Re: Observation to the proposed development of a 220kV substation, telecommunications mast and underground electricity cable infrastructure with associated works.

Location: Rathmorrissey, Pollnagroagh, Moanbaun, Castlelambert, Knocknacreeva, Caraunduff, Caherbriskaun, Lisheenkyle East, Barrettspark and Cashla (Townlands), Athenry, Co. Galway

Applicant: Bord Gáis Energy Limited

Dear Sir/Madam,

As a family we have lived & embedded ourselves in Lisheenkyle & the wider Athenry community since 2017 when we built our home. We feel very at home in the area & enjoy the benefits of being in the countryside while not being too far from Athenry, Oranmore & Galway city.

We are members of local community groups, sports clubs, walking groups, volunteer organisations and run events for our community

We have a child in the local primary school & who will be attending Post Primary school in Athenry come late August

We are very happy here but one of the downsides to where we live has always been the poor road infrastructure on all approach roads to our house where in multiple point on all roads 2 cars are not able to pass each other without 1 or both pulling in (in many cases a car cannot even pass someone on a bicycle or walking without coming to a complete stop)

We live on a road with a quarry and are surrounded by lots of agriculture lands so lorries & large farm machinery are already a constant challenge to our daily lives

As bad as the roads are in width they are always riddled with potholes and since the road was ripped up with the last set of cables going to Cashla sub station the road is even worse

This infrastructure cannot currently take what is on it safely let alone adding more disruption and closures which is completely unacceptable particularly when it is not even to fix the current problems.

Our son had a stroke in 2018 (at the age of 5) and these road closures and disruptions are causing us alot of anxiety and stress over the possibility of not having immediate access to medical care. His stroke happened in our home and only for our quick response to getting him to the local hospital, the outcome could have been very different.

Having reviewed the application documentation, I have outlined my concerns regarding the proposed development

Cumulative Construction Impact on Health and Wellbeing

I believe insufficient information has been provided regarding the cumulative impact of construction activity, heavy traffic movements, excavation works, noise and prolonged disruption on the health, wellbeing and quality of life of residents living close to the proposed infrastructure works.

Incompatible with Rural Character and Galway CDP

In my view, the scale, appearance and industrial nature of the proposed infrastructure are not compatible with the surrounding residential and agricultural landscape. I do not believe the proposal is consistent with the principles of proper planning and sustainable development or with the protection of rural character and landscape objectives contained within the Galway County Development Plan.

Disruption to Rural and Residential Communities Along Route

The proposed 8.1km underground cable route would pass through a number of established rural and residential communities, including Rathmorrissey, Castletambert, Knocknacreeva, Caherbriskaun, Lisheenkyle East and Cashla. These are active farming and residential areas with homes, schools, farms and local businesses located along narrow rural roads. I am concerned about the level of disruption the proposed works would cause to residents, farms, local roads and daily community life.

Prolonged Trenching, Road Closures and HGV Traffic

I believe insufficient consideration has been given to the impact prolonged trenching works, excavation, road occupation, traffic management systems and heavy construction traffic would have on narrow rural roads and the communities that rely on them daily. The application documentation confirms significant road closures, stop/go traffic systems and substantial HGV movements during construction, which could result in serious disruption and ongoing inconvenience for local residents and road users.

Karst Geology and Constrained Road Network

The proposed cable route would involve major construction activity through established rural areas with ribbon development, homes, farms, schools and businesses located along the route. In my view, the cumulative impact of prolonged roadworks, rock-breaking, excavation activity and construction traffic has not been fully addressed within the application documentation, particularly given the sensitive karst limestone geology and constrained nature of the local road network.

Long-Term Road Reinstatement Concerns

I am also concerned regarding the long-term standard of road reinstatement following completion of the proposed works. Similar utility infrastructure works in nearby areas have resulted in uneven road surfaces, raised utility covers and poor reinstatement quality. Given the scale and duration of the proposed trenching works, I believe binding commitments should be provided regarding full road restoration, ongoing maintenance responsibility and reinstatement to an appropriate long-term standard for local communities.

Delays to Emergency Response and Defibrillator Access

The proposed works could cause significant delays and disruption for emergency vehicles, home-support services, school transport, agricultural traffic and daily commuters. I am also concerned about possible delays in accessing community defibrillators and emergency response assistance in rural areas where rapid access can be critical for medical emergencies.

Cumulative Impact on Community Access Routes

The roads affected by the proposed cable route are important community access routes serving homes, farms, schools and businesses across the wider Athenry area. In my view, the cumulative impact of prolonged construction activity, HGV traffic, road closures and disruption on daily community movement has not been adequately addressed within the application documentation.

Groundwater and Drainage in Karst Limestone Geology

I believe insufficient consideration has been given to the possible impact trenching and excavation works could have on groundwater movement, field drainage systems and soil conditions along the route. The proposed works pass through an area of sensitive karst limestone geology where groundwater flows, drainage pathways and subsurface conditions can be complex and unpredictable. Given the nature of karst geology, I believe a precautionary approach should be applied regarding excavation activity, groundwater protection and potential impacts on surrounding lands, wells and drainage systems under the EU Water Framework Directive (2000/60/EC).

Habitats and Ecological Corridors for Wildlife

Hedgerows and roadside vegetation within the area provide important habitats and ecological corridors for birds, pollinators and local wildlife. I am concerned that prolonged construction activity and vegetation disturbance could negatively affect biodiversity and the ecological character of the surrounding rural landscape.

Safety Risks Near Lisheenkyle National School

The proposed cable route passes in close proximity to Lisheenkyle National School along narrow rural roads with limited visibility and no proper hard shoulders. I am concerned that trenching works, construction activity, increased traffic volumes and temporary traffic management measures would create additional safety risks

and disruption for children, parents and school staff, particularly during school drop-off and collection times.

Narrow Roads, HGV Traffic and Increased Congestion

The roads surrounding Lisheenkyle National School are already heavily used by local traffic, school transport and agricultural vehicles. These roads are narrow, have restricted visibility and lack proper public hard shoulders. The only widened sections are private parking bays located outside newer houses, which remain the responsibility of homeowners and are not intended for pedestrian use or roadside safety. The introduction of heavy construction traffic, HGVs and stop/go traffic systems would significantly increase congestion and road safety risks for schoolchildren, residents and all road users.

Students Travelling Daily Along Affected Roads

Many students and school staff from surrounding rural areas travel daily along these local roads to schools in Athenry by bus, car, bicycle and on foot. The road network already experiences significant traffic volumes during school drop-off, collection and commuter periods, particularly within this expanding rural residential area characterised by substantial ribbon development.

Additional Safety Risks for Young People and Vulnerable Road Users

Children and teenagers regularly use these roads to travel to school, sports training and other local activities. I am concerned that prolonged construction works, trenching activity, temporary road restrictions and increased heavy goods vehicle traffic associated with the proposed cable route would create additional safety risks for young people, cyclists, pedestrians and other vulnerable road users throughout the area.

Negative Effect on Residential Character and Quality of Life

The affected area forms part of a growing rural residential community within the wider Athenry area, where many families choose to live because of its rural character, agricultural setting and proximity to local towns, schools and employment centres. The area has experienced significant residential and commuter-related growth in recent years. I am concerned that the introduction of major energy infrastructure into this established rural environment would negatively affect the residential character, visual amenity and overall attractiveness of the area as a place to live and raise families, while also impacting the enjoyment and quality of life of existing residents and property owners.

Cumulative Industrialisation of the Wider Cashla Peaker Project

In my view, the cumulative industrialisation associated with the wider Cashla Peaker Project, including substations, underground infrastructure, lighting, fencing and associated works, would have a significant negative impact on rural amenity, residential character and the long-term sustainability of surrounding rural communities. I am also concerned about the long-term effect this level of industrialisation could have on the quality of life, enjoyment of property and future viability of surrounding homes and agricultural landholdings.

Facilitating Fossil Fuel Infrastructure Against Climate Policy

The proposed substation, mast and underground cable infrastructure are intended to support the operation of new gas-fired electricity generation infrastructure. I am concerned that the proposed development would facilitate long-term fossil fuel energy infrastructure at a time when national and EU climate policy requires significant reductions in greenhouse gas emissions and greater transition towards sustainable and lower-carbon energy systems.

Incompatibility with Ireland's Climate Obligations

In my view, insufficient consideration has been given to the long-term climate implications associated with infrastructure designed to support fossil fuel-based electricity generation. I believe the compatibility of the proposed development with Ireland's climate obligations, emissions reduction targets and broader sustainability objectives has not been adequately demonstrated within the application documentation.

Transparency and Aarhus Convention Obligations

Given the scale and long-term nature of the proposed infrastructure works, I believe a greater level of transparent community consultation and public engagement should have taken place before the application was submitted. In my view, the level of public consultation and access to clear and understandable information has been inadequate and raises concerns regarding the principles of transparency and public participation under the Aarhus Convention.

Cannot Be Assessed in Isolation from the Wider Development

Although this application relates to grid connection infrastructure, I believe the proposed substation, mast and cable route cannot be properly assessed in isolation from the wider connected energy development to which it relates. The planning documentation does not adequately assess the combined and cumulative impact of the proposed infrastructure on the surrounding rural area, road network, residential amenity, agricultural activity and local environment in accordance with the principles of proper planning and sustainable development.

Scale of Disruption and Infrastructure Pressure Underestimated

In my view, insufficient consideration has been given to the practical impact this development would have on local communities, rural roads, farms, traffic movement, groundwater conditions and the overall character of the surrounding area. Residents and road users would experience the development as a significant and prolonged infrastructure project rather than as isolated standalone works. I believe the scale of disruption and infrastructure pressure associated with the proposed development has been underestimated within the planning documentation.

Likely Scale and Duration of Disruption Not Fully Reflected

I am concerned that the application does not fully reflect the likely scale, duration and intensity of disruption associated with prolonged construction works, trenching activity, traffic management systems, road restrictions, rock-breaking and associated infrastructure works across multiple rural communities. Given the nature of the local road network and surrounding residential areas, I believe the likely impact during the construction phase has been significantly underestimated.

Conclusion

For the reasons outlined above, I believe the proposed development would have significant adverse impacts on the local community, rural environment, farms, roads, groundwater conditions and surrounding residential areas. In my view, the application has not adequately demonstrated that the proposed development can proceed without unacceptable impacts on rural amenity, traffic safety, environmental protection and community wellbeing. I do not believe the proposal represents proper planning and sustainable development, and I respectfully request that permission be refused.

Yours Sincerely,

A handwritten signature in black ink, consisting of two lines. The first line is 'Damien' and the second line is 'Sheridan'. The signature is written in a cursive, flowing style.
