

I need more information to enable decision making

I reside along the R474 (Eircodes V95F802 and V95X2K1) and likely directly impacted by this development. From my property, I have a clear view of the mountain. The attached images illustrate the current condition of the landscape compared to its previous, unaltered state.

The scale and visual impact of the changes are a significant concern. However, my primary issue is the lack of clarity regarding how this development affects me as a resident. Despite reviewing the available documentation, I have not been able to determine the implications for my property, local environment, or overall amenity.

Furthermore, I am concerned by the absence of direct engagement from the project team. To date, no representative has contacted me to provide updates, explain the works, or offer any reassurance to those living in close proximity to the site.

Given this lack of information and communication, it is not possible for me to make an informed assessment or feel confident about the impacts of the project.

I formally request that a clear and structured communication plan be put in place, including:

Direct outreach to affected residents

Regular updates on project progress and upcoming works

Clear explanation of potential impacts (visual, environmental, noise, etc.)

A named point of contact for queries and concerns

Until such engagement is established and sufficient information is provided, I must maintain my negative cautious view

Margaret Crowley

What it used be like

Regards

Margaret Crowley
