Hi Dave

Sorry for the delay in replying – I have a few comments that you might want to consider, but I think you are just about there.

The main thing to double check is the language (significant impacts/adverse impacts/ effects and affect, EIA language v. different AA stages) and to close out the other two sites cleanly – so no challenge.

All sites moved to Stage 2, including the two that were ruled out from stage 3 (IROPI) – I just think that this could be made clearer – and that mitigation related to the other two sites, but not compensation.... I know it seems ladybird version but a few sentences might explain. As NPWS disagreed with us – and I know Gerry wants our statement to close it out and that it should be clear that comments are only sought in respect of the 1 site that we are using 6(4) on.

Hope that all makes sense. Call if you want to chat through.

I have been keeping my head down this week so that I have my report complete and ready for peer review and discharge next week – so after this week I should be more available, although will definitely be taking a few days leave .

Rachel
