RE: Case Ref. 324561 (PAX21.324561)
Crumhach Wind Farm Co. Sligo, Application bu SSE Renewables.

While I support the development of renewable wind energy, I would like to voice my concern regarding the scale of the proposed wind farm development.

The existing turbines that are to be removed due to their age, have reasonably sat in the topography of the area without exerting excess visual or environmental impact on the area.

The Proposed new turbines on Kings Mountain are on a much larger scale (up to 180 meters tip height from 76 meters currently) and the proposed locations will put them visually higher than the mountain behind and would be a significant negative visual impact on this sensitive part of this coastal mountain landscape and their immediate proximity to an extremely sensitive nature reserve. The proposed new location of five along the Lough Easkey scenic drive which is one of the major tourist scenic routes in the area would surely be counter to the development of tourism in the area and the businesses who benefit from it.

Thank you for your consideration,

Robin Heathcote
