| 6                                                                                                                                                        | Insurance                 | 2 and 3  | If this type of damage occurs what is the plan if the property has to be vacated for a period of time if remedial work needs to be carried out. As with the current situation and the housing shortage there would not be a viable alternative to house people. Also there would need to be an assurance that all contents in the house needed to be adequately insured in the event the damage necessitates the vacation of the home. There is no clarity as to how our Home Insurance will work, how do TII propose insuring the house and contents for this period of time. As per a recommendation to wrap up your good china that was received, that is not what I consider an adequate response. | <p>Structural impacts are not predicted. Please refer to response item (2) in relation to impacts to your property, and to EIAR Appendix A5.17 Building Damage Report for further information.</p> <p>The Property Owner Protection Scheme (POPS), committed to by TII, allows residential property owners to register with TII if their residential property is within thirty (30) metres of the edge of the MetroLink alignment or fifty (50) metres of station structures. The POPS comprises condition surveys of residential properties along the route of the proposed Project. The purpose of the condition surveys is to ascertain the condition of the properties before, during (if deemed necessary), and after the completion of the proposed Project to determine whether there has been any deterioration of any of the properties surveyed and whether same may be attributable to the proposed Project, and subsequently to recommend repairs as appropriate. Condition survey data gathered pre and post construction, and possibly during construction, will be used to assist the property owner and TII in swift and accurate verification of any property damage claims which may be received from property owners. The POPS is designed to cater for / address repair work which may be necessary for any damage (attributable to the proposed Project) to a qualifying residential property up to a threshold of €45,000. The POPS will be introduced by TII through public consultation and will be formally advised to eligible property owners by the Public Relations Department.</p> <p>Further information on POPS is available in Chapter 11 (Population &amp; Land Use). Useful information can also be found in the MetroLink Frequently Asked Questions document which can be found online at: <a href="https://www.metrolink.ie/en/your-property/property-owners-protection-scheme/">https://www.metrolink.ie/en/your-property/property-owners-protection-scheme/</a> , and this is where useful updates will be made available as the proposed Project progresses.</p> <p>As detailed in response item (2), your property will see 'Slight' damage, which includes for cracks which can be easily filled, and redecoration. Exterior cracks may be visible which may require repainting for weather tightness, and doors and windows may stick. It is anticipated that rehousing will not be required during this time as no structural damage will occur. Further details on the categorisations can be found in Table 4-4 of EIAR Appendix A5.17 Building Damage Report.</p> <p>Insurance costs will be dealt with as part of the overall compensation package associated with any relocation deemed necessary under the Airborne Noise &amp; Groundborne Noise Mitigation Policy as outlined in EIAR Appendix A14.6.</p> |  |
| 7                                                                                                                                                        | Speed of Remedial Work    | 3        | How quickly would TII address the issues, in the event of damage would this immediately be assessed and repaired?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Please refer to response Item (6).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |
| 8                                                                                                                                                        | Timeframe                 | 3        | The timeframe of the tunnelling beneath this particular terrace, I was unable to see any detail on this. How long will this take, and the actual depth of the tunnel underneath the property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>The TBM will take approximately 2 weeks to pass through the area around your property. It would take nominally 1 day to pass under your specific property.</p> <p>The property pack issued to you indicates that the distance from ground level to the crown of the tunnel will be 14m, and 20.7m from ground level to track. This is detailed on drawing no. ML1-JAI-BOR-ROUT_XX-DR-Y-03100 in the property pack.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |

| Letter Re: Intended application by the NRA (Operating as TII Ireland) for the Railway (MetroLink -Estuary to Charlemont via Dublin Airport) Order (2022) |                      |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 9                                                                                                                                                        | Dimension of Tunnel  | 3        | I was unable to find adequate information in lay person terms included in the proposal. Therefore would seek additional information on exact depth and width of the tunnel running from Cliftonville Road to Harts Corner.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>The alignment drawings contained within the Railway Order Plans/ Drawings contain the vertical alignment of the tunnel rail in relation to the existing ground level. Sheet 12 of 19 in Book 2 of 2 shows the alignment in this area which varies with the distance along the route, known as chainage. Please note that the final design alignment will be confirmed during detailed design.</p> <p>The typical tunnel drawing ( drawing reference ML1-JA1-SRD-ROUT_XX-DR-Y-01004) is found in the Structures Drawings Book 3 of 3. This drawing indicates that the overall external diameter of the tunnel ring will be 9.2m.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 10                                                                                                                                                       | Drains & Water Table | 3        | The drainage system, to the rear of my property there is a large underground drain that connects this terrace of houses. This needs to be checked and there needs to be monitoring to ensure that no cracks/damage/subsidence occurs. This could to all intents and purposes develop into a sink hole due to the nature of the clay. How will this impact the water table in this area as there are multiple underground culverts and drains? Drains need adequate monitoring to ensure that no effluent is running into the surrounding ground.                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Please refer to Items 2,3 and 4 above - there is no predicted impacts on utilities nor any impact on the water table in the area. TII will procure its contractors to develop Instrumentation and Monitoring Plans. These plans will help assure that the risks associated with tunnelling and station excavations impacting property and utilities are appropriately managed and controlled. TII will provide advance notice of any attendance that the monitoring contractor may require. Further details on the Instrumentation and Monitoring Plans are presented in EIAR Appendix A5.1 Outline CEMP section 1.1.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 11                                                                                                                                                       | Station Building     | 3        | <p>The building in the drawings in no way sits in the landscape comfortably, it is not in keeping with any of the local architecture. A building should grab the attention of anyone visiting, and become something that the community are proud of, are able to use as more than a station. This needs much more development as the Brian Boru is a landmark for anyone visiting the area with links to James Joyce's Ulysses, the mural on the side alone is something particular to the area. The station name is also very generic, and it if historic building are proposed for demolition there should be something kept in the memory banks, name the station the Brian Boru or similar. No one refers to this part of the city as Glasnevin it has been called Harts Corner since the 1920's when the Harts Building was constructed. Is it the policy for large building projects to eliminate all connection with the previous history of an area?</p> | <p>Regarding the design of Glasnevin being out of character TII disagree and believe the commissioning of internationally renowned architect Nicholas Grimshaw and Partners, has delivered a contemporary station design which is appropriate for a state of the art metro system such as MetroLink. Appropriately, significant emphasis is placed on the public spaces. Where feasible, the station concourse is a soaring space illuminated from above with natural light. Dublin's rich architectural heritage has been respected, but not copied in a pastiche imitation. In accordance with best conservation principles, as set out in the ICOMOS Venice Charter of 1964, the stations are architecturally distinguishable so as not to falsify the existing historic context. Reference and due respect to that context is made through the choice of high quality and appropriate materials and the scale of the interventions.</p> <p>The Project will deliver a robust and authentic design with a strong metropolitan identity, unique and sympathetic to Dublin. Concepts such as singular station volumes, use of natural light, intuitive wayfinding, robust and long-lasting materials, and contextual placemaking will be followed through all stages of development and construction, combining to form the very best in architectural vision.</p> <p>The 'Materials Palette' that has also been included with the Railway Order application further confirms the 'MetroLink Design Vision Principles', including the principle of achieving a 'Sense of Place' that reflects the local area, that is appropriate to the City, and the local context / character. Further information on the MetroLink Design Principles can be found in section 4.5 of Chapter 4 (Description of MetroLink Project).</p> <p>Unfortunately, due to the available land, combined with the construction challenges associated with providing this complex multi-modal interchange station that will deliver significant transport benefits by nature of its connectivity, there is no means of retaining the Brian Boru pub. TII acknowledge this is a significant impact, as stated in CHapter 26 (Architectural Heritage).</p> <p>Before proposing the demolition of the Brian Boru pub, TII did carefully examine the alternative of locating a station at Drumcondra rather than Glasnevin as reported by EIAR Chapter 7, Consideration of Alternatives, section 7.6.5. Both options would require demolition of buildings with potential for significant impacts on architectural heritage, however, once the construction is complete, the proposed station location at Glasnevin offers a much better interchange station location for passengers, a key Project objective of MetroLink.</p> <p>The impacts of the Glasnevin works have been assessed and reported in the EIAR. The Brian Boru pub will be recorded by means of photography and written description to English Heritage Level 3 standard prior to demolition. This is detailed in section 26.7.1 of Chaper 26 (Architectural Heritage).</p> <p>The station is name Glasnevin Station for the purpose of the Railway Order Application. There are no current plans to change names.</p> |

| Letter Re: Intended application by the NRA (Operating as TII Ireland) for the Railway (MetroLink -Estuary to Charlemont via Dublin Airport) Order (2022) |                               |          |                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 12                                                                                                                                                       | Blasting                      | 3        | Liaison required with local homeowners.                                                                                                                                                                                                                                                                                                                                                                                  | <p>The EIAR Chapter 5, MetroLink Construction Phase, Section 5.12.4.5 sets out TII Plans for Community and Engagement during the Construction Phase.</p> <p>A Stakeholder and Community Engagement Plan has already been developed which has guided the frequency and means of communication to date. The proposed Project will continue to progress community engagement by:</p> <ul style="list-style-type: none"><li>▪ Regularly reviewing and updating stakeholder and community engagement plans;</li><li>▪ Actively maintaining partnerships and design focus groups established with the community; and</li><li>▪ Communicating in a timely and open manner.</li></ul> <p>Through the ongoing development of this plan, TII and its appointed contractor(s) will ensure that local residents, occupiers, businesses, local authorities and all other stakeholders affected by the proposed construction works, as outlined in the EIAR, will be informed in advance of work taking place.</p> <p>As detailed in section 3.3.1 of EIAR Appendix A5.1 Outline CEMP, it is noted that the principal component of a Stakeholder Communications Plan will include:</p> <ul style="list-style-type: none"><li>* Procedures to inform members of the community directly affected by the Construction Phase on schedules for any activity of a particularly disruptive nature which is likely to impinge on their person or property e.g. blasting, demolition, pile driving and any mitigating actions that are being taken (shielding, restriction on work hours) to minimise such disruption.</li><li>* For the tunnel boring, TII will establish a website to provide information on the forecast and actual passage of the tunnel boring machine. The contractor(s) will distribute leaflets to properties and affected parties, giving such notice along the tunnelling alignment, along with details of the first point of contact for any queries.</li><li>* The contractor(s) will coordinate preconstruction defect surveys for identified properties, liaising (in conjunction with the employer) with the building surveyor employed to carry out the surveys and maintaining a dialogue with the relevant property owners throughout the duration of the works.</li><li>* Details of contact names and number for any complaints that may arise during works.</li></ul> <p>TII and its appointed contractor(s) will ensure that local residents, occupiers, businesses, local authorities and all other stakeholders affected by the proposed construction works, as outlined in the EIAR, will be informed in advance of work taking place. The notifications will detail the estimated duration of the works, the working hours and the nature of the works. All notifications will include a local helpline number. In addition, information on the works will also be available on the proposed Project website.</p> |
| 13                                                                                                                                                       | Steering and Monitoring Group | 3        | A steering group needs to be set up; as there has to be a direct connection between the project developers with the local community and the residents, this has not been discussed. There needs to be full accountability and transparency. As we are to have to deal with a huge building project both underneath our homes as well as at our main point for access to facilities like hospitals, shops, chemists, etc. | Please refer to response (12) above related to the consultation process of the MetroLink project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Letter Re: Intended application by the NRA (Operating as TII Ireland) for the Railway (MetroLink -Estuary to Charlemont via Dublin Airport) Order (2022) |                              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 14                                                                                                                                                       | Access to Emergency Services | 3        | There is a GP practice and chemists close to the station site, what is the proposal in the event the station build demands the relocation of these services. Access to the Mater Hospital will this be compromised due to road closures?                                                                                                                                                                                                                                                                                                                                                                      | <p>Chapter 5 of the EIAR, MetroLink Construction Phase, explains that traffic management plans for the construction phase of the Project have been developed to minimise the impact on road users, and to maintain access to businesses and other premises. Prior to implementation, all traffic management measures will be agreed with the relevant local authority (FCC or DCC as the case may be) and where relevant, consultation with An Garda Síochána and other statutory stakeholders will be undertaken. The design of traffic management measures and highways works is based on achieving the key objective of maintaining continual access to all properties during the works. Where necessary, a safe alternative route will be provided for pedestrians and vulnerable road users, such as children, and persons with restricted mobility, to maintain pedestrian access to premises. Where detour routes are required, these will be kept as short as possible and detour signage will be clear and easy to understand. All construction sites will be designed to be as unobtrusive as possible. Further information on these mitigation measures can be found in section 6.1. of EIAR Appendix A5.1 Outline CEMP. As a result of these measures, it is not anticipated that the station build will demand the relocation of the GP or chemist at this location.</p> <p>EIAR Chapter 9, Traffic and Transport, section 9.7.1.2 includes a Scheme Traffic Management Plan (STMP) to manage traffic movements during the construction phase to ensure traffic congestion is minimised. The Plan includes measures such as the establishment of Local Community forums which will cover areas local to each station, where stakeholders will have an opportunity to inform the traffic management element of the project. Other measures include the control of construction vehicles in terms of their hours of operation and restrictions on vehicle size and weight.</p> <p>Access to the Mater Hospital will be maintained at all times, as indicated in EIAR Appendix A9.5 Scheme Traffic Management Plan section 7.7.6.3.1.</p> |
| 15                                                                                                                                                       | Community Fund               | 3 and 4  | A fund needs to be set up for the local community as it is this area has no community hall, no facilities for residents to have community groups/functions/meetings and this should be incorporated into the new station. The proposed station building can easily accommodate commuters and residents. It is important that something is given back to the community as we are giving a huge amount, from having the potential of property damage, to the problems that may be cause commuting to the city centre and the effect it will have on local amenities/services especially for the elderly person. | <p>TII will work with established Community Groups through the local community liaison officers along the route to identify projects at local level that would involve the Community in the delivery of MetroLink and its legacy. Such projects could include:</p> <ul style="list-style-type: none"><li>- A local school learning programme.</li><li>- Enhancement of community amenity within agreed funding limits.</li><li>- Engagement with final landscape and finishing options, including aspects of biodiversity.</li></ul> <p>TII are willing to explore mechanisms for investing in local initiatives to support affected communities during the works, such initiatives will be subject to funding being made available.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Letter Re: Intended application by the NRA (Operating as TII Ireland) for the Railway (MetroLink -Estuary to Charlemont via Dublin Airport) Order (2022) |              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 16                                                                                                                                                       | Summary      | 4        | <p>I have lived in this property for nearly 50 years, raised a family and this house can definitely do the same for more families far into the future. The old buildings should be given proper recognition and enjoy protection that other European cities provide. There is not enough safeguarding given to areas that actually enhance a city, and provide fantastic living spaces for families If we are to have a thriving area that people want to live in and visit we need to start to respect and appreciate our architecture which is considerably better and more durable than building that are going up today.</p> <p>The metro is a huge waste of money and an over ground solution would have serviced the locality much better, if a Luas had been run down the Finglas Road, and came from the airport stopping off along route this would have provided the same service and had less impact on properties and historic buildings along the route. I do not believe that this metro will provide the income to cover the cost of building for decades to come and is another wasteful project that will take years to pay dividends.</p> | <p>Your views are noted. TII understand the concerns around protection of buildings and as such, EIAR Chapter 26 (Architectural Heritage) assesses the impact of MetroLink on architectural heritage during both the construction phase and operational phase. as detailed in section 26.3.2. of Chapter 26, the assessment has been undertaken with reference to the most appropriate policies, legislation and guidance documents relating to architectural heritage. Section 26.7.1 of Chapter 26 presents the proposed mitigation measures to protect such buildings within the study area. Please refer to response item (11) above in relation to the impacts to buildings in the Glasnevin area.</p> <p>Chapter 7 of the EIAR (Consideration of Alternatives) details alternative route options considered by TII in the development of the proposed Project and the rationale for ruling those options in and out, that included an assessment of the environmental impacts of each option considered, both positive and negative. In the Fingal North Dublin Transport Study, alternative options were considered including several light rail options. Extending the Luas line from Broombridge to Finglas (LR2) and on to Dublin Airport and Swords was also considered, however it was eliminated from further consideration as the journey time for this option would be very long when compared to other options.</p> <p>The assessment identified an Optimised Metro North (LR7) as the best option for the following reasons:</p> <ul style="list-style-type: none"><li>• It was the most economically advantageous scheme when compared to other options, delivering the highest benefit to cost ratio (BCR) of 1.5, almost double the BCR of the next best scheme (Tunnelled Luas);</li><li>•It generated the highest level of transport benefits when compared to other options, with the highest number of additional public transport trips generated in the morning peak travel period;</li><li>•It provided a new strategic public transport corridor, avoiding reliance on either the existing heavy rail lines or the Luas Cross City line;</li></ul> <p>•It delivered a connection right into the centre of the city, serving O’Connell Street and St. Stephen’s Green;</p> <p>•It retained the opportunity to extend Luas Cross City to Finglas, which would not be feasible if the tunnelled Luas options were selected, and it avoided reducing the service level on Luas Cross City to Cabra and Broombridge;</p> <p>•Due to the high level of segregation, it was considered to significantly increase capacity to allow for potential future growth along the corridor, when compared to other options;</p> <p>•It could potentially be extended southwards in the longer term to alleviate high travel demand on the Luas Green Line, and ultimately form a complete north south metro corridor traversing both the north and south city; and</p> <p>•This option delivered the highest safety benefits when compared to other options.</p> <p>TII disagree that 'the metro is a huge waste of money'. In July 2022, the Government granted Approval in Principle to the NTA to enable the submission of a railway order application by TII to An Bord Pleanála in respect of the MetroLink project (Decision Gate 1). This approval was granted after the Preliminary Business Case (PBC) had undergone significant scrutiny and challenge by bodies that are independent of TII, including DoT and DPER review (including independent review by JASPERS and the Major Projects Advisory Group (MPAG)) of the PBC around timeline, costs and benefits that were updated to inform the Government decision.</p> |
| 17                                                                                                                                                       | Summary      | 4        | <p>There is also a total lack of communication from TII, a refusal to engage with the residents who are actually granting them permission to proceed, there is a huge displeasure within the area with the way both TII and local representatives did not engage with residents. But this seems to be a standard procedure with these large construction projects which is a sad indictment for both our large infrastructure agencies and our local elected representatives.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>Please refer to response (1) above regarding engaging with residents. TII regret that there is a perception that there has been a lack of engagement, however please note that there have been 2 rounds of non-statutory consultation (one for the Emerging Preferred Route, and one for the Preferred Route) and over 1,300 meetings with stakeholders affected by the works since 2018. This is detailed in table 8.1 of EIAR Chapter 8 (Consultation). It is intended that the consultation undertaken in respect of the MetroLink Project will, when the railway order process is complete, fully meet the requirements of the Aarhus Convention, Codified EIA Directive and Irish national legislation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: A submission in respect of the Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022, with specific reference to the proposed Mater Station and associated tunnel |                            |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1                                                                                                                                                                                                                                                                                                                                              | The proposed Mater Station | 2        | <p>The proposed Station works as defined and authorised by this Order ('the Works'), will have significant consequences for the Four-Masters Park (the 'Park') located on the corner of Berkeley Road and Eccles Street. This park is focally dominant in the area and is a welcoming sight for residents and visitors alike, particularly those who enter the area from the North Circular Road/Berkeley Road direction. It has been indicated by Metrolink, that on completion of the Works, the original Park would be reinstated, but only in so far as possible. Such language is meaningless and limitless in the context of the Station and the Park. And the proposed design of the Station lends credence to this assertion.</p>                                                                                        | <p>TII recognise that Four Masters Park has very important heritage and architectural connnotations, and as such the Mater Station urban realm design principles are based on the following:</p> <ul style="list-style-type: none"><li>* Realignment of the Four Masters Memorial;</li><li>* Rearranging the footpath to provide enough pedestrian space for the main entrance;</li><li>* Reinstatement with enhanced planting of the Four Masters Park and its existing railings; and</li><li>* Replacement of existing trees.</li></ul> <p>The construction of Mater Station in the Four Masters Park will affect the park itself, both Eccles Street and Berkeley Road, and St Joseph's Church, requiring stringent environmental management measures during construction and restoration of the urban realm. Design changes that were introduced to reduce impacts on heritage include the following: prior to the construction phase the railings, gates, plinth walls, Healing hands sculpture and Celtic cross at Four Masters Park (RPS, Reference 737) will be removed, stored carefully and reinstated following the completion of construction of the proposed Mater Station.</p> <p>As detailed in Chapter 26 (Architectural Heritage), following the completion of the construction of the station box, the Park will be reinstated on the surface to a shape and form similar to the existing Park with updated planting, including new trees along each side of the triangle. The railings and gates, the Four Masters Cross and the sculpture will all be reinstated to slightly amended alignment and locations to facilitate ventilation grilles, air intake shafts, fire access lift, emergency escape stairs and the main entrance to the station. The existing garden and grotto adjoining and within the grounds of St Joseph's Church will also be reinstated on the existing footprint and in similar style to the Four Masters Park proposals with proposed trees. This allows the accommodation of the introduced elements of the station which will now be expressed at surface level. It also ties in with the axial elements related to the original Mater building and which will be expressed in the proposed shared surface at its front. To ensure the protection of architectural heritage throughout the alignment, a Project Conservation Architect has been engaged to oversee the implementation of the Project. A specialist Heritage Works Contractor will also be appointed to remove, store and conserve and constraints during the construction phase, to ensure they are protected for reinstatement prior to the Operational Phase.</p> |
| 2                                                                                                                                                                                                                                                                                                                                              | Potential Remedies         | 2        | <p>I would argue that the small triangular corner of the Park, which contains the Four Masters Cross, is the most focally dominant and visually pleasing section of the Park. Therefore, if this small triangular corner (which is bounded by Berkeley Road and Eccles Street on two of its sides) was retained/restored as is, and the remaining boundary of the triangle screened off from the Station entry/exit point, (by suitable trees, for example) this would go some way towards retaining the visual impact of this very important focally dominant section of the Park, for this area. In order to achieve this objective, the orientation of the proposed entry/exit point of the Station should be altered [rotated] by ninety degrees, so that it would face the old Mater Hospital portico on Eccles Street.</p> | <p>EIAR Chapter 27 (The Landscape) details the impact on the landscape and visual amenity of the stations during both the construction and operational phases. As noted during the operational phase at Mater Station, on completion of the station box, the surface features will be substantially reinstated as per the project description (please refer to response item (1) above). The Park and its surroundings will be updated and improved, particularly in respect of the shared space to the front of the original hospital building, the refinement of the Park layout and the tree and plant species selection, and therefore a positive impact is anticipated.</p> <p>Upon completion of the proposed Project, the visual amenity of the area will be largely restored, much to its existing condition with some minor improvements. Over the inital period after completion of the construction, the maturity and ambience created by the existing trees cannot be matched. However, as the new trees mature, this too will return with views along the adjacent streets and into the Park, much as they were. The restoration of the open green park space within the triangle of buildings along with the proposed amendments to the original Mater Hospital section of Eccles Street, will again impart the tranquil qualities of the existing condition. Overall, the predicted effects on the visual environment and on visual amenity during the Operational Phase will, in the longer term be significant and positive.</p> <p>The proposed station entance will facilitate connection with bus services to and from Dublin City Centre, with bus stops on Berkeley Road. The entrance will also facilitate desire lines with the pedestrian crossing at the junction of Berkeley Road and Eccles Street, and tie-in with the existing cycle infrastrutcure on Berkeley Road.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: A submission in respect of the Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022, with specific reference to the proposed Mater Station and associated tunnel |                    |          |                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
|                                                                                                                                                                                                                                                                                                                                                |                    |          |                                                                                                                                                                                                                                                                                                                                                                                                              | A 90 degree entrance rotation to face the Mater Hospital has a major impact on the design of the station. It would require a larger station box with major impacts on the site (utilities, traffic, construction) in a very space-constrained location that would possibly make its insertion into the site impractical. The rotation of the access stairs would require a rearrangement of the interior space of the station and the provision of a concourse at the concourse level, with sufficient area for the flow of passengers in their connection to the next level. This in turn has an impact on the configuration of the station's Back of House area, affecting the ventilation jet fans position, which take advantage of the location under the access escalators in their current longitudinal arrangement. Additionally, it would also impact the location of the lifts and shafts above the plaza. All this would require a redesign of the access area that would necessarily involve increasing the dimensions in width and possibly also in length of the station box, which would not be compatible with the space available on site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| 3                                                                                                                                                                                                                                                                                                                                              | Potential Remedies | 2        | In addition, the design and finish of the Station together with its proposed location, the finish of the emergency exit, and other associated structures along the Berkeley Road frontage, is not in keeping with the surrounding architecture - the Mater Hospital, St Joseph's Church, and terraced houses along Berkeley Road/Street. This requires to be addressed in consultation with local residents. | <p>Please refer to response (1) in relation to the impacts to architectural heritage at this location, and please refer to response item (2) above in relation to the anticipated positive impacts on landscaping and visual amenity at Mater Station.</p> <p>The station architecture is integrated in the park in a sympathetic fashion with the skylights being framed by planting and providing circulation routes through the park. Existing monuments and protected railings will be relocated within the park. Large mature trees will be placed so as to provide balance and create space within the park. The landscape design itself will be created on top of the station box and sufficient depths and infrastructure are provided for in order to integrate the landscape design.</p> <p>TII disagree and believe the commissioning of internationally renowned architect Nicholas Grimshaw and Partners, has delivered a contemporary station design which is appropriate for a state of the art metro system such as MetroLink. Appropriately, significant emphasis is placed on the public spaces. Where feasible, the station concourse is a soaring space illuminated from above with natural light. Dublin's rich architectural heritage has been respected, but not copied in a pastiche imitation. In accordance with best conservation principles, as set out in the ICOMOS Venice Charter of 1964, (as referenced in Chapter 26, Architectural Heritage) the stations are architecturally distinguishable so as not to falsify the existing historic context. Reference and due respect to that context is made through the choice of high quality and appropriate materials and the scale of the interventions. At Mater station, the canopy entrance evokes the scale of park structures. The aesthetic values of all eras, including our own, have cultural validity, and therefore the brick is used in a contemporary way reflecting contemporary aesthetic idioms derived from 21st century technology. TII believe the current station and surface level designs greatly enhance the public realm at all locations along the MetroLink route. There is a unifying commonality in the design of all stations, providing a consistent and coherent architectural language, which assists with orientation and wayfinding, and contributes a new architectural lexicon to the cultural iconography of the city.</p> <p>TII confirm that they are committed to continuing stakeholder and community engagement throughout all phases of the Project to ensure its successful delivery.</p> |  |

                                                                                                                                        |                    |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |
| Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: A submission in respect of the Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022, with specific reference to the proposed Mater Station and associated tunnel |                    |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 4                                                                                                                                                                                                                                                                                                                                              | The Built Heritage | 3        | <p>Indeed many of the Georgian Houses which align with the proposed tunnel are over two hundred years old. Consequently, I contend that the Works will impact the built heritage in this area. I understand that engineering surveys prior to, during, and after the project will be carried out to properties within a defined area close to the Works and that there is a commitment for compensation to be paid in certain circumstances. However, it is almost certain that the effects of the Works including, but not limited to, vibration, (whether caused by the Works or unforeseen incidents which occur as a result of the Works) will be experienced beyond this defined area, thus impacting buildings not included in the initial engineering survey.</p> <p>Therefore I would urge that a Mater Station Community Liaison Committee be established prior to the commencement of the Works, to liaise between the Applicant, the building contractor, and the local community to ensure any and all issues that arise before, during and after the Works, are resolved in a coordinated and consensual manner.</p> | <p>The Property Owner Protection Scheme (POPS), committed to by TII, allows residential property owners to register with TII if their residential property is within thirty (30) metres of the edge of the MetroLink alignment or fifty (50) metres of station structures. The POPS comprises condition surveys of residential properties along the route of the proposed Project. The purpose of the condition surveys is to ascertain the condition of the properties before, during (if deemed necessary), and after the completion of the proposed Project to determine whether there has been any deterioration of any of the properties surveyed and whether same may be attributable to the proposed Project, and subsequently to recommend repairs as appropriate. Condition survey data gathered pre and post construction, and possibly during construction, will be used to assist the property owner and TII in swift and accurate verification of any property damage claims which may be received from property owners. The POPS is designed to cater for / address repair work which may be necessary for any damage (attributable to the proposed Project) to a qualifying residential property up to a threshold of €45,000. The POPS will be introduced by TII through public consultation and will be formally advised to eligible property owners by the Public Relations Department.</p> <p>Further information on POPS is available in Chapter 11 (Population &amp; Land Use). Useful information can also be found in the MetroLink Frequently Asked Questions document which can be found online at: <a href="https://www.metrolink.ie/en/your-property/property-owners-protection-scheme/">https://www.metrolink.ie/en/your-property/property-owners-protection-scheme/</a> , and this is where useful updates will be made available as the proposed Project progresses.</p> <p>Chapter 13 (Airborne Noise and Vibration) and Chapter 14 (Groundborne Noise and Vibration) present the anticipated impacts during both the construction and operational phases. As detailed, the highest potential impact arising from the Construction Phase, if not mitigated, would be from blasting, with perceptable effects for people occurring up to a distance of 250m if not mitigated. Vibration impacts from other construction sources may cause potential impacts for most receptors approximately 100m from the source. The predictions of groundborne noise and vibration, and all other construction works, are subject to uncertainty (as are all predictions). However, the design of the Project has been developed to best international practice and standards and complies with the relevant design standards which include provisions to reduce the likelihood of risk events occurring. Chapter 28 (Risk of Major Accidents and Disasters) details potential risk events, reasonable worst consequences, and the proposed mitigation measures. As part of the measures, the Main Works Contractors will be required to prepare a Construction Management Plan, as well as subsidiary plans such as a Ground Movement Management Plan, Risk Management Plan and TBM Management Plan, among others, to identify how unforeseen incidents will be managed.</p> <p>TII are committed to engaging with and listening to the views and concerns of the local community, and working with the local community to manage any impacts resulting from MetroLink construction. As noted in the Outline Construction Environmental Management Plan (Appendix A5.1 of the EIAR), TII and the contractor(s) will take all reasonable steps to engage with stakeholders in the local community, especially those who may be affected by the construction works including residents, businesses, community resources and specific vulnerable groups. The contractor(s) will be responsible for putting in place a Stakeholder Communications Plan which will be developed under the consent of a designated Public Liaison officer appointed by TII. This will provide a two-way mechanism for members of the public to relay any concerns, allowing them to be resolved in a coordinated and consensual manner.</p> |  |

| Submission No.                                                                                                                                                                                                                                                                                                                                 |                    |          | 076 | Letter Re: Railway Order Application - Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin: A submission in respect of the Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022, with specific reference to the proposed Mater Station and associated tunnel |                    |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 5                                                                                                                                                                                                                                                                                                                                              | The Built Heritage | 3        | <p>Further, that an independent expert be appointed and funded by the Applicant to advise the residents of the local community during the entire timescale of the project, in respect of, but not limited, to the following:</p> <ul style="list-style-type: none"><li>• The provision and location of adequate monitoring measures and equipment required to avoid, prevent, reduce, or offset adverse effects on the surrounding environment, including the built heritage;</li><li>• Provision for the monitoring of the above mentioned effects;</li><li>• The parameters to be monitored, duration of monitoring, and the frequency of such monitoring for the purposes of assessing its compliance with any monitoring provisions;</li><li>• Residents' access to data/information collected during the monitoring process and transparency of the monitoring process including any inquiry, investigation, or examination associated with the monitoring process;</li><li>• An emergency point of contact which operates around the clock, for residents with concerns regarding the Works;</li><li>• Noise, vibration, subsidence, potential flooding, and settlement due to the Works;</li><li>• Traffic impact, access, parking spaces, pedestrian safety, and adverse effects on local businesses;</li><li>• Effects on human health - airborne emissions, dust, vibration, noise exposure, stress, rat infestation, electromagnetic radiation, and radon gas emissions;</li><li>• Architectural design of the Park and the Station;</li><li>• Community gain /Community Fund provision.</li></ul> <p>I contend that observations and remedies contained herein have merit and I urge that the issues raised and remedies requested serve as the basis for formal commitments, obligations, and planning conditions that may be required of the Applicant, project sponsor and/or scheme contractor prior to, during, and after construction.</p> | <p>The services of the Independent Engineering Expert (RINA) are due to be concluded on completion of the Railway Order process (expected in 2024). The continuation of provision of independent engineering advice for residential stakeholder groups throughout the enabling works and main construction stages of the MetroLink project is currently being considered as part of an overall comprehensive community engagement plan, which will include amongst other initiatives, the appointment of dedicated MetroLink liaison representatives and local community forums which will provide detailed updates on construction activities in their areas.</p> <p>As noted in response item (4) above, Appendix A5.1 presents the Outline Construction Environmental Management Plan. This document provides a framework that outlines the minimum requirements with regards to the appropriate mitigation, monitoring, inspection and reporting mechanisms that need to be implemented throughout the construction phase. The contractor(s) will update the Outline CEMP to a prepare a more detailed CEMP for each specific package of works required. The detailed CEMP(s) will be provided to FCC and DCC for consultation and approval in advance of any construction works on site. In addition, TII may appoint an Employer Representative to monitor compliance with the CEMP on their behalf. This may involve the appointment of temporary or permanent specialists with appropriate skills and experience as required to implement on-site procedures and monitor construction on behalf of TII to ensure impacts do not exceed those identified in the Railway Order, i.e. competent experts in biodiversity, architecture, archaeology and cultural heritage, noise and vibration, dust, waste, soils, land, ground movements, contamination and water.</p> <p>In addition, regulatory and statutory bodies may undertake site visits to monitor compliance with legislative and regulatory requirements. A Freephone (e.g 1800) helpline service will also be maintained during the Construction Phase to deal with enquiries and concerns from the general public.</p> <p>TII will work with established Community Groups through the local community liaison officers along the route to identify projects at local level that would involve the Community in the delivery of MetroLink and its legacy. Such projects could include:</p> <ul style="list-style-type: none"><li>- A local school learning programme.</li><li>- Enhancement of community amenity within agreed funding limits.</li><li>- Engagement with final landscape and finishing options, including aspects of biodiversity.</li></ul> <p>TII are willing to explore mechanisms for investing in local initiatives to support affected communities during the works, such initiatives will be subject to funding being made available.</p> |  |

Ref No: ML60-A10 |                   |                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1                                                                                                                  | General Objection | Please note page numbers not included as these vary between the three submission although the technical content is the same. | We act on behalf of the above clients who have been served with notice of the making of the above Railway Order Application. Having reviewed the drawings and documentation accompanying same, our clients have instructed us to object to the confirmation of the Metrolink Railway Order Application and all of the supporting documentation to include the proposal Railway Works and Land Requirements, the Book of Reference, the EIAR and the Natura Impact Statement on the following grounds: | TII wish to thank you for your submission and provide the following comments in response to the matters raised.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 2                                                                                                                  | 1. Project Need   |                                                                                                                              | <div>1. Project Need</div> <p>As currently designed, this project is excessive and is leading to a significant overspending versus alternatives. The requirement in relation to increased use of public transport could be met in alternatives ways that would have been much less costly and at the end of the day, would have been better than the Metrolink as it is currently proposed.</p>                                                                                                       | <p>TII disagree with the statement that the project is excessive and leading to significant overspending. Chapter 03 (Background to the MetroLink Project) details the overall need for the Project, and how MetroLink will address a number of current challenges, including compact growth, sustainable mobility, enhanced regional connectivity, quality international connectivity, transition to a low carbon and climate-resilient society, enhanced amenity and heritage, maximising sustainability gains, strong economy supported by enterprise innovation and skills, access to quality childcare, education and health services, and strengthened rural economies and communities.</p> <p>Chapter 07 (Consideration of Alternatives) presents the decision-making process that has led to the development of the proposed Project, including the consideration of alternative transport options. The options assessed included for heavy rail, light rail, Bus Rapid Transit (BRT) options in addition to combination options. The short-listed options were subject to assessment by way of a Multi-Criteria Analysis (MCA) having regard to Environment, Economy, Safety, accessibility and Social Inclusion and Integration.</p> <p>The assessment identified an Optimised Metro North as the best medium-and long-term transport project for the Greater Dublin Area for the following reasons (EIAR Chapter 7, section 7.3.2):</p> <ul style="list-style-type: none"><li>* It was the most economically advantageous scheme when compared to other options, delivering the highest benefit to cost ratio (BCR) of 1.5, almost double the BCR of the next best scheme (tunnelled Luas);</li><li>* It generated the highest level of transport benefits when compared to other options, with the highest number of additional public transport trips generated in the morning peak travel period;</li><li>* It provided a new strategic public transport corridor, avoiding reliance on either the existing heavy rail lines or the Luas Cross City line;</li><li>* It delivered a connection right into the centre of the city, serving O'Connell Street and St. Stephen's Green;</li><li>* It retained the opportunity to extend Luas Cross-City to Finglas, which would not be feasible if the tunnelled Luas options were selected, and it avoided reducing the service level on Luas Cross City to Cabra and Broombridge;</li><li>* Due to the high level of segregation, it was considered to significantly increase capacity to allow for potential future growth along the corridor, when compared to other options;</li><li>* It could potentially extend southwards in the longer term to alleviate high travel demand on the Luas Green Line and ultimately form a compete north south metro corridor traversing both the north and south city; and,</li><li>* This option delivered the highest safety benefits when compared to other options.</li></ul> <p>In July 2022, the Government granted Approval in Principle to the NTA to enable the submission of a railway order application by TII to An Bord Pleanála in respect of the MetroLink project (Decision Gate 1). This approval was granted after the Preliminary Business Case (PBC) had undergone significant scrutiny and challenge by bodies that are independent of TII, including DoT and DPER review (including independent review by JASPERS and the Major Projects Advisory Group (MPAG)) of the PBC around timeline, costs and benefits that were updated to inform the Government decision. The assessment finds that MetroLink is a very positive investment for the people of Ireland, in the country's journey to a low carbon and more sustainable transport network. TII as the Government Agency responsible for delivering MetroLink, are committed to expediting the delivery of this transformative project on receipt of an Enforceable Railway Order, to ensure the benefits of MetroLink can be realised as soon as possible.</p> |

| 3                                                                                                                  | 2. Economic Analysis of Metrolink Versus Alternatives |          | <p>2. Economic Analysis of Metrolink Versus Alternatives</p> <p>The projected total budget cost of the Metrolink Project is extremely high versus other infrastructure capital projects. Analysis is showing that alternatives would have been able to deliver a similar or higher overall benefit and at a lower cost. Therefore, the economic cost benefit analysis on the Metrolink Project should mean that the project should not be progressed in its current form.</p> | <p>Please refer to response (2) above in relation to the consideration of alternatives, the reasons that the Proposed Project was selected as the preferred option, and the economic assessments undertaken. The observation notes that "the cost of the Metrolink project is extremely high by comparison to other infrastructure projects". It is not clear which projects the observation is comparing MetroLink with. It is also unclear what analysis the observation is referring to in its statement that "Analysis is showing that alternatives would have been able to deliver a similar or higher overall benefit and at a lower cost". In July 2022, the Government granted Approval in Principle to the NTA to enable the submission of a railway order application by TII to An Bord Pleanála in respect of the MetroLink project (Decision Gate 1). This approval was granted after the Preliminary Business Case (PBC) had undergone significant scrutiny and challenge by bodies that are independent of TII, including DoT and DPER review (including independent review by JASPERS and the Major Projects Advisory Group (MPAG)) of the PBC around timeline, costs and benefits that were updated to inform the Government decision.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 4                                                                                                                  | 3. Route Selection                                    |          | <p>3. Route Selection</p> <p>Even if one assumed that the Metrolink project was needed and it did stand up to economic analysis, the route chosen is flawed. Better alternative routes were available to the Designers.</p>                                                                                                                                                                                                                                                   | <p>Chapter 07 (Consideration of Alternatives) presents the decision-making process that has led to the development of the proposed Project, including the route selection process. The NTA and TII commissioned an Alignment Options Study to determine the Emerging Preferred Route (EPR) for New Metro North proposed in the Transport Strategy for the GDA. The New Metro North Alignment Options Report (TII, 2018), and all relevant appendices can be reviewed at <a href="http://www.metrolink.ie">www.metrolink.ie</a>.</p> <p>The study area was based around a corridor from Swords to Dublin City Centre via Dublin Airport, in line with the Project's objective as identified in the Transport Strategy for the GDA. The overall study area was broken into three sections, with a number of station location options proposed within. Based on the conclusions of the MCA, Option 9 was recommended as the EPR for NMN for the following primary reasons:</p> <ul style="list-style-type: none"><li>* In terms of Economy, it delivers substantially more benefits than most of the options resulting in the joint highest BCR;</li><li>* It performs among the best in terms of public transport usage i.e. boardings over 24 hours;</li><li>* It integrates better with the wider transport network with better potential for seamless interchange with other modes, particularly heavy rail in the city centre and bus in Swords, than other options considered;</li><li>* It integrates better with current Land Use Policy particularly in Ballymun and Swords; and</li><li>* In terms of Environment, while there are some impacts in terms of Landscape and Visual and Archaeology, Architecture and Cultural Heritage, these impacts can largely be mitigated (EIAR Chapter 7, Table 7-14).</li></ul> <p>Submissions made by stakeholders and the public during the Public Consultation in 2018 on the EPR were carefully analysed. Taken together with other proposed route alignment and design improvements, design responses to consultation submissions have resulted in a number of changes to the EPR leading to a Preferred Route, including alterations to the alignment which led to alternative station locations:</p> <ul style="list-style-type: none"><li>* Realignment of the EPR at Lissenhall;</li><li>* Realignment of the EPR along the R132 Swords Bypass through Swords;</li><li>* Realignment of the EPR over the M50 Motorway and to Ballymun;</li><li>* Realignment of the EPR at O'Connell Street Station; and,</li><li>* Alignment under Trinity College Dublin (TCD).</li></ul> <p>Chapter 07 also provides an outline on a station-by-station basis of alternative station locations, layout or design changes. For full details of the analysis undertaken, please refer to the MetroLink Preferred Route Design Development Report (TII, 2019), available at <a href="http://www.metrolink.ie">www.metrolink.ie</a>.</p> |

| 5                                                                                                                  | 4. Mitigation of Impacts on the Human Environment |          | <p>4. Mitigation of Impacts on the Human Environment</p> <p>In the case of the College Gate Apartment Complex the proposed impact mitigations put forward by the Acquiring Authority are seriously flawed and inadequate. The common areas of the complex and the overall College Gate property has been severely blighted since the route for the Metrolink project was decided and it was clear that the College Gate Complex was within the preferred route for the scheme and would have to be demolished should the scheme proceed on foot of a Railway Order as submitted. It was open to the Acquiring Authority to step forward at that stage and immediately offer to fully deal comprehensively with all of the individual owners in the complex and the Owners Management Company with a comprehensive suite of measures. These would include an offer of adequate full compensation to each owner and other measures such as immediate advance payments to the Owners Management Company to upkeep the common areas. It would have been open to owners to sell at that stage to the Acquiring Authority, if they so choose.</p> <p>This has not been forthcoming from the Acquiring Authority and the complex has remained blighted and the lives of the owners severely impacted since the route for the Metrolink was chosen. Contrary to what has been stated publicly, there is nothing in law to stop the Acquiring Authority in this case doing the right thing, that being to have stepped in immediately and dealt comprehensively with a suite of measures for the College Gate Complex including a full purchase offer for owners wishing to sell and move on with their lives.</p> <p>The early negotiations optional proposal put forward by the TII is a totally unsatisfactory proposal and is deeply flawed in many respects. It is not an adequate mitigation offer. Mitigation is critical in relation to all impacts of a scheme.</p> | <p>TII understand and acknowledges the importance of residential property owners being able to plan their affairs with as much notice and certainty as possible. As part of the Land Acquisition Strategy, TII has introduced a discretionary scheme to encourage early engagement. Our intention is to enter into a pre-agreement with residential property owners to agree a baseline apartment price and other matters of compensation, which will be payable under the compensation code. This will be determined at an early date and provides a commitment from TII to agree terms, ahead of the statutory process, locking in a baseline apartment price, with an agreement to apply indexation to reflect any future uplift. The scheme will accelerate the acquisition process following an enforceable Railway Order avoiding protracted negotiations. TII advocates that residential property owners are professionally advised and as part of the process have agreed to meet all reasonable professional fees and costs. The scheme does not prejudice property owners nor are they obligated to participate. TII have appointed external property consultants to assist them with the implementation of the discretionary scheme. This also ensures that engagement with residential property owners continues and concerns can be addressed where practicable. Further details on TII's Land Acquisition Strategy can be viewed <a href="https://www.metrolink.ie">https://www.metrolink.ie</a></p>                                                                                                                                                                                                                     |
| 6                                                                                                                  | 5. Time Frames and Funding                        |          | <p>5. Time Frames and Funding</p> <p>There is a lack of clarity with regard to time frames and funding for the Metrolink Project. There is no clarity with regard to the approval process and how long this will take. While this is ongoing, the severe blight on the College Gate Complex will continue and the hardship placed on the owners and the Owners Management Company will continue. This is wrong.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>TII as the Government Agency responsible for delivering MetroLink, are committed to expediting the delivery of this transformative project on receipt of an Enforceable Railway Order. Upon approval, the construction phase is anticipated to last approximately 9 years, with the MetroLink planned to be operational in 2035.</p> <p>In July 2022, the Government granted Approval in Principle to the NTA to enable the submission of a railway order application by TII to An Bord Pleanála in respect of the MetroLink project (Decision Gate 1). This approval was granted after the Preliminary Business Case (PBC) had undergone significant scrutiny and challenge by bodies that are independent of TII, including DoT and DPER review (including independent review by JASPERS and the Major Projects Advisory Group (MPAG)) of the PBC around timeline, costs and benefits that were updated to inform the Government decision.</p> <p>The Non-Technical Summary (submitted as part of the Railway Order) outlines the Railway Order process, including how An Bord Pleanála will consider the feedback/submissions received during the statutory public consultation process. The Board has confirmed that it intends to hold an Oral Hearing for this project. The Oral Hearing is a process whereby TII and its specialists are given an opportunity to present evidence on the proposed Project and on submissions received. There is also an opportunity for The Board and parties who made submissions during the statutory consultation process to question TII and its specialists. Following this process, and based on information available to The Board, they will make a decision on the application.</p> |

| RE: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022, Earl Court Apartments, Adelaide Road |                                                                    |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 1                                                                                                                 | Part 1                                                             | 2        | <p>The route selection including horizontal alignment, vertical alignment and depth of MetroLink belowground in the area adjacent to our Clients' building, should be reviewed by NTA/TII to satisfy themselves and to ensure that:</p> <p>(a) MetroLink does not cause structural damage to the foundation system supporting our Clients' building, which comprises strip and pad foundations founded in boulder clay.</p> <p>(b) MetroLink does not cause structural damage to our Clients' building at any level.</p> <p>(c) MetroLink does not cause damage to the finishes of our Clients' building.</p> <p>(d) MetroLink provides the necessary vertical and/or horizontal clearance between the existing basements and the tunnels.</p> <p>(e) We enclose a copy of a drawing EARL-WMS-ZZ-ZZ-DR-S-21209 prepared by Waterman Moylan for your information and reference. Our Clients' building is located on the south eastern side of the building, as shown by Waterman Moylan. We are showing on that drawing our clients' building.</p> | <p>Thank you for the provision of additional drawings on your building. These drawings confirm the assessment undertaken to date. On the MetroLink Project, the approach to ground movement and building damage assessment follows the industry standard three-phased ground movement impact assessment process that is undertaken on tunnelling and underground projects around the world, that includes Channel Tunnel Rail Link (CTRL), Dublin Port Tunnel, Crossrail and High Speed 2. The MetroLink tunnel has been assessed going under these properties at the depth and on the alignment proposed and TII are satisfied that the assessed movements will not lead to structural damage to these properties.</p> <p>EIAR Appendix A 5.17, Building Damage Report, covers the assessed impact is of construction generated ground movements and settlement on property. Table 5-2 of this report shows that the building in question (B-147) has been assessed as falling within the "Slight damage" category currently, an explanation for which can be found in Table 4-4 of the aforementioned report. Such damage if it occurs would be very minor including at worst slight cracking that might require some filling or repointing. Any damage caused as a result of the advancement of the TBM would be repaired by TII.</p> <p>The building has been classified under "Damage category 2 or below" following the Refined Phase 2a Building Damage Assessment. EIAR Appendix 5.17 specifies that all buildings that have been subject to a Phase 2a assessment will be reviewed and reassessed by the D&amp;B Contractor. This Phase 2b assessment will use refined and updated parameters available to the D&amp;B contractor as a result of progression in the development of the design and finalising his construction methodology and planning. If your building is classified at the end of the Phase 2b assessment as Damage Category 3 (Moderate) or above (or where there exists any uncertainty after the Phase 2b assessment) will be the subject of a Phase 3 assessment by the D&amp;B Contractor.</p> <p>The Phase 3 assessment will take account of final design and construction methodology details. For the Phase 3 assessment, each building will be subject to detailed assessment on an individual basis. A detailed survey will be carried out as part of the Phase 3 assessment to provide the necessary additional information to inform this detailed analysis of how the individual elements of the building would be affected by the predicted ground movements. The method and extent of the detailed analysis will be determined on a case-by case basis and may include a more sophisticated semi-empirical or a detailed soil-structure interaction using finite element modelling methods. It is likely that the Phase 3 assessment will yield further improvement to the damage category determined by the Phase 2b assessment. The results of this refined assessment typically show that earlier assessments are conservative and overestimate the likely impact of construction generated ground movements.</p> |
| 2                                                                                                                 | Part 2 (Construction Information) & Part 3 (Operation Information) | 3        | <p>We note that Drawing No. ML1-JAI-EIA-ROUT-XX-DR-Y-13038 (a copy is attached to this submission) does not identify any potential receivers in the area of our Clients' building, therefore essentially ignoring potential damage to our Clients' building.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>The drawing ML1-JAI-EIA-ROUT-XX-DR-Y-13038 presents the receptors considered in the assessment of airborne noise during construction works at the overground sites, where the closest receptors are modelled.</p> <p>According to Chapter 13 Airborne Noise &amp; Vibration, 13.2.3.1 Study Area Construction Phase from an airborne noise and vibration point of view, the key study areas during the Construction Phase include all surrounding sensitive environments to surface construction compounds. Depending on the sources in question and the local area under consideration, the study area extends out to between 50m from construction works to 300m from construction works. The building is located outside the 20 dBLamax contour line for the closest compound as a result no significant impact in terms of Airborne Noise and Vibration is expected on this building as a result of Metrolink works.</p> <p>Please note that there will be no damage caused to this building arising from noise &amp; vibration.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

This drawing indicates MetroLink will generate an additional 50db directly under the location of our Clients' building, which is unacceptable.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>Appendix 14.5 Ground Borne Noise and Vibration Blasting Modelling Results presents predicted groundborne noise and vibration levels during the construction and operation phase of the project. The prediction of groundborne noise during TBM passage for the Earl Court Apartments is 50 dB LASmax, which is above the 45 dB LASmax threshold, resulting potential for impacts on the buildings occupants for the limited duration of TBM passage (less than 2 weeks). Unfortunately, there are no effective methods available to reduce groundborne noise or vibration from TBMs at source, but noting that the duration of this impact will be in the order of up to two weeks as the TBM passes. TII will liaise with Earl Court Management Company DAC to ensure the timing of these impacts are known.</p> <p>The principal mitigation measures aimed at minimising impacts are as follows:</p> <ul style="list-style-type: none"><li>- Advance public consultation and stakeholder engagement can greatly reduce the significance of groundborne noise effects, as building occupants would be prepared for the passage of the TBM and resultant elevated noise and vibration levels.</li><li>- TII will accept and consider applications for additional measures on a case-by case basis, in accordance with its Noise and Vibration Mitigation Policy (see EIAR Appendix A14.6, Airborne Noise &amp; Groundborne Noise Mitigation Policy).</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| RE: Railway (Metrolink-Estuary to Charlemont via Dublin Airport) Order 2022, Earl Court Apartments, Adelaide Road |                                         |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 4                                                                                                                 | Part 2 - Construction Information       | 3        | b) MetroLink has assessed the predicted " <i>Settlement</i> " and presents its findings on Drawing No. ML1-JAI-EIA-ROUT-XX-DR-Y-21149 (a copy is attached to this submission). The deflexion drawing shows settlement between 1 and 45mm occurring underneath our Clients' building. Their building is a conventional masonry and concrete building, which will find it difficult to absorb such a high level of differential settlement. It is also close to the adjoining Cadenza Building which was constructed beside and below their building. This movement cannot be accommodated by the building's structure and could cause damage to foundations, basement, superstructure, facade and internal finishes. | Please refer to response (1). The settlement contours calculated were used to undertake the building damage assessment and conclude a slight damage category. The damage categories are described in section 4.3.2 of the EIAR Appendix A 5.17, Building Damage Report. The Phase 2a assessment will be confirmed by the contractor during further future assessment. TII will undertake any repairs required caused by the construction of the MetroLink. Pre and Post condition surveys will be undertaken to verify.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 5                                                                                                                 | Part 3 - Operational Information        | 3        | a) MetroLink has assessed the " <i>Groundborne Noise from Operation</i> " and presented its findings on Drawing No. ML1-JAI-EIA-ROUT-XX-DR-Y-14041 (a copy is attached to this submission). This drawing indicates MetroLink will be generating an additional 35db directly under the location of our Clients' building which is unacceptable.                                                                                                                                                                                                                                                                                                                                                                      | Appendix 14.5 Groundborne Noise and Vibration Blasting Modelling Results presents predicted groundborne noise and vibration levels during the construction and operation phase of the project. For Earl Court Apartments building, the prediction of groundborne noise and vibration during railway operation are as follows:<br>- The predicted level of groundborne noise during the railway operation for Earl Court Apartments building is 35 dB LASmax, which is below the 40 dB LASmax threshold.<br>- The predicted level of groundborne vibration during the railway operation for Earl Court Apartments building is 0.01 ms-1.75, much lower than the VDV (Vibration Dose Value is a parameter that combines the magnitude of vibration and the time for which it occurs) threshold of 0.8 ms-1.75.<br>As a result, we consider that no significant impact is expected on the building as a result of Metrolink operation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 6                                                                                                                 | Part 4 - Acquisition of substratum land | 3        | MetroLink has proposed to acquire the substratum land located under our Clients' building, which is outlined in drawing no. ML1-JAI-EIA-ROUT-XX-DR-Y-01097 (a copy is attached to this submission). This is unacceptable to our Client, as the future potential to develop this prominent site in the Future will be damaged.                                                                                                                                                                                                                                                                                                                                                                                       | TII note your concerns about the potential impact of MetroLink Project on future potential development of your site. The acquisition of substratum land beneath the Earl Court Management Company DAC building is to enable the construction of the Metrolink tunnel.<br><br>The tunnels are designed and constructed to support future imposed loads. MetroLink will be a catalyst for and provide opportunity for future development and regeneration. While the MetroLink Railway Order does not include for future neighbouring or overhead development, the tunnels and stations are designed to support appropriate future imposed loads.<br>TII will be required to make submissions in relation to planning applications for proposed future developments on or adjacent to MetroLink and there will necessarily be some engineering constraints (such as permissible loadings) required. However MetroLink is committed to engaging with known development proposals and new development proposals as they emerge with the intent of facilitating such developments as they emerge to the maximum extent consistent with the safe operation of the proposed Project.<br><br>Again in common with other existing rail and tunnel projects, following grant of the Railway Order and development of detailed design, TII will produce "Guidance Note for Developers" that will be the subject of bye-laws following the grant of Railway Order and which is designed to facilitate future adjacent or over-site development while protecting the integrity and safety of the MetroLink works and operations.<br><br>Therefore at this stage TII is dealing with known development proposals on a case by case basis, TII will work with parties in the future to assist with the wider development of sites over and above stations and tunnels. In this context TII has successfully engaged with a number of developers over the last two years to accommodate development over and in proximity to the alignment and there have been no material restrictions on development subject to the implementation of agreed design and mitigation measures and it is not anticipated that MetroLink will have a material impact on the development potential of sites above and in proximity to the alignment in future. |
| 7                                                                                                                 | Summary Conclusion                      | 3        | In summary, our Client requests that the route of the proposed MetroLink tunnels are diverted away from their current proposed location (under our Clients' building) to either below the public carriageway or buildings that will not be damaged or compromised by the presence of the tunnels located under.                                                                                                                                                                                                                                                                                                                                                                                                     | TII do not intend to alter the horizontal alignment as the building damage assessments undertaken support the validity of the alignment. Refer to Item 1 above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLDEV PROPERTIES UNLIMITED COMPANY IN RELATION TO PROPERTY AT 13-14 EARLSFORT TERRACE, REAR OF 15-18 EARLSFORT TERRACE AND 17-19 HATCH STREET LOWER, DUBLIN 2 (AND ALSO KNOWN AS 10 EARLSFORT TERRACE) |                                                                               |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| 1                                                                                                                                                                                                                                                     | Introduction (page 1 and 2 of John Spain Associates submission)               | 2&3      | <p>Our client, Earldev Properties Unlimited Company, welcomes the opportunity to make a submission on the Railway Order for the MetroLink line.</p> <p>Our client has a number of observations and concerns in relation to impact of the proposed Railway Order and the MetroLink project on its above property.</p> <p>Our client is also aware that a separate submission may be made by the tenant of the subject building, Arthur Cox Solicitors and a submission will also be made by the adjoining landowner.</p> <p>Our client also wishes to request that an Oral Hearing is held in respect of the Railway Order application so that the points raised within this submission can be further clarified and addressed at the hearing for the benefit of all parties. The proposal is of both national and local significance and accordingly warrants an Oral Hearing.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Thank you for the submission and request for Oral Hearing. We have reviewed the submission and provided response for the observations/ concerns raised in detail below.</p> <p>An overview of the Oral Hearing process is provided in the EIAR Chapter 8.9.2. The Board has confirmed that it intends to hold an Oral Hearing for this project.</p> <p>The purpose of the oral hearing will be to allow issues relevant to an application for approval be examined. The oral hearing can be attended by anyone, but only those that have made a written application may make an oral submission at the oral hearing. The oral hearing is managed by the An Bord Pleanála inspector.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
| 2                                                                                                                                                                                                                                                     | Site and Impacts on Metrolink (page 3 of John Spain Associates submission)    | 3        | <p>However, our client has serious concerns in relation to the identified noise and associated disruption contained within the Railway Order documentation. A “Very High Adverse (significant)1 residual impact is identified to a neighbouring building (20 Earlsfort Terrace). Whilst this impact is noted as being short term, there is no clarity or estimate provided beyond this in relation to the duration of the works due to take place in the vicinity of our client’s property.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>TII note your concerns in relation to the noise and vibration related potential impacts on your property.</p> <p>EIAR Appendix 14.5 Groundborne Noise and Vibration Blasting Modelling Results presents predicted groundborne noise and vibration levels during the construction phase of the project, with the results for 10 Earlsfort Terrace summarised below:</p> <ul style="list-style-type: none"><li>• The predicted level of groundborne noise during TBM passage at surface level is 50 dB LASmax, which is above the 45 dB LASmax threshold, resulting in a significant impact on the buildings occupants for the short duration of the TBMs passage which is estimated to be 2- weeks. This means that the noise will be audible within the building during the short period that the TBM progresses. However, there is no potential for any permanent damage to the building resulting from this activity.</li><li>• The predicted level of groundborne vibration during TBM passage is 0.269 ms-1.75, which is lower than the VDV (Vibration Dose Value is a parameter that combines the magnitude of vibration and the time for which it occurs) Threshold Level of 1.6 ms-1.75, resulting in a not significant impact on the building.</li></ul> <p>Unfortunately, there are no effective methods available to reduce groundborne noise from TBMs at source. TII will liaise with Earldev Properties Unlimited Company to ensure the timing of these impacts are known. The principal mitigation measures aimed at minimising impacts are as follows:</p> <ul style="list-style-type: none"><li>• Advance public consultation and stakeholder engagement can greatly reduce the significance of groundborne noise effects during construction, as building occupants would be prepared for the passage of the TBM and resultant elevated noise and vibration levels.</li><li>• TII will accept and consider applications for additional measures on a case-by case basis, in accordance with its Noise and Vibration Mitigation Policy (see EIAR Appendix A14.6).</li></ul> |  |
| 3                                                                                                                                                                                                                                                     | Engineering Considerations (page 4 and 5 of John Spain Associates submission) | 5&6      | <p>The potential damage to the facades is further set out in the Arup Facades Report which notes “<i>the baseline for anticipated damage has been established as a masonry clad buildingfrom 1977. There does not appear to be any consideration for how a modern glass clad building will react to the proposed differential settlements</i>” .</p> <p>In considering how the subject building may be impacts, Arup Facades note:</p> <p><i>“Modern facades such as those installed on the Arthur Cox-ETHS Building are carefully designed to accommodate project specific building movements. The anticipated structural movements &amp; tolerances for the primary structural frame are defined by the structural engineer. The environmental loading associated with the anticipated wind loading and thermal expansion are defined for the proposed cladding systems. The cladding systems are bespoke to the building and designed to accommodate a defined set of movement criteria. The facade systems and associated bracketry are then detailed to accommodate those defined movements such that the cladding can perform over its design life as these loads are applied. The accommodation of the floor slab movements resulting from changing occupancies for example.</i></p> <p>The anticipated additional differential settlement, resulting from the installation of Metrolink has, as detailed in the report the potential to work loose pointing and cause racking of doors and windows within their frames such that they may stick, when considered for a masonry clad building.</p> | <p>This response here also relates to Item 46 and others below.</p> <p>TII are satisfied that the approach adopted to date for assessment of building damage follows an industry standard approach undertaken on tunnelling and underground projects around the world including on the Channel Tunnel Rail Link and Crossrail in London, the Dublin Port Tunnel and currently on HS 2 in England, and therefore that further assessment does not need to be delivered prior to the proposed Project being consented.</p> <p>The purpose of the Stage 1 and Stage 2a assessments has been to provide/ensure confidence that the Works will not induce unacceptable damage to buildings/structures along the Route. The primary objective has been to confirm that the structural integrity of each building/structure will not be compromised by the Works.</p> <p>Ancillary features in each building/structure, which themselves do not contribute to the structural integrity of the building/structure, are considered in the subsequent Phase 3 assessment. The D&amp;B Contractor is responsible to further investigate the sensitivities of each building/structure to identify those elements within the building/structure curtilage that may not contribute to the structural integrity of the building/structure itself, but will most likely in themselves be sensitive to the excavation and construction processes.</p> <p>In each instance, engaging with the building/structure owner (or their delegated representative) the D&amp;B Contractor will be responsible for identifying further mitigations that will further reduce the potential for damage if needed. These mitigations might relate directly to the excavation and construction processes (at source measures), or they might relate to a direct protection of the non-structural elements for which damage related concern remain.</p>                                                                                                                                                                        |  |

|                                                                                                                                                                                                                                                       |                                                                               |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLDEV PROPERTIES UNLIMITED COMPANY IN RELATION TO PROPERTY AT 13-14 EARLSFORT TERRACE, REAR OF 15-18 EARLSFORT TERRACE AND 17-19 HATCH STREET LOWER, DUBLIN 2 (AND ALSO KNOWN AS 10 EARLSFORT TERRACE) |                                                                               |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
|                                                                                                                                                                                                                                                       |                                                                               |          | <p>We would have a concern that when this level of potential damage is extrapolated to suit a modern office development that there are additional areas of potential damage to consider such as:</p> <ul style="list-style-type: none"><li>• Short term (During the construction of Metrolink) - Damage to glass; damage to stone cladding - Caused from unanticipated differential settlement exceeding current allowances</li><li>• Long term (Design life of cladding) - Damage to glass; damage to stone cladding -Caused by the differential settlement cause from the construction of Metrolink reducing the existing movement accommodation of the installed systems.</li></ul> <p>The differential settlement of this building will have to be carefully monitored and the risk of damage in both the short and long term assessed based on the movements recorded to determine the full impact and risk of damage over the design life of the cladding. "</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>TII are however confident that mitigation to the building itself will not be required.</p> <p>It should be noted that Phase-2a assessment has been carried out with very conservative assumptions with regard to the tunnelling volume loss value (1%) ignoring the beneficial effect that the tunnel face is entirely within the rock strata. This building has been identified as a 'special' building and will be subject to a detailed assessment (Phase-3 assessment) and appropriate control measures will be implemented to protect the building. The Phase-3 assessment will utilize the site specific ground model, particularly considering that the tunnel face is fully in the rock strata in this area.</p> <p>If, based on the detailed Phase-3 assessment, the impacts are still deemed to be unacceptable to items such as building cladding or basement waterproofing (or any other ancillary features) further mitigation measures would then be assessed and implemented. For example enhanced control the TBM slurry pressure in this zone would further reduce face loss and hence impacts. This process has been used successfully across major projects elsewhere with buildings of similar cladding and basement detailing.</p>                                                                                                                                                                                                                                           |  |
| 4                                                                                                                                                                                                                                                     | Engineering Considerations (page 5 and 6 of John Spain Associates submission) | 6&7      | <p>AGL further raise concerns in relation to the assessment of building damage contained within the EIAR in relation to the subject site, stating: <i>“Although the BDR states that the detailed Phase 2b and Phase 3 building damage assessments will be carried out by the detailed designer for the D&amp;B Contractor prior to construction, we would note that there are significant limitations to the Phase 2a preliminary assessment that has been carried out for the Arthur Cox Building in the EIAR, i.e.:</i></p> <ul style="list-style-type: none"><li>• <i>The assessment is based on the response of the building to greenfield settlements that could occur at ground level assuming that the building foundations can articulate (bend) to the curvature of the settlement profile at that level.</i></li><li>• <i>In reality the response of the Arthur Cox building will be determined by the distribution of settlements at basement level, specifically the at the underside of the floor slab, which is 8.5m below street level.”</i></li></ul> <p>Given the low clearance between the tunnel and building sub structure, which is compounded if the upward or horizontal deviations are utilised (set out in the accompanying reports), further consideration of the potential impacts on the subject building are necessary having regard to the AGL Report:</p> <p>“The Wider Effects Report (WER) in Appendix A5.19 to Ch. 5 in Volume 5 of the EIAR identifies constraints to the application of the Limits of Deviation (i.e. where changes to the tunnel alignment are not permitted), and it also includes a screening assessment to identify possible impacts to the application of the LoD (i.e. where changes in the alignment could have an impact on the assessment outcomes in the EIAR). It is significant to note that:</p> <ul style="list-style-type: none"><li>• The Arthur Cox Building has not been identified as a constraint to the application of the vertical alignment of the tunnel, despite the potential proximity of the perimeter load-bearing piles to the tunnel crown; and</li><li>• No potential for significant additional impact on settlement or building damage has been identified if the LoD are applied to move the tunnel alignment upwards or downwards.</li></ul> <p>These are significant omissions to the EIAR assessment of building damage, particularly for the Arthur Cox Building. "</p> | <p>TII confirm that the Phase-2a assessment does consider the greenfield settlements and the lateral ground movements at the formation level of the basement (underside of the basement slab) in the Damage Category Assessment and not at ground level.</p> <p>Please also see response to Item 3.</p> <p>The design includes for a limit of deviation which is required to allow for unforeseen obstructions and construction tolerances which may necessitate a change to the alignment. In the highly unlikely event that this were to occur, any resulting environmental impacts will comply with the limits set by the enforceable Railway Order.</p> <p>TII has carried out a comprehensive set of ground investigations in accordance with relevant guidelines and best practice. It has a high confidence that MetroLink can be constructed along the proposed alignment without requiring vertical or horizontal adjustment. However, in order to guard against rare and undetectable subterranean conditions that might interfere with construction, the Railway Order provides for limits of deviation (as have other railway authorisation since at least the 1840s). The impacts of potential changes within the Limits of Deviation are considered in the Wider Effects Report (Appendix A5.19).</p> <p>There are no omissions to the EIAR assessment approach, the approach adopted is industry standard and designed to ensure that impacts are managed to protect 3rd parties.</p> |  |
| 5                                                                                                                                                                                                                                                     | Engineering Considerations (page 6 of John Spain Associates submission)       | 7        | <p>It is respectfully submitted to An Bord Pleanala, that based on the submitted Railway Order documentation, the subject property stands to be significantly impacted by the proposal and that the submitted assessments may be insufficient to provide an accurate assessment of the predicted and residual impacts. Having regard to the foregoing it is respectfully requested that the applicant undertakes additional assessment to quantify the impacts of the Metrolink and explore option to reduce the residual impacts to not significant.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>Please refer to Item 3.</p> <p>In EIAR Appendix A 5.17 Building Damage Report Table 5.2 the Arthur Cox Building assessments to date indicate that the building falls into the Slight damage category and hence further assessment is not required at this stage. However, the building has been classified as 'special' building, and hence a further assessment (Phase 3) will be undertaken at detailed design phase. This further assessment will pick up on the building's condition close to the time when the building will be impacted, and this additional assessment will refine the impacts of the Metrolink and explore options to mitigate and/or reduce the residual impacts. Residual impacts will not be significant as noted here.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |

| 6                                                                                                                                                                                                                                                     | Settlement and Building Damage (page 6 of John Spain Associates submission)                             | 7        | As set out in the Punch Consulting Engineers Report, it was stated by TII that <i>“no structural impact has been predicted to occur to this building resulting from the construction works based on a preliminary damage assessment”</i> . This however conflicts with the Building Damage Report which does identify impacts. This should be clarified. It is however noted that as set out below, updates to the Building Damage Report to reflect the constructed building should be undertaken.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | The building damage assessment has estimated "Slight" damage currently. Table 4-3 Classifies building damage <i>"Slight"</i> as <i>"Cracks easily filled"</i> . Slight damage does not constitute structural impact and hence the statement is correct.<br><br>Please refer to Item 3 with regard to further refined assessment of impacts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |
| 7                                                                                                                                                                                                                                                     | Settlement and Building Damage (page 6 and 7 of John Spain Associates submission)                       | 7&8      | In relation to settlement and associated building damage, the following additional information is sought (extract of AGL Report recommendations): <ul style="list-style-type: none"><li>• <i>“The Phase 2a assessment in the BDR [Building Damage Report] should be updated to assess the potential damage that could occur to the building for the greenfield settlements at underside of the basement floor slab;</i></li><li>• <i>The assessment should take into account the potential impact of raising the tunnel profile within the LoD;</i></li><li>• <i>The BDR should identify the Arthur Cox building as a Special Structure on the list in Appendix B-2 due to the basement, which is greater than 4.0m deep (i.e. a Case B Special Structure in accordance with Section 4. 1 of the BDR);</i></li><li>• <i>The BDR should also identify the specific structural characteristics of the basement and perimeter secant pile wall in determining the sensitivity of the structure to tunnel- induced settlements;</i></li><li>• <i>The Wider Effects Report (WER) should identify that raising or lowering the tunnel profile within the LoD could have an impact on the tunnel-induced settlements and building damage assessment in the EIAR;</i></li><li>• <i>We would strongly recommend that the Arthur Cox building should be added to the list of constraints in Section 1.4 of the WER to identify that there is no scope to raise the vertical profile of the tunnel within the LoD either from the specimen design level, or above a level at which there is a risk of negligible damage to the building, whichever is lower, "</i></li></ul> | With regard to the specific points noted requiring additional information:<br>1. Refer to Items 3 and 4.<br>2. Refer to Items 3 and 4.<br>3. The Arthur Cox Building is identified in Appendix 5.17 as a Special Structure and hence further assessment will be undertaken.<br>4. The building together with its basement has been assessed at Phase 2a. Phase 3 assessment will further assess all aspects of the structure together with ancillary items and incorporate the existing condition to verify sensitivity.<br>5. Refer to Items 3 and 4. However please note that TII can commit not to raise the alignment of the tunnel at this location.<br>6. Refer to Items 3 and 4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 8                                                                                                                                                                                                                                                     | Settlement and Building Damage (page 7 of John Spain Associates submission)                             | 8        | The following limitations in the submitted documentation are identified by AGL, which should be addressed in revised documentation:<br><i>“We also note the following limitations to the information presented in the EIAR that make it difficult to carry out an independent assessment of the settlement and building damage due to tunnelling:</i> <ul style="list-style-type: none"><li>• <i>The ground investigation information has not been included in the appendices to Chapter 20 - Soils &amp; Geology, so it is not possible to verify the interpreted geological cross sections (Appendix A20.9);</i></li><li>• <i>Not all of the site investigation points on the SI location plans (Figure 20.6) have been included on the interpreted geological cross sections, and most of the SI data shown on the sections does not extend down to the tunnel horizon;</i></li><li>• <i>The tunnel alignment drawings do not show the chainage along the centreline of the tunnel, which makes it difficult to identify the location of the building;</i></li><li>• <i>Most of the alignment plan drawings, including the drawings showing settlement contours (Figure 20.16), are out of date and do not show the current layout and extent of the Arthur Cox building which was completed in 2017."</i></li></ul>                                                                                                                                                                                                                                                                                                                                           | TII would respond to the points raised as follows: <ul style="list-style-type: none"><li>• TII Engineers have interpreted the geological cross sections from the site investigations performed on behalf of MetroLink project. This voluminous technical data derived from the various ground condition site investigations is not included nor required in the EIAR.</li><li>• The collation of ground information will continue to progress post the grant of the Railway Order. The geological cross section in Appendix 20.9 were prepared prior to completion of the latest stages of Ground Investigation (GI) and will be updated incorporating any subsequent investigations commissioned by the contractor.</li><li>• The location of Arthur Cox building can be identified on the following RO drawings: drawing no. ML-LN O-Q18: MetroLink - Alignment, Long Section 18, drawing no. ML-RO 306 D-E: MetroLink - General Arrangement, St. Stephen's Green to Hatch St. Lower and drawing no. ML-RO 306 E-O: MetroLink - General Arrangement, Hatch Street Lower to Grande Parade.</li><li>• The assessments undertaken relate to the new building and the detailed information provided to TII in 2019. This included the bkd planning drawings and an inspection undertaken by ORS of the property (including the basements). This will be refreshed for the Phase 3 assessment.</li></ul> |  |
| 9                                                                                                                                                                                                                                                     | Settlement and Building Damage (page 7 of John Spain Associates submission)                             | 8        | Potential further mitigations should be explored, as set out in the Punch Consulting Engineers Report:<br>"TII look to re-routing the proposed tunnel out onto the street of Earlsfort Terrace itself or drop the proposed tunnel level where building damage will not be a significant issue to this unique site along the proposed Metrolink route."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Please refer to Item 3, 4 and 7. An alteration of the horizontal alignment is not considered necessary and would introduce significant track alignment and operational constraints due to the proximity to the Charlemont station. A lowering of the tunnel alignment in this area within the bounds permissible by the limits of deviation may be feasible subject to more detailed engineering analysis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |
| 10                                                                                                                                                                                                                                                    | Construction and Operational Impacts on Building (page 7 of John Spain Associates submission)           | 8        | As set out in the Punch Consulting Engineers Report, the following information on building condition surveys are sought:<br><i>“Confirmation required on Condition Survey form and frequency prior and during the construction stage of the proposed Metrolink Tunnel Confirmation required on Condition Survey form and frequency during the operation stage of the proposed Metrolink Tunnel"</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | All surveys, monitoring and mitigation proposals for your property will be discussed and agreed with you. TII will employ Professionally Qualified Engineers / Surveyors with the appropriate expertise to undertake the pre and post condition surveys and you are welcome to observe the surveys being undertaken of their property. Initials surveys will be undertaken to educate the Phase 3 assessments discussed under Item 3 and 4. Close out surveys will be undertaken once TII can demonstrate that ground movements have ceased.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| 11                                                                                                                                                                                                                                                    | Construction and Operational Impacts on Building Occupants (page 8 of John Spain Associates submission) | 9        | As set out in the Punch Consulting Engineers Report, site specific assessments are required in relation to noise and vibration impacts, having regard to the as built structure. This is necessary in order to fully evaluate such potential and post mitigation residual impacts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | The assessment presented in Chapter 14 Groundborne Noise and Vibration includes threshold levels for vibration in terms of human response in buildings. These are much more sensitive than levels of vibration that would results in any building damage. As the predicted level of vibration at the building is below the assessment threshold for human response there is a very low risk of building damage as a result of noise or vibration from construction works at this location.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |

| 12                                                                                                                                                                                                                                                    | Asset Protection Policy (page 8 of John Spain Associates submission)                                                                                         | 9        | In relation to the imposition of limitations on development in proximity to the tunnel, the TII referenced Asset Protection Policy is requested. It is essential as part of the Railway Order application and oral hearing process that our client is provided by TII with comprehensive information in a timely manner so that our client can gain a full understanding of the likely restrictions on future development of their asset. As noted in this submission, the existing building has been designed to accommodate additional floors in the constructed structural elements. Full redevelopment of the site for high rise development may also be considered in the future. Imposed limitations by the Metrolink would have a considerable impact on the value of our client's asset.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>The tunnels are designed and constructed to support future imposed loads.</p> <p>TII is working on an MetroLink Guidance Note for Developers that will be the subject of bye-laws following the grant of Railway Order. It has not published that in advance because it would have to be in broad terms that deal with the current RO proposal and any contingencies that might arise from the Board seeking revised designs or new conditionality.</p> <p>Instead, TII's approach to date has to provide comments on design proposals brought forward by developers in advance of them being submitted for planning permission. TII has successfully engaged with a number of developers over the last two years to accommodate development over and in proximity to the alignment and there have been no material restrictions on development subject to the implementation of agreed design and mitigation measures. It is not anticipated that MetroLink will have a material impact on the development potential of sites above and in proximity to the alignment.</p> <p><u>For information, TII note the following observations:</u></p> <p>The site is zoned Z9 - Employment / Enterprise in the Dublin City Development Plan 2022-2028. This zoning permits intensive employment generating development in principle, subject to consideration of the surrounding context and compliance with a range of statutory development management standards set out in the plan.</p> <p>The site has been developed on foot of planning permissions lodged in 2008 and 2014. The maximum height of the building was set as 7 storeys by way of condition (by An Bord Pleanála).</p> <p>The development carried out would appear to be in the range of the maximum development potential on current development standards, although it may be possible to attain a higher insitu development should standards change or the scale of surrounding development also increase.</p>                    |  |
| 13                                                                                                                                                                                                                                                    | Specific Assessment and Limitations in relation to 13 & 14 Earlsfort Terrace, Punch Consulting Engineers Report (page 8 of John Spain Associates submission) | 8&9      | <p>As set out in the Punch Consulting Engineers Report:</p> <p>1. 13 and 14 Earlsfort Terrace requires individual attention from TII as a standalone unique structure in the design of the proposed Metrolink Tunnel.</p> <p>2. An assessment of the proposed Metrolink in relation to the close proximity of the basements structure and secant piled wall.</p> <p>3. Independent settlement, noise and vibration assessments should be undertaken on the actual building (basement, superstructure and facades) in the design of the proposed Metrolink Tunnel.Category 3 independent checking to be undertaken as a minimum checking process.</p> <p>4. Confirmation any anticipated negative impacts on the building and its tenants at 13 and 14 Earlsfort Terrace, Dublin 2 during the construction phase of the proposed Metrolink.</p> <p>5. Confirmation any anticipated negative impacts on the building and its tenants at 13 and 14 Earlsfort Terrace, Dublin 2 during the operational phase of the proposed Metrolink.</p> <p>6. There is no evidence of undertakings to confirm the quality of the rock at the tunnel level. We request that geophysical surveys are carried out on the rock at tunnel level from the existing basement. 2d Resistivity and Seismic Refraction surveys are suggested to determine the rock mass characteristics.</p> <p>7. A limit of upward deviation be applied at 13 and 14 Earlsfort Terrace to protect the existing structure, should the tunnel design be fully validated by TII at this level where no building will occur with the construction of the proposed Metrolink.</p> | <p>With regard to the Punch Consulting Engineers Report:</p> <p>1. Please refer to Items 3, 4 and 7.</p> <p>2. Refer to Items 3, 4 and 7.</p> <p>3. It is agreed that Cat 3 checking will be undertaken.</p> <p>3. The EIAR as submitted has detailed the impacts on the building and its tenants both during construction and operation of the MetroLink.</p> <p>4. Construction Phase Impacts</p> <p>Appendix 14.5 Groundborne Noise and Vibration Blasting Modelling Results presents predicted groundborne noise and vibration levels during the construction phase of the project, with the results for 10 Earlsfort Terrace summarised below:</p> <p>- The predicted level of groundborne noise during TBM passage is 50 dB LASmax, which is above the 45 dB LASmax threshold, resulting in a significant impact on the buildings occupants for the short duration of the TBMs passage which is estimated to be 2-weeks.</p> <p>- The predicted level of groundborne vibration during TBM passage is 0.269 ms-1.75, which is lower than the VDV Threshold Level of 1.6 ms-1.75, resulting in a not significant impact on the building.</p> <p>- Predicted ground movement and building damage impacts are included with EIAR Appendix 5.17 and discussed in Item 4 above.</p> <p>5. Operational Phase Impacts</p> <p>- The predicted level of groundborne noise railway operation is 36 dB LASmax, which is below the 40 dB LASmax threshold, resulting in a not significant impact on the buildings occupants.</p> <p>- The predicted level of groundborne vibration during operation is 0.001 ms-1.75, which is much lower than the VDV Threshold Level of 0.8 ms-1.75, resulting in a not significant impact on the building.</p> <p>6. Appropriate ground investigation will be undertaken by the Contractor to verify design assumptions with regard to the tunnelling operation and in respect of its impact on the surrounding environment.</p> <p>7. Please refer to Items 3 and 4.</p> |  |

| 14                                                                                                                                                                                                                                                    | Specific Assessment and Limitations in relation to 13 & 14 Earlsfort Terrace, AGL Report recommendations (page 8 and 9 of John Spain Associates submission) | 9&10     | As set out in the AGL Report recommendations:<br><br><i>Prior to construction a detailed Phase 3 assessment should be carried out to confirm that there will be a negligible risk of damage to the building during construction. The assessment methodology should be sufficiently detailed and comprehensive take into account:</i> <ul style="list-style-type: none"><li><i>• the estimated ground movements at the level of the basement and perimeter secant pile wall;</i></li><li><i>• the specific structural characteristics of the building, basement, foundations and perimeter secant pile wall; and</i></li><li><i>• The soil-structure interaction between the building and the ground.</i></li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Please refer to Items 3 and 4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
| 15                                                                                                                                                                                                                                                    | Structural and Condition Surveys (page 9 of John Spain Associates submission)                                                                               | 10       | As set out in the Punch Consulting Engineers Report, condition surveys are expected to be undertaken prior to and during construction works.<br><i>ii) In the Damage Assessment Report of Building document, it places the Arthur Cox Building (B-238) in Damage Category B. This conflicts with TII initial response, which states no structural impact has been predicted. This needs to be fully clarified by TII. No damage to the building will be tolerated by our client</i><br><i>iii) Visual condition surveys of the building are expected prior to and during construction works.</i><br><i>There must be photographic condition surveys carried out by professional independent parties procured TII/Main Contractor to ensure any potential damage to the building is accurately recorded.</i><br><i>iv) We request this information as soon as possible to ensure the integrity of the building is maintained during the construction phase of the works.</i><br><i>v) We request TII to confirm when guidelines regarding the process for remediation will be released, should remediation be required. It is our understanding these guidelines are under development by TII based on information from https://www.metrolinkro.ie/ . We reiterate that damage to the building cannot be accepted but we need to understand the guidelines nonetheless."</i> | Please refer to Items 3, 4, 6, 7, 8, 9, 10 and 12 above.<br><br>TII note the party's request for remedial measure however please note the following in relation to potential damage to commerical buildings.<br><br>TII do not intend to put in place a Property Owners Protection Scheme for Commercial Properties along the MetroLink route. However to protect commercial properties, TII contractors appointed to carry out the works will, with the agreement of the owners of such properties, commission chartered building surveyors to carry out a precondition survey of commercial properties. In the event that it is determined that damage has occurred. TII's contractor will be required to commission a follow up survey to confirm the extent of the damage and confirm if the damage has been caused by MetroLink works. Where property damage is confirmed to have been caused by MetroLink works the property concerned will have recourse to MetroLink project insurances. |  |
| 16                                                                                                                                                                                                                                                    | Provision for Future Building Loading (page 9 of John Spain Associates submission)                                                                          | 10       | In relation to the development potential of the site, a condition requiring the tunnel design to cater for additional floors on the subject development (as set out in the Punch Consulting Engineers Report) is requested:<br><i>The tunnel design shall cater for the provision of additional floors to the Arthur Cox building</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | The provision of additional floors to the Arthur Cox building is not compromised by MetroLink as the tunnels design will allow oversite development subject to some requirements, including full engagement with TII by the future designers of the proposed building alterations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| 17                                                                                                                                                                                                                                                    | Land use zoning (page 10 of John Spain Associates submission)                                                                                               | 11       | The existing site is occupied by a significant office building, and is therefore achieving the zoning objective for the site. As the office building is operational and occupied, it is important that any proposed construction works under the building are minimally disruptive.<br><br>A small portion of the site, has a Z8 zoning objective <i>"To protect the existing architectural and civic design character, and to allow only for limited expansion consistent with the conservation objective. "</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | TII proposals do not impact on the architectural and civic character and will be constructed so as to minimise impacts so far as is reasonably practicable. All impacts have been assessed in the EIAR.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |
| 18                                                                                                                                                                                                                                                    | Shape and Structure of the City (page 10 of John Spain Associates submission)                                                                               | 11       | The 15 minute city is also mentioned. It is noted that the proposed metro will assist in the achievement of these objectives, particularly as sustainable travel relates to compact growth and the 15 minute city. Our client would however request that the predicted significant adverse impacts during the short term are fully mitigated to the maximum extent feasible, in order to ensure the site is protected.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | The EIAR presents any potential imapcts arising at this site. TII will seek to minimise impacts so far as is reasonably practicle in line with the proposed mitigation strategies outlined in the EIAR .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |

| 20                                                                                                                                                                                                                                                    | Development Potential (page 11 of John Spain Associates submission)      | 12       | This development potential should be allowed for in the design of the tunnel so as not to restrict such future development. It is not clear what future restrictions may be placed on development above the metro tunnel, and it is important that this should be clarified at this stage, as it is a material consideration in assessing the submitted proposal, to understand impacts on economic development and infrastructure over and proximate the metro line.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Refer to Item 12 above.                                                                                                                                                                                                                                                                                                                                           |  |
| 21                                                                                                                                                                                                                                                    | Development Potential (page 11 of John Spain Associates submission)      | 12       | As noted further in the Appendix 1, it is understood that TII is currently developing an Asset Protection Policy outlining the constraints on future developments in proximity to the MetroLink works, including developments above the tunnel alignment. It is essential this Policy is provided to affected property owners in ample time before the Oral Hearing so that they may adequately assess the potential impact of the Policy and the MetroLink project on their properties.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Refer to Item 12 above                                                                                                                                                                                                                                                                                                                                            |  |
| 22                                                                                                                                                                                                                                                    | Concluding Comments (page 11 of John Spain Associates submission)        | 12       | It is respectfully submitted to An Bord Pleanala, that based on the submitted Railway Order documentation, the subject property stands to be significantly impacted by the proposal and that the submitted assessments may be insufficient to provide an accurate assessment of the predicted and residual impacts. Having regard to the foregoing it is respectfully requested that the applicant undertake additional assessment to quantify the impacts of the Metrolink and explore option to reduce the residual impacts to not significant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | See response to item 2 and 3.                                                                                                                                                                                                                                                                                                                                     |  |
| 23                                                                                                                                                                                                                                                    | Concluding Comments (page 11 and 12 of John Spain Associates submission) | 12&13    | <p>Our client acknowledges that a scheme of this scale will result in impacts however these should be carefully managed and mitigated to minimise the effects on the surrounding landholdings. While our client is currently assessing the impact of these issues on the subject property, due to the lack or unavailability of key information from TII at this stage this exercise is ongoing and our client is not yet in a position to ascertain all immediate and future impacts on its property due the proposed Railway Order and MetroLink project.</p> <p>We must therefore reserve all of our client's rights in relation to the issues that might arise at a later point in respect of the MetroLink project and our client reserves the right to raise additional issues and/or elaborate further on the above issues as necessary should the Board decide to hold an oral hearing or require any clarification and would welcome any responses from the applicant. Our client also reserves the right to maximise the development potential above and below ground of the lands in question.</p> | TII note these comments, reiterate that all impacts have been assessed and presented in the EIAR. TII are happy to engage further with EPUC regarding any residual concerns.                                                                                                                                                                                      |  |
| 24                                                                                                                                                                                                                                                    | Concluding Comments (page 12 of John Spain Associates submission)        | 13       | Punch Consulting Engineers have identified a number of very important matters relating to the implementation and construction of the Scheme which pose a significant threat to the structural integrity of the buildings during the construction phase. Until these concerns are satisfactorily addressed, the value of the Earldevs asset will also be materially affected and until these matters are addressed, or the Scheme completed, Earldev are not in a position to realise the full value of their asset in the marketplace. Whilst this impact on the value of the property may only be of a temporary nature, the Board has a responsibility to ensure that this period of value sterilisation is kept to a minimum. We would respectfully request that the Board does not approve the Scheme and the Railway Order, until such time as the Board is satisfied that the acquiring Authority has the necessary funds to commence and complete the Scheme expeditiously if the Railway Order is confirmed.                                                                                          | The request to withhold approval subject to funding is not within ABP's remit.                                                                                                                                                                                                                                                                                    |  |
| 25                                                                                                                                                                                                                                                    | Concluding Comments (page 12 of John Spain Associates submission)        | 13       | The uncertainty created by approving Compulsory Purchase Orders which are not funded in advance or in an expeditious manner following the grant of a Railway Order creates difficulties for landowners, such as Earldev, which go far beyond the scope of compensation and places an unfair burden on landowners that go beyond the exigencies of the common good.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Under the Transport (Railways Infrastructure) Act 2001 (as amended) upon commencement of the Railway Order, TII will be authorised to acquire compulsorily any land or rights in, under or over land or any substratum of land specified in the Railway Order. Compulsory purchase powers will therefore only take effect following an enforceable Railway Order. |  |

| Submission No.                                                                                                                                                                                                                                        |                                                                                      |          | 079                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                              |  |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLDEV PROPERTIES UNLIMITED COMPANY IN RELATION TO PROPERTY AT 13-14 EARLSFORT TERRACE, REAR OF 15-18 EARLSFORT TERRACE AND 17-19 HATCH STREET LOWER, DUBLIN 2 (AND ALSO KNOWN AS 10 EARLSFORT TERRACE) |                                                                                      |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                              |  |
| 26                                                                                                                                                                                                                                                    | Concluding Comments (page 12 of John Spain Associates submission)                    | 13       | <p>We request that the Board requests TII to issue the detailed information and assessments sought in this submission to our client in advance of any Oral Hearing and provide an opportunity for our client to respond to this further information and assessment.</p> <p>Furthermore, we request that the Board conditions II as part of any proposed Railway Order to satisfactorily address the concerns raised in this submission and in particular that TII ensure that an appropriate design and method statement for the works in the vicinity of the subject property is agreed with our client in advance of the works taking place. This condition is of particular importance to our client as TII has in recent weeks stated that it was not in a position to meet our client prior to the submission deadline to address its concerns.</p> <p>The assessment of compensation would not be limited to the content of this submission.</p> | <p>Plese refer to Items 2, 3 and 4.</p> <p>TII do not consider the request for a condition imposed from An Bord Pleanála to be appropriate. The detailed design and detailed method statement will be developed post an Enforceable Railwau Order being in place.</p>                        |  |
| 27                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 2 of memorandum) | 16       | <p>The Arthur Cox Building at 13 and 14 Earlsfort Terrace requires individual attention as a standalone structure from TII and would request that An Bord Pleanala condition same in any grant of the Railway Order.</p> <p>We request that An Bord Pleanala impose specific conditions in relation to this unique site and structure. We would request that specific conditions are applied to the building's basement, superstructure and facades with regards to settlement, vibration and noise.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Plese refer to Items 3 and 4.</p> <p>TII do not consider the request for a condition imposed by An Bord Pleanála to be appropriate.</p>                                                                                                                                                   |  |
| 28                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 3 of memorandum) | 17       | <p>It is noted that all drawings in the Railway Order show the old building layout which was demolished circa 2014. This is a concern as the Arthur Cox Building at 13 and 14 Earlsfort Terrace has complex and sensitive basement, pile and facade structures in relation to the proposed tunnel. We expect the Arthur Cox Building to be replaced on all relevant drawings and the correct building parameters used in the assessment of the building going forward.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>The assessments undertaken relate to the new building and the detailed information provided to TII in 2019. This included the bkd planning drawings and an inspection undertaken by ORS of the property (including the basements). This will be refreshed for the Phase 3 assessment.</p> |  |

The oral hearing process is managed by the An Bord Pleanála. Please refer to Item 1 above.</p>                                                                                                                                                |  |
| 30                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 5 of memorandum) | 19       | <p>a. Tunnel detail design procurement approach i.e. client design or contractor design. When is the contractor expected to be appointed?</p> <p><i>TII Response 11 th November 2022 - Transport Infrastructure Ireland (TII) applied for a Railway Order for the project on 30 September 2022. The planning process with An Bord Pleanala is likely to take 12-18 months to complete. Once an Enforceable Railway Order has been granted, main infrastructure contractors can be appointed who will develop detailed designs for the tunnel infrastructure prior to construction commencement.</i></p> <p>PUNCH Further Comments:</p> <p>i) A detailed design programme for the tunnel under The Arthur Cox Building, 13 and 14 Earlsfort Terrace is required.</p>                                                                                                                                                                                    | <p>The detailed design and construction programme (in so far as it relates to the Arthur Cox Building) will be provided once developed by the TII Contractor.</p>                                                                                                                            |  |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLDEV PROPERTIES UNLIMITED COMPANY IN RELATION TO PROPERTY AT 13-14 EARLSFORT TERRACE, REAR OF 15-18 EARLSFORT TERRACE AND 17-19 HATCH STREET LOWER, DUBLIN 2 (AND ALSO KNOWN AS 10 EARLSFORT TERRACE) |                                                                                            |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 31                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 5 of memorandum)       | 19       | ii) If the tunnel design is by the main contractor, TII to confirm how soon after the grant of the Railway Order a Main Contractor will be appointed?                                                                                                                                                                                                                                                                                                                                                                                                                                                          | It is anticipated that the Contractor will be procured within 18 months of the grant of the RO. It should be noted it may be a further 60 months prior to the TBM being within the zone of influence of your building.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 32                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 5 of memorandum)       | 19       | iii) TII to confirm when EPUC will receive a full design package for the works?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | This will be confirmed once the main contract is let but likely to be approximately 24 -30 months after the grant of the RO. TII will continued to consult with the submitter but will not furnish the submitter with the detailed design.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |
| 33                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 5 of memorandum)       | 19       | iv) TII to confirm what information EPUC will receive prior to the Oral Hearing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | There are no plans to issue any further information prior to the Oral Hearing apart from any clarifications issued herewith.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 34                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 5 of memorandum)       | 19       | v) Assuming the detailed design is by the Main Contractor, TII to confirm the extent to which the Main Contractor will be required to engage with EPUC during the detailed design process?                                                                                                                                                                                                                                                                                                                                                                                                                     | The main contractor will be responsible for all design and construction. However, all designated designs will be independently checked and TII will accept the design. TII will provide the assurance to EPUC that the design and modelling, together with proposed instrumentation and monitoring is fit for purpose and will not result in impacts greater than that assessed in the EIAR. If monitoring is to be installed on or in your properties, then the methodology and timing of the installations will be agreed with EPUC together with any ongoing maintenance of the monitoring. The Contractor and TII will provide updates as required during the construction process. Additionally, condition surveys will be coordinated with EPUC including any close out condition surveys and the identification of any remedial measures needed. If required by EPUC TII will issue the Phase 3 Assessment details. Please refer also to Items 3 and 4 above. |  |
| 35                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 5 of memorandum)       | 19       | vi) We request that An Bord Pleanala impose specific conditions in relation to this unique site and structure. These conditions need to fully reflective in the production of tender documents for the project.                                                                                                                                                                                                                                                                                                                                                                                                | TII intend to include all necessary constraints and planning conditions in the tender documents together with all available building information to ensure that full cognisance is taken of all 3rd party buildings and infrastructure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 36                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 5 and 6 of memorandum) | 19&20    | <p>b. Confirmation of Civil and Structural Design Firm for the Metrolink tunnel under 13 and 14 Earlsfort Terrace, Dublin 2.</p> <p><i>TII Response 11 th November 2022 - Jacobs/IDOM have developed the civil and structural design to a level sufficient for a Railway Order. TII will further develop these designs to a level of detail sufficient for tendering in the next phase of the project and these designs will ultimately be developed to a detailed design for construction by the main infrastructure contractors.</i></p> <p>PUNCH Further Comments:<br/>Refer PUNCH Comments in 3c below</p> | No response required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLDEV PROPERTIES UNLIMITED COMPANY IN RELATION TO PROPERTY AT 13-14 EARLSFORT TERRACE, REAR OF 15-18 EARLSFORT TERRACE AND 17-19 HATCH STREET LOWER, DUBLIN 2 (AND ALSO KNOWN AS 10 EARLSFORT TERRACE) |                                                                                                                                |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                               |
| 37                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers, Confirmation of Geotechnical Design Firm (page 6 of memorandum) | 20       | <p>c. Confirmation of Geotechnical Design Firm for the Metrolink tunnel under 13 and 14 Earlsfort Terrace, Dublin 2.</p> <p><i>TII Response 11 th November 2022 - Jacobs/IDOM have developed the geotechnical design to a level sufficient for a Railway Order. TII will further develop these designs to a level of detail sufficient for tendering in the next phase of the project and these designs will ultimately be developed to a detailed design for construction by the main works contractors.</i></p> <p>PUNCH Further Comments:</p> <p>i) TII indicate that the design has been "developed to a level sufficient for a Railway Order". An area of concern is around the Oral Hearing process and the lack of clarity as to precisely "what" ABP is being asked to approve in the Railway Order.</p>                       | TII is satisfied that the level of detail provided is sufficient for the purposes of An Bord Pleanála making a decision on the Railway Order in accordance with the relevant statutory provisions and policy. |
| 38                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers, Confirmation of Geotechnical Design Firm (page 6 of memorandum) | 20       | <p>ii) There is no commitment from TII in relation to the commencement date or duration for the proposed detailed design and construction works. This is a significant concern as this site is not a typical site along the selected route. We request a condition to confirm that our site's individual characteristics are incorporated into tender documents and a timeline for same.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                           | Please refer to Items 3, 4, 30, 31 and 32 above.                                                                                                                                                              |
| 39                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers, Confirmation of Geotechnical Design Firm (page 6 of memorandum) | 20       | <p>iii) The lack of clarity in relation to these matters means that our client is not in a position to identify and raise issues which might potentially be caused by the proposed Metrolink works and operations.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | TII do not believe there is a lack of clarity as all impacts are assessed in the EIAR. If further clarification is required over and above that stated herein, TII are happy to facilitate such dialogue.     |
| 40                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 6 and 7 of memorandum)                                     | 20&21    | <p>d. Confirmation of the Technical Design Checking Process for the proposed Metrolink. It is assumed a Category 3 checking process will be undertaken by independent Civil, Structural and Geotechnical Engineers?</p> <p><i>TII Response 11 th November 2022 - All designs will be subject to checking and certification in line with international best practise prior to construction.</i></p> <p>Punch Further Comments:</p> <p>i) The response above does not answer the query and we request that the critically important Technical Design Checking Process for the works is clearly set out by TII.</p> <p>ii) Category 3 independent checking is expected as a minimum checking process. We ask TII to confirm the checking process and we request An Bord Pleanala to condition same in any grant of the Railway Order.</p> | The design checking process is to be developed by TII and will incorporate a CAT 3 checking process.                                                                                                          |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLDEV PROPERTIES UNLIMITED COMPANY IN RELATION TO PROPERTY AT 13-14 EARLSFORT TERRACE, REAR OF 15-18 EARLSFORT TERRACE AND 17-19 HATCH STREET LOWER, DUBLIN 2 (AND ALSO KNOWN AS 10 EARLSFORT TERRACE) |                                                                                             |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 41                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 7 ato 9 of memorandum)  | 21 to 23 | <p>e. Confirmation that a full copy of the detail design package in relation to the Metrolink beneath the building be issued to Earldev Properties Unlimited Company.</p> <p><i>TII Response 11 th November 2022 - TII will provide and request any necessary information during the detail design stage as part of the stakeholder consultation process.</i></p> <p>Punch Further Comments:</p> <p>i) The response above does not answer the query in our opinion.</p> <p>ii) We would expect to see a full copy of the detailed design package which allows for an independent assessment to be carried out by EPUC as they wish. We request confirmation of timelines from TII for this package.</p> <p>iii) The design should be site specific for 13 and 14 Earlsfort Terrace and take into account the concrete frame size/depth, the loadbearing secant pile walls, the water table and diverted River Stein culvert which runs under the building. We request that An Bord Pleanala condition same.</p> <p>iv) The secant piled wall supports not only temporary lateral loads, but the permanent column loads of the building (refer to Photograph 1) . The base level of the loadbearing piles are a significant concern in relation to the proposed tunnel depth and location.</p> <p>v) The culvert of the Old River Stein originally ran through the site prior to construction of the Arthur Cox Building construction (refer to Photograph 2)</p> <p>vi) The construction of the secant piled wall required the culvert to be diverted under the new basement (refer to Figure 1) .</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>TII would welcome a meeting with EPUC to further explore the details presented here and to collate the relevant information to educate the further assessment. Specifically with regard to the points noted, TII comment:</p> <p>1. With regard to ii) TII will issue EPUC with the Phase 3 settlement assessment if required. With regard to timings please refer to Item 32.</p> <p>2. With regard to iii) Phase 3 assessments will be building specific.</p> <p>3. With regard to iv) This point is noted and will be taken into the further assessment. To facilitate this further assessment the original design details would assist if they can be made available.</p> <p>4. With regard to v) we note the comment with regard to the River Stein and TII would like to record that detailed geotechnical and hysrogeological information including the location of underground rivers have informed the development of the MetroLink design.</p> <p>5. With regard to vi) The culverted river under the basement will be taken into account and TII would like to record that detailed geotechnical and hysrogeological information including the location of underground rivers have informed the development of the MetroLink design..</p> |
| 42                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 9 and 10 of memorandum) | 23&24    | <p>f. Details of proposed condition surveys for 13 and 14 Earlsfort Terrace, both in advance of and during the construction works, along with the frequency of such surveys. Although damage to the building will not be tolerated, details to be provided of remediation process/methodology should this be required.</p> <p><i>TII Response 21 st November 2022 - As set out in the Building Damage Report (linked in response to question h), no structural impact has been predicted to occur to this building resulting from the construction works based on a preliminary damage assessment. Due to the basement depths and secant walls, this building will be subject to a further detailed structural survey and structural assessment of building response to ground movements by the Main Works Contractor prior to construction. Based on this assessment, the Main Works Contractor will propose any implementation of protection and mitigation measures and provision of building specific monitoring regime if required during the tunnelling works, including frequency of surveys as required.</i></p> <p><i>TII are in the process of drafting guidelines for regarding the process for remediation in the unlikely event of impact to commercial properties. Once this has been prepared, it will be issued publicly.</i></p> <p>PUNCH Further Comments:</p> <p>i) The response above does not answer the query in our opinion.</p> <p>ii) In the Damage Assessment Report of Building document, it places the Arthur Cox Building (B-238) in Damage Category B (Refer to Appendix A) . This conflicts with the above response, which states no structural impact has been predicted. This needs to be fully clarified by TII and request this is conditioned by An Bord Pleanala.</p> <p>iii) Visual condition surveys of the building are expected prior to and during construction works. There must be photographic condition surveys carried out by professional independent parties procured TII/Main Contractor to ensure any potential damage to the building is accurately recorded.</p> <p>iv) We request this information as soon as possible to ensure the integrity of the building is maintained during the construction phase of the works.</p> <p>v) We request TII to confirm when guidelines regarding the process for remediation will be released, should remediation be required. It is our understanding these guidelines are under development by TII based on information from https://www.metrolinkro.ie/ . We reiterate that damage to the building cannot be accepted but we need to understand the guidelines nonetheless.</p> <p>vi) The initial TII response in vague and concerning and ask An Bord Pleanala to recognise same</p> | <p>TII would respond to the points raised as follows:</p> <p>1. with regard to ii) there is no contradiction here. "Slight" damage (in EIA terminology) is predicted, this is not structural damage.</p> <p>2. with regard to point iii) TII note and agree, this is as planned.</p> <p>3. with regard to iv) TII agree that the surveys and assessment are to be undertaken in time such that the integrity of the building is maintained. This is TII's stated position.</p> <p>With regard to point v), please refer to item 15 above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLDEV PROPERTIES UNLIMITED COMPANY IN RELATION TO PROPERTY AT 13-14 EARLSFORT TERRACE, REAR OF 15-18 EARLSFORT TERRACE AND 17-19 HATCH STREET LOWER, DUBLIN 2 (AND ALSO KNOWN AS 10 EARLSFORT TERRACE) |                                                                                              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 43                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 10 and 11 of memorandum) | 24&25    | <p>g. Details of proposed condition surveys for 13 and 14 Earlsfort Terrace during the operational phase along with the frequency of the surveys and proposals of when these surveys would cease. Although damage to the building will not be tolerated, details to be provided of remediation process/methodology should this be required</p> <p><i>TII Response 21st November 2022 - As per the response to query f, TII are in the process of drafting guidelines for regarding the process for remediation in the unlikely event of impact to commercial properties. Once this has been prepared, it will be issued publicly.</i></p> <p>PUNCH Further Comments:</p> <p>i) Visual condition surveys of the building are expected prior to and during construction works. There must be photographic condition surveys carried out by professional independent parties procured TII/Main Contractor to ensure any potential damage to the building is accurately recorded.</p> <p>ii) It is expected that such condition surveys will continue post construction and through the tunnel operational stages and request that TII confirm the proposed frequency of these surveys during the operational phases of the Metrolink project</p> <p>iii) We request this information as soon as possible to ensure the integrity of the building is fully maintained during the operational phase of the works.</p> <p>iv) We request TII to confirm when guidelines regarding the process for remediation will be released, should remediation be required. It is our understanding these guidelines are under development by TII based on information from <a href="https://www.metrolinkro.ie/">https://www.metrolinkro.ie/</a> . We reiterate that damage to the building cannot be accepted but we need to understand the guidelines nonetheless.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>1. with regard to point i) please refer to Items 10, 34 and 42.</p> <p>2. with regard to point ii) condition surveys will continue until the effect of the construction has ceased, long term impacts during the operational phase are not anticipated.</p> <p>3. with regard to point iii) please refer to Items 10, 34 and 42.</p> <p>4. with regard to point iv) please refer to Items 10, 34 and 42.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 44                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 11 and 12 of memorandum) | 25&26    | <p>h. Confirmation of any predicted vertical settlement of the existing structure at 13 and 14 Earlsfort Terrace.</p> <p><i>TII Response 11th November 2022 - The predicted vertical settlement arising from the tunnelling works can be found In Appendix 5.17 (Building Damage Report) of the EIAR linked here:</i></p> <p>PUNCH Further Comments:</p> <p>i) The predicted settlement is a concern from available information on <a href="https://www.metrolinkro.ie/">https://www.metrolinkro.ie/</a> . The settlement contours on Figure 20.16, sheet 29 of 30 (Refer to Appendix B), suggest settlement of 40-45mm in the calculated settlement trough. PUNCH Consulting Engineers engaged the professional services of AGL Consulting Geotechnical Engineers to assist with this submission. AGL's report issued on the 24 th November 2022 can be found in Appendix C which examines in greater detail the predicted settlement of the proposed works and their findings are equally concerning. Below are some of the extract findings from the AGL report:</p> <p><i>(a) We are concerned about the level of settlement and building damage that has been estimated to occur at the Arthur Cox Building as part of the Phase 2a building damage assessment.</i></p> <p><i>(b) The assessment is based on the response of the building to greenfield settlements that could occur at ground level assuming that the building foundations can articulate (bend) to the curvature of the settlement profile at that level. In reality the response of the Arthur Cox building will be determined by the distribution of settlements at basement level, specifically the at the underside of the floor slab, which is 8.5m below street level.</i></p> <p><i>(c) The increased depth and curvature of the settlement profile at basement level would result in a higher level of strain and damage to the structure if it was assessed using the same procedures in the BDR, possibly putting it into Damage Risk Category 3 or higher.</i></p> <p>ii) There is no evidence of undertakings to confirm the quality of the rock at the tunnel level. We request that geophysical surveys are carried out on the rock at tunnel level from the existing basement. 2d Resistivity and Seismic Refraction surveys are suggested to determine the rock mass characteristics and ask An Bord Pleanala to condition same.</p> <p>iii) If a dense rock with little fractures is encountered, this will lower the risk of potential ground movement and would verify the Ground Loss % used in the design of the tunnel.</p> <p>iv) If a dense rock with little fractures is encountered, this potentially magnifies the noise and vibration levels through our building further which is a significant concern.</p> <p>v) The distance (cover) from the soffit of basement and pile structures to the crown of the tunnel should be used to determine the differential settlement of the proposed works.</p> <p>vi) PUNCH request to review proposed positions of Settlement Monitors and Monitor types as part of the detailed design review and certainly prior to works starting on site.</p> | <p>Please refer to Items 3 and 4.</p> <p>The settlement contours shown on Figure 20.16 of Appendix B is based on Phase-1 assessment with very conservative (absolute worst case) tunnelling volume loss parameters and its purpose is to define the boundaries for the buildings for subsequent assessments. However, Phase 2a has been carried with refined (but still conservative) tunnelling volume loss parameters with the consequent reduction in the greenfield settlements (to less than 30mm). Further, the Phase 2a assessment is based on the ground movements at the formation level of the basement (underside of the basement slab) - for the Damage Categorisation.</p> <p>Phase-3 assessment will utilize the site specific ground model, particularly that the tunnel face is in rock strata in this area, which will result in significant reduction in the volume loss compared to that adopted for the Phase-2a assessment for tunnelling works - this will lead to lower damage category.</p> <p>Any additional ground probing works etc required to validate the basis of assessment will be prescribed as part of the recommendations from the Phase-3 assessment works.</p> |  |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |
| 45                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 13 and 14 of memorandum) | 27&28    | <p>i. Confirmation of predicted vibration and noise under the existing structure at 13 and 14 Earlsfort Terrace from the proposed works.<br/><i>TII Response 11 th November 2022 - The predicted groundbourne noise and vibration levels arising from the construction (and operation) proposed works can be found in Appendix 14.5 (Groundborne Noise and Vibration Blasting Modelling Results) of the EIAR linked here:</i></p> <p>PUNCH Further Comments:</p> <p>i) There is a concern in relation to the identified noise and associated disruption contained within https://www.metrolinkro.ie/. A "Very High Adverse (significant)" residual impact is identified in the documentation. This is not acceptable to us.</p> <p>ii) Whilst this impact is noted as being "short term", there is no clarity or estimate provided beyond this in relation to the duration of these works and associated negative impacts.</p> <p>iii) A further area of concern is Figure 12.2, Sheet 29 of 30, Construction Noise Assessment Locations (Refer to Appendix D) which shows there were no construction noise receivers placed on or surrounding our clients building. This is a huge concern as we cannot see how the predicted noise limits can be determined without a noise receiver on our client's building or surrounding buildings.</p> <p>iv) We request An Bord Pleanala condition an independent noise and vibration assessment of the building based on the individual site specifics and the building form itself.</p> <p>v) It is assumed that these noise levels of 50dB (refer to Appendix E) are calculated on a Phase 1 Greenfield base level. The building and its secant piles are founded in rock. The concrete frame is also a very dense form of construction. If the rock is dense, there is a very efficient direct transmission path for noise and vibration through the building. Therefore, we are concerned noise and vibration levels could be greater than calculated and need this concern to be robustly allayed by TII prior to commencement of work.</p> <p>vi) PUNCH request to review proposed positions of Noise Monitors and Monitor types prior to works starting on site.</p> <p>vii) PUNCH request to review proposed positions of Vibration Monitors and Monitor types prior to works starting on site.</p> | <p>i) TII acknowledge your concern and as per the EIAR, will put measures in place to reduce impacts to your property as much a reasonably practicable. It is correct that there is potential for significant effects from TBM along the route of the tunnel without mitigation (Section 14.5.1, Chapter 14 Groundborne Noise and Vibration). However, for 10 Earlsfort Terrace, the potential impact on commercial activity due to Groundborne Noise following mitigation will be negative, slight and short term to medium term (Table 11.70, Chapter 11 Population and Land Use).</p> <p>As mentioned at Item 2 above, unfortunately, there are no effective methods are available to reduce groundborne noise or vibration from TBMs at source, but mitigation measures can be implemented to minimise impacts. These are as follows:</p> <p>- Advance public consultation and stakeholder engagement will take place. This can greatly reduce the significance of groundborne noise effects, as building occupants would be prepared for the passage of the TBM and resultant elevated noise and vibration levels; and</p> <p>- TII will accept and consider applications for additional measures on a case-by case basis, in accordance with its Noise and Vibration Mitigation Policy (see Appendix A14.6).</p> <p>ii) The duration of impacts from groundborne noise due to TBM passage is short term which means a few days and is expected to be of up to 2-weeks. Currently a detailed timeline is not available as the contractor(s) will prepare the programme for the TBM once they are appointed. Once the programme has been prepared, an advance public consultation and stakeholder engagement will take place (Appendix A5.1, Table 6.1 Tunnel Boring GNV1).</p> <p>iii) The Figure 13.2 Construction Noise assessment locations presents the receptor locations considered in the assessment of Airborne noise and vibration around those construction works that will take place above ground, at stations and site compounds. The property is between two of these locations, in excess of 250m from any works, and as such has not been considered in the assessment of airborne noise. The Figures associated with Chapter 14 of the EIAR indicated groundborne noise contours for the passage of the TBM and the operational railway which include coverage of the named property.</p> <p>iv) The assessment results presented in Appendix 14.5 Groundborne Noise and Vibration and Blasting modelling results present predicted levels of groundborne noise and vibration during construction and operation of the named building. No additional assessment is considered necessary.</p> <p>v) At Arthur Cox's offices the level of TBM noise at surface level is shown as 50 LAm<sub>ax</sub>S in the EIAR contours, and operational noise is shown as 35 LAm<sub>ax</sub>S. The effect of two basements and piles down to the rockhead is an increase of 5 LAm<sub>ax</sub>S for TBM noise to 55 LAm<sub>ax</sub>S and 4dB for operational noise to 39 LAm<sub>ax</sub>S.</p> <p>For TBM noise the threshold of significant effects for offices is 45 LAm<sub>ax</sub>S. More relevant is that the duration of significant effect will approximately 2-weeks depending on the rate of advance in this area. For operational noise the impact remains in the "not significant" category.</p> <p>For TBM the VDV is 0.269 ms-1.75 day at ground level increasing to 0.398 ms-1.75 with the two basements and piles. The threshold of significant effect is 1.6 ms-1.75.</p> <p>No further mitigation is necessary for operational effects. No mitigation is available for the TBM groundborne noise impact anticipated at ground level and within the basements as detailed above except through consultation with the owner/occupier of the timings of the TBM arrival, anticipated duration of the TBM progress and programming.</p> <p>vi) &amp; vii) Appendix 5.1 of the EIAR contains an outline Construction Environmental Management Plan (CEMP) which outlines the proposed approach to noise and vibration monitoring during the construction phase in Table 6.2. A full monitoring and auditing programme will form part of the Construction Noise and Vibration Management Plan (CNVMP) which will be agreed with the Local Authorities prior to the commencement of the Construction Phase.</p> |  |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLDEV PROPERTIES UNLIMITED COMPANY IN RELATION TO PROPERTY AT 13-14 EARLSFORT TERRACE, REAR OF 15-18 EARLSFORT TERRACE AND 17-19 HATCH STREET LOWER, DUBLIN 2 (AND ALSO KNOWN AS 10 EARLSFORT TERRACE) |                                                                                              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                       |
| 46                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 14 and 15 of memorandum) | 28&29    | <p>j. Confirmation that the tunnel can be constructed in the proposed position/depth considering the depth of the existing rock, existing piles and formation level of the double basement.</p> <p><i>TII Response 11th November 2022 - TII's Engineering Designer for the Railway Order design have developed the design for the tunnel alignment considering the geotechnical ground conditions and in consideration of the depth of basement for this building. The design for the tunnel and additional detailed geotechnical analysis and design will be further developed in the next phases of the project.</i></p> <p>PUNCH Further Comments:</p> <p>i) PUNCH Consulting Engineers have serious concerns over the proposed tunnel level relative to that of the double basement structure and secant piled wall of 13 and 14 Earlsfort Terrace. Refer Appendix F of this submission for drawings illustrating the close proximity of the tunnel to the existing basement structure.</p> <p>ii) The proposed crown of the tunnel is approximately 6m below the lowest structural element in the basement and 5.35m below the lowest pile level. We believe the proposed tunnel location is too close to the building's substructure. We request immediate engagement with TII to allay these concerns.</p> <p>iii) The existing double basement is waterproofed with a Rascor White Tank Injection System and relies solely on the reinforced concrete structure to prevent water ingress. Hence, this form of waterproofing is very sensitive to ground movements and the design of the tunnel must take this into account. The basement is designed for a crack width of 0.2mm and the information received state cracking of 1-5mm may occur. This will cause determinantal damage to the basement structure.</p> <p>iv) Refer to letter in Appendix G from Rascor Ireland confirming the potential impacts on their basement waterproofing system with the proposed Metrolink works. Below is some of the extract findings from the Rascor Letter:</p> <p><i>1) The basement of the Arthur Cox building is designed for 0.2mm crack width as required for waterproof concrete structures utilizing the structurally designed reinforcement in the elements and strategically positioned crack-inducing injecting units. If cracking of 1-5mm occurs due to the new conditions arising from the tunnel construction, it would permanently damage the waterproofing system and the basement structure.</i></p> <p>v) The basement structure is below the water table level and the basement slab is very sensitive to vibrations and any adverse cracking to the slab would cause significant water ingress issues.</p> <p>vi) The design should be site specific, taking into account the concrete frame size/depth, the loadbearing secant pile walls which supports perimeter column loadings from the building, the water table and diverted River Stein culvert which runs beneath the building. We request An Bord Pleanala condition a site specific assessment of the proposed tunnel depth.</p> | Refer to Items 3 and 4 above. A specific condition is not required as site specific assessment is TIIs stated position. Refer to Items 3 and 4 above. |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 47                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 15 to 17 of memorandum) | 29 to 31 | <p>k. Confirmation that the permissible vertical deviation as outlined in Section 6(d)ii of the Draft Railway Order of 5m upwards has been fully considered on the proposed tunnel design taking account of the existing Secant Piled Wall and Basement Structure.</p> <p><i>TII Response 11th November 2022 - While the draft Railway Order for MetroLink includes a vertical limit of deviation of 5m upwards for the tunnel, this deviation will invariably be constrained at a number of locations across the proposed scheme, including where proximity to building basements or piles requires consideration (as is the situation beneath 13 and 14 Earlsfort Terrace)</i></p> <p>PUNCH Further Comments:</p> <p>i) We question why TII are asking ABP to approve a scheme which is vague and uncertain. TII are asking ABP to approve a Scheme with a vertical deviation of 5m, despite having the knowledge that this is not possible under 13 &amp; 14 Earlsfort Terrace due to the proximity of the secant piles and basement.</p> <p>ii) If the 5m deviation vertically is applied upwards, the proposed crown of the tunnel is approximately 1m below the lowest structural element in the basement and 0.35m below the lowest pile level. (Refer to Appendix F). This cannot to tolerated and will damage the building.</p> <p>iii) Page 3 of the Wider Effects Report Limit of Deviation Environmental Impact Assessment Report Volume 5 - Technical Appendix (Refer to Appendix H), lists a number of locations where it is not possible to apply Limits of Deviation due to constraints in the immediate vicinity of the proposed alignment. This is also discussed in detail in the AGL Consulting report in Appendix C. We request An Bord Pleanala condition a limit of upward deviation be applied at 13 and 14 Earlsfort Terrace to protect the existing structure, should the tunnel design be validated by TII at this level.</p> <p>iv) In the Damage Assessment Report of Building document, it places the Arthur Cox Building ( B-238) in Damage Category 2 (Refer to Appendix A). This category is classed as Slight and described as: "Redecoration probably required. Several slight fractures inside building. Exterior cracks visible some re-pointing may be required for weather tightness. Doors and windows may stick slightly". It states that crack widths between 1-5mm may form. This level of damage is hugely concerning and not acceptable to our client.</p> <p>v) It appears from the report that the baseline for anticipated damage has been established as a masonry clad building from 1977. There does not appear to be any consideration for how a modern glass clad building will react to the proposed differential settlements. Our facade consultant has serious concerns of the potential damage outlined above could have on the building. Refer to Appendix I from ARUP Facades for letter confirming Facade concerns.</p> <p>(a) The facade to the Arthur Cox-ETHS building is not a masonry facade, it is comprised of large stone cladding and floor to ceiling glazing elements. These large cladding elements are more sensitive to differential movements. For example, a small differential movement across the base of one of the floor-to-ceiling glass panes results in a significantly larger movement at the top of the frame due to the aspect ratio of the glass.</p> <p>(b) The anticipated additional differential settlement, resulting from the installation of Metrolink has, as detailed in the report the potential to work loose pointing and cause racking of doors and windows within their frames such that they may stick, when considered for a masonry clad building. We would have a concern that when this level of potential damage is extrapolated to suit a modern office development that there are additional areas of potential damage to consider.</p> <p>vi) It is noted that the track level at St. Stephens Green is circa 2m below the level proposed at 14 and 14 Earlsfort Terrace. If the building is at risk of damage as outlined, we request that the level of the tunnel at 13 and 14 Earlsfort Terrace is reduced to a depth where damage to the building is negligible.</p> <p>vii) Based on our serious concerns outlined above of potential damage to the building, we request TII look to re-routing the proposed tunnel out onto the street of Earlsfort Terrace itself and ask An Bord Pleanala to consider same.</p> | <p>1. with regard to point i) please refer to Items 3, 4 and 7 above.</p> <p>2. with regard to point ii) please refer to Items 3, 4 and 7 above.</p> <p>3. with regard to point iii) please refer to Items 3, 4 and 7 above.</p> <p>4. with regard to point iv) TII will remediate any issues arisings from the construction of the works such that there are no residual issues.</p> <p>5. with regard to point v), (a) and (b) please refer to Items 3 and 4 above.</p> <p>6. with regard to point vi) please refer to Items 3, 4 and 7 above.</p> <p>7. with regard to point vii) -please refer to Item 9 above.</p> |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLDEV PROPERTIES UNLIMITED COMPANY IN RELATION TO PROPERTY AT 13-14 EARLSFORT TERRACE, REAR OF 15-18 EARLSFORT TERRACE AND 17-19 HATCH STREET LOWER, DUBLIN 2 (AND ALSO KNOWN AS 10 EARLSFORT TERRACE) |                                                                                              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 48                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 17 and 18 of memorandum) | 31&32    | <p>I. Confirmation of the calculated loads from the existing building at 13 and 14 Earlsfort Terrace that have been used in the tunnel design. Please also note Point m below.</p> <p><i>TII Response 21 s' November 2022 - The design of the tunnels takes account of all required load cases, temporary and permanent, including existing building loading and potential future development that may arise in a city. The design of the tunnel is not designed for individual building loads since this is not necessary or practicable, and instead utilises load cases that provide an envelope within which the loads from all existing buildings are taken account of, as well as potential future development that may arise in a city.</i></p> <p>PUNCH Further Comments:</p> <p>i) This is hugely concerning that the tunnel design is not designed for individual building loads as Til contends such an approach is not necessary or practicable.</p> <p>ii) We believe that we have clearly outlined why this individual building requires a full independent assessment.</p> <p>iii) We request that An Bord Pleanala impose specific conditions in relation to this unique site and structure.</p>                                                            | <p>1. With regard to point i) TII confirm that the tunnel is to be designed to cater for all existing buildings above the tunnel.</p> <p>2. With regard to point ii) TII have confirmed previously that the building in question will have detailed specific Phase 3 assessments. This is contained within the EIAR Appendix 5.17. Refer to table 5-2 building B-238.</p> <p>3. With regard to point iii) TII do not believe that additional conditions are required as the requested action in i) and ii) are planned to be undertaken. That said if these are to be conditioned TII have no objection subject to confirmation of the wording of said condition.</p> |
| 49                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 18 of memorandum)        | 32       | <p>m. The structure has been designed for a number of additional floors and the client intends to extend the height of the building in the future accordingly. TII to confirm that the loadings for the additional floors will be included in design of the tunnel?</p> <p><i>TII Response 21 st November 2022 - TII confirm the loadings for the additional floors will be included in the design of the tunnel (also see response to (l) above.</i></p> <p><i>For our records, it would be helpful if the following information could be provided:</i></p> <p><i>i. when do you intend to increase the height of the building?</i></p> <p><i>ii. whether planning consent has been sought or received for this extension; and</i></p> <p><i>iii. confirmation that the existing foundations do not need to be modified for the proposed extension.</i></p> <p>PUNCH Further Comments:</p> <p>i) We request this confirmation as soon as possible to ensure the planned future building vertical expansion is included in the design of the tunnel. The structure was designed to cater for additional floors without any modifications to the sub or superstructure and it would not be accepted by our client if any restrictions were attempted to be put in place.</p> | <p>Refer to Item 12 and 16 above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 50                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 18&19 of memorandum)     | 32&33    | <p>n. TII will need to provide full details of the constraints the tunnel will impose on the future development potential/value of the site. This will need to set out the engagement process which the client/site owner will need to undertake for the preparation of any future planning applications.</p> <p><i>TII Response 11th November 2022 - TII are currently developing an Asset Protection Policy outlining the constraints on future developments in proximity to the MetroLink works, including developments above the tunnel alignment. Once complete, this will be publicly published.</i></p> <p>PUNCH Further Comments:</p> <p>ii) It is assumed that this Policy would have been developed before requesting ABP for the approval of the Railway Order.</p> <p>iii) As outlined above the building has been designed to cater for additional floors and it's the client's intention to complete these works.</p> <p>iv) The Development Plan does not put an upper limit height of buildings within the area. As an example, there is a building, Four Park Place, which is 11 stories in height circa 100 metres from the building. Our client would not wish to be restricted by any measures which constrain the future development potential for the site</p> <p>v) PUNCH note the building limitations on the Dublin Port Tunnel is a building constructed within 25m of the Port tunnel cannot exceed 22.5 kN/m 2 loading over the crown of the tunnel. A similar limitation would have a huge impacts on the site's value and potential.</p> <p>vi) We request the Asset Protection Policy is released as soon as possible and well in advance of future Oral Hearings. TII to confirm when this will be available?</p> | <p>Please refer to Item 12.</p> <p>MetroLink will be a catalyst for and provide opportunity for future development and regeneration. While the MetroLink Railway Order does not include for future neighbouring or overhead development, the tunnels and stations are designed to support appropriate future imposed loads.</p> <p>TII will be required to make submissions in relation to planning applications for proposed future developments on or adjacent to MetroLink and there will necessarily be some engineering constraints (such as permissible loadings) required. However MetroLink is committed to engaging with known development proposals and new development proposals as they emerge with the intent of facilitating such developments as they emerge to the maximum extent consistent with the safe operation of the proposed Project.</p> <p>Again in common with other existing rail and tunnel projects, following grant of the Railway Order and development of detailed design, TII will produce "Guidance Note for Developers" that will be the subject of bye-laws following the grant of Railway Order and which is designed to facilitate future adjacent or over-site development while protecting the integrity and safety of the MetroLink works and operations.</p> <p>Therefore at this stage TII is dealing with known development proposals on a case by case basis, TII will work with parties in the future to assist with the wider development of sites over and above stations and tunnels. In this context TII has successfully engaged with a number of developers over the last two years to accommodate development over and in proximity to the alignment and there have been no material restrictions on development subject to the implementation of agreed design and mitigation measures and it is not anticipated that MetroLink will have a material impact on the development potential of sites above and in proximity to the alignment in future.</p> |  |
| 51                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 19 and 20 of memorandum) | 33&34    | <p>o. Written confirmation of any anticipated negative impacts on the building and its tenants at 13 and 14 Earlsfort Terrace, Dublin 2 during the construction phase. This should include but not be limited to noise and vibration levels of the proposed construction works.</p> <p><i>TII Response 11th November 2022 - Please see responses to questions h and i for links to EIAR appendices outlining the predicted groundbourne noise and vibration and settlement levels in proximity to the building. Other environmental impacts from construction can be found in Volume 3 (Environmental Baseline and Assessment) of the Environmental Impact Assessment Report.</i></p> <p>PUNCH Further Comments:</p> <p>i) The answer here does not appear to address the question and gives little comfort . The tenant is one of the country's leading Solicitor firms and would require breakdown of any negative impacts it may experience during the construction works.</p> <p>ii) It would be requested An Bord Pleanala condition same.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>During construction phase the possible impacts on Arthur Cox building could arise due to settlement and groundborne noise and vibration.</p> <p>Please refer to Items 3, 4, 5, 6 for details on building damage and settlement assessment results at Arthur Cox building.</p> <p>TII confirm that there will be a temporary (up to 2 weeks) but very high adverse (significant) impact for groundborne noise at your building during TBM works, as referred to in Chapter 14: Groundborne Noise and Vibration, section 14.6.1.1 Tunnel Boring. This means that noise will be noticeable within the building, but there is no potential for damage to the building from the noise &amp; vibration. Please refer to Items 2 and 45 above for further details on noise and vibration assessment at your building.</p> <p>Where eligibility is established, there will be an opportunity to apply the TII Airborne Noise and Groundborne Noise Mitigation Policy (EIAR Appendix A14.6). Additionally, advance public consultation and stakeholder engagement will be carried out and TII will continue to communicate timelines and construction details as the project progresses. TII are happy to discuss the application of the TII Airborne Noise and Groundborne Noise Mitigation Policy further.</p> <p>The EIAR fully details all impacts during construction phase of the MetroLink. Please refer to, inter alia, EIAR Appendix 5.17 for Ground movement impacts, EIAR Chapter 11 Population and Land Use, EIAR Chapter 13 Airbourne Noise and Vibration and Chapter 14 for Groundborne Noise and Vibration.</p> <p>TII do not believe it appropriate for An Bord Pleanála to issue such as condition.</p>                                                                                                                                                                                                                                                                                              |  |

|                                                                                                                                                                                                                                                       |                                                                                                   |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |

| 52                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 20 of memorandum)             | 34       | <p>p. Written confirmation of any anticipated impacts on the building and its tenants at 1 3 and 14 Earlsfort Terrace, Dublin 2 post construction and during the operational phase. This should include but not be limited to noise and vibration levels.</p> <p><i>TII Response 11th November 2022 - Please see responses to questions ifor links to EIAR appendices outlining the predicted groundbourne noise and vibration during the operational phase in proximity to the building.</i></p> <p>PUNCH Further Comments:</p> <p>i) The answer here does not appear to address the question and gives little comfort . The tenant is one of the country's leading Solicitor firms and would require breakdown of any negative impacts it may experience during the operational phase of the Metrolink.</p> <p>ii) It would be requested An Bord Pleanala condition same.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <p>During operation phase the possible impacts on Arthur Cox building could arise due to ground-borne noise and vibration. Appendix 14.5 Groundborne Noise and Vibration Blasting Modelling Results presents predicted groundborne noise and vibration levels during the operation of the project, with the results for 10 Earlsfort Terrace summarised below:</p> <p>- The predicted level of groundborne noise during railway operation is 36 dB LASmax, which is below the 40 dB LASmax threshold, resulting in a not significant impact on the buildings occupants.</p> <p>- The predicted level of groundborne vibration during railway operation is 0.01 ms-1.75, which is much lower than the VDV Threshold Level of 0.8 ms-1.75, resulting in a not significant impact on the building.</p> <p>Business operations of EPUC will not be negatively impacted during the operational phase (Section 11.7.2, Chapter 11 Population and Land Use).</p> <p>The EIAR fully details all impacts during operational phase of the MetroLink. Please refer to, inter alia, EIAR Chapter 11 Population and Land Use, EIAR Chapter 13 Airbourne Noise and Vibration and Chapter 14 for Groundborne Noise and Vibration. With regard to timelines, the operational impacts will commence once operations commence in 2035. Once operational, demand will vary through the day and week, with different service levels provided to meet varying demand. Services will operate between 05:30 and 00:30 every day. Service frequency is reduced on weekends and public holidays to reflect lower demand during these periods.</p> <p>TII do not believe it appropriate for An Bord Pleanála to issue such as condition.</p> |  |
| 53                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers (page 20 and 21 of memorandum)      | 34&35    | <p>q. Confirmation that the structural integrity of the building at 13 and 14 Earlsfort Terrace will not be affected in any way by the proposed works during the construction phase and during the operational phase.</p> <p><i>TII Response 11th November 2022 - As set out in the Building Damage Report (linked in response to question h), no structural impact has been predicted to occur to this building resulting from the construction works. This particular building has been defined as requiring additional assessment due to the basement depths and secant walls. The flow chart below (taken from the Building damage Report) provides context on the next stages of building assessments to be carried out in the next stages of the project.</i></p> <p>PUNCH Further Comments:</p> <p>i) In the Damage Assessment Report of Building document, it places the Arthur Cox Building (B-238) in Damage Category B . This conflicts with the above response, which states no structural impact has been predicted. This needs to be clarified by TII.</p> <p>ii) We note that because of the foundations proximity to the tunnel it is classed as an "At Risk" building and that the Phase 3 assessment of the building will be undertaken. This Phase 3 assessment, as we understand it, will be a detailed assessment of the Ground Movement Response to the Arthur Cox Building, 13 and 14 Earlsfort Terrace specifically. We request timelines of when this will be carried out by TII.</p> <p>iii) Our client will not accept building damage and the integrity of the basement cannot be compromised in any way.</p> | <p>1. With regard to point i) please refer to Item 6.</p> <p>2. With regard to point ii) please refer to Items 3 and 32.</p> <p>3. With regard to point iii) The damage predicted is outlined in Items 3 and 4. TII commit to undertaking the condition surveys pre and post construction and will remediate damage caused such that the basement functionality is not compromised. Please also refer to item 15 above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 54                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers, Conclusion (page 21 of memorandum) | 35       | <p>i) Our client wishes to request that an Oral Hearing is held in respect of the Railway Order application, so that the points raised within this submission can be further clarified and addressed in detail at the hearing for the benefit of all parties. The project is of both Local and National significance and accordingly warrants an Oral Hearing.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>Thank you for the request for Oral Hearing. The oral hearing process is managed by the An Bord Pleanála. Please refer to Item 1 above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLDEV PROPERTIES UNLIMITED COMPANY IN RELATION TO PROPERTY AT 13-14 EARLSFORT TERRACE, REAR OF 15-18 EARLSFORT TERRACE AND 17-19 HATCH STREET LOWER, DUBLIN 2 (AND ALSO KNOWN AS 10 EARLSFORT TERRACE) |                                                                                                   |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| 56                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers, Conclusion (page 21 of memorandum) | 35       | iii) We wish to express that there are serious concerns of the design to date and the fact the existing building has not been considered is hugely worrying. This building is not a standard building compared with others along the proposed Metrolink Alignment and this needs to be clearly recognised by TII and request An Bord Pleanala condition this.                                                                                           | Please refer to Items 3 and 4. The building damage assessment process proposed caters for the elements that are noted as of concern to EPUC. This building has been identified as a 'special' building and therefore will be subjected to a detailed assessment (Phase-3 assessment) which will utilize the site specific ground model and the structural details/features of the building to determine any mitigation measures required to protect the building and these measures will be agreed with the buildings owners and their advisers prior to commencement of tunnelling in the area. |  |
| 57                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers, Conclusion (page 21 of memorandum) | 35       | iv) There is no commitment from TII in relation to the commencement date or duration for the proposed detailed design and construction works. We request this information from TII and request An Bord Pleanala condition this.                                                                                                                                                                                                                         | refer to Items 31 and 32.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| 58                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers, Conclusion (page 21 of memorandum) | 35       | v) We request An Bord Pleanala condition that the site be assessed individually due to the scale and form of the building in the relation to the proposed tunnel depth and works to be complete before Oral Hearing. This is examined and noted in finer detail in the AGL Consulting report. (Refer to Appendix C)                                                                                                                                     | The further assessments noted are planned as detailed in the EIAR post grant of the RO and undertaken by the Contractor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 59                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers, Conclusion (page 22 of memorandum) | 36       | vi) We also request An Bond Pleanala condition independent separate assessments of settlement, noise, vibration and damage on the building based on discussions above and works to be complete before any Oral Hearing.                                                                                                                                                                                                                                 | The further assessments noted are planned as detailed in the EIAR post grant of the RO and undertaken by the Contractor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 60                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers, Conclusion (page 22 of memorandum) | 36       | vii) We would also request confirmation when Tender Documents will be issued by TII? We further request that site and individual assessments on the building are included fully in the tender documents to ensure the integrity of the building is in no way compromised by the proposed Metrolink works                                                                                                                                                | Refer to Items 31 and 32 for scheduling details. The tender documents will include all requisite information available to allow the contractor to effectively mitigate impacts so far as is reasonably practicable. EPUC assistance in collating the latest building information will be appreciated.                                                                                                                                                                                                                                                                                            |  |
| 61                                                                                                                                                                                                                                                    | Appendix 1, Memorandum prepared by Punch Consulting Engineers, Conclusion (page 22 of memorandum) | 36       | viii) There are serious concerns based on information received that the building will be damaged by the proposed Metrolink works. Although classed as "Slight", it suggests crack widths of 1-5mm may form. These crack widths would have serious consequences on the basement waterproofing protection and building frame facades and cannot be tolerated. Refer to the Rascor Ireland letter in Appendix G and the ARUP Facades letter in Appendix I. | refer to Items 3 and 4 above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLSFORT BASIN LTD, (PREVIOUSLY EARLSFORT VENTURES LTD) IN RELATION TO PROPERTY AT 15-18 EARLSFORT TERRACE, DUBLIN 2 |                                                        |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 1                                                                                                                                                                  | Cover letter                                           | 2        | <p>Our client, Earlsfort Basin Ltd, (previously Earlsfort Ventures Ltd), welcomes the opportunity to make a submission on the Railway Order for the Metrolink line. Our client has a number of observations and concerns in relation to impact of the proposed Railway Order and the MetroLink project on its above property and would ask An Bord Pleanála fully review same.</p> <p>Our client also wishes to request that an Oral Hearing is held in respect of the Railway Order application so that the points raised within this submission can be further clarified and addressed at the hearing for the benefit of all parties. The proposal is of both national and local significance and accordingly warrants an Oral Hearing.</p>                                                                                                                                                          | <p>Thank you for the submission and request for Oral Hearing. We have reviewed the submission and provided response for the observations/ concerns raised in detail below.</p> <p>An overview of the Oral Hearing process is provided in the EIAR Chapter 8.9.2. The Board has confirmed that it intends to hold an Oral Hearing for this project.</p> <p>The purpose of the oral hearing will be to allow issues relevant to an application for approval be examined. The oral hearing can be attended by anyone, but only those that have made a written application may make an oral submission at the oral hearing. The oral hearing is managed by the An Bord Pleanála inspector.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 2                                                                                                                                                                  | Introduction (page 1 of Memorandum)                    | 4        | <p>It is essential that each of the points raised in this submission are addressed in full by TII. It is noted that the comments in this submission will expand following further engagement with TII. We note, it is vital to our client EBL, that the four buildings remain fully operational during the tunnel works and they cannot accept any interruption or damage to the buildings and their business. We highlight that two of the four buildings in question, No 17 and No. 18 Earlsfort Terrace, are Protected Structures and their National Inventory of Architectural Heritage (NIAH) references are as follows: No. 17 - 50110448 and No. 18 - 50110447. Hence, considering this status, the buildings are of significant national importance and the tunnel works must not negatively impact on the structure or fabric of these four buildings including the protected structures.</p> | <p>This response here also relates to Items 15, 16 and others below.</p> <p>The risk of damage to these buildings has been assessed and is reported on in the EIAR Appendix A5.17. The approach used follows an industry standard approach undertaken on tunnelling and underground projects around the world including on the Channel Tunnel Rail Link and Crossrail in London, the Dublin Port Tunnel and currently on High Speed 2 in England. The purpose of the Stage 1 and Stage 2a assessments has been to provide/ensure confidence that the Works will not induce unacceptable damage to buildings/structures along the Route. The primary objective has been to confirm that the structural integrity of each building/structure will not be compromised by the Works. These assessments are conservative in nature.</p> <p>The potential impacts of construction generated ground movements and settlement on properties is presented in Table 5-2 of A 5.17, Building Damage Report this report in the EIAR. It shows that the buildings (B-55) has been assessed as falling within the "Negligible damage" category currently, an explanation for which can be found in Table 4-4 of the aforementioned report.</p> <p>TII does recognise the importance and architectural merit of your buildings. As a result both of these buildings will move forward for further assessment (Phase 3 Assessment). For the Phase 3 assessments generally, each relevant building will be subject to detailed assessment on an individual basis. Detailed surveys will be carried out as part of the Phase 3 assessment to provide the necessary additional information to inform this detailed analysis of how the individual elements of the building would be affected by the predicted ground movements. The method and extent of the detailed analysis will be determined on a case-by case basis and may include a more sophisticated semi-empirical or a detailed soil-structure interaction using finite element modelling methods. It is likely that the Phase 3 assessment will identify lower predicted settlement impacts as it is more building specific and as a result less conservative than Phase 2 assessments. The results of this refined assessment typically show that earlier assessments are conservative and over estimate the likely impact of construction generated ground movements.</p> <p>Ancillary features in each building/structure, which themselves do not contribute to the structural integrity of the building/structure, are also considered in the subsequent Phase 3 assessment. The D&amp;B Contractor is responsible to further investigate the sensitivities of each building/structure to identify those elements within the building/structure curtilage that may not contribute to the structural integrity of the building/structure itself, but will likely in themselves be sensitive to the excavation and construction processes.</p> <p>In each instance, engaging with the building/structure owner (or their delegated representative) the D&amp;B Contractor will be responsible for identifying further mitigations that will mitigated any further potential for damage These mitigations might relate directly to the excavation and construction processes (at source measures), or they might relate to a direct protection of the non-structural elements for which damage related concern remain.</p> |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLSFORT BASIN LTD, (PREVIOUSLY EARLSFORT VENTURES LTD) IN RELATION TO PROPERTY AT 15-18 EARLSFORT TERRACE, DUBLIN 2 |                                                        |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
| 5                                                                                                                                                                  | Technical Observations, point a (page 2 of Memorandum) | 6        | ii) If the tunnel design is by the main contractor, TII to confirm how soon after the grant of the Railway Order a Main Contractor will be appointed?                                                                                                                                                                                                                                                                                                                    | It is anticipated that the Contractor will be appointed within 18 months of the grant of the ERO. It should be noted it may be a further 60 months for the TBM to be within the zone of influence of your building.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
| 6                                                                                                                                                                  | Technical Observations, point a (page 2 of Memorandum) | 6        | iii) TII to confirm estimated construction programme from when EBL are likely to experience noise and vibration from the proposed Construction Works.                                                                                                                                                                                                                                                                                                                    | Tunnelling from St Stephen's Green to Charlemont is expected to take approximately 6 months, covering Q1 and Q2 of Year 7 Construction (Refer to Appendix A5.2 of the EIAR). Noise and vibration impacts from the advancement of the TBM beneath this location will occur for a very short period of days, up to 2-weeks as referred to in Chapter 14: Groundborne Noise and Vibration, section 14.6.1.1 Tunnel Boring. Currently, a detailed timeline for TBM passage is not available as the appointed contractor(s) will prepare the programme for the TBM. Once the programme has been prepared, an advance public consultation and stakeholder engagement will take place to prepare building occupants for the passage of the TBM and resultant elevated noise and vibration levels (Appendix A5.1, Table 6.1 Tunnel Boring GNV1).                                                                                                                                                                                                              |  |
| 7                                                                                                                                                                  | Technical Observations, point a (page 2 of Memorandum) | 6        | iv) TII to confirm what information EBL will receive prior to the Oral Hearing?                                                                                                                                                                                                                                                                                                                                                                                          | There are no plans to issue any further information prior to the Oral Hearing apart from any clarifications issued herewith. However as identified above TII are happy to engage with EBL. See also response 3 above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| 8                                                                                                                                                                  | Technical Observations, point a (page 2 of Memorandum) | 6        | v) Assuming the detailed design is by the Main Contractor, TII to confirm the extent to which the Main Contractor will be required to engage with EBL during the detailed design process?                                                                                                                                                                                                                                                                                | TII will engage a design team to prepare the detailed design for the proposed project. The construction of this design will be the responsibility of the main contractor. However, all designated designs will be independently checked and TII will accept the design. TII will provide the assurance to EBL that the design and modelling, together with proposed instrumentation and monitoring is fit for purpose and will not result in impacts greater than that assessed in the EIAR. If monitoring is to be installed on or in your properties, then the methodology and timing of the installations will be agreed with EBL together with any ongoing maintenance of the monitoring. The Contractor and TII will provide updates as required during the construction process. Additionally, condition surveys will be coordinated with EBL including any close out condition surveys and the identification of any remedial measures needed. If required by EBL TII will issue the Phase 3 Assessment details. Please refer also to Items 2. |  |
| 9                                                                                                                                                                  | Technical Observations, point b (page 3 of Memorandum) | 5        | b. Confirmation that a full copy of the detail design and construction package will be issued by TII in relation to 15-18 Earlsfort Terrace .<br><br>i) We expect to see a full copy of the detailed design and construction package which allows for an independent assessment to be carried out by EBL as they wish. We request confirmation of timelines from TII for this but note this needs to allow sufficient time for our client to fully review the proposals. | As referred to in response 3 above, TII would welcome a meeting with EBL to further explore the details presented here and to collate the relevant information to educate the further assessment.<br><br>TII will engage with EBL to progress with building surveys and a Phase 3 building assessment. With regard to timings this will be confirmed once the main contract is let but likely to be approximately 24 -30 months after the grant of the RO.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |
| 10                                                                                                                                                                 | Technical Observations, point b (page 3 of Memorandum) | 5        | ii) It is vital for EBL that the building is not damaged during these works. It is noted that 'very slight' building damage may occur and the extent of building damage suggested by TII in the Railway Order is not acceptable.                                                                                                                                                                                                                                         | EIAR Appendix A 5.17, Building Damage Report, Table 5-2, shows that the buildings has been assessed as falling within the "Negligible damage" category currently following the Refined Phase 2a Damage Assessment, an explanation for which can be found in Table 4-4 of the aforementioned report. The settlement contours calculated were used to undertake the building damage assessment and conclude, conservatively, that typical damage and likely forms of repair would be limited to hairline cracks only. Any damage caused will be repaired by TII.<br><br>As mentioned to Item 2 above, the protected buildings are designated as special building and will move forward to Phase 3 Damage Assessment at the detailed design phase. With regard to details of Phase 3 assessment please refer to Item 2.                                                                                                                                                                                                                                  |  |
| 11                                                                                                                                                                 | Technical Observations, point b (page 3 of Memorandum) | 5        | iii) The efficient running of the business operations in each of the 4 buildings is of paramount importance to EBL. Whilst some disruption in terms of noise and vibration is likely, these levels cannot be such that they affect the company's daily operations. We would request that TII provide detailed reassurances on these matters.                                                                                                                             | As outlined in response to Item 6 above, noise and vibration impacts from the advancement of the TBM beneath this location will occur for a very short period of days. To mitigate impacts, advance public consultation and stakeholder engagement will take place which will greatly reduce the significant of groundborne noise effects, as building occupants would be prepared for the passage of the TBM and resultant elevated Noise and Vibration levels (Table 11.70, Chapter 11 Population and Land Use).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |

Confirmation of the Identity of the Geotechnical Design Firm for the Metrolink tunnel beneath 15-18 Earlsfort Terrace?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | These contracts will only be let after the grant of the RO. TII can advise at that time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 14                                                                                                                                                                 | Technical Observations, point e (page 3 of Memorandum) | 5        | e. Confirmation of the Technical Design Checking Process for the Metrolink tunnel beneath 15-18 Earlsfort Terrace?<br><br>i) Category 3 independent checking is expected as a minimum checking process. We ask TII to confirm checking process and we request An Bord Pleanála to condition same in any grant of the Railway Order.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | The design checking process is to be developed by TII and will incorporate a CAT 3 checking process. With regard to the condition request, TII do not believe it appropriate for An Bord Pleanála to issue such as condition as the requested action in i) and ii) will be undertaken by TII.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 15                                                                                                                                                                 | Technical Observations, point f (page 4 of Memorandum) | 7        | f. Details and frequency of proposed condition surveys for 15-18 Earlsfort Terrace by TII, both in advance of and during the construction works as well as during the tunnel operational phase.<br><br>i) In the Damage Assessment Report of Building document on https://www.metrolinkro.ie/, it places 15-18 Earlsfort Terrace (B-55) in Damage Category 1 (Refer to Appendix A) . Possible cracking up to 1mm may occur. Given the sensitive nature of these historical buildings with No 17 and No. 18 Earlsfort Terrace being Protected Structures, this damage cannot be accepted by EBL.<br><br>ii) Visual condition surveys of the building are expected prior to and during construction works. There must be photographic condition surveys carried out by professional independent parties procured by TII/Main Contractor to ensure any potential damage to the building is accurately recorded.<br><br>iii) It is expected that the condition surveys continue post construction and through the tunnel operational stages and request frequency of these surveys to be confirmed by TII.<br><br>iv) We request this information from TII as soon as possible to ensure the integrity of the building is maintained during all phases of the works.<br><br>v) We request TII to confirm when guidelines regarding the process for remediation will be released, should remediation be required. It is our understanding these guidelines are under development by TII based on information from https://www.metrolinkro.ie/ . We reiterate that damage to the building cannot be accepted but we need to understand the guidelines nonetheless. | TII would respond to the points raised as follows:<br><br>Response to point i): Negligible damage is predicted at the 15-18 Earlsfort Terrace building (B-55) following the Refined Phase 2a Damage Assessment. The protected buildings has been identified as a 'special' building and will be subject to a detailed assessment (Phase-3 assessment) and appropriate control measures will be implemented to protect the building. Please refer to Item 2 above.<br><br>Response to point ii): TII note and agree, this is as planned.<br><br>Response to point iii): Condition surveys will be programmed for prior to, during and following the construction phase. Long term impacts during the operational phase are not anticipated and so no further surveys are required.<br><br>Response to point iv): TII agree that the surveys and assessment are to be undertaken in time such that the integrity of the building is maintained. This is TII's stated position.<br><br>Response to point v): TII do not intend to put in place a Property Owners Protection Scheme for Commercial Properties along the MetroLink route. To protect commercial properties, TII contractors appointed to carry out the works will, with the agreement of the owners of such properties, commission chartered building surveyors to carry out a precondition survey of commercial properties. In the event that it is determined that damage has occurred. TII's contractor will be required to commission a follow up survey to confirm the extent of the damage and confirm if the damage has been caused by MetroLink works. Where property damage is confirmed to have been caused by MetroLink works the property concerned will have recourse to MetroLink project insurances. |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLSFORT BASIN LTD, (PREVIOUSLY EARLSFORT VENTURES LTD) IN RELATION TO PROPERTY AT 15-18 EARLSFORT TERRACE, DUBLIN 2 |                                                              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 16                                                                                                                                                                 | Technical Observations, point g (page 4 and 5 of Memorandum) | 7 and 8  | <p>g. Vertical settlement of the existing structure at 15-18 Earlsfort Terrace from the proposed works.</p> <p>i) The predicted settlement is a concern from available information on <a href="https://www.metrolinkro.ie/">https://www.metrolinkro.ie/</a>. The settlement contours on Figure 20.16, sheet 26 of 30 (Refer to Appendix B), suggest settlement up to 25mm in the calculated settlement trough. We request details from TII on how they established this deflection data. The building is a Protected Structure and over 130 years and TII must recognise this.</p> <p>ii) There is no evidence of undertakings to confirm the quality of the rock at the tunnel level. We request that geophysical surveys are carried out on the rock at tunnel level from the existing basement. 2d Resistivity and Seismic Refraction surveys are suggested to determine the rock mass characteristics and ask An Bord Pleanála to condition same.</p> <p>iii) If a dense rock with little fractures is encountered, this will lower the risk of potential ground movement and would verify the Ground Loss % used in the design of the tunnel.</p> <p>iv) If a dense rock with little fractures is encountered, this potentially magnifies the noise and vibration levels through our building further which is a significant concern.</p> <p>v) The distance (cover) from the soffit of basement and pile structures to the crown of the tunnel should be used to determine the differential settlement of the proposed works.</p> <p>vi) PUNCH request to review proposed positions of Settlement Monitors and Monitor types as part of the detailed design review and certainly prior to works starting on site.</p> | <p>Please also refer to Item 2 above.</p> <p>The method of assessment is fully explained in EIAR Appendix 5.17. In summary, the settlement contours shown on Figure 20.16 of Appendix B are based on Phase-1 assessment with very conservative (absolute worst case) tunnelling volume loss parameters; 1.5% when the tunnel is with less than half the tunnel diameter of rock cover and 0.75% when the tunnel is with greater than half the tunnel diameter. The purpose of Phase-1 assessment is to define the boundaries for the buildings for subsequent assessments. However, Phase 2a has been carried with refined (but still conservative) tunnelling volume loss parameters; 1.0% when the tunnel is with less than half the tunnel diameter of rock cover and 0.5% when the tunnel is with greater than half the tunnel diameter - Phase 2a assessment shows less than 16mm settlement under these buildings with Damage Category 0 (Negligible). The details of assessment are given in Section 4 of the Damage Assessment Report. The protected buildings have been identified as 'special' buildings and will be subject to a detailed assessment (Phase-3 assessment) and appropriate control measures will be implemented to protect the building if considered necessary - unlikely in this case as already categorised as in the Negligible damage category.</p> <p>Phase-3 assessment will utilize the site specific ground model, particularly that the tunnel face is in rock strata in this area, which will result in significant reduction in the volume loss due to tunnelling compared to that was assumed in the Phase 2a assessment and thus reduction in the greenfield ground movements.</p> <p>Detailed ground investigations (GI) have been undertaken to produce the geological profile of the proposed MetroLink route. This GI data and existing available desk based data has been used in the assessment. At detailed design the contractor will undertake further investigation as necessary to verify the ground conditions and as required to validate the basis of assessment be prescribed as part of the recommendations from the Phase-3 assessment works.</p> <p>The basements are known and the separation from these structures to the crown of the tunnel has been used in the current assessment. This will be updated at detailed design incorporating final design alignment.</p> |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLSFORT BASIN LTD, (PREVIOUSLY EARLSFORT VENTURES LTD) IN RELATION TO PROPERTY AT 15-18 EARLSFORT TERRACE, DUBLIN 2 |                                                              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 17                                                                                                                                                                 | Technical Observations, point h (page 5 and 6 of Memorandum) | 8 and 9  | <p>h. Noise Impacts under the existing structure at 15-18 Earlsfort Terrace from the proposed works.</p> <p>i) There is a concern in relation to the identified noise and associated disruption contained within https://www.metrolinkro.ie/. A "Very High Adverse (significant)" residual impact is identified in the documentation. This is not acceptable to WHD and will be detrimental to our client's daily business operations . TII should assess this further and mitigate this impact.</p> <p>ii) Whilst this impact is noted as being "short term", there is no clarity or estimate provided beyond this in relation to the duration of these works and associated negative impacts. We request TII to confirm duration of the proposed works and associated impacts on our client's building.</p> <p>iii) Table 14.3: Groundborne Noise from Underground Sources - Threshold of Significant Effects on Non-Residential Buildings (Refer to Appendix C) states a threshold of 45dB for commercial buildings. The calculated noise levels from works under the hotel are 50dB and in excess in the threshold.</p> <p>iv) A further area of concern is Figure 12.2, Sheet 29 of 30, Construction Noise Assessment Locations (Refer to Appendix D) which shows there were no construction noise receivers placed on or surrounding our clients building. This is a huge concern as we cannot see how the predicted noise limits can be determined without a noise receiver on our client's building or surrounding buildings.</p> | <p>(i) TII acknowledge your concern and will put measures in place to reduce impacts to your property as much a reasonably practicable. It is correct that there is potential for significant effects from TBM along the route of the tunnel without mitigation (Section 14.5.1, Chapter 14 Groundborne Noise and Vibration). However, for 15 - 18 Earlsfort Terrace, the potential impact on commercial activity due to Groundborne Noise following mitigation will be negative, slight and short term to medium term (Table 11.70, Chapter 11 Population and Land Use).</p> <p>Unfortunately, there are no effective methods are available to reduce groundborne noise or vibration from TBMs at source, but mitigation measures can be implemented to minimise impacts. These are as follows:<br/>- Advance public consultation and stakeholder engagement will take place (Referred to in Chapter 11: Population &amp; Land Use, Table 11.70 Residual Impact – Community and Social Infrastructure). This can greatly reduce the significance of groundborne noise effects, as building occupants would be prepared for the passage of the TBM and resultant elevated noise and vibration levels; and<br/>- TII will accept and consider applications for additional measures on a case-by case basis, in accordance with its Noise and Vibration Mitigation Policy (see Appendix A14.6).</p> <p>(ii) The duration of impacts from groundborne noise due to TBM passage is short term which means a few days and is expected to be of up to 2-weeks. Currently a detailed timeline is not available as the contractor(s) will prepare the programme for the TBM once they are appointed. Once the programme has been prepared, an advance public consultation and stakeholder engagement will take place (Appendix A5.1, Table 6.1 Tunnel Boring GNV1).</p> <p>(iii) TII acknowledge that the calculated Groundborne Noise levels from works under the hotel are 50dB and in excess in the threshold (45dB), however this will only be the case for a number of days of up to 2-weeks.</p> <p>(iv) The Figure 12.2 Construction Noise assessment locations presents the receptor locations considered in the assessment of Airborne Noise and Vibration around those construction works that will take place above ground, at stations and site compounds. The property is between two of these locations and in excess of 250m from surface works, and as such has not been considered in the assessment of airborne construction noise. The Figures associated with Chapter 14 of the EIAR indicate groundborne noise contours for the passage of the TBM and the operational railway which include coverage of the named property.</p> <p>TII are happy to discuss this further and consider applications for additional measures on a case-by case basis, in accordance with its Noise and Vibration Mitigation Policy (see EIAR Appendix A14.6).</p> |
| 18                                                                                                                                                                 | Technical Observations, point i (page 6 of Memorandum)       | 9        | <p>i. TII to confirm that the tunnel can be constructed in the proposed position/depth considering the depth of the existing rock and gravels and formation level of the 4 buildings at 15-18 Earlsfort Terrace?</p> <p>i) We have concerns about the proposed tunnel location relative to the existing buildings at 15- 18 Earlsfort Terrace both on plan and on section. Refer Appendix E of this submission for drawings illustrating the close proximity of the tunnel to the existing buildings.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Refer to Items 2 and 16 above.</p> <p>The design includes for a limit of deviation which is required to allow for unforeseen obstructions and construction tolerances which may necessitate a change to the alignment. In the highly unlikely event that this were to occur, any resulting environmental impacts will comply with the limits set by the enforceable Railway Order.</p> <p>TII has carried out a comprehensive set of ground investigations in accordance with relevant guidelines and best practice. It has a high confidence that MetroLink can be constructed along the proposed alignment without requiring vertical or horizontal adjustment. However, in order to guard against rare and undetectable subterranean conditions that might interfere with construction, the Railway Order provides for limits of deviation (as have other railway authorisation since at least the 1840s). The impacts of potential changes within the Limits of Deviation are considered in the Wider Effects Report (Appendix A5.19).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 19                                                                                                                                                                 | Technical Observations, point j (page 6 of Memorandum)       | 9        | <p>j. TII to confirm that the permissible vertical deviation for the tunnel as outlined in Section 6(d)ii of the Draft Railway Order of 5m upwards has been fully considered on the proposed tunnel under the 4 buildings at 15-18 Earlsfort Terrace?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>Refer to Item 18.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF EARLSFORT BASIN LTD, (PREVIOUSLY EARLSFORT VENTURES LTD) IN RELATION TO PROPERTY AT 15-18 EARLSFORT TERRACE, DUBLIN 2 |                                                             |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 21                                                                                                                                                                 | Technical Observations, point l (page 6 and 7of Memorandum) | 9 and 10 | <p>l. TII will need to provide full details of the constraints the tunnel will impose on the future development potential/value of the site. This will need to set out the engagement process which the client/site owner will need to undertake for the preparation of any future planning applications.</p> <p>i) We request the Asset Protection Policy is released as soon as possible and well in advance of future Oral Hearings. TII to confirm when this will be available?</p> <p>ii) Our client would not wish to be restricted by any measures which constrain the future development potential for the site either above or below ground level.</p> <p>iii) Plan Number ML-P 306 E-O- Railway Works Metrolink - Property Details Hatch Street Lower to Grand Parade, Area No 306 (Refer to Appendix F) indicates the property details of 15-18 Earlsfort Terrace</p> | <p>MetroLink will be a catalyst for and provide opportunity for future development and regeneration. While the MetroLink Railway Order does not include for future neighbouring or overhead development, the tunnels and stations are designed to support appropriate future imposed loads.</p> <p>TII will be required to make submissions in relation to planning applications for proposed future developments on or adjacent to MetroLink and there will necessarily be some engineering constraints (such as permissible loadings) required. However MetroLink is committed to engaging with known development proposals and new development proposals as they emerge with the intent of facilitating such developments as they emerge to the maximum extent consistent with the safe operation of the proposed Project.</p> <p>Again in common with other existing rail and tunnel projects, following grant of the Railway Order and development of detailed design, TII will produce “Guidance Note for Developers” that will be the subject of bye-laws following the grant of Railway Order and which is designed to facilitate future adjacent or over-site development while protecting the integrity and safety of the MetroLink works and operations.</p> <p>Therefore at this stage TII is dealing with known development proposals on a case by case basis, TII will work with parties in the future to assist with the wider development of sites over and above stations and tunnels. In this context TII has successfully engaged with a number of developers over the last two years to accommodate development over and in proximity to the alignment and there have been no material restrictions on development subject to the implementation of agreed design and mitigation measures and it is not anticipated that MetroLink will have a material impact on the development potential of sites above and in proximity to the alignment in future.</p> <p><u>For information, TII note the following observations:</u></p> <p>The site is zoned Z9 - Employment / Enterprise in the Dublin City Development Plan 2022-2028. This zoning permits intensive employment generating development in principle, subject to consideration of the surrounding context and compliance with a range of statutory development management standards set out in the plan.</p> <p>The site has been developed on foot of planning permissions lodged in 2008 and 2014. The maximum height of the building was set as 7 storeys by way of condition (by An Bord Pleanála).</p> <p>The development carried out would appear to be in the range of the maximum development potential on current development standards, although it may be possible to attain a higher insitu development should standards change or the scale of surrounding development also increase.</p> |
| 22                                                                                                                                                                 | Technical Observations, point m (page 7 of Memorandum)      | 10       | <p>m. Written confirmation from TII of any anticipated negative impacts on the buildings at 15-18 Earlsfort Terrace and its occupants during the construction phase?</p> <p>i) PUNCH request TII to issue details and timelines of any negative impacts for EBL on the normal execution of their business operations during construction phase of the works.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>TII confirm that there will be a temporary but very high adverse (significant) impact for groundborne noise at 15 - 18 Earlsfort Terrace during TBM works. It is important to note however that this will not cause any damage to these buildings. However, where eligibility is established, there will be an opportunity to apply the TII Airborne Noise and Groundborne Noise Mitigation. Additionally, advance public consultation and stakeholder engagement will be carried out and TII will continue to communicate timelines and construction details as the project progresses. TII are happy to discuss the application of the TII Airborne Noise and Groundborne Noise Mitigation Policy further (EIAR Chapter 14, Appendix A14.6).</p> <p>The impact on your commercial activity due to Groundborne Noise and Vibration as a result of tunnelling activities following mitigation will be negative, slight and short term to medium term (Table 11.70, Chapter 11 Population and Land Use). Currently, a detailed timeline for TBM passage is not available as the appointed contractor(s) will prepare the programme for the TBM once they have been appointed. TII will continue to communicate with landowners as the project progresses.</p> <p>The EIAR fully details all impacts during construction phase of the MetroLink. Please refer to, inter alia, EIAR Appendix 5.17 for Ground movement impacts, EIAR Chapter 11 Population and Land Use, EIAR Chapter 13 Airbourne Noise and Vibration and Chapter 14 for Groundborne Noise and Vibration.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| 23                                                                                                                                                                 | Technical Observations, point n (page 7 of Memorandum) | 10        | <p>n. Written confirmation from TII of any anticipated negative impacts on the on the buildings at 15-18 Earlsfort Terrace and its occupants during the operational phase?</p> <p>i) PUNCH request TII to issue details and timelines of any negative impacts for EBL on the normal execution of their business operations during the operational phase of the works.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <p>No significant noise and vibration effects are predicted during the operational phase at 15 - 18 Earlsfort Terrace (Section 14.5.2, Chapter 14 Groundborne Noise and Vibration).</p> <p>Business operations of EBL will not be negatively impacted during the operational phase (Section 11.7.2, Chapter 11 Population and Land Use).</p> <p>The EIAR fully details all impacts during operational phase of the MetroLink. Please refer to, inter alia, EIAR Chapter 11 Population and Land Use, EIAR Chapter 13 Airbourne Noise and Vibration and Chapter 14 for Groundborne Noise and Vibration. With regard to timelines, the operational impacts will commence once operations commence. Once operational, demand will vary through the day and week, with different service levels provided to meet varying demand. It is intended that services will operate between 05:30 and 00:30 every day and that service frequency is reduced on weekends and public holidays to reflect lower demand during these periods.</p> |  |
| 24                                                                                                                                                                 | Technical Observations, point o (page 8 of Memorandum) | 11        | <p>o. Confirmation that the structural integrity of the building at 15-18 Earlsfort Terrace will not be affected in any way by the proposed works during the construction and operational phase.</p> <p>i) In the Damage Assessment Report of Building document on <a href="https://www.metrolinkro.ie/">https://www.metrolinkro.ie/</a>, it places the 15-18 Earlsfort Terrace (B-55) in Damage Category 1 (Refer to Appendix A). We note that the building is a part protected structure and because of this, a Phase 3 assessment will be undertaken. This Phase 3 assessment, as we understand it, will be a detailed assessment of the Ground Movement Response for the office development specifically. We request timelines of when this will be carried out by TII and specific details of the process?</p> <p>ii) EBL will not accept building damage and the integrity of the building cannot be compromised in any way. The superstructure and facades cannot be damaged. Should remediation be required to the superstructure, the work practices and daily operations of the company will be hugely affected.</p> | <p>TII would respond to the points raised as follows:</p> <p>Response to point i): Please refer to Items 2, 9, 10 and 16 above.</p> <p>Response to point ii): The damage predicted is outlined in Items 2, 10 and 16. TII commit to undertaking the condition surveys pre and post construction and will remediate damage caused such that the building integrity is not compromised.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |
| 25                                                                                                                                                                 | Conclusions (page 8 of Memorandum)                     | 11        | <p>i) The project is of both Local and National significance and accordingly warrants an Oral Hearing. Accordingly, our client wishes to request that an Oral Hearing is held in respect of the Railway Order application, so that the points raised within this submission can be further clarified and addressed in detail at the hearing for the benefit of all parties.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <p>Thank you for the request for Oral Hearing. The oral hearing process is managed by the An Bord Pleanála. Please refer to Item 1 above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
| 26                                                                                                                                                                 | Conclusions (page 8 of Memorandum)                     | 11        | <p>ii) We wish to develop and resolve each of the observations made in this submission in advance of any future Oral Hearing and request immediate engagement with TII accordingly. We request that ABP condition same in any grant of the Railway Order.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <p>TII note EBL request for early engagement with TII and are happy to engage further regarding your observations and concerns.</p> <p>TII do not believe it appropriate for An Bord Pleanála to issue such as condition.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
| 27                                                                                                                                                                 | Conclusions (page 8 and 9 of Memorandum)               | 11 and 12 | <p>iii) EBL's primary concern is the effect the proposed works will have on the business operations of its company. The buildings at 15-18 Earlsfort Terrace are over 130 years, with 2 of the buildings Protected Structures and its operations cannot be negatively impacted by the proposed Metrolink works, either in the construction or the operational phase. We would request immediate engagement with TII to allay these concerns.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>TII are willing to meet to discuss the matters raised. Please refer to response (9) above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |
| 28                                                                                                                                                                 | Conclusions (page 9 of Memorandum)                     | 12        | <p>iv) There are concerns based on information received, that the building will be damaged by the proposed Metrolink works. The building is a part protected structure and its structural integrity cannot be compromised by any works. We would request immediate engagement with TII to allay these concerns.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>Thank you for the submission. We have reviewed your submission and provided responses for the observations/ concerns raised in detail above. As stated in response (9) above, TII are happy to engage further with EBL regarding your observations and concerns raised in this submission.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Re: Railway METRO - Charlemont/Dartmouth Square Terminus. Case NO NA 29N.314724 |                         |          |                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 1                                                                               | Letter                  | 1        | We the undersigned support the submission being made by McCabe Durney Barnes on behalf of the Charlemont / Dartmouth Square community and respectfully ask you to consider as follows:                                                                                                                                            | TII have reviewed your submission and responded to the observations raised below. TII can also confirm they have responded to all other submissions received from An Bord Pleanála.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 2                                                                               | 1. A Misplaced Terminus | 1        | If you were building a cross city Metro and were asked to find a centre-city location for a Terminus, would you not want to actually put it in the city centre? How about in the middle of a historical residential suburb away from the city centre with little or no access to other transport services? Welcome to Charlemont. | <p>TII Rationale for the Proposed Charlemont Station</p> <p>TII have carefully considered where the best location is for a southern interchange with MetroLink, and for the reasons set out below, the preferred location is a station at Charlemont.</p> <p>The Board is required to have regard to the likely consequences for proper planning and sustainable development in the area in which it is proposed to carry out railway works (section 43(1) of the 2001 Act) and as such the following matters are relevant.</p> <p>The connection from St Stephens Green to Charlemont / Ranelagh is supported by the previous Transport Strategy for Greater Dublin Area (2016-2035) and the current Transport Strategy for Greater Dublin Area (2022-2042).</p> <p>The Transport Strategies were prepared by the National Transport Authority, scrutinised by the Joint Oireachtas Committee on Transport and approved by the Minister for Transport. It notes in section 12.3.2, "Charlemont offers the optimal location for the primary interchange with the Green Line in response to growing demand in the longer term and is an appropriate location to facilitate any potential future metro extensions to serve the south west, south or south east of the city region should sufficient demand arise."</p> <p>The Transport Strategy is "a consideration material to the proper planning and sustainable development of the area or areas in question." Development Plans are required to be consistent with the Transport Strategy. The Dublin City Development Plan 2022-2028 envisages this station at Charlemon in policy SMT22 "To support the expeditious delivery of key sustainable transport projects so as to provide an integrated public transport network with efficient interchange between transport modes, serving the existing and future needs of the city and region and to support the integration of existing public transport infrastructure with other transport modes. In particular the following projects subject to environmental requirements and appropriate planning consents being obtained: ... MetroLink from Charlemont to Swords".</p> <p>Accordingly, the location of the Charlemont station was a strategic decision made at the highest levels of transport and land use planning and such is fully consistent with the proper planning and sustainable development of the area.</p> <p>The current Transport Strategy considers a range of options for the onward extension of MetroLink to meet the demand for travel over the period of the strategy. This includes consideration of the need for the upgrade of the Luas Green Line to metro with a metro extension to Dublin south west, south or south east. Whilst the strategy envisages that further extensions will be delivered after 2042, MetroLink which terminates at Charlemont allows for the possible extension of the metro in all the above directions.</p> <p>The proximity of the metro to the Luas line at Charlemont provides for a positive customer experience for all users with short interchange distance and due to the proximity, clear wayfinding and high visibility of the interchange. The interchange arrangements at Charlemont provide for significantly better interchange arrangements compared to an interchange at St Stephen's Green Station.</p> <p>The detailed analysis carried out for the Railway Order further confirms that the section of MetroLink route between St Stephen's Green and Charlemont Stations contributes significantly to the overall benefits of the scheme. It serves a significant area of the south city of Dublin and offers enhanced access from the local area to the city centre and a direct connection to Dublin Airport. It serves key trip attractors including residential areas and offices / workplace locations, with high passenger boarding and alighting figures in the peak hours. During the morning peak, at Charlemont station the flows include 1,800 passengers alighting, 2,300 boarding and 1,229 passengers alighting, 2,276 boarding during the evening peak. The passenger numbers contribute significantly to the overall benefits of the scheme and the effect of these benefits outweigh the additional costs that are associated with the delivery and operation of the section from St Stephen's Green to Charlemont station. Further information is available in Chapter 7: Consideration of the Alternatives, section 7.7.8 MetroLink Southern Terminus Location.</p> <p>By extending MetroLink to Charlemont it provides for future proofing of the Green Line, bypassing the capacity constrained Luas on-street running section, and ensures potential future connectivity options are enabled, either to the Green Line or for extensions of the metro.</p> <p>The Charlemont Station interchange provides for increased passenger utilisation of the MetroLink system, thereby increasing the benefits delivered by the Project, reflected by an improved Project Benefit Cost Ration (BCR).</p> |

| Re: Railway METRO - Charlemont/Dartmouth Square Terminus. Case NO NA 29N.314724 |                                              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 3                                                                               | 2. €650m for a 1km tunnel                    | 1        | Having determined that a centre-city Terminus would actually be better placed in the city centre, such as St Stephens Green or O'Connell Street, how would you feel about spending €650m of tax payer's money on a 1k tunnel to a suburb that already had a fully functioning train station and train line? Does that not appear like duplication? Welcome to Charlemont.                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>The Board is not responsible for any decisions in relation to the funding the Project. It is solely responsible for assessing whether the Project is consistent with proper planning and sustainable development and that its effects on the environment are acceptable.</p> <p>The responsibility for funding the Project lies with the NTA, the Government and ultimately the Oireachtas. It has received all necessary approvals, including under the Public Spending Code for the making of a Railway Order. It will undergo further scrutiny and approvals, including under the Public Spending Code, before it is funded. It is not appropriate for the Board to make findings in relation to value-for-money that are outside its statutory functions and would cut across those arrangements. Members of the public are entitled to make representations to their TDs in relation to the value-for-money of any element of the Project.</p> <p>In any event, TII do not agree with this statement for the reasons set out by response (2) above, noting that infrastructure is not being duplicated given the capacity of the Luas south from St. Stephen's Green is restricted due to on-street running.</p> <p>There is a limit to the potential of the Luas to provide additional capacity in the on-street non-segregated section of the Luas Green Line from Charlemont northwards through the city centre. The nature of this route and the fact that it currently crosses several road junctions (Adelaide Road, Harcourt Street / Hatch Street upper and Harcourt Street / St Stephen's Green south) limit the service to a maximum of 24 trams per hour per direction. The projected demand for this section would require a higher frequency of up to 30 trams per hour and this demand cannot be met with on-street systems (Luas / bus). The interchange between Luas and MetroLink proposed at Charlemont will provide the necessary capacity to address the demand on this corridor and reduce overall travel time for passengers</p> <p>There is also high passenger demand forecast for a Metrolink station at Charlemont, including from the Ranelagh area, which would be lost if St. Stephen's Green was the MetroLink southern interchange station. The additional fare revenues collected by the Charlemont Station interchange increase the benefits delivered by the Project, reflected by an improved Project Benefit Cost Ration (BCR).</p> <p>Further, to ensure that public investment delivers value for money, the Public Spending Code sets out requirements for the evaluation, planning and management of public investment. The preparation of a Business Case is a key element of meeting these requirements. The Public Spending Code requires that both the Preliminary Business Case and Final Business Case for public investment projects are published.</p> <p>In July 2022, the Government granted Approval in Principle to the NTA to enable the submission of a railway order application by TII to An Bord Pleanála in respect of the MetroLink project (Decision Gate 1). This approval was granted after the Preliminary Business Case (PBC) had undergone significant scrutiny and challenge by bodies that are independent of TII, including DoT and DPER review (including independent review by JASPERS and the Major Projects Advisory Group (MPAG)) of the PBC around timeline, costs and benefits that were updated to inform the Government decision.</p> |
| 4                                                                               | 3. Planning permission for the Terminus box? | 1        | <p>Following the correct procedure, was the rail order to build the Metro infrastructure already in place when Hines built the Terminus' foundations at Charlemont for NTA? Eh, no. Was there a proper environmental impact study conducted before they proceded? Eh, no. Was there a comparative study of alternative Terminus locations? Eh, No. Welcome to Charlemont.</p> <p>As you are aware, we already have a train station and a train track that goes through Charlemont and Dartmouth Rd and which passes down the end of our garden. It works well. So the question is, why replace something that is working well (the eventual plan and rationale for a Terminus in Charlemont) when there are other areas of the city that have no transport links to the city or airport and that are crying out for it?</p> | <p>The MetroLink enabling works constructed as part of the Hines development was included in the planning application for the Hines Development and has the benefit of planning permission which was granted in April 2019.</p> <p>It is not correct to say that alternative end of line transport interchange locations were not considered. A number of route options were considered in the process of identifying the Emerging Preferred Route (EPR).</p> <p>The station box location was not fixed by the Charlemont Development. The preferred route for MetroLink was published in March 2019 following a comprehensive route options study. The preferred route was based on the emerging preferred route for the scheme which included a station at Charlemont. The Charlemont Metro Enabling Works were constructed to enable the Charlemont Development to proceed whilst simultaneously ensuring there was an option available to construct a station at Charlemont that avoided unnecessary demolition, took advantage of an available site, provided infrastructure that is integrated with planned development rather than necessitating later changes and retrospective adjustments to a new development or even possible demolition of the new development, whilst providing protected provision for the future extension of the scheme south, if required.</p> <p>It is also important to recognise that the station location at Charlemont is influenced by available vacant land and thus avoids unnecessary demolition.</p> <p>Responses (2) and (3) above explain the reasons a station at Charlemont is proposed and that there is no plan to replace the existing Luas Green Line infrastructure.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Submission No.                                                                  |              |          | 081   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 5                                                                               | Letter       | 2        | <p>The adverse effects on the local area; traffic, noise, closure of Dartmouth Road for 8 1/2 years, disturbance from a 24/7 station in a quiet residential suburb, car/taxis dropping off people day and night with no where to park or drop off, well that's just something we'll have to deal with. Before all that happens, though, our request is this;</p> | <p>TII have assessed the impacts of traffic and noise, both for the construction and operational phase, summarised below. TII would also note that construction will generally not take place 24/7, with the exception of some limited below ground sprayed concrete tunnelling works. The proposed working hours for the construction phase of the proposed Project (as per Section 5.2.4 of Chapter 5 of the EIAR) will be for all above ground works to progress Monday to Friday 07:00 to 19:00 and Saturday 07:00 to 13:00. There will be a limited period of 24/7 working below ground to enable the construction of the sprayed concrete lined tunnel, with the associated above ground support activities enclosed within a sound insulated acoustic enclosure as discussed in Section 13.6.1.2.4 of the EIAR.</p> <p>Traffic<br/>The MetroLink is designed to form part of an integrated public transport network with Charlemont selected as the preferred interchange location in order to maximise the potential interchange with the existing Luas Green Line. In overall terms, Charlemont Station will provide for improvements to the public transport network resulting in decreases in private car usage/trips, increases in public transport usages and will facilitate walking and cycling to the station, without significantly impacting on the operation of the road network in the area.</p> <p>Traffic - Construction Phase:<br/>EIAR Appendix A9.5 Scheme Traffic Management Plan presents the analysis undertaken to assess the impact of the traffic management measures on the local road network surrounding the proposed Charlemont Station during the construction phase. At the local level the following parameters have been used to assess impacts on general traffic and on pedestrians:</p> <ul style="list-style-type: none"><li>• Increase in walking distance/quality of service for pedestrians (through removal of footpath, reduction of quality of service, removal of a pedestrian crossing or relocation of crossing by more than 100m);</li><li>• Increase in driver delays at junctions;</li><li>• Changes in traffic flows on surrounding streets; and,</li><li>• Additional distance travelled due to diversions.</li></ul> <p>The analysis undertaken at this location indicates that the increased volume of traffic on Grand Parade and Northbrook Road does not translate into any significant increase in driver delay. The largest increase in driver delay of 12 seconds is registered on the westbound approach on Grand Parade to the Ranelagh Road signalised junction.</p> <p>During the construction phase, pedestrians will experience a reduction in quality of pedestrian infrastructure and space. The construction site boundary will encroach upon footways in the local area, including the northern side of Dartmouth Road, and the southern side of Grand Parade. However, a temporary signalised crossing will be provided west of the Luas to maintain pedestrian access to and from the Stop. Whilst there are partial closures on Dartmouth Road and Grand Parade, pedestrian movements will be maintained on appropriately sized footways through the area.</p> <p>Traffic - Operational Phase:<br/>A microsimulation VisWalk model has been developed for the immediate area surrounding Charlemont Station during the operational phase. The model covers the full extent of the publicly accessible station area, including the immediate vicinity of the station entrance at street level, the Luas stop and nearby junctions at Charlemont Bridge. In order to accommodate the forecast demand from the proposed Charlemont Station, a new staircase with 2.4m stair width is proposed at the south east corner of Charlemont Luas stop. An elevator will also be provided at this location. Both are sized for MetroLink to Luas, and Luas to MetroLink passenger numbers. Please refer to Chapter 9: Traffic &amp; Transport, Appendix A9.2-B Traffic and Transport Assessment Charlemont Station, section 6.1.3. Pedestrian Impact Assessment.</p> <p>In addition, it is proposed that the pedestrian crossing on R111 Grand Parade will be repositioned to the front of the building being developed by Hines. With this infrastructure in place, the model indicates that the R111 Grand Parade will have an acceptable level of service overall, with some reductions in service seen at the pedestrian crossing where pedestrians are required to wait for a green phase at the signals. Overall, it is considered that the model displays an acceptable level of network performance. Chapter 9: Traffic &amp; Transport, Appendix A9.2-B Traffic and Transport Assessment Charlemont Station, section 6.1.3. Pedestrian Impact Assessment refers.</p> <p>The proposed pedestrian crossing on Grand Parade will have minimal impact on the traffic flow along Grand Parade and can be programmed to operate in sync with the existing signalised junction at Grand Parade /Charlemont Street to maintain the flow of traffic movements. When the Project is operational, car mode share will decrease, with a reduction of up to approximately 830 car tips to and from the zones surrounding Charlemont Station over the 12hr period in 2065. In overall terms, the Charlemont Station will provide for improvements to the public transport network resulting in decreases in private car usage/trips, increases in public transport usages and will facilitate walking and cycling to the station, without significantly impacting on the operation of the road network in the area. Chapter 9: Traffic &amp; transport, Appendix A9.2-B Traffic and Transport Assessment Charlemont Station, Section 6.1.2. refers.</p> |

| Re: Railway METRO - Charlemont/Dartmouth Square Terminus. Case NO NA 29N.314724 |              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|                                                                                 |              |          | Response (5) continued                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>Furthermore, TII have deliberately designed the Station with minimum set down space (with the exception of a drop-off on Grand Parade for persons of restricted mobility only) or room for taxi ranks so that it does not encourage the Station to be used as a terminus.</p> <p>Noise</p> <p>The EIAR presents a comprehensive and detailed assessment of both groundborne and airborne noise and vibration in Chapter 13 and 14 of the EIAR. The assessments include for predictive modelling in order to identify the potential impacts on all sensitive receptors during both the construction phase and the operational phase.</p> <p>Noise and disturbance during construction:</p> <p>No profound impacts have been identified for residents during construction of the station and mitigation measures proposed will be effective at reducing the impacts on these properties and in general terms impacts will be associated with the construction phase only. Significant mitigation is proposed to include 4m high noise barriers and further proposed mitigation in line with the Airborne and Groundborne Noise Mitigation Policy. On the implementation of these measures the residual impacts are predicted to be moderate. However, as outlined in Transport Infrastructure Ireland (TII) Airborne and Groundborne Noise Mitigation Policy (Appendix A14.6) there is a process in place whereby further mitigation measures can be implemented at individual properties should this be merited.</p> <p>Chapter 14 of the EIAR assesses groundborne noise and vibration, with EIAR Appendix A14.5 Groundborne Noise and Vibration and Blasting Modelling Results presenting predicted groundborne noise and vibration levels during below ground construction. During TBM passage the predicted level of groundborne noise will be above the 45 dB LASmax threshold for a number of receptors above the runnel alignment, resulting in a significant impact on the building occupants during the relatively short 2-week duration of the TBM passage at a given location. The predicted vibration levels for TBM passage are well below human response thresholds during both day and night-time periods.</p> <p>Unfortunately there are no effective methods are available to reduce groundborne noise from TBMs at source. The principal mitigation measures aimed at minimising impacts are to give advance notice to residents of the timing of the TBM passage.</p> <p>There will additionally be a period of 24/7 working below ground to enable the construction of the sprayed concrete lined turnback intervention tunnel south of the proposed Charlemont Station, with the associated above ground support activities enclosed within a sound insulated acoustic enclosure as discussed in Section 13.6.1.2.4 of the EIAR. During the construction of the intervention sprayed concrete lined tunnels, residents above the proposed tunnel may experience disturbance.</p> <p>As outlined in Transport Infrastructure Ireland (TII) Airborne and Groundborne Noise Mitigation Policy (Appendix A14.6) there is a process proposed whereby further mitigation measures including temporary relocation can be implemented at individual properties should this be merited.</p> <p>Noise and disturbance during operation:</p> <p>No residual noise impacts are identified at this location during operation. The calculated rail noise levels across the proposed Project are not significant in terms of any widespread community disturbance and results in a not significant to slight impact when added to the prevailing noise environment.</p> |

Reflect on whether this really is the best option for a centre-city Terminus (even though its not in the city-centre) and inquire further when they tell you that St Stephen's Green (which is in the city-centre or close to) won't work because according to the independent engineers there is 'no technical reason why they can't use St Stephen's Green' and further that 'it seems like the most obvious place to put it'. | As identified in response to item 2 above a detailed and robust assessment has already been undertaken that has identified Charlemont as the preferred terminus/interchange location.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Re: Railway METRO - Charlemont/Dartmouth Square Terminus. Case NO NA 29N.314724 |              |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 7                                                                               | Letter       | 2        | (b) In addition, in the interests of due process, transparency and adherence to the normal planning procedures that we are subject too and assume others are as well, can you satisfy yourselves that Hines, acting on behalf of the NTA, had permission to build the foundations for a Metro station before NTA/TII had (a) permission from the minister for transport, (b) a budget from the department of transport and or (c) rail order approval? Is there, for instance, any worldview In which a Metro station, particularly one as important as a Metro Terminus, could not be considered part of a rail order that has yet to be approved? | <p>As explained by response (4) above, the MetroLink enabling works constructed as part of the Hines development was included in the planning application for the Hines Development and has the benefit of planning permission which was granted in April 2019, whilst noting that the proposed station box location was not fixed by the Charlemont Development.</p> <p>TII confirm that funding for the MetroLink Enabling works at Charlemont was approved and provided by the National Transport Agency (NTA) who are the Approving Authority for the MetroLink project.</p> |

| Re: Application by the National Roads Authority (operating as Transport Infrastructure Ireland) for the Railway (MetroLink-Estuary to Charlemont via Dublin Airport) Order [2022] Ref ABP-302010-18 |                                                             |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |
| 1                                                                                                                                                                                                   | Interaction with Planned and Proposed Transmission Projects | 4        | It is inevitable that there will be a degree of impact on the transmission grid as a result of the construction and operation on the Metrolink Project. EirGrid seeks to ensure that such impacts are addressed and mitigated to the greatest extent feasible in order to ensure that Government national and regional transportation objectives for the transmission grid can be met.                                                                                                                                                           | <p>TII confirm they are committed to minimising the impact on EirGrid services so far as possible, and continuing to engage and consult with EirGrid throughout the detailed design, construction and operation phases of the project.</p> <p>As noted by EIAR Chapter 22, Infrastructure and Utilities, where there is interaction between MetroLink and existing infrastructure, the locations of the interactions have been identified and planned for, and therefore the potential for any service disruption is limited. All utilities that cross the alignment will also have appropriate protection measures installed and spare capacity for future maintenance or expansion provided where necessary.</p> <p>Where in some cases planned service disruptions are unavoidable to facilitate the connection of existing services to the newly diverted services, then cognisance of the requirements of those premises served by EirGrid will be taken account of in determining the type, duration and phasing of the planned disruption. All of which will be agreed with EirGrid, in accordance with EirGrid's level/business interruption requirements. It is expected that in most cases the duration of disruption will be no more than a few hours. All impacted utilities will be reinstated in accordance with the current standards and specifications for electricity transmission (as specified by EirGrid). Further information on Utility Diversions can be found in section 22.6.1 of Chapter 22 (Infrastructure and Utilities).</p> |  |
| 2                                                                                                                                                                                                   | Interaction with Planned and Proposed Transmission Projects | 4        | There may be substantial construction and operational impacts on the existing and planned transmission grid which need to be addressed and mitigated. Therefore, it is imperative to ensure that the provisions of Government policy and objectives as they relate to the existing and planned transmission grid are upheld and protected, to ensure continuing high standards of safety, security and reliability for electricity users and to protect the investment being made in the development of the transmission grid.                   | <p>TII confirm that the provisions of Government policy and objectives as noted by this observation will be upheld by TII for the reasons stated. EIAR Chapter 22, Infrastructure and Utilities confirms that all impacted utilities will be reinstated in accordance with the current standards and specifications for electricity transmission (as specified by EirGrid). In the case of older utilities, this means that the replacement section will be constructed with modern materials, such as the replacement of underground oil or fluid filled electricity cables with plastic insulated cables. The intention being that these measures will safeguard the future operation of the transmission grid and will allow for planning for future national improvements to the grid.</p> <p>As noted by response (1) above, it is the intention of TII to minimise the impact on EirGrid so far as possible and TII are committed to working closely with EirGrid to achieve this objective.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
| 3                                                                                                                                                                                                   | Interaction with Planned and Proposed Transmission Projects | 4        | EirGrid acknowledges that many of the issues that are of concern to EirGrid, as Transmission System Operator, are of a technical or engineering nature that are most appropriately addressed and resolved ahead of the detailed design process. Therefore, EirGrid would welcome consideration by the Board of the application of appropriate, robust conditions, where such an approach is considered acceptable to the Board, in the event that the Board authorise the Railway Order.                                                         | It is the intention of TII to continue to work with EirGrid to ensure any issues of concern to EirGrid are resolved to EirGrid's satisfaction. TII have procured an Advanced Works Designer who will be further developing the utilities design and who will be consulting with EirGrid to ensure any issues that are of concern have a plan in place to be resolved.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 4                                                                                                                                                                                                   | Conclusion                                                  | 4        | EirGrid therefore requests An Bord Pleanála to ensure that the proposed development can proceed complementary to safeguarding the strategic function, safety and continued efficient operation of the transmission grid, including planning for future national improvements in accordance with separate but interconnected Government objectives.                                                                                                                                                                                               | TII confirm, reflected by the intent of responses (1), (2) and (3) above, their commitment to safeguarding the strategic function, safety and continued efficient operation of the transmission grid, including planning for future national improvements in accordance with separate but interconnected Government objectives.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |
| 5                                                                                                                                                                                                   | Conclusion                                                  | 5        | EirGrid considers that the issues identified can be best addressed and resolved through adequate and appropriate engagement between EirGrid and TII, and agreement of detailed design and methodologies in the post-consent phase. It is of imperative importance, however, that such engagement occurs, prior to the commencement of any development. EirGrid therefore requests that this is ensured by way of the provision of adequate and robust Condition(s) of Approval by An Bord Pleanála, should it be minded to approve the proposal. | TII agrees with the approach set out by EirGrid and considers this aligns with the commitment reflected by the EIAR Chapter 22, Infrastructure and Utilities that notes it is very important that the (MetroLink/TII) Project Team liaises closely and early with EirGrid to arrange the necessary outages of these key electricity transmission circuits. Careful coordination of design and planning will be maintained with EirGrid to avoid any deration of electricity capacity. Prior to implementation, all utilities plans will finalised and confirmed by the appointed contractor(s), and TII will maintain engagement with EirGrid and all relevant bodies throughout this phase to minimise disruption.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |

|                                                                                                                                                   |                                 |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| 1                                                                                                                                                 | Intro                           | 1        | With regards to the above matter I can confirm that I have been instructed to act on behalf of the above named party in relation to the above compulsory acquisition order as it effects their property . My client's property is part of a set piece regency terrace which was developed in the 1830's and is unique in that it is still largely intact and is therefore of significant architectural and historical significance. The property is also a protected structure under the current Dublin city Development plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | TII acknowledge the architectural and historical significance of the property and recognize that the property is also designated as a protected structure. Hence the property has been included in the impact assessment and presented in the EIAR Chapter 26 (Architectural Heritage), Table 26.25: "BH-567 - 4 Harcourt Terrace - Three-storey, two-bay semi-detached house with rendered façade and with ionic pilasters at ground-floor level; single storey porch to side; RPS 3564 DCC; NIAH 50110466".                                                                                                                                                                                                                                                        |
| 2                                                                                                                                                 | Draft of Proposed Railway Order | 1        | <p>My client was issued a letter dated the 20th of September 2022, which included several extracts from plans and a copy of the public advertisement placed in the Irish Independent on the 17th of September 2022, which proports to indicate they have applied for the relevant railway order. However, in their letter they refer to relevant extracts from the "draft of the proposed Railway order" In deed the booklet provided is called the Draft Railway order.</p> <p>In my view there should be no draft involved at this juncture either TII wish to apply for a railway order or they don't. If they wish to apply for a Railway Order to the Bord then both the Bord and Land owner should know exactly what is in the order and there should be no equivocation, which appears to be the case here were the documents are only draft. It begs the question of when will the final Order be submitted and will it be any different from the Draft Order. It is difficult to see how a land owner can make submissions or how the Bord can make decisions based on a draft.</p> | TII confirm that a letter (CAP_ML_0526_22) was issued on 20th of September 2022 to Mrs. Emma Kelly at 4 Harcourt Terrace with reference to 'Intended application by the National Roads Authority (operating as Transport Infrastructure Ireland) for the Railway (MetroLink–Estuary to Charlemont via Dublin Airport) Order [2022]'. Please note that the reference to a "draft Railway Order" is correct and that it reflects the fact that it is a description of what is proposed by TII for approval by an Bord Pleanála as the decision-making body. The "draft" railway Order will become a "Railway Order" only if and when An Bord Pleanála approve it and update to include any specific additional requirements that the Board identify as being required. |

| Submission by Niall Subway MRICS, MSCSI, FCIARbM.MII, Subway and Company Limited Chartered Surveyors on behalf of Emma Kelly, 4 Harcourt Terrace. |                                                |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 3                                                                                                                                                 | Compulsory Purchase and Supporting Information | 2        | <p>In respect of the draft Order I would point out that reference is consistently made to the schedules which are not attached. In particular in part three makes reference to several schedules which are meant to indicate the lands being acquired. Again without these schedules and plans it is not possible for us to properly identify the lands being acquired and the possible effects on our property .I would also draw the Bords attention to section 7.59 of the Non - Technical summary which states that there is are "limits of deviation during the construction phase . There is no such provision allowed in law. In fact schedule three of the 1966 Housing act states "the compulsory purchase order shall be in a prescribed form and shall describe by reference to a map the land to which it relates and shall incorporate, subject to the modifications here and after mentioned any necessary adaptations" Clearly the documentation provide to date does not meet this legal requirement.</p>                                                                                                                                                                                                                                                                                      | <p>Notification letter CAP_ML_0526_22 issued on 20th of September 2022 at 4 Harcourt Terrace includes relevant extracts from the Book of Reference to the plan, indicating the identity of the owners and of the occupiers of the lands described in the Plan. The unique land take referencing and numbering for 4 Harcourt Terrace is "ML6E-U22".</p> <p>The book of reference - third schedule (substratum land which may be acquired) for 4 Harcourt Terrace (ML6E-U22) is attached to the above mentioned notification letter. Relevant extracts of plans (including maps or drawings) which indicate the extent of the lands or land rights affected were also enclosed to the notification letter and include:</p> <ul style="list-style-type: none"><li>• Individualised Property Details (Plan drawing no. ML1-JAI-BOR-ROUT_XX-DR-Y-03768, ML6E-U22), which is the drawing marking out your property (only), which is extracted from the below property plan.</li><li>• Property Details Hatch Street Lower to Grande Parade (Plan drawing no. ML1-JAI-BOR-ROUT_XX-DR-Y-01097, ML-P 306 E-O), which shows the extent and types of land acquisition that TII proposes to acquire to facilitate the construction, operation, and maintenance of the MetroLink project along the section of the route close to your property.</li><li>• Alignment Long Section 18 (Plan drawing no. ML-LN O-O18), which shows the indicative depth of the tunnel along the section of the route close to your property.</li><li>• General Arrangement Hatch Street Lower to Grande Parade (Plan drawing no. ML-RO 306 E-O), which shows the general arrangement of the tunnel along the section of the route close to your property.</li></ul> <p>The drawings in the third schedule show the lands to be acquired with different shading used for temporary, permanent and substratum acquisitions as outlined on the legand. There will be no compulsory acquisition outside the shaded area. The shaded areas include all of the area required to construct and operate MetroLnk, allowing for any variation within the Limits of Deviation.</p> <p>The design includes for a limit of deviation which is required to allow for unforeseen obstructions and construction tolerances which may necessitate a change to the alignment. In the highly unlikely event that this were to occur, any resulting environmental impacts will comply with the limits set by the enforceable Railway Order.</p> <p>TII has carried out a comprehensive set of ground investigations in accordance with relevant guidelines and best practice. It has a high confidence that MetroLink can be constructed along the proposed alignment without requiring vertical or horizontal adjustment. However, in order to guard against rare and undetectable subterranean conditions that might interfere with construction, the Railway Order provides for limits of deviation (as have other railway authorisation since at least the 1840s). The impacts of potential changes within the Limits of Deviation are considered in the Wider Effects Report (Appendix A5.19).</p> |
| 4                                                                                                                                                 | Substratum Definition                          | 2        | <p>The documentation supplied to date makes reference to acquiring substratum. There is no definition supplied as to what this is. Is it measured from the top or the bottom of the Tunnel? When they say the surface what do they mean, is it the floor of a basement and what consideration has been given to any structures with piled foundations or underground car parking? One can only presume that TII will attempt to rely on rule 17 as introduced by section 48 of the Planning and development (strategic infrastructure)Act 2006 which states "the value of any land 10 meters or more below the surface of that land shall be taken to be nil, unless it is shown to be of a greater value by the claimant". All the other rules for the assessment of compensation are based on the open market Value of the lands , which can be determined by an Arbitrator in default of agreement. It is simply not credible that legislation can be introduced where the state has in essence predetermined a nil Value to part of someone's property. In deed even in the case of a half road bed which is controlled by a local authority this is not the case. We would ask that the Bord should seek legal clarity from the Courts as to whether this legislation is Legal in the first instance.</p> | <p>The Metrolink CPO guideline 'metrolink_cpoguideline_final_september-2022' sets out details of substratum acquisition and how this is measured. To summarise substratum is defined as the layer of earth which is 9 metres below ground level.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Submission by Niall Subway MRICS, MSCSI, FCIARbM.MII, Subway and Company Limited Chartered Surveyors on behalf of Emma Kelly, 4 Harcourt Terrace. |                        |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 5                                                                                                                                                 | Substratum Definition  | 3        | The lack of detailed design drawings means that we have no indication of where the top of the Tunnel will be in relation to the underside of our basement floor level of our property or any foundations. This will have serious implications for the property in terms of risk from Vibration during the works and also when the Rail is operational, and also in relation the possible interpretation of rule 17, as referred to previously.                                                                                                                                                                                                                                                                   | <p>Relevant preliminary design drawings (alignment longitudinal section, general arrangement, property details) have been issued to 4 Harcourt Terrace property - please refer to Item no. 3 above. Please note that these drawings show that the top of the tunnel is over 17m below ground level. It should also be noted that the tunnel as proposed is under Harcourt Terrace and hence not directly beneath your building.</p> <p>With regards to your concerns related to potential vibration impacts, EIAR Appendix A14.5, Groundborne Noise and Vibration and Blasting Modelling Results, 14.4 Section AZ4 Northwood to Charlemont, presents the predicted day and night VDV levels (Vibration Dose Value is a parameter that combines the magnitude of vibration and the time for which it occurs) for TBM passage during construction phase and for railway operation, with the results for 4 Harcourt Terrace summarised below:</p> <ul style="list-style-type: none"><li>• The predicted day and night levels of groundborne vibration during TBM Passage are 0.256ms-1.75 (VDV day) and 0.215ms-1.75 (VDV night). Both of these values are lower than the VDV Threshold Levels presented in EIAR Chapter 14.2.1.2.3 Vibration from Construction Sources other than Blasting, meaning that no significant impact is expected on the property as a result of vibrations during TBM passage.</li><li>• The predicted day and night levels of groundborne vibration during railway operation are 0.007ms-1.75 (VDV day) and 0.004ms-1.75 (VDV night). Both of these values are lower than the VDV Threshold Levels presented in EIAR Chapter 14.2.1.2.4 Vibration from Operation, meaning that no significant impact is expected on the property as a result of vibrations during railway operation.</li></ul> |  |
| 6                                                                                                                                                 | Appropriate Assessment | 3        | We also note that the Historic nature of Harcourt Terrace doesn't feature anywhere in the non -Technical summary not even in section 10.17 of the non -Technical summary which purports to deal with Archaeology and Cultural Heritage. One can only conclude that it has not been considered in TII's deliberations in relation to possible effects on a architecturally significate part of Dublin.                                                                                                                                                                                                                                                                                                            | <p>The Non-Technical Summary document summarises in non-technical language the Environmental Impact Assessment Report (EIAR), including the likely significant effects identified, the mitigation and monitoring measures proposed, as well as any residual effects arising from MetroLink that have been identified during the Construction and Operational Phases to inform the planning consent process. The specific chapters of the EIAR present details on the impact assessment of the MetroLink Project on the receiving environment during the Construction Phase and Operational Phase. In this sense, the EIAR Chapter 26 (Architectural Heritage) describes and assesses the likely direct and indirect significant effects of the proposed Project on Architectural Heritage. The protected structure status of the building is known (see Table 26.25: Architectural Heritage Constraints from St Stephen's Green Station to Charlemont Station) hence your property has been subject to impact assessment and the results are presented in the Section 26.5.4.15 St Stephen's Green Station to Charlemont Station. According to the findings of impact assessment, no direct impacts on architectural heritage is predicted during Construction Phase in this section of the study area. No direct or indirect impacts on architectural heritage is predicted during Operational Phase.</p>                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 7                                                                                                                                                 | Appropriate Assessment | 3        | In relation to Section 10.12 Soils and Geology, in the non-technical summary. It is our view that it is far too vague, so as to be of little use when considering possible impacts on our property. We would like to put on record that there is a granite rock seam which runs through the lands adjacent to Harcourt Terrace and our property which will in our view constitute a risk of damage occurring to our property, especially during the works. This would appear not to have been considered. We also that there is a underground river called the river Steyne which flows below the Terrace, similarly, there has been no cognizance or consideration of this demonstrated within these proposals. | <p>As stated above the Non-Technical Summary document summarises in non-technical language the Environmental Impact Assessment Report (EIAR), including the likely significant effects identified, the mitigation and monitoring measures proposed, as well as any residual effects arising from MetroLink that have been identified during the Construction and Operational Phases to inform the planning consent process.</p> <p>The local geological conditions were considered (including the presence of River Steyne/Stein) and presented in detail in the EIAR Chapter 20 (Soils and Geology of the EIAR). Furthermore, EIAR Appendix A 5.17, Building Damage Report, covers the assessed impacts of construction generated ground movements and settlement on property. The settlement contours calculated were used to undertake the buildings damage assessment and take account of the prevailing ground conditions. Properties along Harcourt Terrace have been assessed in the very slight damage category. The assessments include for property basements. Please refer to building B149 in table 5.2 of Appendix A5.17 and to section 4.3.2 for an explanation of the Building Damage Categorisation.</p> <p>Currently, your property is assessed at Damage category 2 or below. The damage categories are described in section 4.3.2 of the EIAR Appendix A 5.17, Building Damage Report. However, it is important to recognise that as your property is designated a 'special' building (designated protected structure) it will be further assessed (Phase 3) at the detailed design stage to verify the impacts.</p>                                                                                                                                                                                 |  |

|                                                                                                                                                   |                        |          |                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|                                                                                                                                                   |                        |          |                                                                                                                                                                                                                                                             | <p>The Phase 3 assessment will take account of final design and construction methodology details. A detailed survey will be carried out as part of the Phase 3 assessment to provide the necessary additional information to inform this detailed analysis of how the individual elements of the building would be affected by the predicted ground movements. The method and extent of the detailed analysis will be determined on a case-by case basis and may include a more sophisticated semi-empirical or a detailed soil-structure interaction using finite element modelling methods. The results of this refined assessment typically show that earlier assessments are conservative and overestimate the likely impact of construction generated ground movements.</p> <p>Furthermore, as 4 Harcourt Terrace building is a designated protected structure and, as referred to EIAR Chapter 26, where the built heritage structures are in the vicinity of the proposed tunnelling these buildings will be included in the Property Owner Protection Scheme (POPS), whereby they are to have condition surveys carried out prior to the commencement of tunnelling and again after completion. In those cases where the POPS survey identifies that damage has occurred as a result of the tunnelling works repairs are to be to be prepared in accordance with method statements prepared by the POPS Conservation Architects and approved where necessary by the MetroLink Project Conservation Architect (PCA). Further detail on the POPS process can be found in Chapter 26 (Architectural Heritage), Chapter 21 (Land Take) and Chapter 11 (Population &amp; Land Use) of the EIAR.</p> |
| 8                                                                                                                                                 | Appropriate Assessment | 3        | For the reason stated above we feel that the Bord should reject the draft order as submitted and also on the basis that the acquisition of our lands would constitute a breach of my Clients constitutional right to the quiet enjoyment of their property. | TII do not believe that granting of the Railway Order breaches the submitters clients constitutional rights.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 9                                                                                                                                                 | Conclusion             | 4        | In conclusion we would request that in any decision the Bord makes they should direct that my Clients costs, incurred in dealing with this matter should be discharged by the TII.                                                                          | TII do not believe the requested condition is appropriate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Letter Re: Railway Order Application- Metro North: Estuary through Swords, Dublin Airport, Ballymun, Glasnevin and City Centre to Charlemont, Co. Dublin |                                                                     |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| 1                                                                                                                                                        | 2. Ballymun 38KV Substation and Telecoms Compound                   | 6, 7, 9  | ESBT support the route of the proposed Metrolink however with specific reference to the construction techniques would wish to emphasise that the integrity of the Grid and in particular electricity supply to our Ballymun telecoms site must be maintained ensuring that any disruption and outages to the site are prevented.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | As presented in Chapter 22 (Infrastructure and Utilities), where there is interaction between the proposed Project and existing infrastructure, such as the Ballymun telecoms site, the locations of the interactions have been identified and planned for, and therefore the potential for any service disruption is limited.<br><br>In some cases, planned service disruptions will be required to facilitate the connection of existing services to the newly diverted services, In such cases, cognisance of the requirements of those premises served by the utility will be taken in determining the type, duration and phasing of the planned disruption. The duration of service interruption will be agreed with the relevant utility provider, in accordance with their service level/business interruption requirements, however in most cases the duration of disruption should be no more than a number of hours. All impacted utilities will be reinstated in accordance with the current standards and specifications for electricity transmission (as specified by ESBT).                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 2                                                                                                                                                        | 2. Ballymun 38KV Substation and Telecoms Compound                   | 7        | During the construction phase of this part of the tunnel, vibration must be contained with prescribed limits to ensure the stability of the telecoms tower and services from the base station generally must not be compromised.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Chapter 14 (Groundborne Noise and Vibration) presents the assessment of vibration during construction of the project. The telecoms mast and base station is in excess of 60m to the east of the edge of the tunnel, where the TBM will progress and more than 150m north of the main station excavation. While some works associated with utility diversions and the proposed grid connection will progress closer to the telecoms mast and base station, the separation distance from the main construction activities with the highest vibration levels mean that there will be no significant vibration levels experienced at the mast site. While predictions of vibration during construction have not been carried out for the mast specifically, predictions have been made for buildings that are closer to the tunnel and are presented in Appendix 14.5 Groundborne Noise and Vibration Blasting Modelling Results. The nearby Ballymun Library is directly above the tunnel centreline, and the predicted vibration during TBM passage is 0.265 ms-1.75 VDV (Vibration Dose Value), which is well below the threshold level of 1.0 ms-1.75. This threshold level has been defined based human response, which is much lower than levels where there would be concerns for the structural integrity of buildings. Given that the telecoms mast is further from the tunnel centreline, then vibration during TBM passage will be lower at the base of the mast than at the Library. |  |
| 3                                                                                                                                                        | 2.3 Need for Unhindered 24/7 Access                                 | 8, 9     | ESBT authorised staff require unhindered and unrestricted access to all our base station sites, including Ballymun. It is important to emphasise that this requirement also extends to authorised persons acting on ESBTs behalf as well as to our customers and where appropriate contractors working on behalf of our customers. Such access is needed on a 24 hour/ 7 days per week basis to allow not only for routing maintenance, but also any emergency works that may be required. The need to maintain a high degree of security at all times is also imperative in order to prevent trespass, potential vandalism, theft, and safety of all those who enter the base station.<br><br>ESBT would have strong reservations to any use of the wider substation lands that could be required for the construction phase of MetroLink on the basis of safety, security and access; unless absolute assurance could be given that these issues were effectively controlled, and necessary arrangements put in place. | TII acknowledge that Railway Order temporary landtake drawing at the ESBT could be clearer. the site is required only to allow for a grid connection at this location for MetroLink. The provision of this grid connection would be undertaken by a contractor approved by ESB/EirGrid based on a Grid Connection approval. This means that access to this site, security for the site and site safety would be fully within the control of ESB, with no direct MetroLink involvement during the construction phase.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 4                                                                                                                                                        | 2.4 Implications of Temporary Repossession (at Ballymun Substation) | 8, 9     | From a commercial and practical perspective finding and alternative site(s) are often difficult to find particularly in urban areas, where land is either already developed or earmarked for development. The process from site identification, design, planning, procurement, capital costs etc. would give rise to very significant capital costs for ESBT and our customers. Put simply, the cost of disruption would greatly outweigh the short term benefits to be gained through the temporary procession of the site. This would be unlikely to be sustainable particularly on a short term/ temporary basis i.e., covering the construction period for Metrolink.<br><br>ESBT could not therefore support in making the telecoms land available, even on a temporary possession basis, to avoid such significant costs in finding and alternative location(s).                                                                                                                                                   | As outlined in response to item (3) above, the requirement for temporary landtake within the site is for the purposes of a grid connection only. As a result, there is not envisioned to be any requirement for the mast and base station to be relocated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
| 5                                                                                                                                                        | 2.4 Implications of Temporary Possession                            | 9        | ESBT would also have strong reservations regarding the use of the adjacent substation lands for such uses connected with Metrolink for reasons concerning access, safety and security.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Please refer to response item (3).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF ESPRIT INVESTMENTS LIMITED IN RELATION TO PROPERTY AT TOWNSEND STREET AND SHAW STREET, 32-33 PEARSE STREET, AND 36-37 PEARSE STREET, DUBLIN 2. |                               |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1                                                                                                                                                                                           | Site and Impacts of Metrolink | 4        | <p>The property is located in the city centre, Dublin 2, and therefore benefits from excellent access to existing public transport and services. It is acknowledged that the city centre location of the site necessarily means that there may be ongoing construction activity in the area at any given time.</p> <p>However, our client has serious concerns in relation to the identified noise and associated disruption contained with the Railway Order documentation. A “Significant” residual impact is identified to a neighbouring building (Dublin Fire Brigade HQ - located to the west on Townsend Street). Whilst this impact is noted as being temporary, there is no clarity or estimate provided beyond this in relation to the duration of these works.</p>                                    | <p>The plot of land adjacent to Dublin Fire Brigade HQ currently contains no building, and so has not been assessed by TII's noise and vibration model. The building 155 Townsend Street is in a similar position in relation to the tunnel route, and so the model results for this building provide a useful indication of potential impact at this location.</p> <p>EIAR Appendix 14.5 Groundborne Noise and Vibration and Blasting Results presents the predicted noise and vibration levels during TBM Passage for various sensitive receptors. The predicted groundborne noise during TBM passage beneath the building 155 Townsend Street is 50 dB LASmax, which is above the Threshold Level of 45 dB, resulting in a significant impact for occupants of any future building that might be present for the limited duration of TBM passage. The predicted groundborne vibration during TBM passage beneath the building 155 Townsend Street is 0.269 ms-1.75 VDV (Vibration Dose Value is a parameter that combines the magnitude of vibration and the time for which it occurs) which is below the threshold of 1.6 ms-1.75 VDV for offices and commercial buildings and also below the threshold of 0.8 ms-1.75 VDV for more sensitive uses. There is therefore no significant impact for groundborne vibration expected at this location.</p> <p>Unfortunately, there are no effective methods available to reduce groundborne noise or vibration from the TBM at source, but noting that the duration of this impact will be temporary and of the order of up to two-weeks as the TBM passes. TII will undertake advanced consultation and stakeholder engagement to prepare people for the passing of the TBM and ensure the timing of these impacts are known. This is detailed in section 6.2 of EIAR Appendix A5.1 Outline CEMP.</p> <p>EIAR Chapter 13, Airborne Noise and Vibration includes an assessment of airborne noise and vibration from the construction of nearby Tara Station. Chapter 13 presents the predicted airborne noise impacts, including Table 13.66 which summarises the noise impacts from the construction of Tara Station. This includes receptor 15 on Townsend Street in the location of this plot of land where the predicted impact is Moderate to Significant and Significant to Very Significant impact during some of the work phases.</p> <p>TII's contractor(s) will prepare a Construction Noise and Vibration Management Plan (CNVMP) for the proposed Project as referred to in EIAR Appendix A5.1, Outline Construction Environmental Management Plan (CEMP). The CNVMP will be a live document and will include a full monitoring and auditing programme which will be agreed with the local authorities prior to the commencement of the Construction Phase, including predetermined monitoring trigger levels to ensure noise and vibration limits are not breached, noting that it is not possible to mitigate TBM groundborne noise and vibration at source. Table 6.2: Noise and Vibration Measures of the Outline CEMP outlines the monitoring programme requirements.</p> <p>The Transport Infrastructure Ireland (TII) Airborne Noise and Ground-borne Noise Mitigation Policy (Appendix A14.6 of EIAR Chapter 14) also sets out the construction noise insulation and temporary rehousing measures to be implemented where required.</p> |
| 2                                                                                                                                                                                           | Site and Impacts of Metrolink | 5        | <p>Our client also has a concern in relation to the assessment and quantification of the impacts contained within the submitted documentation, as our client's property (and the permitted and future buildings to be constructed thereon) has not been specifically assessed, only a neighbouring building. This is especially concerning given that the proposed alignment runs directly under our client's property.</p> <p>The Railway Order applies for a vertical deviation of 5 metres. Whilst it is understood a deviation may be required due to detailed design or conditions encountered, the result of such a deviation in relation to the subject property is potential clashes with substructure and increased impacts arising in relation to noise, vibration and associated building damage.</p> | <p>The assessed impacts of groundborne noise and vibration, and construction generated ground movements on Espirit Investment Limited properties are summarised below.</p> <p>Groundborne Noise and Vibration (EIAR Appendix 14.5 Groundborne Noise and Vibration and Blasting Results)</p> <ul style="list-style-type: none"><li>• 155 Townsend Street - please refer to response (1) above for construction.</li></ul> <p>During operation the predicted groundborne noise at the nearby 155 Townsend Street is 33 dB LASmax, below the threshold of 40 dB LASmax; and vibration is 0.008 ms-1.75 VV day and 0.005 ms-1.75 night, also below thresholds for residential receptors of 0.8 ms-1.75 VDV day and 0.4 ms-1.75 VDV night. As such, no adverse impacts during the railway operation are predicted.</p> <ul style="list-style-type: none"><li>• 15 Shaw Street: The predicted groundborne noise during TBM passage is 44 dB LASmax, which is below the threshold level of 45 dB, resulting in no significant impact for groundborne noise at this location. The predicted groundborne vibration during TBM passage is 0.191 ms-1.75 VDV which is below the threshold of 1.6 ms-1.75 VDV for offices and commercial buildings and is also below the threshold of 0.8 ms-1.75 VDV for more sensitive uses. There is therefore no significant impact for groundborne vibration expected at this location.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF ESPRIT INVESTMENTS LIMITED IN RELATION TO PROPERTY AT TOWNSEND STREET AND SHAW STREET, 32-33 PEARSE STREET, AND 36-37 PEARSE STREET, DUBLIN 2. |              |          |                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|                                                                                                                                                                                             |              |          |                                                                    | <p>During operation the predicted groundborne noise is 23 dB LASmax, below the threshold of 40 dB LASmax; and vibration is 0.003 ms-1.75 VV day and 0.002 ms-1.75 night, also below thresholds for residential receptors of 0.8 ms-1.75 VDV day and 0.4 ms-1.75 VDV night. As such, no adverse impacts during railway operation are predicted.</p> <p>• 33 Pearse Street: The predicted groundborne noise during TBM passage is 50 dB LASmax, which is above the Threshold Level of 45 dB, resulting in a significant impact for limited duration while the TBM passes. The predicted groundborne vibration during TBM passage is 0.27ms-1.75 VDV which is below the threshold of 1.6 ms-1.75 VDV for offices and commercial buildings, and also below the threshold of 0.8 ms-1.75 VDV for more sensitive uses. Therefore no significant impact for groundborne vibration is expected at this location.</p> <p>During operation the predicted groundborne noise is 34 dB LASmax, below the threshold of 40 dB LASmax; and vibration is 0.008 ms-1.75 VV day and 0.005 ms-1.75 night, also below the thresholds for residential receptors of 0.8 ms-1.75 VDV day and 0.4 ms-1.75 VDV night. As such, no adverse impacts during the railway operation are predicted.</p> <p>• 36/37 Pearse Street: The predicted groundborne noise during TBM passage is 49 dB LASmax, which is above the Threshold Level of 45 dB, resulting in a significant impact for limited duration while the TBM passes. The predicted groundborne vibration during TBM passage is 0.257ms-1.75 VDV which is below the threshold of 1.6 ms-1.75 VDV for offices and commercial buildings, and also below the threshold of 0.8 ms-1.75 VDV for more sensitive uses. There is therefore no significant impact for groundborne vibration expected at this location.</p> <p>During operation the predicted groundborne noise is 34 dB LASmax, below the threshold of 40 dB LASmax; and vibration is 0.008 ms-1.75 VV day and 0.005 ms-1.75 night, also below thresholds for residential receptors of 0.8 ms-1.75 VDV day and 0.4 ms-1.75 VDV night. As such, no adverse impacts during the railway operation are predicted.</p> <p>The management of TBM groundborne noise for 33 and 36/37 Pearse Street, and general construction noise and vibration will be in accordance with response (1) above.</p> <p>As explained by EIAR Chapter 14 (Ground-borne Noise and Vibration), section 14.4.2.6 Section AZ4 Northwood to Charlemont and summarised above, the predicted operational noise and vibration for these buildings will not exceed the groundborne noise and vibration thresholds, and therefore no adverse impacts during the railway operation are predicted within the area of Espirit Investments Limited properties.</p> <p>Settlement / Ground Movement Impact<br/>An assessment of the effects of ground movements and potential impacts on existing buildings has been carried out. The approach to ground movement and building damage assessment follows the industry standard three-phased ground movement impact assessment process that is undertaken on tunnelling and underground projects around the world, that includes Channel Tunnel Rail Link (CTRL), Dublin Port Tunnel, Crossrail and High Speed 2. The MetroLink tunnel has been assessed beneath these properties at the depth and on the alignment proposed and TII are satisfied that the assessed movements will not lead to structural damage to these properties.</p> <p>EIAR Appendix A 5.17, Building Damage Report, covers the assessed impacts of construction generated ground movements on properties. Table 5-2 outlines the results of the Phase 2a Building Damage Assessment conducted on representative buildings along the proposed tunnel alignment, including for buildings within your property (B-50 demolished - 155 Townsend Street, B-45 O'Neills Whiskey Bonders and B-46 O'Neills Town House - 36/37 Pearse Street, B-48 The School Tour Company - 32/33 Pearse Street). Tables 5-2 shows that B-45, B-46 and B48 buildings have been assessed as falling within the "Very Slight/Negligible damage" categories. B50 has been demolished. 15 Shaw Street is outside of the zone of influence and hence not impacted by settlement. The damage categories are described in section 4.3.2 of the EIAR Appendix A 5.17, Building Damage Report.</p> |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF ESPRIT INVESTMENTS LIMITED IN RELATION TO PROPERTY AT TOWNSEND STREET AND SHAW STREET, 32-33 PEARSE STREET, AND 36-37 PEARSE STREET, DUBLIN 2. |                 |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|                                                                                                                                                                                             |                 |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>Given the importance of these Pearse Street properties, they are designated as 'special buildings' which means they will be taken forward for a Phase 3 Assessment at the detailed design stage of the Project. The Phase 3 assessment will take account of final design and construction methodology details, and each building will be subject to detailed assessment on an individual basis. A detailed survey will be carried out as part of the Phase 3 assessment to provide the necessary additional information to inform this detailed analysis of how the individual elements of the building would be affected by the predicted ground movements. The method and extent of the detailed analysis will be determined on a case-by case basis and may include a more sophisticated semi-empirical or a detailed soil-structure interaction using finite element modelling methods. The results of this refined assessment typically show that earlier assessments are conservative and overestimate the likely impact of construction generated ground movements. This is detailed in section 4 of EIAR Appendix A5.17 Building Damage Report.</p> <p>The design includes for a limit of deviation which is required to allow for unforeseen obstructions and construction tolerances which may necessitate a change to the alignment. In the highly unlikely event that this were to occur, any resulting environmental impacts will comply with the limits set by the enforceable Railway Order. TII has carried out a comprehensive set of ground investigations in accordance with relevant guidelines and best practice. It has a high confidence that MetroLink can be constructed along the proposed alignment without requiring vertical or horizontal adjustment. However, in order to guard against rare and undetectable subterranean conditions that might interfere with construction, the Railway Order provides for limits of deviation (as have other railway authorisation since at least the 1840s). The impacts of potential changes within the Limits of Deviation are considered in the Wider Effects Report (Appendix A5.19).</p> <p>For assessment of the "the permitted and future buildings to be constructed thereon" referred to by this observation, please refer to response (3) below.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 3                                                                                                                                                                                           | Land use Zoning | 6        | <p>The property is zoned Z5 'City Centre' under the 2022-2028 Development Plan, with an objective <i>"To consolidate and facilitate the development of the central area, and to identify, reinforce, strengthen and protect its civic design character and dignity."</i> The Draft Development Plan further states in relation to Z5 lands that <i>"The strategy is to provide a dynamic mix of uses which interact with each other, help create a sense of community and which sustain the vitality of the inner city both by day and night."</i></p> <p>The subject property will be occupied by mixed-use buildings including retail and office uses, one of which has been granted permission under Reg. Ref. 4778/19 and 2877/21, and is therefore achieving the zoning objective for the property. It is important that any proposed construction works under the building are minimally disruptive and cause no damage to the structure.</p> | <p>Please refer to response (2) above that summarises the assessed impact on existing buildings, noting no structural damage is predicted. A programme of environmental monitoring will be undertaken, that will include noise, vibration and ground movement, with predetermined monitoring trigger levels set to ensure that environmental limits are not breached. Pre and post construction condition surveys, as well as baseline monitoring pre-construction of MetroLink will be undertaken, and in the event of any damage occurring that is attributed to MetroLink, TII will fund the cost and arrange for any necessary repairs. This is outlined as part of the Property Owners Protection Scheme for residential properties, for which further details can be found in Chapter 11 (Population and Land Use) section 11. 6.1.1.</p> <p>With regards to future development, Metrolink will be a catalyst for and provide opportunity for future development and regeneration. While the MetroLink Railway Order does not include for future neighbouring or overhead development, the tunnels and stations are designed to support appropriate future imposed loads.</p> <p>TII will be required to make submissions in relation to planning applications for proposed future developments on or adjacent to MetroLink and there will necessarily be some engineering constraints (such as permissible loadings) required. However MetroLink is committed to engaging with known development proposals and new development proposals as they emerge with the intent of facilitating such developments as they emerge to the maximum extent consistent with the safe operation of the proposed Project.</p> <p>Again in common with other existing rail and tunnel projects, following grant of the Railway Order and development of detailed design, TII will produce "Guidance Note for Developers" that will be the subject of bye-laws following the grant of Railway Order and which is designed to facilitate future adjacent or over-site development while protecting the integrity and safety of the MetroLink works and operations.</p> <p>Therefore at this stage TII is dealing with known development proposals on a case by case basis, TII will work with parties in the future to assist with the wider development of sites over and above stations and tunnels. In this context TII has successfully engaged with a number of developers over the last two years to accommodate development over and in proximity to the alignment and there have been no material restrictions on development subject to the implementation of agreed design and mitigation measures and it is not anticipated that MetroLink will have a material impact on the development potential of sites above and in proximity to the alignment in future.</p> |

| RE: SUBMISSION ON THE METROLINK ON BEHALF OF ESPRIT INVESTMENTS LIMITED IN RELATION TO PROPERTY AT TOWNSEND STREET AND SHAW STREET, 32-33 PEARSE STREET, AND 36-37 PEARSE STREET, DUBLIN 2. |                            |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| 4                                                                                                                                                                                           | Engineering Considerations | 6        | <p>The proposed works have been reviewed by our client’s engineer, Arup Consulting Engineers. This submission is accompanied by a Technical Note prepared by Arup that reviews the proposed construction works and requests that the Railway Order is structured so as to ensure future buildings are protected in this location. Of note in this report is that the piles to be constructed beneath the basement come within the 5m vertical upward deviation applied for as part of the Railway Order.</p> <p>The accompanying Report by Arup requests:<br/>“We expect that the requirement of deviation of the underground tunnel to be clarified by TII/Metrolink technical team at the location underside of our building, whether this is only for a possible grout injection works that would require. As part of the previous agreements, TII/Metrolink is expected to confirm that the tunnelling works should be cognisant of the as constructed underground structures.”</p> | <p>Please refer to response (2) above regards the use of vertical limits of deviation that are constrained by the presence of existing structures.</p> <p>Please refer to response (3) above that sets out how future developments above MetroLink will be dealt with.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |  |
| 5                                                                                                                                                                                           | Concluding comments        | 6 & 7    | <p>Our client welcomes the submission of the Railway Order and the sustainable transport benefits which would be delivered; however, construction and operational impacts should be carefully managed to minimise the effects on the landholdings in the vicinity of the proposed metro. The upward vertical deviation of 5 metres applied for in the Railway Order, if utilised would conflict with constructed piles underneath our client's property.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>The above responses cover the assessed environmental impacts on these buildings, how the vertical limits of deviation will be availed of where there are existing structures constraining their application, and how future developments in the vicinity of the proposed and constructed MetroLink infrastructure will be dealt with.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 6                                                                                                                                                                                           | Concluding comments        | 7        | <p>Our client also reserves the right to maximise the development potential above and below ground of the lands in question. The assessment of compensation would not be limited to the content of this submission.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>MetroLink will be a catalyst for and provide opportunity for future development and regeneration. While the MetroLink Railway Order does not include for future neighbouring or overhead development, the tunnels and stations are designed to support appropriate future imposed loads.</p> <p>TII will be required to make submissions in relation to planning applications for proposed future developments on or adjacent to MetroLink and there will necessarily be some engineering constraints (such as permissible loadings) required. However MetroLink is committed to engaging with known development proposals and new development proposals as they emerge with the intent of facilitating such developments as they emerge to the maximum extent consistent with the safe operation of the proposed Project.</p> <p>Again in common with other existing rail and tunnel projects, following grant of the Railway Order and development of detailed design, TII will produce “Guidance Note for Developers” that will be the subject of bye-laws following the grant of Railway Order and which is designed to facilitate future adjacent or over-site development while protecting the integrity and safety of the MetroLink works and operations.</p> <p>Therefore at this stage TII is dealing with known development proposals on a case by case basis, TII will work with parties in the future to assist with the wider development of sites over and above stations and tunnels. In this context TII has successfully engaged with a number of developers over the last two years to accommodate development over and in proximity to the alignment and there have been no material restrictions on development subject to the implementation of agreed design and mitigation measures and it is not anticipated that MetroLink will have a material impact on the development potential of sites above and in proximity to the alignment in future.</p> <p>Compensation for those affected by compulsory purchase will be assessed in accordance with the compensation code. For further information, please refer to: <a href="https://metrolink.ie/media/0jlpbyso/metrolink_cpoguideline_final_september-2022.pdf">https://metrolink.ie/media/0jlpbyso/metrolink_cpoguideline_final_september-2022.pdf</a></p> <p>As noted in the EIAR Planning Report, The station box at Tara Street does not restrict the potential of these development sites to deliver high intensity city centre, mixed use development, in line with the DCC zoning objective.</p> |  |

| Letter Re: Railway (MetroLink-Estuary to Charlemont via Dublin Airport) Order 2022, Estuary Court Submission No. 2- Short and Long Term Impacts of the Proposed MetroLink Route Through Estuary Court |                   |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 1                                                                                                                                                                                                     | Cover letter      | 1        | The submission sets out genuine concerns for the residents in Estuary Court. We understand for a large infrastructure project like the Metrolink, there will always be an amount of disruption however, we believe under the current proposal, Estuary Court will suffer an unproportional amount of disruption and also an enduring impact with the proposed linear park. We would be grateful if you would consider our submission favourably.            | TII welcome your input and responses are provided below.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 3                                                                                                                                                                                                     | Executive Summary | 9        | The TII has submitted the Rail Order plans for the Metrolink route to cut through our housing estate. They propose to take away our safe open green spaces not just for the construction stage but for good, by subsuming them into a public linear park.<br>The proposed works will have a devastating impact on the residents of Estuary Court, not just with the loss of the open green spaces but with the disruption caused by the construction works. | <p>The proposed Project has been designed taking into account the R132 Connectivity Project promoted by Fingal County Council. The R132 Connectivity Project received approval by An Bord Pleanála on 20 January 2022 (planning application reference number JP06F.310145). The R132 Connectivity Project aims to improve the connectivity and safety of pedestrians and cyclists moving along, and across, the R132 and enhance facilities for all road users with particular benefits for those choosing sustainable modes of transportation such as bus users, cyclists and pedestrians. The planned outcome of the Metrolink architectural and urban realm design for this linear park is to discourage anti-social behaviour, through the attractive setting, use of public lighting, open sightlines, and avoidance of areas where individuals and groups of people can hide.</p> <p>Further acknowledging your concerns, TII is committed to working with local resident’s groups to address concerns that have been expressed in relation to the loss of green space and the impact on the current boundary wall and will continue engagement with these groups in advance of oral hearing.</p> <p>Across the proposed MetroLink, safety and security is addressed by EIAR Chapter 6, MetroLink Operations and Maintenance. Section 6.6.5.8 specifically addresses managing the risk of "Vandalism or Anti-Social Behaviour on the Trains or within the Stations", and the wider chapter also addresses the broader design proposals for managing security challenges, including:</p> <ul style="list-style-type: none"><li>•The architectural and urban realm design is designed to discourage anti-social behaviour, for example through the attractive setting, use of public lighting, open sight-lines, and avoidance of areas where individuals and groups of people can hide.</li><li>•The Operational Control Centre (OCC) will be the central communications and operational hub, located in the administrative building at the Dardistown Depot. The role of the OCC will include monitoring and managing passenger safety and security and antisocial behaviour. The OCC will direct and deploy staff to manage incidents when required.</li><li>•The access control and intrusion detection (ACID) system will identify intruders trying to enter locations where unauthorised access is prohibited.</li><li>•There will be a MetroLink staff presence along the route for assisting passengers, security and deterring anti-social behaviour.</li></ul> |

| Letter Re: Railway (MetroLink-Estuary to Charlemont via Dublin Airport) Order 2022, Estuary Court Submission No. 2- Short and Long Term Impacts of the Proposed MetroLink Route Through Estuary Court |                   |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 4                                                                                                                                                                                                     | Executive Summary | 9        | <p>The residents of Estuary Court do not oppose the Metrolink project, however, we do not believe enough consideration has been given to:</p> <p>1. The re-alignment of the route onto the R132 - See Submission No. 1 - Submission 090</p> <p>2. The long and short-term impact that the proposed works will have on the Estuary Court residents.</p> <p>In the short term there will be significant disruption to the residents of Estuary Court during the construction of the Metrolink. Our close proximity to the proposed works, will be akin to living on a building site for several years. This will have a negative impact on the mental and physical health and wellbeing of all the residents. It is essential that all possible mitigation measures are carried out and that an Independent Consultant is appointed for the residents to monitor and ensure noise and air pollution are kept within acceptable limits, if this proposed plan was to proceed.</p> | <p>For details on the R132 alignment option, see response (4) to submission #90 also from the Estuary Court residents (Estuary Court Submission 1) .</p> <p>TII recognise that there will be impacts related to the construction activity on certain communities and will ensure that these impacts are minimised as much as possible. It is expected that there will be no additional significant impacts on the Population during construction other than those detailed in Chapters 9 through to 27 of the EIAR. Section 11.6.1.2 of Chapter 11 (Population and Land Use) outlines the measures to mitigate and monitor impacts as a result of construction activity (including for noise and air quality) and the contractors and TII will be responsible for ensuring mitigation is implemented in full.</p> <p>The appointed construction contractor and Metrolink operator will have to prepare and implement a Construction Environmental Management Plan (CEMP) that includes a Health and Safety Plan to protect workers, control environmental pollution, and protect members of local communities from construction and operational activities. The contractor consults and seeks Fingal County Council approval for the CEMP prior to the commencement of any construction. An Outline CEMP has been prepared for the EIAR and can be found in Appendix A5.1.</p> |
| 5                                                                                                                                                                                                     | Executive Summary | 9        | <p>The proposed loss of our open green spaces during construction would have a severe impact on the young children. They will have no open green space to play. This is not acceptable and at the very least the TII should relocate their proposed satellite compound elsewhere and allow us to retain our bottom green for our children to play.</p> <p>In the long term the TII are also proposing to subsume our green areas into a public linear park, with our boundary wall punctured with access gaps. This will ultimately change the child friendly environment that we live in and create other major issues such as the security of our homes and anti-social behaviour.</p>                                                                                                                                                                                                                                                                                       | <p>See also response numbers (3) and (4) above dealing with the landscaping plans for the area.</p> <p>Details of the requirements and provision of Construction Compounds are given within section 5.3 of the EIAR Chapter 5: MetroLink Construction Phase. Volume 4 Figures, Chapter 5, Metrolink Construction Figure 5.1 Construction Compounds provides details of all the proposed sites along the alignment, noting that the vast majority, with two exceptions, are positioned in "commercial/industrial" designated land.</p> <p>The Satellite compound designated at Estuary Court, opposite the residents will be required for 36 months to undertake the main MetroLink works within the boundary of the site at this location, including:</p> <p>- The cut &amp; cover and retained cut structures.</p> <p>- The reinstatement of the agreed landscape on the completion of the alignment structures.</p> <p>Note that locations of construction compounds proximate to the workface site are essential to achieving the projected programme for the works.</p>                                                                                                                                                                                                                                                                                                    |

| Letter Re: Railway (MetroLink-Estuary to Charlemont via Dublin Airport) Order 2022, Estuary Court Submission No. 2- Short and Long Term Impacts of the Proposed MetroLink Route Through Estuary Court |                 |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 6                                                                                                                                                                                                     | 1. Introduction | 10       | <p>With the TII's proposed plans, our housing estate will no longer be child friendly, and this will ultimately ruin the little community that has been established here over the last 30 years. This has already caused great stress and anxiety to many of the residents in Estuary Court. While the residents of Estuary Court do not oppose the Metrolink project, we strongly believe that the Metrolink route does not need to come through our estate in the first place (see our Submission No.1 - Submission 090) and secondly if it does have to come through, then the long and short-term impact this will have on the residents must be considered by the TII.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p>TII recognise that the proposals can cause stress and anxiety to residents but this will be minimised as much as possible by the implementation of construction and operational mitigation measures and also by communication and provision of regular factual information to residents.</p> <p>It is expected that there will be no additional significant impacts on the Population during construction other than those detailed in Chapters 9 through to 27 of the EIAR. Section 11.6.1.2 of Chapter 11 (Population and Land Use) outlines the measures to mitigate and monitor impacts as a result of the construction activity.</p> <p>The MetroLink Summary Programme is set out in appendix A5.2 to Chapter 5: MetroLink Construction Phase. The construction phase adjacent to Estuary Court is scheduled to be completed in 36 months, after which the area will be reinstated across the new structures and landscaped in accordance with the details set out within the Railway Order Plans\Drawings, or subject to further development and agreement with Residents and FCC (see response number (3) above, thus reinstating the amenity temporarily lost.</p> <p>For details on the R132 alignment option, see response (4) to submission #90 also from the Estuary Court residents.</p> |
| 7                                                                                                                                                                                                     | 3. TII Proposal | 16       | <p>The original timeframe provided to us by the TII for using the greens was:</p> <ul style="list-style-type: none"><li>• 2 years for the top green;</li><li>• 6-12 months for the lower green.</li></ul> <p>In Appendix 5.3 of the EIAR - the Construction Programme now shows the following (Fig 3.0 TII Construction Programme of the submission) for the area at Estuary Court 'satellite site' (noting that TII are planning to use our green space for construction activities other than cut and cover construction for 36 months).</p> <p>When considered with the actual cut and cover and open cut construction, the estimated duration through this area is between 51 and 69 months. Given that construction programmes often over-run for projects of this size, we envisage the length of time could easily extend to be a lot longer.</p> <p>This also doesn't allow for the time it would take for the new grass to get established and be suitable for playing on. This would take another year. It is very probable that our top green would be unavailable to the kids for 5 / 6 years and the lower green 4 / 5 years. For the young children of Estuary Court, this could represent half of their lives and a pivotal time for their growth and development. This will have a significant impact on them.</p> | <p>The construction phase adjacent to Estuary Court is scheduled to be completed in 36 months, after which the area will be reinstated across the new structures and landscaped in accordance with the details set out within the Railway Order Plans\Drawings, or subject to further development and agreement with Residents and FCC. Further details of the programme are included in response number (6) above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 8                                                                                                                                                                                                     | 3. TII Proposal | 16       | <p>We believe it is not fair or reasonable to take away both of our open green spaces. The bottom green is planned to be used by TII as a satellite compound.</p> <p>We believe not enough consideration has been given to the impact this will have on the residents of Estuary Court and it seems like TII have gone with the easy option to take what they can. There is a large satellite compound already planned for Woodies car park which is only a few meters from Estuary Court and there is an alternative option with the Fingal Co. Co. car park very close to Estuary Court that could easily accommodate the requirements above for a satellite compound. Please see Fig 3.1 of the submission.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <p>See response number (5) above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Letter Re: Railway (MetroLink-Estuary to Charlemont via Dublin Airport) Order 2022, Estuary Court Submission No. 2- Short and Long Term Impacts of the Proposed MetroLink Route Through Estuary Court |                   |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
| 9                                                                                                                                                                                                     | 3. TII Proposal   | 18        | To make matters even worse, when the construction works are complete, the TII do not plan to give us back what we currently have. They have proposed re-developing our open greens into a linear park to run up along the R132. The section of park at Estuary Court will have very limited open green space and will be replaced with planting and paths running through it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | As detailed in the EIAR, but subject to further development and agreement with Residents and FCC (see response number (3) above), the proposed Project will provide an integrated series of small local parks complete with play facilities, seating and planting, adjacent to the residential areas and which interconnect to form part of the longer green ribbon proposed alongside the Fingal County Council's R132 proposals. The extensive landscaping is proposed for over the cut and cover sections and linking around open cut sections, following the alignment but also extending into existing open spaces as appropriate in order to provide a comprehensive recreational facility for the adjacent residential communities.<br><br>The nature of the proposed planting is biodiverse and will mature to provide a much more valuable, connected landscape than is currently the case. The proposed tree planting will be much more appropriately scaled to the adjacent residential open spaces than the existing predominant tall roadside trees. This proposed section of the R132 extensive landscaping, which is being included as an integral part of the proposed Project within this Local Landscape Character Area (LLCA), will beneficially transform the interconnectedness of this area, across and along the road and with the range of local communities and facilities around the eastern side of Swords. This is particularly so for pedestrians and cyclists. It will represent a significant positive effect of the proposed Project in respect of its broader landscape context and in terms of social and cultural amenity for the town of Swords and its environs. It also represents a major enhancement of the existing landscape condition. |  |
| 10                                                                                                                                                                                                    | 3.1 Boundary Wall | 18 to 20  | The TII originally proposed not to reinstate our boundary wall after the Metrolink construction is complete. They had plans to open up our estate to the public and our green spaces would become part of a public linear park.<br>We have engaged with TII over the last two years and one of our main concerns was the replacement of the wall. We tried our best to express the importance of the wall to our estate and even insisted on having our last meeting on site (dated 4/4/2022) to illustrate this. During this time, the TII put forward a number of proposals however, they all fell short of what we currently have and what will meet the needs of the residents.<br>The proposed plan in the Rail Order now includes for a boundary wall (wall type H) and appears to be in a similar location to our existing wall (to be confirmed).<br>However, the wall also includes for four access gaps in the wall (Fig 3.2 of the submission). This poses a security risk for both our houses and for our and the safety of our children playing on the green.<br>The existing boundary wall is a key component that makes our estate safe and secure while also acting as a noise barrier and along with the mature landscaping aesthetically enhancing our estate. A wall with access points, is not secure for children. The main reason the wall was built by the council in the first place was for the safety of children and this is still relevant today. The residents do not want any access points in it. We believe it is a reasonable request for the wall to be reinstated end to end, like for like. We note the General Arrangement drawing for this area (Fig 3.5 of the submission) in the Rail Order specifies for the existing wall to be replaced. | See response number (3) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| 11                                                                                                                                                                                                    | 3.2 Permeability  | 20 and 21 | As mentioned above, none of the residents in Estuary Court want additional access points in the boundary wall or paths through our greens and as there is no through access to other areas from our estate, we can't understand the logic behind this proposed design. When we queried this with the TII, their answer was 'permeability'.<br><br>We understand permeability in an urban design context to mean 'the ease of movement of people to encourage walking or cycling'. This sounds great in principle however, there is a negative side to permeability and studies have linked higher property crime rates to it and found that the over-provision of poorly used permeability is a crime hazard.<br><br>Another negative impact with Permeability is anti-social behaviour. Highfields Estate in Swords successfully campaigned to Fingal Co. Co. to close access points in their estate due to anti-social behaviour.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | See response number (9) above, with Anti-social behaviour also addressed in response number (3).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |

| Letter Re: Railway (MetroLink-Estuary to Charlemont via Dublin Airport) Order 2022, Estuary Court Submission No. 2- Short and Long Term Impacts of the Proposed MetroLink Route Through Estuary Court |                                     |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 12                                                                                                                                                                                                    | 3.3 Walking Route Scenarios         | 21 to 23  | As mentioned previously the Estuary Court residents do not want access gaps in our boundary wall or paths through our greens, however, to try to understand the benefits of permeability through Estuary Court, we set out some walking (or cycling) route scenarios based off the design proposed by the TII (Fig 3.6 Possible Walking Routes Through Estuary Court and proposed scenarios on page 15 of the submission/page 24 of the submission PDF).<br>Based on the above scenarios, there is little to no benefit to the greater community and certainly not big enough to encourage cycling or walking. However, there is a big risk to the Estuary Court community with regards to increased crime and the safety of our children. For us, the risk-benefit ratio does not add up.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | See response number (9) above, with Anti-social behaviour also addressed in response number (3).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 13                                                                                                                                                                                                    | 3.3 Public Linear Park              | 23        | After the Metrolink construction works are complete, the TII are proposing to subsume the open green spaces that the residents of Estuary Court have enjoyed and used for over 30 years into a public linear park. When we first met the TII (Feb 2021) their original plan was not to reinstate our boundary wall so our greens would open out to the R132 and be landscaped with shrubs and trees and form part of a public linear park. As mentioned above, they have now agreed to reinstate a wall (fence type H - design to be confirmed) however, they still want to change our open green spaces to form part of the linear park with shrubs and trees and paths running through it. While this sounds lovely and looks good on a drawing, it would only leave an open green strip approximately 15m wide at the bottom green running along the estate road. This would be completely unsuitable for any type of ball games to be played here.<br><br>We note that Section 7.5. 6.4 of the Non-Technical Summary sets out that <i>where possible, all playing pitches that are impacted during the Construction Phase</i> will be reinstated with improved facilities following completion of the Construction Phase.<br>We find it unacceptable that the TII will reinstate playing pitches with improved facilities however, they won't even reinstate our small open play areas that are so essential to all residents, particularly children and pet owners. | See response number (3) above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 14                                                                                                                                                                                                    | 3.4 Linear Park Planning Permission | 23 and 24 | The TII are proposing to have a linear park all along the R132. In Estuary Court, they are changing the open greens within our curtilage into parkland with paths running through it. In our view that's a material change of the use of this land and we would expect to see that clearly set out in the Draft Rail Order document. However, there is not one mention of a linear park in the Draft Rail Order document or the 1st schedule with work descriptions.<br>There is landscaping included in the Rail Order which you would expect as part of the Metrolink project however, we believe installing a public linear park is more than just landscaping. Landscaping would typically be part and parcel of construction projects; a linear park is certainly not. You don't need a linear park for the construction of the Metrolink and we would question if this is outside the scope of the Metrolink project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | As detailed in the EIAR, but subject to further development and agreement with Residents and FCC (see response number (3) above), the stations at Estuary, Seatown, Swords Central and Fosterstown will be connected by landscaping proposals provided as part of the proposed Project along the R132 whereby it will be possible to walk or cycle along its approximate 5km route. The public realm areas around these stations are defined by the station architecture and the necessity for a plaza arrival area to the front of each station. The public realm around the stations, in conjunction with the amendments to the R132 layout as part of the R132 Connectivity Scheme, interfaces with the surrounding urban framework. The public realm design for these stations has been developed around access points and desire lines for both cyclists and pedestrians to access the stations. Through the explorations of these access movements, the landscape design elements were created, and these form the main elements of the landscape design.<br>A landscape design, integrating the proposed stations with its surrounding areas is a necessary and normal element in the designs of these types of schemes. As noted below, all proposals here are in line with planning policy and have been developed in conjunction with FCC. Ultimately ABP will adjudicate on what is appropriate for the scheme.<br><br>Throughout the Swords area the landscaping proposals outlined in the EIAR and Railway Order (Chapter 27 Landscape and landscape drawings, sheet 6 of 13 from Railway Order Plans\Drawings) have been developed in consultation with Fingal County Council. The proposal aims to improve community connectivity through the development of the linear park linking all of the stations with the community in an open setting. The planned outcome of the Metrolink architectural and urban realm design for this linear park is to discourage anti-social behaviour, through the attractive setting, use of public lighting, open sightlines, and avoidance of areas where individuals and groups of people can hide.<br>While described in the Planning Report as a being of the nature of a linear park, the landscape proposal comprises a series of connected areas of public realm with separate and distinct character provided through common landscape design principles. |

| Letter Re: Railway (MetroLink-Estuary to Charlemont via Dublin Airport) Order 2022, Estuary Court Submission No. 2- Short and Long Term Impacts of the Proposed MetroLink Route Through Estuary Court |                                    |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
| 15                                                                                                                                                                                                    | 3.5 Zoning of Estuary Court Greens | 24 and 25 | <p>The TII's Planning Report sets out the different planning zones of the lands impacted by the Metrolink, the objectives of the zoning and the compliance the project has within the zoning. The Report sets out the following regarding Estuary Court: ".....</p> <p><i>3. The OS zoning affected is primarily comprised of lands set aside to provide amenity as part of established residential communities. The works proposed in these locations reinstate amenity use for the existing residents and the wider Fingal population, and as such complies with OS zoning.</i></p> <p><i>4. The lands affected are not an essential element of the overall integrity of the developed residential development. As such, the use of the lands for railway infrastructure is compatible with the land use zoning at this location. "</i></p> <p>On point No. 3 and 4, we strongly disagree with the TII's view that they comply with the OS zoning. The TII do not intend to reinstate the amenity for existing residents and the lands affected (i.e., our greens) are clearly an essential element of the overall integrity of our developed residential development (i.e., Estuary Court). The greens are integral to our estate being a child friendly estate. Without them it would change the whole dynamic of the estate. Based on the above, there seems to be a mismatch between what the TII are saying in the Planning Report and what they are planning to do in reality.</p> | <p>The residential element of the area is not significantly affected by Metrolink in its operation stage. The open space associated with the development will remain in open space use post construction.</p> <p>While the layout of the open space changes following construction, the nature of the use remains one which provides amenity to the residents of Estuary Court and the wider Fingal community, and as such complies with the OS zoning.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
| 16                                                                                                                                                                                                    | 4. Concerns About Property Damage  | 26 to 28  | <p>There is a major concern in Estuary Court about potential damage to our properties during construction works. The Estuary Court site was originally low-lying land and it was built up with builders rubble / soil in the 60's and 70's. There is a stream running underground through the site. When the houses were built there was an issue with subsidence and several houses had to be underpinned. There is still evidence of settlement around the estate with structural cracks on both end walls. For the purpose of this report a survey was not carried out and the photos from Figure 4.1 of the submission are just an example of structural cracks that are readily visible.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>TII is committed to having a Property Owner Protection Scheme (POPS) in place prior to construction works commencing.</p> <p>The Property Owner Protection Scheme (POPS), committed to by TII, allows residential property owners to register with TII if their residential property is within thirty (30) metres of the edge of the MetroLink alignment or fifty (50) metres of station structures. The POPS comprises condition surveys of residential properties along the route of the proposed Project. The purpose of the condition surveys is to ascertain the condition of the properties before, during (if deemed necessary), and after the completion of the proposed Project to determine whether there has been any deterioration of any of the properties surveyed and whether same may be attributable to the proposed Project, and subsequently to recommend repairs as appropriate. Condition survey data gathered pre and post construction, and possibly during construction, will be used to assist the property owner and TII in swift and accurate verification of any property damage claims which may be received from property owners. The POPS is designed to cater for / address repair work which may be necessary for any damage (attributable to the proposed Project) to a qualifying residential property up to a threshold of €45,000. The POPS will be introduced by TII through public consultation and will be formally advised to eligible property owners by the Public Relations Department.</p> <p>Further information on POPS is available in Chapter 11 (Population &amp; Land Use). Useful information can also be found in the MetroLink Frequently Asked Questions document which can be found online at: <a href="https://www.metrolink.ie/en/your-property/property-owners-protection-scheme/">https://www.metrolink.ie/en/your-property/property-owners-protection-scheme/</a> , and this is where useful updates will be made available as the proposed Project progresses.</p> |  |
| 17                                                                                                                                                                                                    | 4. Concerns About Property Damage  | 28        | <p>There is also a concern with our central heating systems. The copper pipes were laid into the concrete ground floor slabs. With the vibration of the piling works and rock breaking, there is a concern that this will cause movement to the floor slab and potentially leaks to the central heating piping.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <p>See response to item (16) above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |  |

| 18                                                                                                                                                                                                    | 4.1 Property Owners Protection Scheme | 28       | The TII have set up a Property Owners Protection Scheme. This is for property owners that are within 30m from the edge of the Metrolink alignment and it stays in place for 12 months after the opening of the Metrolink. At first glance, it would appear that 4 houses in Estuary Court are within 30m range and would be eligible for the scheme. Given the previous subsidence issues in Estuary Court, we believe the scheme should be extended all the properties in Estuary Court. | See response to item 16 above                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 19                                                                                                                                                                                                    | 5. Concerns during Construction       | 29       | Air pollution - This can affect our health and wellbeing. This will need to be monitored independently to ensure it is within safe limits for the residents and reports made available to the residents if required. There is also the issue of dust dirtying our cars and windows of our houses.                                                                                                                                                                                         | <p>Chapter 16 (Air Quality) of the EIAR presents a comprehensive and detailed assessment of air quality. The assessments carried out include for predictive modelling to identify the potential impacts on all sensitive receptors during both the construction phase and the operational phase and further assessment will be required as the project develops to ensure that the proposed construction and operation of the proposed Project is in line with that presented in the EIAR and any requirements of a Railway Order, if granted.</p> <p>Air Quality during the construction phase will be impacted by traffic and dust emissions resulting from construction activities between Estuary and Seatown station sites from Demolition, Earthworks, Construction and Trackout (Maximum Daily HGV Movements). Section 16.5.2.6, Regional Air Quality Assessment – Construction Phase Southern Peak Scenario, has assessed traffic emissions pre-mitigation as being overall Neutral, Not Significant and short-term.</p> <p>Table 16.44 presents a summary of predicted dust emission magnitudes from the main construction sites, the results for Estuary to Seatown site being:</p> <ul style="list-style-type: none"><li>- Demolition - Medium.</li><li>- Earthworks - Large;</li><li>- Construction - Large;</li><li>- Trackout – Large;</li></ul> <p>This has resulted in defining the site-specific mitigation level as High and thus mitigation will be required. A detailed list of Dust Mitigation Best Practice Measures for each construction activity is presented in Appendix 16.4 Dust Management Plan.</p> <p>Before commencing relevant works, an Air Quality Management Plan will be prepared, considering the air quality assessment undertaken and any conditions imposed by An Bord Pleanála, and submitted for approval to Fingal County Council. The plan will include all appropriate dust and emissions mitigation measures applicable to the circumstances of the relevant site, based on the local authority requirements and industry best practices. A plan will be developed by the contractor for each worksite between Estuary and Seatown.</p> <p>Strict dust prevention will be in place at all times to minimise any potential emissions and these procedures will be strictly monitored and assessed. In the event of dust nuisance occurring outside the site boundary, movements of materials likely to raise dust will be curtailed and satisfactory procedures implemented to rectify the problem before the resumption of construction operations.</p> |
| 20                                                                                                                                                                                                    | 5. Concerns during Construction       | 29       | Dirt from the construction works - As with any construction project, there will be dirt created and this will be dragged onto the roads. There is also the risk of the piling slurry, concrete run off etc. leaking out under the hoarding and into our estate. We will require assurances that any dirt that comes from the construction activity whether it is airborne or on the ground is cleaned off our roads and properties.                                                       | <p>A Dust Management Plan (DMP) will be developed for the project as outlined in Table 6.3 of Section 6.3 of the CEMP (Appendix A5.1 to the EIAR). The DMP will include details of potential dust generating activity, monitoring and visual inspections arrangements, trigger values for dust and control measures to manage. Such measures will include engagement with the local authority and local community groups to identify and manage any local issues. There will be regular road cleaning in the area surrounding works compounds to ensure that the road network is kept clean and that dirt does not accumulate on these roads. Refer to Appendix A16.4 for further details.</p> <p>See also response number (19) above.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Letter Re: Railway (MetroLink-Estuary to Charlemont via Dublin Airport) Order 2022, Estuary Court Submission No. 2- Short and Long Term Impacts of the Proposed MetroLink Route Through Estuary Court |                                 |          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 21                                                                                                                                                                                                    | 5. Concerns during Construction | 29       | Increased vermin activity - As large construction projects like the Metrolink disturb habitats for vermin, this will lead to an increase in their activity. This must be monitored and controlled in an agreed fashion by both the Contractor and TII.                                                                                                                                                                                                            | <p>This risk has been assessed in the EIAR and is not anticipated to be a problem.</p> <p>Section 10.5.1.10 of Chapter 10 (Human Health) states the following:<br/><i>Rodent control, good sanitation, disinfecting contaminated work areas, worker education via tool box talks and using personal protective equipment (PPE) when handling infected animals are important actions for prevention of Leptospirosis (or Weil's Disease). While rodents will be temporarily displaced as a result of initial construction activities, there is nothing in the Construction Phase which would lead to an increase in the number of rodents. It could be argued that with the rodent control policies in place, there will be a reduction in the level of rodents and the subsequent risk associated with Leptospirosis. Because there will be no increase in vermin numbers and more likely a decrease because of vermin control measures there will be no increase in vermin transmitted disease over and no significant adverse effect on human health.</i></p> <p>As with other Environmental items the following monitoring procedure is noted in the CEMP:</p> <p><i>Mitigation and monitoring will be carried out in accordance with the requirements of the EIAR and NIS so that construction activities are undertaken in a manner that does not give rise to significant negative effects. Suitable monitoring programmes will need to be developed, implemented, documented and assessed in accordance with the specification outline in the detailed CEMP(s). The results of all environmental monitoring activities will be reviewed by the Environmental Manager on an ongoing basis to enable trends or exceedance of criteria to be identified and corrective actions to be implemented as necessary. The contractor(s) will be required to inform TII of any continuous exceedances of criteria.</i></p> |
| 22                                                                                                                                                                                                    | 5. Concerns during Construction | 29       | Dangers from heavy plant and construction machinery - There is a big safety concern for vulnerable pedestrians (e.g., children, elderly, people with special needs) with the amount of heavy machinery operating and moving around in this area. There must be clear safe routes provided for pedestrians and flag men used at all crossings, entrances and exits to work areas. The construction areas must also be fully secure so children cannot gain access. | <p>The health and safety of workers and all members of the public is of the highest priority to TII.</p> <p>The works are segregated from the public within the site areas as described. Construction phase traffic management plans will be produced by the contractor and the measures included will be enforced by TII. There will also be public information campaigns in advance of the works, to ensure the public are aware of upcoming works. A Project Construction Traffic Forum will also be set up with relevant stakeholders, including FCC who will address any concerns around construction traffic. Compounds will be secured with appropriate site hoarding and 24hr security to prevent access.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Letter Re: Railway (MetroLink-Estuary to Charlemont via Dublin Airport) Order 2022, Estuary Court Submission No. 2- Short and Long Term Impacts of the Proposed MetroLink Route Through Estuary Court |                                 |           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 23                                                                                                                                                                                                    | 5. Concerns during Construction | 29 and 30 | Traffic management on Seatown road and R132 - A lot of children in Estuary Court and estates further down the Seatown road walk to school. They use the existing pedestrian bridge to cross the busy R132. The TII plan to remove this bridge and not replace it. The school children will now also have to cross the construction area for the proposed route. Safe routes for children walking to school must be provided. We would like to see the traffic management plans for this and also have a liaison officer assigned who the residents can consult with on any traffic issues. It will also be important to know how the traffic will be managed crossing between the Seatown road and the R132. | <p>Appendix A9.5 Scheme Traffic Management Plan which details the impacts on all road users throughout the construction phase, with section 5.2.6.3 detailing the impacts of traffic management around Estuary Court. . Prior to the commencement of any construction works, all temporary traffic management measures will be finalised and provided to FCC (and other relevant stakeholders) to ensure significant impacts have been mitigated as much as is practicable.</p> <p>The impacts at this section include the updated lane capacity on the R132 between Estuary Junction and Seatown Junction to accurately reflect the temporary traffic management. The impacts captured also take cognisance of the TTM in place for Estuary Station and Estuary Junction. At this section along the R132 where there is a slightly reduced capacity on both carriageways, on the southbound carriageway there is a 5% or 6% increase in traffic volume in the morning and evening peak respectively, reflecting a slight impact. On the northbound carriageway there is a more significant increase of 52% in the morning peak and in the evening peak, there is a decrease of 17%. The cause of this redistribution of traffic is the result of the worst-case scenario, where all TTM in the Estuary section is in place in the model and is primarily caused by the restrictions in place at Estuary Junction.</p> <p>There are no notable links showing driver delay as an issue in the immediate vicinity of the R132 crossing works, with a delay of 51 seconds recorded along Seatown Road (minor), westbound during the morning peak and a 64-69 second increase on the west arm approach to Seatown Junction.</p> <p>There is a moderate impact on the network from an increase in HGV movements in the local area. This impact applies to all sites within this section and represents a worst-case scenario for the section. Model results indicate that the worst-case scenario is in the morning peak on the R132 northbound to the south of Estuary Junction and shows an increase of 3% in HGV volume caused by the cumulative construction works in this section, representing a 10-13% share of all traffic.</p> <p>TII recognise that there will be disruption/severance to the road network locally as a result of construction activity. However, an alternative safe pedestrian crossing will be provided prior to demolition of the bridge. To ensure all road users are aware of the change in infrastructure, appropriate warning signs and visibility splays will be provided.</p> <p>Traffic management plans will be put in place during the construction phase and the health and safety of pedestrians is of the highest priority in line with the road user hierarchy in the GDA Transport Strategy.</p> |
| 24                                                                                                                                                                                                    | 5. Concerns during Construction | 30        | Contractor's potentially parking cars in our estate - Designated parking spaces must be provided for the contractors and assurances from them that they won't use any residential areas for parking.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <p>Section 9.6.1.1.3 of Chapter 9 (Traffic and Transport) states:<br/>A Construction Sustainable Mobility Plan will be prepared to support and promote sustainable travel for construction staff travelling to and from the proposed Project site. The mobility plan is a management tool designed to encourage construction staff to rethink their travel choices and requirements during construction in order to minimize the adverse impacts on the environment and on the operation of the transport network within the city. It will be an active document that will require to be updated on a regular basis as construction activities take place and will present a series of measures designed to encourage travel to the constructions site(s) in a sustainable way.</p> <p>Additionally, as noted in Appendix A5.1 Outline Construction Environmental Management Plan, all staff and workforce will be encouraged to make their way to site and home from site by public transport, by project specific transport (e.g. minibuses), by bicycle or on foot. Limited parking spaces will be provided for vehicles required for the construction activity and for employees. The nominated contractor(s) may provide transfer pick-up and drop-off service from suitable public transport hubs.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 25                                                                                                                                                                                                    | 5. Concerns during Construction | 30        | Loss of visual amenity - A 4m high hoarding is proposed to be installed along our kerb line giving a claustrophobic feel as you drive into the estate. We understand the extra height hoarding will help mitigate noise and dust however, if the hoarding is in place for many years which the construction programme provided indicates it will be, this will weather and appear shabby.<br>There must be a maintenance plan for the hoarding and assurances that the works in this area are completed as quickly as possible so that the hoarding can be removed. We understand from our discussions with the TII that once the cover goes on the tunnel, reinstatement works can commence above ground.   | Construction site compound hoarding will be regularly maintained to a) ensure it continues to mitigate impacts as required and b) reflects the internal condition of the compound which should be a well-managed, well maintained and tidy site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
