

Technical Appendix 9.1: Photographs

Natural Drainage Channels

Natural Drainage Channels

Natural Drainage Channels

Natural Drainage Channels & Evidence of Erosion

Natural Drainage Channels & Evidence of Erosion

Example of natural drainage channel which has been modified by the introduction of this watercourse crossing (associated with the existing Barnesmore Windfarm). Lough Golagh discharges into receiving surface water system at this location i.e. baseline sampling location SW1. Photo taken during site survey carried out 09/04/19.

Baseline Sampling Location SW1 – 09/04/19

Baseline sampling location SW1. Photo taken during site survey carried out 25/07/19.

Baseline Sampling Location SW1 – 25/07/19

Example of Stream. Discharge point of Lough Naleaghany.

Example of Stream. Discharge point of Lough Naleaghany, SW2 baseline sampling location.

Baseline Sampling Location SW2

Example of Stream, Lowerymore 030 and SW3 Baseline Sampling Location.

Example of Stream, Lowerymore 030 and SW3-B and SW3-C Baseline Sampling Locations.

Baseline Sampling Locations SW3

Lough Naweelagh discharge point.

Stream (Glendertan River) barely identifiable.

SW4 baseline sampling location.

Baseline Sampling Location SW4

Example of natural drainage channel which has been modified by the introduction of this watercourse crossing (associated with the existing Barnesmore Windfarm). Lough Nabrackboy discharges into Lough Golagh via this surface water channel. Baseline sampling location SW5. Photo taken during site survey carried out 09/04/19.

Baseline Sampling Location SW5 – 09/04/19

Baseline sampling location SW5. Photo taken during site survey carried out 25/07/19.

Baseline Sampling Location SW5 – 25/07/19

Investigation into Surface Water Connectivity North of T1

Investigation into Surface Water Connectivity North of T1

Examples of Artificial Drainage & Culverts

Example of Artificial Drainage & Impacts

Example of Artificial Drainage Channels

Example of Track Culverts and Drainage. Receiving surface water runoff from enhanced natural drainage channels and discharging to natural drainage channels on the downgradient side of the existing trackway.

Example of Artificial Drainage & Culvert
