

1 & 2; Views of R&K Engineering facility from local road, travelling in a north to south direction. Main visual feature is Shed 3, due to screening of yard by existing natural vegetation.

3

3 & 4; Lands outside R & K Engineering, immediately east of the development site, with boundary wall in rear ground of the photograph. Note discontinuous pattern of stone near boundary wall

4

5. Cross section of lands exposed on ledge at eastern boundary of the "new " yard, adjacent to Shed 3, showing fractured bedrock

6. Kohne shot blasting equipment in Shed 2

7 & 8; Surfaces and buildings examined in the yard area, showing no evidence of dust despotion, after dry weather and full operation of the activity on the site

9 & 10. Street views of site and yard area (both existing and pre-construction) (Google) April 2009

11

11; Views of work areas in the Shed No, 3. Finished steel girders are stored prior to movement off site. Shed is mainly used for storage during consolidation of a load prior to movement off site
