

I was born and reared in Muingmore and know every square metre of the land on which the turbines are proposed to locate. My family and I visit Muingmore every year and sometimes twice a year for past sixty years.

In my opinion the site is totally unsuitable for development of any kind due to the depth of the bogland, resulting in major pollution of the streams which flow directly into Blacksod Bay. The carbon footprint of this proposed development far outweighs the zero emissions of the wind turbines.

This peaceful rural area is such a desirable place to live and should not be destroyed by an unsuitable development like this.

The negative impacts this development would have on tourism would be devastating. I confirm that I understand from the original purchase of the land for the grass meal facility that there was agreement that the should the factory cease operations the land would return to the original farm owner. This was approximately in 1959- 1960 period
