SURVEY REPORT

GPR-UTILITY SURVEY

at

WSP Lot 2

for

Irish Drilling

January 2023

PRIVATE AND CONFIDENTIAL

THIS REPORT IS THE RESULT OF A GEOPHYSICAL SURVEY USING NON-INVASIVE ELECTROMAGNETIC/ GROUND PENETRATING RADAR SURVEY TECHNIQUES CARRIED OUT AT THE GROUND SURFACE. INTERPRETATIONS CONTAINED IN THIS REPORT ARE DERIVED FROM KNOWLEDGE OF THE GROUND CONDITIONS, THE GEOPHYSICAL RESPONSE OF THE SUBSURFACE AND THE EXPERIENCE OF THE AUTHOR. SCANTECH GEOSCIENCE LIMITED HAS PREPARED THIS REPORT IN LINE WITH BEST CURRENT PRACTICE AND WITH ALL REASONABLE SKILL, CARE AND DILIGENCE IN CONSIDERATION OF THE LIMITS IMPOSED BY THE SURVEY TECHNIQUE USED AND THE RESOURCES DEVOTED TO IT BY AGREEMENT WITH THE CLIENT. THE INTERPRETATIVE BASIS OF THE INFORMATION CONTAINED IN THIS REPORT SHOULD BE TAKEN INTO ACCOUNT IN ANY FUTURE USE OF THIS REPORT. WHILE THIS REPORT IS PRESENTED IN GOOD FAITH AND WITH PROFESSIONAL INTEGRITY, SCANTECH GEOSCIENCE LIMITED GIVES NO WARRANTY AS TO THE ACCURACY OF THE INTERPRETATIONS AND ASSUMES NO LIABILITY FOR HOW THIS REPORT IS UTILISED.

1 Executive Summary

- Scantech was requested by Irish Drilling to carry out a GPR-Utility Survey for 41 slit trenches on the WSP Lot 2 Irish Water project.

- The objective of the survey was to map the location of underground services or other significant GPR anomalies at each slit trench location.

- The GPR-Utility survey results have been presented in the final AutoCAD drawing file associated with this report along with the pdf drawing/report for each ST location.

2 Survey Acquisition

2.1 Objectives

The objective of the survey was to map the location of underground services or other significant GPR anomalies at each slit trench location.

2.2 Survey Area and Site Conditions

Figure 1. The slit trench locations marked as blue pins.

Survey Conditions/Comments:

The slit trench locations were located on roads from north of Cloughjordan running north east towards Geashill. Many of these roads were quiet local roads.

Figure 2. Slit trench location example.

Water: Scantech have identified water from Hydrant/SV information together with GPR data. Water record location (2D) has also been shown where GPR was unable to locate the possible location of water service according to the record information. Small feeds off main lines to houses/buildings have not been located.

Telecom: Scantech have identified Eir Telecom from manhole information together with GPR data. Opened accessible manholes were logged, clamped and traced. Eir Telecom record location has been included where it was not possible to locate the location of the telecom. A radio sweep was undertaken at each slit trench to identify any other possible telecoms. Cables can sometimes give no signal when they are either fibre-optic or too small to carry a signal.

Power: Scantech have identified Power from EML and record information together with GPR data. A power sweep was carried out at each slit trench to locate power lines. Where a record power line could not be verified on site using EML or GPR, the possible location of the power has been shown as per the record drawing. Small feeds off main lines to houses/buildings may not have been located.

Gas: Scantech have identified gas from gas valves and GPR data. Gas record location (2D) has also been shown where GPR was unable to locate the possible location of gas service as per the record information. Possible small feeds off main lines to buildings have not been located.

Drainage: Scantech have identified drainage lines from manhole information together with GPR data. Opened accessible manholes were logged, photographed and linked through sound-link (where possible). Drainage record location (2D) has also been shown where GPR was unable to locate the possible location of a pipe denoted 'UTT'.

Public Lighting: Scantech have identified Public Lighting from manhole information together with GPR data. Opened accessible manholes and AJs were logged, clamped and traced. Lampposts were inducted into and traced.

Fibre Optic: Scantech have identified Fibre Optic from manhole information together with GPR data. Opened accessible manholes were logged, clamped and traced. Fibre Optic cables usually give no signal when clamped.

Unknown Services: Where GPR has found an anomaly to which a service cannot be attributed, it is noted on the drawing as 'Scantech-Unknown Service'. Single anomalies are displayed as short orange lines in the direction of the unknown anomaly with the associated depth. Several unknown service lines were picked up within the slit trench locations. These were identified from the GPR data.

Radio Anomaly: Radio Anomalies are detected using EML, usually indicating the presence of a cable or metal pipe. These anomalies are then checked against GPR to find a depth.

2.3 2.3 Survey Crew

Name		Role
Pat Judge	Lead Surveyor	EML & Manhole Surveying
Brice LeComte	Geophysicist	GPR Acquisition and GPS Surveying
Sean Casey	Surveyor	GPR Acquisition and EML

2.4 Survey Type & Methodology

The survey was carried out to a Category B survey (PAS 128:2014 Specification for underground Utility detection, verification and Location, BSI 2014). Survey was carried out in September 2022.

The survey methodology is outlined in the sub-sections below.

2.4.1 Existing Data Review

Existing information for the survey area was provided to Scantech by the client prior to commencement of the survey. Record information was obtained from service providers.

2.4.2 EM Location Survey

Electromagnetic location (EML) surveying was carried out using Radiodetection RD8100 EM passive and active radio frequency transmitters and receivers. This method is used to detect metallic/conducting utilities e.g., power, telecoms, metallic services.

2.4.3 Manhole Survey

Visible manholes and access chambers on-site were inspected and surveyed. This involved opening each lid where possible and recording all relevant information; utility type, size, material, direction, invert levels etc. Photos were taken of the exterior and interior of all manholes. Manholes were not entered.

2.4.4 GPR Geophysical Survey

Ground Penetrating Radar is a geophysical technique used by geophysicists to image the subsurface. A high frequency electromagnetic pulse is transmitted into the ground. The pulse is reflected at the boundaries between materials of different dielectric permittivity and the receiver

records the returned energy. Combining the impulse response traces along a profile allows the geophysicist to build up a 2D or 3D geophysical image of the subsurface (radargram). Careful data analysis and interpretation is required for GPR application.

The survey was carried out using Mala Ground Explorer ground penetrating radar (GPR) antenna system with central frequency of 450MHz.

GPR profiles were recorded in the survey area. GPR anomalies were marked as the data was recorded and marked on the ground. Profiles were acquired in orthogonal directions within the survey area. All GPR data was recorded and saved for off-site post processing. GPR recording times ranging from 0 to 90 nanoseconds were used.

GPR is effective in resolving sub surface utilities, but its effectiveness is reduced by the presence of highly conductive materials e.g. wet clay/soil, reinforced concrete. Clay or plastic material pipes in wet or clay rich soil are unlikely to be identified. Pipes of diameter less than 100mm are difficult to identify- many of the gas records indicate pipes smaller than this size. The absence of features on the recorded GPR data is not conclusive proof of the absence of these features as they may lie outside the range or resolution of the GPR signal lie between GPR profiles or masked by shallower services or poor ground conditions. We therefore cannot accept liability for damage caused to utilities not identified by GPR survey.

2.4.5 Site Mark-up

Utilities were marked on the ground to indicate the utility location based on the detected signal return in the field. The survey area was marked using non-permanent spray paint on grassed areas and paint/chalk on paved/tarmac areas.

2.5 Base Map and Survey Location Mapping

No topographical base map was provided so Scantech surveyed some topographical information to add context to the GPR results.

The survey equipment used was a GQM8 RTK GPS receiver with K8 Field Controller. This equipment was also used to survey all utility ground marks.

3 Data processing

3.1 Off-Site GPR Analysis

All GPR data was processed and interpreted back in the office. Off-site GPR analysis, also referred to as post-processing, involves applying a range of mathematical filters to the data to improve the signal to noise ratio which facilitates effective interpretation. It also involves velocity analysis for depth conversions, see 3.3 below. The quality of the data processing and interpretation is directly dependent on the qualification of the personnel involved and their experience.

3.2 GPR Data Processing

Data processing included the following steps;

a.) DC adjustment
b.) Time-zero adjustment
c.) 2D spatial filtering
d.) Amplitude correction
e.) Predictive deconvolution
f.) Bandpass filtering
g.) Background removal
h.) F-K Migration

The GPR profiles were then processed using time varying gain functions to improve the target signal to noise ratio. This process aids interpretation of the enhanced GPR signatures.

3.3 GPR Depth Calibration

The speed of a radar wave through the subsurface will vary depending on the type of material it travels through. Velocities can be highly variable and depend strongly on the clay and water content of the subsurface.

In order to determine the depth to a GPR anomaly, the recorded two way travel times must be converted to depth using an accurate estimate of the average subsurface velocity.

The velocity ranges for the survey were determined using a combination of direct calibration (from manholes) and hyperbolic curve fitting algorithms applied to radargrams with reflection signatures which indicated different ground conditions.

A direct velocity calibration was carried out in the laneway (adjacent to a manhole) and in the enclosed site the velocity was determined from curve fitting. All GPR profiles acquired during the survey was converted from travel time to depth using velocities ranging between 90 cm/ns and 100 cm/ns.

To convert the measured two way time to depth, the following formula is used:

Depth [m] = Velocity [cm/ns] * Two-Way-Time [ns] * 0.005

The depth values presented should be checked and revised once additional trial pit or other excavation information within the enclosed site becomes available. The effective depth of penetration varied across the site and ranged from 0.2mbgl to 1.5mbgl.

4 Data interpretation

4.1 GPR Data Interpretation

Interpretation of GPR data involves the identification and characterisation of anomalies with respect to amplitude, frequency, phase, position, depth, geometry and coherency. Anomalies with similar attributes are interpolated across profiles. These linear features can then be constrained by manhole information or other ground truthing.

For this survey, the identified GPR anomalies within the enclosed site can be split into three categories,

1.) anomalies interpreted as possible unknown services (orange lines on the drawing);

2.) discrete anomalies consistent with responses from buried services but not coherent across profiles (orange circles along the GPR profiles);

3.) high amplitude anomalies not consistent with responses from buried services but possibly related to either a void or the presence of subsurface material change in the fill composition (orange clouded areas).

Note: Scantech reserves the right to revise the interpretation if additional relevant information is provided e.g., trial pit/slit trench or excavation information.

4.2 Data Merge/Quality Control

Information from all sources (GPR, EML, Manholes) were correlated and merged onto the final drawing.

4.3 Metadata and Drawing File Nomenclature

The final survey drawing is called SGL_22256_Nenagh-Lot2_Irish-Drillings_20.09.22.dwg and contains layers as listed below.

Utility Type	Line Colour
Foul Sewer	Green
Cable TV	Purple
Telecom - Eir	Magenta
Water	Blue
Power	Red
Unknown Service	Orange
Fibre Optic	Teal
Combined Sewer	Brown

Storm Sewer	Cyan
Gas	Yellow

Notes:

- Unknowns are linear GPR anomalies identified across some GPR profiles but of unknown source.
- R denotes sections of services that have been taken from record.
- UTT denotes services that we have been “Unable to Trace” usually due to blockages or poor signal quality.
- UTO denotes services lids that we have been “Unable to Open”.

5 Conclusions & Recommendations

Scantech was requested by Irish Drilling to carry out a GPR-Utility Survey for 41 slit trenches on the WSP Lot 2 Irish Water project. The objective of the survey was to map the location of underground services or other significant GPR anomalies at each slit trench location. The survey has achieved this principle objective as shown on the survey drawings together with this associated survey report. Scantech reserves the right to revise the interpretation if additional relevant information is provided

Respectfully submitted,

SITE NOTES

1. Date Scanned 09-09-22
2. No Power or Radio signal
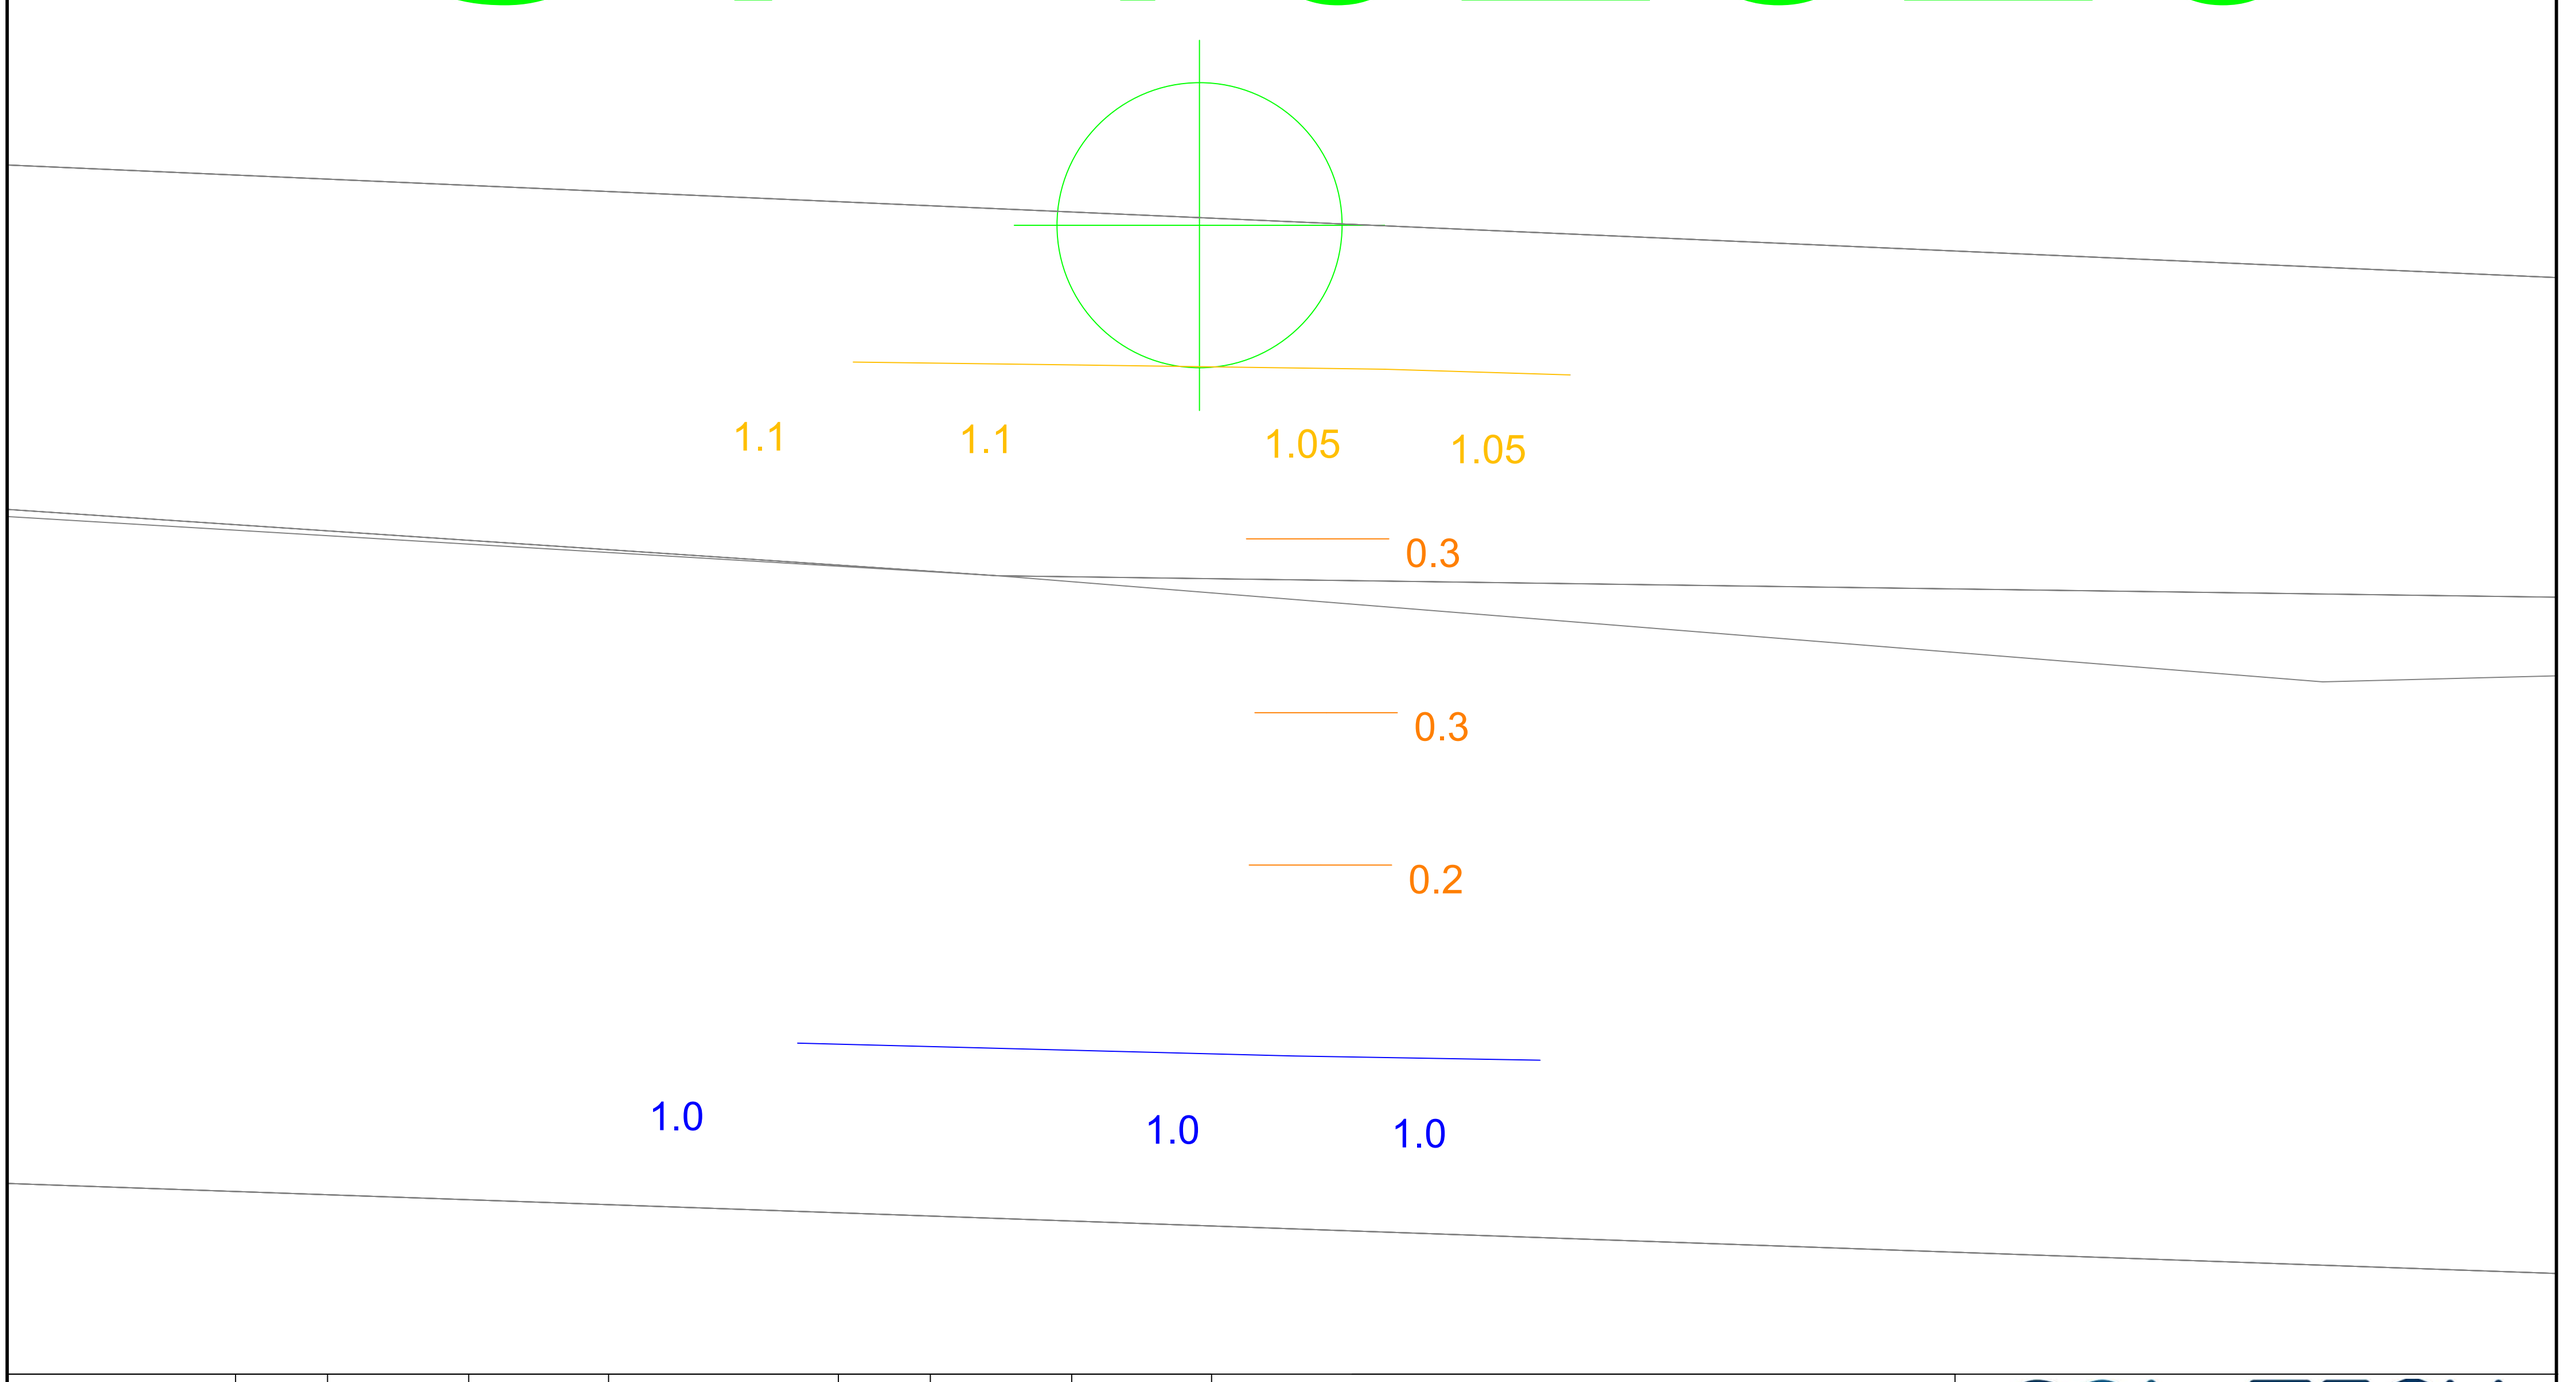
3. 3x GPR Anomaly at 0.2-0.3mBGL on road
4. 1x possible Watermain at 1.0mBGL on S side
5. 1x possible unknown service at 1.1mBGL on N side

ST-102520



DESCRIPTION	COLOUR	TRACED SERVICES	INFERRED SERVICES
Foul Water Sewer	GREEN		
Surface/Storm Water Sewer	CYAN		
Combined Sewer	BROWN		
Power	RED		
Telecoms			
Eircom	MAGENTA		
Cable TV	PURPLE		
Alternative Telecoms	PINK		
Watermain	BLUE		
Gas	YELLOW		
Unknown Service	ORANGE		

DESCRIPTION	COLOUR	TRACED SERVICES	INFERRED SERVICES
Trench Scar	LIGHT GREEN		
Utility Providers Records			
ESB Records	RED		
Bord Gais Records	YELLOW		
Telecom Records	MAGENTA

Foul Sewer/Water Manhole	GREEN	MH 00	
Surface/Storm Water Manhole	CYAN	MH 00	
Power Manhole	RED	MH 00	
Telecom Manhole	MAGENTA	MH 00	
Watermain Manhole	BLUE	MH 00	
Water Hydrant, Meter, Sluice Valve, Air Valve, Stop Cock	BLUE	HY WM SV AV SC	

NOTES:

1. Utility survey carried out with RF & GPR equipment.
2. RF = RD8000 Transmitter & Receiver.
3. GPR = Ground Penetrating Radar - Mala 450 MHz.
4. Unknown voltage on electric cables.
5. 300mm denotes the diameter of the pipe.
6. 0.5 denotes depth in metres below ground level to top of pipe.
7. Survey carried out in September 2022.
8. R denotes sections of services taken from record.
9. UTT denotes unable to Trace, UTO denotes unable to Open

Disclaimer:
The Information on this drawing is a general guide only and the accuracy thereof cannot be guaranteed. No liability is accepted for any discrepancy, ommission or deviation from the actual subsurface location or depth to underground utilities.

For all PSDs & hydrometer tests scheduled: Hydrometer required if more than 10% passing for last sieve.

MCV tests: 1p test at natural moisture content.

Moisture content tests to be undertaken as part of all Atterberg / PI testing as well as any other test which tyhis forms an integral part of the test i.e. MCV, Compactions.

Testing of cross-strata samples shall be avoided.

Please advise if additional information is required to inform sample preparation and testing conditions.

All tests performed in accordance with BS1377:1990 unless specified otherwise

Key: w = water content, LL = Liquid Limit, PL = Plastic Limit, PI = Plasticity Index

Density test: wd - water displacement; wi - immersion in water

Linear measurement unless : 4pt cone unless : Liquid Limit; 1pt - single point test; NP - Non Plastic

Particle density: sp - small pyknometer; gj - gas jar

Date Printed: 16/03/2023

QC From No: R1

Approved By: Administrator

LIQUID LIMIT, PLASTIC LIMIT AND PLASTICITY INDEX

Site Name	WSP Eastern & Midlands Region			Sample No.	4
Project No.	2021OY102	Client	Irish Drilling	Depth Top	0.90 m
Soil Description	Brown sandy gravelly silty CLAY (gravel is fmc and sub-angular to sub-rounded)			Depth Base	m
				Sample Type	D
				Samples received	16/08/2022
				Schedules received	11/08/2022
				Project Started	17/08/2022
				Date Tested	11/10/2022

Job No. 32282

Borehole/Pit No. TP-101206

NATURAL MOISTURE CONTENT	**11**	**%**
% PASSING 425µm SIEVE	**57**	**%**
LIQUID LIMIT	**23**	**%**
PLASTIC LIMIT	**15**	**%**
PLASTICITY INDEX	**8**	**%**

Remarks

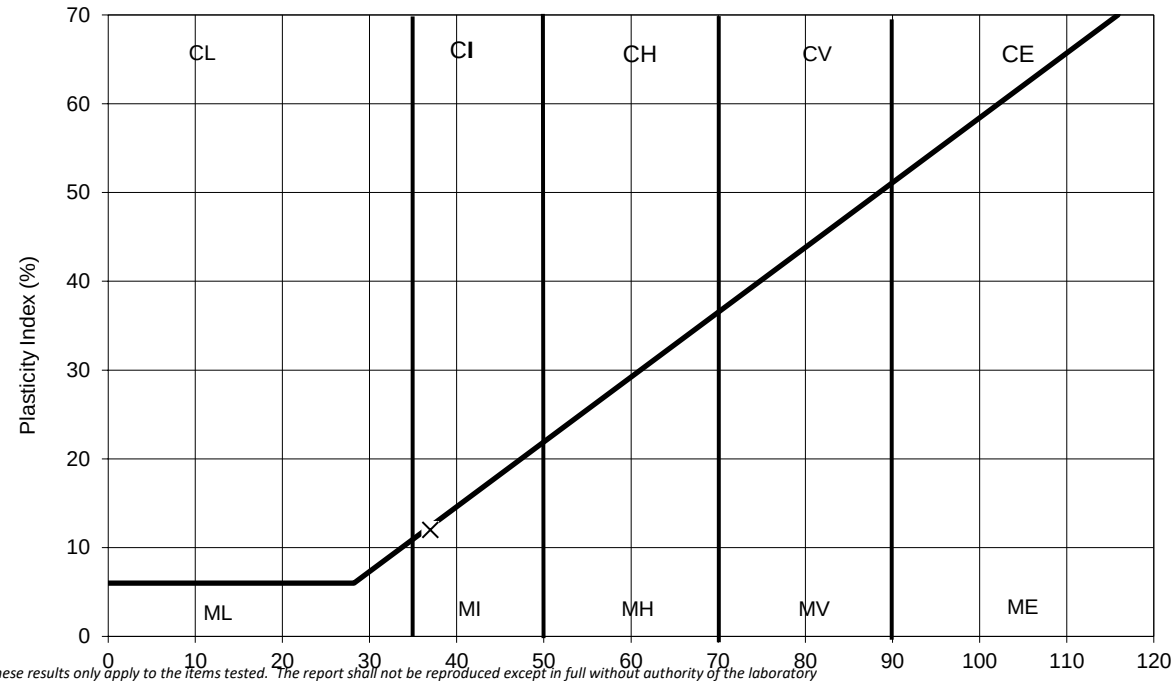
Sample washed to obtain test fraction

PLASTICITY INDEX



These results only apply to the items tested. The report shall not be reproduced except in full without authority of the laboratory

TEST METHOD

BS1377: Part 2 :Clause 4.3 : 1990 Determination of the liquid limit by the cone penetrometer method
BS1377: Part 2 :Clause 5.0 : 1990: Determination of the plastic limit and plasticity index
BS1377: Part 2 :Clause 3.2 : 1990:Determination of the moisture content by the oven drying

Checked and Approved

LIQUID LIMIT, PLASTIC LIMIT AND PLASTICITY INDEX

				Job No.	32282
				Borehole/Pit No.	TP-91104
Site Name	WSP Eastern & Midlands Region			Sample No.	4
Project No.	2021OY102	Client	Irish Drilling	Depth Top	1.80 m
Soil Description	Greyish brown slightly sandy slightly gravelly very silty CLAY (gravel is fmc and angular to sub-rounded)			Depth Base	m
				Sample Type	D
				Samples received	16/08/2022
				Schedules received	11/08/2022
				Project Started	17/08/2022
				Date Tested	22/11/2022

NATURAL MOISTURE CONTENT	**11**	**%**
% PASSING 425µm SIEVE	**71**	**%**
LIQUID LIMIT	**18**	**%**
PLASTIC LIMIT	**12**	**%**
PLASTICITY INDEX	**6**	**%**

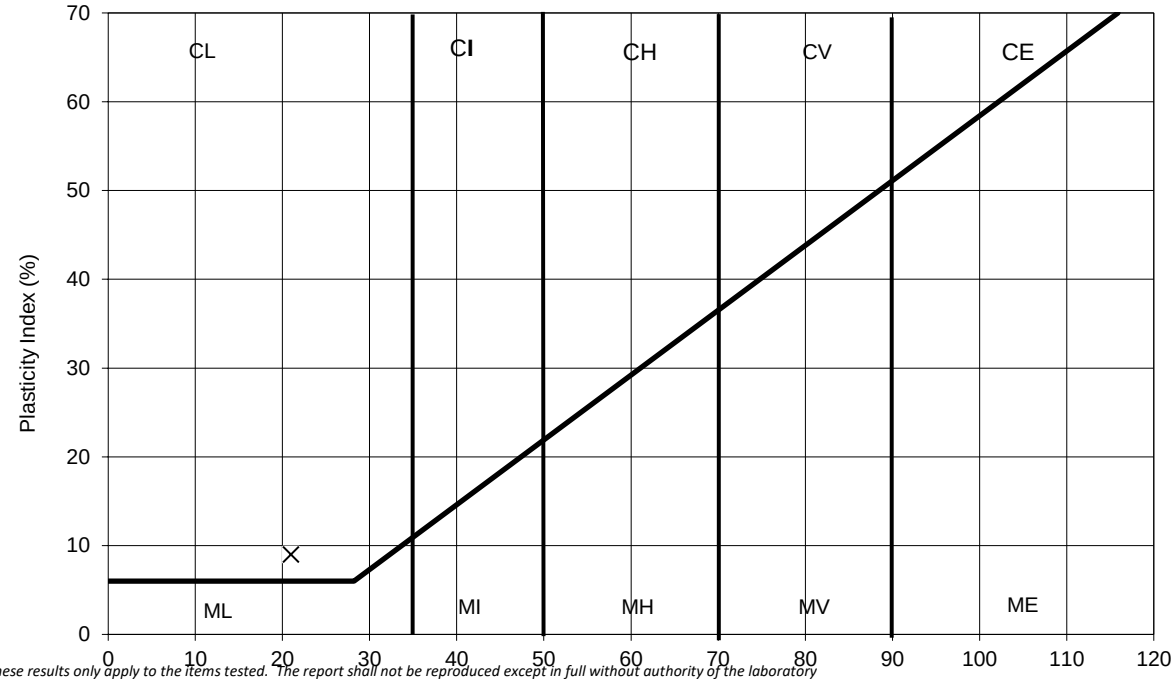
Remarks

Sample washed to obtain test fraction

PLASTICITY INDEX



These results only apply to the items tested. The report shall not be reproduced except in full without authority of the laboratory

TEST METHOD

BS1377: Part 2 :Clause 4.3 : 1990 Determination of the liquid limit by the cone penetrometer method
BS1377: Part 2 :Clause 5.0 : 1990: Determination of the plastic limit and plasticity index
BS1377: Part 2 :Clause 3.2 : 1990:Determination of the moisture content by the oven drying

PLASTIC LIMIT	**13**	**%**
PLASTICITY INDEX	**6**	**%**

Remarks

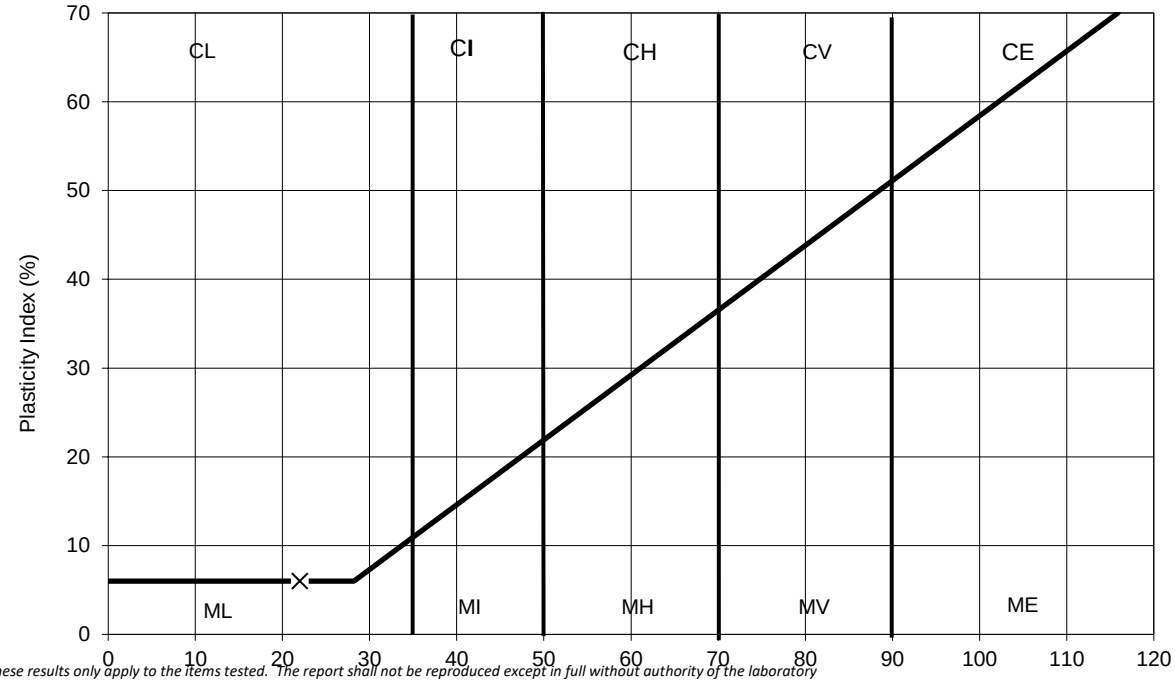
PLASTICITY INDEX



These results only apply to the items tested. The report shall not be reproduced except in full without authority of the laboratory

TEST METHOD

BS1377: Part 2 :Clause 4.3 : 1990 Determination of the liquid limit by the cone penetrometer method
BS1377: Part 2 :Clause 5.0 : 1990: Determination of the plastic limit and plasticity index
BS1377: Part 2 :Clause 3.2 : 1990:Determination of the moisture content by the oven drying

Checked and Approved

Site Name	WSP Eastern & Midlands Region			Sample No.	4
Project No.	2021OY102	Client	Irish Drilling	Depth Top	1.70 m
Soil Description	Greyish brown slightly sandy slightly gravelly very silty CLAY (gravel is fm and angular to sub-angular)			Depth Base	m
				Sample Type	D
				Samples received	16/08/2022
				Schedules received	11/08/2022
				Project Started	17/08/2022
				Date Tested	24/11/2022

Job No. 32282

Borehole/Pit No. TP-99206

NATURAL MOISTURE CONTENT	**11**	**%**
% PASSING 425µm SIEVE	**71**	**%**
LIQUID LIMIT	**21**	**%**
PLASTIC LIMIT	**15**	**%**
PLASTICITY INDEX	**6**	**%**

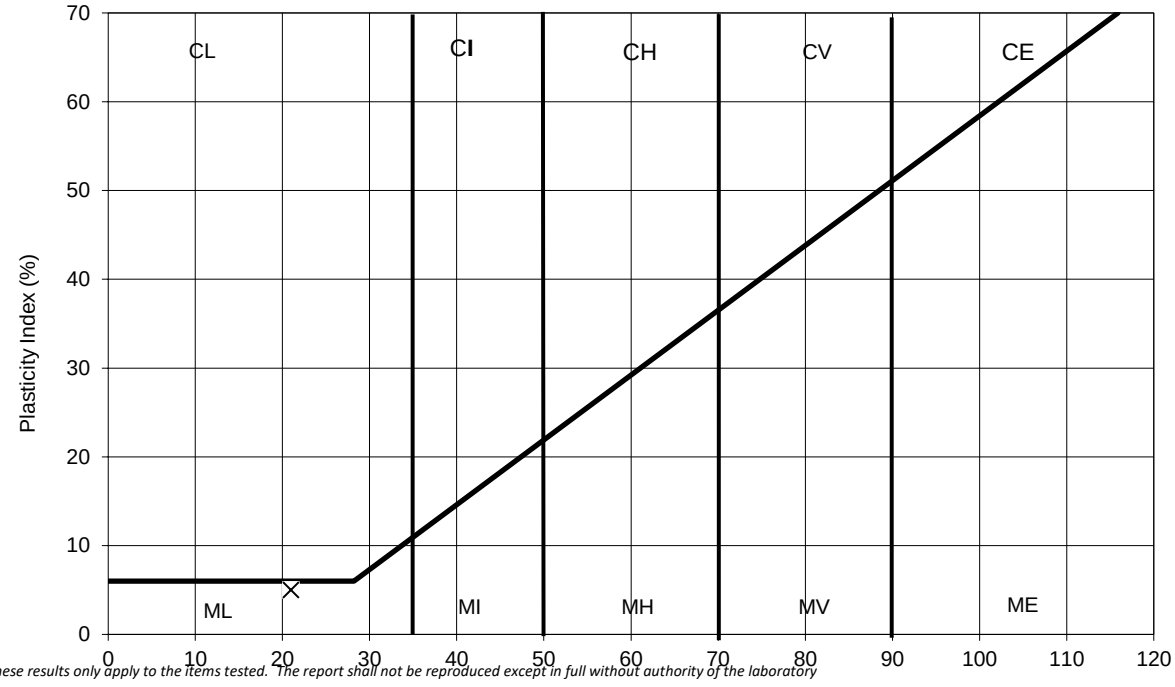
Remarks

Sample washed to obtain test fraction

PLASTICITY INDEX



These results only apply to the items tested. The report shall not be reproduced except in full without authority of the laboratory

TEST METHOD

BS1377: Part 2 :Clause 4.3 : 1990 Determination of the liquid limit by the cone penetrometer method
BS1377: Part 2 :Clause 5.0 : 1990: Determination of the plastic limit and plasticity index
BS1377: Part 2 :Clause 3.2 : 1990:Determination of the moisture content by the oven drying

Checked and Approved
