| 32                                                                                                                                                                                                                      | Conservation Section - summary of report - Tara St | 28       | <div>- The key concerns relate to the significant departure from the historic urban plots and grain in the formation of the large new public plaza, and the somewhat disjointed quality of the urban volume that is largely determined by the location and alignment of the above-ground Metrolink structures.</div> <div>- Recommends that in the consideration of the best urban realm strategy for this site, that reference is made to the historic grain to inform the pattern of suitable future development and to achieve a refinement of the spatial coherence of the new urban space</div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | TII will work with DCC to achieve through future development a refinement of this new urban space in the event of an Enforceable Railway Order being granted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
| 33                                                                                                                                                                                                                      | Conservation Section - summary of report - SSG     | 28       | <div>- The key interventions comprise the relocation of the curved arrangement of large stones wall that forms the backdrop to the Wolfe Tone Statue further back into the park to facilitate the construction of the Metrolink entrance and the placement of brick structures to house vents and escape lifts within the public realm and not within the park, in accordance with the feedback received from the OPW.</div> <div>- Concern is expressed regarding the placement of the new Metrolink station within the curtilage of this historic park and National Monument because of its significance and sensitivity, and the impacts arising from the proposed development particularly the loss of significant mature trees and the placement of associated structures within the historic streetscape.</div> <div>- The OPW preference is that a number of vents and Firemen's' lifts should be placed outside rather than inside the park. It is proposed that these secondary but essential structures will be located within the public pavement zone parallel with the eastern boundary of the park, flanked by a somewhat ad hoc arrangement of bicycle stands.</div> | <div>St Stephen's Green Park is a National Monument in state ownership, subject to its own legislation (St Stephen's Green (Dublin) Act 1877).</div> <div>Please also refer to response (67) below that summarises the rationale for the preferred location of St. Stephen's Green Station.</div> <div>Relocating the surface penetrations from within the Park to the pavement is not feasible due to internal station configuration constraints and impacts on pedestrian flow along the pavement. MetroLink has sought to locate wherever possible the surface penetrations outside the boundary of the Park, including ventilation grills and firefighting lifts.</div> <div>EIAR Chapter 27, The Landscape, section 27.5.4.23 identifies that there will be a very significant temporary impact on the Landscape due to the loss of trees in the area of St. Stephen's Green East if mitigation measures are not deployed. However with the proposed mitigation measures relevant to this location in place, summarised below, this temporary impact can be mitigated by:</div> <div>(1) Development of site specific and comprehensive proposals for hard and soft landscape works, including for trees ensuring effective retention of mature trees where possible. These will include: details of the tree species mix, numbers, density and sizes proposed; the tree preparation, presentation, transportation, lifting and placement techniques proposed, as well as; the proposed ground preparation, rootball securing technique, backfill materials and methods, and the specific establishment maintenance proposals for each. These measures will minimise the risk to tree establishment and maximise their viability and future rates of growth.</div> <div>(2) In sensitive locations such as St. Stephen's Green, residual landscape and visual effects will be significantly reduced through the inclusion in the proposed planting of relatively mature specimen trees. Furthermore, while the removal of trees from the landscape will initially have a significant impact if left unmitigated, especially in the case of old and developed trees as the replacing material (saplings) can never have the same size and development as the mature original trees that have been removed, resulting in an initial, but temporary contrast between the original established area of trees and the new planted trees area. Over a period of time this contrast will reduce and eventually become imperceptible.</div> <div>While the temporary impact on trees is considered very significant, it does occur over a localised area of the Park that amounts to only 5% of the total area of the Park, impacts 64 trees in the Park, and is confined to the east side (adjacent to the Park fence line) of the Park only. TII are therefore of the view that the construction of St. Stephen's Green Station will not have a significant impact on the overall amenity and function of the Park during construction, given only 5% of the Park area is taken during the Construction Phase, and that once construction is completed, this area is returned to the Park, with only 0.2% of the total Park area taken by MetroLink when operational, whilst providing further access to, and reinforcing that St. Stephen's Green is a key Dublin landmark and destination.</div> |  |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                       |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 34                                                                                                                                                                                                                      | Conservation Section - summary of report - SSG        | 28       | <p>- Raised concerns regarding the visual and physical impact of these structures on the character of the historic streetscape, creating visual clutter and obstructions within the public pavement.</p> <p>- Whilst the proposed use of brick for these structures is acceptable in principle, there are significant concerns regarding the location of these structures and the adverse impacts arising on the historic streetscape. It will be possible to screen other vents within the park enclosure with planting, reducing their visual impact.</p> | <p>This observation appears to be misaligned with observation (33) above which sets out a preference for surface penetrations to be external to the Park. Nonetheless TII confirm that great care has been taken to minimise the impact on the Park and public realm as explained by responses (58) and (67) below.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 35                                                                                                                                                                                                                      | Conservation Section - summary of report - Charlemont | 29       | <p>Appropriate mitigation measures and vibration monitoring shall be in place for the duration of the excavation, construction and operation phases to ensure that damage to the Protected Structures and their curtilages and rear laneway is avoided.</p>                                                                                                                                                                                                                                                                                                 | <p>At Charlemont Station, TII confirm that environmental monitoring will be in place throughout the works along the route of MetroLink. This will comprise baseline, construction and close-out monitoring. Operational monitoring will also be in place to demonstrate compliance with the environmental limits.</p> <p>Mitigation measures will be in place to minimise the risk of damage, this will be preceded by condition surveys and necessary structural assessments. Monitoring will be linked to predetermined threshold trigger levels set by competent specialists in consultation with TII Environment, Archaeology and Heritage and MetroLink PCA, that will provide the necessary warning trigger levels before environmental limits thresholds are exceeded and damage to heritage constraints does not arise. All private residences will be afforded pre and post-works condition surveys in accordance with the proposed Property Owner Protection Scheme which requires surveys for Protected Structures and structures listed on the NIAH to be undertaken by suitably qualified and accredited Conservation Architect. The station design involves removal or partial removal of a section of the laneway to facilitate construction of a section of the MetroLink Station box, upon completion of the works, laneway and the wall will be reinstated. Should damage occur, the management of the necessary repair and cost will be borne by TII. Further details on the framework of these mitigation measures can be found in section 26.7 of EIAR Chapter 26 (Architectural Heritage).</p> |
| 36                                                                                                                                                                                                                      | Conservation Section - summary of report - Charlemont | 29       | <p>Further careful consideration is required of the proposed detailing of the public realm in front of the principal elevation of the Carroll's Building (BH-579),</p>                                                                                                                                                                                                                                                                                                                                                                                      | <p>The general architectural design principles for Charlemont Station are to:</p> <ul style="list-style-type: none"><li>• Provide a landmark signifying the entrance to Metrolink at the northern side of the station, while respecting the significance of the Carrolls building and the historic context by maintaining a modest scale.</li><li>• Improve the Luas connection from ground level through additional stairs and lifts and provide an improved pedestrian environment between the Luas staircase and the entrance to Metrolink;</li><li>• Treat the internal street as a shared vehicular and pedestrian space;</li><li>• Provide for cycle parking at the southern entrance, thereby encouraging active travel to public transport interchange</li></ul> <p>The landscape design within this area is coordinated with the development currently under construction and integrated with MetroLink and Luas infrastructure requirements. The landscape design here consists of pockets of planting and strategically placed mature trees to integrate and soften the human experience within this zone.</p> <p>TII consider that the design is of high quality. Reinstatement and landscaping will be required to integrate the MetroLink above ground elements sympathetically with the existing environment. DCC will be consulted during the finalisation of these proposals during the detail design phase.</p>                                                                                                                                                                                    |

| 38                                                                                                                                                                                                                      | Conservation Section - summary of report                                                            | 29       | The City Council has carefully considered the observations from the Conservation Section. Whilst it is acknowledged that there will be significant loss of historic fabric on O'Connell Street, the frontages will be retained and overall the presence of a metro station with its large population catchment will greatly enhance the vitality and economy of O'Connell Street. Similarly, as stated above, the location of the St. Stephen's Green station at the north east end of St. Stephen's Green is considered the most appropriate location.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | TII thank DCC for confirming their endorsement of these MetroLink proposals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 39                                                                                                                                                                                                                      | Environment & Transportation Department (E&T)- summary of report: Traffic Division                  | 29       | <p>The Traffic department has been engaging with the Metrolink team throughout the design process and in general there are no major issues of concern which are still outstanding. There are a number of items to highlight though and these are set out below:</p> <p>(1) - All changes to or new junction and crossings designs are to be agreed with DCC prior to implementation and only the DCC traffic signal maintenance contractor is allowed to carry out any work on DCC traffic infrastructure for either temporary or permanent changes</p> <p>(2) - Additional CCTV locations are required by DCC to manage traffic through the road changes and linked to the DCC communications network to be agreed on a site by site basis with DCC with all costs to be paid by TII.</p> <p>(3) - The scheme traffic management plan should be a dynamic document with constant revision a coordination group be established with representatives of the NTA, TII, DCC and the public transport operators.</p> <p>(4) - As the construction phase of each station will be over several years, all traffic management works and changes necessary for the works should be, as much as is possible, undertaken using permanent materials and layouts, except where there are short duration activities i.e. advanced enabling works.</p> <p>(5) - All works must be in line with the Control of Roadwork Directive and in line with the DCC HGV management strategy.</p> <p>(6) - Where it becomes necessary to implement traffic management changes outside the red line in order to mitigate the impact of the works or the permanent stations, then any such necessary agreed changes should be fully funded by TII/NTA.</p> <p>[Numbers is parenthesis added by TII]</p> | <p>TII are appreciative of the proactive approach taken by DCC with regards this matter and the confirmation that there are no major issues of concern. With regard to the specific observations raised:</p> <p>1. Agreed.</p> <p>2. Changes to CCTV locations or additional requirements linked to the MetroLink scheme will be agreed with DCC. If such changes are required due to MetroLink then the cost of the alteration will be borne by TII. MetroLink main works contractor shall provide Dublin City Council's appointed signal maintenance contractor and DCC's appointed telecommunications contractor with all information required for all alterations, installations and any works to the city's existing traffic signalling infrastructure or existing fibre and CCTV infrastructure .</p> <p>3. The STMP will be a dynamic document, updated periodically to reflect Project progress. TII will convene a coordination group with representatives of NTA, DCC, TII and operators as required. In the initial phases of the projects, the meetings will be held on a fortnightly basis, however, while works are being executed on site the frequency of meetings will increase to weekly, and more frequently if required.</p> <p>4. and 5. Agreed. Traffic management will be agreed on a case-by-case basis and where left insitu for a prolonged period will be suitably designed. Works will be in accordance with the Control of Roadwork Directive and in line with DCC HGV management strategy unless otherwise agreed with DCC.</p> <p>6. TII agree to the cost of traffic works outside redline boundaries being borne by TII in so far as it relates to MetroLink works.</p> |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                                               |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
| 41                                                                                                                                                                                                                      | Environment & Transportation Department (E&T)-summary of report: Traffic Division - Glasnevin | 30       | There is a lack of a pedestrian crossing shown to the North of Whitworth Road and the design should be amended to include the third arm at the junction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | As part of BusConnects, a pedestrian crossing will not be provided to the north of Whitworth Road to accommodate bus stopping locations adjacent to the Glasnevin MetroLink station. There is no requirement arising from the MetroLink scheme for a pedestrian crossing to be located north of Whitworth Road. The pedestrian crossing south of Whitworth Road will be maintained to facilitate pedestrian movements, as well as the provision of a crossing north of Lindsay Grove.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 42                                                                                                                                                                                                                      | Environment & Transportation Department (E&T)-summary of report: Traffic Division - Glasnevin | 30       | The station itself is within a constrained site and this will in time cause some issues, particularly with potential Croke Park match day/ concert day traffic. During the detailed design process for this station the consideration of the impact of these one off events needs to be taken into account and the event plans for Croke Park events updated to take account of this new facility. The existing walking provision along Whitworth road is quite inadequate with no footpath provision on one side and separate to this project a specific study of Whitworth road and options for increasing pedestrian space is needed to be undertaken. | With regards to the Whitworth Road observation - No issues relating to pedestrian movement along Whitworth Road were identified due to the provision of the single footpath. Chapter 9, Traffic and Transport, section 9.6.2.3, does note the model experienced saturation at the pedestrian crossing at the southern side of the R108/Whitworth Road Junction. This issue is solved by widening the crossing from 2m to 4m which can be accommodated in the design.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| 43                                                                                                                                                                                                                      | Environment & Transportation Department (E&T)-summary of report: Traffic Division - Mater     | 30       | Due to its proximity to the station entrance and associated pedestrian activity, the junction of Berkeley Road, Eccles Street and St Vincent's Road North has been proposed for signalisation however the proposed layout needs to be evaluated in the detailed design phase and the junction tightened up to allow for better and safer operation.                                                                                                                                                                                                                                                                                                       | EIAR Appendix A9.2-1 presents a Traffic and Transport Assessment of Mater Station during the operational phase. As noted, due to its proximity to the Station entrance and associated pedestrian activity, the junction of Berkeley Road, Eccles Street and St Vincent's Road North has been proposed for signalisation, with provision for pedestrian crossings on every arm to ensure the safe crossing for pedestrians. Additionally, the width of Eccles Street will be reduced at the junction. Provision of shared space will be incorporated on Eccles Street in the vicinity of the junction with Berkeley Road, which will also act as a traffic calming measure on approach to the junction.<br><br>The results from the LinSig modelling undertaken indicate that in both the AM and PM peak hours of 2035 that the proposed signalised junction is expected to operate within capacity. All arms of this junction have been modelled to ensure its effective operation. |  |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                                                           |          |                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 46                                                                                                                                                                                                                      | Environment & Transportation Department (E&T)-summary of report: Traffic Division - SSG                   | 30       | At this location the layout on the ground has changed substantially since the design of the scheme was completed. There is in place at present a traffic layout which facilitates outdoor dining on Merrion Row and which was implemented during the pandemic. As per the Dublin City Development plan 2022 - 2028, it is the intention to review these measures and either make permanent or remove. | TII will continue to consult with DCC to ensure the latest DCC traffic management plans are incorporated in the MetroLink detail design.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                                                       |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 50                                                                                                                                                                                                                      | Environment & Transportation Department (E&T)-summary of report: Traffic Division - Operational Phase | 30       | <p>- A set of protocols are required to be established with the Metro Link operator regarding any interruption to service and how this is communicated to DCC Traffic,</p> <p>- A monitoring and reporting regime needs to be agreed with DCC</p> <p>- A protocol for how any changes in road layouts or use of streets which impact any aspect of the Metro operation will have to be developed.</p>                                                                                                       | <p>A set of protocols will be agreed with DCC as part of the development of temporary traffic management plans for specific work. Protocol and temporary traffic management plans will be agreed in advance with DCC as part of traffic forums convened during construction. The arrangement will be similar to those that works effectively on Luas projects.</p> <p>As detailed in Appendix A9. Overall Traffic and Transport Assessment section 7.2, It is anticipated that, overall, the proposed Project will provide for improvements to the public transport network, resulting in decreases in private car usage/trips (with the exception of trips being made to and from the Park and Ride Facility), increases in public transport usages, and will facilitate walking and cycling to the stations, without significantly impacting on the operation of the networks in the area. There may be a requirement for further work in conjunction with FCC and DCC to determine full effective mitigation measures, such as reconfiguration of street furniture or reallocation of space to maximise available width where there are Significant negative impacts to pedestrian comfort levels.</p> <p>As detailed in EIAR Chapter 6 (MetroLink Operations and Maintenance), should services be disrupted, for example due to delays closing doors or to a broken-down train, it will be possible to keep disruption to a minimum by using track crossovers and varied routing so that other trains can by-pass the affected train. In advance of the operational phase, a communication strategy between MetroLink and the relevant parties within DCC Traffic will be established to ensure continued network coverage in the event of any interruption of service. However, as detailed in EIAR Chapter 6 (MetroLink Operations and Maintenance), the Communication Base Train Control system and its supporting communications network is a highly reliable, fully duplicated system with redundancy built in, so that failure in one part of the system is replaced by another part of the system, so that operational failures are extremely unlikely.</p> <p>A monitoring and reporting regime will be agreed with DCC in advance of the operational phase, which will include protocols for communications between the operator and DCC.</p> |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                                              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 57                                                                                                                                                                                                                      | Environment & Transportation Department (E&T)- DCC Environmental Protection Division Summary | 31       | <p>- The proposed works are largely underground, sometimes at considerable depths. It is important to ensure that there is no impact on existing drainage infrastructure, particularly critical infrastructure such as the Grand Canal Tunnel.</p> <p>(1) - The principles of Sustainable Drainage Systems (SuDs) should be integrated with all other environmental aspects of a project</p> <p>(2) - Groundwater shall be protected throughout the construction and operational phases of the project.</p> <p>(3) - The project shall not result in the deterioration of ground or surface water quality in accordance with the Water Framework Directive.</p> <p>(4) - Domestic wastewater generated within site compounds shall be discharged to foul/combined sewers only in consultation with the statutory body (Irish Water).</p> <p>(5) - TII advised of the importance of demonstrating compliance with the Water Framework Directive and the draft 3rd cycle of the River Basin Management Plan.</p> <p>(6) - Conditions Recommended - see Appendix</p> <p>[Numbers is parenthesis added by TII]</p> | <p>With particular regard to the Grand Canal Tunnel, TII have surveyed the structure to confirm it's line and level and lowered the MetroLink alignment, tunnel and Charlemont Station, to ensure there is adequate clearance between it and the MetroLink running tunnel to manage possible ground movement generated by TBM tunnelling. TII contracts will included strict settlement and vibration limits which will be adhered to by the tunnelling contractor during the works. These limits will ensure that there are no negative impacts on the Grand Canal Tunnel that would affect its continued operation during Metrolink works.</p> <p>(1). The drainage system for the proposed Project has been designed to incorporate Sustainable Urban Drainage System (SuDs) components and techniques (C753, CIRIA, 2015).</p> <p>(2) and (3). Groundwater impacts are described in EIAR Chapter 18, Hydrology, with proposed mitigation measures where required detailed in section 18.6.</p> <p>The contractor will be required to operate in compliance with a Construction Environmental Management Plan (CEMP). The project-specific Outline CEMP (CEMP) for the project is included in EIAR Appendix A5.1. This document includes specific measures which will be implemented in order to protect the water environment. TII will operate in accordance with The Water Framework Directive (WFD).</p> <p>(4). The plan is that all discharges go to sewer and TII continue to liaise with Irish Water in this regard to ensure there is sufficient capacity.</p> <p>(5). Mitigation plans developed and included within EIAR Chapter 18 are designed in compliance with the WFD and the River Basin Management Plan.</p>                                                 |
| 58                                                                                                                                                                                                                      | Environment & Transportation Department (E&T)- City Architects Summary                       | 32       | <p>The report does not raise any fundamental objections to the proposed but looks at each of the proposed stations and makes specific suggestions that could improve each of them in terms of a range of aspects including; material palette; universal design aspects of the stations and surrounds; accessible parking; the public realm; pedestrian movement prioritisation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>Thank you for confirming there are no fundamental objections. TII have commissioned internationally renowned architect Nicholas Grimshaw and Partners who have delivered contemporary station designs which are appropriate for a state of the art metro system such as Metrolink. Appropriately, significant emphasis is placed on the public spaces. Where feasible, the station concourse is a soaring space illuminated from above with natural light. Dublin's rich architectural heritage has been respected, but not copied in a pastiche imitation. In accordance with best conservation principles, as set out in the ICOMOS Venice Charter of 1964, the stations are architecturally distinguishable so as not to falsify the existing historic context. Reference and due respect to that context is made through the choice of high quality and appropriate materials and the scale of the interventions. At Mater station, the canopy entrance evokes the scale of park structures. At St Stephen's Green, the materials of the ventilation structures are chosen to respect the surrounding 18th century Georgian brick architecture. The aesthetic values of all eras, including our own, have cultural validity, and therefore the brick is used in a contemporary way reflecting contemporary aesthetic idioms derived from 21st century technology. TII believe the current station and surface level designs greatly enhance the public realm at all locations along the MetroLink route. There is a unifying commonality in the design of all stations, providing a consistent and coherent architectural language, which assists with orientation and wayfinding, and contributes a new architectural lexicon to the cultural iconography of the city.</p> |

Proposed above ground station structures and tree planting will visually intrude into views of the church from the road corridor and change its original open setting.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>As outlined in EIAR Chapter 27, The Landscape, section 27.5.4.16, the design of the proposed Collins Avenue Station includes public realm improvements where possible. It is noted that the entrance canopy, row of three surface mounted skylights, lifts vents and emergency exits will alter the landscape in front of the Church but features will be implemented to reduce those impacts where possible. The Station design incorporates a broad section of new public realm and garden to the front of the Church in contemporary style, featuring; high quality paving; seating; bike parking; and garden tree planting with swale planting and ornamental ground cover planting. This will improve the overall appearance of the landscape with the addition of the station features.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                    |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 61                                                                                                                                                                                                                      | Parks, Biodiversity and Landscape Services Summary | 33       | <u>Albert College Park Intervention Shaft</u><br>- The layout should not impact on the main football pitch<br>- The new facility's boundary on the Ballymun Road should be designed to match the existing park perimeter by use of a hedge boundary with railing to rear if possible<br>- Request for information to be provided to Park Services for approval at detail design                                                                                                                                                                                                                                                                                                                                   | <p>As explained by EIAR Chapter 11, Population and Land Use, Table 11.64, the land take required for the Albert College Intervention shaft will result in the loss of both of the existing 5 a-side pitches and a small portion of one of the full-sized pitches. To maintain the existing facilities, it is proposed to rotate the existing full-sized pitches 90 degrees and locate them side-by-side to the east of the park, resulting in slightly reduced dimensions. Sufficient area will be available to increase the dimensions of both 5 a-side pitches as well as providing sufficient circulation around the pitches while they are occupied. The impacts will be reduced to negative, slight, short-term. A condition survey of the stone and rail boundary will be undertaken by the MetroLink PCA prior to the commencement of construction.</p> <p>As detailed in section 27.5.4.17 of EIAR Chapter 27 (The Landscape), the proposed Project creates a slightly changed shape to the interior of the Park in the operational phase, however it will be able to function as it currently does. The replacement tree planting at the intervention shaft site will mature and the gap created in the boundary tree line will, over time, be filled. Initially the increased intervisibility between the interior of the park and the residents across the Ballymun Road, will not be much diminished by the proposed replacement planting. Ultimately as the replacement tree planting matures, the visual environment and visual amenity offered by the Park will return to its current characteristics.</p> <p>TII are happy to engage further with DCC Parks Services throughout the detailed design stage on this matter.</p> |

Tree indicated for removal will be removed as part of Bus Connects project and separate planning application.</p> <p>With regards to pitch drainage and irrigation, a specialist consultant has been appointed for designing the football pitch. and drainage design. The drainage design and pitch irrigation will take account of the station roof slab beneath. Details of this design, including drainage system can be made available when finalised. The impacts to the hydrology of football pitches has been considered in section 18.5.3.6 of EIAR Chapter 18 (Hydrology).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                    |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 65                                                                                                                                                                                                                      | Parks, Biodiversity and Landscape Services Summary | 33       | <p><u>O'Connell Street Station</u></p> <p>The station drawing below indicates the potential removal of 13 Plane trees 'subject to confirmation of temporary facade protection measures'. The retention of these trees, which are now successfully established following the street's upgrading works is preferable to Parks Services. Further discussions are required should their removal be considered essential as future compensatory planting post development will require careful planning to maximise the success of re-planting and establishing the tree row.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                 | This observation is noted and TII will continue to consult with DCC to ensure minimal impact at this location so far as practicable. Please also refer to response (10) above regards to mitigation measures to reduce the impact of tree loss.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 66                                                                                                                                                                                                                      | Parks, Biodiversity and Landscape Services Summary | 34       | <p><u>Tara Station :</u></p> <p>- There are no landscape impacts arising and generally a positive upgrade of the local public realm will occur</p> <p>- Further greening opportunities could be considered for the site. A more detailed landscape /public realm plan should be prepared.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | The positive endorsement is appreciated by TII. Please refer to response (32) above with regards the future development of the public realm.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 67                                                                                                                                                                                                                      | Parks, Biodiversity and Landscape Services Summary | 34       | <p><u>St Stephen's Green Station:</u></p> <p>- The location of this station within St Stephen's Green Park is not supported by Park Services due to its inappropriate impact on this historic flagship park. Conservation area policy of the Development Plan (BHA9) states that development within or affecting a conservation area must contribute positively to its character and distinctiveness and take opportunities to protect and enhance the character and appearance of the area and its setting. The station and its associated facilities do not comply with this policy and as a transportation project do not actually contribute to the functioning of a historic park. In view of this it is recommended that an alternative location external to the park should be sought for this station.</p> <p>- As stated above, the City Council considers that the benefits to the city outweighs the localised impacts on St. Stephen's Green and may indeed attract more users to the Green.</p> | <p>Please refer to response (58) with regards to the architectural treatment of St. Stephen's Green Station.</p> <p>For the reasons set out below, TII are in agreement with the City Council that the benefits to the city outweighs the localised impacts on St. Stephen's Green and may indeed attract more users to the Green.</p> <p>TII have undertaken significant assessment of alternative options for the MetroLink station as presented in EIAR Chapter 7 Consideration of Alternatives (refer to section 7.7.10.10, New Metro North Alignment Options Report (TII 2018), and appendices A7.5, A7.7 and A7.8). This analysis considered potential environmental effects on St. Stephen's Green Park, potential effects on buildings on the east and north sides of St. Stephens Green, on traffic and transport along St. Stephens Green East, and on critical utilities serving large areas of the city located under the road at St. Stephen's Green East.</p> <p>Options assessed include alternative MetroLink alignment options through this area with alternative station locations, alternative station locations at St. Stephen's Green East, and alternative construction methodologies such as mining. The preferred station location of St. Stephen's Green East was chosen as it minimises the potential impacts on the Park when compared to other options with a larger footprint in the Park. The preferred option occupies c. 5% of the Park area during the construction phase, reducing to just 0.2% of the Park during the operational phase. In addition, all heritage features such as monuments, railings, bollards, and paving stones can will be fully reinstated following the construction phase.</p> <p>The location of the station has been chosen and carefully designed to ensure that St Stephen's Green East continues to function as an important transport route, as an important corridor for critical utilities such as water, electricity and sewage, and as an important location for commercial and business activities. Ensuring this critical functionality on this side of St. Stephen's Green would have been prolonged and very difficult to achieve with the Location 8 that was located entirely outside of the Park. This option also negates the potential for direct impacts on properties to the east side of St Stephens Green East road, on critical utilities including a major Victorian sewer, and on the roadway which is an important access route to the city centre, particularly for public transport.</p> <p>It is acknowledged in Chapter 27 of the EIAR that the reinstatement of trees removed will take a significant period of time to re-establish. However on completion of the construction phase, reinstatement of heritage items and replanting (and reestablishment) of trees, TII maintains that the proposed St. Stephen's Green Station will enhance this area by providing Dubliners and visitors alike with high quality public transport access to St. Stephen's Green and to this area of the city, thereby reducing car dependency, noise levels and improving air quality, while allowing citizens to enjoy St Stephen's Green long into the future.</p> |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 68                                                                                                                                                                                                                      | Parks, Biodiversity and Landscape Services Summary             | 34       | <u>Charlemont Station</u><br>Street trees are well established mature trees and there will be a significant reduction of greening in the area as result of their removal. Compensatory street tree planting post-construction should be implemented and detailed landscape plans should be presented of the scheme                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Please refer to response (10) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 69                                                                                                                                                                                                                      | Parks, Biodiversity and Landscape Services Summary             | 34       | <p>- Badger: The proposed mitigation in the EIAR would be required in full if permission is granted. Timeframe for the “pre-construction checks of the activity status of all setts” should be revised from 12 months to 6 months prior to construction to ensure that no further setts have been established. The ecologist for the project should also consult with the National Parks and Wildlife Service (NPWS) prior to construction</p> <p>- Otter: The cumulative impacts that all three of the proposed projects: Metrolink, Luas Extension, and Royal Canal Greenway could have on the otter population should be evaluated</p> <p>- Bats: Considered additional mitigation through a programme of replacing hedges and trees years in advance of construction allowing for hedgerows and trees to mature and reduce impacts when construction takes place</p> <p>- Welcome that a suitably qualified bat ecologist will review and input into Lighting Plan.</p> <p>- Specified information to be provided to DCC for approval at detail design stage (detail in report) Protected species: Further evaluation of some species required and mitigation measures required (see report for full detail)</p> <p>- Japanese Knotweed: complete Japanese knotweed surveys using a suitably qualified ecologist and conduct any required eradication programme.</p> | <p>Badger: As outlined in EAIR Chapter 15 Biodiversity, section 15.5.1.6 there is only one badger sett located within the zone of influence (Zoi) of the proposed Project. Whilst there will be no direct loss of this sett as a result of the proposed Project, potential impacts could still occur as a result of disturbance. The 12-month timeframe for Pre-construction surveys is taken from TII Guidance "Guidelines for the Treatment of Badgers Prior to Construction of a National Road Scheme" where it is recommended that the surveys will be carried out no more than 10-12 months in advance of construction. As per the Guidance, this will be supplemented by inspection of the area immediately prior to site clearance to ensure no new setts were established. However, TII have no objection to reducing this to 6 months for the reasons set out by the observation.</p> <p>Otter: The impact of the Luas extension project is considered by EIAR Chapter 30, Cumulative impacts. The Royal Canal Greenway is due for completion prior to construction of MetroLink and therefore no impacts are predicted.</p> <p>Bats: TII and the contractor will work with DCC to agree a planting and lighting strategy (in terms of locations and timing) whilst allowing the project construction phase to progress in line with the current proposed programme.</p> <p>Japanese Knotweed: TII confirm that surveys will be undertaken by a suitably qualified ecologist. Mitigation strategies to prevent the spread of Japanese Knotweed have been prepared with regard to Invasive Species Ireland (ISI) Best Practice Management Guidelines for Japanese knotweed and The Environment Agency (EA) Managing Japanese knotweed on development sites - the Knotweed Code of Practice (Version 3, amended in 2013, withdrawn from online publication in 2016). Surveys and a desktop study had identified Japanese Knotweed:</p> <ul style="list-style-type: none"><li>• Located within Irish Rail lands along the existing railway embankments and adjacent lands north of the Royal Canal south-east of Glasnevin Cemetery; and</li><li>• Located on banks of the River Tolka and Royal Canal, and within St. Stephen’s Green Park.</li></ul> <p>The method for control of Japanese Knotweed will depend on the nature and timing of construction works. These will be fully detailed in the final ISMP after the pre-construction survey of the proposed Project (EIAR Appendix A15.8).</p> |
| 70                                                                                                                                                                                                                      | Culture, Recreation and Economic Services Department - Summary | 34       | <p>Markiewicz Sports &amp; Fitness Centre</p> <p>- DCC have engaged with TII in relation to the development of a sports and recreational facility to replace Markiewicz Sports &amp; Fitness Centre</p> <p>- DCC have commissioned a feasibility study to look at alternative locations in the area</p> <p>- Initial findings have identified a possible location and an outline scheme to ensure existing services to the community in this part of the city are maintained and enhanced. The next stage is for DCC to consult with stakeholders, including elected representatives, community representatives, facility users etc. early in 2023 in relation to the feasibility study completed. If agreement in principle is forthcoming, DCC will appoint a design team to develop detailed proposals and prepare and submit a planning application for the new facility. Throughout this process DCC will continue discussions on a range of key issues with TII in relation to the successful procurement of a new Leisure Centre, including around compensation and reinstatement costs, programming impacts and timing issues and stakeholder engagement</p>                                                                                                                                                                                                     | <p>TII will continue to work with DCC in relation to the development of an alternative sports and recreational facility to replace the Markiewicz leisure centre and intends to fund the alternative. However, TII does not have control over that development, which is part of DCC’s function to provide public sport and recreational facilities in its function area. DCC may or may not be in a position to deliver it in parallel with the MetroLink project. Accordingly, the Board should assess the MetroLink project on the basis that the alternative may not be available. The impact would then be significant, but nonetheless one that would not outweigh the strategic scale long term benefits that MetroLink will deliver.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                 |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 71                                                                                                                                                                                                                      | Dublin Fire Brigade - Summary                                   | 35       | <div>- DFB fully support the development of a Metro System for Dublin and have been liaising with TII in this regard.</div> <div>- As part of the liaison process, DFB have been presented with the fire safety strategy for the design of the tunnel and prototype station.</div> <div>- Further analysis is being undertaken by TII to support key queries raised about the fire safety strategy. We continue to be available to work with TII in anticipation of the advancement of the design.</div>                                    | <div>TII thank DFB for their support and proactive engagement throughout the preliminary design process and Railway Order application. TII will continue to work closely with DFB to ensure the design is advanced in accordance with DFB requirements. it is noted that as detailed before.</div> <div>As detailed in EIAR Chapter 6 (MetroLink Operations and Maintenance) section 6.6.5.6, a Fire Safety Strategy for the proposed Project has been developed in liaison with Dublin Fire Brigade. This strategy includes safety features at stations to minimise the risk of fire, safety lineside features within tunnels and other sections such as, but not limited to ventilation, CCTV, signage, lighting, firefighting water supply systems; proposed emergency evacuation protocols to be adopted for emergency events along the railway line and at stations; station specific information including drawings and evacuation calculations; safety systems and features to be adopted as part of the formal tender requirements for rolling stock; and fire safety information relating to the depot at Dardistown and the park and ride at Estuary. Further information on the location of fire service accesses and facilities is provided in EIAR Chapter 4 (Description of the MetroLink Project). TII will continue to work with DFB to resolve any outstanding queries they may have.</div>                                                                                                                                                                                                       |  |
| 72                                                                                                                                                                                                                      | Telecoms Units - Summary                                        | 35       | Given the difficulty of laying duct along or close to the rail line it would be important to get any duct put in during construction as the addition of duct at a later date along the route would be very difficult. DCC Telecoms would request that the following be included in the project: 2x110mm ducts installed in a duct bank along the complete length of the route with associated access chambers at regular intervals of not more than 200m.                                                                                   | Unlike the Luas network, the MetroLink alignment is running in tunnel from Northwood Station throughout to the city. Typically TII would acceded to this request, however in the case of a scheme which is in tunnel and 30m below ground level, efficient/economic access to the ducting and chambers for the purposes of extending services to a catchment along the alignment would not be feasible.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |
| Appendix 1 - Recommended Conditions (see appended sheet)                                                                                                                                                                |                                                                 |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| Appendix 2 - Departmental Reports                                                                                                                                                                                       |                                                                 |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 73                                                                                                                                                                                                                      | Planning and Property Development Department - Ballymun Station | 52       | While the Drawings reference the Bus Connects proposals, it must be noted that these proposals are also still at the planning stage and must be integrated into the Metro Station Environs. The applicant should have regard to the Part 8 Planning consent granted for the Plaza in September 2021 (Reg. Ref. 3131/21), the on-site works of which are expected to commence in 2023. The provision of car parking at this particular location, as proposed, would seriously detract from the creation of a pedestrian-focused civic space. | <div>As noted BusConnects is at the planning stage and therefore it would not be appropriate for TII to assume BusConnects has been granted planning permission as part of the MetroLink Railway Order application. However, (1) The GDA Transport Strategy requires BusConnects to be delivered and (2) the EIAR has to consider the likely future baseline. TII has therefore considered BusConnects as part of the design so that in the event planning permission is granted it can be integrated with the MetroLink project. Please refer to response (40) above.</div> <div>Regards the planning consent granted and the provision of car parking, TII note the observation. For the reasons explained by response (40) above and as set out by EIAR Chapter 9 Traffic and Transport, section 9.6.2.2.4.5: "There will be a loss of commercial parking in Ballymun Car Park to facilitate the Station entrance and associated cycle parking. However, a total of 24 car parking spaces will be provided along both sides of the R108 Ballymun Road at Ballymun Station, reducing the severity of the impact.".</div> <div>The carparking shown on the MetroLink drawing illustrates carparking which is required as part of the BusConnects scheme. TII are seeking consent for these carparking spaces as part of the Metrolink railway order applications, to ensure that the works can be provided under by TII or BusConnects depending on which applicant is in a position to carry the works at the appropriate. This will depend of the progress of their the respective planning applications.</div> |  |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                 |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 74                                                                                                                                                                                                                      | Planning and Property Development Department - Ballymun Station | 56       | It is also noted that the landscape drawings provided on the web link provided, within the book entitled “Landscaping Details: Fingal County Council and Dublin City Council”, do not contain any landscape detail for this site or the rest of the DCC lands. Therefore a full and detailed assessment of the materials proposed has not been carried out.                                                                                                                                                                                                                                                           | The landscaping plans are contained within the Structures Drawings Book 2 of 3 MetroLink Stations Dublin City Council. Chapter 27 of the EIAR further provides descriptions of the proposed landscaping for DCC stations and Appendix 27.1 Photomontages illustrates the proposals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 75                                                                                                                                                                                                                      | Planning and Property Development Department - Ballymun Station | 56       | It is recommended that TII redesign the public domain interface between the station and the roadway, taking into account the need to prioritise pedestrian movement and the provision of civic space. Materials should take account of and tie in with existing materials along Main Street and those proposed for the new Civic Plaza at Cearndg an tSeachtar Laoch.                                                                                                                                                                                                                                                 | EIAR Appendix A9.2-A Section 6.1.3 explains the results of the pedestrian comfort and impact assessments for Ballymun Station. No issues were found for pedestrians on the Main Street, while issues identified surrounding the pedestrian crossings (Section 6.1.3.1) have been mitigated.<br><br>With regards materials and architectural treatment, please refer to response (58) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 76                                                                                                                                                                                                                      | Planning and Property Development Department - Ballymun Station | 56       | It is also noted that the proposal includes provision for 292-cycle spaces. It is recommended that the placing of bike stands as shown along the new Civic space on Main Street will lead to excessive pedestrian impediments and visual clutter. Given that bike parking at a station will frequently be for a full working day, it is recommended that multi-storage bike areas should be provided, either as stand-alone elements or as part of the new station box. Parking should not be treated the same as parking in front of shops etc. and daytime storage rather than ease of parking is more appropriate. | EIAR Appendix A9.2-A section 6.1.3 outlines the pedestrian comfort and impact assessments for Ballymun Station. These found no issues arising for pedestrians on Main Street.<br><br>TII do not agree that there will be associated visual and physical clutter as a result of the cycle parking. EIAR Chapter 27 (The Landscape) details the assessment of the landscape and visual impacts during both the construction and operational phases.<br><br>As detailed in Chapter 4 (Description of the MetroLink Project) section 4.7.6, cycle parking is provided in one of two options, (1) a specifically designed cycle park building and (2) surface parking, both covered and uncovered, which is integrated within the landscape design at each particular station.<br><br>At present, two-tier cycle parking racks have not been utilised in the Project's design as they may preclude the parking of various other types of bikes, including cargo bikes, tricycles or accessible bikes, amongst others. However, the use of two-tier cycle parking, and the provision of other types of cycle parking, will be considered by TII during the detailed design stage and in our discussion with other agencies involved in the delivery of cycle parking city wide, such as DCC.<br><br>As set out by EIAR Chapter 6, MetroLink Operations and Maintenance, due to space constraints in the vicinity of stations in the DCC area, it has not been possible to provide 100% of bicycle parking required to meet demand at every station. However, the maximum number of bicycle parking has been provided at each station taking cognisance of available space. EIAR Chapter 31, Summaries of the route wide mitigation and monitoring proposed, goes on to further note (Mitigation Reference TT19) that cycle parking provisions per station will be monitored to ensure that the level of provision is meeting the demand. Similarly, the volume and type of cycle parking provisions required may change over the course of the Operational Phase due to the ongoing shift to shared and micro mobility solutions.<br><br>Notwithstanding the above. TII does agree that there is a need for high density cycle parking into the future to accommodate demand from the Project, as well as demand from the general increase in cycling forecasted within the City. In recognising the shortfall, meeting this demand will require a coordinated multi-agency approach to ensure efficient delivery of cycle parking spaces and facilities. There is a clear mix of uses in the areas surrounding MetroLink stations, which may see cycle demand in varying peak times. As a result, it requires a combined approach and delivery from multiple agencies, e.g. Dublin City Council, Fingal County Council, NTA, TII and Irish Rail, to identify how future demand can be accommodated sustainably and the maximum benefits of the parking achieved. This will include the consideration of available land, but noting such land is often already allocated as part of future development plans. TII anticipate cycle parking provisions are likely to involve a combination of fixed and shared bicycles and other facilities to support the delivery of mobility hubs across the region. |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                  |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |
| 77                                                                                                                                                                                                                      | Planning and Property Development Department - Northwood Station | 57       | Site 29, to the north, is also sterilised until after the MetroLink delivery, as it is shown for use as a logistics yard associated with MetroLink. Please note that this site contains old field boundaries. Any works to this field boundary should be addressed in the Planning scheme.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | This has been identified and assessed in EIAR Chapter 25 Archaeology & Cultural Heritage, ACH113. It is noted within the Chapter that “any extant section of Townland Boundary to be impacted upon will be subject to a detailed written and photographic survey (to include test excavations where appropriate)” .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
| 78                                                                                                                                                                                                                      | Planning and Property Development Department - Northwood Station | 57       | <p>The key points concerning the proposed Northwood stop</p> <ul style="list-style-type: none"><li>• Confirmation from TII concerning the future constraints on Site no. 31 of the LAP: Is there scope to build over any aspects of the Station stop?</li><li>• This stop proposes 204 cycle spaces. It is recommended that the at-grade street provision will create pedestrian and visual street clutter. Provision for multi-storage bike areas should be provided in place of at-grade bike storage.</li><li>• The landscape strategy should include tree planting to the median of Ballymun Road (R108) to be provided by either Bus Connects or MetroLink. A key focus of this area should be the creation of a more pedestrian-friendly environment that creates a safe and visually pleasing pedestrian place that enhances east-west movement in this new emerging urban area.</li></ul> | <p>In response to the observations made:</p> <p>1. The Railway Order does not include for an oversite development (OSD), but the MetroLink project does not preclude an OSD. TII have consulted with DCC and can confirm that oversite development is possible at Site 31. “MetroLink will be a catalyst for and provide opportunity for future development and regeneration. While the MetroLink Railway Order does not include for future neighbouring or overhead development, the tunnels and stations are designed to support appropriate future imposed loads. TII will be required to make submissions in relation to planning applications for proposed future developments on or adjacent to MetroLink and there will necessarily be some engineering constraints (such as permissible loadings) required. However MetroLink is committed to engaging with known development proposals and new development proposals as they emerge with the intent of facilitating such developments as they emerge to the maximum extent consistent with the safe operation of the proposed Project.</p> <p>Again in common with other existing rail and tunnel projects, following grant of the Railway Order and development of detailed design, TII will produce “Guidance Note for Developers” that will be the subject of bye-laws following the grant of Railway Order and which is designed to facilitate future adjacent or over-site development while protecting the integrity and safety of the MetroLink works and operations.</p> <p>Therefore at this stage TII is dealing with known development proposals on a case by case basis, TII will work with parties in the future to assist with the wider development of sites over and above stations and tunnels. In this context TII has successfully engaged with a number of developers over the last two years to accommodate development over and in proximity to the alignment and there have been no material restrictions on development subject to the implementation of agreed design and mitigation measures and it is not anticipated that MetroLink will have a material impact on the development potential of sites above and in proximity to the alignment in future.</p> <p>2.Please also refer to response (1) above regards the provision of cycle parking. As detailed in Chapter 4 (Description of the MetroLink Project) section 4.7.6, cycle parking is provided in one of two options, (1) a specifically designed cycle park building and (2) surface parking, both covered and uncovered, which is integrated within the landscape design at each particular station.</p> <p>At present, two-tier cycle parking racks have not been utilised in the Project's design as they may preclude the parking of various other types of bikes, including cargo bikes, tricycles or accessible bikes, amongst others. However, the use of two-tier cycle parking, and the provision of other types of cycle parking, will be considered by TII during the detailed design stage and in our discussion with other agencies involved in the delivery of cycle parking city wide, such as DCC.</p> <p>3. Tree planting by MetroLink will be in accordance with response (10) and the Railway Order application.</p> |  |
| 79                                                                                                                                                                                                                      | Planning and Property Development Department - Conclusion        | 57       | It is recommended that clarification is sought concerning the development potential of DCC-owned sites directly impacted by MetroLink, It is also recommended that minor amendments are sought to enhance the pedestrian environment and create attractive and safe places.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>TII will support DCC for any future DCC OSD and ASD proposals</p> <p>With regards to the minor amendments referred to, please refer to response items (99) and (110) and in the individual station responses above. Further details on the public realm at each station can be found in EIAR Chapter 4 (Description of MetroLink Project).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 80                                                                                                                                                                                                                      | Conservation | 69       | Albert College Intervention Shaft (26.13)<br>The impact on architectural heritage will be negligible. However, I note the proposed works will necessitate the removal of 69 out of 155 trees, which is most regrettable and should be mitigated by re-planting/landscaping.                                                                                                                                                                                                                                                                                                                                    | Please refer to response (10) above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 81                                                                                                                                                                                                                      | Conservation | 69       | Griffith Park Station, Mobhi Road (26.14)<br>- Whitehall College (Colaiste Caomhain: 19th century college buildings) is included in the RPS (Ref. No. 7746 and NIAH Reg. No. 50130149). The River Tolka is located within a Red Hatch Conservation area and the concrete Dean Swift Bridge with its cast iron railings is included in the NIAH (Reg. No. 50130053). It is proposed to remove part of the historic railings and entrance piers along St. Mobhi Road and realign them moving the gates back into the site to facilitate the construction of the new station in the southwest corner of the site. | As set out by EIAR Chapter 26 Architectural Heritage, Table 26.66 the following mitigations are proposed - Prior to any works the gates, piers and railings are to be recorded by means of photography and written description. The features are to be removed in accordance with the specification prepared by the Project Conservation Architect (PCA), stored securely, pending being returned to the site and reinstated. This will include any required conservation works. The impact is assessed to be moderate following mitigation. TII will liaise with DCC and the OPW who own Whitehall College and Tolka Park throughout the detailed design and construction process, |
| 82                                                                                                                                                                                                                      | Conservation | 69       | The proposed interventions at Whitehall College include the removal of 31 of 145 trees, which is most regrettable and should be mitigated by re-planting/landscaping.                                                                                                                                                                                                                                                                                                                                                                                                                                          | Please refer to response (10) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 83                                                                                                                                                                                                                      | Conservation | 69       | - With the placement of various vents and shafts associated with the new station along the western boundary, it may be difficult to reinstate the same level of screening with trees/planting as exists at present to reduce the visual impact of the new structures. This requires careful consideration.<br>- The magnitude of the impact will be medium and the effect will be very significant. The visual impacts should be reduced if possible.                                                                                                                                                          | The observation is noted. TII have throughout the design endeavoured to reduce visual impact so far as practicable and refer to response (58) above regards the architectural treatment of the MetroLink stations. As noted by EIAR Chapter 27, The Landscape, Table 27.16, the visual effect during the operational phase at Griffith Park Station has been assessed as moderate, positive, and permanent.                                                                                                                                                                                                                                                                         |
| 84                                                                                                                                                                                                                      | Conservation | 69       | The visual impact of HVM bollards on the presentation of the new station is dominant - an alternative approach is recommended such as the incorporation of landscaping/raised planters to improve the overall presentation.                                                                                                                                                                                                                                                                                                                                                                                    | Please refer to response (15) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 85                                                                                                                                                                                                                      | Conservation | 73       | SSG<br>- The location of HVM bollards compromises the quality of the urban realm and requires greater consideration - an alternative approach is recommended such as the incorporation of landscaping/raised planters to improve the overall presentation.                                                                                                                                                                                                                                                                                                                                                     | Please refer to response (15) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                 |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 86                                                                                                                                                                                                                      | Conservation    | 73       | <p>The proposed interventions at St. Stephen’s Green Station include the removal of 64 of 225 significant mature trees and will give rise to the denuding of the park for a long period where trees are removed until the new planting is established - this most regrettable. There are several potential locations where new development is proposed that would be preferable to the level of intervention that is being proposed at St. Stephen’s Green.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>Please refer to response (67) above that explains the rationale for the preferred location of St Stephen's Green Station.</p> <p>EIAR Chapter 27, The Landscape, section 27.5.4.23 identifies that there will be a very significant temporary impact on the Landscape due to the loss of trees in the area of St. Stephen's Green East if mitigation measures are not deployed. However with the proposed mitigation measures relevant to this location in place, summarised below, this temporary impact can be mitigated by:</p> <p>(1) Development of site specific and comprehensive proposals for hard and soft landscape works, including for trees ensuring effective retention of mature trees where possible. Details of such planting proposals will be provided for consultation with OPW in advance of the construction phase. These will include: details of the tree species mix, numbers, density and sizes proposed; the tree preparation, presentation, transportation, lifting and placement techniques proposed, as well as; the proposed ground preparation, football securing technique, backfill materials and methods, and the specific establishment maintenance proposals for each. These measures will minimise the risk to tree establishment and maximise their viability and future rates of growth.</p> <p>(2) In sensitive locations such as St. Stephen's Green, residual landscape and visual effects will be significantly reduced through the inclusion in the proposed planting of relatively mature specimen trees. Furthermore, while the removal of trees from the landscape will initially have a significant impact if left unmitigated, especially in the case of old and developed trees as the replacing material (saplings) can never have the same size and development as the mature original trees that have been removed, resulting in an initial, but temporary contrast between the original established area of trees and the new planted trees area. Over a period of time this contrast will reduce and eventually become imperceptible.</p> <p>While the temporary impact on trees is considered very significant, it does occur over a localised area of the Park that amounts to only 5% of the total area of the Park, impacts 64 trees in the Park (the majority of the trees are lower value trees (category B or C trees) with just 5 Category A trees) , and is confined to the east side (adjacent to the Park fence line) of the Park only. TII are therefore of the view that the construction of St. Stephen's Green Station will not have a significant impact on the overall amenity and function of the Park during construction, given only 5% of the Park area is taken during the Construction Phase, and that once construction is completed, this area is returned to the Park, with only 0.2% of the total Park area taken by MetroLink when operational, whilst providing further access to, and reinforcing that St. Stephen's Green is a key Dublin landmark and destination.</p> |
| 87                                                                                                                                                                                                                      | City Architects | 95       | <p>Notes on MetroLink Review Process</p> <p><u>B. Railway Order Lodgement</u></p> <p>City Architects had requested that a full Pre-Planning (Railway Order) Documentation set be provided for review and comment in advance of the Railway Order Application. Til subsequently advised that due to programme constraints, this request could not be facilitated and Til would be proceeding with the lodgement of the Railway Order Application.</p> <p><u>C. Previous Comments</u></p> <p>City Architects have provided detailed comments on proposals as they have developed. We have not received satisfactory responses to many of the issues raised in our comments. Further consultation and clarification will be required.</p> <p><u>D. Next Steps</u></p> <p>City Architects would like to request a clear and detailed outline of how the process will be run from here and how City Architects (and other Dublin City Council Departments) will have the opportunity to follow up on our concerns and keep them live through to resolution. Meaningful workshops at key stages will be essential.</p> | <p><i>B - Railway Order Lodgement:</i> Unfortunately due to programme constraints TII could not facilitate DCC Architects request to review pre-planning documentation. However prior to the submission of the Railway Order TII convened over xx meetings with DCC departments including the Chief Architects department to provide an overview of the Architectural design of each station and the design of the urban realm at each station location. TII commit to continuing this extremely helpful consultation process post the grant of an enforceable Railway Order as the scheme moves from Preliminary to Detail design and eventual construction.</p> <p><i>C - Previous Comments :</i> TII are in the opinion that satisfactory responses were provided to the issues raised by DCC Architects, however some of the queries were raised can only be dealt during the detailed design of the project. TII will engage with DCC at the during detailed stage of the project after the grant of RO.</p> <p><i>D - Next Steps :</i> TII will continue to engage with the Chief Architects Department throughout the next stages of the development of the design. A process for receiving DCC comments in this regard will been agreed with the Chief Architects Department.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 88                                                                                                                                                                                                                      | City Architects                                | 95       | <p>Notes on MetroLink Review Process</p> <p><u>E. Design Build Contractor</u></p> <p>Clarification is required regarding what stage of the project the Design Build Contractor will be appointed. To ensure success of the project, it will be essential that the Client Requirements for the Design Build Contractor clearly set out the following:</p> <p>1. the need to fully develop in detail the Concept Design Intent for Street Level Common Components to deliver high-quality, fully coordinated and integrated public realm.</p> <p>2. the need to have Architects, a Grade 1 Conservation Architect and Landscape Architects as key members of the Design Build Team, with sufficient inputs/hours at each stage to ensure the service is properly resourced.</p>                                                                                                                                                                               | <p>The detailed design will be developed by the Design and Build contractors appointed to deliver the MetroLink scheme. TII's client requirements for the design and build contractors will be set out in the tender documentation. However, the form of contract is not relevant to this Railway Order application and the Environmental Impact Assessment process that has been undertaken.</p> <p>Details on the public realm associated with each station are detailed in EIAR Chapter 4 (Description of MetroLink Project). Section 4.5 of this chapter also details the design principles for the proposed Project. This chapter also details the architectural and landscape/public realm aspects of the design which are of relevance to the assessment of landscape and visual impacts.</p> <p>As noted in section 26.7 of EIAR Chapter 26 (Architectural Heritage), a Project Conservation Architect has been engaged to oversee the implementation of the Project. It is noted that the works will also be supervised by suitably qualified professionals.</p> <p>TII are happy to engage further with DCC during the detailed design stage and agree matters where required by RO conditions.</p> |
| 89                                                                                                                                                                                                                      | CA-RO-G-01 General Railway Order Documentation | 96       | <p>- The Railway Order Drawings comprise very simplified planning drawings and are difficult to review in detail. Some inconsistencies exist between the drawings, verified views and materials palette document.</p> <p>- Existing Condition Plan (including all existing utilities, street lighting, traffic control boxes, bollards, bins, benches etc.) and Proposed Site Plan at same scale are not provided in the 'Structures Details Book 2 of 3 MetroLink Stations Dublin City Council.pdf.</p> <p>- The 'Materials Palette. pdf and EIAR Appendix 'A27.1 Photomontages.pdf have also been reviewed as they better display the required quality of materials, architectural detailing and finishes required for such a major infrastructure project. This level of quality should be a Condition of the Railway Order to ensure that the proposal will be tied to the R.O. documents so that what is proposed at this stage will be delivered.</p> | <p>TII consider they have included on the drawings all the necessary information and detail to inform the Railway Order application and notes that the submission has not identified any guideline or best practice that TII has not adhered to in that regard, nor has it identified the inconsistencies referred to. TII would further note that for each station the following is provided: proposed street level design, street level elevations, concourse and mezzanine level plan, platform and under platform level plan, longitudinal section, and cross sections. Following a grant of Railway Order TII the will consultant with DCC during the development of the detail design.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                   |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 92                                                                                                                                                                                                                      | CA-RO-G-05 General Environment and Sustainability                 | 96       | <p>- MetroLink is a major scheme presenting excellent opportunities for sustainable design and environmentally sensitive solutions across the city, these should be fully explored (e.g. green roofs, rainwater attenuation, greening strategies, solar energy etc.) Drinking water fountains/bottle fillers should be provided at all stations to reduce reliance on single use plastics.</p> <p>- It would be a major environmental positive if the MetroLink could be carbon neutral with operation fully powered by renewable green energy - possibilities for making this a reality should be pursued as early as possible in the scheme.</p> | <p>TII share these aspirations and are pursuing these opportunities at this early stage of the Project. EIAR Chapter 17 Climate, outlines possible measures to mitigate carbon, including:</p> <p>- Implementing a whole-life Carbon Management Plan aligned to PAS 2080 (Green Construction Board 2016) to inform the design, build and operation of MetroLink utilising TII's Carbon Assessment Tool;</p> <p>- Achieving Net Zero for operational energy by the design year with a stretch aspiration to be close (&gt;80%) to Net Zero at start of operation through energy efficiency, innovation, green power purchases and offsetting residual emissions;</p> <p>- Achieving a reduction in mains water use during operation through the use of rainwater harvesting, water re-use and efficiency systems and devices at all work sites, stations, and buildings. Wastewater from the vehicle washing plant will be treated and recycled in-situ to reduce water usage; and</p> <p>- Requiring operations to achieve high recycling rates with an aspiration to achieve zero waste directly to landfill.</p> <p>There is also an opportunity to reduce operational energy requirements by the recycling of braking energy. When vehicles brake, their kinetic energy is converted into electricity and returned to the traction power line. The installation of reverse substations on the proposed Project system will offer the opportunity to reuse a portion of braking energy. Based on the inclusion of two reverse substations (at Dardistown and Charlemont) it is estimated that the system could potentially regenerate 0.119MW. This recovery equates to 0.6% of the energy needed to run the stations (19.58MW).</p> <p>TII will continue to progress initiatives through the detail design to reduce carbon both during construction and operation.</p> |
| 93                                                                                                                                                                                                                      | CA-RO-G-06 General Placemaking                                    | 97       | A placemaking focused approach needs to be the priority around stations to ensure MetroLink delivers public realm of the highest quality to Dublin City. Placemaking and activation needs to remain the focus throughout detail design and construction phases to deliver places for people and a vibrant, successful public realm.                                                                                                                                                                                                                                                                                                                | Please refer to response (58) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 94                                                                                                                                                                                                                      | CA-RO-G-07 General Emergency Vehicle Access & Evacuation Strategy | 97       | Fire evacuation strategy for each station should be considered as part of an integrated public realm design to avoid potential pedestrian congestion around emergency exits to ensure MetroLink can be safely evacuated in emergencies. Requirements for emergency vehicle access needs to be fully integrated into the public realm design.                                                                                                                                                                                                                                                                                                       | The MetroLink design and Railway Order application has been developed in consultation with Dublin Fire Brigade (DFB). TII will continue to consult with DFB throughout all stages of the design to ensure the necessary provision is made.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 95                                                                                                                                                                                                                      | CA-RO-G-08 General Public Realm and Red Line Boundary             | 97       | Clarification of the red line boundary is required on each station to clearly identify the site boundary and the extent of the works to be undertaken as part of the MetroLink project. All necessary works or upgrades in the vicinity (e.g.. footpath upgrades in surrounding streets) need to be included in the project works.) Clarification of the extent of the Public Realm on each station is required. Should the proposal be for any portion of the 'Urban Realm' to be retained as private land or closed off to public access at any time (e.g. closed to public at night) this must be clearly identified.                           | The redlines are included within the Property Drawings pack in Railway Order Plans\Drawings. The redlines indicate the extent of the proposed (permanent) acquisition of lands required for MetroLink. With regard to the extent of the Public Realm at each station please also refer to EIAR Chapter 21 Land Take.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                     |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 96                                                                                                                                                                                                                      | CA-RO-G-09 General Percentage of Budget Allocation for Public Realm | 97       | Clarification of percentage of allocation of budget for Public Realm to be provided. Urban realm proposals shown in 'Materials Palette.pdf need to be integrated into the scheme through the procurement process to ensure the high quality public realm proposals are not just aspirational but are actually delivered.                                                                                                                                   | Public Realm is integrated into the scheme as part of the current design and this will continue to be the case throughout the procurement process and the development of the detail design. ABP can impose such conditions as are required to ensure the quality of the public realm is consistent with proper planning and sustainable development. The Project budget is outside the scope of the RO process and ABP's jurisdiction and is a matter for the NTA, Government and TII under the oversight of the Oireachtas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 97                                                                                                                                                                                                                      | CA-RO-G-10 General Percent for Art                                  | 97       | Clarification of how the Percent for Art scheme requirements for will be met across the MetroLink scheme is required - it is recommended that it be on a per station basis. Art should be embraced as a means of adding cultural richness to each station and integrating the structures into their context.<br>Portal soffits are an ideal opportunity for a unique art piece or distinctive colour at each station in lieu of the timber cladding shown. | The project Art Scheme budget has been agreed an amount of €4million has been allocated for station and line wide Art incentive in accordance with the public transport Art policy. The Art scheme incentive will be agreed during the detailed design stage. Publication of the TII Public Transport Art Policy and establishment of a Public Art Advisory Group is currently under development in TII. Development of the Artists Brief for Metrolink and procurement of the artist(s) will take place during the Client Partner Design period and be further developed in the detail design period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 98                                                                                                                                                                                                                      | CA-RO-G-11 General Integrated Transport Network                     | 97       | MetroLink proposal needs to be fully coordinated with other major infrastructure projects including BusConnects and DART Expansion to ensure designs are integrated, mutually complimentary and deliver high quality public realm spaces at interfaces between projects. Coordination with Bike Sharing schemes should be included to ensure better connectivity between services particularly in the city centre.                                         | The coordination of MetroLink proposals with other major projects is already in place. Both BusConnects and DART Expansion are being consulted regularly given that MetroLink will interface with both projects.<br><br>Please also refer to response (1) above that summarises how MetroLink will form part of a wider integrated transport network and how cycle parking and bike sharing provision will require an inter-agency approach to deliver it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 99                                                                                                                                                                                                                      | CA-RO-G-12 General Transport and Accessibility Model                | 97       | The public realm needs to be designed for the projected future passenger volumes to ensure footpaths around stations are sufficiently sized to cater for future projected loading at peak times.                                                                                                                                                                                                                                                           | EIAR Appendix A9.2 section 6.3 explains that pedestrian comfort levels have been modelled for 2018, 2050 and 2065 at the AM Peak hour and where significant impacts have been identified, mitigation measures have been included.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 100                                                                                                                                                                                                                     | CA-RO-G-13 General Site Sterilisation                               | 98       | The lack of provision for over site development on certain sites is a major concern as it would have long term impacts on the development potential.                                                                                                                                                                                                                                                                                                       | Please refer to response (78) above regards oversite development.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 101                                                                                                                                                                                                                     | CA-RO-G-14 General Conservation Architect                           | 98       | A full-time Grade 1 Conservation Architect needs to remain an integral member of the team throughout the project. Their role needs to include advising in relation to temporary works that impact on protected structures, monuments and historic fabric across all city centre sites to inform the decision making process in relation to construction methodologies and traffic management.                                                              | As outlined in EIAR Appendix A5.1 (CEMP), specialists with appropriate skills and experience will monitor on-site construction on behalf of TII, where required. In terms of Architectural Heritage a the MetroLink Project Conservation Architect, incorporating two number Grade 1 Architects supported by a Conservation Engineer, Industrial and Stained Glass specialists was appointed by TII in January 2022. The MetroLink PCA has been appointed for 12.5 years i.e. for the full duration of the Construction phase (considered to be up to 10 years) and following close out phases. In accordance with the TII Code of Practice a Cultural Heritage Strategy has been prepared by TII's Project Archaeologist and will be updated in terms of built heritage by the PCA. The strategy is a live document and will be updated and issued to stakeholders as required. The role of the PCA and the Cultural Heritage Strategy is embedded in to the EIAR and consequently into any grant of an ERO; these will also be embedded into all future applicable contracts. |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                           |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 102                                                                                                                                                                                                                     | CA-RO-G-15 General Materials                              | 98       | The Railway Order 'Materials Palette.pdf is welcome but needs to be developed to ensure the materials and finishes knit in with the existing Dublin City palette of materials, street furniture etc. Low maintenance, durable materials are required                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | The materials palette will be further developed during detailed design.                                                                                                                                                                                                                                                                                                                                         |
| 103                                                                                                                                                                                                                     | CA-RO-G-16 General High Quality Street Furniture          | 98       | All street furniture and pop up elements need to be highly durable, vandal proof and easy to maintain and agreed with DCC where they are to be taken in charge. This selection criteria must be applied from the outset when designing or selecting all street furniture items.                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Please refer to response (6) above.                                                                                                                                                                                                                                                                                                                                                                             |
| 104                                                                                                                                                                                                                     | CA-RO-G-17 General Pop Ups                                | 98       | City Architects would urge the design team to minimise the number of surface interventions (ventilation shafts etc.) as much as possible and all proposed interventions should be carefully designed and integrated into the public realm. Potential for vandalism and maintenance requirements need to be carefully considered.                                                                                                                                                                                                                                                                                                                                                                                                   | The MetroLink design has considered the surface interventions carefully. Please refer to responses (6) and (58) above.                                                                                                                                                                                                                                                                                          |
| 105                                                                                                                                                                                                                     | CA-RO-G-18 General Entrance Typology                      | 98       | <p>The Station Entrance Portal typology needs to be developed, including any security shutters etc. that may be required, as early as possible as this will have implications for how the public experience the stations.</p> <p>Additional consideration should be given to the portals within historical site contexts as to whether modulation or similar measures should be introduced where it meets the ground.</p> <p>Finer grain detail at eye-level, including cladding joints etc. will be very important and this requires further development. The corners and edges need to be reviewed, square edges tend to be damaged easily so a radius or chamfer edge detail should be considered for increased durability.</p> | The Station Entrance Portal typology will to be developed during the detailed design stage to ensure good integration with public realm. Finer grain detail as described in the observation will also be addressed at the detail design stage.                                                                                                                                                                  |
| 106                                                                                                                                                                                                                     | CA-RO-G-19 General Architectural Language and Iconography | 98       | The 'Branding', architectural language, iconography for the signage and wayfinding will be a critical factor for the success of the stations at their above ground public interface. Signage should be kept to the minimum required and clutter needs to be avoided.                                                                                                                                                                                                                                                                                                                                                                                                                                                               | These design principles are outlined in EIAR Chapter 4, section 4.5.                                                                                                                                                                                                                                                                                                                                            |
| 107                                                                                                                                                                                                                     | CA-RO-G-20 General Advertising                            | 98       | No commercial advertising should be permitted around stations, and if possible the same should apply within stations and on trains. Proliferation of advertising on transport projects creates visual clutter and greatly detracts from a high quality public realm. Advertising is not shown on the Railway Order 'Structures Details Book 2 of 3 MetroLink Stations Dublin City Council.pdf or 'MaterialsPalette.pdf                                                                                                                                                                                                                                                                                                             | Commercial advertising will provide additional revenue towards the overall efficient operation of the MetroLink scheme. TII's position is that ABP should not restrict advertising and that it is in the public interest that the project should be entitled to display any advertising allowed under the exempted development provisions of the Planning and Development Regulations and other applicable law. |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                         |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
| 108                                                                                                                                                                                                                     | CA-RO-G-21 General Cycle Provisions on Trains           | 98       | Consideration should be given to providing cycle parking on MetroLink trains so passengers can bring their bikes with them, lifts should be sized to accommodate bikes. This project is coming at time where cycle infrastructure in Dublin is undergoing major enhancements and the opportunity to improve transport integration should not be missed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Please refer to response (55) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| 109                                                                                                                                                                                                                     | CA-RO-G-22 General Cycle Parking Provisions at Stations | 99       | <p>The importance of adequate cycle parking a stations is understood as part of an integrated transport network and the good quantum of bicycle parking is welcome. However, the Railway Order Station proposals show public realm dominated by Sheffield cycle stands. The locations for cycle parking require further review to ensure they are fully integrated into a coherent public realm proposal noting that cycle parking on footpaths can cause obstructions for people with disabilities.</p> <p>Consideration should be given to the provision of parking for non-standard, adapted and cargo bikes and mobility scooters in accordance with Dublin City Council Development Plan standards.</p> <p>It is envisaged that bike parking will be used for short stays, but also by commuters and others for longer stays. Singular, Large, covered bike enclosures and possibly stackers should be considered where possible. These offer a better level of security, and also remove visual and physical clutter from the public domain.</p> | <p>Please refer to response (1) regards cycle parking provision.</p> <p>TII do not agree that the proposals show public realm dominated by Sheffield cycle stands, or that there is associated visual and physical clutter. EIAR Chapter 27 (The Landscape) details the assessment of the landscape and visual impacts during both the construction and operational phases. It is noted that at some locations, such as Griffith Park, some cycle parking will be provided in an underground parking facility, with additional parking on the ground level within the public realm.</p> <p>As detailed in Chapter 4 (Description of the MetroLink Project) section 4.7.6, cycle parking is provided in one of two options, (1) a specifically designed cycle park building and (2) surface parking, both covered and uncovered, which is integrated within the landscape design at each particular station.</p> <p>At present, two-tier cycle parking racks have not been utilised in the Project's design as they may preclude the parking of various other types of bikes, including cargo bikes, tricycles or accessible bikes, amongst others. However, the use of two-tier cycle parking, and the provision of other types of cycle parking, will be considered by TII during the detailed design stage and in our discussion with other agencies involved in the delivery of cycle parking city wide, such as DCC.</p>                        |  |
| 110                                                                                                                                                                                                                     | CA-RO-G-23 General Lighting                             | 99       | Lighting will be very important in how the above ground elements around stations are perceived particularly at night In addition to safety requirements, all above ground elements should be beautifully lit at night. Glazed facades mean the structures emit light at night and contribute to a more secure environment. Where lamp standards are proposed, they should be positioned to avoid clutter and designed/selected to complement their context                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>The lighting design for each station has gone beyond minimum health and safety requirements and has been developed as part of an overall architectural design strategy for each of the stations based on the following principles:</p> <ul style="list-style-type: none"><li>• Task lighting is provided at levels equivalent to operational requirements;</li><li>• Direct lighting is provided in soffits above platforms and the plaza areas (at ground level);</li><li>• Lighting will be integrated into balustrades and skirting;</li><li>• There is a strategy to use cooler lighting for directly lit spaces and warmer lighting within indirectly lit spaces, however this is dependent on the materials approach;</li><li>• Indirect lighting is provided from accessible areas at a low level; and</li><li>• Increased perception of space, legibility, and security is provided through the indirect lighting of space and volume.</li></ul> <p>Station entrances and plaza areas will also be sympathetically lit. The plaza and station access areas for pedestrians will have 6m to 9m columns, with 8m to 10m columns for the bus stop and drop-off areas.</p> <p>The design will reduce light spill wherever possible. Luminaires will emit zero upward light. Areas with new tree planting and/or other variable obstructions to lighting will be lit accordingly, to account for future tree growth and seasonal changes.</p> |  |
| 111                                                                                                                                                                                                                     | CA-RO-G-24 General Passenger Lifts                      | 99       | Passenger lifts should be given equal priority to entrance canopies and integrated into the public realm accordingly in line with Universal Design Principles and equal access for all. The proposed difference in materials makes them easily identifiable from Dublin Fire Brigade Lifts and this principle needs to be followed through as the design develops.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Entrance canopies and passenger lifts are integrated into the public realm in accordance with Universal Design Principles. Passenger and Dublin fire brigade lifts will be clearly identified in accordance with their function.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                   |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 112                                                                                                                                                                                                                     | CA-RO-G-25 General Dublin Fire Brigade Lifts      | 99       | The proposed brick cladding is appropriate and in keeping with the industrial heritage of the city and the perforated brick to conceal MEP vents is welcome. Careful consideration in terms of brick selection and architectural detailing will be important in integrating the structures into the various historic contexts.                                                                                                                                                                              | Please refer to response (58) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 113                                                                                                                                                                                                                     | CA-RO-G-26 General Common Components Interactions | 99       | Common components shown in the 'Materials Palette.pdf should be fully developed and integrated into the public realm. Part of this process should include considering how positive interaction with the elements can be encouraged and controlled as well as discouraging negative interactions such as anti-social behaviour and climbing. Design must ensure that the installation of security devices is avoided.                                                                                        | <p>The common components at each station will provide a consistent, high quality passenger experience. The entrance portals, skylights, public facing lifts, and service lifts will form a coherent line wide MetroLink brand identity as part of the Dublin streetscape, aiding wayfinding and placemaking. The concise and recognisable material palette across the common components takes inspiration from both historical and contemporary elements of the city's built environment.</p> <p>The station popups share a set of principles that ensure a high-quality passenger experience is achieved across the Metrolink network:</p> <ul style="list-style-type: none"><li>• Durability, security, functionality;</li><li>• Commonality across contexts;</li><li>• Branding and identity;</li><li>• Universal access;</li><li>• Weather protection and safety; and</li><li>• Environment.</li></ul> <p>Security devices will only be installed if justified. Please also refer to responses (6) and (58) above.</p> |
| 114                                                                                                                                                                                                                     | CA-RO-G-27 General HVM Bollards                   | 99       | The proposed 'Bollards or equivalent (HVM)' at each station are concerning for their impact on the visual amenity of the public realm and problems they present for visually impaired pedestrians. The requirement for the bollards is understood, however their locations and alignments need to be reconsidered as part of an integrated public realm proposal for each station. Wherever possible landscape/greening/raised planting/seating interventions should be used as an alternative to bollards. | Please refer to response (15) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 115                                                                                                                                                                                                                     | CA-RO-G-28 General Upstand Floor Hatch            | 99       | Several vents and hatches are shown in pedestrian areas around the stations and in some cases it is unclear if they will be flush with surrounding paving. Details, specifications, loadings, guarding, bollards, lighting, sirens, signage, maintenance requirements, etc. need to be provided for these openings to clarify if/how they will open in the event of an emergency and what impact they will have on the public realm.                                                                        | <p>All emergency hatches/exits for sub-surface stations will be flush with the pavement and consist of automatic openings at street level, provided with electric or hydraulic opening system, as well as with manual opening. These structures have the capacity to support a load of six tons. They will be provided and installed in accordance with the Machinery Directive 98/37/EC and technical regulation EN 12453 – EN 12445. In the event of a fire event, an audible alarm is activated to notify the public.</p> <p>Smoke exhaust grills in footways and sidewalks, will be installed flush, in the green areas grills have a 30mm upstand.</p> <p>TII's position is that the detail in the application and this response provide the level of detail requested.</p>                                                                                                                                                                                                                                           |
| 116                                                                                                                                                                                                                     | CA-RO-G-29 General Utility Cabinets               | 100      | It is understood that all utility/service supply cabinets will be located below ground level as they are not shown on the Railway Order Street Level Design. This approach needs to be followed through all stages of the project to minimise clutter in the public realm.                                                                                                                                                                                                                                  | All utility/service supply cabinets related to MetroLink will be located within the stations and below ground level. The exception will be cabinets provided by DCC for traffic and public lighting. The location of these cabinets where determiner at details design stage will be agreed in advance with the relevant department within DCC. This will include DCC Public Ream team.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                           |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 117                                                                                                                                                                                                                     | CA-RO-G-30 General Tree Management                        | 100      | The construction of the stations involves the removal of a significant no. of mature trees. Every effort must be made to minimise the no. of trees removed and any trees removed must be replaced with new appropriate tree specimens to support greening, biodiversity and environmental sustainability.                                                                                                                                                                                                                           | Please refer to response (10) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 118                                                                                                                                                                                                                     | CA-RO-MS08-01 Ballymun Station Site Development Potential | 100      | <p>City Architects note that the intention of the plan for the regeneration of Ballymun is to reduce the number of large open spaces. The introduction of a Plaza the same scale as the station box above the station does not seem to support this and will impede the potential for future oversite development.</p> <p>The 2007 BRL Masterplan also identified a strong street edge for this site as part of the objective to create a main street with density and a mix of active uses and frontages on the Ballymun Road.</p> | At Ballymun, the development potential has been considered on an overall site basis and makes an allowance for the provision of a plaza to Ballymun Road with a strong development edge to that plaza. The LAP makes specific provision for an area of open space fronting onto Ballymun Road. Furthermore, feasibility study by Sistra, recommends that it was considered appropriate to set back the building frontage at least 15-20 meters to better integrate with the proposed MetroLink underground station in order to provide a more inviting entrance to the station. The current design has been discussed and agreed with DCC. |
| 119                                                                                                                                                                                                                     | CA-RO-MS08-02 Ballymun Station Urban Design               | 100      | <p>The public realm design should give consideration to the new design proposal for the plaza opposite the proposed Metro Station, this should be considered from an urban design perspective.</p> <p>Pedestrian connectivity across the Ballymun Road (R108) via the proposed toucan crossing is vital and needs to be developed and coordinated with BusConnects.</p>                                                                                                                                                             | The public realm design gives consideration to the new design proposal for the plaza opposite the proposed Metro Station. The design is also aligned to the Bus Connects in this area.                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 120                                                                                                                                                                                                                     | CA-RO-MS08-03 Ballymun Station Public Realm Design        | 100      | <p>The public realm around the entrance to the MetroLink station needs to be coordinated with the potential shopping centre on the adjacent site help activate the space rather than detract from it through the introduction of new public open spaces within the shopping centre.</p> <p>The shopping centre may not be built so the station needs to be designed to function with or without the adjacent shopping centre. Consideration should be given so additional space activation, for example, through a cafe kiosk.</p>  | Account will be taken of the public realm as set out by response (58) above. TII are not planning to accommodate retail within the Metrolink station or development. TII have no plans for a Cafe/Kiosk at this location and as such is not included in the RO application.                                                                                                                                                                                                                                                                                                                                                                |
| 121                                                                                                                                                                                                                     | CA-RO-MS08-04 Ballymun Station Cycle Parking              | 100      | Whilst a good quantum of bicycle parking is welcome, the proliferation of Sheffield stands across the site is of concern. It is envisaged that bike parking will be used for short stays, but also by commuters and others for longer stays. Singular, Large, covered bike enclosures and possibly stackers should be considered where possible. These offer a better level of security, and also remove visual and physical clutter from the public domain.                                                                        | Please refer to response (1) regards cycle parking provision. At the detail design stage parking provision will be made for non-standard bikes. Please refer to response (109) in relation to the integration of cycle parking into the landscaped design, and the provision of both covered and uncovered parking.                                                                                                                                                                                                                                                                                                                        |

| 124                                                                                                                                                                                                                     | CA-RO-MS08-07<br>Ballymun Station<br>Accessible Parking & Set<br>down           | 101      | It appears that construction of this station will necessitate the removal of 3 accessible parking spaces. Preservation of the existing quantum of accessible parking should be a priority. Set down area for people with disabilities should also be considered.                       | Temporary management measures have been developed to minimise the impact on parking and loading. At Ballymun Station, the impact to parking at this location is considered to be Slight, with accessible parking maintained on the westbound side of Sillogue Road. The proposed site for Ballymun Station is earmarked for future development and therefore will be subject to loss of parking. To facilitate pedestrian movement to and from the area, the pedestrian crossing south of Sillogue Road will be temporarily relocated 40m south of its existing location, closer to the accessible parking.<br><br>As part of the operational design, parking will be provided along the northbound carriageway of the Ballymun Road, adjacent to the station entrance, and therefore accessible drop off will be facilitated. Parking on the eastbound side of Sillogue Road will be also be provided, as well as maintenance of the existing taxi rank located adjacent to the station entrance to allow for integration. |  |
| 125                                                                                                                                                                                                                     | CA-RO-MS08-08<br>Ballymun Station<br>Bollards clash                             | 101      | To the immediate south of the station on Sillogue Road there appears to be a clash between existing parallel parking spaces and proposed bollards. The proposed layout would present a problem in opening car doors.                                                                   | The position of the bollards will be adjusted at detail design to ensure there is no clash with these car parking spaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
| 126                                                                                                                                                                                                                     | CA-RO-MS09-01 Collins<br>Avenue Station<br>Transport and<br>Accessibility Model | 101      | This station will serve the DCU campus so it is likely that this station will be intensively used in the future and the public realm design needs to accommodate large passenger volumes.                                                                                              | TII confirm DCU footfall has been accounted for in the public realm design.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 127                                                                                                                                                                                                                     | CA-RO-MS09-02 Collins<br>Avenue Station Median<br>Exhaust Shafts                | 101      | The proposed over track exhaust shafts in centre median appear to significantly complicate the construction of the station and potentially give rise to public safety concerns.                                                                                                        | The overhead track exhaust (OTE) will only be used in the event of a fire emergency and is therefore a low probability event. The OTE's have been positioned to minimise the impact on the existing environment / landscape. In the event of a station fire the road would be closed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                           |          |                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 129                                                                                                                                                                                                                     | CA-RO-MS09-04 Collins Avenue Station Landscape Layout     | 101      | The fragmented landscape design potentially gives rise to concealed spaces behind above ground elements, layout could be further rationalised. Sustainable drainage proposal is welcome but further details of swales and connecting open drains required.                                                                                                                       | TII do not consider the landscape design is fragmented. A design principle for this station is to integrate grilles and hatches required for the Station with planting proposals to avoid fragmented design. The landscape design will have future planting and swales to manage surface water sustainably, verge planting to direct pedestrians and cyclists, and a new plaza to integrate the street with the proposed Project and its architectural features as well as linking the Church with the adjacent new transport infrastructure. Concealed spaces have been minimised in the preliminary design and remaining spaces will be actively be monitored by the CCTV and the operation control centre, subject to Data Protection Impact Assessment and GDPR requirements. Please also refer to response (13) above with regards to the landscape design. |
| 130                                                                                                                                                                                                                     | CA-RO-MS09-05 Collins Avenue Station Cycle Parking        | 101      | Cycle parking is a dominant element in the public realm and requires further consideration.                                                                                                                                                                                                                                                                                      | Collins Station requires the provision of 228 spaces, (126 racks) which were arranged with the green areas but concentrating the major quantity along the road to Albert College due the expected demand. Please refer to response (109) in relation to the integration of cycle parking with the public realm. Please also refer to response (1) above with regards to cycle parking provision.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 131                                                                                                                                                                                                                     | CA-RO-MS09-06 Collins Avenue Station Bollards             | 101      | A more considered approach to HVM bollards is required as part of a coherent public realm design.                                                                                                                                                                                                                                                                                | Please refer to response (15) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 132                                                                                                                                                                                                                     | CA-R0-MS1 0-01 Griffith Park Station Elevation Assessment | 101      | City Architects suggest that an elevation study along the length of St Mobhi Road is essential. The treatment of the wall should be considered for example, stone cladding, imprinted concrete with artistic design, planted walls, windows, sections in relief and recessed elements, greening at base of walls etc. which could provide some animation and rhythm to the wall. | The TII architectural vision aligns with the considered treatment of the wall as shown by Diagram 4.81 in EIAR Chapter 4. "As the station structure is incorporated into the topography it results in a new retaining wall of 5m plus in height. This wall will be clad with planting in places and on top of this structure a number of feature trees are placed to create the desired boundary and atmosphere."                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 133                                                                                                                                                                                                                     | CA-R0-MS1 0-01 Griffith Park Station Elevation Assessment | 101      | Lighting on the footpath along the edge of the retaining wall to the football pitch will need to be considered carefully in order to ensure passenger safety as this footpath will be between a row of mature trees and a high wall.                                                                                                                                             | Lightening design will be finalised at detailed design.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 134                                                                                                                                                                                                                     | CA-RO-MS10-02 Griffith Park Station Cycle Path            | 102      | The interaction between the 2-way cycle path and pedestrian infrastructure, for example, at the bus stop gives rise to potential conflicts. Further consideration should be given to layout, materials and finishes to minimise conflicts.                                                                                                                                       | As indicated in the street layout drawing provided in EIAR Chapter 4, Description of the MetroLink Project, the cycle lane will be interrupted by a footpath to facilitate access between the bus stop and the MetroLink station at Griffith Park. In line with the road hierarchy set out in the Transport Strategy for the GDA 2022-2042, pedestrians will take priority over cyclists. Appropriate signage will be provided to alert cyclists of the oncoming pedestrian movements to minimise any conflicts, as well as contrasting surface materials to signify the difference between the cycle lane and footway.                                                                                                                                                                                                                                          |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                          |          |                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
| 135                                                                                                                                                                                                                     | CA-RO-MS1 0-03 Griffith Park Station Entrance Plaza      | 102      | <p>The proposal to create plaza at the station entrance is welcome and has potential to be further developed.</p> <p>The plaza will have no passive surveillance from adjacent properties so this needs to be considered to ensure passenger safety and to avoid a potential location for anti-social behaviour.</p> | <p>TII have considered security, passenger safety and the risk of anti-social behaviour as part of the design. EIAR Chapter 6, MetroLink Operations and Maintenance, sets out the measures provided, including:</p> <ul style="list-style-type: none"><li>•The architectural and urban realm design is designed to discourage anti-social behaviour, for example through the attractive setting, use of public lighting, open sight-lines, and avoidance of areas where individuals and groups of people can hide.</li><li>•The Operational Control Centre (OCC) will be the central communications and operational hub, located in the administrative building at the Dardistown Depot. The role of the OCC will include monitoring and managing security and antisocial behaviour. The OCC will direct and deploy staff to manage incidents when required.</li><li>•CCTV will be installed throughout the MetroLink system to provide general security and surveillance of all the public areas, subject to Data Protection Impact Assessment and GDPR requirements, and to inform, if required, the directing and sending of staff to manage the situation.</li><li>•There will be a MetroLink staff presence along the route for assisting passengers, security and deterring anti-social behaviour.</li></ul> <p>These will be further developed during the detail design to achieve the objective of provide a safe and secure experience for the public.</p> |  |
| 136                                                                                                                                                                                                                     | CA-RO-MS1 0-04 Griffith Park Station Universal Access    | 102      | <p>The station and plaza should be designed taking account of universal design principles - consideration given to disabled parking, set-down area.</p>                                                                                                                                                              | <p>As set out by EIAR Chapter 6, MetroLink Operations and Maintenance, the proposed Project has been designed on the principle of Access for All and universal design principles. The design has been developed to meet all legislative requirements relevant to accessibility including the Disability Act 2005, and in turn the Sectoral Plan for Accessible Transport under the Disability Act 2005 (DTTAS 2012). The design will also comply with Part M of the Second Schedule of the Building Regulations.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                            |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 141                                                                                                                                                                                                                     | CA-RO-MS10-01<br>Glasnevin Station - Station configuration | 102      | This station is a major interchange location between the MetroLink and Irish Rail but also could see high volumes of passengers for events in Croke Park - the station must be designed to accommodate the anticipated no. of passengers without adversely impacting on the public realm (queues, overcrowded footpaths etc.)                                                                                                                             | The demand study considered to size Glasnevin Station, assumes the maximum demand foreseen in 2057 + factor 25%. Please also refer to response (42) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 142                                                                                                                                                                                                                     | CA-RO-MS10-01<br>Glasnevin Station - Station configuration | 102      | The footpath/road layout outside the station needs to be carefully assessed and designed to ensure safe movement routes are provided for pedestrians to bus stops and minimising conflicts with cycle paths.                                                                                                                                                                                                                                              | TII have carefully considered this as part of the Metrolink design as shown in EIAR Chapter 4, Diagram 4.86 Glasnevin Station Layout. A high quality, safe and attractive access to all facilities, stations, trains and public spaces has been designed to promote independent mobility; high quality and safe access for cyclists (with cycle parking); and, bus interchange being integrated with existing bus services.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 143                                                                                                                                                                                                                     | CA-RO-MS10-02<br>Glasnevin Station Royal Canal Greenway    | 102      | The interface between the station and the pedestrian/cycle path beside the canal (where there are planned towpath upgrades to connect with the Royal Canal Greenway) needs to be assessed to ensure the proposal enhances the public realm in this location and does not negatively impact this important route."                                                                                                                                         | TII have carefully considered the interface of the station with pedestrian and cycle paths. As noted by EIAR Chapter 6, Metrolink Operations and Maintenance, at Glasnevin Station, cycle lanes are being provided along Phibsborough Road to access the Station, to tie in with Bus Connects cycle lane proposals. To the south pedestrian and cycle access is provided to the Royal Canal and the cycle network. TII are also consulting with Waterways Ireland to ensure the canal cycle paths are fully integrated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 144                                                                                                                                                                                                                     | CA-R0-MS1 0-03<br>Glasnevin Station 2-way Cycle Path       | 103      | The 2-way cycle path appears to terminate in a potentially hazardous configuration at the junction with Prospect Road to the north of the station introducing a potential conflict between pedestrians and cyclists. Further consideration should be given to layout, materials and finishes to minimise conflicts."                                                                                                                                      | As indicated in the street layout drawing provided in EIAR Chapter 4, Description of the MetroLink Project, the cycle lane will be interrupted by a footpath to facilitate access to the bus stop. In line with the road hierarchy set out in the Transport Strategy for the GDA 2022-2042, pedestrians will take priority over cyclists. Appropriate signage will be provided to alert cyclists of the oncoming pedestrian movements to minimise any conflicts, as well as contrasting surface materials to signify the difference between the cycle lane and footway.                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 145                                                                                                                                                                                                                     | CA-RO-MS10-04<br>Glasnevin Station Pedestrian crossings    | 103      | There is no pedestrian crossing currently shown connecting the station to the east with the block between Whitworth Road and Lyndsey Grove. Consideration should be given to the inclusion of a pedestrian crossing here as there will likely be large pedestrian footfall approaching along the north side of Whitworth Road, including a potentially high concentration of visually impaired people accessing from the National Council for the Blind." | As indicated in Drawing no. ML1-JAI-ARD-ROUT_XX-DR-Y-03076 (MetroLink General Arrangement Prospect Way to Royal Canal), the existing signalised pedestrian crossing on Whitworth Road will be maintained, facilitating safe access from the block between Lindsay Grove and Whitworth Road, and the Cross Guns Bridge. From here, pedestrians can utilise the signalised crossing on Prospect Road south of Whitworth Road to access the Station. In recognition of the potentially complex routing and road crossing behaviour at this site, a VisWalk model was produced for the area surrounding the station, including the Whitworth Road area. The model indicates that whilst there is a relatively high pedestrian demand at the pedestrian crossings at the Whitworth Road junction, the additional width provided on the southern crossing will be sufficient to accommodate the anticipated demand. As a result, an additional crossing to the north of Whitworth Road is not required. |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                            |          |                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 146                                                                                                                                                                                                                     | CA-RO-MS10-05<br>Glasnevin Station Conservation & Heritage | 103      | There are a no. of protected structures in the area including the railings to the north of the proposed station. The bridges and canal locks are also of Industrial Heritage importance so a considered and sensitive approach is required in this location.                                                                                                     | <p>All the protected structures in the area of Glasnevin Station were assessed and the predicted direct and indirect impacts are presented in EIAR Chapter 26 Architectural Heritage, Tables 26.4 and 26.50, with the necessary mitigation measures presented in Table 26.66, summarised below:</p> <p>- Railings and gates at Dalcassian Downs - The railings and their plinth walls are to be recorded by photography and written description prior to their removal. The railings and walls are to be taken down in accordance with a specification prepared by the Project Conservation Architect (PCA) and the materials removed into secure storage pending reinstatement. At the appropriate stage of construction, the materials are to be returned to site and the railings and walls reinstated in accordance with a conservation method statement prepared by the PCA. All works of dismantling, protection, transportation and reconstruction are to be carried out by a dedicated heritage contractor.</p> <p>- Fifth Lock, Royal Canal - The locks present at Royal Canal have been identified as architectural constraints within the assessment of architectural heritage, as detailed in Table 26.16 of EIAR Chapter 26 (Architectural Heritage). A detailed assessment of the canal lock will be carried out during the detailed design stage and appropriate protective or control measures implemented to ensure they remain operational and meet the performance requirements.</p> <p>- Royal Canal - The construction of the station will necessitate the closure of the Royal Canal and dewatering and infilling of a section of the canal during construction, with reinstatement on completion. Depending on condition, part or all of the quay wall on the northern side of the canal will be removed and reinstated at the end of the works in this area. The towpath will be closed for the duration of the works. Depending on condition, the southern quay wall may require repair to support the temporary pedestrian and cycle path. If following the draining of the canal basin a survey indicates that the canal walls are deemed to be susceptible to damage, the north wall will be removed in whole or in part; this may extend to the entire wall of the canal basin or just the copings. The south wall will be repaired in situ to accommodate the pedestrian/cycle way. Any damaged coursing exposed on draining of the canal will be made good, if the north wall is in very poor condition, it may be deemed best to be removed entirely and reinstated post construction – the PCA and TII will consult with and take direction from Waterways Ireland on this issue, though preference will be given to protection in situ. The form of the protection for the canal bed and repair/removal of canal walls will be in accordance with a method statement to be prepared by the PCA in consultation with Waterways Ireland. A good quality hoarding with sensitive images will be erected. The retaining wall on the northern side of the canal will be recorded by photography and written description prior to its removal. The wall will be taken down in accordance with a conservation method statement prepared by the PCA and the materials removed into secure storage pending reinstatement. At the appropriate stage of construction, the materials will be returned to site and the wall reconstructed in accordance with a conservation method statement prepared by the PCA. All works of dismantling, protection, transportation and reconstruction will be carried out under the supervision of a suitably qualified architectural conservation specialist.</p> <p>- Abutments of former railway bridge - The abutments of the former railway bridge will be recorded by photography and written description, and all loose masonry will be repaired prior to the erection of the temporary bridge. The repair works, the erection of the temporary bridge and its subsequent removal will be carried out in accordance with a conservation method statement prepared by the PCA. All works of dismantling, protection, transportation and reconstruction will be carried out under the supervision of a suitably qualified architectural conservation specialist.</p> |  |
| 147                                                                                                                                                                                                                     | CA-RO-MS10-06<br>Glasnevin Station Public Realm            | 103      | A more detailed public realm proposal for the plaza space needs to be developed with further consideration given to elements such as seating, trees and planting, surface materials, level changes and artwork. Further detail is required to clarify how complex levels are being resolved through use of gently sloped surfaces, steps and landscape elements. | TII are of the view that the public realm is sufficiently developed for the purposes of the Railway Order application as set out by EIAR Chapter 4, Description of the MetroLink Project, section 4.17.7, and as illustrated by the Railway Order drawings (Structures Details, MetroLink Stations) and EIAR Appendix A27.1 photomontages. A 3D model environment has been used to refine the complexity of the levels and optimise the solution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |

The inclusion of the retail unit is welcome to improve the public interface and help to activate the plaza.                                                                                                                                                                                               | Noted. Please also refer to response (147) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 149                                                                                                                                                                                                                     | CA-RO-MS10-07<br>Glasnevin Station Service Building                   | 103      | The proposal shows a large brick-clad service building housing Irish Rail back of house spaces and vents for MetroLink.<br><br>Consideration needs to be given to the inclusion of windows, planting, sections in relief/recessed elements which may provide a rhythm and animation, particularly along Prospect Road. Perhaps a cafe kiosk in the service building to the north would activate this facade and adjoining space. | TII will work with local residents and DCC to further develop the cladding and planting design to ensure that it integrates into its surrounding environment. There are no plans for a cafe kiosk included in this railway order application.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 150                                                                                                                                                                                                                     | CA-RO-MS10-08<br>Glasnevin Station Oversight Development & Urban Form | 103      | Due to the important and complex interchange at this location, the station has been designed from the inside out. More consideration needs to be given to how the station will impact the streetscape.                                                                                                                                                                                                                           | TII have considered how the station will impact the streetscape. EIAR Chapter 4, Description of the MetroLink Project, outlines how the Glasnevin Station building is set back from Prospect Road where a public realm will be created, assisting in the connectivity to Prospect Road and adjacent land uses. This public realm deals with the changes in levels on site, by using sculptural wall elements and planting, and provides access to the station via ramps, steps and level access. The access route for pedestrians is provided through multiple access points along Prospect Road to a level plaza that leads to the Station building. The active plaza has seating and large mature trees. To the south, pedestrian and cycle access is provided to the Royal Canal and the cycle network. An active space for outdoor seating is provided for retail on this façade.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 151                                                                                                                                                                                                                     | CA-RO-MS10-08<br>Glasnevin Station Oversight Development & Urban Form | 103      | This site has opportunities for a building edge, oversight development of an appropriate scale to the context and future development on lands behind the proposed station but the proposal does not appear to have sufficiently explored these opportunities.                                                                                                                                                                    | Please refer to response (2) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 152                                                                                                                                                                                                                     | CA-RO-MS10-09<br>Glasnevin Station Wayfinding                         | 103      | The architectural language of the station building gives rise to a concern that the station entrance may not be easily identifiable particularly vulnerable or visually impaired users. The design needs to be further developed to address this issue.                                                                                                                                                                          | EIAR Chapter 6 MetroLink Operations and Maintenance, section 6.8.3.1 Access to Stations explains how the approaches to the station entrances are positioned to provide convenient access with minimal changes in level. Design features to facilitate safe access to the station entrance include signalised crossings, 'raised tables' within the roadway to reduce traffic speed at pedestrian crossings and dropped kerbs on pavements on both sides of the crossing to remove a trip hazard and aid wheelchair users and people with wheeled luggage. Tactile paving surfaces will warn pedestrians with visual difficulties of the absence of a kerb and guide them in the direction of the crossing.<br><br>EIAR Chapter 6 also explains how MetroLink has been designed on the principle of Access for All. The design has been developed to meet all legislative requirements relevant to accessibility including the Disability Act 2005 and in turn the Sectoral Plan for Accessible Transport under the Disability Act 2005 (DTTAS 2012). The design will also comply with Part M of the Second Schedule of the Building Regulations.<br><br>During the detail design TII will continue to consult with the National Council for the Blind and other disability groups to 'ensure access for all' is provided. |

| Submission No.                                                                                                                                                                                                          |                                                          |          | 071                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                          |          |                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 153                                                                                                                                                                                                                     | CA-RO -MS10-10<br>Glasnevin Station<br>Landscape Layout  | 103      | Further detail is required to clarify how complex levels are being resolved through use of gently sloped surfaces, steps and landscape elements.                                                                                                                                                                                                                                                                                     | A 3D model environment has been used to refine the complexity of the levels and optimise the solution. The RO design is adequate to allow all significant effects on the environment to be identified, described and assessed and for the Board to determine the consistency of the project with proper planning and sustainable development. The final detail will be developed in the detailed design phase.                                                                                                                                                                                                                                                                                                                                                                                                                           |

The assessed impact on Architectural Heritage is fully described in EIAR Chapter 26 and specifically section 26.4.4.8. The RO design is adequate to allow all significant effects on the environment to be identified, described and assessed and for the Board to determine the consistency of the project with proper planning and sustainable development.</p> <p>Please also refer to responses (25) and (28) regards the treatment of the park railings and the revised layout of the Park.</p>                                                                                                                                                                                   |
| 156                                                                                                                                                                                                                     | CA-RO-MS12-02 Mater<br>Station Biodiversity              | 104      | This station necessitates the removal of the existing park including mature trees and will have a substantial impact on the biodiversity of the site. Detailed assessments and ongoing monitoring will be required throughout all stages of the project to minimise any negative impacts on biodiversity and to ensure that the biodiversity of the park is restored through the new trees and greening in the new landscape design. | <p>Please refer to responses (10), (27) and (29) above in relation to the impacts on trees.</p> <p>The impacts on biodiversity have been assessed and presented in EIAR Chapter 15 (Biodiversity). Section 15.5 of EIAR Chapter 15 presents the mitigation measures to avoid or reduce the potential impacts of the proposed Project on biodiversity. All of these mitigation measures are included in the Schedule of Environmental Commitments which will be implemented by the contractor under supervision of both the Project Ecologist (employed by the Employer) and the Ecological Clerk of Works (employed by the Contractor). The planting proposed in the landscape design will compensate for habitat loss by providing new areas of these habitat types, as detailed in section 15.8 of EIAR Chapter 15 (Biodiversity).</p> |
| 157                                                                                                                                                                                                                     | CA-RO-MS12-03 Mater<br>Station Main Entrance<br>Location | 104      | The main entrance to the station is located in very close proximity to the intersection of Berkeley Road and Eccles Street. This appears to create a pinch point where it may be difficult to safely manage the arrival and departure of high volumes of passengers at peak times. A detailed study of this area should be carried out to demonstrate how pedestrian and vehicle movements are safely accommodated in the proposal.  | This has been fully assessed. EIAR Appendix A9.2-I Section 6.1.3.1 outlines the Pedestrian Impact Assessment for the Mater Station that found no concerns relating to the close proximity of the main station entrance to the intersection of Berkely Road and Eccles Street.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 158                                                                                                                                                                                                                     | CA-RO-MS12-04 Mater<br>Station Roof lights               | 104      | The introduction of the approx. 2m high roof light upstands will have a substantial impact on the park and the visual permeability, they may provide space for anti-social behaviour. The height of these elements needs further consideration and they need to be fully integrated into the landscape proposal for the park.                                                                                                        | During the workshops held with DCC Architects , it was acknowledge that providing day light into the station by skylights was welcomed and TII had provided some precedent examples of international metro stations which use roof light solutions for reference. It was agreed that due to the sensitive nature of the Mater Station site, the roof lights design would be carefully considered and designed. Details will be provided (for discussion) during the detailed design stage. It is intended to consult with DCC to reduce the height of each roof light during detail design in order to minimise the visual the impact                                                                                                                                                                                                    |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                       |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 159                                                                                                                                                                                                                     | CA-RO-MS12-05 Mater Station Park Ownership and Access | 104      | The park at the proposed Mater Station is currently maintained by DCC but is owned by the Mater Hospital with private access for the hospital only. City Architects are of the view that in order for the public realm around the station to function successfully, public access to the park will be required. Every effort should be made to obtain public access to the park.                                                                                                                                                          | As part of the Project, it is proposed to acquire the land at Four Masters Park. This will allow for the construction of the Mater Station whilst also creating a shared space to provide greater connectivity to the adjacent existing pedestrian network and to ensure sufficient space for exiting MetroLink passengers<br>TII will retain responsibility for the operations, maintenance and security of the park post construction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 160                                                                                                                                                                                                                     | CA-RO-MS12-06 Mater Station Conservation - Buildings  | 104      | The site is surrounded by protected structures including St Joseph's Church, The Mater Hospital and the house at 39 Eccles street. The EIAR Architectural Heritage Impact at this station During Operation (AHI-60) is noted as moderate and a more detailed study in the context of protected structures and visual impact should be undertaken to demonstrate that the proposal will not adversely impact or detract from the existing amenity, including views (for example the vista towards St. George's Church at Hardwicke Place). | As part of the EIAR, AHI-60 was assessed to understand the impact of the proposed Project during Construction and Operation. As noted, during the Operational Phase it was identified that the impact on the Four Masters Park was moderate (prior to mitigation). Following this assessment, mitigation was proposed through design of the station and landscaping proposals. The mitigation proposed (a landscape design that creates a shared surface plaza which will provide greater connectivity to the adjacent existing pedestrian network) will see this impact be reduced from Moderate to Slight in relation to Architectural Heritage.<br><br>In relation to Landscape impacts as outlined in Chapter 27 The Landscape of the EIAR, it is noted that upon completion that the visual amenity of the area will be largely restored, much to its existing condition though with some minor improvements. Overall at this location, the predicted effects on the visual environment and on visual amenity during the Operational Phase will be significant and positive in the long term.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 161                                                                                                                                                                                                                     | CA-RO-MS12-07 Mater Station Conservation - Railings   | 104      | The gates, railings and plinth walls surrounding the park including the Celtic cross commemorating the Four Masters are a protected structure. The proposal identifies a change in alignment, geometry and extent of the park railings. A conservation strategy and report for how these railings are to be reinstated should be undertaken to ensure this amenity is protected.                                                                                                                                                          | Please refer to responses (23) and (25) above.<br><br>EIAR Chapter 26 Architectural Heritage, Table 26.66 presents the proposed mitigation measures:<br>- Four Masters Cross - The cross will be lifted and removed to a place of secure storage in accordance with a conservation method statement provided by the PCA. It will receive the necessary conservation and repairs. On completion of the construction of the Station the Cross will be returned to the Park and re-erected in a place to be agreed as part of the landscaping design of the Park. This will be carried out in accordance with a conservation method statement prepared by the PCA.<br><br>- Railings, gates and plinth walls at Four Masters Park - The gates, railings and plinth walls will be removed in accordance with a conservation method statement prepared by the PCA and brought to a place of secure storage during the works. Following construction of the station box, the gates, railings and plinth walls will be reinstated on a revised alignment in accordance with a conservation method statement prepared by the PCA.<br><br>- Healing Hands sculpture - The sculpture will be lifted and removed to a place of secure storage in accordance with a conservation method statement provided by the PCA. On completion of the construction of the Station, the sculpture will be returned to the Park and re-erected in a place to be agreed with the park owners as part of the landscaping design of the park. This will be carried out in accordance with a conservation method statement prepared by the PCA.<br><br>The MetroLink PCA is currently completing their condition survey of the Park and will meet with DCC and Mater Hospital to advise them of their findings. |
| 162                                                                                                                                                                                                                     | CA-RO-MS12-08 Mater Station HVM Bollards              | 104      | The proposed HVM bollards appear to obstruct pedestrian movements and clash with tactile paving at the pedestrian crossing on Berkeley Road. The locations and alignment should be better coordinated with the park railings to provide a more coherent, resolved solution.                                                                                                                                                                                                                                                               | Please refer to response (15) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                               |          |                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 163                                                                                                                                                                                                                     | CA-RO-MS12-09 Mater Station Branding                          | 105      | City Architects strongly advise that branding responds to historical context as is the convention in conservation areas.                                                                                                                                                                                                                                                                                                       | Please refer to response (58) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| 164                                                                                                                                                                                                                     | CA-RO-MS13-01 O'Connell Street Station Railway Order Drawings | 105      | The proposed street level design is not shown for the O’Connell Street Station therefore it is not possible for City Architects to comment on the Public Realm and Landscape proposal elements of this location. There appears to be an error/omission on the following drawing:<br>Drawing no. ML1-JA1-SRD-ROUT.XX-DR-Y-02071<br>Drawing Title METROLINK - STRUCTURES, O’CONNELL STREET STATION, PROPOSED STREET LEVEL DESIGN | The necessary detail is shown on:<br>Drawing no. ML1-JA1-ARD-ROUT_XX-DR-Y-03088<br>Drawing Title METROLINK - GENERAL ARRANGEMENT, PARNELL STREET TO GPO BUILDINGS.<br>Reference- RO Plans/ Drawing- Alignment Drawing Details -Book 2 of 2 Dublin City Council<br><br>As noted in section 4.17.9.2 of EIAR Chapter 4 (Description of the MetroLink Project), the urban realm and landscaping design for O’Connell Street Station will be provided by the developers as part of the over-site development at this location. In the event that the current proposals for the over-site development does not go ahead, the MetroLink station will be built with the two entrances as planned while the development site at ground level would be surrounded by hoarding until new or revised plans for the over-site development come forward. The proposals for O’Connell Street Station differ in some detail to these standardised designs due to the over-site development. In particular, the station box will be covered by a transfer slab, which is required to help support the over-site development but results in the absence of skylights in the station ceiling and modifications for ventilation and smoke extraction. In EIAR Chapter 4 (Description of the MetroLink Project), Diagram 4.89 presents a cross section of the station and Diagram 4.90 shows a plan form of the main surface features of station. |  |
| 165                                                                                                                                                                                                                     | CA-RO-MS13-02 O'Connell Street Station configuration          | 105      | The proposed location of the station below a commercial development appears to be a very challenging proposition and gives rise to several issues including station access, emergency services access, pop-up locations/coordination, constructability and programme coordination. These issues require full coordination and ongoing monitoring to ensure a successful outcome for this key station.                          | Extensive consultation has taken place over the last 4 years between TII and Dublin Central Ltd. This has resulted in a fully integrated design which considers all station access, emergency services access, pop-up locations/coordination, constructability and programme coordination. This close coordination is reflected in the respective planning applications of Dublin Central and TII at this location.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |
| 166                                                                                                                                                                                                                     | CA-RO-MS 13-03 O'Connell Street Station Pedestrian Movements  | 105      | The pedestrian loadings at this busy station need to account for all transfer passengers from bus routes, both Luas lines and the overhead development on the site to ensure the station and surrounding public realm is designed to accommodate the projected pedestrian volumes.                                                                                                                                             | The pedestrian loadings have been assessed taking account of the relevant factors to inform the design. Please refer to EIAR Appendix A9.2-K, section 6.1.3 which outlines the Pedestrian Impact Assessment, Pedestrian Comfort Assessment, and Immediate Area Impact.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 167                                                                                                                                                                                                                     | CA-RO-MS13-04 O'Connell Street Station Entrance               | 105      | The station entrance is located directly off O’Connell St. where there are a large no. of bus stops - this should be coordinated with the BusConnects proposal so that bus stops can be held away from the immediate vicinity of the station entrance to avoid the potential for a bottleneck forming                                                                                                                          | Coordination with BusConnects will continue through the detailed design phase. However, there are no BusConnects core bus corridor works proposed on O’Connell Street.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                            |          |                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 168                                                                                                                                                                                                                     | CA-RO-MS13-05<br>O'Connell Street Station<br>O'Connell Street ACA location | 105      | This station is located in the O'Connell Street Architectural Conservation Area. Detailed assessments and ongoing monitoring through all stages of the project is required to ensure the historically and culturally significant buildings, monuments etc. in the area are not adversely impacted by the works or the new station. | <p>As outlined in EIAR Appendix A5.1 (CEMP), specialists with appropriate skills and experience will monitor on-site construction on behalf of TII where required. In terms of Architectural Heritage this will include a Project Conservation Architect. A Cultural Heritage Strategy has been prepared by TII's Project Archaeologist and will be updated appropriately by the MetroLink Project Conservation Architect, who will remain involved for the duration of the project (Section 6.8). However it is noted that the draft RO application has assessed the impacts on the environment of two scenarios (1) where Dublin Central GP obtains and implements planning permission for the Dublin Central scheme first, in which case it will carry out the relevant demolitions and construction of the MetroLink Enabling Works in accordance with its planning permission and the Railway Order and (2) where Dublin Central GP does not proceed first, in which case TII's contractor will carry out the relevant demolitions and construct all railway works. No works are proposed on O'Connell Street with the exception of works necessary for the retention of facades, and thus not impact on street furniture, monuments etc. outside of the applicants redline boundary will arise</p> <p>Condition surveys, structural assessments and specialist surveys have been undertaken by Dublin Central and submitted as a component of their planning application. All buildings relating to TII station location will have been inspected by TII Project Archaeologist, the EIAR competent specialist and the MetroLink PCA. Environmental monitoring will be in place throughout the works and supervised by relevant MetroLink Project Team members and specialists. This will comprise baseline, construction and close-out monitoring. For MetroLink works vibration and settlement/deformation monitors will be installed linked to alarms to identify any vibration or settlement activity so that vibration threshold limits are not exceeded. Trigger warnings will be set in a three tier notification hierarchy so as to ensure work practices are paused and amended such that threshold levels are not breached. In the event of a trigger threshold being breached, works will cease until the cause of the vibration exceedance is identified and systems / methodologies modified to prevent recurrence. Threshold levels will be devised by a competent specialist in consultation with the MetroLink PCA and Environment team, and will be in line with the recommendations of the MetroLink EIAR and relevant British Standards.</p> |  |
| 169                                                                                                                                                                                                                     | CA-RO-MS13-06<br>O'Connell Street Station Access                           | 105      | The proposed angled escalators appear to be a successful solution for this station entrance, perhaps a similar strategy could be considered for some of the other station entrances on tight sites e.g. Mater Station.                                                                                                             | OCS Station required a particular solution for the eastern entrance due the particular constraints on this station. The preferred solution where ever possible is to have a straight line of passenger flow.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |

| 170                                                                                                                                                                                                                     | CA-RO-MS13-07<br>O'Connell Street Station<br>Public Safety             | 105      | The traffic management proposal for the site involves taking control of Moore Lane and using the narrow streets in the area for HGV routes in and out of the site. This central site attracts high volumes of pedestrian and cyclist traffic so public safety measures such as specific driver training and use of marshals at site entrances should be implemented. | <p>Safety, whether it be the public, businesses, stakeholders, people working on the project or any other group or entity that comes in to contact with the Project, will not be compromised in anyway.</p> <p>Mitigation measures for all sites, will include specific driver training, induction and marshals, but additionally, as outlined by EIAR Appendix A 9.5 Scheme Traffic Management Plan:</p> <ul style="list-style-type: none"><li>• Controls at the entrance/exits of sites for construction vehicles in order to ensure the safety of other road users and pedestrians;</li><li>• Pedestrian routes will be maintained throughout the construction period around the construction sites (safety risks to the general public will not increase as a result of construction activity);</li><li>• In very sensitive areas, such as the City Centre, the designated access and pedestrian routes around the construction sites, particularly at and/or along the hoarding lines, must not be perceived as uninviting by pedestrians. The environment around the sites, therefore, will be designed to ensure that pedestrians and cyclists feel they are entering a safe and accessible environment. This will ensure that impact to businesses and shops adjacent to the work areas is minimised;</li><li>• Temporary pathways and cycle ways will be installed where appropriate, and provision will be made to ensure access for individuals with restricted mobility is maintained; and</li><li>• Where the existing level of service cannot be maintained in the vicinity of the construction sites, an alternative route will be designated, be clearly visible, be safe and be signed, and have the level of service required to cater for the pedestrian demand.</li></ul> <p>EIAR Chapter 28 Risk of Major Accidents and Disasters also notes that a serious or fatal collision involving construction traffic caused by the increase in HGVs could lead to an injury or fatality. Table 28.9 ID C8 notes that to mitigate this risk "Blind spot detection will be compulsory for HGVs in order to identify vulnerable road users".</p> |
| 171                                                                                                                                                                                                                     | C A -RO-MS 13-08<br>O'Connell Street Station<br>Conservation Architect | 106      | There are several protected structures near the site (on O’Connell Street, Moore Lane and Parnell Street) and HGV access routes need to be considered in respect of minimising any potential impacts to historic fabric.                                                                                                                                             | <p>In addition to the measures set out by response (170) above, as noted by EIAR Appendix A 9.5 Scheme Traffic Management Plan;</p> <ul style="list-style-type: none"><li>• Suitable routes have been identified in order to direct construction traffic onto suitable roads, and to minimise the negative effects of increased HGV traffic on the environment.</li><li>• Construction vehicles will be controlled in terms of the hours of operation (i.e. construction traffic may be prohibited during periods of very heavy traffic) and by imposing restriction on vehicle size and weight.</li></ul> <p>Please see response to Item (168) above this also applies to any structure within the environs of the works area where the competent specialist, in consultation with the relevant heritage specialist, identifies a potential indirect impact on buildings with historic fabric.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                                                        |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |
| 172                                                                                                                                                                                                                     | CA-RO-MS13-09<br>O'Connell Street Station<br>Coordination and Interdependency with Private Development | 106      | It is noted that the construction of this station is tied to the Hammerson development that will form the over site development above the station and both projects may progress at different rates through the planning and approval processes. Coordination of phased construction of both projects will be essential and the extent of the public realm vs. private space needs to be clearly defined.                                                 | <p>Please refer to response (165) above.</p> <p>In the event that the current proposals for the over-site development does not go ahead, the MetroLink station will still be built with the two entrances as planned, while the development site at ground level would be surrounded by hoarding until new or revised plans for the over-site development come forward. The station design is integrated with the proposed redevelopment of this site so the O'Connell Street Station will remain structurally independent from the over-site development. Construction of the station will require the demolition of several structures and the retention of protected façades of the buildings along O'Connell Street Upper. The entrances/exits to the station will be integrated into the existing façades.</p> <p>Allowance has also been made for the possibility that the developers may not progress with the proposed mixed-use development in advance of MetroLink. To provide for this scenario the TII has worked closely with Dublin Central GP Ltd to ensure that the design for that scheme allows for the construction of an independent support structure to enable the station box construction and fit out to be carried out during or after the Dublin Central GP works have been completed. Both scenarios (with and without the over-site development) have been fully assessed on the EIAR. The cumulative effect of the over-site development is considered in the EIAR Chapter 31 (Cumulative impact of interactions between other projects).</p> |  |
| 173                                                                                                                                                                                                                     | CA-RO-MS14-01 Tara Street Station Interchange                                                          | 106      | This city centre station is at a key location and acting as a major interchange between the MetroLink and the existing Dart and Irish Rail services. The proposal passengers will have to leave the MetroLink station to enter the Dart station or vice versa, this will potentially give rise to overcrowding at station entrances and on public footpaths. The lack of a direct connection between MetroLink and Dart stations is a missed opportunity. | <p>The scope of the MetroLink project and TII remit does not include for forming a direct connection to the DART Station. As detailed in EIAR Chapter 4 (Description of the MetroLink Project) section 4.17.10, Tara Station will be located alongside the DART railway line, aligned in a north-west to south-east direction. The station box is constrained by Poolbeg and Townsend Street and has been designed to fit into this space. Passenger flow modelling does not indicated any overcrowding at this station entrance or footpaths adjoin the plaza station area, as presented in Appendix A9.2- O Traffic and Transport Assessment Tara Street Station. Response item (175) presents further details on the pedestrian modelling at this location.</p> <p>Tara Station will act as a multi-modal interchange station between MetroLink and DART railway line. The main point of interchange between the two stations will be via the southern entrance to Tara Station. Townsend Street will be reduced to single lane traffic in the section fronting Tara Street southern entrance, east of the DFB building to the DART railway line, to provide more space for pedestrian movements. A short section of Townsend Street between Tara Street and the DFB building will remain two-way to provide egress to and from the DFB building in both directions. Further details are contained in section 4.17.10 of Chapter 4 (Description of the MetroLink Project).</p>                                                                                          |  |
| 174                                                                                                                                                                                                                     | CA-RO-MS14-02 Tara Street Station HVM Bollards                                                         | 106      | The proposed location for the HVM bollards on Poolbeg St creates a barrier on the public footpath and should be re-examined. The bollards should be relocated to a location further back on the footpath to maintain an uninterrupted footway similar to Townsend St.                                                                                                                                                                                     | Please refer to response 15 above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                        |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 175                                                                                                                                                                                                                     | CA-RO-MS14-03 Tara Street Station Luke St & Poolbeg St | 106      | <p>The drawings indicate that Luke St will be a shared surface with kerbs and a 2-way cycle route. This is also the proposed main pedestrian access route from the proposed Tara MetroLink station to the Tara Dart station and the River Liffey. The detail design of this street is very important and must promote pedestrian priority. The existing footpath is to be retained but is below standard width and the expected volumes of pedestrians will be forced onto the carriageway. The surface material used including the material for the shared carriageway on both Luke St and Poolbeg St needs to be carefully selected to promote pedestrian priority. Vehicular access to Poolbeg St &amp; Luke St must be limited to essential vehicles only. The design of the junction of the station plaza area and the proposed 2 way cycle path on Luke St needs to be considered carefully to encourage cyclists to dismount.</p> | <p>EIAR Appendix A9.2-O presents a Traffic and Transportation Assessment of the operational phase at Tara Street Station. At present, there are low volumes of traffic utilising Poolbeg Street and therefore there will be a minimal impact on general traffic accessing the area. Additionally, there will be a reduction of up to approximately 1,300 car trips over the years from zones within a 2km radius of the station, reducing the vehicular demand on the roads around the station.</p> <p>A microsimulation VisWalk model has been developed for the immediate area surrounding the Tara Street Station, covering the full extent of the publicly accessible plaza, the Irish Rail station and nearby streets. The model indicates that the current design of the proposed station is expected to perform with an acceptable level of service. The proposed public plaza offers a high level of service regarding pedestrian routing. The north side of Townsend Street experiences relatively high levels of pedestrian demand, however the proposed design to widen Townsend Street at this location (at the Moss Street Junction) facilitates improvements to pedestrian congestion and the crossings at this location. The model indicates an acceptable level of service on Luke Street, with a high level of service on Poolbeg Street.</p> <p>Cycle parking will be provided on the public plaza at several locations, with one location provided adjacent to the end of the cycle path on Luke Street, encouraging cyclists to dismount at this location. Surface material for shared carriageway will be agreed with DCC at detailed design stage.</p> |
| 176                                                                                                                                                                                                                     | CA-RO-MS14-04 Tara Street Station Public Bench         | 106      | <p>Access to the proposed public bench on the station plaza area near the corner of Poolbeg St and Luke St is blocked by the proposed cycle stands. The layout of the proposed cycle stands should be re-considered.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Access to the bench can be gained from either side of the cycle parking. The final details of the bench and cycle parking can be dealt with at the detail design stage.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                                      |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 177                                                                                                                                                                                                                     | CA-RO-MS14-05 Tara Street Station Railway Bridge & Pedestrian Underpass              | 106      | The existing railway bridge passes over Poolbeg St and the Station Plaza area creating an underpass. The lighting levels under the bridge and the surface finishes on the under croft of the bridge need to be considered to discourage anti-social behaviour and promote pedestrian safety.                                                                                                                                                                                                                | <p>As noted by EIAR Chapter 6, MetroLink Operations and Maintenance, the architectural and urban realm design is designed to discourage anti-social behaviour, for example through the attractive setting, use of public lighting, open sight-lines, and avoidance of areas where individuals and groups of people can hide. This will be supported by:</p> <ul style="list-style-type: none"><li>• The Operational Control Centre (OCC) which will be the central communications and operational hub, located in the administrative building at the Dardistown Depot. The role of the OCC will include monitoring and managing security and antisocial behaviour. The OCC will direct and deploy staff (including notifying the emergency services if required), to manage incidents when required.</li><li>• Subject to Data Protection Impact Assessment and GDPR requirements, CCTV will be installed throughout the MetroLink system to provide general security and surveillance of all the public areas, and to inform, if required, the directing and sending of staff to manage the situation.</li></ul> <p>Section 4.12.8.3 of Chapter 4 (Description of the MetroLink Project) details the external lighting strategy for the Project. The lighting class (and therefore the light level and uniformity targets) for each area to be lit, has been selected using BS5489-1:2020 with account made for the local ambient lighting and environmental zones, covering both roadways and pedestrianised/cyclist areas. Replacement public lighting will be provided in currently lit areas affected by the proposed Project. The plaza and station access areas for pedestrians will have 6m to 9m lighting columns.</p> <p>As detailed in section 4.7.10.2 of EIAR Chapter 4 (Description of the MetroLink Project), the general architectural design principles for Tara Station are to:</p> <ul style="list-style-type: none"><li>* Enlarge the footprint to accommodate the commercial unit on the south-east building corner;</li><li>* Provide lifts separate from the entrance canopies;</li><li>* Strengthen Luke Street pedestrian connection to the river bank with a cycle lane;</li><li>* Take into consideration the DART expansion and viaduct refurbishment;</li><li>* Consider pedestrian connection to the river bank along the rail viaduct;</li><li>* Enlarge the south entrance and above/below ground direct interchange link to MetroLink; and</li><li>* Activate the viaduct vaults by introducing commercial units.</li></ul> |
| 178                                                                                                                                                                                                                     | CA-RO-MS14-06 Tara Street Station Pedestrian Access to Tara Dart station, Poolbeg St | 106      | A pedestrian access route from the Tara MetroLink station entrance/exit to the Tara St Dart Station entrance, through existing Dart station lands, from Poolbeg St should be explored to improve inter-connectivity in the city.                                                                                                                                                                                                                                                                            | EIAR Appendix A9.2-O Traffic and Transportation Assessment - Tara Street Station presents the volume of passengers interchanging to and from the Project with other public transport modes. In both model scenarios assessed, whilst there are high volumes of interchange to and from DART, the highest interchange occurs to/from the bus network. Therefore, the Project has been designed to ensure maximum interchange with all modes of transport. Additionally, the southern entrance has been enlarged to accommodate anticipated demand at this location adjacent to the pedestrian crossing to access the DART station.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 179                                                                                                                                                                                                                     | CA-RO-MS14-07 Tara Street Station Site Development Potential                         | 106      | The proposal drastically reduces the development potential of the site as it indicates that there is no provision for development directly above the station. The footprint of the Proposed Future Development By Others identified is limited to the south west corner of the site. This has substantial commercial implications and equates to the loss of the Markiewicz Leisure Centre as well as the sterilisation of a publicly owned city centre site where an opportunity for densification exists. | As noted previously, the Railway Order does not include for an oversite development (OSD), but the MetroLink project does not preclude an OSD.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Item No.                                                                                                                                                                                                                | Section Ref.                                                            | Page No. | Observation Statement                                                                                                                                                                                                                                                                                                                  | TII Response                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                         |          |                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 180                                                                                                                                                                                                                     | CA-RO-MS14-07 Tara Street Station Site Development Potential            | 107      | The station structure, all services and utilities need to be designed and configured in such a way as to ensure optimum oversite development is not precluded                                                                                                                                                                          | Please refer to response (179) above. The detail design will make reasonable provision for oversite development.                                                                                                                                                                                                                                                                                                                                                                      |
| 181                                                                                                                                                                                                                     | CA-RO-MS14-08 Tara Street Station Public Realm                          | 108      | The proposal shows a plaza area at the proposed Tara St MetroLink Station with a pedestrian link along Luke St to Tara Street Dart Station. The design of the public realm of these spaces needs to be of a high standard using high quality materials to create a world standard civic space in the city centre.                      | The design of the public realm of these spaces will be of a high standard using high quality materials to create a world standard civic space in the city centre.                                                                                                                                                                                                                                                                                                                     |
| 182                                                                                                                                                                                                                     | CA-RO-MS14-09 Tara Street Station Cycling Infrastructure                | 108      | The location and configuration of the cycle path on Luke St needs to be considered to address the future conflict with pedestrians on the shared surface and within the plaza area.                                                                                                                                                    | Please refer to response (175) above in relation to the cycle infrastructure adjacent to Luke Street, and the modelled level of service on the public plaza.                                                                                                                                                                                                                                                                                                                          |
| 183                                                                                                                                                                                                                     | CA-RO-MS14-10 Tara Street Station Pedestrian Traffic                    | 108      | As there will be substantial increases in pedestrian traffic around the station, a study recommending required improvements of existing footpaths in the area needs to be undertaken to ensure a safe environment for pedestrians.                                                                                                     | Please refer to response (175) above in relation to the pedestrian modelling that has been undertaken at Tara Station, which includes the full extent of the publicly accessible station area, the immediate vicinity of the Station entrance at street level, the Irish Rail station and nearby junctions. Detailed results of the pedestrian modelling undertaken at this location are presented in EIAR Appendix A9.2-O Traffic and Transportation Assessment-Tara Street Station. |
| 184                                                                                                                                                                                                                     | CA-RO-MS14-11 Tara Street Station Upgrade of Railway Arches             | 108      | There is an opportunity to upgrade Tara St Rail station and the existing arches with the potential for occupying the arches and activating the public realm. A coordinated proposal should be developed with Irish Rail to maximise the potential of the pubic space in this location.                                                 | The MetroLink proposals will allow for the future activation by others of the existing arches. The commercial development of the arches is not part of the MetroLink scope or fall within the remit of TII.                                                                                                                                                                                                                                                                           |
| 185                                                                                                                                                                                                                     | CA-RO-MS14-13 Tara Street Station Landscape Layout                      | 108      | This site has the potential for a valuable public space in the city and a detailed public realm study for this station should be undertaken. The current public space design is dictated by the track alignment so is somewhat fragmented and could better respond to pedestrian desire lines.                                         | Please refer to response 179 above                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 186                                                                                                                                                                                                                     | CA-RO-MS15-01 St. Stephen's Green Station Site Context and Conservation | 108      | As noted in the presentation, St. Stephens Green is a national monument (to the kerb lines) so this as a particularly sensitive site requiring special consideration. Care needs to be taken to ensure the proposal is that which minimises the impact on the National Monument and ongoing monitoring will be required at all stages. | TII recognise that St. Stephen's Green needs to be treated sensitively and respectfully. Response (67) above sets out the rationale for the preferred location of St. Stephen's Green Station and how the impact of MetroLink will be managed and mitigated. Response (168) summarises the approach that will be taken to monitoring. All such works will be devised in agreement with the MHLGH and subject to Ministerial Consent.                                                  |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                 |          |                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                |
| 187                                                                                                                                                                                                                     | CA-RO-MS15-02 St. Stephen's Green Station Pop-up Configurations | 108      | Due to the sensitive nature of the site, the architecture, materials and detailing of the pop-ups needs to be of the highest standards as the design is further development. In addition, if it is possible to reduce the heights of the pop-ups but using hydraulic ram lifts, this should be considered.                                   | TII provide the assurance that the architectural treatment of the Station will be to a high standard (see response 58) and that the detail design will refine the Railway Order design wherever possible to further reduce the impact of the proposed St. Stephen's Green Station on the Park. |
| 188                                                                                                                                                                                                                     | CA-RO-MS15-02 St. Stephen's Green Station Pop-up Configurations | 108      | All ventilation grilles etc. need to be carefully configured to minimise their visual impact, the open lattice brickwork is a good solution.                                                                                                                                                                                                 | Please see response (187) above.                                                                                                                                                                                                                                                               |
| 189                                                                                                                                                                                                                     | CA-RO-MS15-03 St. Stephen's Green Station Tree Removal          | 108      | A significant no. of large mature trees will need to be removed to facilitate the construction of the station. Under the Landscape Proposal presented, all trees along the eastern side of St. Stephen's Green within approx. 70m of eastern railings the railings are to be removed (in excess of 100 trees), this appears to be excessive. | Please note that 64 trees, not 100 as stated by the observation, will be felled to allow for the construction of the proposed Station. Of these 64, just 5 are classified as Class A trees. Response (86) provides further detail.                                                             |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                        |          |                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| 190                                                                                                                                                                                                                     | CA-RO-MS15-03 St. Stephen's Green Station Tree Removal | 108      | Every effort to minimise the no. of trees impacted needs to be taken including keeping the site compound to the absolute minimum size required to facilitate construction.                                                 | <p>EIAR Chapter 27, The Landscape, section 27.5.4.23 identifies that there will be a very significant temporary impact on the Landscape due to the loss of trees in the area of St. Stephen's Green East if mitigation measures are not deployed. However with the proposed mitigation measures relevant to this location in place, summarised below, this temporary impact can be mitigated by:</p> <p>(1) Development of site specific and comprehensive proposals for hard and soft landscape works, including for trees ensuring effective retention of mature trees where possible. Details of such planting proposals will be provided for agreement with OPW in advance of the construction phase. These will include: details of the tree species mix, numbers, density and sizes proposed; the tree preparation, presentation, transportation, lifting and placement techniques proposed, as well as; the proposed ground preparation, rootball securing technique, backfill materials and methods, and the specific establishment maintenance proposals for each. These measures will minimise the risk to tree establishment and maximise their viability and future rates of growth.</p> <p>(2) In sensitive locations such as St. Stephen's Green, residual landscape and visual effects will be significantly reduced through the inclusion in the proposed planting of relatively mature specimen trees. Furthermore, while the removal of trees from the landscape will initially have a significant impact if left unmitigated, especially in the case of old and developed trees as the replacing material (saplings) can never have the same size and development as the mature original trees that have been removed, resulting in an initial, but temporary contrast between the original established area of trees and the new planted trees area. Over a period of time this contrast will reduce and eventually become imperceptible.</p> <p>While the temporary impact on trees is considered very significant, it does occur over a localised area of the Park that amounts to only 5% of the total area of the Park, impacts 64 trees in the Park, and is confined to the east side (adjacent to the Park fence line) of the Park only. TII are therefore of the view that the construction of St. Stephen's Green Station will not have a significant impact on the overall amenity and function of the Park during construction, given only 5% of the Park area is taken during the Construction Phase, and that once construction is completed, this area is returned to the Park, with only 0.2% of the total Park area taken by MetroLink when operational, whilst providing further access to, and reinforcing that St. Stephen's Green is a key Dublin landmark and destination.</p> <p>As detailed in EIAR Chapter 5 (MetroLink Construction Phase), land required for construction activities has been minimised wherever possible and boundaries adjusted to avoid and/or minimise impacts as far as possible. The siting of construction compounds is considered in Section 7.8 of Chapter 7 (Description of the Alternatives) of this EIAR. Any effects on the environment as a result of site set up or the activities carried out within construction compounds have been assessed in the relevant EIAR chapters.</p> |  |
| 191                                                                                                                                                                                                                     | CA-RO-MS15-03 St. Stephen's Green Station Tree Removal | 108      | Confirmation is also required to demonstrate that the 2.35m soil depth proposed above the station box is sufficient to allow for mature trees to be planted and grow to the same size as the trees that have been removed. | The 2.35m soil depth proposed above the station box is sufficient to allow for mature trees to be planted and grow to the same size as the trees that have been removed. This depth was determined following an Arboriculture Impact Assessment undertaken by an arboriculturist.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                              |          |                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 192                                                                                                                                                                                                                     | CA-RO-MS15-04 St. Stephen's Green Station Pedestrian Traffic | 108      | As there will be substantial increases in pedestrian traffic around the station and to allow for future development, a study recommending required improvements of existing footpaths, islands etc. in the area needs to be undertaken to ensure a safe environment for pedestrians. | <p>As stated in EIAR Appendix 9.2 Overall Project Traffic &amp; Transportation Assessment - The impacts on pedestrian comfort levels across the network have been assessed in the 2018 Base scenario, and the 2050 and 2065 Scenario A. All scenarios have been assessed in the AM Peak Hour (08:00-09:00) for this analysis. At St Stephen's Green, further VisWalk microsimulation indicates that the network operates with an acceptable level of service in the majority of locations. The level of service is lower at specific locations on the network (Level D and Level E), such as at the waiting areas at signalised pedestrian crossings and at the entrances to the station escalators. Some delay at these locations is likely due to the high pedestrian demand, however it is considered that the overall level of service on the network is acceptable.</p> <p>As noted in EIAR Chapter 9, Traffic and Transport, pedestrian comfort levels will be required to be monitored throughout the Operational Phase to ensure that the surrounding footways have the capacity to maintain acceptable levels of comfort and safety with increasing demand. 'Uncomfortable' and 'Acceptable' links identified in the assessment are to be monitored to ensure that maximum available width is provided through the monitoring of street furniture placement and total footpath width, where applicable.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| 193                                                                                                                                                                                                                     | CA-RO-MS15-04 St. Stephen's Green Station Pedestrian Traffic | 108      | Merrion Row and Hume Street have existing narrow footpaths that may be insufficient to deal with increased volumes of pedestrians.                                                                                                                                                   | Please refer to response item (192) above in relation to the pedestrian modelling undertaken at St. Stephen's Green, and the proposed mitigation and monitoring measures that will be required throughout the operational phase.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 194                                                                                                                                                                                                                     | 5-05 St. Stephen's Green Station Plaza Arrangement           | 108      | The proposal to relocate the Wolfe Tone statue and Famine Memorial further inside the green is a welcome proposal as it will help form a place for gathering and a more open entrance to St Stephens Green from the plaza adjacent to the proposed MetroLink entrance.               | Noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 195                                                                                                                                                                                                                     | 5-05 St. Stephen's Green Station Plaza Arrangement           | 108      | The configuration of the gate, railings and seating at the entrance to St. Stephens Green need to be carefully considered and in keeping with the historical context.                                                                                                                | <p>As noted in EIAR Chapter 4, Description of the MetroLink Project 4, section 4.17.11.2 St Stephen's Green Station Urban Realm and Landscaping Design - Architectural features of the Station will be integrated within the Park and along its eastern fringe. These include the station entrance canopy, ventilation infrastructure, Dublin Fire Brigade access and egress, station lifts and access shafts. The design will integrate these within the constraints of the Park's features and leave as small a footprint as possible on the Park and its environs upon reinstatement. Surrounding these elements, the fence line, paving slabs, light stands and bollards will be reinstated to ensure that the historical context of the location will be retained. All such works will be devised in agreement with the MHLGH and subject to Ministerial Consent.</p> <p>TII note the historical significance of the park. This has been reflected in the assessment carried out as part of the EIAR. As explained by EIAR Chapter 26 Architectural Heritage, a number of structures of architectural heritage significance will need to be removed and placed into safe storage. This includes sections of the Park railings, bollards, lamp standards and paving outside the Park railings, the Wolfe Tone monument, and the Famine sculpture and trees within the Park and outside it. Within the Park there are short stretches of railing bordering the entry to the Park from the gates on the eastern perimeter, and there are low iron railings bordering the paths alongside the lawns; these will also have to be removed within the construction area.</p> <p>The railings, gates and plinth walls will be removed by a specialist heritage contractor in accordance with a method statement to be prepared by the Project Conservation Architect (PCA), brought into secure storage for the duration of the works and conserved as necessary. At the completion of the construction of the station, the railings, plinth wall and gates will be reinstated in their original locations in accordance with a method statement prepared by the PCA. All works of removal, transportation, storage and reinstatement are to be supervised by the PCA and method statements will be agreed with the OPW and the Minister's office (Housing).</p> |  |

| Submission No.                                                                                                                                                                                                          |                                                            |          | 071                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |

| 197                                                                                                                                                                                                                     | CA-RO-MS15-06 St. Stephen's Green Station Bollards         | 108      | The HVM bollards adjacent to the footpath outside St Stephen's Green at the entrance plaza appear to be appropriately aligned however the spacing could perhaps be widened to reduce clutter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Please refer to response 15 above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |
| 198                                                                                                                                                                                                                     | CA-RO-MS15-06 St. Stephen's Green Station Bollards         | 108      | A gate is not shown at the entrance to St Stephen's Green from the plaza and if required, it would potentially clash with the HVM Bollards - further details required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | A gate will be provided to secure the Park. The details of how the gate fits with the bollards and the wall will be determined at detail design. All such works will be devised in agreement with the MHLGH and subject to Ministerial Consent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 199                                                                                                                                                                                                                     | CA-RO-MS15-06 St. Stephen's Green Station Bollards         | 108      | The proposal shows the omission of the existing bollards along the kerb line at the north east corner of Stephen's Green, this needs to be confirmed to avoid a proliferation of bollards in this sensitive location.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | The existing bollards at the north east corner Stephen's Green Park are Protected Structures, and will be removed and carefully stored and eventually reinstated under the supervision of the Project Conservation Architect (PCA).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| 200                                                                                                                                                                                                                     | CA-RO-MS15-07 St. Stephen's Green Station Utility Cabinets | 108      | <p>All vents, services and utility cabinets in the vicinity of the station need to be fully coordinated and discreetly located in this sensitive location. Cabinets need to be integrated in the design as early as possible so that they can be placed underground wherever possible and any above ground cabinets should be located in a single discreet cabinet in a considered location (possibly on the proposed widened footpath on Hume Street). The proposed additions to the footpaths around the pop-ups are welcome.</p> <p>Note: This is a very sensitive heritage site so uncoordinated or haphazard clusters of utility cabinets on public footpaths will not be acceptable.</p> | <p>All utility/service supply cabinets related to MetroLink will be located within the stations and below ground level. The exception will be cabinets provided by DCC for traffic and public lighting. The location of these cabinets where determiner at details design stage will be agreed in advance with the relevant department within DCC.</p> <p>As set out by EIAR Chapter 27, The Landscape, smoke, ventilation exhaust and other vents are to be located within the Park, along with inlets, draught relief/TVS/equipment exit and OTE - these will all be carefully landscaped within the Park. (the surface footprint of Station features in the Park amounts to just 0.2% of the total area of the Park). Other ground level elements, including lifts, emergency exits, OTE/TVS and supplies inlet are to be located outside the Park, alongside the road margin. The provision of "pop ups" associated with the Station will require alterations to the current road layout locally. The proposed road layout accommodates BusConnects proposals at this location.</p> <p>Similarly, EIAR Chapter 4 Description of the MetroLink Project, section 4.17.11.2 St Stephen's Green Station Urban Realm and Landscaping Design notes that architectural features of the Station will be integrated within the Park and along its eastern fringe. These include the station entrance canopy, ventilation infrastructure, Dublin Fire Brigade access and egress, station lifts and access shafts. The design aims to integrate these within the constraints of the Park's features and leave as small a footprint as possible on the park and its environs upon reinstatement.</p> |  |
| 201                                                                                                                                                                                                                     | CA-RO-NIS15-08 St. Stephen's Green Station Branding        | 108      | City Architects strongly advise that branding responds to historical context as is the convention in conservation areas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | TII consider that the design of the MetroLink stations does this. Please refer to response (58) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                     |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 202                                                                                                                                                                                                                     | CA-RO-MS16-01<br>Charlemont Station configuration   | 109      | As the last station on the proposed MetroLink line and a key interchange with the Luas green line, this will be a very busy station with very high pedestrian footfall. Sufficient footpath widths need to be provided to accommodate the high volume of pedestrians in particular along the route between the Metro Station exit/entrance and the proposed Charlemont Luas station access lift and stairs on Grand Parade.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>The station has been designed to accommodate the predicated passenger and pedestrians flows over the life of the project.</p> <p>As detailed in Appendix A9.2-B Traffic and Transport Assessment - Charlemont Station, a static pedestrian comfort assessment has been undertaken to assess the footway provisions following the increased volumes of pedestrians on the network in the design years. The results show that at Charlemont Station in both 2050 and 2065 , the comfort level on Dartmouth Road is rated as 'Comfortable' for the anticipated volume of pedestrian movements, and meets with the guidelines identified in the DCC Public Realm Masterplan. The results of the static assessment are presented in section 6.1.3 Pedestrian Impact Assessment of Appendix A9.2-B Traffic and Transport Assessment - Charlemont Station.</p> <p>Further examination of the performance of the street network surrounding Charlemont Station was undertaken using a microsimulation VisWalk model. The simulation model covers the full extent of the publicly accessible station entrances, including the immediate vicinity of the station entrances at street level on both Grand Parade and Dartmouth Road. With the proposed pedestrian infrastructure in place, the model indicates that at the northern entrance, the footways will operate at an acceptable level of service. A reduced level of service is only observed at the pedestrian crossing whilst pedestrians are waiting for the green phase at signals. The model indicates that the strongest flow of passengers will be going west from the northern entrance, towards the Luas interchange and Charlemont Street, with lower flows of pedestrians utilising the southern entrance on Dartmouth Road to travel east towards Dartmouth Square West. Therefore, the level of service of the pedestrian network at the southern entrance will be higher than that of the northern entrance.</p> |  |
| 203                                                                                                                                                                                                                     | CA-RO-MS1 6-02<br>Charlemont Station Shared Surface | 109      | The proposed shared surface linking Dartmouth Road to Grand Parade will become the main pedestrian route from the Metro stations southern exit to the Charlemont LUAS stop. It is currently proposed to allow 2-way vehicular traffic along this route, it is indicated as a through road and no pedestrian only zone is provided. This arrangement is not suitable for what will become a busy pedestrian link. The carriageway should be reduced to a single lane of vehicular traffic to provide a pedestrian footpath zone for the length of shared space, creating a safe pedestrian route from the Metro station exit to the Charlemont LUAS stop and Grand Canal, but still providing access for service vehicles to the station and adjacent building. The material for the carriageway needs to be carefully selected to promote pedestrian priority. The vehicular through route should also be removed and a cul-de-sac created, with the use of planting / bollards. | <p>The proposed shared surface linking Dartmouth Road to Grand Parade will be barriered/gated at either end and speed restricted, hence enabling vehicle access to be controlled and vehicle flows to be managed and safe pedestrian access to be provided. Given that the roadway and footpath are in a controlled access area, it is reasonable to treat this as a shared vehicle/pedestrian area with road and footpath marked out by contrasting finishes, colours and textures.</p> <p>The vehicle through route needs to be maintained for reasons of access, but as noted, access will be controlled and limited to access only vehicles.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |

| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                                                                                                                           |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 207                                                                                                                                                                                                                     | CA-RO-MS16-04<br>Charlemont Station<br>Grand Canal Proposed Pedestrian Crossing & Proposed Signalised Pedestrian Crossing | 109      | A raised pedestrian crossing zone and a signalised pedestrian crossing are proposed adjacent to each other on Grand Canal. The proposed crossing arrangement for pedestrians as indicated on the drawing is unclear and confusing. Grand Parade is currently a busy vehicular route and at peak times is full of queuing traffic which would fill the uncontrolled raised pedestrian crossing area. The proposed drop-off area impacts negatively on the waiting area for pedestrians for the controlled crossing point. | The purpose of the raised table junction is to alert/inform drivers they are approaching a different environment and to calm the traffic.<br><br>Noting that as set out by EIAR Chapter 6, MetroLink has been designed on the principle of 'Access for All', the drop off is restricted to, and provided to ensure the Station is accessible to persons of restricted mobility. Its location on Grand Parade is proposed to suit the lift access provided for Charlemont Station. The exact location on Grand Parade can be agreed with DCC during the next stage of the design process. |
| 208                                                                                                                                                                                                                     | CA-RO-MS16-05<br>Charlemont Station<br>Grand Parade Drop-off Zone                                                         | 109      | The proposed drop-off zone for vehicles on Grand Parade will interrupt the existing historical bank of the Grand Canal and the setting of the Grand Canal. It could also create parking issues along Grand Parade. The proposed drop off should be removed from the scheme. An alternative drop off zone can be provided on Dartmouth Rd at the southern entrance to the Metro Station.                                                                                                                                  | Please refer to response (207).The drop off location is specifically for people with restricted mobility (PRMS) and has such have been location on Grand parade to ensure ease of access to the PMS lift and the north end of the station.                                                                                                                                                                                                                                                                                                                                               |
| 209                                                                                                                                                                                                                     | CA-RO-MS16-06<br>Charlemont Station<br>Public Realm impacts                                                               | 109      | The construction phase of this station will be challenging due to the constrained site with the adjacent development over part of the station box. Construction Management and phasing will need to be carefully considered to minimise impacts on the adjacent Luas stop and to ensure the surrounding public realm can function for pedestrians and cyclists and public transport during construction.                                                                                                                 | TII recognise and understand the issues raised and is working closely with the commercial developer to ensure the objectives and outcomes for both the commercial development and MetroLink are delivered whilst managing the impacts on the adjacent Luas stop and the surrounding public realm, including pedestrians, cyclists and public transport during construction.                                                                                                                                                                                                              |
| 210                                                                                                                                                                                                                     | CA-RO-MS16-07<br>Charlemont Station<br>Landscape Layout                                                                   | 109      | A more detailed public realm proposal needs to be developed for this station. A passenger lift is proposed at only one of the two entrances.                                                                                                                                                                                                                                                                                                                                                                             | TII consider that the public realm design is sufficiently developed for the purpose of the Railway Order application. TII have considered sufficient provision for PRM access is catered for by the single lift at the northern entrance to the station.                                                                                                                                                                                                                                                                                                                                 |
| 211                                                                                                                                                                                                                     | CA-RO-MS16-07<br>Charlemont Station<br>Landscape Layout                                                                   | 109      | The stair and lift connection to the Luas platform is very prominent in streetscape, design needs to be high quality and not simply functional.                                                                                                                                                                                                                                                                                                                                                                          | The design of the stair and lift connection to the Luas platform will be high quality and with keeping the sensitive nature of the nearby Carroll's building.                                                                                                                                                                                                                                                                                                                                                                                                                            |

| 1                                                                                                                                                                                                                       | Planning and Property Development Department | 38   | <p>The proposed development at Glasnevin Station shall be designed so as to allow oversite development so to not impede the development potential of the site</p> <p><i>Reason: To provide for comprehensive redevelopment of the site in line with Objective SMT014 of the Dublin City Development Plan 2022 - 2028.</i></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>The proposed condition requires further discussions with DCC.</p> <p>The Railway Order does not include for an oversite development (OSD) at this site, however the MetroLink project does not preclude appropriate OSD at Glasnevin in the future. TII can explore the potential for oversite development once in receipt of an enforceable Railway Order. Should any viable oversite developments materialise in the future they will form part of a separate planning application by TII or its agents.</p>                                                           |
| 2                                                                                                                                                                                                                       | City Valuer's Office                         | 38   | <p>Where DCC land is impacted by the Project, the following should apply:</p> <p>(a) DCC should be compensated for its lands utilised for the Project (including tenanted and leased properties, if any), whether title is/is not taken, in accordance with statute; the Acquisition of Land (Assessment of Compensation) Act, 1919, as amended, relevant case law and protocols. In the latter context, the Council shall be entitled to recover its reasonable professional fees incurred in dealing with the project acquisitions. Interest shall be payable on compensation amounts from the date of entry and taking possession of the Council plots (excluding Road-Bed cases only)</p> <p>(b) If title to DCC land is being transferred to TII/NTA or another, Dublin City Council, in addition to compensation under 1(a) above, will retain the air-rights for development purposes, as appropriate. In the cases where air-rights are retained by the Council, compensation payable shall reflect this fact.</p> <p>(c) Appropriate accommodation works should be provided at DCC properties affected by the Project</p> <p><i>Reason: In the interests of protecting Dublin City Council's assets and their development potential</i></p> | <p>In relation to land requirements TII will enter into a comprehensive agreement with DCC, at the appropriate time following the Railway Order coming into operation, where the terms of such an agreement will be developed in consultation with DCC. The land requirements, including all interests and rights in, on, under or over land, whether of a permanent or temporary nature, will be listed and catalogued and account will be taken of any items of accommodation works where provided for and contained within the Railway Order.</p>                        |
| 3                                                                                                                                                                                                                       | Housing Development-Housing & Community      | 38   | <p>1A. With reference to properties at the corner of Luke Street and Townsend Street (specifically 23 and 34 Luke Street and 25-32 Townsend Street), should these properties and associated lands be acquired by TII, as part of the Metrolink project, TII shall liaise with Dublin City Council's Housing and Community Services Department on all aspects of their plan.</p> <p><i>Note: Notwithstanding a pressing requirement for existing tenants in 25-35 Townsend Street to be satisfactorily relocated in the event of such an acquisition, the site itself has considerable development potential which must be realised by the City Council. To this end DCC has commissioned a feasibility study to examine the development potential of the site as a whole.</i></p> <p>1B. Dublin City Council requires a considerable lead-in period in the event of having to relocate tenants. Throughout this process DCC will continue discussions on a range of key issues with TII including, but not limited to, the requirements of existing tenants, the undertaking of necessary stakeholder engagement, programming and appropriate compensation."</p> <p><i>Reason: in the interests of orderly development</i></p>                       | <p>The proposed condition requires further discussions with DCC.</p> <p>1 A/ 1B - TII shall continue to liaise with Dublin City Council's Housing and Community Services Department on all aspects of plan to relocate the residents of LuEk Street and Townsend Street (specifically 23 and 34 Luke Street and 25-32 Townsend Street).</p> <p>TII note DCC's reference to a "Feasibility Study" in respect to potential future development of the site as a whole. Any future development of the site as a whole does not form part of this Railway Order Application.</p> |

| 4                                                                                                                                                                                                                       | Archaeology  | 38   | <p>1 . The implementation of the EIAR measures shall be oversee by a TII Project Archaeologist and undertaken in accordance with the TII/NMS Code of Practice for archaeology.</p> <p>2. The TII Project Archaeologist shall ensure that Dublin City Council Archaeology Section receives a copy of all archaeological Method Statements when submitted to NMS.</p> <p>3. The TII Project Archaeologist shall ensure that Dublin City Council Archaeology Section receives a copy of archaeological reports when submitted to NMS.</p> <p>4. The TII Project Archaeologist shall ensure that Dublin City Council Archaeology Section receives bi-weekly updates on archaeological finds and mitigation progress throughout the delivery of the scheme through to completion.</p> <p>5. The primary archaeological paper archive for all archaeological site investigations to be prepared and deposited with the Dublin City Archaeological Archive (DCAA) or with the National statutory repository within two years of the archaeological licence expiry.</p> <p>6. All archaeological consultants appointed to the proposed Project shall comply with the Code of Practice and shall liaise directly with the TII Project Archaeologist in relation to all archaeological requirements. Mitigation measures will seek to preserve in situ any archaeological or cultural heritage constraints, which may be impacted by the proposed Project. Where this is not possible a hierarchical range of mitigation measures will be implemented in advance of and during construction phase which will aim to ameliorate all impacts.</p> | <p>The proposed condition is agreed with following amendments as outlined below:</p> <p>Item 1: Agreed. In compliance with the 2017 Code of Practice (CoP) for Archaeology as agreed between the now Minister for Housing, Local Government and Heritage (HLGH), all TII works are overseen by a TII Project Archaeologist.</p> <p>Item 2: Agreed to provide 'For Information Only Purposes' in relation to Section 26 Method Statements relevant to DCC administrative areas. Documents will be provided in digital format only.</p> <p>Item 3: Agreed. All reports arising from the grant of a Section 26 licence will be issued via e-mail to DCC following formal acceptance as final by submitted to the Ministers Office via NMS, DHLGH and the NMI. No hard copies of reports will be provided.</p> <p>Item 4: Agreed. Regular updates on archaeological finds and mitigation progress relevant to DCC administrative areas throughout the delivery of the scheme will be provided, such updates will be 'For Information Purposes Only' and will be no more frequent than monthly and will be issued via email.</p> <p>Item 5: The proposed condition requires further discussions with DCC: In accordance with the National Monuments Act 1930 (as amended) and in accordance condition 13 of a grant of a Section 26 Licence for excavation ' The final place of deposition of all archives associated with the archaeological excavation shall be the National Monuments Service archive except as may be otherwise directed by the Minister'.</p> <p>Item 6: Agreed: This is in accordance with the TII/MHLGH CoP for Archaeology.</p> |  |
| 5                                                                                                                                                                                                                       | Conservation | 39   | <p>The proposed works should take into account any areas that contain historic stone setts noted in Volume 2, Appendix 6 of the Development Plan, and take all practicable measures to avoid loss of or damage to historic materials and features. The Applicant should comply with the requirements of the Architectural Heritage Protection Guidelines for Planning Authorities 201 1 - 14.4. 1 and the Department of Arts, Heritage and the Gaeltacht (now the Department of Housing, Local Government and Heritage) Advice Series Paving - The conservation of historic ground surfaces and best conservation practice.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>The proposed condition is agreed with following amendments as outlined below:</p> <p>TII confirm the proposed works will take into account any areas that contain historic stone setts noted in Volume 2, Appendix 6 of the Development Plan, and will take all practicable measures to avoid loss of or damage to historic materials and features. TII will comply with the requirements of the Architectural Heritage Protection Guidelines for Planning Authorities 201 1 - 14.4. 1 and the Department of Arts, Heritage and the Gaeltacht (now the Department of Housing, Local Government and Heritage) Advice Series Paving - The conservation of historic ground surfaces and best conservation practice.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |

| 6                                                                                                                                                                                                                       | Conservation | 39                  | <p>1. Details of the temporary bridge that will facilitate access for the occupants of Coke Oven Cottages during construction works shall be submitted and agreed in writing with the planning authority prior to commencement of development</p> <p>2. A Conservation Method Statement for the proposed reinstatement of the historic railings, relocation of the Healing Hands, Four Masters Cross and Grotto and the overall realigned park layout shall be shall be submitted and agreed in writing with the planning authority prior to commencement of development</p> <p>3. A detailed Method Statement demonstrating how the historic fabric of the Mater Hospital and boundary balustrade will be protected from damage during the enabling and construction works shall be submitted and agreed in writing with the planning authority prior to commencement of development</p> <p>4. Details of the proposed junctions/interfaces with all existing historic fabric and structures to be retained in the vicinity of all proposed stations, and mitigation measures to address impacts arising, shall be submitted for the written agreement of the planning. Impacts shall be minimised where possible</p> <p>5. All works shall be designed and supervised by an expert in architectural conservation in accordance with the provisions (outlined above) of the Dublin City Development Plan 2022- 2028, the Architectural Heritage Protection Guidelines for Planning Authorities (2011) and relevant documents of the DHLGH Advice Series</p> <p><i>Reason: To safeguard the special architectural interest of affected Architectural Heritage across the Metrolink Route - including Protected Structures and Conservation Areas, landscaping, historic paving, setts, kerbing and associated features, boundary treatments, historic street furniture, gardens and trees and historic public realm etc. - and to ensure that the proposed repair works will be carried out in accordance with best conservation practice with no unauthorised or unnecessary damage or loss of historic fabric, the Conservation Section recommend that.</i></p> | <p>The proposed condition is agreed with following amendments as outlined below.</p> <p>Item 1: The design for the temporary bridge has been designed to efficient level of detail for environmental assessment and the grant of a railway order. TII will consultant with Waterways Ireland and DCC at detail design stage and will not commence works until both parties are satisfied with the detail design. All works will comply with Waterways Ireland Conservation Guidelines and requirements.</p> <p>Item 2 - TII will prepare and submit the relevant conservation Method Statements to DCC for comment prior to commencing each relevant phase of works. Public Realm design of the park has been finalised following consultation with DCC and Mater Hospital, this agreed design is reflected in the RO drawings</p> <p>Item 3 - TII will prepare and submit the relevant conservation Method Statements to DCC for comment prior to commencing each relevant phase of works.</p> <p>Item 4 - Details of the proposed junctions/interfaces with all existing historic fabric and structures to be retained in the vicinity of all proposed stations, and mitigation measures to address impacts arising will prepare and submit to DCC for comment prior to commencing each relevant phase of works</p> <p>Item 5 - All heritage works shall be 'carried out in line with best conservation practice as advised by a suitably qualified person with expertise in architectural conservation' in accordance with the policy BHA2 of the Dublin City Development Plan 2022- 2028, the Architectural Heritage Protection Guidelines for Planning Authorities (2011) and relevant documents of the DHLGH Advice Series will also be complied with.</p> |
| 7                                                                                                                                                                                                                       | Conservation | 39                  | <p>6. In accordance with best conservation practice, specifications and method statements for the careful and sensitive relocation and reinstatement of historic fabric identified in the report above, and in particular to Protected Structures, sites/structures on the NIAH and DCIHR, and structures and features in Architectural Conservation Areas (ACAs) across the Metrolink Route shall be submitted by the conservation expert for the written approval of the Planning Authority</p> <p>7. The conservation expert shall advise the Planning Authority on architectural heritage and conservation matters that may have further impacts on the project throughout the construction phases as these arise</p> <p>8. If, through the course of construction work across the Metrolink Route, hitherto unknown and concealed architectural heritage fabric is found, the conservation expert shall contact the Conservation Section to advise them of the discovery as the presence of historic fabric may inform an alternative strategy for a design proposal that would enhance the setting of a Protected Structure, other historic buildings and features, an Architectural Conservation Area or Conservation Area</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>The proposed condition requires further discussions with DCC.</p> <p>Item 6 and 7 - TII will prepare and submit the relevant conservation Method Statements to DCC for comment prior to commencing each relevant phase of works. TII will consult with DCC Conservation on the reinstatement of relevant heritage items throughout the lifetime of the project.</p> <p>Item 8 - With reference to Item 8 TII will notify DCC Conservation of the identification of unknown/concealed heritage fabric however, TII cannot undertake works outside of those assessed in the EIAR and permitted by a grant of an ERO.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 8                                                                                                                                                                                                                       | Conservation | 40   | <p>9. All existing original architectural heritage features, in the vicinity of the works shall be protected during the course of all phases of construction works.</p> <p>10. All repair of historic fabric shall be scheduled and carried out by appropriately experienced specialist contractors and conservators of historic fabric</p> <p>11 . The new station structures shall incorporate the potential to incorporate particular features that reflect the respective locations of the stations, either through artworks, decorative wall and/or ceiling/floor surfaces, lighting and interpretive material, so that each station has its own identity within common design parameters, with iconic signage that is respectful of each particular location. Careful consideration should be given to ensure an appropriate high quality design response for the design/branding of the new stations, canopies, signage, metro stop sign, furniture, lighting, colour schemes must reflect the same standards as the high quality iconography, detailing and signage of the London Underground, the New York Subway and Paris Metro and shall be coordinated with Iarnród Eireann Stations in locations where interchanges are proposed between the Metrolink and Railway.</p> | <p>The proposed condition is agreed with following amendments as outlined below:</p> <p>Item 9 - The proposed condition is agreed.</p> <p>Item 10 - The proposed condition is agreed.</p> <p>Item 11- The station design will be development in accordance with the MetroLink Architecture strategy and vision by Grimshaw. Art works at each station shall reflect the location of each station and will be agreed in accordance with the public transport Art policy. TII will consult with DCC in relation to the scheme specific art policy prior to it being finalised and implemented.</p> |

| 9                                                                                                                                                                                                                       | Traffic Division | 40   | <p>1 . A comprehensive agreement shall be put in place between DCC and the TII regarding how any location is to be handed over to TII and its contractors, what pre-inspection and recording of any site is necessary and how the site is to be maintained during construction activities and by whom. The agreement shall also address the hand back process, the treatment of all relevant records treated and how all areas are to be accepted back by DCC following construction. It should further set out any areas which TII will have to maintain and the agreed mapping of any such locations.</p> <p>Reason: In the interest of orderly development</p> <p>2. All relevant DCC departments involved with the development of the Scheme shall be consulted during the detailed design development process for the Scheme and TII shall incorporate the requirements of the DCC departments into the final detailed design of the Scheme</p> <p>Reason: In the interest of orderly development</p> <p>3. Addition CCTV and traffic signals are required in a number of places along the route and these should be agreed between DCC and TII and funded from the project.</p> <p>Reason: In the interest of orderly development</p> <p>4. A consultative committee of DCC, TI, NTA, AGS transport operators and other relevant parties as may be required, shall be established to meet periodically over the course of the construction</p> <p>Reason: To ensure that the various projects which may be affected by Metrolink construction or have an impact on Metrolink construction are managed in as seamless a fashion as possible to minimise disruption.</p> <p>5. Following hand back, a separate agreement shall be put in place between DCC and the TII regarding the costs of maintenance of any additional items which have now been added to the DCC infrastructure and which are necessary for the maintenance and operation of the MetroLink system. In addition operation protocols between DCC and Metrolink need to be agreed for the operational phase of this project.</p> <p>Reason: In the interest of orderly development</p> | <p>The proposed condition is agreed with following amendments as outlined below:</p> <p>With regards to the proposed conditions set out by DCC Traffic Division:</p> <p>Condition (1) - The proposed condition is agreed.</p> <p>Condition 2 - While TII will consult with DCC throughout the details design stage it is not practical to presume that, yet to be determined requirements, can be incorporated into the detail design.</p> <p>Condition (3) - The proposed condition agreed. Additional CCTV and traffic signals which arise from the requirement to carry out MetroLink works will be agreed and provided by TII, provided that nothing in this condition will require TII to provide CCTV in such a manner as to contravene the requirements of the General Data Protection Regulation or the Data Protection Act 2018.</p> <p>Condition (4) -The proposed condition is agreed.</p> <p>Condition (5) - The proposed condition is agreed. .</p> |

| 10                                                                                                                                                                                                                      | Active Travel Unit | 41                  | <p>1. All bicycle spaces shall be provided as close as possible to the proposed Metrolink station entrances without comprising pedestrian routes to and from stations and all bicycle parking spaces to be sheltered and secure. Consideration should be made for bicycle lockers at all stations to provide adequate security at selected stations.</p> <p><i>Reason: In the interests of facilitating sustainable commuting options</i></p> <p>2. Cycle lanes shall be provided on Phibsborough Road which links cyclists from/to the Royal Canal Greenway to the proposed two-way cycle lane to the bicycle spaces in the North West corner of the site, if feasible.</p> <p>3. The proposed that the number of bicycle parking spaces shall be increased at all stations where feasible. Details to be agreed in writing with the planning authority prior to the commencement of development<br/><i>Reason: In the interests of facilitating sustainable commuting options</i></p> <p>4. All stations shall be designed to facilitate the transfer of bicycles to and from Metro.</p> <p><i>Reason: In the interests of facilitating sustainable commuting options</i></p> | <p>The proposed conditions require further discussions with DCC.</p> <p>Condition (1).The proposed condition requires further discussions with DCC. Bicycle parking spaces are provided as close as possible to the proposed Metrolink station entrances without comprising pedestrian routes to and from stations. Sheltered bicycle parking spaces with lockers are not provided in the city centre as part of the Railway Order design with the exception of Griffith station where underground cycle parking provision is provided.</p> <p>Condition (2). The proposed condition requires further discussions with DCC. As the provision of cycle lanes on Phibsborough Road is not within the scope of MetroLink.</p> <p>Condition (3). The proposed condition requires further discussions with DCC The maximum number of bicycle parking has been provided at each station taking cognisance of available space and public realm. To meet future cycle parking demand, this will require a coordinated multi-agency approach to ensure efficient delivery of cycle parking spaces and facilities. The remaining cycle parking demand requires a combined approach and delivery from Dublin City Council, Fingal County Council, and NTA, in order to achieve the maximum cycle parking provision. TII anticipate cycle parking provisions are likely to involve a combination of fixed and shared bicycles and other facilities to support the delivery of mobility hubs across the region.</p> <p>Condition (4). The proposed condition requires further discussions with DCC. MetroLink will be designed to accommodate folding/commuter type bikes and micro mobility devices, however access to the MetroLink system for these devises will be dependent on a the establishment of a coherent city wide public transport policy regarding their use on public transports systems by the Department of Transport and the National Transport Authority.</p> |
| 11                                                                                                                                                                                                                      | Road Divisions     | 41                  | <p>Handover:</p> <p>1. Prior to commencement of any works, a formal Handover Procedure Agreement shall be agreed with Dublin City Council and put in place for all works to be undertaken on public lands. This procedure shall be carried out on any section of work as soon as it is completed. A global handover of all works at the end of the construction period shall not be permitted. As built drawings of each section of the finished works shall be provided in A1 sized hard copy to an appropriate scale and also in electronic format compatible with Dublin City Council's current version of MicroStation. These as built drawings shall include details of any new services and alterations to existing services. Drawings shall also be provided showing exactly what areas are to be in Dublin City Council's charge. The agreement shall also specifically address proposed maintenance arrangements for public in charge areas over stations and other structures</p> <p><i>Reason: In the interest of orderly development</i></p>                                                                                                                        | <p>The proposed condition requires further discussions with DCC.</p> <p>Condition (1)- TII agree to a formal 'Handover Procedure Agreement' being put in place and that the procedure shall be implemented as soon as reasonably possible after work is completed by TII's contractors for the agreed sections defined by the aforementioned agreement. All information will be transmitted electronically to DCC. The electronic format of the transmitted information shall be agreed with DCC prior to transfer.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| 13                                                                                                                                                                                                                      | Road Divisions | 42   | <p>Roads Design &amp; Construction:</p> <p>4. Final details (including materials, finishes, sizes, gradients, levels and drainage) of all junctions, carriageways, islands, buildouts and footways as well as all signal/traffic light infrastructure shall be agreed with Dublin City Council prior to construction.</p> <p><i>Reason: In the interest of orderly development</i></p> <p>5. New roads and alterations to existing roads shall comply with “Technical Acceptance of Road Structures on Motorways and Other National Roads DN-STR-03001 April 2019”.</p> <p><i>Reason: In the interest of orderly development</i></p> <p>6. Road Safety Audits shall be carried out for any new roads and each existing public road that is to be modified as part of the scheme works at appropriate stages throughout the design of each individual scheme</p> <p><i>Reason: In the interest of orderly development</i></p> <p>7. The alignment of any new or altered roads included as part of the Project shall be designed so as ensure that all longitudinal gradients and crossfalls on carriageways, islands, buildouts and footways are in accordance with those specified in “Construction Standards for Road and Street Works in Dublin City Council” unless otherwise agreed with Dublin City Council</p> <p><i>Reason: In the interest of orderly development</i></p> | <p>The proposed condition is agreed with following amendments as outlined below:</p> <p>Condition (4) - The proposed condition is agreed. TII require that DCC shall agree to not unreasonably withhold their agreement, and that any comments that need to be addressed prior to agreement being reached are returned within 28 working days of TII submitting documentation to DCC. In the event of no comments being received after 28 days, agreement will be deemed to have been reached.</p> <p>In the event that DCC and TII cannot agree within the 28 day period referred to, disagreements shall be elevated to a DCC/TII Panel comprising senior leadership members of both organisations that will adjudicate and agree how agreement will be reached.</p> <p>Condition (5) - The proposed condition is agreed.</p> <p>Condition (6) - The proposed condition is agreed.</p> <p>Condition (7) - The proposed condition is agreed.</p> |

| 14                                                                                                                                                                                                                      | Road Divisions | 42   | <p>Roads Design &amp; Construction:</p> <p>8. Pedestrian and cyclist connectivity to and within stations shall be improved as part of the project where possible. Cycle parking shall be provided at all stations in secure, well-lit and convenient locations. Details to be agreed with Dublin City Council at detailed design stage. Principles of universal design shall be adhered to and accessibility requirements shall be met throughout the project.</p> <p>Reason: In the interests of facilitating sustainable commuting options</p> <p>9. Any alterations to kerbside spaces such as pay and display scheme/loading/line markings/signage pole shall be agreed with E&amp;T Department at detailed design stage</p> <p>Reason: In the interest of orderly development</p> <p>10. All signage and road markings to comply with the Traffic Signs Manual</p> <p>Reason: In the interest of orderly development</p> <p>11 . Prior to commencement of works, Transport Infrastructure Ireland shall consult with the Roads Design and Construction Division of Dublin City Council regarding any works that impact on bridges within Dublin City's jurisdiction. All works to bridges shall align with best practice as set out in TII Publications (Standards and Technical).</p> <p>Reason: In the interest of orderly development</p> | <p>The proposed condition is agreed with following amendments as outlined below:</p> <p>Condition (8). The proposed condition is agreed. EIAR Chapter 6 explains how MetroLink has been designed on the principle of Access for All. The design has been developed to meet all legislative requirements relevant to accessibility including the Disability Act 2005 and in turn the Sectoral Plan for Accessible Transport under the Disability Act 2005 (DTTAS 2012). The design will also comply with Part M of the Second Schedule of the Building Regulations.</p> <p>Condition (9)- The proposed condition is agreed</p> <p>Condition (10) - The proposed condition is agreed.</p> <p>Condition (11) - The proposed condition is agreed</p> |

Prior to commencement of works, Transport Infrastructure Ireland shall engage with Dublin City Council to agree in writing an overall Traffic Plan for all project works including phasing of works, road closures and diversions etc. and which addresses the cumulative impact on traffic for the whole city. Transport Infrastructure Ireland shall continually liaise with Dublin City Council during construction through an agreed schedule of regular meetings.</p> <p>Reason: In the interest of orderly development</p> <p>19. All roadworks shall be carried out in accordance with the current edition of Dublin City Council's Directive for the Control and Management of Roadworks in Dublin City unless otherwise agreed with Dublin City Council.</p> <p>Reason: In the interest of orderly development</p> <p>20. In cases of reinstatement of areas where the roadway or footway is not being reconstructed in full (e.g. trench for utility alongside street) Transport Infrastructure Ireland or their Contractor shall pay Dublin City Council long term impact charges as set out in the 'Guidelines for Managing Openings in Public Roads', published by the Department of Transport guidelines for managing openings in public roads apr. 2017.pdf (rmo.ie) or any updated version.</p> <p>Reason: In the interest of orderly development</p> <p>21. All antique setts if removed as part of the works shall be cleaned, stored on pallets by the contractor and reinstated in the carriageway to with Dublin City Council's specification if required by Dublin City Council unless otherwise agreed with Dublin City Council.</p> <p>Reason: In the interest of orderly development</p> | <p>The proposed condition is agreed with following amendments as outlined below:</p> <p>Condition (18) - The proposed condition is agreed TII propose that the Scheme Traffic Management Plan included with the EIAR will be a dynamic document, updated periodically to reflect Project progress. TII will convene a coordination group regularly with representatives of NTA, DCC, TII and operators to provide the necessary updates' T2 approval process will be adhered to and it is understood that no works can commence without an approved T2 cert.</p> <p>Condition (19) - The proposed condition is agreed</p> <p>Condition (20) The proposed condition is agreed</p> <p>Condition (21) - The proposed condition is agreed</p> |
| 18                                                                                                                                                                                                                      | Road Divisions | 44   | <p>Construction Period:</p> <p>22. All existing and antique natural stone kerbs and flags, if removed without damage as part of the works, shall be cleaned, stored on pallets by the contractor and reinstated in the footway to with Dublin City Council's specification</p> <p>Reason: In the interest of orderly development</p> <p>23. Specific areas and infrastructure to be taken in charge shall be agreed in writing with Dublin City Council</p> <p>Reason: In the interest of orderly development</p> <p>24. Where relevant works should comply with Dublin City Council's procedure for 'Ground Anchors Installations' shall be adhered to as contained at <a href="https://www.dublincity.ie/residential/transportation/apply-licence-or-permit/ground-anchor-installation-">https://www.dublincity.ie/residential/transportation/apply-licence-or-permit/ground-anchor-installation-</a></p> <p>Reason: In the interest of orderly development</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p>The proposed condition is agreed</p> <p>Condition (22) - The proposed condition is agreed.</p> <p>Condition (23) - The proposed condition is agreed.</p> <p>Condition (24) - The proposed condition is agreed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 19                                                                                                                                                                                                                      | DCC Environmental Protection Division | 44   | <p>1 . The detailed surface water (SW) drainage design shall be agreed in writing with DCC Drainage Planning, Policy and Development Control prior to commencement. TII, their agents or contractor must comply with the Greater Dublin Regional Code of Practice for Development Works - version 6.0 (available from <a href="http://www.dublincity.ie">www.dublincity.ie</a> Forms and Downloads) and any other relevant specifications as shall issue by DCC's Drainage Planning, Policy and Development Control during the construction of the Works.</p> <p><i>Reason: In the interest of orderly development</i></p> <p>2. (i) The development shall incorporate Sustainable Drainage Systems in the management of surface water, providing an integrated approach with the landscaping proposals. Full details of these shall be agreed in writing with DCC Drainage Planning, Policy and Development Control prior to commencement of construction. Soft landscaping should be considered before hard landscaping. The SuDs design should refer to the new Dublin City Council Sustainable Drainage Design and Evaluation Guide published in 2021.</p> <p>(ii) Submission to include a detailed design check which shall incorporate:</p> <ul style="list-style-type: none"><li>• Full design details including rationale and calculations and flow control measures, discharge rates etc. in each area/sub-catchment.</li><li>• Gully and swales /SuDs elements design to be approved where additional required. Drawings should also indicate where revisions to existing SW infrastructure are necessary.</li><li>• Manhole design to facilitate flow control devices, discharge manholes etc.</li><li>• Functionality of swale connection pipes throughout.</li><li>• Check of attenuation volumes provided.</li></ul> <p><i>Reason: In the interest of orderly development</i></p> | <p>The proposed condition is agreed with following amendments as outlined below:</p> <p>Condition (1) - The proposed condition is agreed. TII confirm the detailed surface water (SW) drainage design will be agreed in writing with DCC Drainage Planning, Policy and Development Control prior to commencement and that TII will comply with the Greater Dublin Regional Code of Practice for Development Works - version 6.0. With regards the issue of other relevant specifications, TII's position is that these should be confined to the specifications in force prior contracts being awarded are let in the interests of maintaining cost and schedule certainty, since introducing these post contract award is not good practice.</p> <p>Condition (2)</p> <p>(i) The proposed condition is agreed. TII agree the Project will incorporate Sustainable Drainage Systems in the management of surface water, soft landscaping will be preferred where practicable and the SuDs design will refer to the new Dublin City Council Sustainable Drainage Design and Evaluation Guide published in 2021.</p> <p>(ii) The proposed condition is agreed.</p> <p>In relation to condition 1 &amp; 2 TII require that DCC shall agree to not unreasonably withhold their agreement, and that any comments that need to be addressed prior to agreement being reached are returned within 28 working days of TII submitting documentation to DCC. In the event of no comments being received after 28 days, agreement will be deemed to have been reached.</p> <p>In the event that DCC and TII cannot agree within the 28 day period referred to, disagreements shall be elevated to a DCC/TII Panel comprising senior leadership members of both organisations that will adjudicate and agree how agreement will be reached.</p> <p>TII do not consider it appropriate that detailed submissions should be made to DCC, given this is the role that TII will undertake. TII commit to undertaking a design that meets the DCC specified requirements and providing the necessary assurance to DCC this has been the case.</p> |

| 20                                                                                                                                                                                                                      | DCC Environmental Protection Division | 44   | <p>3. TII, their agents or contractor shall submit details, including cross-sections of buildings/ foundations in relation to all affected SW sewers, for the written agreement of DCC's Drainage Planning, Policy and Development Control. No additional loading shall be placed on any surface water sewer and any damage to a sewer shall be rectified at TII's expense.</p> <p><i>Reason: In the interest of orderly development</i></p> <p>4. Surveys on the location and condition of the surface water infrastructure sewers, both pre and post development, shall be carried out by the developer. This shall include any sewers which are close enough to the Metrolink route that their later maintenance would require consultation with TII and any sewers that might be impacted by the tunnel construction process. These shall be upgraded in advance of works commencing if this is deemed necessary by Environmental Protection Division. Any damage to public drainage infrastructure shall be rectified at the developer's/ contractor's expense.</p> <p><i>Reason: In the interest of orderly development</i></p> <p>5. As constructed drawings and a CCTV survey of all new public pipelines and pipelines to be taken in charge must be submitted to DCC Drainage Planning, Policy and Development Control after the completion of each phase of the development on site. This submission should include drawings indicating clearly the proposed demarcation between public and private SW drainage infrastructure. Future maintenance responsibility for all new and altered surface water drainage elements of the project and all existing drainage in proximity to the Metrolink route is to be agreed in writing with the Environmental Protection Division</p> <p><i>Reason: In the interest of orderly development</i></p> <p>6. TII shall model the cumulative effects of the proposed SW sewer diversions and compile a report specifying the details of all sewer upgrades and diversions and confirming that adequate capacity will be provided in surface water sewers, taking into account future demand. Particular attention shall be paid to the diversion of the Wad River to ensure there is no reduction in conveyance capacity and that there is no increase in flood risk during or after the works.</p> <p><i>Reason: In the interest of orderly development</i></p> | <p>The proposed condition requires further discussions with DCC.</p> <p>Condition (3) - The proposed condition requires further discussions with DCC. While TII agree to provide the full details in relation to affected SW sewers, TII can cannot commit to providing such information for all building and foundation along the route.</p> <p>Condition (4) - The proposed condition requires further discussions with DCC . TII agrees to undertake pre and post surveys -of the surface water infrastructure. and In the unlikely advent that surface waters are impacted by the tunnels works TII will agree and carry out neccasrary remedial measures.</p> <p>Condition (5) - The proposed condition is agreed</p> <p>Condition (6) - TII confirm they will model the cumulative effects of the proposed SW sewer diversions and compile a report specifying the details of all sewer upgrades and diversions and confirming that adequate capacity will be provided in surface water sewers, taking into account future demand.</p> |

| 21                                                                                                                                                                                                                      | DCC Environmental Protection Division | 45                  | <p>7. Each SW sewer diversion and any new connection to the SW network shall be carried out under separate licence from DCC Drainage Planning, Policy and Development Control. TII, their agents or contractor shall comply with the licensing and connection procedure of DCC Drainage Planning, Policy and Development Control. No application for a licence will be accepted until the drainage design details are agreed in writing.</p> <p><i>Reason: In the interest of orderly development</i></p> <p>8. There shall be no pumping or discharge of groundwater or any other trade effluent to Dublin City Council sewers or waters except under and in accordance with a licence granted by Dublin City Council as required by the Local Government (Water Pollution) Acts, 1977 and 1990. Please note, Dublin City Council is the local authority responsible for the surface water drainage network. Irish Water is the sanitary authority responsible for the foul and combined drainage network.</p> <p><i>Reason: In the interest of orderly development</i></p> <p>9. All internal basement drainage must be designed in accordance with the City Council's policy on basements as set out in the Greater Dublin Strategic Drainage Study - Regional Drainage Policy - Volume 6, Basements. In particular, all internal drainage shall be pumped so as to discharge by gravity from the site to the public sewer and all openings to such structures shall be higher than the prevailing flood level in the area. All underground structures must be constructed to be watertight and therefore eliminate any permanent requirement to discharge groundwater. The design should address any potential risk of flotation or structural failure arising from making the structure watertight and should take steps to eliminate such risks.</p> <p><i>Reason: To minimise flood risk</i></p> | <p>The proposed condition is agreed.</p> <p>Condition (7) - The proposed condition is agreed.</p> <p>Condition (8) - The proposed condition is agreed.</p> <p>Condition (9) - The proposed condition is agreed.</p> |
| 22                                                                                                                                                                                                                      | DCC Environmental Protection Division | 46                  | <p>10. TII shall ensure that a Site Specific Flood Risk Assessment is carried out and submitted for the proposed scheme. This should identify and quantify the potential risks from all sources including coastal, fluvial, pluvial and groundwater. TII shall confirm in writing to the Drainage Division that the scheme has been designed such that the risk of flooding to the scheme has been reduced as far as is reasonably practicable, and that the proposals do not increase the risk of flooding to any adjacent or nearby area.</p> <p><i>Reason: To minimise flood risk</i></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>The proposed condition required further discussion with DCC.</p> <p>Condition (10) - An SSFRA forms part of the RO application and this condition is not required.</p>                                           |

| 23                                                                                                                                                                                                                      | Air Quality Monitoring and Noise Control Unit | 46                  | <p>1. The works shall be carried out having regard to a Construction Management Plan. The plan must be written having regard to the Dublin City Council, Air Quality Monitoring and Noise Control Unit Good Practice Guide for Construction and Demolition (below link). The Plan shall include remedial measures identified owing to the results of the baseline monitoring survey as committed to in the EIS. The plan shall be submitted to and approved in writing by the Planning Authority before work commences.<br/><a href="https://www.dublincity.ie/residential/environment/air-quality-monitoring-and-noise-control-unit/good-practice-guide-construction-and-demolition">https://www.dublincity.ie/residential/environment/air-quality-monitoring-and-noise-control-unit/good-practice-guide-construction-and-demolition</a></p> <p><i>Reason: To reduce the intrusion of noise and in the interest of amenity</i></p> <p>2(a). The hours of operation for the construction phase for all construction sites including depots shall be restricted to 7.00am to 7.00pm, Monday to Friday, and 8.00am to 2.00pm on Saturdays. Permission to work outside of these hours must be subject to the approval of Dublin City Council.</p> <p>2(b). Details of the hours of operation for the tunnel boring operation shall be agreed in writing with the Planning Authority prior to the commencement of boring operations.</p> <p>Reason: In order to safeguard the amenities of the area</p> <p>3. The commitments and remedial measures proposed in the Airborne Noise &amp; Ground borne Noise Mitigation Policy submitted with the EIA shall be implemented in full. TII must enter into discussion with DCC prior to construction start regarding its monitoring regime, information sharing and details of any mitigation measures which are required.</p> <p><i>Reason: To reduce the intrusion of noise and in the interest of amenity</i></p> | <p>The proposed condition required further discussion with DCC</p> <p>Condition (1). - TII confirm the works will be carried out having regard to a Construction Management Plan which will be written having regard to the Dublin City Council, Air Quality Monitoring and Noise Control Unit Good Practice Guide for Construction and Demolition. The Plan will include remedial measures identified owing to the results of the baseline monitoring survey as committed to in the EIAR. The plan will be submitted for approval in writing by the Planning Authority before work commences.</p> <p>TII request that that DCC shall not unreasonably withhold their agreement and that any comments that need to be addressed prior to agreement being reached are returned within 28 working days of the submission of documentation to DCC. In the event of no comments being received after 28 working days, agreement will be deemed to have been reached.</p> <p>In the event that DCC and TII cannot agree within the 28 working day period referred to, disagreements shall be elevated to a DCC/TII Panel comprising senior leadership members of both organisations that will adjudicate and agree how agreement will be reached.</p> <p>Condition (2)(a&amp; b) - The proposed condition requires further discussions with DCC. The hours of work are detailed in the EIAR to optimise the overall delivery programme.</p> <p>Condition (3) - TII confirm they will honour the commitments submitted with the EIAR, and will enter into discussion with DCC prior to commencement of construction regarding its monitoring regime, information sharing and details of any mitigation measures which are required.</p> |

| 24                                                                                                                                                                                                                      | Public Lighting | 46   | <p>The following requirements of DCC’s Public Lighting Section shall be adhered to:</p> <p>1. Briefings to be provided on the general layouts in each area in order to fully understand and assess public lighting requirements</p> <p>2. Ongoing consultation is required at all stages from design, to construction, to testing, commissioning and handover/taking in charge.</p> <p>3. A formal documented approvals process is required to be put in place with sign off at each stage</p> <p>4. New and/or altered public lighting schemes shall comply and be designed to IS EN13021. They shall also comply with DCCs General Specification for Public Lighting</p> <p>5. Light Level Classes are dependent upon Daily T raffle Flows and levels of usage (both vehicular and pedestrian) and need to be formally agreed and signed off for each area of the project</p> <p>6. All public lighting works shall carried out a competent public lighting contractor or operator (such as DCC Public Lighting Services)</p> <p>7. Condition Assessment of lighting infrastructure shall be required in advance</p>                                                                                                                                                                                                                                                                                                                                          | <p>The proposed condition is agreed with following amendments as outlined below:</p> <p>Conditions 2, 3, 7, 9, 11, 13-22 are agreed in principle however TII's preference is to work with DCC to agree on the details during the detail design stage of the project</p> <p>The following proposed conditions are agreed 1, 4, 5, 6, 8, 10, 12 in so far as they relate to MetroLink works within the extent of the station footprint and related public realm design.</p> |
| 25                                                                                                                                                                                                                      | Public Lighting | 47   | <p>8. Replacement of existing Lighting Infrastructure with new infrastructure shall occur as necessary</p> <p>9. Some lighting Infrastructure will at end of life and the upgrading of luminaires may require the upgrade the entire PL asset, including the column, cabling, and ducting for electrical and lighting compliance.</p> <p>10. Upgrade of luminaires to high efficiency LED luminaires is a minimum requirement for each area. LEDs shall comply with DCC General Specification</p> <p>11. Applicant shall establish lighting circuits and electrical supply locations at design stage</p> <p>12. Applicant shall establish if any third party infrastructure, e.g. Traffic Lights, are supplied from the public lighting infrastructure and plan to relocate accordingly</p> <p>13. There is a limitation on where lights can be re-located. Careful consideration needed</p> <p>14. Need to minimise street clutter to avoid plethora of supply pillars and other street furniture</p> <p>15. Lighting Works shall require alterations to other Utility Services as necessary</p> <p>16. Permits may be required to work on lights, e.g. close to lights on ESB Network Infrastructure or Luas Tram Network Infrastructure</p> <p>17. Careful consideration needs to be given to all proposed tree locations with respect to light locations to reduce potential blocking that could result in carriageways and footways being in darkness.</p> | <p>Please refer to response item (24).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                |

Lighting Designers shall carefully consider existing tree locations in their designs.</p> <p>19. GPPR surveys shall take place advance of construction in certain areas as necessary</p> <p>20. The applicant shall locate all underground services and identify possible underground congestion</p> <p>21. The applicant shall locate any cellars under footpath s/roads</p> <p>22. Facilitates detailed design of new lighting infrastructure and identifies possible location for lighting columns and duct routes etc.<br/><i>Reason: In in the interests of amenity and public safety</i></p> <p>Notes to applicant:<br/>(a) DCC Public Lighting (PL) is the only ESB authorised body that is responsible for managing street lights mounted on ESB Networks Infrastructure in Dublin City Council. Those involved in Projects such as Metro-link cannot alter, remove or relocate lighting infrastructure mounted on ESB Infrastructure without DCC PL and ESNB approval.<br/>(b) There appear to be significant pavement works in most areas that will require complete replacement of existing lighting infrastructure including provision of ducts, cable chambers, lighting columns, luminaires, cabling, supply pillars and these details shall be addressed in the detailed design process</p>                                                                                                                                                                                                                                                                                                                                                                                          | Please refer to response item (24).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 27                                                                                                                                                                                                                      | City Architects | 47                  | <p>The applicant shall comply with the following requirements of DCC’s City Architects:</p> <p>1. (a) All external materials shall be low-maintenance and durable. The materials shall be generally as per 'Materials Palette.pdf and EIAR Appendix 'A27.1 Photomontages.pdf submitted with the application documentation and all materials and finishes shall knit in with the existing Dublin City palette of materials, street furniture etc. and the design shall ensure that the installation of security devices is avoided; the Urban Realm proposals shown in 'Materials Palette.pdf' shall be integrated into the scheme through the procurement process to ensure high quality public realm proposals are delivered and all external materials shall be agreed in writing with the planning authority prior to the commencement of any development</p> <p>(b) All street furniture and pop up elements need to be highly durable, vandal proof and easy to maintain and agreed in writing with the Planning Authority where they are to be taken in charge. This selection criteria must be applied from the outset when designing or selecting all street furniture items.</p> <p><i>Reason: In the interests of visual amenity and the achievement of a high quality public domain</i></p> <p>3. Universal Design Principles shall be applied to all aspects of MetroLink with access for all passengers treated with equal importance. Passenger lifts should be given equal priority to entrance canopies and integrated into the public realm accordingly in line with Universal Design Principles and equal access for all.</p> <p><i>Reason: In the interests of universal access</i></p> | <p>The proposed condition is agreed with following amendments as outlined below:</p> <p>Condition (1a) - The proposed condition is agreed. TII confirm all external materials will be low-maintenance and durable and will be generally as per 'Materials Palette.pdf and EIAR Appendix 'A27.1 Photomontages.pdf submitted. TII require further clarification regards the "installation of security devices is avoided" given these would only be provided if deemed appropriate and necessary.</p> <p>Condition (1b). The proposed condition is agreed. TII confirm all street furniture and pop up elements will be highly durable, vandal proof and easy to maintain.</p> <p>In relation to condition 1a &amp; 1b, TII would ask that DCC shall not unreasonably withhold their agreement and that any comments that need to be addressed prior to agreement being reached are retuned within 28 working days of the submission of documentation to DCC. In the event of no comments being received after 28 working days, agreement will be deemed to have been reached.</p> <p>In the event that DCC and TII cannot agree within the 28 working day period referred to, disagreements shall be elevated to a DCC/TII Panel comprising senior leadership members of both organisations that will adjudicate and agree how agreement will be reached.</p> <p>Condition (3) - The proposed condition is agreed. EIAR Chapter 6 explains how MetroLink has been designed on the principle of Access for All. The design has been developed to meet all legislative requirements relevant to accessibility including the Disability Act 2005 and in turn the Sectoral Plan for Accessible Transport under the Disability Act 2005 (DTTAS 2012). The design will also comply with Part M of the Second Schedule of the Building Regulations. please note that TII do not consider there is a need for this condition.</p> |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Written Submission from Dublin City Council's Chief Executive to An Bord Pleanála in relation to the National Transport Application for the Railway (MetroLink - Estuary to Charlemont via Dublin Airport) Order [2022] |                 |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 28                                                                                                                                                                                                                      | City Architects | 48   | <p>4. The number of surface interventions (ventilation shafts etc.) shall be minimised as much as possible and all proposed interventions should be carefully designed and integrated into the public realm. Potential for vandalism and maintenance requirements need to be carefully considered</p> <p><i>Reason: In the interests of visual amenity and the achievement of a high quality public domain</i></p> <p>5. Station signage shall be kept to the minimum required and lamp standards shall be positioned to avoid clutter</p> <p><i>Reason: In the interests of visual amenity and the achievement of a high quality public domain</i></p> <p>6. Wherever possible landscape/greening/raised planting/seating interventions should be used as an alternative to bollards<br/><i>Reason: To avoid an over-proliferation of 'Bollards or equivalent (HVM)' at each station in the interests of visual amenity of the public realm and avoid creation of potential hazards for visually impaired pedestrians.</i></p> <p>7. Details, specifications, loadings, guarding, bollards, lighting, sirens, signage, maintenance requirements, etc. of the proposed vents and hatches shall be provided for these openings to clarify if/how they will open in the event of an emergency and what impact they will have on the public realm</p> <p><i>Reason: In the interests of public safety</i></p> <p>8. All utility/service supply cabinets will be located below ground level unless otherwise agreed with the planning authority in writing.</p> <p>9. The number of trees removed shall be minimised and any trees removed shall be replaced with new appropriate tree specimens</p> <p><i>Reason: To support greening, biodiversity and environmental sustainability.</i></p> | <p>The proposed condition is agreed with following amendments as outlined below:</p> <p>Condition (4) - The proposed condition is agreed. TII consider that the MetroLink design already minimises the number of surface interventions and that they are carefully designed and integrated into the public realm. TII confirm vandalism and maintenance requirements will be carefully considered.</p> <p>Condition (5) - The proposed condition is agreed. TII confirm station signage shall be kept to the minimum required. TII consider that lamp standards have been positioned to avoid clutter.</p> <p>Condition (6) - The proposed condition is agreed. TII commit to working with DCC and An Garda Síochána to reduce the intrusiveness of the HVM bollards as well as considering alternatives wherever possible.</p> <p>Condition (7) - The proposed condition is agreed. TII have responded to this observation and can provide further detail as required.</p> <p>All emergency hatches/exits for sub-surface stations will be flush with the pavement. And consist of automatic openings at street level, provided with electric or hydraulic opening system, as well as with manual opening.</p> <p>Smoke exhaust grills in footways and sidewalks, will be installed flush, in the green areas grills have a 30cm upstand</p> <p>Hatches</p> <p>The emergency exits for sub-surface stations consist of automatic openings at street level, provided with electric or hydraulic opening system, as well as with manual opening.</p> <p>Grills</p> <ul style="list-style-type: none"><li>• Smoke exhaust grills, including overhead track exhaust (OTE), will be installed as far as possible away from the location of emergency exits or intervention shafts. Smoke exhaust can be installed close to ground level. It should be noted that smoke will only be exhausted from these grills during a fire event. (A low probability event)</li><li>• Ventilation exhaust grills will be installed close to ground floor in footways, or in green areas with 30cm high kerbing to minimise the risk of flooding.</li><li>• Inlet air grills, as a general rule will be installed at a height 3.50m above existing ground level. This is to ensure clean unpolluted air is taken into the ventilation system. Depending on the urban context, this design principle could be relaxed.</li></ul> <p>When the grilles are located in footways and sidewalks, they will always be installed flush.</p> <p>Condition (8) - The proposed condition is agreed. All utility/service supply cabinets related to MetroLink will be located within the stations and below ground level. The exception will be cabinets provided by DCC for traffic and public lighting. The location of these cabinets where determiner at details design stage will be agreed in advance with the relevant department within DCC. TII confirm all utility/service supply cabinets will be located below ground level wherever possible. In the event this is not possible this will be agreed in writing with DCC with an understanding that permission will not unreasonably be withheld and a decision will be made within 28 working days of the submitted request.</p> <p>Condition (9) - The proposed condition is agreed. TII confirm that the number of trees removed shall be minimised and any trees removed shall be replaced with new appropriate tree specimens where possible. EIAR Chapter 27 Landscape &amp; Visual, section 27.6.1 includes for a number of mitigation measures to reduce the impact of MetroLink.</p> |

The treatment of the wall at Griffith Park Station shall be agreed in writing the Planning Authority prior to the commencement of development and shall include for example, stone cladding, imprinted concrete with artistic design, planted walls, windows, sections in relief and recessed elements, greening at base of walls etc. which could provide some animation and rhythm to the wall. Lighting on the footpath along the edge of the retaining wall to the football pitch shall be agreed in writing with the planning authority prior to the commencement of development</p> <p><i>Reason: In order to ensure passenger safety</i></p> <p>Mater Station</p> <p>11. The height of roof light upstands at Mater Station shall be agreed in writing with the planning authority prior to the commencement of development</p> <p><i>Reason: To avoid anti-social behaviour</i></p> <p>Tara Street Station</p> <p>12. (i)The details of the Public Domain and Landscaping for this station shall be agreed in writing with the planning authority prior to the commencement of development and shall include the following (i) design must promote pedestrian priority including widening of substandard width footpaths<br/>(ii) The surface material used including the material for the shared carriageway on both Luke St and Poolbeg St needs to be carefully selected to promote pedestrian priority.</p> <p><i>Reason: In the interests of a quality public realm</i></p> | <p>The proposed condition is agreed with following amendments as outlined below:</p> <p>Condition (10) - The proposed condition is agreed.</p> <p>Condition (11). The proposed condition is agreed During the workshops held with DCC Architects , it was acknowledge that providing day light into the station by skylights was welcomed and TII had provided some precedent examples of international metro stations which use roof light solutions for reference. It was agreed that due to the sensitive nature of the Mater Station site, the roof lights design would be carefully considered and designed. Details will be provided (for discussion) during the detailed design stage. It is intended to consult with DCC to reduce the height of each roof light during detail design in order to minimise the visual the impact</p> <p>Condition (12)(i) - The proposed condition is agreed subject to footpath improving with the front print of the station and extent of the public realm.</p> <p>Condition 12 (ii) - The proposed condition is agreed.</p> <p>In relation to condition 10 and 12 TII request that DCC shall not unreasonably withhold their agreement and that any comments that need to be addressed prior to agreement being reached are retuned within 28 working days of the submission of documentation to DCC. In the event of no comments being received after 28 working days, agreement will be deemed to have been reached.</p> <p>In the event that DCC and TII cannot agree within the 28 working day period referred to, disagreements shall be elevated to a DCC/TII Panel comprising senior leadership members of both organisations that will adjudicate and agree how agreement will be reached.</p> <p>With regards to widening of footpaths, this will only be undertaken if deemed within the scope of the MetroLink project and that pedestrian modelling shows it is required.</p> |

| 30                                                                                                                                                                                                                      | Parks, Biodiversity and Landscape Services | 49   | <p>1. In order to retain the open views of Our Lady of Victories Church (Collins Avenue Station) as the architectural focal point in the locality mitigation measures shall be implemented and shall include height reduction of skylights, removal of proposed tree planting to front of church and coordination of materials and colours with the church building. Full details to be submitted and agreed in writing with the planning authority prior to the commencement of development</p> <p>2. The following information shall be submitted to the planning authority for written agreement at detail design stage:</p> <p>(i) Site hoarding alignment plan</p> <p>(ii) Tree survey, tree impact plan and tree protection plan prepared by an arboriculturist</p> <p>(iii) A landscape plan with details indicating the park's landscape reinstatement works, hard and soft works, and boundaries design, prepared by a landscape architect</p> <p>(iv) Specification of materials</p> <p>(v) Outline project programme, including a 36 month DLP/Maintenance period for all works within the park</p> <p>3. Details of replacement tree planting and pitch drainage and irrigation details at Griffith Park Station shall be submitted for the written agreement of the planning authority prior to the commencement of development</p> <p>4. Details of screening of the Mater Station's skylights and vents shall be submitted for the written agreement of the planning authority prior to the commencement of development</p> <p>5. The existing trees at the Mater Station site shall be surveyed before removal so that similar replacement planting may be achieved post construction.</p> <p>6. Detailed landscape /public realm plan to include further greening opportunities for Tara Street Station and compensatory street-tree planning for Charlemont Station shall be submitted to the planning authority for written agreement prior to the commencement of development</p> | <p>Regards DCC Parks, Biodiversity and Landscape Services proposed conditions:</p> <p>Condition (1) - The proposed condition requires further discussion with DCC. TII do not agree that this condition is necessary and consider that the proposed MetroLink design for Collins Avenue Station is appropriate. As outlined in EIAR Chapter 27, The Landscape, section 27.5.4.16, the design of the proposed Collins Avenue Station includes public realm improvements where possible. It is noted that the entrance canopy, row of three surface mounted skylights, lifts vents and emergency exits will alter the landscape in front of the Church, but features will be implemented to reduce those impacts where possible. The Station design incorporates a broad section of new public realm and garden to the front of the Church in contemporary style, featuring high quality paving, seating, bike parking, and garden tree planting with swale planting and ornamental ground cover planting. TII consider this will improve the overall appearance of the landscape with the addition of the Station features.</p> <p>Condition (2) - The proposed condition is agreed TII assume this condition is sought only for 'park' works and on this assumption provide no objection to the drafted condition.</p> <p>Condition (3) - The proposed condition is agreed. TII confirm that details of replacement tree planting and pitch drainage and irrigation details at Griffith Park Station shall be provided.</p> <p>Condition (4) - The proposed condition is agreed.</p> <p>Condition (5) - The proposed condition is agreed. TII confirm that the existing trees at the Mater Station site will be surveyed before removal so that similar replacement planting will be achieved post construction.</p> <p>Condition (6) - The proposed condition requires further discussions with DCC. The MetroLink Railway Order application provides adequate details of the proposed landscape /public realm for Tara Street Station and Charlemont Station.</p> <p>In relation to the above conditions TII request that DCC shall not unreasonably withhold their agreement and that any comments that need to be addressed prior to agreement being reached are retuned within 28 working days of the submission of documentation to DCC. In the event of no comments being received after 28 working days, agreement will be deemed to have been reached.</p> <p>In the event that DCC and TII cannot agree within the 28 working day period referred to, disagreements shall be elevated to a DCC/TII Panel comprising senior leadership members of both organisations that will adjudicate and agree how agreement will be reached.</p> |

| 31                                                                                                                                                                                                                      | Biodiversity     | 49   | <p>1. Badger: The proposed mitigation in the EIAR to be implemented in full and the timeframe for the "pre-construction checks of the activity status of all setts" shall be 6 months prior to construction to ensure that no further setts have been established. The ecologist for the project shall also consult with the National Parks and Wildlife Service (NPWS) prior to construction</p> <p>2. Bats: mitigation through a programme of replacing hedges and trees years in advance of construction allowing for hedgerows and trees to mature and reduce impacts when construction takes place. Details to be agreed in writing with the planning authority.</p> <p>3. The following information shall be provided to DCC for written approval at detail design stage:<br/>(i) Lighting Management Plan (that's been reviewed by bat ecologist)<br/>(ii) Detailed bat survey data within DCC lands, including table of number of bats recorded per species per survey date.</p> <p>4. Protected species: Further evaluation of some species required and mitigation measures required (see report for full detail)</p> <p>5. Japanese Knotweed: complete Japanese knotweed surveys using a suitably qualified ecologist and conduct any required eradication programme.</p> | <p>The proposed condition is agreed with following amendments as outlined below:</p> <p>Condition (1) - This proposed condition is agreed.</p> <p>Condition (2) - The proposed condition is agreed.</p> <p>Condition (3) - The proposed condition is agreed</p> <p>TII request that DCC shall not unreasonably withhold their agreement and that any comments that need to be addressed prior to agreement being reached are retuned within 28 working days of the submission of documentation to DCC. In the event of no comments being received after 28 working days, agreement will be deemed to have been reached.</p> <p>In the event that DCC and TII cannot agree within the 28 working day period referred to, disagreements shall be elevated to a DCC/TII Panel comprising senior leadership members of both organisations that will adjudicate and agree how agreement will be reached.</p> <p>Condition (4). The proposed condition requires further discussions with DCC. DCC to explain which species TII have not assessed as part of the railway order application.</p> <p>Condition (5). The proposed condition is agreed.</p> |

| Letter Re: Dublin Commuter Coalition, MetroLink, ABP case ref: 314724 |                |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1                                                                     | Overview       | 3        | Our main point, however, is to call for speed in all stages of planning and building MetroLink. Given the many cancelled plans and delays in building a metro in Dublin over the past decades, as well as the urgent transport needs of hundreds of thousands of residents, MetroLink needs to be built as swiftly as possible.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | TII as the Government Agency responsible for delivering MetroLink, are committed to expediting the delivery of this transformative project on receipt of an Enforceable Railway Order.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 2                                                                     | 24hr Operation | 4        | <p>According to Volume 2 Chapter 6.4.3 MetroLink Operations and Maintenance of the EIAR, the hours of operation will be 5:30-00:30. Globally, a number of cities operate metro lines 24 hours a day. Examples include New York, Tokyo and Copenhagen. Copenhagen's is the most similar to Metrolink, as it has a modern, driverless metro system. We strongly believe that Dublin's MetroLink should emulate Copenhagen's operating hours. Even if 24-hour service is not attainable, the 5:30am start is too late, given Dublin Airport's first wave of departures sees dozens of flights depart between 06:15 and 07:30. We believe the MetroLink should facilitate airport staff and passengers arriving before the morning wave of departures. Furthermore, Metrolink will connect to a number of 24-hour orbital buses. It will also be the only direct way to travel between Ballymun/Glasnevin and Dublin Airport.</p> <p>Existing 24-hour buses have shown strong demand and the 41 bus is regularly full from Abbey St, leaving passengers stranded in the middle of the night.</p> | As set out by EIAR Chapter 6, MetroLink Operations and Maintenance, section 6.4.3, "It is anticipated that services will operate between 05:30 and 00:30, every day". At this time it is not part of the operational strategy for a service running 24 hours day, 7 days a week (referenced in EIAR Chapter 6 (MetroLink Operations and Maintenance), section 6.4), however as with any transport system, the future development and needs for serving the Dublin population may change in time, and this would be considered if such a situation arose requiring extended MetroLink operating hours.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 3                                                                     | Cycle Parking  | 4        | While we are pleased to see that there are some bike parking facilities at most of the stations, it is concerning that there in 12 of the 15 stations, the cycle parking provision will not meet the predicted demand. In four stops, the applicant predicts that there will be cycle parking provision for fewer than 1/5th of the cyclists predicted to be looking for a place to park their bike. We understand that in some locations there are constraints on the space available for cycle parking, but for these cases, we would insist that the applicant provides the needed cycle parking.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>As set out by EIAR Chapter 6, MetroLink Operations and Maintenance, due to the space constraints in the vicinity of stations it has not been possible to provide 100% of the bicycle parking required to meet demand at every station. However, the maximum number of bicycle parking has been provided at each station taking cognisance of available space. EIAR Chapter 31, Summaries of the route wide mitigation and monitoring proposed, goes on to further note (Mitigation Reference TT19) that cycle parking provisions per station will be monitored to ensure that the level of provision is meeting the demand to the best extent possible. Similarly, the volume and type of cycle parking provisions required may change over the course of the Operational Phase due to the ongoing shift to shared and micro mobility solutions.</p> <p>Notwithstanding the above. TII does agree that there is a need for high density cycle parking into the future to accommodate demand from the Project, as well as demand from the general increase in cycling forecasted within the City. In recognising the shortfall, meeting this demand will require a coordinated multi-agency approach to ensure efficient delivery of cycle parking spaces and facilities. There is a clear mix of uses in the areas surrounding MetroLink stations, which may see cycle demand in varying peak times. As a result, it requires a combined approach and delivery from multiple agencies, e.g. Dublin City Council, Fingal County Council, NTA, TII and Irish Rail, to identify how future demand can be accommodated sustainably and the maximum benefits of the parking achieved. This will include the consideration of available land, but noting such land is often already allocated as part of future development plans. TII anticipate cycle parking provisions are likely to involve a combination of fixed and shared bicycles and other facilities to support the delivery of mobility hubs across the region.</p> |
| 4                                                                     | Cycle Parking  | 4        | We could not find specific information about accessible cycle parking. There should be bike parking for accessible bikes - including pedelec bikes and wheelchair bikes - at all stations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Provision for accessible cycle parking will be made at the detail design stage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 5                                                                     | Cycle Parking  | 4        | Some of the bike parking will be 'semi-enclosed', but the rest will either have a roof or overhang over it, or will have no protection at all. Given that theft of bicycles is common in Dublin, we would like to highlight the need for regular monitoring of these cycle parking areas. We would suggest that, where there is room, provision be made for more secure types of cycle parking.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>Security is addressed by EIAR Chapter 6, MetroLink Operations and Maintenance, and includes for:</p> <ul style="list-style-type: none"><li>•The architectural and urban realm design being designed to discourage anti-social behaviour, for example through the attractive setting, use of public lighting, open sight-lines, and avoidance of areas where individuals and groups of people can hide.</li><li>•The Operational Control Centre (OCC) will be the central communications and operational hub, located in the administrative building at the Dardistown Depot. The role of the OCC will include monitoring and managing security and antisocial behaviour. The OCC will direct and deploy staff to manage incidents when required.</li><li>•CCTV will be installed throughout the MetroLink system to provide general security and surveillance of all the public areas, and to inform, if required, the directing and sending of staff to manage the situation.</li><li>•There will be a MetroLink staff presence along the route for assisting passengers, security and deterring anti-social behaviour.</li></ul> <p>TII confirm security systems will be provided in cycle parking areas.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Letter Re: Dublin Commuter Coalition, MetroLink, ABP case ref: 314724 |                                                               |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 6                                                                     | Pedestrian and Cyclist Priority During Construction           | 5        | We understand that a major project like MetroLink will require temporary changes to traffic patterns and other inconveniences during the construction phase. We would ask that the applicant makes a positive effort to ensure that these temporary measures are consistent with the Hierarchy of Road Users set out in section 8.1 1 of the Greater Dublin Area Transport Strategy 2022-2042, which calls for design and planning decisions to prioritise the needs of pedestrians and cyclists first and private cars last. | As detailed in EIAR Appendix A9.5, traffic management plans for the construction of the MetroLink have been developed to minimise the impact of the Project on road users, and to maintain access to businesses and other premises. A hierarchical approach to traffic management has been adopted with pedestrian/cyclists, public transport and commercial needs provision taking preference over private car usage, in line with the hierarchy identified in the Greater Dublin Area Transport Strategy 2022-2042.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 7                                                                     | Pedestrian and Cyclist Priority During Construction           | 5        | Too often, in Dublin, construction works will close or restrict access to footpaths, cycle lanes, and bus priority lanes, in order to maintain uninterrupted access for private cars or for free public parking. This approach is not consistent with the hierarchy of road users and can be dangerous as well as disruptive.                                                                                                                                                                                                 | Please refer to response (6) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 8                                                                     | Pedestrian and Cyclist Priority During Construction           | 5        | We ask that any temporary changes during construction respect the Hierarchy of Road Users and ensure that access for pedestrians and cyclists is retained as a first priority, even if this means restricting or rerouting motor vehicle traffic.                                                                                                                                                                                                                                                                             | Please also refer to response (6) above. As detailed in EIAR Appendix A9.5, temporary pathways and cycleways will be installed where appropriate and provision will be made to ensure access for those of restricted mobility is maintained. Where the existing level of service for pedestrians cannot be maintained in the vicinity of the construction sites, an alternative route will be designated, be clearly visible, be safe, will have clear signage, and will have the level of service required to cater for the pedestrian and cycle demand. This is indicated in section 6.1 of EIAR Appendix A5.1 Outline CEMP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 9                                                                     | Real accessibility and the lessons from DART                  | 5        | It is important that all Metrolink stations are accessible to all Dubliners, including wheelchair users and others with limited mobility.                                                                                                                                                                                                                                                                                                                                                                                     | <p>As set out by EIAR Chapter 6, MetroLink Operations and Maintenance, the proposed Project has been designed on the principle of Access for All. The design has been developed to meet all legislative requirements relevant to accessibility including the Disability Act 2005 and in turn the Sectoral Plan for Accessible Transport under the Disability Act 2005 (DTTAS 2012). The design will also comply with Part M of the Second Schedule of the Building Regulations.</p> <p>The proposed Project will include the following features:</p> <ul style="list-style-type: none"><li>• The floor of the train will be at the same level as the platform;</li><li>• There will be a very narrow gap between the train and the platform;</li><li>• Wheelchair users will be able to access each train;</li><li>• The interior is designed to ensure maximum visibility of grab rails and other features;</li><li>• All platforms incorporate ramps or lifts for access purposes;</li><li>• Changes in level, platform edges and crossing points are highlighted using tactile paving;</li><li>• Ticket machines will be accessible at all stations with at least one machine with controls set lower for wheelchair users, where the supporting plinth will not project in front of the face of the machine in a way that prevents its convenient use and there will be a clear space in front of the machine to facilitate wheelchair users; and,</li><li>• The internal dimensions of each lift have been designed to accommodate wheelchair users and provide a clear unobstructed space for manoeuvring in front of every entrance door to the lift.</li></ul> |
| 10                                                                    | Real accessibility and the lessons from DART (Bullet point 1) | 5        | <p>In order to ensure that Metrolink is accessible to all, we suggest that the applicant:</p> <p>Monitor the ongoing "Big Lift" project and ensure that all MetroLink lifts are built to the highest standards the first time;</p>                                                                                                                                                                                                                                                                                            | <p>TII have designed a system that takes account of best industry practice, and will continue to do so throughout the detail design phase taking account of any emerging best practice. With particular regards to the provision of lifts, as presented in EIAR Chapter 6, MetroLink Operations and Maintenance, specifications for lift design include features such as tactile floor numbers, the position of the lift controls for easy reach, and signalling and illumination levels. Section 6.7 of this chapter also covers the critical importance of maintenance that will be undertaken to provide a safe and reliable system, including:</p> <ul style="list-style-type: none"><li>• Availability: Ensure that the facilities, equipment and assets in general are kept in optimum conditions to avoid unplanned downtime that can have an impact on service quality;</li><li>• Reliability: To guarantee that the installation or equipment works correctly over a given period;</li><li>• Life of the equipment: To reduce wear and tear on equipment and facilities and assets, thus prolonging their life;</li><li>• Cost reduction: To avoid losses and unforeseen expenses due to corrective maintenance takes following unscheduled downtime, which is in general more costly than scheduled and preventative maintenance.</li></ul> <p>Maintenance will be managed and resourced from Dardistown Depot, with a detailed maintenance plan developed for the whole project by the operator.</p>                                                                                                                                                        |

| Letter Re: Dublin Commuter Coalition, MetroLink, ABP case ref: 314724 |                                                               |          |                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 11                                                                    | Real accessibility and the lessons from DART (Bullet Point 2) | 6        | Ensure that station designs include redundancies to ensure continued access, for example, including both lifts and ramps at surface-level stations, or multiple lifts at each deep-level station with access to both platforms, so a single out of service lift does not leave a wheelchair user stranded;                | <p>As detailed in EIAR Chapter 4, Description of the MetroLink Project, the underground stations are served by public lifts, generally with one lift from street to concourse level, and two lifts concourse to platform level. More lifts are proposed at stations forecasted to experience a higher footfall or to serve two entrances. Six lifts are proposed between the street and platforms and the concourse and platforms at Dublin Airport. At Northwood, two lifts will be provided between the street and mezzanine level, and four between the mezzanine and platform levels. At Tara, two lifts are proposed between the street and concourse level, and four between the concourse and platform levels.</p> <p>Where it has not been necessary to provide additional lifts to serve footfall it was deemed it was not economic to provide additional lifts that will not be needed or will be redundant for almost all the time. For the stations where there is no lift redundancy, in the event of a lift being temporarily out of operation:</p> <ul style="list-style-type: none"><li>• For lift users who can use them (but prefer not to), escalators and stairs remain available, recognising that this will not be appropriate for wheelchair users.</li><li>• For the underground stations, in the event of a:<ul style="list-style-type: none"><li>(i) concourse to surface lift failure, the firefighters lift will be used temporarily.</li><li>(ii) platform lift failure, users may continue one stop north or south, and using the passenger lifts at that stop to access the opposite platform, change directional service and continue to their destination station.</li></ul></li><li>• For retained cut stations, passengers requiring lift access from platform to surface level would need to exit at an adjacent station, noting that these stations are relatively close together. As detailed in Chapter 6 (MetroLink Operations and Maintenance) section 6.8.2, all stations are designed in accordance with the principle of Access for All. The design has been developed to meet all legislative requirements relevant to accessibility including the Disability Act 2005 and in turn the Sectoral Plan for Accessible Transport under the Disability Act 2005 (DTTAS 2012). The design will also comply with Part M to the Second Schedule of the Building Regulations.</li></ul> <p>TII would also note that London Underground's Station Planning Standards and Guidance has been followed as best practice and this does not follow a sizing approach which delivers or requires this level of redundancy.</p> <p>As explained by EIAR Chapter 6, MetroLink Operations and Maintenance, in the event of a lift failure, staff at the Operational Control Centre or within the station will be warned by an alarm, and a staff member will be directed to the station to arrange for the lift to be returned to surface as quickly as possible.</p> |
| 12                                                                    | Real accessibility and the lessons from DART (Bullet point 3) | 6        | Prepare for and provide contingency plans so that, if a passenger lift is out of service, wheelchair users may be allowed supervised access to fire brigade lifts until it is repaired.                                                                                                                                   | Please refer to response (12) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 13                                                                    | Real accessibility and the lessons from DART                  | 6        | Specifically at Glasnevin Station, there are only steps and lifts between the Irish Rail platforms and the street level entrance and the MetroLink concourse. Given the significant transfer patterns predicted between DART and MetroLink services, we believe the Irish Rail platforms should be built with escalators. | There is insufficient space available on the Irish Rail platforms for escalators (require more space and have less evacuation capacity than stairs), and hence lifts and stairs are provided. Passenger flows have been modelled to ensure both lifts and stairs provide sufficient capacity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 14                                                                    | Public Toilets                                                | 6        | According to Volume 2 Chapter 6. 8.1.5 Welfare Facilities for Passengers of the EIAR, public toilets will be provided for passengers at the main interchange stations. However, many key stations such as Estuary are missing public toilets. We believe that all major stations should have public toilets.              | As noted in section 6.8.1.5 of Chapter 6 (MetroLink Operations and Maintenance), public welfare facilities will only be provided at the main interchange stations. The remaining non-interchange stations will not be provided with public welfare facilities for reasons of safety, deterring anti-social behaviour, maintenance and security.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| 1                                          | 3.0 Requested Conditions                                     | 2        | <p>Request that ABP consider two modifications via condition for this project:</p> <p>1. To increase the levels of bike parking provided at five stations: Northwood, Ballymun, Collins Avenue, Glasnevin and Tara Street.</p> <p>2. The second to require the hundreds of HGVs required at each construction site to be direct vision vehicles, which have no major blind spots - see <a href="https://tfl.gov.uk/info-for/deliveries-in-london/delivering-safely/direct-vision-in-heavy-goods-vehicles">https://tfl.gov.uk/info-for/deliveries-in-london/delivering-safely/direct-vision-in-heavy-goods-vehicles</a>. This will significantly reduce the traffic hazard to the most vulnerable road users: pedestrians and cyclists.</p>                                                                                                                                                                                                                                                                                                                                                                                      | The following responses cover these two core observations and the supporting detail provided with this submission.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 2                                          | 3.1 Increase Cycle Parking Provision at City Centre Stations | 2        | The provision at many stations falls well below the predicted demand. In particular of note are Northwood (38%), Ballymun (45%), Collins Avenue (37%), Glasnevin Metro + Rail (43%), Tara Metro + DART (13%).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>As set out by EIAR Chapter 6, MetroLink Operations and Maintenance, due to space constraints in the vicinity of stations in the DCC area, it has not been possible to provide 100% of bicycle parking required to meet demand at every station. However, the maximum number of bicycle parking has been provided at each station taking cognisance of available space. EIAR Chapter 31, Summaries of the route wide mitigation and monitoring proposed, goes on to further note (Mitigation Reference TT19) that cycle parking provisions per station will be monitored to ensure that the level of provision is meeting the demand. Similarly, the volume and type of cycle parking provisions required may change over the course of the Operational Phase due to the ongoing shift to shared and micro mobility solutions.</p> <p>Notwithstanding the above. TII does agree that there is a need for high density cycle parking into the future to accommodate demand from the Project, as well as demand from the general increase in cycling forecasted within the City. In recognising the shortfall, meeting this demand will require a coordinated multi-agency approach to ensure efficient delivery of cycle parking spaces and facilities. There is a clear mix of uses in the areas surrounding MetroLink stations, which may see cycle demand in varying peak times. As a result, it requires a combined approach and delivery from multiple agencies, e.g. Dublin City Council, Fingal County Council, NTA, TII and Irish Rail, to identify how future demand can be accommodated sustainably and the maximum benefits of the parking achieved. This will include the consideration of available land, but noting such land is often already allocated as part of future development plans. TII anticipate cycle parking provisions are likely to involve a combination of fixed and shared bicycles and other facilities to support the delivery of mobility hubs across the region.</p> |  |
| 3                                          | 3.1 Increase Cycle Parking Provision at City Centre Stations | 3        | <p>Appendix A4.1 section 3.2.2 suggests that "Shared Mobility Solutions' (aka bike sharing) means that the provision of adequate cycle parking is not required. In particular, quoting research by TCD Associate Professor Brian Caulfield in 2018 to back up the following statement in the EIAR that "due to the short journeys usually taken by the Dublin Bikes and Bleeper Bikes, the turnover can be very high day to day, with a station turnover ratio of slightly more than 1:5 to the station capacity". No reference is provided for the paper's name.</p> <p>After contacting Brian Caulfield he believes the paper they are referencing is "Effectiveness of Small Scale Bike Sharing Systems According to the Analysis of Turnover Station Ratios" (Jimenez, Nogal, Caulfield, 2018). That research paper does not support the statement in section 3.2.2 that "an assumption can be applied to this scenario whereby 1 space on a public bicycle parking rack for shared mobility could facilitate 5 shared bicycle parking events during the 3-hour peak period used for calculating the potential demand."</p> | <p>Appendix A4.1 suggests the use of shared mobility solutions may assist in accommodating the anticipated demand for cycle parking. It does not suggest that adequate cycle parking is not required. As noted in response item (2) above, TII agree that there is a need for high density cycle parking provision into the future to accommodate demand from the Project, and demand across the city, but meeting the shortfall will require a coordinated multi-agency response.</p> <p>The statement of turnover ratio of station capacity has been erroneously referenced. The 2016 paper 'Perceptually important points of mobility patterns to characterise bike sharing systems: The Dublin case) by Jiménez et al. should have been referenced here instead. As noted in Appendix A4.1, a limited amount of data was available at the time of writing, leading to the development of an assumption which was used to demonstrate 'the potential number of users who can be accommodated by the proposed number of spaces during the 3-hour peak period.' As an assumption only, the turnover ratio of events per 3 hour peak period was not explicitly based upon data in the aforementioned paper, as it looked at station capacity turnover rather than individual parking events.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |

| Submission No.                             |                                                                                |          | 073                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| 4                                          | 3.1 Increase Cycle Parking Provision at City Centre Stations                   | 3        | <p>The applicant makes the argument that there is limited space to provide cycle parking at stations where there is under provision. However, if you look at Griffith Park station the applicant is specifically building an underground cycle parking space to provide the necessary space.</p> <p>Adjacent to the Ballymun and Northwood stations, where the proposed cycle parking will only cover 38% and 45% of the predicted cycle demand respectively, there is ample space adjacent to the station for TII to build the cycle parking necessary to support the predicted demand in the opening year.</p> <p>Our biggest concern is at Tara Street station. Again the applicant argues there is not enough space to provide the necessary cycle parking. The applicant is CPO'ing the whole block so adjacent land is within their control. The vast majority of the site post-construction is marked for "future development by others". TII could use that space for cycle parking in the interim. TII could condition the future development land to include cycle parking for the metro and train station within the new development.</p> <p>TII makes unfounded arguments that shared bike schemes will lessen the need for cycle parking at stations like Tara Street. Even still, their proposals include removing the existing Dublin Bikes station outside of the Constant Markiewicz centre for construction and not reinstate it post-construction (MetroLink Structures Tara Station Proposed Street Level Design - Sheet 1).</p> <p>The other option the applicant should consider is the use of two-tier cycle parking racks. They provide cycling parking at increased densities, making them more suitable for locations with limited space. Two-tier cycle parking racks are not a replacement for the standard Sheffield stand so two-tier racks do not support cargo bikes, tricycles, bikes with large front baskets or rear child seats. Attached at the end of this document are two photos of a two-tier cycle parking hub in Waltham Forest, London, UK.</p> <p>In summary, we suggest that it is possible to comply with the predicted cycle parking demands:</p> <p>At Ballymun and Northwood provide more cycle parking in adjacent land.</p> <p>At Tara Street TII will own the adjacent land and could use it to provide the cycle parking they are required to provide. Reinstate Dublin Bike stations near the station.</p> <p>At all locations consider the use of two-tier cycle parking racks to increase densities where space is constrained.</p> | <p>Please refer to response item (2) above in relation to the coordinated response required to deliver cycle parking within Dublin. As noted, this will include the consideration of available land, but noting such land is often already allocated as part of future development plans. For example, at Tara Street, as noted in your observation, the adjacent site space is marked for 'future development by others'. This land could be developed under a separate planning application post MetroLink becoming operational, and therefore additional cycle parking provision could be provided as part of that development. This requires a coordinated agency approach, as outlined in response item (2). In a similar way, the reinstatement of Dublin Bikes at a suitable location in this area would require coordination with DublinBikes. It is noted, that although 20 DublinBikes spaces will be lost at this location, it is proposed that 256 spaces ill be provided at Tara Street as part of MetroLink.</p> <p>As noted in the Planning Report (submitted as part of the Railway Order), the lands surrounding both Northwood and Ballymun are zoned for mixed uses (such as commerical and residential development, noted in section 4.4.3.6 and 4.5.1.4 of the Planning Report), and therefore there will be in the future, a clear mix of uses in the areas surrounding MetroLink stations, which may see cycle demand in varying peak times. As a result, it requires a combined approach and delivery from multiple agencies, e.g. Dublin City Council, Fingal County Council, NTA, TII and Irish Rail, to identify how future demand can be accommodated sustainably and the maximum benefits of the parking achieved.</p> <p>TII disagree that unfounded statements have been made regarding the impact of shared bike schemes on the cycle provisions proposed. As detailed in response item (3) above, a literature review on shared bike schemes informed the assumptions that were made surrounding the potential turnover events associated with shared bike schemes. As noted in Appendix A4.1, a limited amount of data was available at the time of writing, leading to the development of an assumption which was used to demonstrate 'the potential number of users who can be accommodated by the proposed number of spaces during the 3-hour peak period.' As an assumption only, the turnover ratio of events per 3 hour peak period was not explicitly based upon data in the aforementioned paper, as it looked at station capacity turnover rather than individual parking events.</p> <p>As noted, two-tier cycle parking racks have not been utilised in the Project's design as they may preclude the parking of various other types of bikes, including cargo bikes, tricycles or accessible bikes, amongst others. However, the use of two-tier cycle parking, and the provision of other types of cycle parking, will be considered by TII during the detailed design stage and in our discussion with orther agencies involved in the delivery of cyle parking city wide.</p> |  |
| 5                                          | 3.2 Direct Vision HGVs to Reduce Traffic Hazard Risks to Vulnerable Road Users | 5        | <p>We are concerned about the level of road danger posed by the heavy good vehicles (HGVs) needed to construct MetroLink and that TII have not sufficiently mitigated the risk in their submitted outline Construction Environmental Management Plan.</p> <p>2. To require the hundreds of HGVs required at each construction site to be direct vision vehicles, which have no major blind spots. This will significantly reduce the traffic hazard to the most vulnerable road users: pedestrians and cyclists.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>TII confirm that their main works contractors will be required to comply with the Direct Vision Standard (DVS) and safety permit for heavy goods vehicles (HGVs).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
| 6                                          | 3.2.2 Impact of MetroLink on number of HGVs in Urban Areas                     | 6        | <p>Appendix A9.5 Scheme Traffic Management Plan, section 4.4.3 shows how much of an impact the HGVs required for MetroLink will increase the number of HGVs in the area. Many streets will see construction vehicle increases of 10-30% and some streets increases of over 30% (A9.5, Appendix F, Figure A.F-1 - Figure A.F-4). This will increase the risk to vulnerable road users on many city centre streets with no segregated cycling infrastructure.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>As part of the traffic assessment presented in EIAR Appendix A9.5 Scheme Traffic Management Plan, the impact on cycle safety has been considered. A two-stage screening assessment methodology has been adopted, ensuring that any reduction in quality of service for cyclists (by one level or more) has been captured, with remedial measures including the temporary installation of cycle ways where appropriate, to minimise the impact on cyclists. Where the existing level of service cannot be maintained in the vicinity of the construction sites, alternative routes will be designated to minimise the risk to vulnerable users. As such, the traffic management measures have been designed in line with the hierarchy of road users identified in the GDA Transport Strategy, giving highest preference to pedestrians and cyclists.</p> <p>Prior to implementation, all traffic management measures will be agreed with FCC and DCC, and where relevant, consultation with An Garda Siochána and other statutory stakeholders will be undertaken to ensure the safety of use</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |

| RE: MetroLink Railway Order (Case: 314724) |                                                 |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 7                                          | 3.2.3 Mitigation Measures proposed by MetroLink | 6        | Appendix A5.1 Outline Construction Environmental Management Plan (CEMP) outlines the small number of mitigation measures proposed by the applicant.                                                                                                                                                                                                                                                                                                       | Please note, the assumption has been made that the submission query in this instance intends to read as 'Appendix A5.1 Outline Construction Environmental Management Plan (CEMP) outlines the small number of mitigation measures proposed by the applicant', rather than 'outsides'.<br><br>As outlined in Appendix A5.1, the purpose of the Outline Construction Environmental Management Plan (CEMP) is to provide a framework that outlines how contractor(s) working for TII and the NTA will manage, and where practicable, minimise, potential negative environmental effects during the construction phase. It identifies the minimum requirements with regards to the appropriate monitoring, inspection and reporting mechanisms that need to be implemented throughout construction. EIAR Chapter 31 presents a summary of the route wide mitigations that are proposed for all aspects of the Project. Potential significant impacts to cyclists, and other users, have been designed out as far as possible through the development of the temporary traffic management measures, and therefore further mitigations are not required.                                            |  |
| 8                                          | 3.2.3 Mitigation Measures proposed by MetroLink | 6        | Table 6.1 topic TT7 discusses the mitigation measures for people walking and cycling.<br>Vague suggestions are made (by TII) about providing temporary footpaths and cycleways around construction sites.                                                                                                                                                                                                                                                 | Prior to implementation, all traffic management measures will be agreed with FCC and DCC, and where relevant, consultation with An Garda Síochána and other statutory stakeholders will be undertaken to ensure the safety of users.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| 9                                          | 3.2.3 Mitigation Measures proposed by MetroLink | 6        | Table 6.1 topic TT6 says that "Bus lanes may be temporarily converted to general traffic lanes in order to optimise the flow of traffic on the network during the Construction Phase".<br><br>In many places in the city bus lanes are the only cycle infrastructure that exists. Removing bus lanes will make cycling less safe.                                                                                                                         | Please refer to response (6) above in relation to the assessment of the impact on cycle safety and proposed mitigation measures.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 10                                         | 3.2.3 Mitigation Measures proposed by MetroLink | 6        | Report A5.3 Construction Sequence Report shows bus lanes and cycle lanes removed during some construction phases in favour of maintaining traffic lanes.                                                                                                                                                                                                                                                                                                  | Please refer to response item (6) above in relation to the assessment of the impact on cycle safety and proposed mitigation measures. Appendix A9.5 Scheme Traffic Management Plan details the temporary traffic management measures proposed and the impacts on all road users throughout the construction phase. As noted, a hierarchical approach to traffic management has been adopted with pedestrians/cyclists, public transport and commercial needs provision taking preference over private car usage. A summary of the impact of the construction works indicates that, as a result of the TTM and mitigation measures proposed, the bus network will not face any significant impacts at any location. At most locations, with the exception of Dublin Airport and Glasnevin, cycle facilities are protected. At these locations, mitigation measures have been identified to minimise the severity of the impact as far as possible.<br><br>Prior to implementation, all traffic management measures will be agreed with FCC and DCC, and where relevant, consultation with An Garda Síochána and other statutory stakeholders will be undertaken to ensure the safety of users. |  |
| 11                                         | 3.2.3 Mitigation Measures proposed by MetroLink | 6        | Chapter 28 Risk of Major Accidents and Disasters notes that a serious or fatal collision involving construction traffic caused by the increase in HGVs could lead to an injury or fatality. This risk exists in all zones, throughout the life of the project. Table 28.9 ID C8 says that to mitigate this risk a number of actions are proposed including "Blind spot detection will be compulsory for HGVs in order to identify vulnerable road users". | TII confirm "Blind spot detection will be compulsory for HGVs in order to identify vulnerable road users". Please refer to response item (5) above in relation to the safe operation of heavy goods vehicles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 12                                         | 3.2.4 Proposed Mitigation Measures for HGVs     | 6        | TII needs to set high standards for HGV vehicles that work on the MetroLink project. TII has a responsibility to protect vulnerable road users.<br><br>The CrossRail project in the UK set a good example. It required... much stronger requirements than those described by TII in their CEMP or in Chapter 28.                                                                                                                                          | Health and safety of all, whether it be the public, businesses, stakeholders, people working on the project or any other group or entity that comes in to contact with the Project, will not be compromised in anyway. As reflected by response (7) above, if there are any other safety concerns that Dublin Cycling Campaign feel would benefit from further discussion, TII would welcome this engagement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |

| Submission No.                             |                                             |          | 073                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| RE: MetroLink Railway Order (Case: 314724) |                                             |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 13                                         | 3.2.4 Proposed Mitigation Measures for HGVs | 9        | <p>TII's proposed mitigation measures are out of date with the best scientific evidence on how to mitigate the risk to vulnerable road users posed by HGVs. There are standards from other projects that they should implement for MetroLink.</p> <p>We request that ABP ask TII for further information on how to mitigate this risk, including how cycling will be facilitated safely around construction sites.</p> <p>We also ask ABP to require conditions on HGVs to use the latest technology improvements to reduce the risks of blind spots.</p> | <p>TII do not agree that the proposed mitigation measures are outdated.</p> <p>As noted by:</p> <p>Response (5) above, TII confirm that their main works contractors will be required to comply with the Direct Vision Standard (DVS) and safety permit for heavy goods vehicles (HGVs).</p> <p>Response (5) and (6) refer to how the safety of cyclists, and the details surrounding the proposed temporary traffic management measures for each construction site will be addressed; and</p> <p>Response (12) that health and safety of all is the top priority of TII and that if there are any other safety concerns that Dublin Cycling Campaign feel would benefit from further discussion, TII would welcome this engagement.</p> |
| 14                                         | 4.0 Conclusion                              | 9        | <p>We hope that ABP decides to approve this vital public transport project with the two modifications via condition.</p> <p>Increase cycle parking at the following metro stations: Northwood, Ballymun, Glasnevin and Tara Street</p> <p>Require TII to use the latest standards for mitigating the risks of HGVs to vulnerable road users by copying working standards from other European construction projects</p>                                                                                                                                    | <p>Please refer to response (13) regards mitigating risk of HGV's to vulnerable road users and response (4) regards increasing cycle parking provision.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Submission on the Railway (MetroLink to Charlemont via Dublin Airport) Order [2022] |                    |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1                                                                                   | Introduction       | 1        | <p>I preface this submission be clearly stating I welcome the plans for MetroLink and the fact it has been submitted to An Bord Pleanala for the granting of a Railway Order.....</p> <p>The current alignment as submitted to An Bord Pleanala is ambitious and has the capacity to reshape transport in Dublin for decades to come, with multiple connections to bus, rail and tram services.</p> <p>It is an absolute necessity that this project proceeds without further delay.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>TII wish to thank you for taking the time to make this submission. Your positive support is gratefully appreciated, and for the reasons you have set out, TII are committed to realising the MetroLink Project to address the challenges highlighted and to deliver the benefits that MetroLink will bring.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2                                                                                   | Local Connectivity | 3        | <p>MetroLink proposes to link the third largest town in Ireland by population, Swords, with our capital city, our international airport, Dublin Airport, and Dublin City University through Phibsboro and into the city centre. It is vital infrastructure. When this is delivered, we must make sure that people will not have to get into their cars to travel from one side of Swords to the other. They should be able to travel quickly, efficiently and in an environmentally friendly way to the MetroLink. This will benefit all the Greater Dublin Area, particularly those living in the rural villages and rural areas who will be able to get to Swords relatively quickly and then on into Dublin City. It is not just a service for Swords, or Fingal, or the airport; it is infrastructure that will benefit the whole of the Greater Dublin Area.</p> <p>In Swords the key concern is transport for residents. There is a great need for improved paths and cycle lanes for people to be able to cycle, walk and use electric scooters throughout Swords. The Metrolink project must be delivered but in tandem with the delivery of accessibility and sustainable methods of accessing Metrolink stations throughout the proposed MetroLink route.</p> | <p>As outlined in Chapter 4 (Description of the MetroLink Project) Section 4.13.2.1, the need for integration with other modes of transport including walking and cycling has been considered in the design of the proposed Project. The R132 Connectivity Project received planning approval on 20 January 2022 and will progress ahead of MetroLink. This will improve the R132 for vehicle occupants, cyclists and pedestrians and will also provide access across the R132 where it is necessary to demolish four footbridges which conflict with the MetroLink alignment. The realignment of the existing roundabouts to signalised junctions will improve connectivity across the R132 through the provision of signalised pedestrian crossings and improved footway provisions. Cycle parking provision will also be provided as part of MetroLink at the proposed Swords Station and will cover 100% of the predicted demand at this station (Table 4.9).</p> <p>The South Fingal Transport Study 2019 also notes that future interchange to the MetroLink from other modes, including bus, walk and cycle should be considered as part of any redevelopment of Swords Main Street and the R132 Swords Bypass. Green corridors have also been identified as part of the Barrysparks and Crowscastle Masterplan, which will be located adjacent to the Swords Central Station, providing pedestrian and cyclist connectivity from the Holywell area.</p> |

| Letter Re: Intended application by the NRA (Operating as TII Ireland) for the Railway (MetroLink -Estuary to Charlemont via Dublin Airport) Order (2022) |                                           |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
| 1                                                                                                                                                        | Communication from TII to local residents | 2        | TII have not been transparent throughout the planning process of this proposed project. All documentation has been on line, and for those of us unable to avail of online information there should have been meetings with the residents. The only meeting held with regard this was several years ago and this was organised by the local residents. At no stage have TII ever offered a town hall type meeting with regard this railway order. | <p>TII disagree with the assertion made that a proper and transparent engagement process was not followed. As detailed in EIAR Chapter 8 (Consultation) section 8.4 and 8.6, non-statutory consultations have been held on both the Emerging Preferred Route and the Preferred Route, respectively. Printed copies of all documentation were also made available to the public during the consultation period at offices throughout the city.</p> <p>EIAR Chapter 8, Consultation presents an overview of the extensive stakeholder and public consultation that has been undertaken to date to inform the development of the proposed Project. As indicated, consultation will be maintained by TII throughout the construction phase alongside the establishment of the Project Construction Traffic Forum, and the provision of a freephone (e.g. 1800) helpline where concerns can be raised. Further details can be found in section 6.1. of EIAR Appendix A5.1 Outline CEMP in section 5.4 of Chapter 5 (MetroLink Construction Phase).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 2                                                                                                                                                        | Provision of Detail                       | 2        | I have been in receipt of documentation which I consider scant and does not provide any real clarity on potential damage to the property as a result of vibration from the heavy machinery boring underneath my property. The paperwork appears to be done from the TII side and is not heavy on information for the property owner.                                                                                                             | <p>TII believe that the information presented is clear and specific to the building in question.</p> <p>Excavation for the tunnels and other below ground structures could potentially lead to ground movements at the surface and below ground. An assessment of the effects of vibration on ground movements and potential impacts on existing buildings has been carried out as part of the Scheme Design and presented in the EIAR in Appendix A5.17 Building Damage Report.</p> <p>EIAR Appendix A 5.17, Building Damage Report, assesses the impacts of construction generated ground movements and settlement on this property. The settlement contours calculated were used to undertake the building damage assessment. The damage categories are described in Section 4.3.2 of the Building Damage Report. The building risk categories shown in Table 4-4 are used to define the degree of building damage related to the Risk Category. Table 5.2 of this report shows that your property (building B123) has been assessed as falling within the 'Slight' - Damage Category 2 (No structural damage - table4.4. of Appendix A5.17 indicates type of issues that may be seen, such as cracks that may be easily filled, redecoration probably required, slight fracture cracks inside and exterior cracks visible with some repainting required). See also response (6) in relation to the Property Owners Protection Scheme (POPS) where remedial works to any damage caused by the MetroLink project are addressed.</p> <p>EIAR Appendix A14.5 Groundborne Noise and Vibration Modelling Results presents the assessment of vibration resulting from the construction (and operational) phase. The predicted level of groundborne vibration during TBM passage is 0.278 ms-1.75 day and 0.234 ms-1.75 night, below the VDV (Vibration Dose Value is a parameter that combines the magnitude of vibration and the time for which it occurs) Threshold Level of 1.0 ms-1.75 day and 0.5 ms-1.75 night, resulting in a not significant impact on the building.</p> <p>TII's contractor(s) will prepare a Construction Noise and Vibration Management Plan (CNVMP) for the proposed Project as referred to in EIAR Appendix A5.1, Outline Construction Environmental Management Plan (CEMP). The CNVMP will be a live document and will include a full monitoring and auditing programme which will be agreed with the Local Authorities prior to the commencement of the Construction Phase, including predetermined monitoring trigger levels to ensure noise and vibration limits are not breached, noting that it is not possible to mitigate TBM groundborne noise and vibration at source. Table 6.2: Noise and Vibration Measures of the Outline CEMP outlines the monitoring programme requirements.</p> <p>The Transport Infrastructure Ireland (TII) Airborne Noise and Ground-borne Noise Mitigation Policy (Appendix A14.6 of Chapter 14) sets out the construction noise insulation and temporary rehousing measures to be implemented where required.</p> |  |
| 3                                                                                                                                                        | Depth of Tunnel                           | 2        | The tunnel from ground to top level will be 15 metres. This is just short of 50ft which is not deep. The average depth of the underground in London is 24 metres, which would equate to 78ft.                                                                                                                                                                                                                                                    | <p>The property pack issued to you indicates that the distance from ground level to the crown of the tunnel will be 14m, and 20.7m from ground level to track. This is detailed on drawing no. ML1-JAI-BOR-ROUT_XX-DR-Y-03100 in the property pack.</p> <p>The depth of the tunnel is sufficient to mitigate impacts on your building. The depth in relation to your building has been used in the assessments outlined above and has concluded that there will be no structural impacts and hence the depth of the tunnel is considered appropriate.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |

| Letter Re: Intended application by the NRA (Operating as TII Ireland) for the Railway (MetroLink -Estuary to Charlemont via Dublin Airport) Order (2022) |                           |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| 4                                                                                                                                                        | Monitoring of Foundations | 2        | The properties along this section of the route have the standard foundations which would be attributed to a property built over 100 years ago. The house is sitting on boulder clay and monitoring must be carried out to the highest standard. This area is referenced in the documentation but no studies appear to have been completed. Foundations under these properties are only 18 inches in many of the homes and will be subject to subsidence and perhaps a rise in the water table level.                                                                                                                                                                                                   | Please refer to response items (2,3) above. The type and nature of your property has been used in the assessment. A programme of ground movement monitoring will be implemented, with the monitoring locations informed by further analysis to be undertaken during the detailed design stage. The assessment of the impact of the construction works on the water table is presented in Chapter 19 (Hydrogeology). There is no predicted change in ground water levels at this location, as indicated in section 19.7 of Chapter 19 (Hydrogeology).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |
| 5                                                                                                                                                        | Subsidence                | 2        | As this is a large terrace, where there is the potential for movement of the boulder clay. It is very possible one weaker structure on the terrace could negatively impact all the properties and cause issues with subsidence/cracking/issues with doors windows/roof/drains. Or more serious damage and there does not appear to have been any impact study done in this instance.                                                                                                                                                                                                                                                                                                                   | Please refer to response items (2, 3, 4) above related to tunnelling works and the assessment of impacts on ground movements, subsidence and settlement. The assessments undertaken respect the ground conditions local to your property. Please also note that the Phase 2a assessment undertaken is considered moderately conservative. TII have undertaken a sample Phase 3 assessment on terraced residential buildings and this demonstrates the conservatism and that impacts are likely to be lower than the "slight" impact currently assessed. Further information on the assessments can be found in EIAR Appendix A5.17 Building Damage Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
