 REVISION CLOUD

1. CCGT & Water Demand
The inclusion of Combined Cycle Gas Turbines has necessitated the addition of supporting service compounds to the masterplan, specifically at the rear of DC1-3, DC5, and DC6. For DC4, the service compound has been integrated within the building envelope. This modification has affected the placement of the Sprinkler Tank and Fuel Compounds.

Following additional archaeological survey studies, an additional Fulacht Fiadh was identified at the southern corner of the previously designated location of DC4. As a result, the size of DC4 has been significantly reduced in size and shape, leading to necessary adaptations to the perimeter road, attenuation pond, fence line, and the main access road running through the site.

Additionally, the cycle and pedestrian lane along the R409 have been revised to pass behind the proposed bus stop. Additionally, the alignment of the cycle and pedestrian lane has been set back from the main entrance and egress of the site, enhancing visibility for passing vehicles intending to enter.
