Hi Gary

I acknowledge receipt of your email and presentation in relation to this case. Please note that the s.37CC request has been given a separate file and ABP reference number. The reference number is **ABP-322447-25**.

Kind regards
Eimear

Caution: This is an **External Email** and may have malicious content. Please take care when clicking links or opening attachments. When in doubt, contact the ICT Helpdesk.

Hi Niamh,

Further to our discussions last week, please find attached a deck we propose using to facilitate discussion at the S37CC meeting tomorrow. This deck only includes information that was submitted as part of the S37CC request letter, i.e. there is no new information. We also intend discussing the drawings referenced in the request letter.

We hope that this is acceptable, but please give me a call before the meeting if necessary.

Kind regards,

Gary

Thank you for your attention.

Water Supply Project Eastern & Midlands Region

An Bord Pleanála
S. 37CC Consultation

20th May 2025

Outline of 37CC Legislation
Details unlikely to be confirmed at application stage
Pipeline Construction
Vertical Alignment
Horizontal Alignment

Legislative Provisions – S. 37CC – PDA 2000

Section 37CC (2) (e) requires that the applicant provide:
a description of—

(i) the details, or groups of details, of the proposed development that, owing to the circumstances set out in subparagraph (ii), are unlikely to be confirmed at the time of the proposed application, and
(ii) the circumstances relating to the proposed development, including such circumstances as the Minister may prescribe in relation to any class or description of development for the purposes of this subparagraph, that indicate that it is appropriate that the proposed application be made and decided, before the prospective applicant has confirmed the details referred to in subparagraph (i) including, in particular, whether the prospective applicant may be able to avail of technology available after making the proposed application that is more effective or more efficient than that available at the time of the application,

- Given the nature and scale of the project, it is inevitable that certain obstacles or unidentified constraints will arise during construction that may affect the preferred route for the pipeline.
- Design changes to pipeline will be within agreed parameters, will not result in material changes to the planning application and will not alter any conclusions reached regarding the effects on the environment reported in the EIAR.

Pipeline Construction – Vertical alignment

- The pipeline would be laid at a minimum depth of cover of 1.2m above the crown of the pipe.
- Maximum depths of excavation are generally 6m, except where peat is encountered and at trenchless crossings where local site conditions/constraints will impact depths.
- The vertical alignment of the pipeline can vary between 1.2m and 4.4m to the crown of the pipe.

Pipeline Construction – Horizontal alignment

- The pipeline within will have a maximum horizontal Limit of Deviation dictated by the maximum construction working width.
- A permanent 10m wide wayleave is needed for the pipeline connections between washout valves and washout outfalls.
- Outfall pipeline alignment could be anywhere within the 10m permanent wayleave.
- Outfall headwalls and discharge point would have to move with the alignment of the outfall pipeline.

Pipeline Construction - wayleave

- The permanent wayleave would be 20m in width and will be provisionally centred on the pipeline, however in practice, the location of the permanent wayleave may differ depending on how land is to be acquired, through voluntary sign up or by CPO.

Thank you
