Planning Application Reference Number: ACP-324165-26

Applicant: Maughanaclea Ltd / Enerco

Description of Development: 10 year planning permission for Maughanaclea Wind Farm Consisting of 14 wind turbines, a 110kV substation and 110kV underground cabling connection and associated works

Location: Maughanaclea , County Cork

Dear Sir / Madam

I have many concerns as do many of my neighbours for the above planning application, below are my concerns on why I would like to appeal against the planning application.

LAND: This development would cause irreversible damage to our land for farming and the biodiversity of our environment for our future. The destroying of our beautiful landscape , West Cork is known for its stunning natural beauty and we are now being over run with Wind Turbine Farms every which way you turn and destroying the beauty of which for many years had drawn Tourists to our beautiful Country, no one wants to walk around a wind farm, or see them on every sky line, the planning of putting these wind farms through Heritage and Archaeology sites which Kealkill and the Mealagh Valley are well know for it is extremely disrespectful to our Country and people before us.

WILDLIFE: The needless destroying of homes of our wild life and the lives of all the animals that make up part of our Eco system is absolutely heartbreaking and the impact this will have on our land and environment we need to be protecting not destroying for our future of our Country.

HEALTH IMPACTS: The night mare for families who's homes are going to be so close to the wind farm that there health will be impacted and their disturbed sleep this will then be extended onto the animals and pets that people have within their homes and farms. The disturbing noise of the turbines outside the premises and inside , I myself was going to rent a property that was within the minimum distance from the house to turbine and it was truly shocking the pressure that was felt within the house was very unpleasant , the constant noise and light continually changing due to the sun and clouds off the blades on the turbine . Then there is the lights on

the turbines at night which are extremely bright and are a source of light pollution in a nocturnal landscape.

Then we go to the worrying and devastating effect the Wind Farms have on the value of peoples properties and land, I have know several family who have tried to move away from there homes as they are just no longer able to bear living in such disturbing environment any more and nearly had to give there homes away as no one wants to live in such areas that once gave families such peace , safety and beauty then to have their lives turned upside down by this forever growing threats of the Wind Farms.

Yours faithfully
