system design. There are no significant impacts associated with this source.</p> <p>Escalators will provide access between ground level to station platform level. Mechanical elements associated with escalators are housed below ground and are fully enclosed. The station entrance is enclosed by a roof structure and walls around the perimeter at ground level. The escalators set back into the station. Notwithstanding, operation of escalators do not generate any notable noise sources during operation and will not be audible above the prevailing noise environment to the adjacent residential properties.</p> <p>A traffic noise assessment has been undertaken for the full extent of the study area which includes the surrounding road networks of Charlemont Station. Section 13.5.3 of Chapter 9 of the EIAR discusses the noise impact assessment associated with operational phase traffic on the surrounding road network. The change in road traffic noise is determined to be negligible and not significant as a result of the proposed development. Also please note that no 'drop-off' areas are provided with the exception of a proposed drop-off on Grande Parade for persons of restricted mobility only.</p> <p>The drawing referred to presents a road across the finished station between Dartmouth Road and Grand Parade. The intent of this road is to provide access to the Union Development only and will not allow through access. The road will be barriered and have controlled access, be speed restricted and traffic calmed, and be treated as a shared vehicular pedestrian space. This will prevent it from being used as a "rat-run".</p> <p>Chapter 13 Airborne noise and vibration includes the assessment of changes in road traffic noise resulting from the project in Section 13.5.3.1.</p> <p>In summary, the key potential sources of airborne noise associated with the operational phase is set out in Chapter 9 of the EIAR.</p> |

| Submission No.                                                          |                                                                 |          | 041                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 34                                                                      | 5.2.7 Public Address (PA) Systems                               | 33       | Section 13.5.3.2.4 of the EIAR relates to PA systems. The majority of station structures for the proposed Project will be fully underground. Any breakout of noise from the station areas is likely to be via the access stairwells and escalators to ground surface. This is a significant concern for the residents of Dartmouth Square West as they reside directly next to the main entrance where PA announcements for 19 hours a day can have the potential to significantly impact their amenities. This is not assessed in the EIAR.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Please refer to response (33) above regards PA systems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 35                                                                      | 5.3 Hours of Operation                                          | 33       | <p>MetroLink is planned to operate 19 hours per day, 365 days a year. It is planned that there would 20 trains per hour at a frequency of three minutes between trains. Stations would be opened from 5.30 am to 00.30 every day of the year.</p> <p>Further to comments on passing traffic, the operating hours mean that effectively, the new metro street running parallel to the station will become some form of thoroughfare at least 19 hours per day.</p> <p>The drawing no. ML1-JAI-SRD-ROUT-XX-DR-Z-02090 - illustrates the proposed street level design. It is also not clear how the station concourse and area will be physically closed to the public outside of operating hours. Metallic rolling shutters are noisy. Both of these could affect the residential amenities of nearby neighbours.</p> <p>We would also note that the Luas Green Line with which the Charlemont station interfaces closes at 11 pm on Sunday. Yet, it is proposed that Metro will operate the interchange for an extra hour when there is no Luas to interchange to.</p> | <p>Response (33) above explains how access will be controlled to the new road that connects Dartmouth Road and Grand Parade.</p> <p>The station entrances are enclosed with gates, there are no roller shutter doors proposed at the station entrances. It will also be a contractual requirement placed upon the MetroLink operator to act responsibly and considerately, and be a 'good neighbour' when operating the station.</p> <p>The operating hours for Luas services is not a matter for this railway order submission, however TII expect that once the scheme is operational the operating hours of both services will be closely co-ordinated by the National Transport Authority.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 36                                                                      | 5.4 Traffic and Transport<br><br>5.4.1 Modelling and Assessment | 35       | <p>No local area modelling is undertaken of the impact upon the road network around the Charlemont Station. The assessment done as part of the EIAR (Appendix A9.2-B Traffic and Transport Assessment- Charlemont Station) fails to have regard to the most up-to-date bus connects plans. As with the construction phase, the assessment relies on a strategic assessment that does not take into account the local impacts. The figure below illustrates the road layout upon completion.</p> <p>The development creates a significant new link in the road network through the site linking Grand Parade with Dartmouth Road and Ranelagh Road. This creates a rat-run which will effectively bypass the Ranelagh Road/Grand Parade signalised traffic junction. This traffic movement has not ben assessed.</p>                                                                                                                                                                                                                                                   | <p>It is not correct to say no local area modelling has been undertaken. A VISWALK local model has been developed for this station, assessing the impact of the new pedestrian crossing on Grand Canal on the road network. The model demonstrates that it will have a minimal impact on driver delay on this road. In overall terms, the Charlemont station will provide for improvements to the public transport network resulting in decreases in private car usage/trips, as evident in the forecasted modal shift, and as such further local traffic or junction modelling was not undertaken.</p> <p>Additionally, as detailed in Appendix A9.2-B Traffic and Transport Assessment - Charlemont Station, the Project has been assessed in two alternative future scenarios.</p> <p>Scenario A includes (but is not limited to) Bus Connects Dublin Area Bus Network Redesign, and Bus Connects Fares and Ticketing.</p> <p>Scenario B includes (but is not limited to) Bus Connects Core Bus Corridors (planned 16 corridors).</p> <p>The anticipated future receiving environment at this location with Bus Connects Network Redesign services in place, is presented in section 3.2 of this document, with the assessment of impacts during the operational phase presenting impacts in both Scenario A and Scenario B.</p> <p>Regards the internal street between Grand Parade and Dartmouth, as explained by response (33) above, the intent of this road is to provide access to the Union Development only and will not allow through access.</p> |

| Submission No.                                                          |                                                                          |          | 041                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |

| 37                                                                      | 5.4 Traffic and Transport<br><br>5.4.2 Drop-Off, Pick Up and Interchange | 35       | There is very limited drop-off or pick up facilities or proper interchange for taxi or future bus services. Given that the location of integration with bus services in this suburban location, it is likely that there will be a significant demand for such interchange facilities.                                                                                                                                                                                                                                                                                                                                                         | <p>The Station is intentionally designed with only one drop-off for persons of restricted mobility only. As detailed in EIAR Chapter 6, MetroLink Operations and Maintenance, the proposed Project has been designed to ensure maximum interchange with other modes of transport, specifically more sustainable modes of transport such as walking, cycling and public transport, to discourage the use of private vehicles. Charlemont Station provides a short interchange distance to the Green Line, as well as being within a 5-minute walk of BusConnects proposed A Spine and E Spine routes. The provision of drop-off facilities have been considered during the design process with such facilities only provided at locations that are less likely to encourage unnecessary short journey car trips in the local area.</p> <p>During the operational phase, the model zones around Charlemont Station forecast a reduction in Car mode share, with a reduction of between 400 and 800 car trips over the 12hr period. Transport modelling presented in EIAR Chapter 9, Traffic and Transport also indicates that the majority of passengers boarding and alighting at Charlemont will transfer from/to other forms of public transport, and therefore will not require drop-off facilities.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 38                                                                      | 5.4 Traffic and Transport<br><br>5.4.3 Pedestrian Movements              | 36       | The figure below illustrates the level of pedestrian activity in and around the northern entrance to the station. This will give rise to a significant amount of activity in an around the detriment of residential amenities of those living in Dartmouth Square West.                                                                                                                                                                                                                                                                                                                                                                       | <p>As detailed in EIAR Appendix A9.2-B Traffic and Transport Assessment - Charlemont Station, a microsimulation VisWalk model has been developed for the immediate area surrounding Charlemont Station. The simulation model covers the full extent of the publicly accessible station entrance, including the immediate vicinity of the station entrance at street level. With the new pedestrian infrastructure in place, the model indicates that at the northern entrance, the footways will operate at an acceptable level of service. A reduced level of service is only observed at the pedestrian crossing whilst pedestrians are waiting for the green phase at signals. The model indicates that the strongest flow of passengers will be going west from the northern entrance, towards the Luas interchange and Charlemont Street, with lower flows of pedestrians going east towards Dartmouth Square West.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 39                                                                      | 5.5 Impact upon Amenities<br><br>5.5.1 Anti-Social Behaviours            | 37       | The residents have significant concerns that this major interchange station will attract anti-social behaviour for up to 19 hours a day. This is common with many European capital interchanges. This currently is a relatively quiet residential area that benefits from amenities, but the potential for late night arrivals, taxi pick-ups, drop-offs and anti-social behaviour would disturb these amenities and later the nature of the area.                                                                                                                                                                                            | <p>The interchange will certainly increase the number of people passing through the area, however it is important to note that people will be using MetroLink, similar to Luas as a transport hub, moving quickly in and out of the area. The station will not be a destination attracting people to the area. TII have deliberately designed the Station with minimum set down space (with the exception of a drop-off on Grand Parade for persons of restricted mobility only) or room for taxi ranks so that it does not encourage the Station to be used as a terminus. Furthermore as outlined in Chapter 6 of the EIAR, CCTV will be installed at all stations including Charlemont with monitoring of each station being managed from the Operational Control Centre. This means that in the unlikely event of antisocial behaviour, MetroLink security staff and /or An Garda Siochana will be notified immediately to manage the situation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 40                                                                      | 5.5 Impact upon Amenities<br><br>5.5.2 General Impacts                   | 37       | The overall impact of both the construction and operational phases of the project, in terms of noise, vibration, visual impacts, traffic, HGV movement, construction activity, operational emissions, anti-social behaviour and general activity around the station will be such as to severely and permanently adversely affect the residential amenities of the residents listed in this submission. The impacts will be so severe as to evidently be in material contravention of the Dublin City Development Plan zoning objective for the area, which is Z2: "To protect and/or improve the amenities of residential conservation areas. | <p>The impacts of the proposed project, both during the construction and operational phase have been assessed in the EIAR that accompanies the Railway Order, with mitigation measures proposed where necessary and practicable, to ensure impacts are within acceptable limits, noting that there will be a temporary groundborne noise significant impact when the TBM passes for approximately 2 weeks. For the vast majority of the construction phase and all of the operational phase, the impacts of the Project are consistent with the protection and improvement of the amenities of this residential conservation area. The operation of the project will improve those amenities by improving access to sustainable transport and reducing traffic. The above responses have also addressed in summary the concerns raised by this submission.</p> <p>Regards the reference to the Z2 zoning objective. The zoning under the Dublin City Development Plan 2022 - 2027 for the residential properties in question is "Z2 Residential Neighbourhoods (Conservation Areas)" with an objective to "protect them from unsuitable new developments or works that would have a negative impact on the amenity or architectural quality of the area (See Table 3.11 of the submitted Planning Report). As outlined in Section 4.5.18.6 of the Planning Report, the element of the Project within the Z2 zoning area will affect a below ground area only and will not impact on the amenities or architectural qualities of the area. The majority of the proposed Charlemont Station and all above ground elements are located within the lands zoned Z6 with the objective "To provide for the creation and protection of enterprise and facilitate opportunities for employment creation". The Station has been designed so that it is integrated with the proposed redevelopment of this site by a third party development, and as such, the Station design promotes the zoning objective. The MetroLink station design does not result in any segregation of the area, with no surface barriers or walls proposed.</p> |  |

| Submission No.                                                          |                                                         |          | 041                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                         |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 41                                                                      | 6. PROPERTY ISSUES<br><br>6.2 Compulsory Purchase Order | 38       | We would point out that this submission highlights that there will be a significant loss of amenity of the properties which are the subject of the CPO and hence there will be a diminution in the value of retained land.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | The loss of amenity referred to is temporary. TII do not agree that the development will have a long term and permanent negative affect on the value of property. In fact there is evidence to suggest that property values will in fact increase in close proximity to public transport infrastructure and that local residents will greatly benefit from having a world class metro system providing access to the city centre, airport and north city at their door step. |
| 42                                                                      | 6. PROPERTY ISSUES<br><br>6.3 Rear Lane                 | 38       | <p>Under the proposed railway works of Dartmouth Square, the plans demarcate proposed permanent acquisition (ML 70-A3). The Metrolink proposal includes permanently acquiring a significant portion of the laneway from no. 11 to 15 inclusive with approximately 30% of the laneway width remaining at this location. This leaves c.800mm of space between the proposed permanent acquisition site area and the garden walls to properties no. 11-15 inclusive. In addition, the remainder of the laneway is due to be a temporary site.</p> <p>On 29th October 2019, the National Transport Authority and the National Road Authority Operating as Transport Infrastructure Ireland entered into an agreement with a number of residents of Dartmouth Square West. In entering this agreement, TII agreed to a position in advance of submitting this application.</p> <p>The Application as proposed is in breach of the agreement. In the circumstances, it is submitted that TII ought to amend the application to ensure it complies with their obligations under this agreement.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | TII will comply fully with the terms of agreement entered into with the residents of Dartmouth Square West.                                                                                                                                                                                                                                                                                                                                                                  |

PROPERTY ISSUES<br><br>6.4 Properties                | 38       | The owner of no. 1 Dartmouth Square has not been named in the book of reference. However, the occupier has received the documentation issued by TII.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | The Occupier (s) of 1 Dartmouth Square has been acknowledged in the book of reference.                                                                                                                                                                                                                                                                                                                                                                                       |
| 44                                                                      | 6. PROPERTY ISSUES<br><br>6.5 Devaluation of Properties | 39       | <p>During the construction stage, there will be a severe impact upon property values. Section 21.3.5.1 of the EIAR states:</p> <p><i>"The value of the properties may be impacted upon by various existing external forces which contribute to the degradation of that property. These can include high levels of noise, vibration, traffic or air pollution".</i></p> <p>There is no assessment of the impact upon value of properties. Section 10.13.4 of the Non-Technical Summary merely states:</p> <p><i>"Existing and planned future properties will benefit from being located in close proximity to a new permanent public transport system. Experience of the effects of the Luas Red and Green Lines on property prices along these lines would indicate that generally residential property values and land values in the study area will increase"</i></p> <p>However, there is no evidence in the documentation to support this. The Planning and Development Act 2000 as amended specifically links the loss of amenity and the devaluation of property as the reason for refusal which excludes rights to compensation. It is only properties that are purchased as a result of the CPO associated with the Rail Order that can benefit from compensation. The State is not in a position to grant permission for development which will devalue property, as there is no mechanism for compensation in these circumstances. To grant permission where there is a loss of amenity, and an associated devaluation of property, would adversely affect the right to enjoy one's dwelling and property rights as protected under the Constitution and the European Convention of Human Rights. The intensity and duration of construction and the ongoing impacts during operation, including the proximity of the Terminus to a number of dwellings, are all likely to impact negatively on the value of the affected properties. The potential loss of part of the rear laneway will also have a major detrimental effect on the amenities of the residents of Dartmouth Square West and value of their properties. There has been no examination to the adverse impacts these proposals will have on the valuation of properties at Dartmouth Square West.</p> | For the reasons noted by the observation and response (41) above, evidence indicates that in the long-term the value of property will increase.                                                                                                                                                                                                                                                                                                                              |

| Submission No.                                                          |                                                                                                     |          | 041                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                                                     |          |                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 45                                                                      | 6. PROPERTY ISSUES<br><br>6.6 Temporary Relocation                                                  | 40       | Effectively some, or all of the residents listed in this submission may have to be temporarily relocated at TII's expense. Indeed, given the 9 year duration of the construction programme, this would effectively be a permanent relocation.                                                              | As noted by response (4) above, on the implementation of noise mitigation measures the residual impacts are predicted to be moderate. However, as outlined in Transport Infrastructure Ireland (TII) Airborne and Groundborne Noise Mitigation Policy (Appendix A14.6) there is a process proposed whereby further mitigation measures can be implemented at individual properties should this be merited.        |

| Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                                                  |          |                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 54                                                                      | SUMMARY & REQUESTED AMENDMENTS<br><br>7.1 Summary of Submission Points<br><br>Construction Phase | 41       | Construction of the intervention tunnel will give rise to significant noise and disturbance, 24/7 during the period of its construction.                                                              | <p>There is an error in Table 14.13 of the EIAR where it is outlined that drill and blast will be used at "all underground stations and intervention tunnels". A number of amendments were made to the proposed construction methodology for the intervention tunnel and these were assessed in the EIAR. These amendments included moving the intervention tunnel deeper and excavating the tunnel by mechanical means only. Both of these interventions were proposed to reduce potential effects arising from the construction of the intervention tunnel. The assessment of the mechanical excavation for the evacuation tunnel and intervention tunnel has been carried out, and is included within Chapter 14 of the EIAR. The assessment of groundborne noise and vibration from mechanical excavation for a number of representative receptors is presented in Table 14.31 and Table 14.33, with predictions for a greater number of receptors in the area presented in Appendix 14.5 Groundborne Noise and Vibration Blasting Modelling Results.</p> <p>Owing to the nature of the sprayed concrete intervention tunnel construction and to ensure a safe and stable method of excavation, and minimising settlement impact, the sprayed concrete intervention tunnel construction will be undertaken 24 hours per day, seven days per week. The groundborne noise and vibration arising from mechanical excavation of the tunnel will not exceed threshold limits. During night-time support works at the surface, an acoustically clad steel framed building will be used within the compound to control airborne noise breakout to surrounding sensitive properties. All concrete to support the sprayed concrete tunnel lining operation will be batched on site within the acoustic enclosure and will not require night-time delivery. Please also refer to response (4) above.</p> |
| 55                                                                      | SUMMARY & REQUESTED AMENDMENTS<br><br>7.1 Summary of Submission Points<br><br>Construction Phase | 41       | The construction phase will last over 9 years. This is a medium-term effect which has not been properly considered in the EIAR.                                                                       | <p>This statement is incorrect. Please refer to Table 2.3 of Chapter 2 of the EIAR where the durations of effect utilised in the analysis throughout the EIAR are referenced. However, please note that the assessment in Chapter 13 has noise and vibration impacts over shorter durations to reflect the duration of the actual activity i.e. excessive noise effects resulting from the construction will not last 9 years, but will last as long as the "noisy activity" lasts. These durations are outlined in Chapter 13 of the EIAR.</p> <p>Please also refer to response (18) above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

HGV traffic on quiet residential roads will have a severe impact upon amenities. | Please refer to response (23) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 59                                                                      | SUMMARY & REQUESTED AMENDMENTS<br><br>7.1 Summary of Submission Points<br><br>Construction Phase | 41       | There will be a severe impact upon human health which has not been properly assessed.                                                                                                                                             | <p>The Human Health Assessment is presented in Chapter 10 Human Health. This chapter identifies human beings as being sensitive due to their age, health status or for other reasons. But as outlined in section 10.3.4 of the Chapter 10 of the EIAR, it is neither possible or necessary to identify every sensitive receptor along the proposed alignment. The approach used in the assessment is to present residences (including the ones listed), schools, workplaces and places of worship as "highly sensitive" as identified in section 10.3.4.2. This EIAR has had full regard to the construction phasing, including night time working, and groundborne noise and vibration etc. as the health assessment is based on the modelling and assessment outputs of a number of chapters (see Table 10.3). These are Chapter 9 Traffic and Transport, Chapter 11 Population and Land Use, Chapter 12 Electromagnetic Compatibility and Stray Current, Chapter 13 Airborne Noise &amp; Vibration, Chapter 14 Groundborne Noise &amp; Vibration, Chapter 16 Air Quality , Chapter 18 Hydrology, Chapter 19 Hydrogeology and Chapter 20 Soils and Geology.</p> <p>It is not correct to say "There will be a severe impact upon human health which has not been properly assessed." EIAR Chapter 10, Human Health has identified that there may some residual effects after mitigation measures due to the noise and vibration arising from mechanical excavation, TBM advancement and proposed blasting resulting in "annoyance to users, but no health effects".</p> |
| 60                                                                      | SUMMARY & REQUESTED AMENDMENTS<br><br>7.1 Summary of Submission Points<br><br>Construction Phase | 42       | The proposed mitigation measures do not mitigate the profound impact that the proposed scheme will have on residents of Dartmouth Square given the associated scale and time period of the proposed development.                  | <p>The analysis presented in the EIAR does not support this statement. No profound impacts have been identified for the residents of Dartmouth Square and mitigation measures proposed will be effective at reducing the impacts on these properties and in general terms impacts will be associated with the construction phase only. See below for more details of relevant analysis:</p> <p>(1) EIAR Chapter 9 Traffic and Transport outlines that after mitigation measures have been implemented there will be a residual long term slight impact on pedestrians as there will be more pedestrians in the area. However the use of existing footpaths will be at "acceptable comfort levels". There will be no other residual impacts either in the construction or operational phase related to traffic or transport.</p> <p>(2) EIAR Chapter 10 has identified that from the Human Health perspective, there may some residual effects after mitigation measures due to the noise and vibration arising from mechanical excavation, TBM advancement and proposed blasting resulting in "annoyance to users, but no health effects"</p> <p>(3) These effects are also addressed in EIAR Chapter 13 where mitigation measures are proposed including 4m high noise barriers and further proposed mitigation in line with the Airborne and Ground borne Noise Mitigation Policy at 10 &amp; 11 Dartmouth Square. On the implementation of these measures the residual impacts are predicted to be reduced to moderate.</p>                                           |

|                                                                         |                                                                                                 |          | Response (60) continued.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | (4) EIAR Chapter 14 assesses ground borne Noise and Vibration and identifies a residual impact on Dartmouth Square West of significant during the advancement of the TBM. However, this will be for a limited duration and residual effects from other construction phase activities are not considered significant following the implementation of mitigation measures.<br><br>(5) EIAR Chapter 16 Air Quality identifies that there will be no significant effects once mitigation measures are implemented.<br><br>(6) EIAR Chapter 21 Land Take has identified a significant effect on Dartmouth Square properties due to the requirement for temporary land take for construction and for the erection of noise barriers. However this land will be reinstated following the completion of the construction phase.<br><br>(7) EIAR Chapter 26 of the EIAR identifies the potential for impacts on Dartmouth Square ACA due to enabling works entailing the redirection of utilities. However it is proposed that these works will be managed in accordance with a method statement to be prepared by the Project Conservation Architect in order to minimise any effects on the historical granite steps, kerbing and lamp standards. The impacts following the implementation of these mitigation measures was considered to be slight.<br><br>(8) EIAR Chapter 27 identifies potential landscape and visual effects after mitigation associated with the construction phase. These are moderate and negative for the effects on the landscape amenity and slight and negative for the visual effects. |

| 64                                                                      | SUMMARY & REQUESTED AMENDMENTS<br><br>7.1 Summary of Submission Points<br><br>Operational Phase | 42       | The mitigation measures proposed do not meaningfully mitigate the significant adverse impacts during operation for residents of Dartmouth Square West                                                                                                                                                                                         | <p>The identified impacts associated with the operational phase are limited to impacts associated with the movement of increased numbers of people in the area, but these impacts are not considered significant. Chapter 9 Traffic and Transport outlines that after mitigation measures have been implemented there will be a residual long term slight impact on pedestrians as there will be more pedestrians in the area. However the use of existing footpaths will be at "acceptable comfort levels". There will be no other residual impacts either in the operational phase related to traffic or transport. Please also refer to responses (36) to (38). In addition, no significant residual negative impacts are anticipated on the Population and Land Use from the operation of the proposed Project as outlined in Chapter 11 Population and Land use. With regards this submission and the observations raised:</p> <p>Responses (30) and (31) - explains how potential noise and ventilation impacts will be managed and mitigated.</p> <p>Response (32) - explains why rail noise levels will not have a significant impact.</p> <p>Response (33) - explains how noise from PA and escalators will be managed so that it does not have a significant impact, and that traffic noise has been assessed and is not predicted to be significant.</p> <p>Response (39) - explains how the risk of anti-social behaviour will be managed.</p> <p>Following the incorporation of the mitigation measures into the design of the proposed Project and implementation on an ongoing basis throughout the lifecycle, the residual effects that will arise during operation will be permanent and positive.</p> |

| Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 68                                                                      | SUMMARY & REQUESTED AMENDMENTS<br><br>7.2 Requested Amendment and Conditions | 42       | <p>The parties to this submission fully support the requested amendments in the General submission in relation to the omission of the section between Tara Street and Charlemont and the making of a separate railway order application for a section between Tara Street and St Stephens Green. This element should effectively be refused for the reasons outlined above.</p> <p>The EIAR is wholly inadequate and does not properly assess the impacts of the development in accordance with the requirements of the Directive.</p>                                                                                           | <p>TII do not consider it is correct or appropriate that the MetroLink alignment south of the proposed Tara Station should be omitted for the reasons explained by response (1) above, noting also that a scheme which terminates at Tara Street would not be consistent with the Transport Strategy for Greater Dublin Area (2022-2042). In addition any decision to terminate the scheme at Tara will significantly impact on the overall viability and benefits of scheme.</p> <p>However, while there is a strategic need for a MetroLink station at Charlemont, TII recognise that the short-term implications for local residents will be significant as the scheme progresses through the construction stage. TII are committed to working closely with local residents to ensure the required mitigation measures are put in place.</p> <p>Finally, TII note that throughout this submission MacCabe Durney Barnes have frequently referred to the Railway Order application, and in particular the EIAR as being inadequate. TII do not accept this, and consider that the level of detail not only submitted as part of the Railway Order application, but the particular responses provided above to individual statements and observations made demonstrate the detailed consideration that has been applied to the submitted MetroLink Railway Order application.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 69                                                                      | SUMMARY & REQUESTED AMENDMENTS<br><br>7.2 Requested Amendment and Conditions | 42       | <p>Requested amendments and conditions are as follows:</p> <p>1. Properly designed drop-off and pick up on Grand Parade.</p> <p>2. Apply appropriate and binding conditions in relation to noise and vibration limits based upon impacts upon internal noise and not external facades.</p> <p>3. Restrict construction hours to 07:30 hrs to 18:00 hrs Monday to Friday, 0:800 hrs to 13:00 hrs on Saturday with no working outside of these hours., No night-time working should be permitted.</p> <p>4. The application should be consistent with the agreed terms between TII and the residents of Dartmouth Square West.</p> | <p>1. Please refer to response (37). The provision of a drop off at this location is proposed for PRMs only. In this context, it is proposed that the number of drop offs will be minimal and as such will not impact traffic movements significantly. TII do not want to introduce further drop off points as they would attract vehicular traffic to the area which would potentially cause traffic congestion.</p> <p>2. Chapter 13 of the EIAR does specify the use of appropriate noise limits supported by a monitoring programme to ensure that limits are adhered to (at the facade of nearby sensitive receptors). Please refer to the response (3) that explains why the use of the external facade is appropriate for the assessment.</p> <p>3. Response (4) explains the working hours proposed by the Railway Order application and how both day time and night time works will be managed. The rational for night time working is also explained, noting all planned night-time work activities will have to be undertaken, controlled and mitigated under the detailed Construction Environmental Management Plan to maintain impacts below the agreed construction noise thresholds.</p> <p>Also as noted by response (4), upon the implementation of mitigation measures the residual impacts are predicted to be moderate for day time working. In addition, as outlined by the Transport Infrastructure Ireland (TII) Airborne and Groundborne Noise Mitigation Policy (Appendix A14.6) there is a process proposed whereby further mitigation measures can be implemented at individual properties should this be merited. It is therefore not considered necessary to reduce the proposed day time working hours of Monday to Friday 07:00 to 19:00, and Saturday 07:00 to 13:00 or unreasonable to be able to undertake work during these core day time hours whilst still providing residents with quiet time during MetroLink construction.</p> <p>In addition progressing this work 24 hours a day will ensure that the construction phase is completed much more quickly, thereby reducing the duration of effect on nearby sensitive receptors.</p> <p>4. Please refer to response (42) above.</p> |

Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                    |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 1                                                                                                                                                                                                                                  | 2. Executive Summary                               | 2        | <p>The Charlemont and Dartmouth Community Group (CDCG) is in support of the overall Metrolink project. However, we believe that the section of the project between St. Stephen's Green and Charlemont is a €650m duplication of infrastructure that is not justified on many very important grounds.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>The Board is not responsible for any decisions in relation to the funding the Project. It is solely responsible for assessing whether the Project is consistent with proper planning and sustainable development and that its effects on the environment are acceptable.</p> <p>The responsibility for funding the Project lies with the NTA, the Government and ultimately the Oireachtas. It has received all necessary approvals, including under the Public Spending Code for the making of a Railway Order. It will undergo further scrutiny and approvals, including under the Public Spending Code, before it is funded. It is not appropriate for the Board to make findings in relation to value-for-money that are outside its statutory functions and would cut across those arrangements. Members of the public are entitled to make representations to their TDs in relation to the value-for-money of any element of the Project.</p> <p>TII do not agree with this statement that infrastructure is being duplicated given the capacity of the Luas south from St. Stephen's Green is restricted due to on-street running.</p> <p>There is a limit to the potential of the Luas to provide additional capacity in the on-street non-segregated section of the Luas Green Line from Charlemont northwards through the city centre. The nature of this route and the fact that it currently crosses several road junctions (Adelaide Road, Harcourt Street / Hatch Street upper and Harcourt Street / St Stephen's Green south) limit the service to a maximum of 24 trams per hour per direction. The projected demand for this section would require a higher frequency of up to 30 trams per hour and this demand cannot be met with on-street systems (Luas / bus). The interchange between Luas and MetroLink proposed at Charlemont will provide the necessary capacity to address the demand on this corridor and reduce overall travel time for passengers.</p>                                                                                                                                                                                                   |
| 2                                                                                                                                                                                                                                  | 2. Executive Summary<br><br>Compliance with Policy | 2        | <p>It is not transport policy to extend metro to the south at any time prior to 2042. The section of the subject Rail Order Application between St. Stephen's Green and Charlemont represents the first section of such a southern extension and effectively locks-in the replacement of the Luas Green Line. Building south of St. Stephen's Green is premature and is a leftover from a now defunct concept of Metrolink as a Swords to Sandyford megaproject.</p> <p>The NTA/TII has failed to adapt the Rail Order Application to the reality that such a megaproject is not a policy objective at this point in time and it is premature to expensively lock-in decisions about Metro South 2-3 decades in advance of any requirement to do so.</p> <p>The NTA/TII has prioritised a Luas Green Line Tie-in over a fully functioning City Centre Terminus. This means that for the NTA/TII, it is more important to build the Charlemont Metro Station now in order to achieve this potential outcome 2-3 decades in the future, then it is to build a City Centre Terminus now that can connect to multiple modes of transport during the next 2-3 decades.</p> | <p>Since the date of the RO submission, the NTA's GDA Transport Strategy 2022-2042 has been adopted and confirms Charlemont as a station location.</p> <p>The current Transport Strategy for Greater Dublin Area (2022-2042) considers a range of options for the onward extension of MetroLink to meet the demand for travel over the period of the strategy. This includes consideration of the need for the upgrade of the Luas Green Line to metro with a metro extension to Dublin south west, south or south east. Whilst the strategy envisages that further extensions will be delivered after 2042, MetroLink which terminates at Charlemont allows for the possible extension of the metro in all the above directions.</p> <p>The NTA Transport Strategy builds on a significant body of analysis carried out by TII in the consideration of designs, alignments and locations. The location of the southern terminus was determined following a review of options to determine the Emerging Preferred Route (EPR).</p> <p>In the Emerging Preferred Route Report, Charlemont was identified as the last station prior to the tie-in to the Green Luas Line which was intended to be upgraded to Metro standard. as outlined in EIAR chapter 7, decision to terminate at Charlemont instead was driven by three factors:</p> <p>(a) the additional impacts that would be involved in upgrading the Luas south of Charlemont as a result of the proposed adoption of a high degree of automated operations (GoA4);</p> <p>(b) the development of alternatives to accommodate increased capacity on the Luas line south of Charlemont without that upgrade; and</p> <p>(c) Feedback received during the EPR non-statutory consultation.</p> <p>Charlemont Station, is a modification (in response to not upgrading the Luas Green Line to metro) of the preferred Luas Green Line Tie Option 4B and is proposed because:</p> <p>• As noted above, the connection from St Stephens Green to Charlemont / Ranelagh is supported by the previous Transport Strategy for Greater Dublin Area (2016-2035) and the current Transport Strategy for Greater Dublin Area (2022-2042).</p> |

                            |                                                              |          | 042                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|                                                                                                                                                                                                                                    |                                                              |          | Response (2) continued.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <ul style="list-style-type: none"><li>• The proximity of the MetroLink station to the Luas stop at Charlemont provides for a positive customer experience for all users with short interchange distance and due to the proximity, clear wayfinding and high visibility of the interchange, as well as being within a 5-minute walk of BusConnects proposed A Spine and E Spine routes. The interchange arrangements at Charlemont provide for significantly better interchange arrangements compared to an alternative interchange at St Stephen's Green Station. Passengers wishing to interchange between Luas and metro at an alternative St Stephen's Green terminus would face a 500m-walk along a route either through St Stephen's Green park or along the footpath north of the park, which adds significantly to the time for interchange and therefore the overall journey time for passengers and a less positive customer experience for all interchange users. This passenger experience would be reduced further for those with mobility or visual impairments as well as those travelling to/from the airport with luggage.</li></ul> <p>These benefits would not be achieved by a terminus at St Stephen's Green.</p> <ul style="list-style-type: none"><li>• The section of MetroLink route between St Stephen's Green and Charlemont Stations contributes significantly to the overall benefits of the scheme. It serves a significant area of the south city of Dublin and offers enhanced access from the local area to the city centre and a direct connection to Dublin Airport. It serves key trip attractors including residential areas and offices / workplace locations, with high passenger boarding and alighting figures in the peak hours. During the morning peak, at Charlemont station the flows include 1,800 passengers alighting, 2,300 boarding and 1,229 passengers alighting, 2,276 boarding during the evening peak. The passenger numbers contribute significantly to the overall benefits of the scheme and the effect of these benefits outweigh the additional costs that are associated with the delivery and operation of the section from St Stephen's Green to Charlemont station. Please refer to Chapter 7: Consideration of the Alternatives, section 7.7.8 MetroLink Southern Terminus Location, Table 7-16 Summary to Identify Southern Termination Point for MetroLink.</li></ul> <ul style="list-style-type: none"><li>• As noted above, the location of the interchange at Charlemont does not preclude onward extension south. An interchange at Charlemont is supported by policy including the Dublin City Development Plan 2022 - 2028 and the Transport Strategy for the Greater Dublin Area. As noted by the GDA Transport Strategy 2022-2042, section 12.3.2, "Charlemont offers the optimal location for the primary interchange with the Green Line in response to growing demand in the longer term and is an appropriate location to facilitate any potential future metro extensions to serve the south west, south or south east of the city region should sufficient demand arise."</li></ul> <ul style="list-style-type: none"><li>• By extending MetroLink to Charlemont it provides for future proofing of the Green Line, bypassing the capacity constrained Luas on-street running section, and ensures potential future connectivity options are enabled, either to the Green Line or for extensions of the metro.</li></ul> <ul style="list-style-type: none"><li>• The Charlemont Station interchange provides for increased passenger utilisation of the MetroLink system, thereby increasing the benefits delivered by the Project, reflected by an improved Project Benefit Cost Ratio (BCR).</li></ul> <p>Omitting this station or providing an alternative location would contravene the Transport Strategy. TII is legally obliged to secure the provision of the light rail and metro infrastructure determined from time to time by the NTA. An Bord Pleanála is also required to give significant weight to the Transport Strategy. It is among the most important policies in the national planning hierarchy.</p> |
| 3                                                                                                                                                                                                                                  | 2. Executive Summary<br><br>Strategic Need and Business Case | 2        | The entire project business case is flawed when it is based on the proposed southern terminus that lies outside current transport policy. This fact is recognized in both the JASPERS independent review and the MPAG Review, which identifies the section of the project south of St. Stephen's Green as 'strategically weak' and that it duplicates other fixed rail services. Surprisingly, the final Business Case did not address these concerns. As this section is probably one of the most expensive parts of the project (1km of tunnel and 1 station for €650m), its removal from scheme is likely to substantially increase the probability of the project successfully getting through the next stages of the government approvals process. Furthermore, the JASPERS review concludes that the connection to Ranelagh could feasibly be deferred until there is clarity on the future of the Luas Green Line and this would bring the project back in line with current transport policy. | <p>TII do not agree that the section of the project south of St. Stephen's Green as 'strategically weak' and that it duplicates other fixed rail services.</p> <p>Please also refer to responses (1) and (2) above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                                                                   |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| 4                                                                                                                                                                                                                                  | 2. Executive Summary<br><br>City Centre Hub Location & Prejudicing Options for Expansion of the Transport Network | 2        | <p>While a metro south extension is not part of current transport policy, even if it were to be considered at some stage in the future, the starting point for an extension should be St. Stephens Green and not Charlemont. The section of the Luas Green Line from St. Stephens Green to Charlemont is already one of the existing spokes radiating out from the hub of St. Stephens Green. Therefore, this duplicating section of the proposed MetroLink project represents an upfront payment of €650m towards a single future option, that is the replacement of the Luas Green Line. Once a metro section is built to Charlemont, it will deny other potential routes, such as to the south-west, the opportunity to build a successful business case as it forces increased costs of connecting from Charlemont and bypasses the opportunity of addressing unserved areas closer to the St Stephens Green Hub. This effectively "locks-in" the Green Line Replacement 2-3 decades in advance of any requirement.</p> <p>n addition, any future underground tunnelled solution (i.e. an option other than the Luas Green Line replacement) would start boring from the south and therefore there is no advantage tunnelling to Charlemont now (which the NTA/TII claims is an "appropriate" location for these other options). Such a new tunnel could be aligned all the way to St Stephen's Green; however, this would create a €650m stranded asset/ white elephant at Charlemont and would be a costly negative to overcome in any business case. Moreover, any overground rail or road solution on the south (other than the Luas Green Line replacement) could not interchange at Charlemont because its location is so constrained and incapable of further transport mode connections.</p> <p>Charlemont is in a residential area not a city centre location. It can only interchange with the Luas Green Line and has no scope for adequate connectivity with other modes of transport, such as other proposed light rail, bus services and road transport. It is simply not suitable as a Key Transport Interchange to serve Dublin city centre.</p> | <p>Please refer to responses (1) and (2) above.</p> <p>The location of the Charlemont station is partly in residential zoning and partly in a commercial zoning Z6 (To provide for the creation and protection of enterprise and facilitate opportunities for employment creation) and is in close proximity to a concentration of commercial buildings and hotels along and just inside the canal ring.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |
| 5                                                                                                                                                                                                                                  | 2. Executive Summary<br><br>Flawed Assessment of Alternative South Termini                                        | 3        | <p>The Rail Order Application contains a deeply flawed rationale in the consideration of alternative terminus locations to the south. The "decision... not to upgrade the Luas Green Line to Metro" should have resulted in NTA/TII demoting the importance of the "Charlemont (tie in with Luas Green Line)". The alignment choices "to determine the most appropriate termination location for the MetroLink project" should have investigated three options: St Stephen's Green West, St Stephen's Green East and Charlemont. St Stephen's Green West becomes a viable option once the NTA/TII's self-imposed constraint of forcing a connection to a Luas Green Line tie-in location is removed. Indeed, a carefully designed St Stephen's Green termination point (West or a more connected version of East or a hybrid) would provide a superior interchange with the Luas Green Line and maximise the scope for future southern extension routes (including the possible replacement of the Luas Green Line option). The fact that St Stephen's Green was never properly evaluated as a terminus option shows that the EIAR is deeply flawed and inadequate.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>Responses (1) and (2) provide the rationale for the proposed Charlemont Station.</p> <p>The preferred route for MetroLink was published in March 2019 following a comprehensive route options study. The preferred route was based on the emerging preferred route for the scheme which included a station at Charlemont and considered station locations at St Stephen's Green West.</p> <p>A station on St Stephen's Green West is not preferred for several reasons:</p> <p>If a station was placed on St Stephen's Green West, the alignment between the proposed Tara Station and a station on St Stephen's Green West would result in an undesirable horizontal reverse curve and an alignment greater than a 1000m long that would necessitate an intermediate intervention shaft located somewhere between these stations to provide a design that is compliant with NFPA 130. Additional construction would be required to provide such a facility, similar in size to the proposed Albert College Park Intervention shaft. Open space is extremely limited in this part of the urban core and where it exists it has important institutional, recreational and cultural uses (eg the grounds of Trinity College Dublin.</p> |  |

| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |              |          |                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|                                                                                                                                                                                                                                    |              |          |                                                                                                          | <p>As noted above, it is Government policy to provide a station and interchange with the Luas Green Line at Charlemont, as set out by the GDA Transport Strategy 2022 – 2042, and this is preferred for the reasons set out by responses (1) and (2) above. Should a station be placed on St Stephen's Green West, the alignment between a station located here and the proposed Charlemont Station would also result in an undesirable horizontal reverse curve and again an alignment that is greater than 1000m long, and would thus again require an intervention shaft similar to the proposed Albert College Park Intervention shaft to be provided. This would be expected to result in significant demolition and redevelopment in an existing built-up area.</p> <p>In both cases, compared to the proposed alignment that runs much more directly between Tara, St Stephen's Green and Charlemont, the additional length of tunnel and the addition of two intervention shafts generated by locating a station on St Stephen's Green West is more impactful in comparison. It is also noted that while the proposed location of a station at Charlemont is being objected to by this submission, it does not change the fact that an alignment between the proposed Tara Station and the critical interchange it provides with Irish Rail, and a station on St Stephen's West is not acceptable to TII for the reasons set out above.</p> <p>As a potential station location, St Stephen's Green West itself is a very constrained location due to the presence of buildings, Luas and St Stephen's Green Park. Maintaining the Luas operational during station construction would be complex and challenging with significant disruption expected, whilst the impacts on St Stephen's Green Park would be greater for a station in this location compared to the proposed location on St Stephen's Green East. This would be the result of; the likely need to place more of the station in the Park compared to the proposed station on St Stephen's Green East; it would impact an area of the Park that has greater amenity value than St Stephen's Green East due to the nearby Park entrance adjacent to the southern end of Grafton Street, and there would be a risk of impacting the existing Park lake.</p> <p>In summary, an alignment that links the proposed Tara, St Stephen's Green East and Charlemont stations is a technically better solution, more direct and economic alignment, does not require additional intervention infrastructure, avoids a complex engineering interface with the Luas Green Line, impacts the Park less and has less potential for disruption during the construction phase.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                                       |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 6                                                                                                                                                                                                                                  | 2. Executive Summary<br><br>No Studies to Support the Proposed Alignment to the South | 3        | <p>A vital component of the Rail Order Application is the consideration of alternative alignments from the south end of the Metrolink line. The Applicant did undertake a detailed consideration of potential tie-ins with the Luas Green Line and a Preferred Option (Option 4 (b) was selected in the March 2017 study.</p> <p>However as will be described below, NTA/TII has procured to complete the construction of an alternative design of the Charlemont Station Box which delivers a very significantly different alignment to that proposed in the Tie-in study and in the March 2019 "Preferred Route" consultation. Very importantly the implications of the built alignment are both to the north and south of Charlemont. Notably to the north the more easterly alignment has very strongly influenced the Applicant not to consider station options on St. Stephens Green West where the optimal interchange with the Green Line would occur. The resulting alignment to the south of Charlemont shifts to the west and rules out the preferred "in-line" tie-in with the Luas Green Line and will cause significantly increased demolition of houses in the Ranelagh area.</p> <p>Not only is the March 2017 Luas Tie-In Study now totally irrelevant from a tie-in perspective (none of the options were used or re-evaluated), it is also redundant from a policy perspective (no Luas Green Line replacement is part of the subject Rail Order Application). Furthermore, the alignment that has already been built is not justified or supported by any other analysis provided in the Rail Order Application.</p> <p>Clearly this leaves a fatal gap in the preparation and documentation of the Rail Order Application. The fundamental and essential study that should have replaced the Luas Tie-In Study is a city-centre terminus study that uses appropriate criteria (that are significantly different from those used in the Tie-in study). Such a study, however, was never undertaken by the Applicant. In fact, the Rail Order Application provides no studies to support the proposed (already built) alignment to the south.</p> <p>Obviously by building the alignment prior to making a Rail Order Application, NTA/TII has denied An Bord Pleanála the opportunity to consider alternatives through the planning process for the current Rail Order Application.</p> | <p>Having regard to the March 2017 Green Line tie in study, the proposed station design is in effect a modification to the preferred Green Line Tie Option 4B which was modified as result of the postponement of the upgrade of the Green Line to metro standard. The preferred route for MetroLink was published in March 2019 and was based on a comprehensive route options study, with further work undertaken at this stage of the project to refine elements of the proposed Project. Details of all of these design refinements were outlined in the Preferred Route Design Development Report which was subject to public consultation in 2019. The preferred route was based on the emerging preferred route for the scheme which included a station at Charlemont (Refer to Appendix O of the Preferred Route Design Development Report for details of design refinements proposed at Charlemont and the rationale for the same). Further analysis was also undertaken to analyse the decision for an interchange with Luas at Charlemont when compared to an interchange location at St. Stephen's Green. This report identified Charlemont as the preferred location for an interchange. (Refer to Appendix A7.9).</p> <p>TII acknowledge that the Green Line Option 4B Charlemont Station alignment runs in a northwest / southeast alignment i.e., the station is perpendicular to Grand Parade and Dartmouth Road, compared to the Preferred Route Charlemont Station alignment that runs north - south. TII would note that for the reasons explained below that this slight angled reorientation of Charlemont Station does not create an alignment that makes significant changes to the Project. It is also very important to note that the alignment consulted on at the Preferred Route stage (Refer to Appendix A7.9, Appendix O, Figure 8) compared to that presented by and applied for by the Railway Order (see RO drawing ML1-JAI-ARD-ROUT_XX-DR-Y-03096) is almost identical. TII would also further note that part of the design refinement was to reduce the extent of the Station box at the north east corner so that it no longer intruded in to the rear gardens of the Dartmouth Square West properties.</p> <p>Regards a possible future connection to the Luas Green Line at Ranelagh, EIAR Appendix A7.4, Figure 3-1 shows how MetroLink would connect to the Luas Green Line. The connection will comprise a mined tunnel extension from the overrun tunnel to the Luas Green Line tie-in location. Cut and cover construction will only be undertaken in the confines of the Luas Green Line and therefore no property will be demolished as a result. TII would further note that as explained by response (5) above, a station on St Stephen's Green West is not preferred due to the implication of this on the alignment between St Stephen's Green West and the proposed Tara Station, and the challenges associated with constructing a station on St Stephen's Green West.</p> <p>It is also not correct to say that the proposed Charlemont Station location has influenced the decision not to consider station options on St Stephen's Green West, noting the Preferred Route was based on the Emerging Preferred Route for the scheme which included a station at Charlemont and considered station locations at St Stephen's Green West. The reasons for why a station is not preferred on St Stephen's Green West is explained by response (5) above, and response (1) and (2) above explains the need for future proofing of the Luas Green Line by bypassing the capacity constrained Luas on-street running section to ensure potential future connectivity options are enabled, either to the Green Line or for extensions of the metro.</p> |  |

Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                                                                                 |          |                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |
|                                                                                                                                                                                                                                    |                                                                                                                                 |          |                                                                                                                                                                                                                                                                                                                                                                                                           | <p>The station box location was not fixed by the Charlemont Development. The preferred route for MetroLink was published in March 2019 following a comprehensive route options study. The preferred route was based on the emerging preferred route for the scheme which included a station at Charlemont. The Charlemont Metro Enabling Works were constructed to enable the Charlemont Development to proceed whilst simultaneously ensuring there was an option available to construct a station at Charlemont that avoided unnecessary demolition, took advantage of an available site, provided infrastructure that is integrated with planned development rather than necessitating later changes and retrospective adjustments to a new development or even possible demolition of the new development, whilst providing protected provision for the future extension of the scheme south, if required.</p> <p>It is also important to recognise that the station location at Charlemont is influenced by available vacant land and thus avoids unnecessary demolition.</p> <p>The submission seeks to portray the construction of the Metro Enabling Works as prejudicial to future decisions on proper planning and sustainable development of the area. It implies that the counterfactual would have had no effect on such decisions. That is not the case. There was a planning conflict between the EPR and the Grand Parade Development at the time the latter development was proposed. It was clearly within the Board's remit to grant permission for the Grand Parade Development with the MetroLink Enabling Works included so as to allow the site to be developed in accordance with its zoning objective while preserving the option to provide the proposed MetroLink station at this location.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 7                                                                                                                                                                                                                                  | 2. Executive Summary<br><br>Charlemont Station Box work are not described in the Rail Order Application (EIA Project Splitting) | 4        | The enabling works and construction of the station box at Charlemont, which have already been undertaken, are not described in the Application as forming part of the subject Rail Order, Under the EIA Directive, an EIA must consider the direct, indirect and cumulative effects of all aspects of the development. On this point alone, the entirety of the Rail Order Application is legally unsafe. | <p>The MetroLink enabling works constructed as part of the Hines development has the benefit of planning permission which was granted in April 2019. The station box location was not fixed by the Charlemont Development, but had been identified previously as part of the alignment studies designed to deliver on the objectives of the then GDA Transport Strategy. The preferred route for MetroLink was published in March 2019 following a comprehensive route options study. The preferred route was based on the emerging preferred route for the scheme which included a station at Charlemont. The Charlemont Metro Enabling Works were constructed to enable the Charlemont Development to proceed whilst simultaneously ensuring there was an option available to construct a station at Charlemont that avoided unnecessary demolition, took advantage of an available site, provided infrastructure that is integrated with planned development rather than necessitating later changes and retrospective adjustments to a new development or even possible demolition of the new development, whilst providing protected provision for the future extension of the scheme south, if required.</p> <p>There is no inconsistency with the EIA Directive. All options remain open to the Board in relation to this location. The critical factor in favour of the station at this location are the policy decisions and supporting analysis outlined above and not the permitted enabling works.</p> <p>TII rejects the assertion that the inclusion of a roof slab at Two Grand Parade has prejudiced the EIA process. The MetroLink Enabling Works were a modest change to the Two Grand Parade design that preserved the option to deliver a station at the location identified in the Emerging Preferred Route Report and was fully within the Board's remit as part of its consideration of the proper planning and sustainable development of Dublin City.</p> <p>The decision to grant permission for Two Grand Parade, which included the MetroLink Enabling Works, was challenged by way of judicial review, but the judicial review was withdrawn. The objections now raised attack the validity of that decision, which is prohibited by Section 50 of the Planning and Development Act 2000.</p> <p>The MetroLink advanced enabling works is not an integral part of the MetroLink proposal. The construction these works allowed a key site with commercial zoning to proceed without prejudicing the delivery of a MetroLink station at this location.-The Board remains entitled to refuse permission for a station at this location or seek revised designs if it has any concerns with the effects of the MetroLink advanced enabling works on the environment. TII has already outlined why, in its view, the Board can and should grant a Railway Order for the construction of the station at this location.</p> <p>The reference to retention permission is fundamentally mistaken. The MetroLink advanced enabling works are permitted by the permission for the office development. Its construction does not require any retrospective consent. The Railway Order will not purport to authorise any development retrospectively.</p> |  |

| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                                            |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 8                                                                                                                                                                                                                                  | 2. Executive Summary<br><br>Charlemont Station Box Not Permitted/ Unauthorised Development | 4        | <p>The current Railway Order and associated EIAR acknowledges that the enabling works including the construction of the Station Box at Charlemont has already occurred. TII appear to suggest that these works were permitted under the planning permission for the Office building at 2 Grand Parade. That commercial office development required normal planning permission to be obtained under the Planning and Development Act 2000. However, the Metro Station Box works are "railway works" and cannot be granted permission under that Act. Instead, they require a separate application for, and grant of, a Railway Order under the Transport (Railway Infrastructure) Act 2001. No Railway Order was obtained for the Charlemont Metro Station Box and therefore these railway works were not authorised and could not be lawfully undertaken.</p> <p>Moreover, the Charlemont Station Box is an unauthorised development that also required an EIA and as such, under legislation, the Board is compelled to refuse to consider any application for its retention. Clearly Charlemont Station is an integral part of the Metrolink proposal and the subject Rail Order Application. The Board, therefore, cannot grant the current Rail Order as to do so would a) facilitate the circumvention of the EIA Directive by the splitting of projects and b) amount to a retention permission which it is compelled to refuse. Effectively, Charlemont Station cannot be considered as usable for the Metrolink project because it will remain legally unsafe.</p> | <p>The claim -that a Railway Order is needed to authorise any works that fall within the definition of railway works is mistaken. The definition of "railway works" is "any works required for the purposes of a railway or any part of a railway, including works ancillary to the purposes aforesaid such as parking by buses or by persons using vehicles who intend to complete their journey by railway, and relocation of utilities, and in this definition "works" includes any act or operation of construction, excavation, tunnelling, demolition, extension, alteration, reinstatement, reconstruction, making good, repair."</p> <p>The definition is expansive and is designed to facilitate the inclusion of ancillary development within a railway order. It is not intended to preclude the authorisation of ancillary development through other processes. The MetroLink Enabling Works are like any number of other works that ancillary to a railway, like power supply, roads (in the case of on-street light rail) or the buildings that provide support for light rail electrification.</p> <p>Please refer to response (7) above.</p> |  |
| 9                                                                                                                                                                                                                                  | 2. Executive Summary - Charlemont Station Box Not Permitted/ Unauthorised Development      | 4        | <p>This design and alignment of the Charlemont Station Box is very significantly different to the proposal in the Preferred Route consultation. No notice was made to the public of the proposed changes and there was no opportunity for affected parties to make comment.</p> <p>In the event of a future Luas tie-in, which the NTA/TII says "will remain a likely option for the future", the implications of the now locked-in (built) station alignment are profound. It will result in the demolition of houses on Manders Terrace, Charleston Road and will require the demolition of 11 houses and 24 apartments on Oakley Road. None of these houses and apartments would be demolished under the earlier design that was presented in the Preferred Route Consultation.</p> <p>Not only was no notice given to affected parties, but the implications of the new alignment are now known to the Applicant and yet it is not presented in the EIAR of the Rail Order Application. Case law has clearly established that an EIAR must "...<i>take account, as far as practically possible, of potential later phases.</i> ...". The EIAR is again inadequate and disingenuous in not presenting the known facts.</p>                                                                                                                                                                                                                                                                                                                                              | <p>Response (6) explains why TII do not consider the design and alignment of the station box at Charlemont applied for by the Railway Order application differs significantly to that consulted on at the Preferred Route stage of the Project.</p> <p>The station box at Charlemont allows for a future tie into the Luas Green Line should it be determined in the future that through running metro services to Sandyford is the required solution to address the public transport needs to the south of the city. It is misleading to say that there are profound implications associated with the "station alignment" being "locked-in". Any piece of infrastructure once constructed is "locked -in" i.e. it cannot move, but this "station alignment" does not lock in future extensions to the south. The Charlemont station location will allow for future alignments to the south, south west or south east as required in the future. The statement that the decision to locate a station at Charlemont will result in the demolition of properties in Ranelagh is not correct for the reasons explained by response (6) above.</p>               |  |
| 10                                                                                                                                                                                                                                 | 2. Executive Summary<br><br>Inadequacy of the Rail Order Application and Scheme Detail     | 4        | <p>Overall, we consider the detail of the Railway Order Application to be inadequate. These inadequacies are considered throughout this submission and in the other two CDCG submissions (especially in relation to issues such as Vehicular Traffic and Parking, Proposed Traffic Measures, Pedestrian Traffic, Drop-off, Noise, Disturbance, and Impact upon Amenities in the Vicinity of Charlemont Station). The lack of detail is in no small part due to the procurement method adopted by the Applicant, which is a 'design and build'. The first component is 'design' which should be undertaken prior to submission for a Railway Order consent. By following a 'design and build' approach NTA/TII is failing to provide the required level of detail under which a Rail Order could be granted by An Bord Pleanála (ABP).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>TII have responded each of the -alleged inadequacies referred to in this submission and the other two CDCG submissions referred to, explaining why TII consider the detail provided in the EIAR is appropriate for the Railway Order application. The alleged deficiencies in the assessment are stated in general terms and are not particularised by reference to the guidance in the EIAR (or indeed any other guidance).</p> <p>There is no connection between the selected procurement method and the level of design for the Railway Order application. The level of design undertaken is appropriate for a Railway Order application, noting that the design to inform the Railway Order application has been developed to Preliminary Design level. This Preliminary Design provides the required level of detail to inform the EIAR, and the level of design presented and used to inform the EIAR is consistent with previous successful Railway Order applications and appropriate guidance. The EIAR has identified, described and assessed all of the likely significant effects of the project on the environment.</p>                      |  |

| Submission No.                                                                                                                                                                                                                     |                          |          | 042                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |

Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                          |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 11                                                                                                                                                                                                                                 | 3.1.2 Construction Phase | 6        | The predicted construction period is 9.25 years. Standard working hours will be 07.00 hours to 19.00 hours on weekdays, with 30 minute site preparation time either side of these hours (excluding Bank and Public Holidays) and 07.00 hours to 13.00 hours on Saturdays. However, section 5.2.4.2 of the EIAR indicates that; " <i>Excavation in rock: at some stations excavation of rock will be carried out during standard hours, but on a 7 day a week basis and for all intervention tunnels (drilling and moving rock underground) will be carried out on a 24 hour a day basis for seven days per week ;</i> " Charlemont Station falls clearly within these categories.                                                                                                    | <p>Proposed Working Hours are outlined in Section 5.2.4 of Chapter 5 of the EIAR. Standard working hours will generally be the norm for all above ground works i.e. Monday to Friday 07:00 to 19:00 and Saturday 07:00 to 13:00. The 30 minute site preparation and end of day clean-up will take place within this time frame. HGV deliveries will not be permitted outside of these hours. Only tunnelling and other works underground will be undertaken 24 hours a day. The only exception to this is the requirement for other noisy work above ground outside standard working hours for events such as concrete pours, abnormal deliveries etc. TII and their Contractor will engage with the local community and local authority to advise of any such upcoming events such as this, and will minimise any such occurrence so far as practicable.</p> <p>All planned night-time work activities will have to be undertaken, controlled and mitigated under the detailed Construction Environmental Management Plan to maintain impacts below the agreed construction noise thresholds. Mitigation measures that can be used to reduce impact are detailed within Chapter 13, section 13.6, including the use of temporary acoustic enclosure structures for planned activities outside of the standard working hours .</p> <p>The rationale for 24/7 working on underground activities such as Mechanical Electrical Power (MEP) installation, TBM strip out, and tunnel clean and track laying, is that they can be managed underground without causing disturbance at night. While activities below ground are progressed on a 24/7 basis, site level activities such as deliveries etc will be limited to standard working hours (Chapter 5, Section 5.5.17.3 refers). In addition progressing this work 24 hours a day will ensure that the construction phase is completed much more quickly, thereby reducing the duration of effect on nearby sensitive receptors, including the dwellings of members of the observer group.</p> <p>Owing to the nature of the sprayed concrete intervention tunnel construction and to ensure a safe and stable method of excavation, and minimising settlement impact, the sprayed concrete intervention tunnel construction will be undertaken 24 hours per day, seven days per week. The groundborne noise and vibration arising from mechanical excavation of the tunnel will not exceed threshold limits. During night-time support works at the surface, an acoustically clad steel framed temporary building located above the access to the SCL work site on the south east corner of the compound will control airborne noise breakout to surrounding sensitive properties. All concrete to support the sprayed concrete tunnel lining operation will be batched on site within the acoustic enclosure and will not require night-time delivery.</p> |  |
| 12                                                                                                                                                                                                                                 | 3.1.2 Construction Phase | 6        | These limits of deviation may be very significant in on a tight site like Charlemont Station.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>The station at Charlemont will be carried out within the footprint of the MetroLink Enabling Works unless modified by An Bord Pleanála. Assuming that the Board grants a Railway Order for an unmodified design at this location, TII will accept a condition that restricts the Limits of Deviation for this station.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 13                                                                                                                                                                                                                                 | 3.1.3 Scheme Detail      | 7        | Overall, we consider the detail of the railway order application to be inadequate. These inadequacies are considered throughout this submission. The lack of detail is in no small part due to the procurement method to be adopted, which is a 'design and build'. The first component is 'design' which should be undertaken prior to submission for a railway order consent. Our clients have been advised by RINA that only about 30% of the detail will be presented in the Rail Order Application and therefore it is impossible for the residents to be able to assess the impact of the proposal. By following a 'design and build' approach NTA/TII is failing to provide the required level of detail under which a Rail Order could be granted by An Bord Pleanála (ABP). | <p>Please refer to response (10) above.</p> <p>It is not clear to what the "30%" is referring to, but as explained by response (10) above, a Preliminary Design provides the required level of detail to inform a Railway Order application. A Detailed Design is needed for construction but not to inform an EIAR and a Railway Order application.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 14                                                                                                                                                                                                                                 | 3.2.1 Operational Phase  | 9        | Charlemont Station design drawing - Figure 2: Charlemont station surface layout from page 15 of the submission, is inconsistent with the Charlemont Station drawing in Volume 4. Railway Order Plans\Drawings - Structures Details Book 2 of 3 MetroLink Stations Dublin City Council which shows traffic lights on Grand Parade, a drop-off zone that cuts across the existing cycle path and is accommodated by a new footpath that cantilevers over the canal. The implication of these proposed traffic measures surrounding Charlemont Station are set out in Section 6.12 of the submission.                                                                                                                                                                                   | <p>A small inconsistency has arisen as a result of the inclusion of a 'drop-off' for persons of restricted mobility only not being included in the Figure 2 referred to. This is simply the result of a change being made to the RO drawing before the application was submitted and the corresponding required change to Figure 2 being inadvertently overlooked.</p> <p>The drawing from Volume 4 'Railway Order Plans\Drawings - Structures Details Book 2 of 3 MetroLink Stations Dublin City Council presents exactly was is being applied for under the Railway Order application.</p> <p>TII have responded to section 6.12 below.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |

Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                   |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 15                                                                                                                                                                                                                                 | 3.2.1 Operational Phase                           | 9        | An intervention tunnel is proposed for emergency evacuation from the tunnel south of Charlemont Station. This will be a mine and blast construction, utilising concrete spray construction methodology.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Please note that there is an error in Table 14.13 of the EIAR where it is outlined that drill and blast will be used at "all underground stations and intervention tunnels". A number of amendments were made to the proposed construction methodology for the intervention tunnel south of Charlemont and these were assessed in the EIAR. The intervention tunnel alignment has been dropped to mitigate impacts and the tunnel will be excavated by mechanical means only and blasting will not be required at this location. Both of these interventions were proposed to reduce potential effects arising from the construction of the intervention tunnel.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 16                                                                                                                                                                                                                                 | 3.2.1 Operational Phase                           | 10       | The EIAR indicates that the Charlemont Station is dependent upon the structural deck which has already been constructed and purports to be pursuant to the planning permission for a commercial development at No.2 Grand Parade under P.A Reg. Ref 2373/17 (ABP PL29S.300873) and subsequently amended under PA Reg. Ref 4755/19. (This station box work is an Unauthorised Development and is discussed in detail in Section 6.10 below).                                                                                                                                                                                                                                                            | Please refer to response (7) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 17                                                                                                                                                                                                                                 | 3.2.2 Construction Phase                          | 10       | The principal access and egress to the construction compound will be from the south via Dartmouth Road. Dartmouth Road will be partially closed (one way traffic only) for 12 to 18 months for utility diversions and fully closed for between 24 and 30 months for the main station construction works. However, Appendix 5.2 of the EIAR outlines construction schedule and it indicates that the Charlemont Station Compound/Deep Station has a 102 month construction period from Q3 of Year 1 to Q4 of Year 9. This is a significant contradiction in the EIAR documentation, which has very significant impacts upon the residents in the area, particularly for those living on Dartmouth Road. | <p>The overall construction of the works at Charlemont Station is anticipated to be 102 weeks, see EIAR Chapter 5: MetroLink Construction Phase, Table 5.15.</p> <p>Two options have been considered in the EIAR to construct the station under Dartmouth Road. Both options utilise a top down construction method for the station, meaning that Dartmouth Road is only closed long enough to facilitate access to the site and the installation of the foundation piles and roof slab of the station, before utilities are rediverted back along Dartmouth Road and the road reinstated, with the remainder of the works continuing underneath.</p> <p>The first option considered allows for no vehicle access to Two Grand Parade, and the staging of the works for MetroLink for this option is set out within Chapter 5 MetroLink Construction Phase Appendix A5.3, Figures 8-72 to 8-78. This option results in a full closure of Dartmouth Road of up to 5 years to facilitate access (utility diversions, temporary works etc.) to the site and the installation of the foundation piles, roof slab of the station and reinstatement.</p> <p>The second option (The Developer Alternative Construction Methodology) considered, and proposed by the Railway Order application to maintain access to Two Grand Parade, and the staging of the works for MetroLink for this option is set out within Chapter 5 MetroLink Construction Phase Appendix A5.3, Figures 8-79 to 8-87. This option involves two stages on Dartmouth Road: a partial closure; followed immediately by a full closure of Dartmouth Road. The full duration of these consecutive activities is estimated to take 4 years.</p> <p>- Partial Closure: To close Dartmouth Road for the works, the utilities have to be diverted. Subject to Statutory Undertaker approvals (ESB, Eircom etc.) this process is estimated to take up to 18 months, while access is maintained along Dartmouth Road via a proposed single lane closure.</p> <p>- Full Closure: Once the utilities have been diverted, the road is then shut to through traffic (pedestrian access is maintained) and is estimated to take up to 30 months to complete the piling, and roof slab. The utilities and road will then be reinstated and road reopened.</p> |
| 18                                                                                                                                                                                                                                 | 4. History of the Project<br><br>4.1 Introduction | 11       | It demonstrates that the project has not maintained pace with the evolution of policy as considered in the following section.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | TII do not agree. The Project, including the station at Charlemont, as noted previously, is in step with the latest policy, the GDA Transport Strategy 2022-2042.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                                                 |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 20                                                                                                                                                                                                                                 | 4.3.3 Transportation Modelling for the Transport Strategy for the Greater Dublin Area 2016-2035 | 13       | The St. Stephen's Green hub was to be the main point of integration between services. All of the modelling was based on the Metro project aligning on the western side of St. Stephens Green and integrating Metro, DART underground and Luas services at this point. Increasing the distance between stations (i.e. between Metro/DAT and Luas) will undoubtedly result in time penalties for interchanging between services, thereby making it less attractive.                                                                                                                                      | It is of note that the current GDA Transport Strategy is 2022-2042. Response (2) above expands further regards the relevance of this and response (5) explains why a station on St Stephen's Green West is not preferred.                                                                                                                                                                                                                                                                                                                               |
| 21                                                                                                                                                                                                                                 | 4.3.4 New Metro North - Luas Green Line Tie-In Study (March 2017)                               | 13       | However, it is evident that with the policy abandonment of the conversion of Luas Green Line to Metro South in the next 2 to 3 decades, the concept of a tie-in and interchange with Luas Green Line must be radically re-imagined. Policy objectives now require a city centre hub to be created that is capable of facilitating a range of potential southern extensions that may occur in a few decades time. (Section 6.5 deals with these matters in detail).                                                                                                                                     | Response (2) above explains the rationale for why Charlemont Station is proposed noting that this is in accordance with NTA's GDA Transport Strategy 2022-2042, including section 12.3.2 "Charlemont offers the optimal location for the primary interchange with the Green Line in response to growing demand in the longer term and is an appropriate location to facilitate any potential future metro extensions to serve the south west, south or south east of the city region should sufficient demand arise."                                   |
| 22                                                                                                                                                                                                                                 | 4.3.4 New Metro North - Luas Green Line Tie-In Study (March 2017)                               | 14       | As will be discussed below, the Preferred Option selected from the March 2017 Luas Green Line Tie-In Study proved to be impossible to build from an engineering perspective as it failed to incorporate the east-west sewer along the Grand Canal and the tunnel would have to go deeper under the canal resulting in too steep a gradient to meet the preferred tie-in point north of Ranelagh Luas Stop.                                                                                                                                                                                             | It is true that the original connection work as part of the EPR study did not have precise details of the sewer and when these were obtained the extent of the clash with the assumed tunnel alignment/station was identified. The subsequent assessment work for the Preferred Route identified that the tunnel and Charlemont Station could be lowered such that a track alignment could be achieved back up to the Ranelagh Luas stop by adopting a 1% gradient through the Station and a 6% gradient (maximum exceptional gradient) up to Ranelagh. |
| 23                                                                                                                                                                                                                                 | 4.3.5<br>Carroll's Building (P.A Reg. Ref: 2373/17)                                             | 15       | .....that previous studies had failed to have due regard to the main east west sewer along the Grand Canal, which the top of the tunnel had to pass under.                                                                                                                                                                                                                                                                                                                                                                                                                                             | Please refer to response (22) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 24                                                                                                                                                                                                                                 | 4.3.5<br>Carroll's Building (P.A Reg. Ref: 2373/17)                                             | 15       | The alignment of the line also meant that any future tie-in with the elevated section of the Luas Green line to the south would have to pass through existing built areas, including a significant amount of demolition within the Ranelagh area, before tying in and replacing the elevated sections of the Luas Green line to the south.                                                                                                                                                                                                                                                             | Please refer to response (6) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 25                                                                                                                                                                                                                                 | 4.3.5<br>Carroll's Building (P.A Reg. Ref: 2373/17)                                             | 16       | However, it is quite clear that this pushed the railway alignment to the north of Charlemont in an eastwardly direction and the station at St. Stephen's Green had to be on the eastern side of the Green some considerable distance from the Luas station on the western side. No revision to the Tie-in study was undertaken during this period and the very significant implications of reorientating the station alignment at Charlemont for the future extension/replacement of the Luas Green line to the south and the station location to the north at St. Stephen's Green was not considered. | Please refer to response (6) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |
| 26                                                                                                                                                                                                                                 | 4.3.5<br>Carroll's Building (P.A Reg. Ref: 2373/17)            | 16       | <p>While it was quite evident that the application was premature pending the resolution and determination of the Metro Link project and the potential future alignment of the station and track alignment, the Board failed to understand the significance of their decision granting permission for the office development with the associated station box alignment, notwithstanding that it was emphasised at the oral hearing that was held on the application. The decision to grant permission effectively meant that all other decisions followed from this in relation to what is a critical piece of city transportation infrastructure.</p> <p>For some unknown reason, TII/NTA engaged in this process of station design and alignment with the developer without undertaking the appropriate studies of the implications of these actions, rather than just submitting to the Board that the office scheme was premature pending the determination of the precise alignment of Metro and the associated station design and alignment. This decision with an angled station box was contrary to the preferred option 4 (b) as detailed in the Tie-In Study of March 2017.</p>                                                                                                                                                                                                                                                                                                                                                                            | <p>Response (6) explains why TII does not agree; that the Metro Enabling Works are prejudicial to future decisions on proper planning and sustainable development of the area, and that it delivers an alignment that makes significant changes to the Project.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 27                                                                                                                                                                                                                                 | 4.3.5<br>Carroll's Building (P.A Reg. Ref: 2373/17)            | 17       | <p>The changed alignment of the station box effectively constrained the Applicant from considering of any potential for alignment between St. Stephen's Green West and Charlemont. TII were literally boxing all parties into focussing on St. Stephen's Green East as the only station location and failed to consider station options on St. Stephen's Green West where the optimal interchange with the Luas Green Line would occur. A fundamental planning, investment and strategic transportation decision was made in relation to the Metro alignment and city centre station locations. Every study and element of the project from this point on was structured to justify this decision on Metro. The Board was not aware of the implications of its decision, yet it proceed to issue a grant of permission.</p> <p>The deeper station, fixed alignment, resulting potentially longer tunnel to the south, required demolition of houses in Ranelagh, duplication of rail infrastructure in the form of Metro and Luas, with two metro stations and two Luas stations was never the subject of a revised tie-in study with updated criteria. This transportation planning process gives rise to significant concerns in relation to public policy and the public good.</p>                                                                                                                                                                                                                                                                               | <p>Response (5) explains that various station locations were considered at St. Stephen's Green and why a station on St. Stephen's Green West is not preferred.</p> <p>Response (6) explains why TII does not agree the Metro Enabling Works are prejudicial to future decisions on proper planning and sustainable development of the area and -there would be no requirement for demolition expressed by the above observations.</p> <p>Responses (1) and (2) explain the rationale for the proposed Charlemont Station and why it is not considered there is a duplication of infrastructure.</p>                                                                                                                                                                                                                                                         |  |
| 28                                                                                                                                                                                                                                 | 4.3.6<br>New Metro North Options Alignment Report (March 2018) | 17       | <p>New Metro North Options Alignment Report (March 2018) report prepared by Arup's considered a series of options, which are specified as the options considered in the EIAR. The date of this report is important, as it was undertaken and published after TII had agreed to the station box at Charlemont as part of the planning application P.A Reg. Ref: 2753/17.</p> <p>Section 4.2.2.1 of the Report states in relation to the tie in for Metro South, that:</p> <p>"In the context of this Options Study, this tie-in location is identified as a fixed location and as a result, all feasible and practicable route options for NMN within Study Area A are required to tie into this point and include for an interchange between NMN and the Green Line Luas at this location."</p> <p>It is of strategic significance, that the option of connecting Tara Street with a station on St. Stephens Green West was not considered.</p> <p>However, as indicated in the text above, the EIAR now considers the tie-in was now fixed. Not through any consideration of alternatives as part of a rail order application, but rather as a result of a decision on a commercial office development.</p> <p>On a broader point, the tie in location is identified as a fixed location in the study pre-empting the policy change in the form of a deferral of the Metro south connection. The Options study was effectively invalidated by the evolution of policy and should have been updated by a new tie-in study and a new city centre terminus study.</p> | <p>TII do not consider that the date of the report is important given that as explained by response (6) above TII does not consider the Metro Enabling Works are prejudicial to future decisions on proper planning and sustainable development of the area.</p> <p>The decision to locate a station at Charlemont was not driven by the location of a separate commercial development. The preferred route for MetroLink was published in March 2019 and was based on a comprehensive route options study as explained by response (6) above. It is incorrect to say that the proposed station location has influenced the decision not to consider station options on St Stephen's Green West. Response (5) further explains why a station on St Stephen's Green West is not preferred, and response (2) explains why Charlemont Station is proposed.</p> |  |
| 29                                                                                                                                                                                                                                 | 4.3.7<br>Initial MetroLink                                     | 19       | <p>It is no surprise that the project had to be cut back to what resembled Metro North, which was meant to be to the city centre. However, the NTA has hung onto the mega concept that it is one MetroLink project and hence their need to provide the link between St. Stephen's Green and Charlemont as an advance build towards replacement of the Luas Green Line.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>Responses (1) and (2) explain the rationale for the proposed Charlemont Station noting that this is not based on an objective of an advance build towards replacement of the Luas Green Line.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |

Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                                   |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 30                                                                                                                                                                                                                                 | 4.3.8<br><br>MetroLink Green Line<br>Future Demand<br>Capacity Intervention       | 20       | TII published a Technical Notes dated March 2019 outlining the available Luas Green Line passenger demand projections in the context of the required service capacity on the existing Luas Green Line, south of Charlemont. This technical note is referred to in Appendix A7.9 of the EIAR and a hyperlink is included as a footnote. This document effectively forms part of the EIAR, yet the hyperlink has been removed and access to the original report is not available.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>The technical note referred to in Appendix A7.9 was available. However, changes made to the TII website resulted in the link being broken. This document is now available at the following link:<br/><a href="https://www.metrolink.ie/media/4uicblph/metrolink_green_line_future_demand_capacity_intervention.pdf">https://www.metrolink.ie/media/4uicblph/metrolink_green_line_future_demand_capacity_intervention.pdf</a></p> <p>The observer can make any further comment on this document at the Oral Hearing.</p>                                                                                      |
| 31                                                                                                                                                                                                                                 | 4.3.8<br><br>MetroLink Green Line<br>Future Demand<br>Capacity Intervention       | 20       | <p>Relying on the information provided in the aforementioned appendix (A7.9) indicates that the passenger numbers carried by the Luas Green Line in the busiest morning peak hour in 2017, pre-Covid, was approximately 5,000 passengers in the northbound direction. The possible introduction of new 55 metre length trams, and the extension of the existing trams , would increase the Green Line capacity up to approximately 8,000 passengers per direction per hour based on a three-minute frequency.</p> <p>The modelling projections suggest that further upgrades to the Luas Green Line to achieve a 30 trams per hour Luas service between Sandyford and St. Stephen's Green, would accommodate Luas demand to approximately 2039 in the high projection or to approximately 2049 in the low projection. The report concludes "A metro upgrade of the Luas Green Line south of Charlemont would ultimately be required in the long term although the timing of this intervention is dependent on the rate of demand growth".</p> | <p>Its not clear what is being implied here by the respondents observation. However, TII confirm that the reports conclusion have been correctly stated.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 32                                                                                                                                                                                                                                 | 4.3.8<br><br>MetroLink Green Line<br>Future Demand<br>Capacity Intervention       | 20       | In relation to location of the MetroLink Station at St. Stephen's Green, "Its location on the east side of the park and not the west side as in previous alignments was dictated by restrictions on railway curvature between the two adjacent stations." The issue of the self-imposed constraint to St Stephen's Green East is considered in further detail below in section 6.5.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>Response (5) explains why a station on St Stephen's Green West is not preferred.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 33                                                                                                                                                                                                                                 | 4.3.8 MetroLink Green Line Future Demand Capacity Intervention                    | 20       | <p>We consider that the NTA/TII demand capacity forecasting is highly unreliable for the following reasons:</p> <ul style="list-style-type: none"><li>• In March 2017 "Luas Tie- In Study the NTA forecast Luas exceeding capacity by 2027</li><li>• One year later in March 2018 in the Emerging Preferred Route the NTA revised this forecast and said the Luas will not exceed capacity before 2042</li><li>• March 2019 in the Preferred Route the NTA said the need to replace the Luas "will not arise for some time - in the region of twenty years."</li><li>• The NTA/TII are now saying Luas Green Line capacity will not be exceeded for 2 to 3 decades.</li><li>• Furthermore, no study on the impact of the pandemic has been carried out by the NTA on the Luas Green Line capacity.</li></ul>                                                                                                                                                                                                                                  | <p>TII do not agree that demand capacity forecasting is unreliable. In any event, the observer has not provided any alternative basis for the Board to assess the disputed planning need for this station.</p>                                                                                                                                                                                                                                                                                                                                                                                                  |
| 34                                                                                                                                                                                                                                 | 4.3.9 Jasper<br>(Independent Review for the European Commission and Central Bank) | 21       | <p>A.1.4. Have the policy and delivery assumptions been captured, challenged and agreed with all key stakeholders?</p> <p>There appears to be relatively strong consensus on the project concept amongst key stakeholders, apart from isolated issues such as those impacting on the finalization of the design for St Stephens Green. It is noted that the revised design for St Stephens Green arose following the objective to provide a connection to Charlemont/Ranelagh, which is no longer considered a priority by the independent review team.</p> <p>It is quite clear from this independent review that it is not considered that the final section of the Metro from St. Stephen's Green to Charlemont is a priority. This can be interpreted as phrasing indicating that it should be dropped.</p>                                                                                                                                                                                                                               | <p>Responses (1) and (2) explain the rationale for the proposed Charlemont Station. Response (5) explains why a station on St Stephen's Green East is preferred noting that this is driven by the location of Tara Station rather than Charlemont.</p> <p>The Independent Review Group are an advisory group and the section to Charlemont was subsequently endorsed in the GDA Transport Strategy (and indeed the Government's approval of the Preliminary Business Case, albeit that was a financial approval which not primarily concerned with matters of proper planning and sustainable development.)</p> |

Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                                   |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 35                                                                                                                                                                                                                                 | 4.3.9 Jasper<br>(Independent Review for the European Commission and Central Bank) | 21       | <p>A.2.1. Have reasonable alternatives been considered? Is there a clear best option? If there are several options that would meet the need, how was the robustness tested?</p> <p>Interchange between Luas/Metro services is available at St Stephens Green and O'Connell Street, and the proposal to deliver through-services between Swords and Sandyford has been postponed for the foreseeable future. The justification for the connection from St Stephens Green to Charlemont/Ranelagh is based on the perceived difficulty of adding this as a separate project at a later date.</p> <p>Again, the independent review returns to the issue of the justification for the last section of the line. The above quote refers to a perceived difficulty in extending the line later. It is apparent that the sponsoring authority is attempting to build as much of the MetroLink project as possible and attempting to build a rationale and justification for it.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Responses (1) and (2) explain the rationale for the proposed Charlemont Station noting that this is not based on an objective of an advance build towards replacement of the Luas Green Line. It is not based on any difficulty relating to the future delivery of the St Stephen's Green to Charlemont section of the project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 36                                                                                                                                                                                                                                 | 4.3.9 Jasper<br>(Independent Review for the European Commission and Central Bank) | 21       | <p>A.3.1. Are project costs including contingencies and benefits realistic?</p> <p>Costs and contingencies are appropriately calculated. Regarding the project's scope and design several technical aspects appear to make the project expensive: in particular the inclusion of full segregation along the 7 km section beyond the airport, the inclusion of the connection to Ranelagh/Charlemont, the use of relatively short distances between city centre stations, and very high station costs.</p> <p>A.3.4. What drives the cost, schedule, benefits, productivity and performance of the project?</p> <p>The main cost driver is the Civil Works Unit Cost (which only includes the base cost components without any contingencies), where the EU's average is around EUR 86m, while Metrolink costs EUR 181m per kilometre (more than double). The objective of connecting to a future upgraded Luas Green Line, providing full segregation through Swords, and the provision of large station boxes is likely to be driving this high unit cost.</p> <p>The independent review was evidently very concerned about the costs and benefits of the project, highlighting the inclusion of the 7 km of segregated line beyond the Airport and the southern connection to Ranelagh. This is effectively indicating that very costly infrastructure for the state is being proposed, but which is not justified. It is also clear that the concerns over relatively short distances between stations and very high station costs will be perpetuated if the Metro gets extended through the replacement of the Luas Green Line. This will result in the 700m distance between the Canal and Ranelagh having 2 Metro Stations (Charlemont and a new Ranelagh metro station at Oakley Road) and 2 Luas Stations (the existing Charlemont and Ranelagh stops). Clearly this will stitch in high costs for future development and an overdevelopment of rail infrastructure in a very small area.</p> | <p>Please refer to responses (1) above that explains The Board is not responsible for any decisions in relation to the funding the Project and that infrastructure is being duplicated given the capacity of the Luas south from St. Stephen's Green is restricted due to on-street running. In any event, all of the information referred to was taken into account by the Government when it approved the Preliminary Business Case.</p> <p>As previously noted, the NTA's GDA Transport Strategy 2022-2042, section 12.3.2 states "Charlemont offers the optimal location for the primary interchange with the Green Line in response to growing demand in the longer term and is an appropriate location to facilitate any potential future metro extensions to serve the south west, south or south east of the city region should sufficient demand arise." The emphasis is on "potential" and "should sufficient demand arise", it is therefore not appropriate to assume there will be a new Ranelagh metro station at Oakley Road as suggested. Any future decisions taken regards metro will be the subject of future further study and consideration if deemed required.</p> <p>Responses (1) and (2) provide the rationale for the proposed Charlemont Station.</p> |
| 37                                                                                                                                                                                                                                 | 4.3.9 Jasper<br>(Independent Review for the European Commission and Central Bank) | 21       | <p>A.4.8. Should the project be broken down into smaller steps?</p> <p>The connection to Ranelagh could feasibly be deferred until there is clarity on the future of the Luas Green Line (subject to an improved understanding of how this could physically be delivered in a scenario with metro operational).</p> <p>This conclusion was made as recently as May 2022. There needs to be greater clarity on what is being proposed to the Green Line.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Responses (1) and (2) provide the rationale for the proposed Charlemont Station.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                      |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 38                                                                                                                                                                                                                                 | 4.3.10 MPAG Review Note (June 2022)                                  | 22       | <p>6. There are concerns that the current route duplicates other public transport services and planned transport interventions in the corridor, potentially leading to demand abstraction. Undermining the viability of other transport services may cause difficulties in the planning process. Up to date analysis of the cumulative impacts of major public transport services in the vicinity of Metrolink (existing and planned) is needed in order to confirm the project need and to justify the selection of the most appropriate project design both within the environmental assessment materials and the business case. The potential for likely long-term traffic management on the road networks is not factored in"</p> <p>The cumulative assessment is required at strategy level and project level, yet this is not provided in the subject Railway Order Application.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>Response (1) above addresses why infrastructure between St Stephen's Green and Charlemont is not deemed to be duplicated.</p> <p>EIAR Chapter 3 Background to the MetroLink Project, section 3.1 notes that the "This Chapter presents a review of the need for the MetroLink project (hereafter referred to as the proposed Project) in the context of the historical development of a proposed metro system for Dublin as supported by transport and planning policy since 2001. The need for the proposed Project is discussed based on reference to the current challenges identified in relevant plans and policy documents and how these challenges would be met by the proposed Project. All policy documents referenced in this Chapter are publicly available documents and can be sourced from the documents authors. Alternatively, each of these documents, listed by section 3.1 can be downloaded from the website <a href="http://www.MetroLink.ie/background">www.MetroLink.ie/background</a> information."</p> <p>EIAR Chapter 9, Traffic and Transport assesses the impact of the MetroLink Project on Traffic and Transport during the Construction Phase and Operational Phase and includes impacts on public transport. Key indicators such as public transport mode share improve with the delivery of MetroLink. As shown in Appendix A9.2-M Traffic and Transport Assessment - St Stephen's Green, all model zones along the section of the alignment between St Stephen's Green and Charlemont see up to a 5% increase in public transport mode share.</p> |  |
| 39                                                                                                                                                                                                                                 | 4.3.10 MPAG Review Note (June 2022)                                  | 22       | <p>In reflecting the conclusions of the independent review, the MPAG (Major Projects Advisory Group) report states:</p> <p><i>"7. The rationale for extending the preferred scheme to Charlemont is noted by JASPERS as "strategically weak" given the additional costs involved and the duplication of the LUAS Green Line which also provide a public transport service to the areas of the city centre in question. To counter this point by JASPERS, NTA/TII make a case for the terminus at Charlemont that better provides for a future connection into a new south side transport scenario, whatever that may look like. "</i></p> <p>Rather than addressing this issue, effectively the NTA/TII would be reinforcing the problem by duplicating more infrastructure further south to Ranelagh and creating more drivers of high unit costs.</p> <p>A further report has been included in the railway order application, which compares the St. Stephens Green terminus with the Charlemont Terminus. It is apparent that the project has been effectively designed as a standalone civil engineering project, rather than as part of an integrated transportation network. There is a very unclear rationale as to why the southern section from St. Stephens Green to Charlemont has been included, as it has changed from being a necessary connection to the Green Line for upgrade to Metro; to interchanging with the Luas Green line; to perceived difficulties of adding this later.</p> | <p>Responses (1) and (2) provide the rationale for the proposed Charlemont Station.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |

| 41                                                                                                                                                                                                                                 | 5.2.2 Draft Transport Strategy for the Greater Dublin Area 2022-2042 | 24       | <p>It is significant that the post-2042 light rail network does not include any extension of Metro to the south. Furthermore, as outlined above the real optimal interchange with the Luas Green Line is at St Stephen's Green West. However, due to the advance building of the Charlemont Station Box (with its more easterly alignment at its north end), the NTA/TII constrained itself from considering of any potential for alignment between St. Stephens Green West and Charlemont.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>Response (5) above explains why a station at St Stephen's Green West is not preferred.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |

Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                      |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 42                                                                                                                                                                                                                                 | 5.2.2 Draft Transport Strategy for the Greater Dublin Area 2022-2042 | 25       | <p>It is not part of the Strategy, even post 2042, to upgrade the Luas Green line to metro standard. The city will be served by Luas, a single Metro line to the Airport and a much expanded DART service. This will include the DART underground between Spencer Dock and Heuston Station. The planned overall network is illustrated in the figure below.</p> <p>It must be noted that the Strategy is currently only in draft form. The Board should not be bound by its provisions, but should have regard to the light rail network that is emerging. In particular, if the Board refuses to confirm the connection between St. Stephens Green and Charlemont, undoubtedly the final adopted strategy will take this into account.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>TII would note the GDA Strategy 2022-2042 states "In reviewing and updating the Transport Strategy, which takes place every 6 years, the NTA will assess the requirement to provide additional Metro lines in the GDA based on updated forecast demand for travel and on emerging significant changes in land use and spatial policy, including previously considered options to extend Metrolink southwards towards UCD, or along the existing Luas Green Line, or towards South West Dublin."</p> <p>Since the date of the RO submission, the NTA's GDA Transport Strategy 2022-2042 has been adopted.</p> <p>The Metrolink route does not in any way impede future connectivity or integration to a future Dart underground scheme.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 43                                                                                                                                                                                                                                 | 5.3.1 Dublin City Development Plan 2016 2022                         | 25       | <p>The City Centre is defined as the area covered by Z5 zoning, where the objective is "To consolidate and facilitate the development of the central area, and to identify, reinforce, strengthen and protect its civic design character and dignity". On the south side of the city, the zoning only extends from the Liffey to St. Stephens Green and Camden Street. From a policy perspective, the Inner City is the area that falls between Grand and Royal Canals. In this regards, not only does the Charlemont Station not fall within the City Centre area, as defined in the Development Plan, it does not even fall within the area designated as Inner City. It may therefore be classified as Outer City. The area around Dartmouth Square is covered by zoning objective Z2: "to protect and/or improve the amenities of residential conservation areas."</p> <p>The following policy also applies:</p> <p>MT4: To promote and facilitate the provision of Metro, all heavy elements of the DART Expansion Programme including DART Underground (rail interconnector), the electrification of existing lines, the expansion of Luas, improvements to the bus network in order to achieve strategic transport objectives.</p> <p>St Stephen's Green, the South Georgian Core and the Grand Canal are designated as "Conservation Areas" in the current DCDP 2016-2002</p> | <p>As outlined in Section 4.5.18.6 of the Planning Report, the majority of the proposed Charlemont Station and all above ground elements are located within the lands zoned Z6 with the objective "To provide for the creation and protection of enterprise and facilitate opportunities for employment creation". The Station has been designed so that it is integrated with the third party redevelopment currently under construction overhead. Furthermore, the construction of a station is Permissible under the Z6 zoning objective, and as such the Proposed Project is consistent with the zoning objective. While not within the City Centre as defined in the development plan, the lands are within the inner suburbs, where development is supported by way of Policy SC8 of the Dublin City Development Plan 2022-2028, "To support the development of the inner suburbs and outer city in accordance with the strategic development areas and corridors set out under the Dublin Metropolitan Area Strategic Plan and fully maximise opportunities for intensification of infill, brownfield and underutilised land where it aligns with existing and pipeline public transport services and enhanced walking and cycling infrastructure." Specifically, a station at Charlemont is identified and supported as part of Metrolink within Policy SMT22 of the development plan. The design of the station, integrating with intensive development overhead is entirely consistent with the policies of the plan.</p> <p>The zoning under the Dublin City Development Plan 2022 - 2028 for the residential properties in question is "Z2 Residential Neighbourhoods (Conservation Areas)" with an objective to "protect them from unsuitable new developments or works that would have a negative impact on the amenity or architectural quality of the area" (See Table 3.11 of the submitted Planning Report). The MetroLink station and associated works will not have a negative impact on the amenity or architectural quality of the area, apart from temporary impacts during the construction phase that will be mitigated as outlined in the EIAR.</p> <p>The element of the Project within the Z2 zoning area will affect a below ground area only and will not compromise the land use objective for the lands overhead.</p> |

However, it is noted that provisions of the Draft Development Plan do not accurately reflect the proposals in the Transport Strategy. For example, the Draft Development Plan illustrates the MetroLink project continuing on in a southerly direction, with a tie in at Ranelagh. However, this is quite clearly not proposed in the Draft Transportation Strategy. It is noted that the Draft Development Plan was drafted prior to the Draft GDA Transport Strategy.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Since the date of the RO submission, the NTA's GDA Transport Strategy 2022-2042 has been adopted and notes the following:</p> <p>Charlemont offers the optimal location for the primary interchange with the Green Line in response to growing demand in the longer term and is an appropriate location to facilitate any potential future metro extensions to serve the south west, south or south east of the city region should sufficient demand arise.</p> <p>In reviewing and updating the Transport Strategy, which takes place every 6 years, the NTA will assess the requirement to provide additional Metro lines in the GDA based on updated forecast demand for travel and on emerging significant changes in land use and spatial policy, including previously considered options to extend Metrolink southwards towards UCD, or along the existing Luas Green Line, or towards South West Dublin.</p> <p>The inconsistencies referred to have been resolved with the finalisation of the Development Plan and GDA Transport Strategy.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 46                                                                                                                                                                                                                                 | 6. Points of Submission<br><br>6.1 Introduction | 28       | <p>It is apparent that this important project has been designed in the context of a disjointed evolution of a policy framework and has been driven, and indeed prejudiced, by private development proposals on the Carrolls Building site.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Responses (1) and (2) provide the rationale for the proposed Charlemont Station, and response (6) explains why the station box location is not fixed by the Charlemont Development.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 47                                                                                                                                                                                                                                 | 6.2 Compliance with Policy                      | 28       | <p>In summary, the policy of the current Transport Strategy for the Greater Dublin Area 2016-2035 only covers the Metro North element from Swords/Airport to the City Centre. This should then be followed by capacity increases of the Luas Green Line services. This capacity increase has not yet been undertaken and the modelling projections suggest that further capacity increases to the Luas Green Line to achieve a 30 trams per hour Luas service between Sandyford and St. Stephen's Green, would accommodate Luas demand to approximately 2039 in a "high projection" scenario or to approximately 2049 in the "low projection" scenario. No part of Metro South should be considered until after the Luas services have been enhanced. Furthermore, it is evident that Metro South is being dropped, as reflected in the revised Draft Strategy. The Minister for Transport must formally approve the strategy for it to have full effect. Under section 31J of the Planning and Development Act, the Board must, in carrying out its functions, ensure that the GDA transport strategy "....<i>shall be a consideration material to the proper planning and sustainable development of the area or areas in question</i> ."</p> <p>The NTA/TII has prioritised a Luas Green Line Tie-in over a fully functioning City Centre Terminus. This means that for the NTA/TII, it is more important to build the Charlemont Metro Station now in order to achieve this potential outcome 2-3 decades in the future, then it is to build a City Centre Terminus now that can connect to multiple modes of transport during the next 2-3 decades.</p> | <p>In responses (1) and (2) above we have noted that since the date of the RO submission, the NTA's GDA Transport Strategy 2022-2042 has been adopted and confirms Charlemont as a station location. Further, the current Transport Strategy for Greater Dublin Area (2022-2042) considers a range of options for the onward extension of MetroLink to meet the demand for travel over the period of the strategy. This includes consideration of the need for the upgrade of the Luas Green Line to metro with a metro extension to Dublin south west, south or south east. Whilst the strategy envisages that further extensions will be delivered after 2042, MetroLink which terminates at Charlemont allows for the possible extension of the metro in all the above directions.</p> <p>Responses (30) and (31) has explained why capacity increases to the Luas Green Line to achieve 30 trams per hour Luas service between Sandyford and St. Stephen's Green is not proposed.</p> <p>The rationale for the proposed station at Charlemont is explained by responses (1) and (2) above, and response (5) explains why a station on St Stephen's Green West is not preferred. The project has been designed to ensure that the proposed city centre station locations and Charlemont will provide sufficient capacity to meet the requirements of the city centre while forming part of an integrated transport network, by facilitating interchange with Dart (at Tara St) and Luas (at Charlemont).</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                                    |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 48                                                                                                                                                                                                                                 | 6.3 Material Contravention of the Dublin City Development Plan and Loss of Amenity | 29       | <p>We strongly contend that the proposed development in the Charlemont &amp; Dartmouth area during its long construction phase and its operational phase, will result in a serious loss of residential amenity for occupiers in the surrounding area. This is demonstrably contrary to the zoning objective for the area, which is objective Z2: <i>"to protect and/or improve the amenities of residential conservation areas. "</i></p> <p>Section 6 of the Planning Report accompanying the Rail Order Application includes a material contravention statement. It states:</p> <p><i>"In consideration of the fact that the proposed project is of strategic importance to the long term development of the Dublin region for land-use and transport and has been specifically identified as being of national importance in the National planning Framework, National Development Plan and other key statutory documents, it is considered that there is ample justification for An Bord Pleanála to permit a Material Contravention of the relevant Development Plans."</i></p> <p>This material contravention statement is wholly inadequate as it does not specify which development plan the development materially contravenes. Furthermore, this material contravention is not specified in the public notices and therefore the public are not made specifically aware that the Railway Order Application materially contravenes a development plan which has been adopted by locally elected representatives. Furthermore, that section of the project that is south of St. Stephen's Green is outside of transport policy objectives. The Application is therefore fundamentally flawed.</p> | <p>As outlined in Section 4.5.18.6 of the Planning Report, the majority of the proposed Charlemont Station and all above ground elements are located within the lands zoned Z6 with the objective "To provide for the creation and protection of enterprise and facilitate opportunities for employment creation". The Station has been designed so that it is integrated with the third party redevelopment currently under construction overhead. Furthermore, the construction of a station is Permissible under the Z6 zoning objective, and as such the proposed Project is consistent with the zoning objective. While not within the City Centre as defined in the development plan, the lands are within the inner suburbs, where development is supported by way of Policy SC8 of the Dublin City Development Plan 2022-2028, "To support the development of the inner suburbs and outer city in accordance with the strategic development areas and corridors set out under the Dublin Metropolitan Area Strategic Plan and fully maximise opportunities for intensification of infill, brownfield and underutilised land where it aligns with existing and pipeline public transport services and enhanced walking and cycling infrastructure." The design of the station, integrating with intensive development overhead is entirely consistent with the policies of the plan.</p> <p>The zoning under the Dublin City Development Plan 2022 - 2028 for the residential properties in question is "Z2 Residential Neighbourhoods (Conservation Areas)" with an objective to "protect them from unsuitable new developments or works that would have a negative impact on the amenity or architectural quality of the area" (See Table 3.11 of the submitted Planning Report). The element of the Proposed Project within the Z2 zoning area will affect a below ground area only and will not compromise the land use objective for the lands overhead.</p> <p>Furthermore, it is agreed that the short-term implications for local residents will be significant as the proposed Project progresses through the construction stage, however the EIAR assesses the environmental impacts of the construction phase and commits to the implementation of appropriate mitigation measures that reduce the environmental impacts so they are not significant, with the exception of the short-term passing of the TBM for the reasons explained by section 4.2.2 Construction Phase (b) Noise and Vibration. For the operations phase, all environmental impacts are mitigated so they are not significant. TII will work closely with local residents to ensure the required mitigation measures are put in place.</p> <p>Metrolink with a station located at Charlemont is specifically identified in the Greater Dublin Area Transport Strategy 2022-2042 and is specifically supported, including Charlemont station, in policy SMT22 of the Dublin City Development Plan 2022-2042 "To support the expeditious delivery of key sustainable transport projects so as to provide an integrated public transport network with efficient interchange between transport modes, serving the existing and future needs of the city and region and to support the integration of existing public transport infrastructure with other transport modes. In particular the following projects subject to environmental requirements and appropriate planning consents being obtained: • DART + • Metrolink from Charlemont to Swords • BusConnects Core Bus Corridor projects • Delivery of Luas to Finglas • Progress and delivery of Luas to Poolbeg and Lucan".</p> <p>Therefore, the Proposed Project complies with the policies and objectives of the relevant development plans at this location.</p> <p>The significant effects of the Proposed Project on the environment, including those in the vicinity of Charlemont Station, have been fully assessed in the EIAR that accompanies the Railway Order application.</p> <p>The Transport (Railway Infrastructure) Act 2001 does not require the applicant or the Board to take any additional procedural steps to apply for or grant a Railway Order that involves a material contravention of the development plan. While TII's position there is no material contravention of the development plan, it has referred the Board to the criteria that are relevant to the Board's decisions to grant planning permission in material contravention of the development plan should the Board take a different position. The 2001 Act does not refer to those criteria, but they are clearly matters that the Board would consider in the event it took the view that the proposed Railway Order involves a material contravention of the development plan.</p> |

                            |                                      |          | 042                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

                                                                                                                                                                                           |
| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                      |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 49                                                                                                                                                                                                                                 | 6.4 Strategic Need and Business Case | 29       | <p>.....It is envisioned that the tunnel that extends 350m past the Charlemont Station will be connected to tie-in at-grade with the existing Luas Green Line in order to facilitate the full replacement of the Green Line to metro standard. This tie-in connection will involve a top-down construction method which will have devastating implications for houses in Ranelagh, with the demolition of Manders Terrace and half of Oakley Road (see section 6.11).</p> <p>All options considered in the multi-criteria analysis as detailed in Appendix B of the Business Case start at Charlemont. None start at St. Stephen's Green (either east or west). The southern starting point for the entire project is flawed and does not reflect the current policy in relation to Metro North, as detailed in the current Transport Strategy, that it should be the city centre only. Furthermore, the policy context for the Business Case does not refer to the Draft updated Transport Strategy for the GDA 2022-2042, which abandons the Metro South Project in its entirety.</p> <p>The unit cost of Metro is c€322 per kilometre, which is compared to a European average of c€122m per kilometre. The Metro cost is an average of over and underground. The alternative termini study furnished as part of the EIAR estimate that the southern section between St. Stephen's Green and Charlemont (including a tunnel extension to facilitate a switch back) will cost €650m. This is a very significant cost to the State, particularly in a situation where the benefits are not evident, as the service duplicates the Green Line between St. Stephen's Green and Charlemont. This concern was raised in the JASPERS independent review and reflected the MPAG Review, where the link was considered to be 'strategically weak' and duplicated other fixed rail services. It was requested that these matters be addressed prior to a Stage Gate decision by Government. The Business Case was revised to reflect increased costs and different assumptions. The inflation assumptions were rebased from Q4 2019 prices to Q4 2021 prices. However, this rebasing totally misses the current surge in inflation resulting from energy price increases and the war in Ukraine. The revised cost benefit ratios (CBR) reduced from between 1.4 to 2.5, to between 1.1 and 2.0. If current inflation is taken into account, which it would be as part of the assessment of this project, the cost-benefits of the project is likely to be below required thresholds.</p> <p>Probably the most costly section of the project is between St. Stephen's Green and Charlemont. Omission of this section would significantly improve the CBR figures, so that it will actually have a chance of passing the next stage of the Business Case process and the decision-making by the Government at the next Stage Gate 2 at the pre-tender approval stage.</p> <p>Surprisingly, the final Business Case (presented to Government for Decision Gate 1 on the 4th July 2022) did not address all of the points of concern raised in the MPAG Review of 21st June 2022. In particular, the business case has not addressed the principal concern of the JASPAR review, that the section to the south of St. Stephen's Green was 'strategically weak'. As indicated above, the original Business Case of February 2021 advocated this link on the basis that it was required to tie in and replace the Luas Green Line services, although this was overtaken by the emerging Draft Transport Strategy which effectively considers dropping the south side metro element.</p> <p>The critical issue is that the MetroLink section from St. Stephens Green East to Charlemont duplicates the Luas Line Green services. The Draft Transport Strategy indicates that an enhanced Luas Green Line will have capacity to 2039 and beyond and hence its replacement to Metro is not required. The JASPERS review concludes that the connection to Ranelagh could feasibly be deferred until there is clarity on the future of the Luas Green Line.</p> | <p>Please refer to responses (1) above that explains The Board is not responsible for any decisions in relation to the funding of the Project.</p> <p>Response (6) explains why no demolition of property will be required in the event of a tie-in to the Luas Green Line.</p> <p>As previously noted, since the date of the RO submission, the NTA's GDA Transport Strategy 2022-2042 has been adopted and confirms Charlemont as a station location.</p> <p>Response (1) above explains the position regards funding of the project, and response (1) and (2) also provide the rationale for the proposed Charlemont Station, including why there is not considered to be an unnecessary duplication of infrastructure between St. Stephen's Green and Charlemont.</p> |

| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                                           |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 50                                                                                                                                                                                                                                 | 6.5 City Centre Hub Location & Prejudicing Options for Expansion of the Transport Network | 28       | <p>.....we contend that strategically, even if an extension to Metro were to be considered at some stage in the future, the starting point for an extension should be St. Stephens Green and not Charlemont.</p> <p>To make Charlemont the starting point for future planning of the rail network is fundamentally and conceptually flawed. For example, any metro spoke to the south-west of the city which would start from Charlemont (given the fixed alignment of the metro station box) would have to cross back under the Luas Green Line, resulting in very significant costs and be of limited value over the distance where the line would duplicate the Luas services. This would significantly undermine the business case of such a project. Spokes in the wheel would be crossed and buckled. While the alignment of the station box at Charlemont does lend itself to onward extension to the south west, such an alignment would miss the opportunity to provide a station in the south inner city/Portobello/Rathmines. This is because spoke is starting too far from the real hub of St. Stephens Green.</p> <p>Extending to Charlemont now:</p> <p>bypasses valuable underserved areas and thereby reduces the "Benefit to Cost" ration of a South West (SW) Corridor in the future.</p> <p>makes an upfront payment of €650m towards the future replacement of the Luas Green Line</p> <p>By denying a SW route the benefits of starting at St Stephen's Green and getting the current metro project to subsidies the first station, Charlemont effectively "locks-in" the Green Line Replacement 2-3 decades in advance of the requirement to make a decision.</p> <p>The 360m tunnel extension to the south on a fixed alignment prejudices future service to south Rathmines for example. It effectively locks in an alignment without proper consideration the impacts of this on properties and transport options.</p> <p>In the context of facilitating alternative southern metro routes there is no advantage in building the metro tunnel to Charlemont at this point. Clearly the only way to get a return on the additional €650m cost to Charlemont is to tie-in with the Green Line. Therefore the value of the Charlemont station is totally predicated on replacing the Luas Green Line and that locks-in future decisions several decades in advance of the requirement.</p> | Responses (1) and (2) above explain the rationale for a proposed station at Charlemont, including that Charlemont will facilitate any future extension to MetroLink south, south west or south east. Response (5) explains why a station on St Stephen's Green is not proposed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 51                                                                                                                                                                                                                                 | 6.5.1 City Centre Interchange                                                             | 32       | <p>The figure below (reference Figure 14), which is extracted from the EIAR, illustrates that there is effectively no interchange with other public transport services other than Luas. There are no bus stops near the Charlemont Station.</p> <p>The figure below, which is taken from the NTA's website, illustrates the network of public transport networks. It can be seen clearly there is a dense network of bus connects, Luas and DART services in and around St. Stephens Green. In contrast there is no network of public transport around the Charlemont Station. This is not the correct location for a city centre terminus interchange.</p> <p>We also note that TII has attempted to make a virtue of lack of interchange at this city centre terminus. The slide below is from meeting held between TII and CDCG on the 3rd March 2022:</p> <p>More akin to terminus of urban metro systems - not mainline train station;<br/>No Drop off location;<br/>No Taxi Rank Drop off;<br/>Restricted Parking - Parking for residents only;</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>The Station is intentionally designed with only one drop-off for persons of restricted mobility only. As detailed in EIAR Chapter 6, MetroLink Operations and Maintenance, the proposed Project has been designed to ensure maximum interchange with other modes of transport, specifically more sustainable modes of transport such as walking, cycling and public transport, to discourage the use of private vehicles. Charlemont Station provides a short interchange distance to the Green Line, as well as being within a 5-minute walk of BusConnects proposed A Spine and E Spine routes. The provision of drop-off facilities have been considered during the design process with such facilities only provided at locations that are less likely to encourage unnecessary short journey car trips in the local area.</p> <p>The modelling data shows that there will be significant growth in public transport usage in trips to and from the city centre area, resulting in an increase of up to 43,000 public transport trips over the 12hr day. There will be a corresponding reduction of over 14,000 car trips along the alignment from Northwood to Charlemont, reducing demand on the road network. The provided interchange with the Luas Green Line at this location is also anticipated to reduce vehicle demand from the south of the city (via Ranelagh) as a result.</p> <p>During the operational phase, Dartmouth Road will have a new pedestrian crossing, one of which is located towards Ranelagh Road. The provision of this crossing will also act as a traffic calming measure on Dartmouth Road.</p> <p>As noted above, a drop off point will be available on Grand Parade for persons of restricted mobility. In this context, it is proposed that the number of drop offs will be minimal and as such will not impact traffic movements significantly.</p> |  |

                            |                             |          | 042                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                             |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 52                                                                                                                                                                                                                                 | 6.6.1 Alignments & Stations | 35       | <p>.....NTA/TII have not properly examined the options for interchange at St. Stephens Green. The western route options considered in the EIAR included stations at St. Stephens Green West. These options arose for the New Metro North Alignment Options Report March 2018 (see Figure 6 above). This however contradicts those detailed Appendix B of the Preliminary Business Case, which outlined 10 route options for the southern section of the project, none of which included a station at St. Stephens Green West. The penultimate station before Charlemont on the western alignment was at College Green. It therefore appears as though the Government has let the railway order proceed to the planning stage on the basis of inaccurate information.....</p> <p>The alignment choices "to determine the most appropriate termination location for the MetroLink project" should have investigated three options : St Stephen's Green West, St Stephen's Green East and Charlemont. St Stephen's Green West becomes a viable option once the self-imposed constraint of forcing a connection to a Luas Green Line tie-in location is removed. Indeed, a carefully designed St Stephen's Green termination point (West or a more connected version of East or a hybrid) would provide a superior connection to the Luas Green Line and maximise the scope for future southern extension routes (including the replacement of the Luas Green Line option as will be discussed below). The fact that St Stephen's Green was never properly evaluated as terminus option shows that the EIAR is deeply flawed and inadequate.</p> <p>There is very limited interconnection with Luas services at the St. Stephens Green East location. The western side of the Green is the real destination for the vast majority of users, as this is the retail core of the city with high levels of footfall throughout the day. Indeed, this is a very significant inadequacy in the EIAR as it does not assess pedestrian origin/destination patterns in and around these critical city centre MetroLink stops. Both the Charlemont and St. Stephens Green East stations leave the majority of passengers where they do not want to go. This is to the top of Grafton Street, which is what was proposed in the original Metro North project.</p> <p>As indicated above, the EIAR suggests that it was not possible to connect Tara Street with a station at St. Stephens Green West, owing to the curvature between two adjoining stations. It was on this basis that only St. Stephens Green East was considered. St Stephen's Green East was then ruled out as a terminus option on the basis that it provided sub-optimal interchange with Luas. In addition, it was considered that this option would not provide for an optimal passenger experience for these travelling onto the Airport with suitcases etc.</p> <p>However, upon review, and using the minimum radii and track curvature used in the actual rail order drawings, it is evident that a St. Stephen's Green West station is technically feasible. We refer to the figure above.....</p> <p>A further important consideration in relation to track design and rail alignment is the requirement for a very lengthy 360m turnback facility to the south of Charlemont Station. No rationale for this lengthy turnback facility is provided. The length of this tunnel also determines the length of the associated intervention tunnel has ben provided. Drawing no ML1-JAI-ARD-ROUT_XX-DR-Y-03096 and ML1-JAI-ARD-ROUT_XX-DR-Y-0307 illustrates that there are three switch back cross-overs. It must be the case that a switch back can only occur once. Furthermore, the length of this prejudices onward future alignments. This is exceeding costly to provide.</p> <p>For these reasons, we request that the Board commissions independent consultancy advice in relation to track alignment, station design and safety considerations on the sections south of Tara Street Station, including the need for a 350m turnback facility to the south of Charlemont Station.</p> | <p>Response (6) explains that the preferred route for MetroLink was published in March 2019 and was based on a comprehensive route options study and on the emerging preferred route for the scheme which included a station at Charlemont and considered station locations at St Stephen's Green West.</p> <p>Response (1) above explains the position regards funding of the Project and the Business Case, while response (5) explains why a station on St Stephen's Green West is not preferred, and responses (1) and (2) explain the rationale for a proposed station at Charlemont.</p> <p>As presented in EIAR Chapter 9 (Traffic and Transport), and Appendix A9.2 Overall Scheme Traffic and Transport Assessment (including station-specific assessments), the origins and destinations of MetroLink passengers have been assessed for all stations. The AM peak hour has been assessed as, for most stations, this time period represents a higher number of boarding and alighting passengers than the PM peak hour. For St Stephen's Green, this is presented in Appendix A9.2-M Traffic and Transportation Assessment -St Stephen's Green section 5.1.1.5. The figures show that whilst the retail areas of Grafton Street and St Stephen's Green Shopping Centre in the west do attract some passengers, destinations also include the employment areas to the north, east and south of the station during the AM peak hour. The pedestrian comfort assessments (presented in section 6.1.3 of Appendix A9.2-M) also illustrate that all sides of St Stephen's Green have been assessed in the static comfort assessment, with the northern side assessed further in the microsimulation VisWalk modelling, to ensure comfort levels are maintained for passengers dispersing towards these retail areas to the west of the station, in the AM peak hour. In summary, the pedestrian network at this location performs well with no areas of excessive congestion or bottlenecks for pedestrians.</p> <p>The need for turnback's and intervention tunnels is covered by EIAR Chapter 4, Description of the MetroLink Project. This section of tunnel is required to allow for the safe and efficient operation of the turnback facility , while also facilitating the stabling of a small number of trains at this location to allow for the efficient operation of the MetroLink system. Please refer to Appendix A7.4 Charlemont Shafts Options Report where there is a review of a number of options for the proposed turnback facility and for the location of an intervention/ventilation tunnel/shaft. The intervention tunnel avoids the need for surface landtake, and the impact associated with this, to accommodate a shaft.</p> <p>The length of the turnback does not prevent an extension south of Charlemont in a future extension of metro services that do not form part of the MetroLink scheme. TII's role is to deliver Metrolink as supported by the Transport Strategy for Greater Dublin Area (2022-2042) and Dublin City Development Plan 2022-2028. The connection from St Stephens Green to Charlemont / Ranelagh and the need for the turnback facility is supported by the current Transport Strategy. The Transport Strategies were prepared by the National Transport Authority, scrutinised by the Joint Oireachtas Committee on Transport, and approved by the Minister for Transport. It notes in section 12.3.2, "Charlemont offers the optimal location for the primary interchange with the Green Line in response to growing demand in the longer term and is an appropriate location to facilitate any potential future metro extensions to serve the southwest, south or southeast of the city region should sufficient demand arise.</p> |

Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                   |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 53                                                                                                                                                                                                                                 | 6.6.1 Alignments & Stations                                       | 38       | <p>This alignment could have connected to Charlemont on the original preferred alignment Option 4 (B) as set out in the New Metro North Luas Green Line Tie-in Study - Options Appraisal Report. However, this terminal option may not tie in with the angled station box design which was proposed and negotiated between the developer and TII during the course of dealing with the application on P.A Reg. Ref: 2373/17. The Board's decision to grant permission for the office development, upon which the angled station box was built, may have effectively prejudiced the potential to provide an appropriate city centre station at St. Stephens Green West and all western alignment options, as it may not be possible to align a metro with this station box at Charlemont. Furthermore, it has potentially prejudiced the tie-in with the Luas line in the event that this ever occurs. The station box alignment is not fit for purpose in relation to the alignment to the south or north of it. The issue of prematurity of the office development which would prejudice a proper consideration of Metro alternatives was strongly argued at the oral hearing into the appeal relating to the Carrolls Building office extension, but the Board merely accepted what TII had to say. The issue of that decision prejudicing the appropriate alignment of the Metro scheme is central to the project and the basis for the entire EIAR.</p> <p>Appendix A7.9 of the EIAR compares the options of terminating the line at Charlemont or at St. Stephens Green East. The option of terminating at Charlemont is favoured as it provides for interchange with the Luas Green Line. If further considers that</p> <p>"The only alternative location is at SSG East and as is demonstrated below this is not an optimal location for interchange with the Green Line."</p> <p>The evident alternative of a termination at St. Stephens Green West is not considered in the assessment, although this is the evident termination point, and is possible as illustrated in Figure 17.</p> | <p>Response (6) explains why TII does not agree that the Metro Enabling Works are prejudicial to future decisions on proper planning and sustainable development of the area.</p> <p>Further, for the reasons set out by response (6), and the rationale presented by responses (1) and (2) explaining why a station at Charlemont is preferred, TII do not agree that the station box alignment is not fit for purpose in relation to the alignment to the south or north of it.</p> <p>Response (5) explains why a station on St Stephen's Green West is not preferred.</p>                                                                                                                                                                                                                                                                                                         |
| 54                                                                                                                                                                                                                                 | 6.6.2 Passenger Convenience & Accessibility                       | 38       | <p>In the assessment of the two options considered, the walk time from St. Stephens Green East to Luas was 7.58 minutes and 2.9 minutes interchange at Charlemont. However, in the Charlemont case, this totally fails to take account of the passenger experience, where passengers ascending from the Metro station would have to climb stairs up to the Luas platform situated above the canal. Given that this is meant to be a major city interchange catering for passengers with suitcases and bags going to/coming from the Airport, such an arrangement is wholly sub-optimal.</p> <p>Currently, Luas passengers looking to access the north of the canal (which is the majority) alight at the stop above the canal and simply use the north stairs to exit on their desired side of the canal. For Metro passengers looking to access the north of the canal, they will have to alight deep underground (south of the canal), must use escalators to reach ground level and then must walk to either around Ranelagh Road Bridge or Leeson Street Bridge or climb the stairs to the Luas stop platform (contra flow to exiting Luas passengers) in order to reach the north side of the Canal.</p> <p>The Metro station is an inferior solution than the Luas stop for walkers seeking to access the north of the canal.</p> <p>We also highlight that there is an inherent contradiction in the application. On the one hand TII are maintaining in the overview of the project that there is an interchange station at St. Stephen's Green. On the other, they are indicating that the St. Stephens Green East is too distant from Luas to serve as an effective interchange.</p>                                                                                                                                                                                                                                                                                                                                                                                                     | <p>It is a matter of fact that the interchange travel distance between the proposed MetroLink station at Charlemont and the Luas Green Line is significantly shorter than at St Stephen's Green and therefore the additional distance travelling via the new stairs or lift does not change this conclusion.</p> <p>It is acknowledged that there is a requirement for passengers to access Luas services by going up another level, which is unavoidable here due to the elevation of the Luas at this location. A new stairwell and lift on the south side of Grand Parade is provided to allow passengers of restricted mobility, including those with luggage to easily access the Luas platform.</p> <p>St. Stephens Green East is an interchange point for Luas but Charlemont is a much more effective interchange point due to the reasons set out by response (2) above.</p> |
| 55                                                                                                                                                                                                                                 | 6.6.3 No Consideration an Efficient Connection at Stephen's Green | 39       | <p>Unlike Charlemont, the NTA/TII have never made an attempt to try to ensure that there is an efficient connection between the proposed SSG East Station and the existing SSG West Luas stop by undertaking an analysis of alternatives to identify a preferred method of connection having regard to known constraints. (For example, a travelator connection between mezzanine level SSG East rising to street level SSG West). While it was deemed worth building a stairs in front of a listed building and one new lift for Charlemont; no alternatives were explored to improve the connection at St Stephen's Green.</p> <p>The Applicants comparison of the options of terminating the line at Charlemont or at St. Stephens Green East in Appendix A7.9 is therefore wholly inadequate in that it compares one option that attempted to improve the connection and another where no attempt was made. This is not a robust consideration of alternatives.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>The new stairs and lift proposed are required to allow the predicted passenger numbers access between Luas and MetroLink at Charlemont, hence they form part of the station design at Charlemont. The provision of a travelator along the entire north side of St. Stephens Green is an entirely different proposition, that is not required to allow passengers access to Luas at St. Stephen's Green. Furthermore, such an intervention would have potential for further significant impacts on the curtilage of the National Monument, which it is suggested would be far more significant than those currently resulting at the Carrolls Building (considering both the relative extent of the structures proposed and the relative importance of the protected structures).</p>                                                                                               |

| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                                |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 56                                                                                                                                                                                                                                 | 6.7 No Studies to Support the Proposed Alignment to the South                  | 40       | <p>A vital component of the Rail Order Application is the consideration of alternative alignments for the south end of the Metrolink line. The Applicant did undertake a detailed consideration of potential tie-ins with the Luas Green Line to the south. Option 4 (b) was the one selected in the March 2017 study. This was the Ranelagh in- line option. No major impacts upon road and bus networks were identified. While it did impact upon properties on Dartmouth Road, it performed best in the multi-criteria analysis. Furthermore, it was the cheapest of the options considered and thee assessment suggested that there were no issues with future connectivity from a terminus at Charlemont.</p> <p>The figures below show the differences between the Preferred Option supported by the Luas Green Line Tie-In Study (March 2017) and the alignment in the Rail Order Application.</p> <p>As can be seen, the already built Charlemont Station Box creates an alignment that is very significantly different from the Preferred Option. (Note Option 4B goes directly under the Carroll's Building, whereas the as-built is significantly to the east at its north end). The implications of the built alignment are discussed in detail in Section 5.10. Very importantly, these implications are both to the north and south of Charlemont. Notably to the north the more easterly alignment has very strongly influenced the Applicant not to consider station options on St. Stephens Green West where the optimal interchange with the Luas Green Line would occur. The resulting alignment to the south of Charlemont shifts to the west and rules out the preferred "in-line" tie-in with the Luas Green Line and will cause significantly increased demolition of houses in the Ranelagh area (see also Appendix 3 below).</p> <p>Not only is the March 2017 Luas Tie-In Study now totally irrelevant from a tie-in perspective (none of the options were used or re-evaluated), it is also redundant from a policy perspective (no Luas Green Line replacement is part of the subject Rail Order Application). Furthermore, the alignment that has already been built is not justified or supported by any other analysis provided in the Rail Order Application.</p> <p>Clearly this leaves a fatal gap in the preparation and documentation of the Rail Order Application. The fundamental and essential study that should have replaced the Luas Tie-In Study is a city-centre terminus study that uses appropriate criteria (that would have been very different from those used in the Tie-in study). Such a study, however, was never undertaken by the Applicant. In fact, the Rail Order Application provides no studies to support the proposed/build alignment to the south.</p> <p>An Bord Pleanála has therefore been denied the opportunity to consider alternatives through the planning process for the current Rail Order Application. Furthermore, since the Applicant still contends that "a Green Line run-through connection will remain a likely option for the future" (Vol 5. A7.9), the alignment that has already been built will severely curtail An Bord Pleanála's scope to consider alternatives for any future potential tie-in with the Green Line Luas several decades from now. For these reasons, we request that the Board commissions independent consultancy advice to undertake a city-centre terminus study that uses appropriate criteria to determine the most appropriate south termination location for the MetroLink project.</p> | Please refer to response (6) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 57                                                                                                                                                                                                                                 | 6.8 No Alternative Charlemont Station Box Design can be Considered in the EIAR | 41       | <p>The simple fact is that no alternative station box/design could be considered in the EIAR as this had already been designed as part of the office development permitted under P.A. Reg Ref:2372/17 and 4755/19. TII fully acknowledge that the station has effectively already been partially designed and constructed and the further completion of the station box and internal fit out is required.</p> <p>The EIA screenings by the planning authority and An Bord Pleanála in relation to these applications did not even consider screening for this element of MetroLink.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>Please refer to response (6) above.</p> <p>The Board can seek further information or revised designs if it is not satisfied that the station box design has acceptable impacts on the environment or that it is consistent with the proper planning and sustainable development of the area.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

The enabling works and the construction of the station box at Charlemont, which have already been undertaken, are not described in the Application as forming part of the subject Rail Order.</p> <p>The rail order application is therefore incomplete.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Please refer to response (7) above. The EIAR does not assess the impacts of constructing the MetroLink Enabling Works because the Railway Order does not authorise the construction of the MetroLink Enabling Works. The works for the station box were assessed by the planning permission sought for the commercial development applied for by, and subsequently granted to Hines and are now complete. As presented in EIAR Chapter 30: Cumulative impacts of the interaction between other projects and MetroLink, including the cumulative potential of the above-mentioned project was assessed. In so far as the observers identify any impacts that they allege should have been assessed, these have been addressed in the EIAR or directly in the responses to their submissions. |

| Submission No.                                                                                                                                                                                                                     |                                                                     |          | 042                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |

| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                     |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |
| 59                                                                                                                                                                                                                                 | 6.9.2 Charlemont Station Alignment and Design                       | 42       | <p>The station box which has already been designed and constructed, and which forms an integral part of the project, was not subject to an EIA. It was neither screened for an EIA, and we would contend, given impact and implications for the wider network, and the environmental impact upon the residents of Dartmouth Square and the Charlemont area, that it should have been the subject of a full EIAR.</p> <p>Under the EIA Directive, an EIA must consider the direct, indirect and cumulative effects of all aspects of the development. On this point alone, the entirety of the rail order application is legally unsafe.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p>Please refer to response (7) above. The works for the station box were assessed by the planning permission sought for the commercial development applied for by, and subsequently granted to Hines. As presented in EIAR Chapter 30: Cumulative impacts of the interaction between other projects and MetroLink, including the cumulative potential of the above-mentioned project was assessed.</p> <p>In so far as the observers identify any impacts that they allege should have been assessed, these have been addressed in the EIAR or directly in the responses to their submissions.</p>                                                                                                                                                                                                                                                                                                                                        |  |
| 60                                                                                                                                                                                                                                 | 6.9.3 Cumulative Effects of Later Phases                            | 43       | <p>One of the principal reasons for bringing the line as far as Charlemont is facilitate onward extension. Case law has established that an EIAR must "...<i>take account, as far as practically possible, of potential later phases</i> ..." (Fitzpatrick &amp; Daly v An Bord Pleanála &amp; Others [2019] IESC 23). The full impacts of the impacts upon other communities to the south has not been assessed "as far as practically possible". It merely states that there would be segregation and significant impacts during construction. This, in our opinion, constitutes an inadequate level of assessment of subsequent phases of the project. It therefore renders the Railway Order application incomplete.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>The extension of MetroLink is not planned for another 20 years. As such, the only assessment practically possible is in the application documents. However it should be noted that any onward extension of MetroLink will be subject to a robust options assessment at such time as the predicted demand for such an extension is identified. Following this, it will also be subject to EIA should this progress. The Board is entitled to seek further information on this point, but any design would necessarily be speculative and the observers have not explained what practical benefit it would confer on the decision making process or public participation.</p>                                                                                                                                                                                                                                                             |  |
| 61                                                                                                                                                                                                                                 | 6.10 Charlemont Station Box Not Permitted/ Unauthorised Development | 43       | <p>The current railway order and associated EIAR acknowledges that the enabling works including the construction of the station box at Charlemont has already occurred. TII appear to suggest that these works were permitted under P.A Reg. Ref: 2373/17 and 4755/19. The station box and enabling works were not included in the public notices in relation to this commercial project and were incorporated into the design as a result of a further information request, which was not advertised. They were two entirely different projects: one a commercial office development for which planning permission was sought; and the other for MetroLink enabling works, for which no permission was sought. The secant piling and associated slab were nothing to do with the commercial office development for which planning permission was sought. The developer applicant and TII negotiated and designed this critical part of the entire transport network and incorporated it into the planning application for an office development without referring to it in any public notices. Third parties were effectively excluded from a statutory process. A senior counsel's opinion is included in Appendix 2 (of the submission) in relation to this critical point.</p> <p>These works are now the subject of a formal enforcement complaint to Dublin City Council submitted on 05/01/23. This complaint states the following:</p> | <p>TII will seek permission to produce written and oral legal submissions at oral hearing that will address, among other things, the Senior Counsel's Opinion.</p> <p>The Board was entitled to grant permission for the designs referred to, which were produced pursuant to statutory requests for information and conditioned in the grant of permission. Section 50 of the Planning and Development Act prohibits any person from questioning the validity of that decision otherwise than by way of judicial review. A judicial review was taken against that permission but withdrawn. The points now raised in this submission are outside the scope of this railway order process. The Board is now required to address the proposed Railway Order and all aspects of the Charlemont station on its own merits by reference to its impacts on the environment and the proper planning and sustainable development of the area.</p> |  |

| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                                            |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 62                                                                                                                                                                                                                                 | 6.11 Implications of the Locked-in Alignment of the Charlemont Station Box | 44       | <p>In the March 2019 consultation on the "Preferred Route", the proposed an alignment for the Luas Green Line "Tie-in" was to be an "in-line" connection. This allowed the public to understand and comment on the implications of the proposal.</p> <p>Since that consultation, NTA/TII reached an agreement (in private) with the developer of the new office building at 2 Grand Parade for a design of the Charlemont Station Box. Construction of this Station Box commenced, without a Rail Order, in April 2021 and was completed in the first quarter of 2022. This design and alignment of the station box is very significantly different to the proposal in the Preferred Route consultation. No notice was made to the public of the proposed changes and there was no opportunity for affected parties to make comment.</p> <p>The NTA/TII argues in justification of the station at Charlemont that "a Green Line run-through connection will remain a likely option for the future" and that the decision to do so has been "deferred" (although this is stated without any required policy decision).</p> <p>In the event of such a future Luas tie-in, the implications of the now locked-in (built) station alignment are profound. It will result in the demolition of houses on Manders Terrace, Charleston Road and (as evaluated in Option 5 of the Tie-in study) will require the demolition of 11 houses and 24 apartments on Oakley Road. None of these houses and apartments would be demolished under the design presented in the Preferred Route Consultation.</p> <p>Not only were affected parties not given notice prior to construction but the implications of the new alignment are now known to the Applicant and yet it is not covered in the EIAR of the Rail Order Application. Instead of presenting the facts about the ramifications of new station alignment, the Applicant merely proffers that a benefit of "the preliminary design for this location allows for a future connection to the Green Line using top-down construction without the need for a TBM bored tunnel extension" Appendix A7.9 p3.</p> <p>As stated above, case law has established that an EIAR must "...take account, as far as practically possible, of potential later phases...". Section 39 of the Transport (Railway Infrastructure) Act 2001 (as amended) provides that the Applicant for a Railway Order must prepare an EIAR that includes (in addition to other matters):-</p> <p><i>(ii) a description of the likely significant effects of the proposed railway works on the environment,</i></p> <p><i>(iv) a description of any features of the proposed railway works, and of any measures envisaged, to avoid, prevent or reduce and, if possible, offset likely significant adverse effects on the environment,</i></p> <p><i>(v) a description of the reasonable alternatives studied by the applicant which are relevant to the proposed railway works and their specific characteristics, and an indication of the main reasons for the option chosen, taking into account the effects of the railway works on the environment.</i></p> <p>The Applicant considers that a future Luas Green Line tie-in is "a likely option for the future", and is aware of the required demolition of houses in the Ranelagh area as a result of such a tie-in, however the Applicant did not disclose or refer to these likely significant effects in the EIAR. The EIAR is again inadequate and disingenuous in not presenting these known facts.</p> <p>More detail on this issue is provided in Appendix 3 of the submission.</p> | <p>Response (6) explains why TII do not consider the design and alignment of the station box at Charlemont applied for by the Railway Order application differs significantly to that consulted on at the Preferred Route stage of the Project.</p> <p>Response (6) explains why no demolition of property will be required in the event of a tie-in to the Luas Green Line.</p> <p>Please refer to response (60) above regards a possible future alignment south of the proposed Charlemont Station not being assessed by the EIAR.</p> |

| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                      |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 63                                                                                                                                                                                                                                 | 6.12.1 Vehicular Traffic and Parking | 45       | The assessment in Table 9.90 of the EIAR concludes that during the construction phase the closure of Dartmouth Road will only have a short term moderate negative impact. Grand Parade is heavily over congested during the peak morning and evening period, and while acknowledging that there would be a 10% increase in flows, it still only classifies the impact as 'moderate'. (Note it is also proposed to have a signalled pedestrian crossing (traffic lights) on Grand Parade). Given the importance of Grand Parade as an orbital road providing access to the employment zones in the Dublin 2 and 4 area, this conclusion must be deemed inaccurate. The closure of Dartmouth Road will have significant local effects on access and traffic flows. The construction sequencing for Charlemont, shown at Section 8.14 of Appendix 5.3, indicates that Dartmouth Road will be closed for 102 months (8.5 years). The closure of Dartmouth Road will have very significant local effects on access and traffic flows. Again, the conclusion that the impacts would be merely moderate cannot be justified. Northbrook Road will experience an increase in traffic movements during construction. | Construction Phase<br><br>As presented in Chapter 09 (Traffic and Transportation), the loss of parking at Albert College (42 spaces) is deemed to be significant as it is a loss of approximately 42% of public parking within 200m, therefore it is considered a loss of a 'very high' percentage of the available parking in the area (more than 30% of available spaces within 200m), in line with the methodology for assessing the impacts during the construction phase, as presented in Table 9.22 and in Appendix A9.5 Scheme Traffic Management Plan.<br><br>The loss of 30 spaces on Dartmouth Road is considered 'moderate' as indicated in the text in Chapter 09 (Traffic and Transportation), and in Appendix A9.5 Scheme Traffic Management Plan, and has been incorrectly presented as 'Slight' within the table. The loss of 30 spaces at this location is less than 30% of the available parking within 200m, and therefore is not considered significant. Parking will be restricted on Dartmouth Road however pedestrian access will be maintained to the properties, and therefore residents can utilise available parking in the surrounding area and walk to their property. |
|                                                                                                                                                                                                                                    |                                      |          | The conclusion in Table 9.93 of the EIAR that construction impacts resulting in the loss of 30 parking spaces will only result in a slight negative effect cannot be justified. This compares with the assessment of Albert College where the loss of 42 spaces is deemed to be significant. It should be noted that where an impact is identified, mitigation measures should be proposed. The only mitigation measure is to "Monitor if closure is required at all points, or if it can be reinstated temporarily throughout the works. This impact will be removed following completion of Construction Phase." There is no acknowledgement of the impact upon local residents not being able to access their houses, or avail of on-street parking. This matter is dealt with in detail in separate submissions.                                                                                                                                                                                                                                                                                                                                                                                        | In line with the road user hierarchy identified in the Transport Strategy for the GDA, the traffic management measures have been designed to prioritise pedestrian/cyclist, public transport and commercial needs provision, over private vehicles. As such, pedestrian access at this location has been maintained over the need for parking spaces due to space constraints arising from the required construction boundary. Further mitigations are detailed in Appendix A9.5 Scheme Traffic Management Plan, which details that a Project Construction Traffic Forum will be established to ensure a coordinated response to construction activities and communicate any concerns from local stakeholders. A Free Phone Helpline (e.g. 0800) will also be available to the public 24/7 to raise any concerns. Where road closures are unavoidable, such as at Dartmouth Road, alternative arrangements will be provided through diversions and signage strategies for access traffic and through traffic.                                                                                                                                                                                       |
|                                                                                                                                                                                                                                    |                                      |          | The assessment of permanent operational impacts states:<br><br>"As part of the proposed Project at Charlemont Station, new pedestrian crossing will be provided to the east of the station on Grand Canal; however, this will have a minimal impact on driver delay on this road."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Both local traffic modelling and the impact upon pedestrians has been assessed. EIAR Appendix A9.5 Scheme Traffic Management Plan presents the analysis undertaken to assess the impact of the traffic management measures on the local road network surrounding the proposed Charlemont Station during the construction phase. At the local level the following parameters have been used to assess impacts on general traffic and on pedestrians:<br><br>• Increase in walking distance/quality of service for pedestrians (through removal of footpath, reduction of quality of service, removal of a pedestrian crossing or relocation of crossing by more than 100m);<br>• Increase in driver delays at junctions;<br>• Changes in traffic flows on surrounding streets; and,<br>• Additional distance travelled due to diversions.                                                                                                                                                                                                                                                                                                                                                            |
|                                                                                                                                                                                                                                    |                                      |          | However, no detailed modelling of the impact of a pedestrian crossing at this point has been undertaken on this critical orbital route. Even from observations, it is evident that there will be an adverse impact.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|                                                                                                                                                                                                                                    |                                      |          | The impact of the traffic measures based on the proposed road level design of Charlemont Station is shown in the Figure below.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | The analysis undertaken at this location indicates that the increased volume of traffic on Grand Parade and Northbrook Road does not translate into any significant increase in driver delay. The largest increase in driver delay of 12 seconds is registered on the westbound approach on Grand Parade to the Ranelagh Road signalised junction.<br><br>During the construction phase, pedestrians will experience a reduction in quality of pedestrian infrastructure and space. The construction site boundary will encroach upon footways in the local area, including the northern side of Dartmouth Road, and the southern side of Grand Parade. However, a temporary signalised crossing will be provided west of the Luas to maintain pedestrian access to and from the Stop. Whilst there are partial closures on Dartmouth Road and Grand Parade, pedestrian movements will be maintained on appropriately sized footways through the area.                                                                                                                                                                                                                                              |

Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |              |          |                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|                                                                                                                                                                                                                                    |              |          | Response (63) continued.                                                                                 | <p>Operational Phase</p> <p>As detailed in Appendix A9.2-B Traffic and Transport Assessment - Charlemont Station, a static pedestrian comfort assessment has been undertaken to assess the footway provisions following the increased volumes of pedestrians on the network in the design years. The results show that at Charlemont Station in both 2050 and 2065 , the comfort level on Dartmouth Road is rated as 'Comfortable' for the anticipated volume of pedestrian movements, and meets with the guidelines identified in the DCC Public Realm Masterplan. The results of the static assessment are presented in section 6.1.3 Pedestrian Impact Assessment of Appendix A9.2-B Traffic and Transport Assessment - Charlemont Station.</p> <p>Further examination of the performance of the street network surrounding Charlemont Station was undertaken using a microsimulation VisWalk model. The simulation model covers the full extent of the publicly accessible station entrances, including the immediate vicinity of the station entrances at street level on both Grand Parade and Dartmouth Road. With the proposed pedestrian infrastructure in place, the model indicates that at the northern entrance, the footways will operate at an acceptable level of service. A reduced level of service is only observed at the pedestrian crossing whilst pedestrians are waiting for the green phase at signals. The model indicates that the strongest flow of passengers will be going west from the northern entrance, towards the Luas interchange and Charlemont Street, with lower flows of pedestrians utilising the southern entrance on Dartmouth Road to travel east towards Dartmouth Square West. Therefore, the level of service of the pedestrian network at the southern entrance will be higher than that of the northern entrance.</p> <p>In addition, it is proposed that the pedestrian crossing on R111 Grand Parade will be repositioned to the front of the building being developed by Hines. With this infrastructure in place, the model indicates that the R111 Grand Parade will have an acceptable level of service overall, with some reductions in service seen at the pedestrian crossing where pedestrians are required to wait for a green phase at the signals. Overall, it is considered that the model displays an acceptable level of network performance.</p> <p>The proposed pedestrian crossing on Grand Parade will have minimal impact on the traffic flow along Grand Parade and can be programmed to operate in sync with the existing signalised junction at Grand Parade /Charlemont Street to maintain the flow of traffic movements. When the Project is operational, car mode share will decrease, with a reduction of up to approximately 830 car tips to and from the zones surrounding Charlemont Station over the 12hr period in 2065. In overall terms, the Charlemont Station will provide for improvements to the public transport network resulting in decreases in private car usage/trips, increases in public transport usages and will facilitate walking and cycling to the station, without significantly impacting on the operation of the road network in the area.</p> <p>Furthermore, TII have deliberately designed the Station with minimum set down space (with the exception of a drop-off on Grand Parade for persons of restricted mobility only) or room for taxi ranks so that it does not encourage the Station to be used for a significant volume of car or taxi trips.</p> |

Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                                   |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 64                                                                                                                                                                                                                                 | 6.12.2 Pedestrian Traffic                         | 48       | <p>There are very significant concerns about the pedestrian movements around the station. This is an interchange station with Luas with high levels of movement between the two. Most of this movement will be focussed on the area in front of the Carrolls Building and will be reliant on a very sub-standard stair access between road level and the elevated Luas platform above the canal. The EIAR acknowledges this issue in Appendix 9.2. The pedestrian environment along Grand Parade is deemed to be unsatisfactory. The drawings show that there are two pedestrian crossings proposed for Grand Parade; one is a Signalled Pedestrian Crossing (Traffic Lights) and the other an Uncontrolled Pedestrian Crossing. There are also two Proposed Uncontrolled Pedestrian Crossing on Dartmouth Road. A traffic light on Grand Parade must have a traffic impact (see the Figure above).</p> <p><i>"The results of the Charlemont assessment show that all links will fall below DCC guidance in 2050, with the exception of Dartmouth Road. Whilst they do not meet DCC guidance, they are deemed to have an 'Acceptable' level of comfort, with the exception of Grand Parade West which has an 'Uncomfortable' rating. In 2065, the results show that all links will fall below DCC guidance, with the exception of Dartmouth Road. Both Charlemont Street and Grand Parade West are deemed 'Uncomfortable', while Ranelagh Road and Canal Road maintain an 'Acceptable' level of comfort."</i></p> <p>As indicated in preceding sections, no assessment is undertaken of the pedestrian movements along Dartmouth Road, which is considered to be a significant deficiency.</p> <p>The Canal provides an effective barrier for pedestrians seeking to gain access to the north side and Adelaide Road. Pedestrians will be required to take a very circuitous route via Charlemont Street. Charlemont Place on the north side of the Canal is a major commuter pedestrian and cycle route to the employment areas of Dublin 2 and 4. However, the lack of access to the north side of the Canal will force pedestrians along the relatively narrow pathways on either side of Grand Parade. The provision of a staircase to the Luas station will do nothing to mitigate this.</p> | <p>This statement is incorrect. As detailed in Appendix A9.2-B Traffic and Transport Assessment - Charlemont Station, a microsimulation VisWalk model has been developed for the immediate area surrounding Charlemont Station. The simulation model covers the full extent of the publicly accessible station entrance, including the immediate vicinity of the station entrance at street level. As presented in Figure 6.10 of Appendix A9.2-B, the layout of the Charlemont microsimulation model network includes Dartmouth Road, and Charlemont Street. With the new pedestrian infrastructure in place (new staircase at Luas stop, provision of an elevator and the repositioning of the pedestrian crossing on crossing on Grand Parade) the model indicates that at the northern entrance on Grand Parade, the footways will operate at an acceptable level of service. A reduced level of service is only observed at the pedestrian crossing whilst pedestrians are waiting for the green phase at signals. The model indicates that the strongest flow of passengers will be going west from the northern entrance, towards the Luas interchange and Charlemont Street, with lower flows of pedestrians going east towards Dartmouth Square West. Therefore, the network at the southern entrance at Dartmouth Road also performs with an acceptable level of service.</p> |  |
| 65                                                                                                                                                                                                                                 | 6.12.3 Drop-Off                                   | 50       | <p>There is no effective provision made for drop-off at this important interchange. Taxi, bus and casual private car users are not appropriately catered for. There is only a short drop on the northern side of the carriageway of Grand Parade and none on Dartmouth Road. There is no taxi rank or provision for future bus services. The interchange with other modes is therefore wholly inadequate. (We noted section 6.5.1 above that TII has attempted to make a virtue of lack of interchange at this city centre terminus in a meeting held between TII and CDCG on the 3 rd March 2022). This will merely result in ad hoc drop off, particularly on Dartmouth Road, blocking access for local residents. Drop-off on Grand Parade will result in traffic congestion and a traffic hazard (especially for cyclists as the proposed Drop-off replaces the existing footpath and cuts across the existing cycle lane).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Please refer to response (51) above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |
| 66                                                                                                                                                                                                                                 | 6.13 Noise, Disturbance and Impact upon Amenities | 50       | <p>The development will have a very significant impact upon the amenities of those residing in the area. This will result from the lengthy construction period of c 9 years, with noise and vibration impacts from tunnelling, the construction of the cut and fill new station, tunnelling and boring associated with the new tunnel and the intervention tunnel. Noise impacts on properties in the vicinity (Dartmouth Square West, Dartmouth Road and Cambridge Terrace) will all range from moderate to very significant. The hours of working are specified as 07:00 hrs to 19:00 hrs. The passage of the Tunnel Boring Machine (TBM) through the stations will be on a 24 hours, 7 days a week basis. HGV deliveries will be ongoing over a lengthy period of time. The impact upon this residential neighbourhood will be very significant.</p> <p>The operational phase will be result in train noise, noise from public address systems, passengers accessing the station, taxis and cars dropping off and picking up.</p> <p>Detailed submissions in relation to the impact upon amenities will be made in the associated submissions in relation to Dartmouth Square West and Dartmouth Road.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>All the concerns cited have been responded to in the associated submissions referred to in relation to Dartmouth Square West and Dartmouth Road.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                  |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 67                                                                                                                                                                                                                                 | 6.14 Public Consultations        | 51       | <p>TII's engagement with the public and local communities affected by this major infrastructure proposal has been wholly unsatisfactory. The experience of CDCG is that TII has not engaged in a meaningful manner to address their concerns and properly mitigate impacts. While there was initial engagement with affected landowners and communities, they have effectively delegated in recent times responsibility to RINA. The role of RINA is to provide independent engineering advice. However, RINA is commissioned by and reports to TII.</p> <p>At a meeting between NTA/TII, members of the CDCG and Ivana Back TD on the 3rd of March 2022, the NTA/TII stated that they were no longer willing to listen to residents' views and were progressing to submit the Rail Order Application. Their stated reason for this was because "further design changes will delay the MetroLink by up to 2 years at a significant additional cost." Rather than the NTA/TII being satisfied that they had completed all necessary and appropriate analysis and assessments, they just didn't want to delay any further or incur any further costs in finding a better solution for Metrolink and local residents.</p> <p><i>Next Steps.</i></p> <ul style="list-style-type: none"><li>• <i>Data and Analysis to be Collated into a Report;</i></li><li>• <i>Railway Order Application to be submitted in Q2 2022;</i></li><li>• <i>Consultation with independent expert who will assist you with your submissions;</i></li><li>• <i>Further design changes will delay the MetroLink by up to 2 years at a significant additional cost.</i></li></ul> <p>The full implications of the final and fixed alignment at Charlemont has never been the subject of public consultation and the station box at Charlemont has been taken as a predetermined factor in the preparation of the entire scheme. The residents of Manders Terrace, Charleston Road and Oakley Road have never been advised that their houses would be demolished in the event that the tie-in should happen in the future.</p> <p>The scale of the project is very significant, and the issues are complex. RINA was only able to provide answers to queries after the Rail Order was submitted, making it very difficult to evaluate and compile a reasonable submission within the time available.</p> | <p>As outlined in Chapter 8 of the EIAR, significant consultation has been undertaken during the development and progression of the MetroLink project. Such consultation includes major public consultation events undertaken to consult on both the Emerging Preferred Route (EPR) and the Preferred Route (PR). Furthermore, the project website (www.metrolink.ie) has been active during the entire duration of the proposed project providing information on project progress with all major project outputs provided on the site for the public. Finally, an independent engineering consultant, RINA, has been provided to potentially affected community groups along the alignment to provide expert technical advice to these groups on the project.</p> <p>EIAR Chapter 8, Appendix A8.19 Meetings Register shows there has been 10 meetings between March 2019 and March 2022 with residents in the Charlemont area that is in addition to the Emerging Preferred Route and Preferred Route non-statutory consultation.</p> <p>The appointment of an Independent Engineer to provide advice and guidance to residents groups has been broadly welcomed by Residents Groups route wide. Whilst TII fund the Independent Engineer they act independently in accordance with their scope of works which can be accessed via the following link <a href="https://www.metrolink.ie/en/your-property/independent-engineering-expert-rina/">https://www.metrolink.ie/en/your-property/independent-engineering-expert-rina/</a>.</p> <p>In the administration of their contract TII have not acted in anyway to affect the independent reporting of RINA and believe this is reflected in their final report which provides a fair and reasonable representation Stakeholder Concerns and their own independent view any technical shortcomings of the scheme and the overall EIAR.</p> <p>NTA/TII are always prepared to listen to residents views and sincerely regret if anything different were communicated at any of the many consultations meetings held over the years of public consultation. TII consider they have completed all necessary and appropriate analysis and assessments, as explained by TII's responses to the associated two submissions concerning Dartmouth Road and Dartmouth Square West.</p> <p>Response (6) explains why TII do not consider the design and alignment of the station box at Charlemont applied for by the Railway Order application differs significantly to that consulted on at the Preferred Route stage of the Project, and hence there was no requirement for further consultation. Response (6) also explains why the station box location was not fixed by the Charlemont Development, and also explains why no demolition of property will be required in the event of a tie-in to the Luas Green Line at Ranelagh.</p> <p>TII acknowledge the scale of the project is very significant but would note that RINA were engaged for a significant period before the Railway Order application was submitted and that the Railway Order Statutory Consultation ran from 30th September 2022 until 16th January 2023.</p> |
| 68                                                                                                                                                                                                                                 | 7.1 Summary of Submission Points | 52       | 1. Compliance with Policy - The proposed development, which extends from the city centre at St. Stephens Green to the inner suburban area does not comply with the policy of the Transport Strategy for the Greater Dublin Area 2016-2035. The extension of Metro to the south city is only to occur after the Luas Green Line services have been upgraded (capacity increases) as an interim measure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Please refer to response (2) above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 69                                                                                                                                                                                                                                 | 7.1 Summary of Submission Points | 52       | 2. The business case fails to accurately take into account inflation projections. The inclusion of an highly expensive section between St. Stephens Green and Charlemont (estimated by TII to cost €650m) is strategically weak and duplicates the existing Luas Green Line services.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Response (1) above explains the position regards funding of the Project and the Business Case and why there is not considered to be a duplication of infrastructure. Charlemont is the incorrect strategic location for a hub and spoke system as it is too far out along the Luas Green Line spoke and would prejudice future options for integration of networks and services. St. Stephens Green is the most appropriate location as it provides for interchange with bus, Luas, other road transport and future DART underground.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Responses (1) and (2) explain the rationale for the proposed Charlemont Station. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                  |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 71                                                                                                                                                                                                                                 | 7.1 Summary of Submission Points | 52       | 4. The project incorrectly dismisses St. Stephens Green West as an appropriate terminal station. It only considers St. Stephens Green East and Charlemont. Furthermore, no study was ever undertaken by NTA/TII to explore the options to increase the efficiency of the connection between a metro station St. Stephens Green East with the existing Luas stop at St. Stephens Green West.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Please refer to response (5) that explains why a station on St Stephen's Green West is not preferred.</p> <p>Please refer to response (55) regards feasibility of connection between St. Stephens Green East and the existing Luas stop at St. Stephen's Green West.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 72                                                                                                                                                                                                                                 | 7.1 Summary of Submission Points | 52       | 5. No study has ever been carried out using specific and appropriate criterial for a city centre terminus. The closest to a terminus study, completed in March 2017, is now shown to be totally irrelevant from a tie-in perspective (none of the options were used or re-evaluated) and is also redundant from a policy perspective (no Luas Green Line replacement is part of the subject Rail Order Application). This leaves a fatal gap in the EIAR documentation and renders it inadequate and incomplete.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>Please refer to response (6) above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 73                                                                                                                                                                                                                                 | 7.1 Summary of Submission Points | 52       | 6. No supporting studies have been included in the Rail Order Application that justifies the alignment that has already been constructed at Charlemont. Should this alignment be used to tie-in with the Luas Green Line in the future it will result in the demolition of houses in the Ranelagh area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>Please refer to response (6) above. Response (6) also explains why no demolition of property will be required in the event of a tie-in to the Luas Green Line.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 74                                                                                                                                                                                                                                 | 7.1 Summary of Submission Points | 52       | 7. No alternatives to the station box at Charlemont were considered as it had been fixed through the design of the overhead commercial development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Please refer to response (6) above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 75                                                                                                                                                                                                                                 | 7.1 Summary of Submission Points | 52       | 8. The previous determination of the alignment at Charlemont involves project splitting and the potential cumulative impacts of future phases has not been taken into account, in as far as practical.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>Please refer to response (7) above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 76                                                                                                                                                                                                                                 | 7.1 Summary of Submission Points | 52       | <p>9. The EIAR is inadequate in relation to:</p> <ul style="list-style-type: none"><li>• Description - The EIAR fails to adequately describe all aspects of the development, particularly the enabling works already undertaken at Charlemont and future elements of the project.</li><li>• Alternatives - This matter is addressed in 5.5 to 5.7 above. There is an inadequate assessment of alternatives alignments, station location, station design at Charlemont and future alignments.</li><li>• Traffic &amp; Transport Assessment - An assessment of pedestrian flows in and around Charlemont Station is provided in Appendix A9.2B of the traffic impact assessment. However, the assessment does not consider egress and access from the station entrance onto Dartmouth Road.</li><li>• Noise - The noise assessment in Chapters 13 and 14 only considers the impacts during the construction phase and the running of trains in the operational phase. However, no assessment is provided of the noise impacts associated with escalators running in the operational phase.</li></ul> | <ul style="list-style-type: none"><li>• Description - Please refer to response (7) above.</li><li>• Alternatives - There is no sections 5.5 to 5.7. Please refer to response (6) above.</li><li>• Traffic &amp; Transport Assessment - Please refer to response (63) above. Regards the assessment does not consider egress and access from the station entrance onto Dartmouth Road. Appendix A9.2-B Traffic and Transportation Assessment-Charlemont Station presents the pedestrian impact assessment in the vicinity of Charlemont Station. The static comfort assessment (and images presented in Figure 6.8 and 6.9) illustrate that the impact on Dartmouth Road has been assessed, with this link maintaining a 'Comfortable' level of comfort in line with DCC's guidance in the operational phase. Further to this, a microsimulation VisWalk model has been developed for the immediate area surrounding Charlemont Station. The extent of the pedestrian model is shown in Figure 6.10 of Appendix A9.2-B, which includes the southern station entrance on Dartmouth Road. Whilst the text does not explicitly refer to Dartmouth Road, it is stated that overall, it is considered that the pedestrian model displays an acceptable level of network performance in the assessment.</li><li>• Noise - Please refer to the responses provided to the associated submissions for Dartmouth Road and Dartmouth Square West.</li></ul> |

Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                  |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 77                                                                                                                                                                                                                                 | 7.1 Summary of Submission Points | 53       | 10. The station box at Charlemont, as constructed, does not have the benefit of planning permission and has not been part of the EIA undertaken for this project. It is an unauthorised development. Processing the current application, which is reliant on these preliminary works, is legally unsafe and contravenes the provisions of the EIA Directive. The public, including the owners of houses that will be demolished in the event of a future Luas tie-in, were denied the right to be notified and to make comments on the known implications of the pre-determined alignment.                                                                                                                                                                                                                                                                                                                                                            | Please refer to responses above, including (7) and (8) regards planning permission and legality.<br><br>Response (6) also explains why no demolition of property will be required in the event of a tie-in to the Luas Green Line.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
| 78                                                                                                                                                                                                                                 | 7.1 Summary of Submission Points | 53       | 11. The development would have an adverse impact upon traffic during the construction and operational phase, drop-off has not been properly designed and there is poor integration with other modes. Pedestrian movements in and around the station would be difficult.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Please refer to response (63) that explains the assessed impact upon traffic and pedestrians during the construction and operational phases of the Project.<br><br>Response (51) responds to the provision of drop-offs and integration with other modes of transport.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 79                                                                                                                                                                                                                                 | 7.1 Summary of Submission Points | 53       | 12. The development would result in noise and disturbance during the construction and operational phases and would result in a loss of amenities for the area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Please refer to the responses provided to the associated submissions for Dartmouth Road and Dartmouth Square West.<br><br>Noise and disturbance during construction: No profound impacts have been identified for residents and mitigation measures proposed will be effective at reducing the impacts on these properties and in general terms impacts will be associated with the construction phase only. Significant mitigation is proposed to include 4m high noise barriers and further proposed mitigation in line with the Airborne and Groundborne Noise Mitigation Policy. On the implementation of these measures the residual impacts are predicted to be moderate. However, as outlined in Transport Infrastructure Ireland (TII) Airborne and Groundborne Noise Mitigation Policy (Appendix A14.6) there is a process in place whereby further mitigation measures can be implemented at individual properties should this be merited.<br><br>Loss of amenity during construction: EIAR Chapter 11, Population & Land Use provides an assessment of effects on community amenity during construction and operation, which relates to the interaction of impacts on air quality; visual amenity; traffic and transport; and noise and vibration. At this location during construction as outlined in Section 11.5.2 of Chapter 11, no impacts are identified on the retail sector or community and social infrastructure (e.g. schools or hospitals). Any severance/disruption to transport will be limited by site mitigation measures such as alternative routes reducing impacts to not significant. |  |
| 80                                                                                                                                                                                                                                 | 7.1 Summary of Submission Points | 53       | 13. There has been inadequate and poor public consultation during the design stage of the project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Please refer to response (67) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 81                                                                                                                                                                                                                                 | 7.2.1 Legal Advice               | 53       | We are strongly of the opinion that it is legally unsafe for the Board to consider the current railway order application. To avoid further undue costs to the applicant, third parties and the Board itself, we request that the Board seeks legal advice, at an early stage and in advance of any oral hearing, in relation to whether:<br><br>i. the Board can consider the application which is reliant on an element of which falls outside the application (i.e. the Charlemont Station Box), and for which permission has not been obtained;<br><br>ii. the EIAR has properly assessed the enabling works at Charlemont Station;<br><br>iii. enabling railway works that form an integral part of the MetroLink project shall form part of the railway order application; and<br><br>iv. the Board is in a position to consider any railway order application involving retention of enabling works, given the provisions of the EIA Directive. | TII has no difficulty with the Board seeking independent legal advice on the issues raised here, but will seek permission to make written and oral legal submissions on them at the oral hearing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |

| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 |                                             |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 82                                                                                                                                                                                                                                 | 7.2.2 Specialist Railway Engineering Advice | 53       | <p>Given the very important strategic issues at stake, we request that the Board appoints its own independent specialist engineering advice:</p> <ul style="list-style-type: none"><li>• To undertake a city-centre terminus study that uses appropriate criteria to determine the most appropriate south termination location for the MetroLink project;</li><li>• To assess rail alignment, station location and design on the sections south of Tara Street Station, including the need for a 350m turnback facility to the south of Charlemont Station.</li></ul> | Responses (1) and (2) above explain the rationale for a proposed station at Charlemont, response (5) explains why a station on St Stephen's Green is not proposed, and response (52) explains the need for a turnback facility.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 83                                                                                                                                                                                                                                 | 7.3 Requested Amendment                     | 54       | <p>Reflecting the original Metro North precedent decision, we request the following amendments:</p> <p>i. Omit from the Railway Order the section from Tara Street Station to Charlemont Station and associated onward tunnel extension and intervention tunnel.</p> <p>ii. Require the submission of a railway order for a section from Tara Street Station to St. Stephens Green which would effectively provide for a terminal hub station which can effectively integrate with the Luas Green Line and future DART underground.</p>                               | <p>The above responses, and the responses to the associated submissions concerning Dartmouth Road and Dartmouth Square West, explain why TII do not consider it is correct or appropriate that the MetroLink alignment south of the proposed Tara Station should be omitted, and also demonstrates why the proposed Charlemont Station has been selected by TII as the preferred interchange with the Luas Green Line.</p> <p>A scheme which terminates at Tara Street would not be consistent with the Transport Strategy for Greater Dublin Area (2022-2042) and would be a material contravention of the Dublin City Development Plan 2022-2027. In addition, any decision to terminate the scheme at Tara will significantly impact on the overall viability and benefits of scheme.</p> |

| Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 Case Reference Number NA29N.314724 - Residents of 33 Dartmouth Road - Submission to Metrolink Railway Order application |                                                                            |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 1                                                                                                                                                                                               | Letter - opening statement                                                 | 1        | While we in favour of the broad aim of the Metrolink project to connect Dublin's city centre to our national airport, as a resident living in the Dartmouth/Charlemont area, we wish to set out a number of observations, for the Board's consideration, regarding the proposal to locate the Terminus station at Charlemont- Dartmouth. Our family home is in the midst of the community where the Terminus station at Charlemont is proposed to be located, and is dangerously close to the proposed very deep pile insertions and deep station box excavations. The impacts of the Metrolink proposal on our family home during both construction and operational phases is profound and will result in a fundamental loss of amenity, loss of property value and represents a profound 'interference with the right to the peaceful enjoyment of one's property'.                                                                                                                                                                                                                                                                                                                                                                                              | Thank you for taking the time to make a submission and your overall endorsement of the MetroLink Project with the exception of Charlemont Station. We have reviewed your submission and responded to the observations made, below.<br><br>TII would like to assure you that at no time will the safety of this property and its occupants be placed at risk, noting that the construction of the station and tunnels will be monitored, including surrounding ground and building movements, with predetermined trigger levels aligned with action plans to ensure movements do not exceed acceptable levels.<br><br>TII can also confirm that both construction and operational impacts have been carefully assessed. TII do understand your particular concerns regards the proximity of 33 Dartmouth Road to the construction of the proposed Charlemont Station, and while TII are of the view that the construction environmental impacts can be mitigated, relocation is an available option in line with the criteria identified in Appendix A14.6 Airborne Noise and Groundborne Noise Mitigation Policy. TII are available to discuss this option if that is something the property owner would like to explore and consider, noting that the southern boundary to the site will only be close to the property for the period of the full Dartmouth Road closure, estimated to be 30 months, and will then be stepped back to the other sider of the road when Dartmouth Road is reopened. TII would further note that there are no profound impacts predicted during the operational phase.<br><br>With regards property value, TII are of the view that the proposed development will have a long term positive affect in terms of property value. There is strong evidence to suggest that property values will in fact increase in close proximity to public transport infrastructure and that local residents will greatly benefit from having a world class metro system providing access to the city centre, airport and north city at their door step. |  |
| 2                                                                                                                                                                                               | Letter - opening statement                                                 | 1        | We are asking An Bord Pleanala to give very serious considerations to the important issues raised in this submission, and, in consequence, make fundamental changes to the Southern section of the route recognizing the inappropriate and strategically weak nature of the current proposal that places a major transport hub in a quiet Victorian residential by-road.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | TII do not agree that the proposed Charlemont Station is in appropriate or strategically weak for the reasons explained by responses (4) and (5) below. Among other things, it would be a material contravention of the GDA Transport Strategy 2022-2042 for ABP to grant an RO for a MetroLink alignment that omits a station at Charlemont.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |
| 3                                                                                                                                                                                               | 1.2. Companion Submissions by the Charlemont and Dartmouth Community Group | 2        | <p>The Charlemont and Dartmouth Community Group (CDCG) has made three submissions (Submitted to An Bord Pleanala by Specialist Planning and Environmental Consultants MacCabe Durney Barnes Limited), which relate to different aspects concerning the MetroLink project. The submissions are as follows:</p> <ul style="list-style-type: none"><li>• Submission 1 (General) - This subject submission relates to general policy and strategic matters and area wide concerns for the Charlemont-Dartmouth Community</li><li>• Submission 2 (Dartmouth Road) - This associated submission relates to the concerns of the residents on Dartmouth Road relating to impacts during the construction and operational phases of the project.</li><li>• Submission 3 (Dartmouth Square West) - This associated submission relates to the concerns of the residents on Dartmouth Square West relating to impacts during the construction and operational phases of the project.</li></ul> <p>As owners of 33 Dartmouth Road we have been heavily involved in the development and preparation of all 3 Submissions and are fully in support of them. This submission should be viewed in conjunction with those submissions and provides some additional perspectives.</p> | TII have reviewed and responded to all submissions received in response to the Railway Order application.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |

| Submission No.                                                                                                                                                                                  |                                                                                              |          | 043                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022 Case Reference Number NA29N.314724 - Residents of 33 Dartmouth Road - Submission to Metrolink Railway Order application |                                                                                              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 4                                                                                                                                                                                               | 1.3. Support for the Overall Metrolink Project but the South Terminus is Not Fit For Purpose |          | <p>We are in support of the overall Metrolink project. However, we believe that it is not in the broad strategic interests or common good of Dublin to place the south Terminus of Metrolink at Charlemont. It is wholly inappropriate to place a terminus in such an inaccessible location for a minimum of 2 to 3 decades and permanently, if the replacement of the Luas Green Line does not occur.</p> <p>The Charlemont Station only provides a sub-optimal interchange with the Luas Green Line, is incapable of connecting with any future Luas Lines, is not capable of increased connection with road transport in terms of low emissions buses and cars and, outside of the Dart corridor, Charlemont and especially Dartmouth Road will become the main MetroLink access point for the southside. This is not sustainable in a such a residential and constrained location.</p> <p>The proposed south terminus at Charlemont is incapable of acting as a city centre hub and therefore is not fit for purpose. It is simply in the wrong location.</p> <p>Furthermore, the section of the Metrolink project between St. Stephen's Green and Charlemont is a €650m duplication of infrastructure that is not justified on many very important grounds.</p> | <p>TII disagree with the statement that “it is not in the broad strategic interests or common good of Dublin to place the south Terminus of MetroLink at Charlemont”.</p> <p>The Board is required to have regard to the likely consequences for proper planning and sustainable development in the area in which it is proposed to carry out railway works (section 43(1) of the 2001 Act) and as such the following matters are relevant.</p> <p>The connection from St Stephens Green to Charlemont / Ranelagh is supported by the previous Transport Strategy for Greater Dublin Area (2016-2035) and the current Transport Strategy for Greater Dublin Area (2022-2042). The latter considers a range of options for the onward extension of MetroLink to meet the demand for travel over the period of the strategy. This includes consideration of the need for the upgrade of the Luas Green Line to metro with a metro extension to Dublin south west, south or south east. Whilst the strategy envisages that further extensions will be delivered after 2042, MetroLink which terminates at Charlemont allows for the possible extension of the metro in all the above directions. . The Transport Strategies were was prepared by the National Transport Authority, scrutinised by the Joint Oireachtas Committee on Transport and approved by the Minister for Transport. It notes in section 12.3.2, “Charlemont offers the optimal location for the primary interchange with the Green Line in response to growing demand in the longer term and is an appropriate location to facilitate any potential future metro extensions to serve the south west, south or south east of the city region should sufficient demand arise.”</p> <p>The Transport Strategy is “a consideration material to the proper planning and sustainable development of the area or areas in question.” Development Plans are required to be consistent with the Transport Strategy. The Dublin City Development Plan 2022-2028 envisages this station at Charlemont in policy SMT22 “To support the expeditious delivery of key sustainable transport projects so as to provide an integrated public transport network with efficient interchange between transport modes, serving the existing and future needs of the city and region and to support the integration of existing public transport infrastructure with other transport modes. In particular the following projects subject to environmental requirements and appropriate planning consents being obtained: ... MetroLink from Charlemont to Swords”.</p> <p>Accordingly, the location of the Charlemont station was a strategic decision made at the highest levels of transport and land use planning and such is fully consistent with the proper planning and sustainable development of the area.</p> <p>The choice of Charlemont as a station location and interchange point is based on robust analysis that has identified that this location provides significant passenger numbers for the proposed MetroLink. Passengers using MetroLink will arise from (1) The ability for an immediate interchange with Luas (which is one of the key project objectives), (2) passenger demand modelling which identified significant demand within the catchment served by this station, and (3) It should also be noted that the proposed station is within a 5-minute walk distance of the Bus Connects proposed A Spine and E Spine routes.</p> <p>The proximity of the metro to the Luas line at Charlemont provides for a positive customer experience for all users with short interchange distance and due to the proximity, clear wayfinding and high visibility of the interchange. The interchange arrangements at Charlemont provide for significantly better interchange arrangements compared to an interchange at St Stephen’s Green Station.</p> <p>TII therefore do not agree that Charlemont provides a “sub-optimal interchange” and would further note that the MetroLink forms part of an integrated public transport network. The system is designed in an integrated manner so that people travelling from the area south of Dublin to access locations north of Charlemont, such as Dublin Airport, Mater, Swords etc. will utilise public transport to interchange with the MetroLink, or will walk or cycle to access their local station. The system is not designed to encourage people to drive to stations within the City and TII actively discourage people from doing so other than the Park &amp; Ride station at Estuary. TII also do not agree that “Charlemont and especially Dartmouth Road will become the main MetroLink access point for the southside” as this is not borne out by our transport analysis. Furthermore, TII have deliberately designed the Station with minimum set down space (with the exception of a drop-off on Grand Parade for persons of restricted mobility only) or room for taxi ranks so that it does not encourage the Station to be used as a terminus.</p> |
