# 1. Photowire Visualisations: Early-Stage Photomontage Visuals

Photomontage imagery was captured from many locations in the LVIA Study Area other than the 18 No. viewpoints that were selected for the final EIAR Volume 2: Photomontage Booklet. Many photomontage viewpoints were not selected for inclusion in the final EIAR Volume 2: Photomontage Booklet due to the limited visibility of the proposed turbines as demonstrated by draft photomontages, termed photowires. Photowires are early-stage photomontage visualisations comprising panoramic photos with wireline overlays (Classified as Type 3 Visualisations in the Landscape Institute Technical Guidance Note, 2019).

The photowire visuals presented in this appendix are useful aids for the discussion of visibility from receptors. The assessment of visual impacts reported in Appendix 14-3 only assess the type 4 verified photomontages included in the Volume 2 Photomontage Booklet. These photowires are presented in this document and are considered in the discussion of Visual Effects in Section 14.7 of Chapter 14.

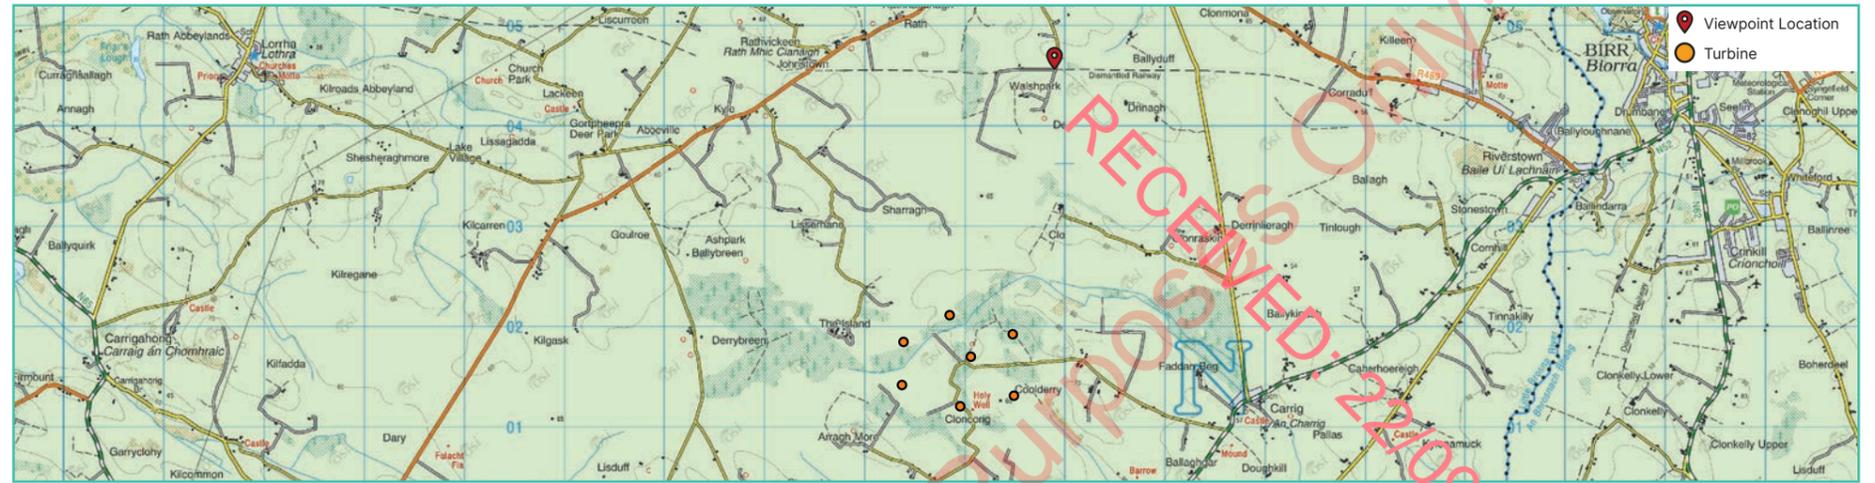

18 No. viewpoints are presented in this document. For each viewpoint, a key image is presented at 120° showing the existing view from that viewpoint, providing context. A photowire is then presented at 53.5° below each key image, as well as location information. The location of early-stage photomontage viewpoints discussed in text are marked as orange icons in Figure 14-19 and labelled alphabetically as PWVP A through to PWVP R. A brief description of each viewpoint is included in the table to the right.
