1.0 INTRODUCTION

1.1 BACKGROUND

- 1.1.1 DBFL Consulting Engineers (DBFL) have been commissioned by McGarrell Reilly Homes to prepare a Traffic and Transport Assessment (TTA) for a proposed residential development on 2 no. greenfield sites located at Newtownmoyaghy, Kilcock, Co. Meath.
- 1.1.2 The subject proposals seek permission for a 575 unit residential development comprising 388 no. houses and 187 no. apartments / duplex apartments. A 623m² neighbourhood focused Crèche is also included in the proposals.
- 1.1.3 The purpose of this TTA is to quantify the existing transport environment and to detail the results of assessment work undertaken to identify the potential level of transport impact generated as a result of the proposed 575 residential units.
- 1.1.4 The scope of the assessment covers transport and sustainability issues including access, pedestrian, cyclist and public transport connections. Recommendations contained within this report are based on existing and proposed road layout plans, site visits, on site traffic observations and junction survey data.
- 1.1.5 This TTA has been prepared in reference to the requirements of the National Roads Authority (TII) "Traffic and Transportation Assessment Guidelines". Reference has also been made to the "Meath County Development Plan 2013-2019", "Kildare County Development Plan 2017-2023" and the "Kilcock Local Area Plan 2015-2021".

1.2 METHODOLOGY

- 1.2.1 Our approach to the study accords with policy and guidance both at a national and local level. Accordingly, the adopted methodology responds to best practices, current and emerging guidance, exemplified by a series of publications, all of which advocate this method of analysis. Key publications consulted include;
- '*Traffic and Transport Assessment Guidelines*' (May 2014) TII
 - '*Traffic Management Guidelines*' Dublin Transportation Office & Department of the Environment and Local Government (May 2003)

- *'Guidelines for Traffic Impact Assessments'* The Institution of Highways and Transportation
- Kilcock Local Area Plan 2015-2021
- Kildare County Council Development Plan 2017-2023
- Meath County Development Plan 2013-2019

1.2.2 Our methodology incorporated a number of key inter-related stages, including;

- **Site Audit:** A site audit was undertaken to quantify existing road network issues and identify local infrastructure characteristics, in addition to establishing the level of accessibility to the site in terms of walking, cycling and public transport. An inventory of the local road network was also developed during this stage of the assessment.
- **Traffic Counts:** Junction turning counts were commissioned and the results analysed with the objective of establishing local traffic characteristics in the immediate area of the proposed residential development.
- **Trip Generation:** A trip generation exercise has been carried out to establish the potential level of vehicle trips generated by both third party committed development and the proposed residential development.
- **Trip Distribution:** Based upon the 2021, 2026 and 2036 transport network provision and associated junction layout / control characteristics, in addition to the spatial / land use configuration of the urban environment across the catchment area of the development site, a distribution exercise has been undertaken to assign both committed development and the applicant's proposed development's site generated vehicle trips across the local road network in each of the three future design year scenarios.
- **Network Impact:** Ascertain the specific level of influence generated by the proposed development upon the local road network and subsequently identify which junctions need to be assessed in greater detail in accordance with the appropriate TII guidelines.

- Network Assessment: Drawing upon the findings of the previous stages, an operational assessment of the local road network has been undertaken to evaluate the performance of key local junctions following the implementation and occupation of the proposed development.

1.3 REPORT STRUCTURE

- 1.3.1 As introduced above, this TTA seeks to clarify the potential level of influence generated by the proposed development upon the local road network and subsequently ascertain the existing and future operational performance of the local transport system. The structure of the report responds to the various stages of this exercise including the key tasks summarised below.
- 1.3.2 Chapter 2 of this report describes the receiving environment at the proposed development's location and surrounding area, whilst the local planning framework and associated transport objectives and policies that influence the design and appraisal of the subject residential proposals are highlighted within Chapter 3.
- 1.3.3 Chapter 4 provides a summary of the proposed residential development's key characteristics whilst Chapter 5 outlines the trip generation exercise carried out and the potential network impact of the proposals assessed for the 2021 Opening Year and the 2026 and 2036 Future Design Years.
- 1.3.4 The operational performance of key local junctions for a range of different development / traffic scenarios both prior to and following the commissioning of the proposed residential development are investigated and reported within Chapter 6.
- 1.3.5 The main conclusions and recommendations derived from the analysis are summarised in Chapter 7.

2.0 RECEIVING ENVIRONMENT

2.1 LOCATION

2.1.1 The proposed development site is located approximately 800m to the east of Kilcock Town Centre, north of the R148 Maynooth Road corridor. The subject scheme is proposed to be implemented on two individual plots (Northern and Southern sites) of land within the Meath County Local Area Plan Boundary as per the Kilcock LAP (2015-2021).

2.1.2 The general location of the subject site in relation to the surrounding road network is illustrated in Figure 2.1 below whilst Figure 2.2 indicatively shows the full extent of the subject lands in the context of the urban environment.

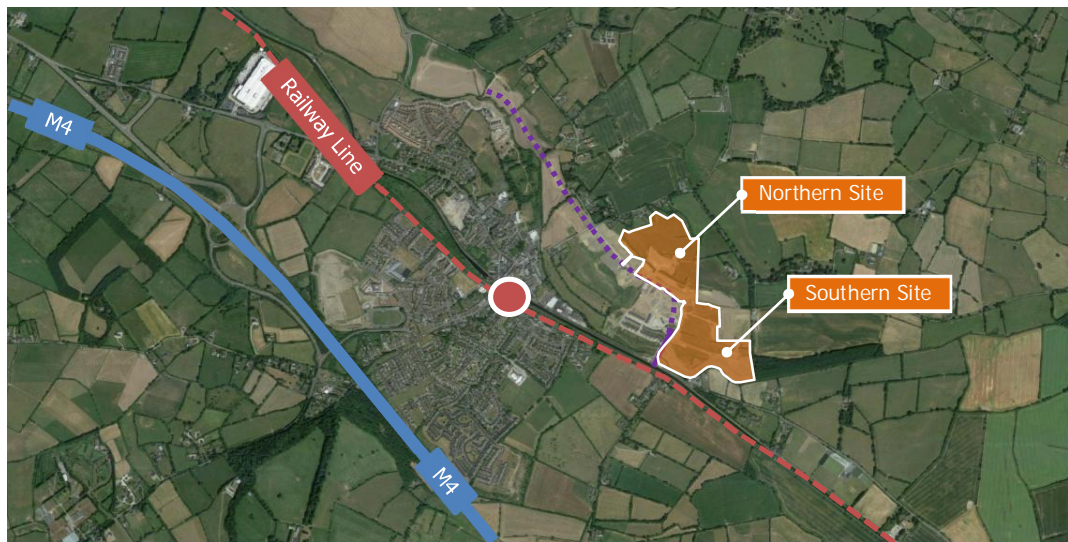

Figure 2.1: Site Location (Source: google maps)

Figure 2.2: Indicative Site Boundary (Source: google maps)

2.2 LAND USE

2.2.1 The subject lands are zoned "A2 – To provide for new residential communities with ancillary community facilities, neighbourhood facilities and employment uses as considered appropriate for the status of the centre in the Settlement Hierarchy" within the Meath County Development Plan 2013-2019.

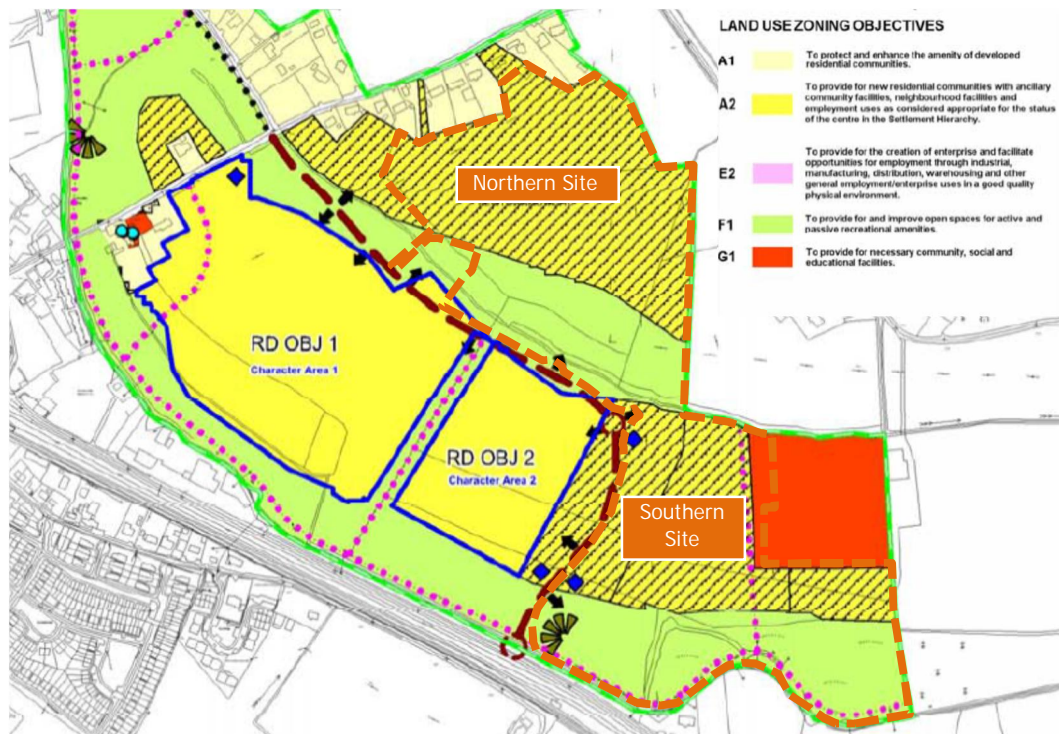

Figure 2.3: Land Use Zoning Objectives (Source: Map 1 Kilcock LAP 2015-2021)

2.2.2 The surrounding area to the west and south of the subject southern and northern development sites comprises the emerging 150 unit residential development on the Character Area 2 lands (as designated within the Kilcock LAP 2015-2021) of which 33 no. units are currently occupied (PI. Ref. RA171230 / 150205) and the permitted 130 unit residential development on the Character Area 1 lands (PI. Ref. 161443).

2.3 EXISTING TRANSPORTATION INFRASTRUCTURE

Road Network

2.3.1 The proposed northern site is located to the north of the emerging Distributor Road corridor whilst the southern site is located to the east of this emerging road infrastructure.

- 2.3.2 Currently the initial 160m of the emerging Distributor Road has been completed from the recently constructed roundabout on the R148 Maynooth Road to just north of the existing access to the partially constructed (33 units out of a total 150 units currently occupied) Character Area 2 development.
- 2.3.3 Travelling southeast on the R148, from the recently constructed roundabout, leads to Maynooth located approximately 5km to the east. Travelling northwest on the R148 for approximately 800m leads to Kilcock Town Centre and the R125 / R148 signal controlled junction. Travelling southwest on the R125, this corridor terminates at the R407 which subsequently provides access to the M4 strategic road network to the west and destinations to the south including Clane, Naas and the strategic M7 road network.
- 2.3.4 Travelling north on the R125 provides access to Dunboyne (15km via Moyglare Road), Dunshaughlin (19km) and the strategic M3 road network.

Existing Pedestrian and Cycling Facilities

- 2.3.5 The R148 Maynooth Road (Figure 2.4) is subject to a speed limit of 50kph. It benefits from recently upgraded pedestrian and cycle infrastructure including a good quality footway along the northern side of the corridor between the new R148 roundabout junction and Kilcock Town Centre. A shared cycle / pedestrian facility, which forms part of the Royal Canal Greenway, is available to the south of the road corridor along the Royal Canal bank.

Figure 2.4: Existing Pedestrian & cycle Facilities on the R148 Maynooth Road

2.3.6 Along the R125 road corridor (Figure 2.5), pedestrians can benefit from the provision of a footway along the western side of the corridor between the Town Centre and the upgraded R125 / Distributor Road junction which benefits from pedestrian footways on both sides of the road in the immediate vicinity of the emerging upgraded junction. In addition, there is a southbound raised cycle lane in place over a distance of approximately 50m after which cyclists share the carriageway with vehicular traffic on approach to Kilcock Town Centre.

Figure 2.5: Existing Pedestrian & Cycle Facilities on the R125 Road Corridor

Public Transport – Bus

2.3.7 Kilcock is located on the ‘Longford - Mullingar – Dublin’ Bus Eireann service (Route 115) which connects the town to areas such as Longford, Edgeworthstown, Mullingar, Kinnegad, Enfield, Maynooth, Leixlip and various parts of Dublin. The nearest bus stop is located on Harbour Street which is located approximately 800m from the subject site.

Direction	Mon-Fri	Sat	Sun
Dublin to Kilcock	33	32	18
Kilcock to Dublin	32	31	16

Table 2.1: Bus Eireann Route 115 (No. of Services)

2.3.8 This service links Kilcock to Maynooth and Dublin with 33 services from the city centre and 32 services from Kilcock every weekday as presented in Table 2.1 above. The journey time is approximately 30 minutes from Kilcock to Dublin (Heuston).

Public Transport - Rail

2.3.9 Kilcock is located on the ‘Dublin – Sligo’ rail line, with services running daily, connecting Kilcock to areas such as Longford, Mullingar, Maynooth, Leixlip, Castleknock and various destinations in Dublin City. Kilcock station is fully accessible and benefits from car-parking facilities. The subject development site is located approximately 1.2km from Kilcock Train Station. Table 2.2 provides a summary of the number of rail services available at Kilcock on each day of the week.

Direction	Mon-Fri	Sat	Sun
Dublin to Sligo / Longford	11	7	6
Sligo / Longford to Dublin	10	7	6

Table 2.2: Rail Services available at Kilcock Train Station (Number of Services)

2.4 LOCAL AMENITIES

2.4.1 As illustrated in Figure 2.6, the proposed development site is well placed in terms of the availability of and access to local amenities. There are a number of schools within 5km of the site including St. Josephs Boys NS, Gaelscoil Chill Coca, Clochar Coca Nofa NS and Scoil Dara post primary school. Furthermore, the subject site benefits from good access to local retail and leisure facilities.

Figure 2.6: Local Amenities

2.5 ROAD SAFETY REVIEW

- 2.5.1 With the objective of ascertaining the road safety record of the immediate routes leading to/from the subject site, the collision statistics as detailed on the Road Safety Authority's (RSA) website (www.rsa.ie) have been examined. The RSA website includes basic information relating to reported collisions over the most recent twelve-year period, from 2005 to 2016 inclusive.
- 2.5.2 The RSA database records detail where collision events has been officially recorded such as the when the Garda being present to formally record details of the incident.
- 2.5.3 Table 2.3 below summarises the RSA Collision Data in the vicinity of the proposed development.

FIGURE 2.7: RSA Collision Data (www.rsa.ie)

- 2.5.4 The review of the RSA data reveals that the local road network exhibits a good safety record considering the volume of traffic travelling across the local road network.
- 2.5.5 In summary the review confirms that no significant incident trends or significant safety concerns are evident across the local road network.

Ref	Severity	Year	Vehicle	Circumstances	Day	Time	Casualty
1	Minor	2012	Car	Head-on conflict	Fri	0700-1000	1
2	Minor	2010	Car	Other	Thurs	1600-1900	2
3	Minor	2012	Bus	Pedestrian	Sat	1900-2300	1
4	Fatal	2005	Car	Other	Sun	0300-0700	1

TABLE 2.3: RSA Collision Data (www.rsa.ie)

2.6 PROPOSED TRANSPORT INFRASTRUCTURE

Road Infrastructure Proposals

Distributor Road

2.6.1 A number of road objectives are proposed within the Kilcock Local Area Plan (LAP) 2015-2021 as presented in Figure 2.8 below.

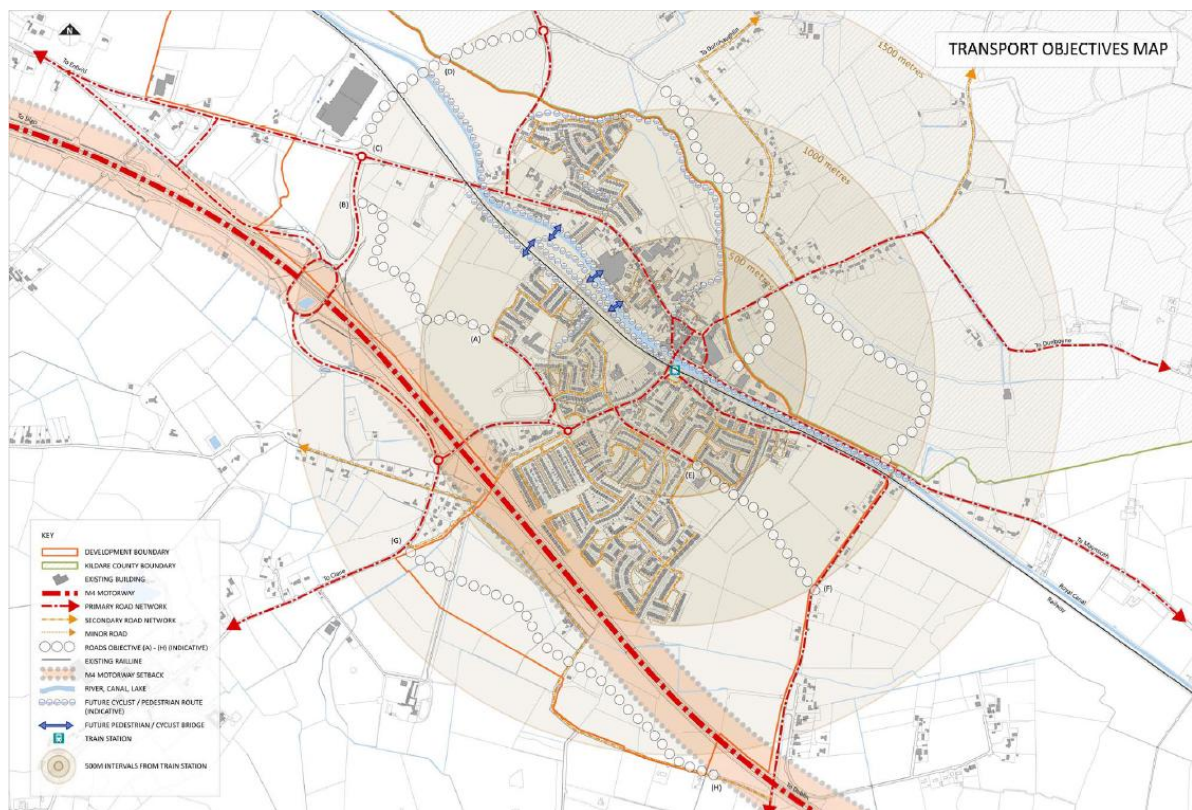

Figure 2.8: Transport Objectives Map (Kilcock LAP 2015-2021)

2.6.2 In addition to the Distributor Road proposals through the subject masterplan lands, as discussed in greater detail in the following paragraphs, further road proposals within the LAP include the extension of the aforementioned distributor road to the R148 / R158 roundabout thereby providing a complete route between the Maynooth Road in the east and the M4 motorway in the west which avoids Kilcock Town Centre.

2.6.3 The section of the Distributor Road which runs through the Masterplan Lands, (and approved by An Bord Pleanala under PL17.239375, PL17.238370 and PL09.238818) is approximately 0.86km in length and will consist of a 7.3m wide carriageway, with a 1.5m wide verge, 1.5m cycletrack and a 2.0 m wide footpath on each side of the road. This road will run in a north-west direction from a new roundabout on the R148, Maynooth Road. The road will form approximately 32% of the overall distributor road identified in the Kilcock LAP (approximately 2.7 km in length) and will stretch from the R148 Maynooth Road to the R125 Dunshaughlin Road. We note that all other sections of the distributor road outside the subject masterplan lands between the R148 and R158 have been granted planning permission by An Bord Pleanla. Works on the approved sections of Distributor Road within the overall Masterplan lands have commenced.

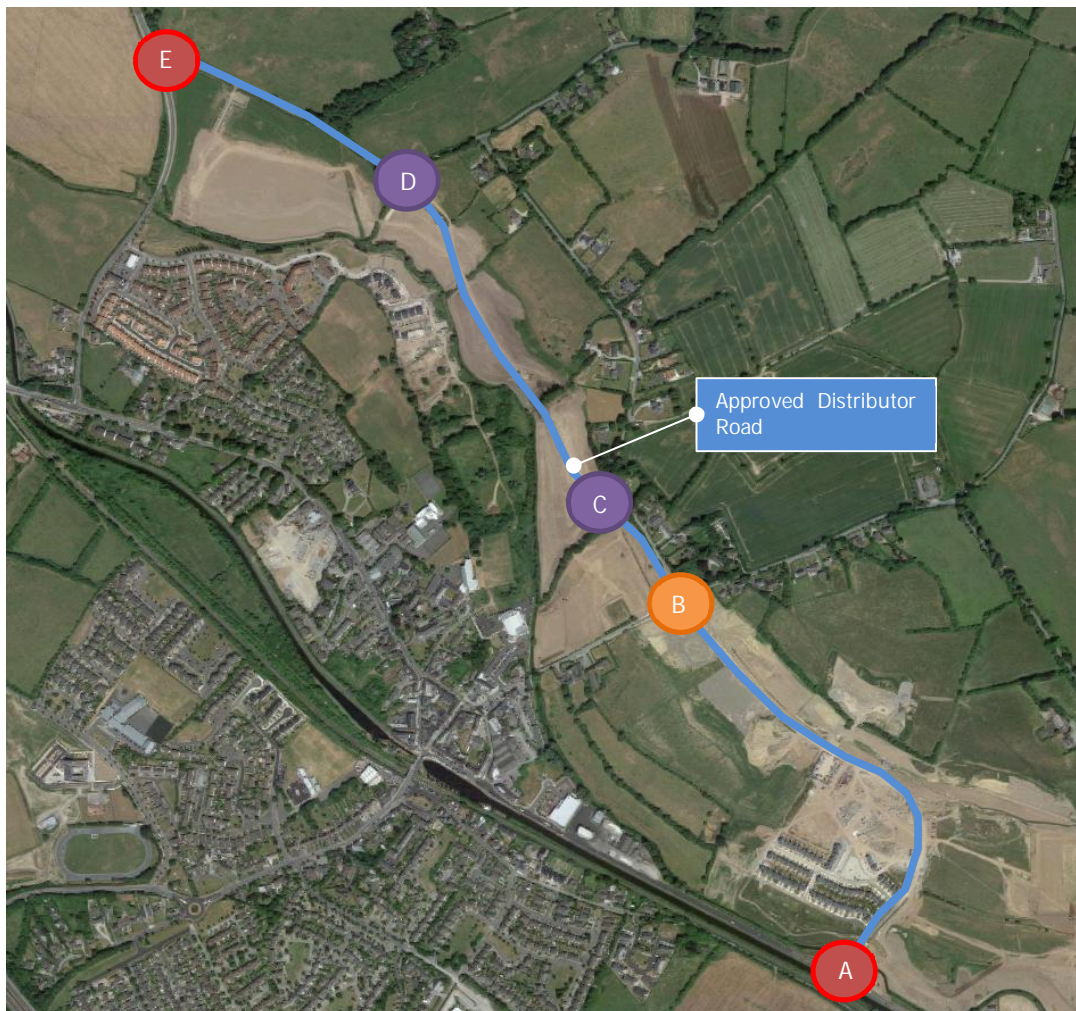

Figure 2.9: Approved Distributor Road / Existing Road Junctions

2.6.4 The approved Kilcock LAP Distributor Road (to be completed by others) will connect to the existing road network at five locations as described below and illustrated in Figure 2.9.

- A. The first is the recently constructed 3-arm **roundabout junction** with the R148 Maynooth Road to the southeast of the town centre;
- B. The second is the recently upgraded 4-arm **signalised junction** with the existing R125 Dolanstown / Newtownmoyaghy junction;
- C. The third is the approved **priority junction** with the R125 Dolanstown at the location of the existing bend in the road approximately 250m north west of Newtownmoyaghy;
- D. The fourth junction is the **priority junction** with the existing county road linking the R158 and R125, at the location of the ninety degree bend in the road;
- E. Finally, the tie-in to the existing R158 / county road **roundabout junction**.

2.6.5 As part of the subject assessment, whilst the recently constructed Junctions A (Maynooth Road roundabout) and Junction B (R125 Dunshaughlin Road Signal-controlled junction) are operational, it has been assumed that a through route will not be complete between these two junctions by the 2021 Opening Year. By the 2026 Future Design Year, it has been assumed that the entire section of Distributor Road between the R148 Maynooth Road and the R125 will be complete whilst the remaining sections of Distributor Road will be complete by the 2036 Future Design Year.

New Road / Harbour Street Junction Upgrade

2.6.6 As part of the emerging permitted development, the existing New Road / Harbour Street junction is proposed to be upgraded from the current priority controlled junction arrangement to a signal controlled junction arrangement. The proposals will also facilitate two-way traffic along New Road between Harbour Street and the R125 Dunshaughlin Road. In summary, the following enhancements (which do not form part of the subject planning application) are proposed at this junction;

- New signal controls at New Road / Harbour Street including pedestrian crossings on the New Road and Harbour Street (E) arms,
- Introduction of a northbound lane along New Road (currently one-way),

- Right turn pocket on Harbour Street for traffic travelling north on New Road, and
- Two-lane approach to Harbour Street / Shaw bridge signalised junction on Harbour Street arm.

2.6.7 For the purposes of this assessment, it has been assumed that this proposed junction upgrade will be operational sometime before the subject development's adopted 2021 Opening Year.

3.0 POLICY FRAMEWORK

3.1 MEATH COUNTY DEVELOPMENT PLAN 2013-2019

3.1.1 The Meath County Development Plan 2013-2019 sets out the policies for sustainable development within the council area up to 2019.

3.1.2 The Meath County Development Plan 2013 – 2019 intends to promote and facilitate the provision of the necessary infrastructure to fully accommodate the demand for development and future population increases in an environmentally sustainable manner. The following policies are considered relevant to the proposed development:

Movement and Access

MA POL 2: *To promote and facilitate the development of cycling and walking facilities in the Kilcock Environs by securing the development of a network of safe cycle routes and footpaths on new and existing roads and on routes reserved exclusively for pedestrians and cyclists.*

MA POL 3: *To provide clear delineation between road hierarchy and their functions through the design process.*

MA POL 4: *To ensure that traffic safety measures are incorporated into the design of all new roads.*

MA POL 5: *To require the provision of good public lighting standards on all routes and extension of footpaths and public lighting to the development boundaries on public roads in association with further development.*

MA POL 6: *To provide for an integrated network of cycle ways throughout the Environs in order to promote more sustainable modes of transportation.*

MA POL 7: *To ensure that cycleways and footpaths are overlooked by adjoining development and are provided with an adequate level of public lighting.*

MA OBJ 1: *To reserve free from development the permitted Local Distributor Road within the Kilcock Environs area extending from the R148 (Maynooth Road) to the southeast, to the roundabout along the R158 (Summerhill Road) with provisions for suitable links and tie in provisions to the adjoining road network in County Kildare. The permitted alignment of this road is shown on the land use zoning objectives map.*

MA OBJ 2: *To facilitate the provision, in tandem with development, of the section of the Local Distributor Road extending from the R148 (Maynooth Road) to the existing R125 (Dunshaughlin Road) with provisions for suitable links and tie in provisions to the adjoining*

road network in County Kildare. Any planning application seeking consent to construct this section of roadway shall be accompanied by an appropriately detailed Flood Risk Assessment considering the existing un-defended flood extents. Furthermore, any development within the subject lands shall be subject to Appropriate Assessment pursuant to the Habitats Directive to ensure that the proposed development will not adversely impact upon the qualifying interests of any Natura 2000 sites.

MA OBJ 3: *To carry out general road improvements in the Kilcock Environs, including junction tie in works and upgrades to facilitate the provision of a new spinal road.*

Public Transport

Trans Pol 7: *To support the improvement of existing rail transport infrastructure including the Dublin/Sligo route with increased suburban services to Enfield and Kilcock, the existing Dublin.*

Trans Pol 11: *To ensure that new developments in Large Growth Towns I and II and Moderate Sustainable Grown Towns are laid out so as to facilitate the provision of local bus services.*

Walking and Cycling

Trans Pol 22: *To ensure, where possible, that cycleways and footpaths are effectively delineated from major vehicular carriageways.*

Trans Pol 23: *To require planning applications for major developments to demonstrate proposals to address accessibility for pedestrians and cyclists.*

Trans Pol 24: *To require planning applications for major developments to demonstrate proposals to address accessibility for pedestrians and cyclists.*

Residential Development

RD OBJ 1: *To accommodate, on the lands identified on the land use zoning objectives map to the east of the R125 (Dunshaughlin road), a maximum of 250 residential units and a neighbourhood centre and to reserve a site of 1.6 hectares for a primary school within these lands. The primary school site and neighbourhood centre shall be located adjacent to each other. Any application for development on these lands shall be accompanied by a Master Plan illustrating the layout for the site in its entirety as illustrated on the land use zoning objectives map. The layout shall make provision for connections, particularly pedestrian and cyclist, between Character Area 1 and Character Area 2.*

RD OBJ 2: *To accommodate, on the lands identified on the land use zoning objectives map to the north of the Rye Water River, a maximum of 150 residential units. Any planning application for development on these lands should include a Master Plan showing the proposed layout for the entire site as illustrated on the land use zoning objectives map.*

This should make provision for connectivity between Character Area 1 and Character Area 2.

INF POL 24: *To require planning applications to demonstrate the development proposal's accessibility for pedestrians and cyclists.*

3.2 KILCOCK LOCAL AREA PLAN 2015-2021

3.2.1 The Kilcock Local Area Plan (LAP) 2015-2021 sets out the policies for sustainable development in the town of Kilcock up to 2021.

3.2.2 In the context of the subject development site and the proposed residential scheme a number of the most relevant objectives of the LAP include;

Movement and Transport – Integrated Land-Use and Transportation

MTO 2: *"To maximise the use of public transport infrastructure, walking and cycling and minimise car dependence."*

MTO 3: *"To promote pedestrian and cycling movements for local trips."*

MTO 4: *" To avoid severance within local catchments."*

Movement and Transport – Public Transport

MTO 5: *"To seek to develop a park and ride facility at a location close to the M4 interchange and provide car parking for rail services on 'the island' adjacent to the train station in order to remove commuter related parking in the town centre."*

MTO 6: *"To investigate the provision of bus transport facilities throughout the town and to seek to ensure an increase in the provision of bus stops, bus shelters and bus bays with appropriate timetable information."*

Movement and Transport –Cycling

MTO 7: *"To develop a local cycle network for Kilcock connecting key destinations to the wider catchment and national cycle network."*

MTO 8: *"To provide additional cycle and pedestrian bridges across the Royal Canal and railway line to form part of strategic cycling and walking routes."*

MTO 10: *"To develop a direct cycle linkage system away from the primary traffic network including on and off-road cycle lanes designed and constructed to minimise conflict with other road users."*

MTO 11: *"To develop new cycle links to a high standard for utility cycling including:*

- *The Royal Canal Route,*
- *The Bawnogues to the Train Station using 'the Island' as a route along the Railway linking to the Royal Canal Cycle Track Route,*
- *To enhance the outer orbital walking and cycling route from Courtown Demesne to Connaught Street and the Courtown Road,*
- *Develop a pedestrian and cyclist bridges connecting the Ryebridge area to the schools in Bawnogues crossing the Royal Canal and Railway,*
- *The Ryebridge area to the Town Centre along the Rye Water River,*
- *Branganstown to the Train station and to the outer orbital route.*

Movement and Transport –Walking

MTO 12: *"To create and support a network of pedestrian infrastructure to promote and facilitate walking and provide improved levels of priority and lighting for pedestrians and cyclists along key desire lines"*

MTO 14: *"To provide increased priority for pedestrians particularly at the entrances to the town centre through the introduction of increased pedestrian crossing points and other measures as appropriate. Traffic calming within the Market Square as well as pedestrian and cyclist crossing points over the Royal Canal and railway line and will be prioritised."*

MTO 15: *"To develop a high quality pedestrian environment in the vicinity of the railway station."*

Movement and Transport - Roads Capacity Improvements

MTO 25: *"To facilitate the future construction of the following roads and in the interim protect their routes from development:*

- *From Mollyware Street (Royal Meadows) to the Branganstown Road,*
- *From the Enfield Road to the County boundary,*
- *From the Bawnogues to the M4 interchange"*

MTO 26: *"To coordinate and co-operate with Meath County Council in the design and construction of the road network serving Kilcock."*

MTO 27: *"To agree in consultation with Meath County Council the detail alignment and design of a local distributor road...to facilitate a vehicular circulation route from the Dunshaughlin Road and adjoining development lands to the Maynooth Road."*

MTO 28: *“To consult and co-ordinate with Meath County Council in the design and construction of new bridges connecting zoned lands in County Meath to the town in order to relieve pressure on the existing Meath Bridge and improve connectivity.”*

3.3 DEVELOPMENT CONTROL

Car Parking Standards

3.3.1 Reference has been made to Table 11.9 of the Meath County Council Development Plan (2013-2019) which outlines the car parking standards for the county.

3.3.2 Furthermore, reference is made to Chapter 4 of Sustainable Urban Housing: Design Standards for New Apartments Guidelines for Planning Authorities, as published by the Department of Housing, Planning and Local Government (DHPLG), March 2018. The subject site location, can be classified as *‘Peripheral and/or Less Accessible Urban Locations’*.

3.3.3 In relation to car parking, within *‘Peripheral and/or Less Accessible Urban Locations’*, the DHPLG document states:

‘As a benchmark guideline for apartments in relatively peripheral or less accessible urban locations, one car parking space per unit, together with an element of visitor parking, such as one space for every 3-4 apartments, should generally be required.’

3.3.4 With regard to the proposed development schedule and the location of the subject site, the associated car parking requirements are outlined in Table 3.1 below.

3.3.5 In response to the above MCC development management standards the scheme is permitted to provide 1111 on-site car parking spaces comprising 518 within the Southern site boundary and 593 within the Northern site boundary. Nevertheless, the DHPLG guidance suggests that a lower quantum should be provided ranging from a total provision of 1053 to 1067 car parking spaces.

Site	Unit Type		Development Standard		No. of Units / GFA	Quantum Permitted/ Required	
			MCC	DHPLG		MCC	DHPLG
Southern Site	Apartment	1-2 bed	1.25 / unit + 1 visitor space / 4 units	1 / unit plus 1 visitor / 3-4 units	115	144 resident, 29 visitor	115 resident, 29-38 visitor
		3 bed	2 / unit + 1 visitor space / 4 units		4	8 resident, 1 visitor	4 resident, 1-2 visitor
	House		2 / unit	As MCC	147	294	As MCC
	Crèche (623m ²)		1 / staff, 1 set down / 5 children	As MCC	18 staff, 119 children	18 staff, 24 set down	As MCC
	Total Southern Site						518
Northern Site	Apartment / Duplex	1-2 bed	1.25 / unit + 1 visitor space / 4 units	1 / unit plus 1 visitor / 3-4 units	58	73 resident, 15 visitor	58 resident, 15-19 visitor
		3 bed	2 / unit + 1 visitor space / 4 units		10	20 resident, 3 visitor	10 resident, 3 visitor
	House		2 / unit	As MCC	241	482	As MCC
	Total Northern Site						593
Overall Total						1111	1053-1067

Table 3.1: Car Parking Standards

Mobility Impaired Car Parking

3.3.6 Note 4 of Table 11.9 of the Meath County Council Development Plan (2013-2019) specifies that *“Parking facilities for mobility impaired drivers and their vehicles shall be provided at the general rate of 2 per 100 spaces”*.

Cycle Parking Standards

3.3.7 Reference has been made to both Section 11.9.2 of the Meath County Development Plan (2013-2019) which outlines the minimum cycle parking provision sought for new developments within the area governed by MCC, and Section 4.17 of the aforementioned DHPLG requirements. The cycle parking standards applicable to the subject development are detailed in Table 3.2 below.

3.3.8 In response to the above MCC development management standards the scheme is required to provide a minimum of 115 on-site cycle parking spaces comprising 75 within the Southern site boundary and 40 within the Northern site boundary. Nevertheless, the DHPLG guidance suggests that a higher quantum of 432 cycle parking spaces should be provided comprising 270 cycle parking spaces within the Southern site and 162 within the Northern site.

Site	Unit	MCC Standard		DHPLG Standard		MCC Requirement		DHPLG Requirement	
		Long Stay	Short Stay	Long Stay	Short Stay	Long Stay	Short Stay	Long Stay	Short Stay
Southern Site	Apartment	1 / 3 car parking		1 / bed	1/2 apts	51	10	196	60
	House*	NA		NA	NA	NA		NA	
	Crèche	1 / 3 car parking		As MCC	As MCC	6	8	As MCC	
	Total Southern Site						75		270
Northern Site	Apartment	1 / 3 car parking		1 / bed	1/2 apts	31	9	128	34
	House*	NA		NA	NA	NA		NA	
	Total Northern Site						40		162
Overall Total						115		432	

* Cycle parking opportunities available in-curtilage

Table 3.2: Cycle Parking Standards

4.0 CHARACTERISTICS OF PROPOSALS

4.1 OVERVIEW

4.1.1 The proposals seek permission for the provision of a 575 unit residential development over 2 no. individual sites. The Southern site comprises a total of 266 residential units including 147 no. houses and 119 apartments / duplex apartments. The Northern site comprises a total of 309 residential units including 241 no. houses and 68 no. apartments / duplex apartments. A 623m² creche facility is also proposed within the Southern site which is predicted to accommodate 18 staff and 119 children. A summary of the residential development proposals is presented in Table 4.1 below.

Description	Northern Site	Southern Site	Total
1-Bed Apartment	3	17	20
2-bed Apartment	11	35	46
1-Bed Duplex / Maisonette / Simplex	15	29	44
2-bed Duplex / Maisonette / Simplex	29	34	63
3-Bed Duplex / Maisonette / Simplex	10	4	14
2-Bed House	22	21	43
3-Bed House	163	107	270
4-Bed House	56	19	75
Total	309	266	575

Table 4.1: Proposed Development Schedule

4.1.2 The proposed development site layout is presented in Figure 4.1 below and further details of the proposals are illustrated in the architects' scheme drawings as submitted with this planning application.

4.2 SITE ACCESS

Vehicles

4.2.1 Both the southern and northern development lands will be accessed off the emerging Distributor Road corridor. The southern development lands will be accessible via a new **roundabout junction** and **priority controlled junction** with the emerging permitted Distributor Road. The northern development lands will be accessible via 2 no. **priority controlled junctions** with the Distributor Road as presented in Figure 4.1.

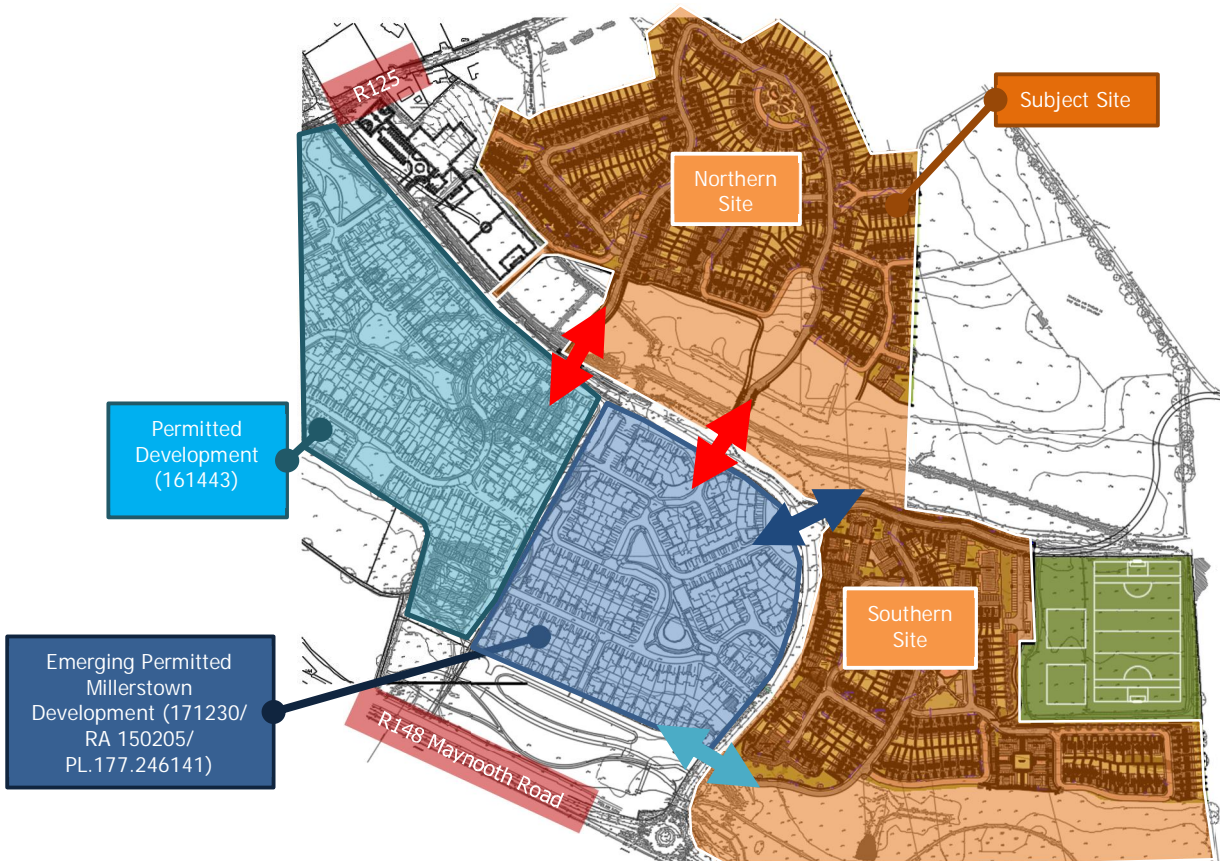

Figure 4.1: Proposed Development Site Layout and Access Locations

Pedestrians and Cyclists

- 4.2.2 The subject development will be highly accessible to both pedestrians and cyclists via a range of convenient connection points including all of the aforementioned vehicle access locations. Furthermore, the permitted Distributor Road scheme will, once complete, provide dedicated segregated pedestrian / cycle facilities on both sides of the road corridor.
- 4.2.3 Internally, dedicated pedestrian footways will be provided on all streets which will connect with the existing / future pedestrian facilities on the external network thereby facilitating excellent pedestrian connectivity.
- 4.2.4 Map 1 of the Kilcock LAP 2015-2021 indicatively illustrates future pedestrian walkway proposals in the vicinity of the subject site, which, once complete would provide convenient pedestrian / cycle access to the Maynooth Road corridor and the Royal Canal Greenway and subsequently result in shorter walking / cycling distances between the subject development lands and Kilcock Town Centre, Public Transport interchange locations (bus and train).

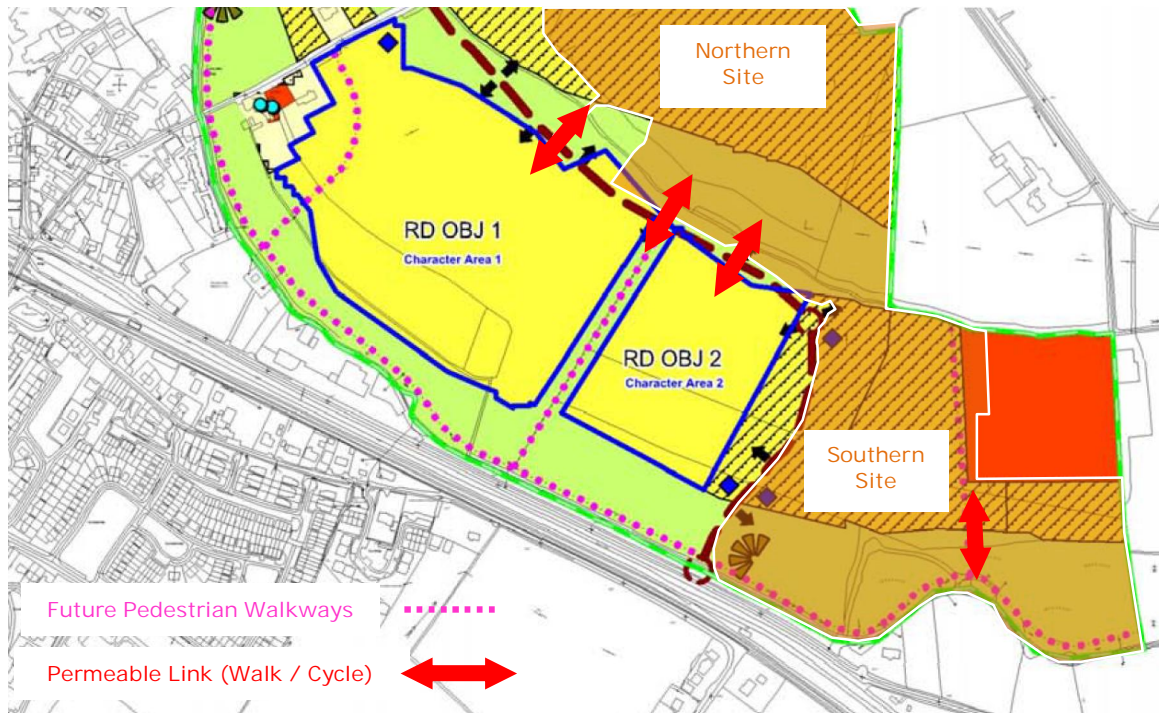

Figure 4.2 : Future Kilcock LAP 2015-2021 Proposed Pedestrian Walkways

4.3 PARKING

Car Parking

4.3.1 The development proposals include the provision of 1019 car parking spaces on-site comprising 561 no. within the Northern site and 458 no. within the Southern (including 40 no. GAA changing room car parking spaces) site as summarised in Table 4.3 below.

Description	Northern Site	Southern Site	Total
Houses	460	273	733
Apartments	14 resident / 2 visitor	52 resident / 6 visitor	74
Duplex	42 resident / 28 visitor	-	70
Corner Blocks	12 resident / 3 visitor	67 resident / 6 visitor	88
Creche	-	14	14
GAA Club	-	40	40
Total	561	458	1019

Table 4.3: Proposed Car Parking Provision

4.3.2 The subject scheme proposes the following dedicated car parking provision ratio's per residential unit type with the remaining spaces assigned as visitor spaces;

- 2 spaces per 3+ bed house,

- 1 space per 2 bed house,
- 1 space per apartment unit, and
- 1 space per duplex apartment unit.

- 4.3.3 The proposed car parking provision for the three and four bedroom houses is fully compliant with the MCC development management standards (i.e. 2 spaces per unit).
- 4.3.4 The scheme proposals include for 1 space per 2 bedroom house which is lower than the development plan requirement for residential houses. Furthermore, apartment and duplex car parking provision is proposed at a rate of 1 per unit (excluding visitor spaces) which is also slightly lower than the development plan requirement. Accordingly, a management regime will be implemented by the development's management company to control access to these on-site apartment car parking bays thereby actively managing the availability of on-site car parking for residents / visitors.
- 4.3.5 The residents within one of the proposed residential apartments will NOT include the ownership of a designated parking space. Nevertheless, all residents of the proposed residential apartment scheme will have the opportunity to apply to the management company for both (i) a residents car parking permit (updated annually or upon return of same permit) to the management company to gain access to a dedicated (assigned) on-site car parking space or (ii) a visitor's car parking permit (which will be issued electronically and subject to time restrictions). A nominal charge will be applied to obtain a permit with the objective of covering the associated management and enforcement costs.
- 4.3.6 Each permit will enable the resident (or visitor) to park a vehicle within a specific assigned parking bay for a defined period of time. This management regime will enhance the availability of on-site car parking, ensuring that every resident who needs car parking can avail of an on-site car parking space whilst residents that actually don't own a car are not unnecessarily assigned a car parking space.
- 4.3.7 Notwithstanding the above car parking management regime, whilst the proposed car parking provision to be assigned to the apartment units (and 2 bed houses) is slightly lower than the allowable development plan provision, this is considered appropriate due to;

- i. the subject scheme proposals include for a high provision of cycle parking at the apartment units which is significantly higher than the development management standards,
- ii. the convenient location of the Royal Canal Greenway facility to the south of the subject site (particularly accessible from the southern site), and
- iii. The proximity of the subject development site to Kilcock Train Station (approx. 1.2km),
- iv. The DHPLG requires only 1 car parking space per unit plus 1 visitor space per 3-4 units (it is assumed that a 2 bed house would have a similar car parking demand to that of an apartment), and
- v. A review of the Census (Sapmap) 2016 data has been undertaken for 4 no. small areas with similar characteristics to the subject development site. The analysis revealed that, on average, there is a car parking availability of 0.86 per residential unit. Table 4.4 below presents a summary of the car availability data at the adopted Census 2016 small areas.

Small Area	Locations	Ratio
Sa2017_087047018	Connaught St / Rochford Ct / Rochford Row	0.87
Sa2017_087047016	Village Gr / Fair Gr / Molly Ware St	0.90
Sa2017_087047010	Chapel View / The Paddocks	0.71
Sa2017_087047017	Rochford Gr / Rochford Pk / Rochford Ave	0.96
Average		0.86

Table 4.4: Summary of Census 2016 Car Availability

- 4.3.8 Accordingly, based on a cumulation of the above reasons, the opportunity exists to provide car parking at a rate slightly lower than the recommended development standards.
- 4.3.9 The subject proposals promote the provision of 14 no. neighbourhood focused crèche car parking spaces comprising 8 no. staff spaces and 6 no. drop of spaces. Whilst this proposed provision is less than the development plan maximum requirements (18 staff and 24 set down), the proposed crèche facility is expected to primarily cater for the subject development since the approved / emerging adjoining residential developments (Pl. Ref. RA 171230 / RA 150205 / Pl.177.246141 and Pl. Ref. RA161443) incorporate a crèche facility as part of their

proposals. Accordingly, the vast majority of trips to / from the proposed crèche facility will be walking trips to / from within the proposed development.

- 4.3.10 In addition to the above car parking proposals, the subject scheme includes for the allocation of 40 no. car parking spaces at the playing pitches located to the east of the southern site boundary.

Mobility Impaired Parking Provision

- 4.3.11 The subject scheme is required to provide 2 no. mobility impaired car parking spaces per 100 car parking spaces. It is assumed that housing units can accommodate mobility impaired parking in curtilage. Accordingly, dedicated mobility impaired car parking is provided for the apartment / duplex units and the crèche only. Applying the development plan requirement to the subject apartment / duplex units necessitates the provision of 2 no. dedicated mobility impaired car parking spaces in both the northern and southern development sites. Additionally, 1 no. dedicated mobility impaired car parking space is required at the proposed crèche facility.

- 4.3.12 The subject proposals include for the provision of 4 no. dedicated mobility impaired apartment / duplex car parking spaces in the northern site and 6 no. in the southern site comprising 5 apartment spaces and 1 no. crèche space.

Cycle Parking

- 4.3.13 The proposals include the provision of a total 314 cycle parking spaces including 242 no. residential, 40 no. crèche and 32 no. GAA club cycle parking spaces on-site. The 242 no. residential cycle parking spaces comprise 163 long stay parking spaces and 97 short stay parking spaces. Residents of residential housing units can accommodate long and short stay bicycle parking in-curtilage. It is expected that duplex units can accommodate long stay cycle parking in-curtilage however 24 no. dedicated short stay cycle parking spaces have been provided. A summary of the cycle parking provision is presented in Table 4.4 below.

- 4.3.14 The provision of 242 no. residential cycle parking spaces is significantly higher than the development plan minimum requirement of 101 no. spaces and represents a good compromise between the development plan and generous DHPLG requirements (416).

- 4.3.15 A total of 40 no. cycle parking spaces are proposed to be provided at the crèche facility comprising 18 no. long stay (1 per staff) and 22 no. short stay spaces

(approximately 1 per 5 children). The proposed overall provision of 40 no. crèche cycle parking spaces is 26 no. spaces higher than the minimum development plan requirement.

Description	Northern Site		Southern Site		Total	
	Long Stay	Short Stay	Long Stay	Short Stay	Long Stay	Short Stay
Houses	-	-	-	-	-	-
Apartments	14	7	52	26	66	33
Duplex	-	24	-	-	-	24
Corner Blocks	12	6	67	34	79	40
Creche	-	-	18	22	18	22
GAA Club	-	-	-	32	-	32
Sub-Total	26	37	137	114	163	151
Total	63		251		314	

Table 4.4: Summary of Cycle Parking Provision

4.4 DESIGN APPROACH

Internal Roads Layout

4.4.1 The proposed development is consistent with both the principles and guidance outlined within the Design Manual for Urban Roads and Streets (DMURS) 2013 (Updated May 2019). The scheme proposals are the outcome of an integrated design approach that incorporates traditional road design along with elements of urban design and landscaping to create lower traffic speeds and thereby facilitate a safer road environment for pedestrians and cyclists. The proposed layout provides for a package of self-regulating design measures including: -

- Horizontal deflections through 'tight' corner radii
- Vertical deflections through the inclusion of raise tables
- Narrow residential streets and a meandering alignment to actively influence vehicle speeds.

Development Phasing

4.4.2 The southern development site is proposed to be constructed first with the initial 100 housing units within the southern site assumed to be built and occupied by the adopted 2021 Opening Year. The remaining units of the southern site and the full northern development site is assumed to be complete and occupied by the 2026 Future Design Year.

5.0 TRIP GENERATION AND DISTRIBUTION

5.1 BASELINE TRAFFIC SURVEYS

5.1.1 Both AM and PM peak period weekday traffic counts (classified junction turning counts) were conducted over a 6-hour period from 07:00 - 10:00 and again from 16:00 - 19:00 on Wednesday 14th March 2019. The surveys, undertaken by IDASO Ltd., established that the local networks AM and PM peak hours occur between 08:15 – 09:15 and 17:45 - 18:45, respectively.

5.1.2 In order to analyse and assess the impact of the potential future development upon the local road network, a traffic model of the following junctions was created;

Junction 1 – Harbour St / Bridge St / School St Junction,

Junction 2 – Harbour St / New Rd Junction,

Junction 3 – Distributor Rd / Maynooth Rd Junction,

Junction 4 – Distributor Rd / Moyglare Rd / Dunshaughlin Rd Junction,

Junction 5 – School St / New Lane Junction, and

Junction 6 – New Lane / The Square Junction.

Figure 5.1: Junctions included within DBFL Traffic Model

5.2 MODAL SPLIT

5.2.1 The Central Statistics Office 2016 SAPMAP (Small Areas Population Map) was examined in order to determine travel patterns within the local vicinity of the subject residential development. Figure 5.2 below illustrates the areas that were selected for the analysis based on their proximity to the subject site and because they best represent the development's future trends.

Figure 5.2: Areas of Interest for Trend Analysis (source: Census 2016)

- 5.2.2 The analysis reveals the mode of travel used by the residents when travelling to/from work from their homes as illustrated in Figure 5.3. It is revealed that the car was the primary mode of transport to work in the study area with 78.9% (76.1% travelling as a vehicle driver and 2.8% travelling as a car passenger) in 2016. Travel by public transport represents the next most popular mode of travel (5.7% by bus and 8.8% by train) whilst the remaining 6.6% travel to work using active modes of travel (5.7% by bicycle and 0.9% on foot).
- 5.2.3 The mode of travel for educational purposes differs significantly to that observed in the travel to work analysis as illustrated in Figure 5.4. It is revealed that travel my sustainable modes of travel represent the majority of recorded trips accounting for a total of 54.6% of all trips to education. 38.6% of all education trips were undertaken using active travel modes whilst 16.0% were undertaken using public transport. The remaining 45.5% of education trips were undertaken by car (i.e. 43.1% as car passenger and 1.4% as car driver).

Figure 5.3: Proposed Developments Housing Units Modal Split (2021) – Travel to Work

Figure 5.4: Proposed Developments Housing Units Modal Split – Travel to Education

5.3 TRIP GENERATION

Proposed Development

- 5.3.1 A review of trip generation factors contained within the TRICS database was carried out. TRICS data is primarily UK based, although a number of Irish sites have recently been included and the number of Irish sites continues to expand. Nevertheless, we consider that TRICS will provide a reasonable indication of traffic generation from the proposed development.
- 5.3.2 Notwithstanding the above, internal research undertaken by TRICS has shown that there is no direct evidence of trip rate variation by country or region. The use of English, Scottish or Welsh data can be equally applicable to Ireland if users take into account important site selection filtering factors such as levels of population,

location type, local public transport provision, and development size and car ownership level, amongst others.

5.3.3 Data supplied for inclusion in TRICS undergoes a procedure of validation testing, and there is no evidence from this procedure suggesting that data from Ireland bears any significant fundamental differences to that from the other countries included. Consequently, we consider that TRICS will provide a reasonable indication of traffic generation from the proposed development.

5.3.4 Table 5.1 includes the predicted TRICS derived trip rates during the morning and evening peak hour periods. The TRICS output files are included in Appendix B of this report.

Description	Unit	AM Peak Hour		PM Peak Hour	
		Arr	Dep	Arr	Dep
Residential Houses	Per Unit	0.150	0.372	0.317	0.217
Residential Apartments/Duplexes	Per Unit	0.084	0.173	0.190	0.149
Crèche	Per 100m ²	5.811	4.155	0.966	2.493

Table 5.1: Proposed Development Vehicle Trip Rates

5.3.5 Based on the above trip rates, the potential peak hour vehicle trip generation for both development sites is calculated as presented in Table 5.2.

Description	Southern Site				Northern Site			
	AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
	Arr	Dep	Arr	Dep	Arr	Dep	Arr	Dep
Houses	22	55	47	32	36	90	76	52
Apartments/Duplexes	10	21	23	18	6	12	13	10
Crèche	18	13	3	8	-	-	-	-
Total	50	88	72	57	42	101	89	62

Table 5.2: Potential Development Vehicle Trip Generation

5.3.6 It is expected that a large proportion of trips generated by the proposed crèche facility will be internal trips with a high level of walk / cycle trips due to crèche facility located in close proximity to the residential units and the availability of creche facilities in adjoining emerging / permitted development schemes (PI. Ref. RA 171230 / RA 150205 / PI.177.246141 and PI. Ref. RA161443). Accordingly, the TRICS predicted development trips have been discounted by 50%. In reality, it is expected that this discounted proportion could actually be much greater and therefore the assumed 50% discount is considered robust.

5.3.7 As introduced in Section 4.2.2 above, it is estimated that 100 housing units within the Southern site will be constructed and occupied by the adopted 2021 Opening Year, with the entire development constructed and occupied by the 2026 Future Design Year (i.e. Opening year plus 5 years). Table 5.3 presents the predicted development vehicle trip generation during each of the adopted design year scenarios.

Design Year	Southern Site				Northern Site			
	AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
	Arr	Dep	Arr	Dep	Arr	Dep	Arr	Dep
2021 Opening Year	15	37	32	22	0	0	0	0
2026 Future Design Year	50	88	72	57	42	101	89	62
2036 Future Design Year	50	88	72	57	42	101	89	62

Table 5.3: Predicted Development Design Year Vehicular Trip Generation

5.4 COMMITTED DEVELOPMENT

5.4.1 Following a review of MCC / KCC on-line planning portal DBFL have established the existing third-party sites, as located within the area of influence of the subject development site, which currently benefit from a valid planning permission but have yet to be constructed and / or occupied. DBFL have subsequently included the following third-party developments proposals (as indicated on Figure 5.5) as 'committed development' within the subject developments network assessment.

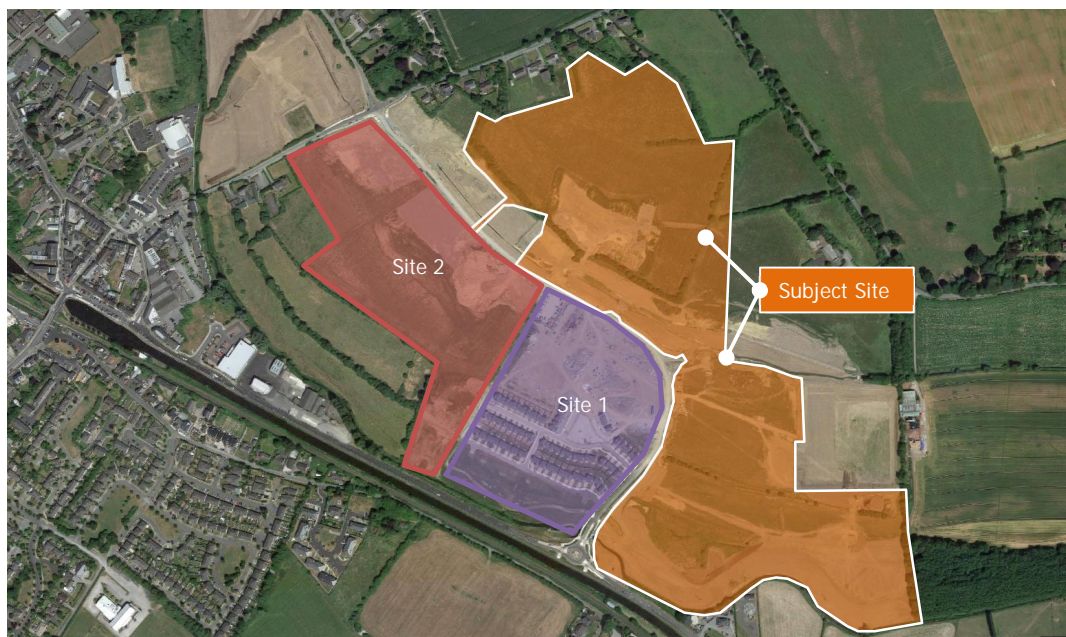

Figure 5.5: Existing Third Party Committed Developments

Site 1 - Residential Development (Pl. Ref. RA 171230 / RA 150205 / PL.177.246141)

- 5.4.2 Planning permission was granted for 150 residential units in June 2016 (Pl. Ref. RA 150205 / PL.177.246141). Subsequently, a change of unit types for 2 no. sites was approved in January 2018 (Pl. Ref. RA 171230).
- 5.4.3 The site for this committed residential development is known as 'Character Area 2' within the Kilcock LAP. The development is currently under construction and at the time of the traffic surveys (March 2019), 33 no. residential houses were occupied.
- 5.4.4 In order to determine the level of traffic generated from this permitted development reference was made to the original planning application (Ref. RA 150205) which included a TTA containing the predicted vehicle trips that could be generated by this predicted development. The existing vehicle flows from the 33 no. currently occupied units has been recorded in the traffic surveys and therefore have been subtracted from the predicted vehicle trip generation as summarised in Table 5.4 below.

Land Use	AM Peak Hour		PM Peak Hour	
	Arr	Dep	Arr	Dep
Trip Generation	20	44	50	33

Table 5.4: Committed Development Site 1 Peak Hour Vehicle Trip Generation

- 5.4.5 As this development is partially completed, in order to provide a robust assessment DBFL have assumed that all of the proposed 150 residential units will be occupied by the subject residential developments 2021 Opening Year.

Site 2 - Residential Development (Pl. Ref. RA161443)

- 5.4.6 Planning permission was granted for 130 residential units in December 2017. The site for the proposed residential development is located adjacent to the aforementioned permitted development and is known as Character Area 1 within the Kilcock LAP.
- 5.4.7 In order to determine the level of traffic generated from the permitted development, reference was made to the original planning application (Ref. RA161443). The TTA submitted with this application estimated traffic generation for the residential units as presented in Table 5.5.

Land Use	AM Peak Hour		PM Peak Hour	
	Arr	Dep	Arr	Dep
Trip Generation	24	54	62	41

Table 5.5: Committed Development Vehicle Trip Generation

5.4.8 As this development has yet to be constructed, in order to provide a robust assessment, DBFL have assumed that all of the proposed 130 residential units will be occupied by the subject residential developments 2021 Opening Year.

5.5 TRIP DISTRIBUTION

Base Traffic Redistribution

5.5.1 For the purposes of this assessment, it has been assumed that, in the 2021 Opening Year scenario, the section of Distributor Road between the existing Maynooth Road roundabout and the future roundabout junction providing access to the subject southern site and the section between the committed "Character Area 1" development access and the Dunboyne / Dunshaughlin Road recently upgraded signal controlled junction will be constructed. Accordingly, it has been assumed that there will be no through road in place resulting in no redistribution of base traffic in the 2021 Opening Year.

5.5.2 By the adopted 2026 Future Design Year, the complete section of the permitted Distributor Road between the R148 Maynooth Road and the R125 Dunboyne / Dunshaughlin Road will be complete and operational. Accordingly, a proportion of the base (growthed) traffic flows as recorded in the 2019 traffic surveys will reassign onto this new piece of road infrastructure thereby reducing the potential future traffic flow through Kilcock Town Centre. By the 2036 Future Design Year, the full length of Distributor Road between the R148 Maynooth Road and the R158 roundabout is assumed to be complete and therefore an additional redistribution exercise has been undertaken to reflect the potential diverted traffic currently travelling between the R158 and Maynooth onto the future Distributor Road.

5.5.3 The permitted Kilcock LAP Character Area sites TTA's incorporated a vehicle registration survey which was carried out between 08:00 - 10:00 and 16:30 -18:30. This survey involved recording all vehicle registration plates at the following locations:

- R158 / Church Street;

- County Meath Bridge (R125); and
- Harbour Road / New Road.

5.5.4 The information contained in this survey was used to determine (i) The percentage of vehicles that travel from the R125 / R158 and exit left onto Harbour Street at New Road in the morning peak and (ii) the percentage of vehicles that travel along Harbour Street at New Road and use the R158 / R125 in the evening peak.

5.5.5 The results of the surveys indicated that some 3.1% of the traffic travelling south along the R158 and 35.58% of the traffic travelling south along the R125 is likely to divert east along the proposed distributor road to exit at the new roundabout on R148 Maynooth Road, thus avoiding Kilcock Town Centre. 20.62% of the traffic travelling west along R148 Maynooth Road is likely to divert north along the new distributor road to avoid Kilcock Town Centre, with 5.35% exiting at the R125 and 15.27% at the R158.

5.5.6 We consider that the above figures should still be representative of the traffic likely to be diverted from the Town Centre and its environs onto the proposed new Distributor Road, when completed, and therefore, the same redistribution proportions have been incorporated into the subject assessment. The predicted level of redistributed vehicular flows are presented within Figures 2b (2026 Future Design Year) and 2c (2036 Future Design Year) within Appendix A.

Development Trip Distribution

5.5.7 The assumed subject development trip distribution for the adopted 2021 Opening Year, 2026 Future Design Year and 2036 Future Design Years are presented in Figures 6a, 6b and 6c respectively as located in Appendix A. Generally, the predicted development trips are assumed to have the following origin / destination distribution characteristics;

- Dublin / Motorway – 50%,
- Maynooth – 10%,
- Dunshaughlin / Dunboyne – 10%,
- Trim – 10%,
- Kilcock – 10%, and
- Naas / Sallins – 10%

5.6 TRAFFIC GROWTH

5.6.1 The TTA adopts an Opening Year of 2021. In accordance with TII Guidance, Future Design years (+5 and +15 years) of 2026 and 2036 have therefore been adopted. We note that this TII defined 15-year future year projection is significantly larger when compared to international best practice.

5.6.2 The TII Project Appraisal Guidelines (PAG) have been utilised to determine the traffic growth forecast rates. The traffic growth forecast rates within the PAG ensures local and regional variations and demographic patterns are accounted for.

5.6.1 Table 6.2 within the PAG provides Annual National Traffic Growth Factors for the different regions within Ireland. The subject site in Kilcock lies within 'Meath' with the growth factors as outlined within Table 5.6 below.

Name	Low Sensitivity Growth				Central Growth				High sensitivity Growth			
	2016-2030		2030-2040		2016-2030		2030-2040		2016-2030		2030-2040	
	LV	HV	LV	HV	LV	HV	LV	HV	LV	HV	LV	HV
Meath	1.0156	1.0349	1.0052	1.0164	1.0173	1.0365	1.0070	1.0174	1.0205	1.0400	1.0108	1.0226

Table 5.6: Link-Based Growth Rates: Annual Growth Factors (Source: PAG)

5.6.2 In order to provide a robust assessment DBFL have assumed 'Central Growth' rates for the adopted Opening Year of 2021 and Future Design Years of 2026 & 2036. As such, applying the annual factors as outlined in Table 5.6 above, the following growth rates were adopted to establish corresponding 2021, 2026 and 2036 baseline network flows:-

- 2019 to 2021 – 1.035 (or 3.5%);
- 2019 to 2026 – 1.128 (or 12.8%); and
- 2019 to 2036 – 1.247 (or 24.7%).

Assessment Scenarios

5.6.3 Two different traffic scenarios have been assessed, namely (a) the 'Base' (Do-Minimum) traffic characteristics; and (b) the 'Post Development' (Do-Something) traffic characteristics.

5.6.4 The 'Base' (Do Minimum) traffic scenario comprises the existing traffic characteristics growthed accordingly for each of the adopted design years, the aforementioned committed development traffic and the implementation of the emerging distributor road and subsequent redistribution of base traffic.

5.6.5 The proposed development traffic flows are then added to the network's Do Minimum traffic flows to establish the new 'Post Development' traffic flows whilst consideration has been given to the potential reassignment of baseline (and committed development) traffic movements as a result of the introduction of alternative vehicle routing options following the delivery of new road infrastructure through the site.

5.6.6 In summary the following development scenarios are considered: -

- Do Minimum A1 – 2021 Base Flows + Committed Developments
- Do Minimum A2 – 2026 Redistributed Base Flows + Committed Developments
- Do Minimum A3 – 2036 Base Flows Redistributed Base Flows + Committed Developments
- Do Something C1 - 2021 Do Minimum + Proposed Development Flows
- Do Something C2 - 2026 Do Minimum + Proposed Development Flows
- Do Something C3 - 2036 Do Minimum + Proposed Development Flows

Assessment Period

5.6.7 The weekday AM and PM peak hour flows have been identified as occurring between 08:15 - 09:15 and 17:45 – 18:45 respectively. These peak hours form the basis of the 2021, 2026 and 2036 network assessments.

Network Vehicle Flows

5.6.8 The following Figures as included in Appendix A present the vehicle flows across the local road network for each of the adopted development scenarios: -

- Figure 5a – 2021 Do Minimum
- Figure 8a – 2021 Do Something
- Figure 5b – 2026 Do Minimum
- Figure 8b – 2026 Do Something
- Figure 5c – 2036 Do Minimum
- Figure 8c – 2036 Do Something

5.7 NETWORK IMPACT

5.7.1 The Institution of Highways and Transportation document '*Guidelines for Traffic Impact Assessments*' states that the impact of a proposed development upon the local road network is considered material when the level of traffic it generates

surpasses 10% and 5% on normal and congested networks respectively. When such levels of impact are generated a more detailed assessment should be undertaken to ascertain the specific impact upon the network's operational performance. These same thresholds are reproduced in the NRA (TII) document entitled '*Traffic and Transport Assessment Guidelines*' (2014).

- 5.7.2 In accordance with the IHT and NRA (TII) guidelines we have undertaken an assessment to establish the potential level of impact upon the key junctions of the local road network. To enable this calculation to be undertaken we have based the analysis upon the 2021 Opening Year and 2036 Future Design Year scenarios.
- 5.7.3 The analysis has demonstrated that whilst the proposals will generate a subthreshold impact upon the key off-site junctions 4, 5 and 6, a material impact (>10%) is noted at Junctions 1, 2 & 3 in the 2036 Future Design Year.
- 5.7.4 Table 5.7 below details the specific scale of network impact predicted at each of the key local off-site junctions during the 2021 and 2036 Design Years.

Ref	Junction	Design Year	AM Peak Hour	PM Peak Hour
1	R148 Harbour St / R125 Bridge St Signal Controlled Junction	2021	2.9%	2.5%
		2036	12.5%	11.1%
2	R148 Harbour St / New Lane Priority Controlled Junction	2021	3.3%	4.0%
		2036	13.9%	15.5%
3	R148 Maynooth Rd / Distributor Road Roundabout	2021	6.6%	9.5%
		2036	20.4%	28.9%
4	Distributor Road / R125 / Moyglare Rd Junction	2021	1.1%	2.4%
		2036	8.8%	9.2%
5	School Street / New Lane Junction	2021	0.5%	1.0%
		2036	1.1%	3.3%
6	New Lane / The Square Junction	2021	0.6%	1.8%
		2036	1.2%	3.4%

Table 5.7: Proposed Developments Network Impact

- 5.7.5 In Table 5.8 (AM Peak Hour) and Table 5.9 (PM Peak Hour) the predicted impacts have been categorised for the 2036 Future Design Year. At the off-site junctions, negligible impacts are predicted at Junctions 5 & 6 whilst a low impact is predicted at Junction 4. Medium impacts are predicted at Junctions 1 & 2 whilst a high impact is predicted at Junction 3.

	Junction - Nature of Impact (Additional Vehicular Traffic on key Junctions)	Impact Scale	Impact Level
1	R148 Harbour St / R125 Bridge St Signal Controlled Junction	12.5%	Medium
2	R148 Harbour St / New Lane Priority Controlled Junction	13.9%	Medium
3	R148 Maynooth Rd / Distributor Road Roundabout	20.5%	High
4	Distributor Road / R125 / Moyglare Rd Junction	8.8%	Low
5	School Street / New Lane Junction	1.1%	Negligible
6	New Lane / The Square Junction	1.2%	Negligible

Table 5.8: Network Impact Categorisation 2036 AM Peak Hour

	Junction - Nature of Impact (Additional Vehicular Traffic on key Junctions)	Impact Scale	Impact Level
1	R148 Harbour St / R125 Bridge St Signal Controlled Junction	11.1%	Medium
2	R148 Harbour St / New Lane Priority Controlled Junction	15.5%	Medium
3	R148 Maynooth Rd / Distributor Road Roundabout	29.0%	High
4	Distributor Road / R125 / Moyglare Rd Junction	9.2%	Low
5	School Street / New Lane Junction	3.4%	Negligible
6	New Lane / The Square Junction	3.4%	Negligible

Table 5.9: Network Impact Categorisation 2036 PM Peak Hour

5.7.6 Based on the network impact categorisation discussed above, the following junctions will be subject to further detailed analysis. Whilst the impact level at Junction 4 is predicted to be less than 10%, this junction will also be subject to further assessment due to its close proximity to the subject development site;

- Junction 1: R148 Harbour St / R125 Bridge St Signal Controlled Junction
- Junction 2: R148 Harbour St / New Lane Priority Controlled Junction
- Junction 3: R148 Maynooth Rd / Distributor Road Roundabout
- Junction 4: Distributor Road / R125 / Moyglare Rd Junction

Figure 5.3: Increase in Vehicle Trips Generated Through Key Local Junctions (2036 Future Design Year)

5.8 MITIGATION STRATEGY

5.8.1 A package of integrated mitigation measures has been identified to off-set the additional local demand that the proposed residential development on the subject zoned lands could potentially generate as a result of the forecast increase in vehicle movements by residents of the scheme. The strategy includes specific measures for both the construction and operational stages of the proposed development.

Construction Stage

5.8.2 The Construction Management Plan (an outline CMP accompanies the application) and the associated Construction Traffic Management Plan (CTMP) in addition to the applications accompanying Construction and Waste Management Plan will incorporate a range of integrated control measures and associated management initiatives with the objective of mitigating the impact of the proposed developments on-site construction activities.

Operational Stage

5.8.3 With the objective of mitigating the potential impact of the proposed development as predicted in Section 5.7 above during its operational stage, the following initiatives and associated timescale for their implementation have been identified and subsequently form an integral part of the subject development proposals.

- Infrastructure (constructed by others) 2026 – Completion of the Distributor Road between the R148 Maynooth Road and the R125 as per details presented previously in Figure 2.9. Whilst the completion of this section of the corridor provides benefits for the proposed development, it will also result in potential notable decreases in base and development traffic travelling through the town centre. Furthermore, the design of this emerging Distributor Road incorporates dedicated segregated cycle and pedestrian facilities on both sides of the corridor.
- Infrastructure (constructed by others) 2036 – Completion of the Distributor Road between the R148 Maynooth Road and the R158 as per details presented previously in Figure 2.9. Whilst the completion of this section of the corridor provides benefits for the proposed development, it will also result in potential notable decreases in base and development traffic travelling through the town centre.
- Infrastructure (permitted development) Before 2021 Opening Year – Upgrade of the existing New Road / Harbour Street from the current priority controlled junction arrangement to a signal controlled junction arrangement. This junction enhancement will result in reduced queues and delays at this junction which have been observed during the morning and evening peak hours.
- Infrastructure (Connectivity) – The design of the scheme proposals has sought to maximise the ability to provide attractive connections to surrounding pedestrian / cycle network. Internally, dedicated pedestrian footways will be provided on all streets which will connect with the existing / future pedestrian facilities on the external network thereby facilitating excellent pedestrian permeability. As introduced previously, Map 1 of the Kilcock LAP 2015-2021 indicatively illustrates future pedestrian walkway proposals in the vicinity of the subject site, which, once complete would

provide convenient pedestrian / cycle access to the Maynooth Road corridor and the Royal Canal Greenway and subsequently result in shorter walking / cycling distances between the subject development lands and Kilcock Town Centre, Public Transport interchange locations (bus and train) and the Royal Canal Greenway facility.

- Facilities – Cycle parking has been provided at a much higher rate to that proposed within the development management standards. Accordingly, this generous provision of cycle parking will help ensure cycling is a viable alternative mode of transport to private car travel thereby helping minimise private car trips generated by future.
- Management – A Mobility Management (MMP) is to be compiled with the aim of guiding the delivery and management of coordinated initiatives by the scheme promotor. The MMP ultimately seeks to encourage sustainable travel practices for all journeys to and from the proposed development.

6.0 NETWORK ANALYSIS

6.1 INTRODUCTION

6.1.1 The operational assessment of the local road network has been undertaken using the Transport Research Laboratory (TRL) computer packages TRANSYT for signal-controlled junctions and Junctions 9.0 (ARCADY) for roundabout controlled junctions.

6.1.2 When considering signalised junctions, a Degree of Saturation (DoS) of greater than 90% (0.90) would indicate a junction to be approaching capacity, as operation above this DoS value is poor and deteriorates quickly. Similarly, roundabout controlled junctions, a Ratio of Flow to Capacity (RFC) of greater than 85% (0.85) would indicate a junction to be approaching capacity, as operation above this RFC value is poor and deteriorates quickly.

6.1.3 For the TRANSYT analysis a one-hour AM and PM period has been simulated from 08:15 to 09:15 and 17:45 to 18:45. For the ARCADY analysis, a 90-minute AM period has been simulated; from 08:00 to 09:30 and 17:30 to 19:00. For both the ARCADY and TRANSYT analyses traffic flows were entered using an Origin-Destination table for the peak hours.

6.1.4 In order to analyse and assess the impact of the proposed development on the surrounding road network, a traffic model of the junctions was created and analysed for the schemes following Opening and Future Design Years:

- 2021 Opening Year
- 2026 Future Design Year (Opening Year +5 years)
- 2036 Future Design Year (Opening Year +15 years)

6.1.5 As introduced previously, the following key junctions have been considered for further analysis: -

- Junction 1: R148 Harbour St / R125 Bridge St Signal Controlled Junction
- Junction 2: R148 Harbour St / New Lane Junction
- Junction 3: R148 Maynooth Rd / Distributor Road Roundabout
- Junction 4: Distributor Road / R125 / Moyglare Rd Junction

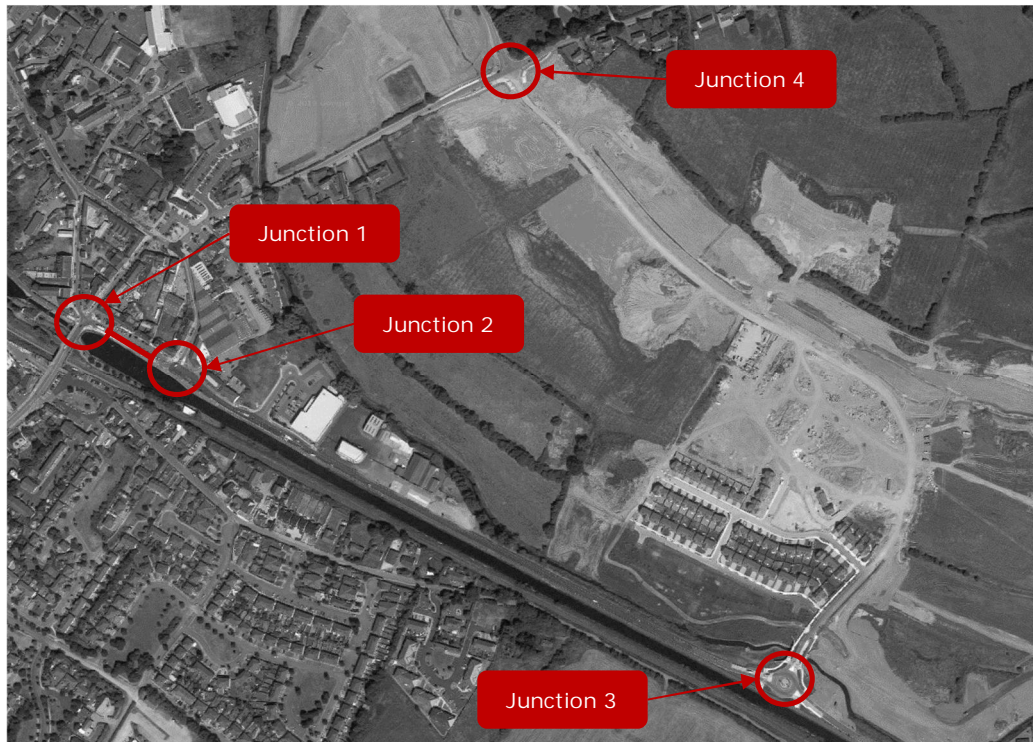

Figure 6.1: Junctions Assessed

6.2 JUNCTION 1 AND 2: R148 HARBOUR ST / SHAW BRIDGE / NEW ROAD JUNCTION

6.2.1 Junctions 1 and 2 have been modelled as one junction due to the close proximity of both junctions to one another. As introduced in Section 2.6 of this report, there are future proposals to upgrade the existing New Road / Harbour Street priority controlled junction to a signal controlled junction and therefore both the Do-Minimum and Do-Something scenarios incorporate the upgraded New Road / Harbour Street junction layout.

6.2.2 Notwithstanding the above, a model of the existing junction arrangement has been constructed and calibrated in order to establish the existing junction's operational performance within the 2019 base traffic scenario (Table 6.1). The arms were labelled as follows within the existing layout TRANSYT model:

- Arm A: Shaw Bridge
- Arm B: Bridge Street
- Arm C: School Street
- Arm D: Harbour Street (W)
- Arm E: New Road

Arm F: Harbour Street (E)

Arm	Movement	AM Peak Hour			PM Peak Hour		
		DoS (%)	Delay (s)	MMQ (pcu)	DoS (%)	Delay (s)	MMQ (pcu)
A	S,L,R	69	18.78	9.86	62	22.69	6.67
D	S,L,R	95	144.75	21.89	95	88.06	22.15
E	L	17	0.18	0.02	6	0.06	0.00
	R	100	207.44	16.29	101	163.16	17.19
F	S	0	16.41	3.31	114	267.09	40.09

Table 6.1: 2019 TRANSYT Analysis – Existing Junction Arrangement

6.2.3 The results of this 2019 base assessment (Table 6.1) reveal that, i) before the application of growth factors to the base traffic and ii) the introduction of the proposed and committed development traffic, the existing junction arrangement is currently approaching or operating over capacity during the morning (100%) and evening (114%) peak hours. Queuing is observed on the Harbour Street approach during the peak hours which extend beyond the New Road junction thereby causing queuing to occur along New Road. Accordingly, it is envisioned that the future enhancements at this junction will alleviate the observed queuing levels with the existing layout.

6.2.4 The principal results of the operational assessment of the future upgraded signal-controlled junction layout during the weekday morning and evening peaks are summarised in Tables 6.2 to 6.4 below. The arms were labelled as follows within the TRANSYT model:

- Arm A: Shaw Bridge
- Arm B: Bridge Street
- Arm C: School Street
- Arm D: Harbour Street (W-Westbound)
- Arm E: Harbour Street (E)
- Arm F: New Road
- Arm G: Harbour Street (W-Eastbound)

2021 Opening Year

6.2.5 The 'Do-Minimum' 2021 AM peak hour TRANSYT results (Table 6.2) indicate that this junction is predicted to be operating with significant reserve capacity with a maximum Degree of Saturation (DoS) value of 60% and a maximum MMQ of 12.90 pcu's being recorded. For the 'Do-Something' scenario, with the introduction of the

proposed development traffic (100 housing units in the 2021 Opening Year), this junction is predicted to continue to be operating with significant reserve capacity with a maximum DoS value of 60% and a maximum MMQ of 13.44 pcu's being recorded. This represents zero increase in the maximum DoS value and 0.54 pcu increase in predicted maximum MMQ length.

Peak Hour	Arm	Movement	Do-Minimum			Do-Something		
			DoS (%)	Delay (s)	MMQ (pcu)	DoS (%)	Delay (s)	MMQ (pcu)
AM Peak	A	S,L,R	58	18.67	12.90	60	19.63	13.44
	D	L	21	0.91	0.40	22	0.97	0.45
		S,R	46	32.33	4.13	46	30.75	4.12
	E	S	50	46.21	6.58	54	46.38	7.38
		R	4	38.19	0.48	6	37.69	0.74
	F	L	40	15.71	5.93	42	16.19	5.95
R		28	14.38	4.58	29	14.81	4.54	
G	S, L	60	52.09	8.40	59	51.25	8.66	
PM Peak	A	S,L,R	54	27.99	10.57	58	29.49	11.38

G	S, L	23	34.69	5.30	25	34.22	5.86	

Table 6.2: 2021 TRANSYT Analysis

6.2.6 The PM peak hour 'Do-Minimum' TRANSYT results indicate that this junction is predicted to be again operating well within capacity with a maximum DoS value of 62% and a maximum MMQ of 12.74 pcu's being recorded. Similarly, the PM peak hour 'Do-Something' TRANSYT results indicate that this junction is predicted to continue to operate well within capacity with a maximum DoS value of 63% and a maximum queue of 13.32 pcu's being recorded. This represents an increase in the maximum DoS value of only 1% and 0.58 pcu increase in predicted maximum MMQ length.

2026 Future Design Year

6.2.7 The 'Do-Minimum' 2026 AM peak hour TRANSYT results (Table 6.3) indicate that this junction is again predicted to be operating with significant reserve capacity with a maximum Degree of Saturation (DoS) value of 65% and a maximum MMQ of 14.59 pcu's being recorded. For the 'Do-Something' scenario, with the

introduction of the proposed development traffic (full development complete), this junction is predicted to continue to be operating with significant reserve capacity with a maximum DoS value of 71% and a maximum MMQ of 17.86 pcu's being recorded. This represents an increase in the maximum DoS value of 6% and 3.27 pcu increase in predicted maximum MMQ length.

Peak Hour	Arm	Movement	Do-Minimum			Do-Something		
			DoS (%)	Delay (s)	MMQ (pcu)	DoS (%)	Delay (s)	MMQ (pcu)

G	S, L	26	35.48	5.85	38	36.38	8.58	

Table 6.3: 2026 Future Design Year TRANSYT Analysis

6.2.8 The PM peak hour 'Do-Minimum' TRANSYT results indicate that this junction is predicted to be again operating well within capacity with a maximum DoS value of 61% and a maximum MMQ of 12.27 pcu's being recorded. Similarly, the PM peak hour 'Do-Something' TRANSYT results indicate that this junction is predicted to continue to operate well within capacity with a maximum DoS value of 70% and a maximum queue of 15.10 pcu's being recorded. This represents an increase in the maximum DoS value of 9% and 2.83 pcu increase in predicted maximum MMQ length.

2036 Future Design Year

6.2.9 The 'Do-Minimum' 2036 AM peak hour TRANSYT results (Table 6.4) indicate that this junction is again predicted to be operating with significant reserve capacity with a maximum Degree of Saturation (DoS) value of 70% and a maximum MMQ of 17.71 pcu's being recorded. For the 'Do-Something' scenario, with the introduction of the proposed development traffic (full development complete), this

junction is predicted to continue to be operating with significant reserve capacity with a maximum DoS value of 78% and a maximum MMQ of 21.25 pcu's being recorded. This represents an increase in the maximum DoS value of 8% and 3.54 pcu increase in predicted maximum MMQ length.

Peak Hour	Arm	Movement	Do-Minimum			Do-Something		
			DoS (%)	Delay (s)	MMQ (pcu)	DoS (%)	Delay (s)	MMQ (pcu)

G	S, L	29	35.34	6.39	40	36.12	9.14	

Table 6.4: 2036 Future Design TRANSYT Analysis

6.2.10 The PM peak hour 'Do-Minimum' TRANSYT results indicate that this junction is predicted to be again operating well within capacity with a maximum DoS value of 67% and a maximum MMQ of 13.99 pcu's being recorded. Similarly, the PM peak hour 'Do-Something' TRANSYT results indicate that this junction is predicted to continue to operate well within capacity with a maximum DoS value of 75% and a maximum queue of 17.02 pcu's being recorded. This represents an increase in the maximum DoS value of 8% and 3.03 pcu increase in predicted maximum MMQ length.

6.3 JUNCTION 3: R125 MAYNOTH RD / DISTRIBUTOR RD JUNCTION

6.3.1 The principal results of the operational assessment of this roundabout controlled junction during the weekday morning and evening peaks are summarised in Tables 6.5 to 6.7 below. The three arms were labelled as follows within the ARCADY model:

- Arm A: Maynooth Road (East)
- Arm B: Distributor Road
- Arm C: Maynooth Road (West)

2021 Opening Year

- 6.3.2 The 'Do-Minimum' 2021 AM peak hour ARCADY results (Table 6.5) indicate that this junction is predicted to be operating with significant reserve capacity with a maximum Ratio of Flow to Capacity (RFC) value of 0.54 and a maximum queue of 1.3 pcu's being recorded. For the 'Do-Something' scenario, with the introduction of the proposed development traffic (100 housing units in the 2021 Opening Year), this junction is predicted to continue to be operating with significant reserve capacity with a maximum RFC value of 0.56 and a maximum queue of 1.4 pcu's being recorded. This represents an increase in the maximum RFC value of only 0.02 and no change in the predicted maximum queue length.
- 6.3.3 The PM peak hour 'Do-Minimum' ARCADY results indicate that this junction is predicted to be again operating well within capacity with a maximum RFC value of 0.28 and a maximum queue of 0.4 pcu's being recorded. Similarly, the PM peak hour 'Do-Something' ARCADY results indicate that this junction is predicted to continue to operate well within capacity with a maximum RFC value of 0.29 and a maximum queue of 0.4 pcu's being recorded. This represents an increase in the maximum RFC value of only 0.01 and no change in the predicted maximum queue length.

Peak Hour	Stream	Do-Minimum			Do-Something		
		Queue (pcu)	Delay (s)	RFC	Queue (pcu)	Delay (s)	RFC
AM Peak	A	0.2	4.38	0.17	0.2	4.48	0.17
	B	1.3	7.59	0.54	1.4	7.80	0.56
	C	0.1	4.36	0.08	0.1	4.58	0.13
PM Peak	A	0.4	5.06	0.28	0.4	5.15	0.29
	B	0.3	4.45	0.23	0.4	4.59	0.26
	C	0.0	3.39	0.04	0.1	3.47	0.06

Table 6.5: 2021 Opening Year ARCADY Analysis

2026 Future Design Year

- 6.3.4 The 'Do-Minimum' 2026 AM peak hour ARCADY results (Table 6.6) indicate that this junction is predicted to again be operating with significant reserve capacity with a maximum Ratio of Flow to Capacity (RFC) value of 0.53 and a maximum

queue of 1.2 pcu's being recorded (slight reduction in maximum queue length compared to the 2021 'Do-Minimum' scenario due to the assumed completion of the emerging Distributor Road between the R148 and R125 and associated diverted base traffic). For the 'Do-Something' scenario, with the introduction of the proposed development traffic (fully complete), this junction is predicted to be operating well within capacity with a maximum RFC value of 0.60 and a maximum queue of 1.6 pcu's being recorded. This represents an increase in the maximum RFC value of 0.07 and maximum queue length of 0.4 pcu.

6.3.5 The PM peak hour 'Do-Minimum' ARCADY results indicate that this junction is again predicted to be operating well within capacity with a maximum RFC value of 0.31 and a maximum queue of 0.5 pcu's being recorded. Similarly, PM peak hour 'Do-Something' ARCADY results indicate that this junction is predicted to continue to operate within capacity with a maximum RFC value of 0.34 and a maximum queue of 0.5 pcu's being recorded. This represents an increase in the maximum RFC value of only 0.03 and no change in the predicted maximum queue length.

Peak Hour	Stream	Do-Minimum			Do-Something		
		Queue (pcu)	Delay (s)	RFC	Queue (pcu)	Delay (s)	RFC
AM Peak	A	0.2	4.38	0.18	0.3	4.73	0.20
	B	1.2	7.57	0.53	1.6	8.68	0.60
	C	0.2	4.78	0.18	0.5	5.84	0.32
PM Peak	A	0.5	5.16	0.31	0.5	5.55	0.34
	B	0.3	4.38	0.20	0.5	4.99	0.31
	C	0.1	3.61	0.12	0.2	3.95	0.20

Table 6.6: 2026 Future Design Year ARCADY Analysis

2036 Future Design Year

6.3.6 The 'Do-Minimum' 2026 AM peak hour ARCADY results (Table 6.7) indicate that this junction is predicted to again be operating with significant reserve capacity with a maximum Ratio of Flow to Capacity (RFC) value of 0.60 and a maximum queue of 1.6 pcu's being. For the 'Do-Something' scenario, with the introduction of the proposed development traffic (fully complete), this junction is predicted to be operating well within capacity with a maximum RFC value of 0.67 and a maximum queue of 2.1 pcu's being recorded. This represents an increase in the maximum RFC value of 0.07 and maximum queue length of 0.5 pcu.

6.3.7 The PM peak hour 'Do-Minimum' ARCADY results indicate that this junction is again

predicted to be operating well within capacity with a maximum RFC value of 0.34 and a maximum queue of 0.6 pcu's being recorded. Similarly, PM peak hour 'Do-Something' ARCADY results indicate that this junction is predicted to continue to operate within capacity with a maximum RFC value of 0.37 and a maximum queue of 0.6 pcu's being recorded. This represents an increase in the maximum RFC value of only 0.03 and no change in the predicted maximum queue length.

Peak Hour	Stream	Do-Minimum			Do-Something		
		Queue (pcu)	Delay (s)	RFC	Queue (pcu)	Delay (s)	RFC
AM Peak	A	0.3	4.48	0.20	0.3	4.85	0.22

Table 6.7: 2036 Future Design Year ARCADY Analysis

6.4 JUNCTION 4: R125 / DISTRIBUTOR RD / MOYGLARE RD JUNCTION

6.4.1 The principal results of the operational assessment of this signal-controlled junction and priority-controlled junction during the weekday morning and evening peaks are summarised in Tables 6.8 to 6.10 below. The arms were labelled as follows within the TRANSYT model:

- Arm A: Distributor Road
- Arm B: R125 (South)
- Arm C: R125 (West)
- Arm D: Moyglare Road

2021 Opening Year

6.4.2 The 'Do-Minimum' 2021 AM peak hour TRANSYT results (Table 6.8) indicate that this junction is predicted to be operating with significant reserve capacity with a maximum Degree of Saturation (DoS) value of 54% and a maximum MMQ of 4.21 pcu's being recorded. For the 'Do-Something' scenario, with the introduction of the proposed development traffic (100 housing units in the 2021 Opening Year), this junction is predicted to continue to be operating with significant reserve capacity

with a maximum DoS value of 55% and a maximum MMQ of 4.29 pcu's being recorded. This represents an increase in the maximum DoS value of only 1% and 0.8 pcu increase predicted maximum MMQ length.

6.4.3 The PM peak hour 'Do-Minimum' TRANSYT results indicate that this junction is predicted to be again operating well within capacity with a maximum DoS value of 54% and a maximum MMQ of 4.20 pcu's being recorded. Similarly, the PM peak hour 'Do-Something' TRANSYT results indicate that this junction is predicted to continue to operate well within capacity with a maximum DoS value of 56% and a maximum queue of 4.29 pcu's being recorded. This represents an increase in the maximum DoS value of only 2% and 0.09 pcu increase predicted maximum MMQ length.

Peak Hour	Arm	Movement	Do-Minimum			Do-Something		
			DoS (%)	Delay (s)	MMQ (pcu)	DoS (%)	Delay (s)	MMQ (pcu)
AM Peak	A	S,L	9	19.01	0.65	9	19.01	0.65
		R	26	19.60	2.39	26	19.64	2.42
	B	S,L,R	30	25.59	1.28	30	25.66	1.30
	C	S,L	11	19.15	0.81	11	19.15	0.81

D	S,L,R	54	26.97	4.20	56	27.27	4.29	

Table 6.8: 2021 TRANSYT Analysis

2026 Future Design Year

6.4.4 The 'Do-Minimum' 2026 AM peak hour TRANSYT results (Table 6.9) indicate that this junction is predicted to again be operating with significant reserve capacity with a maximum Degree of Saturation (DoS) value of 55% and a maximum MMQ of 4.44 pcu's being recorded. For the 'Do-Something' scenario, with the introduction of the proposed development traffic (100 housing units in the 2021 Opening Year), this junction is predicted to continue to be operating with significant reserve capacity with a maximum DoS value of 56% and a maximum MMQ of 4.61 pcu's being recorded. This represents an increase in the maximum DoS value of only 1% and 0.17 pcu increase predicted maximum MMQ length.

6.4.5 The PM peak hour 'Do-Minimum' TRANSYT results indicate that this junction is predicted to be again operating well within capacity with a maximum DoS value of 54% and a maximum MMQ of 4.45 pcu's being recorded. Similarly, the PM peak hour 'Do-Something' TRANSYT results indicate that this junction is predicted to continue to operate well within capacity with a maximum DoS value of 54% and a maximum queue of 4.61 pcu's being recorded. This represents zero increase in the maximum DoS value and 0.16 pcu increase predicted maximum MMQ length.

Peak Hour	Arm	Movement	Do-Minimum			Do-Something		
			DoS (%)	Delay (s)	MMQ (pcu)	DoS (%)	Delay (s)	MMQ (pcu)

Table 6.9: 2026 Future Design Year TRANSYT Analysis

2036 Future Design Year

6.4.6 The 'Do-Minimum' 2036 AM peak hour TRANSYT results (Table 6.10) indicate that this junction is predicted to again be operating with significant reserve capacity with a maximum Degree of Saturation (DoS) value of 60% and a maximum MMQ of 4.91 pcu's being recorded. For the 'Do-Something' scenario, with the introduction of the proposed development traffic (100 housing units in the 2021 Opening Year), this junction is predicted to continue to be operating with significant reserve capacity with a maximum DoS value of 61% and a maximum MMQ of 5.18 pcu's being recorded. This represents an increase in the maximum DoS value of only 1% and 0.27 pcu increase predicted maximum MMQ length.

6.4.7 The PM peak hour 'Do-Minimum' TRANSYT results indicate that this junction is predicted to be again operating well within capacity with a maximum DoS value of 59% and a maximum MMQ of 5.03 pcu's being recorded. Similarly, the PM peak hour 'Do-Something' TRANSYT results indicate that this junction is predicted to continue to operate well within capacity with a maximum DoS value of 60% and a

maximum queue of 5.32 pcu's being recorded. This represents a 1% increase in the maximum DoS value and 0.29 pcu increase predicted maximum MMQ length.

Table 6.10: 2036 Future Design TRANSYT Analysis

6.5 NETWORK PERFORMANCE SUMMARY

6.5.1 The maximum recorded peak hour DoS (Signalised Junctions) RFC (Roundabout Junction) values at each of the four local key junctions are summarised for the AM and PM peak hours in Figures s 6.2 and 6.3 respectively.

6.5.2 The analysis reveals that all junctions will operate within acceptable operational thresholds in all adopted design year scenarios. Negligible impacts as a result of the subject development proposals are predicted compared to the Do-Minimum scenario.

Figure 6.2: Summary of AM Peak Hour Network Assessment

Figure 6.3: Summary of PM Peak Hour Network Assessment

6.6 DISTRIBUTOR ROAD / SITE ACCESS JUNCTION ASSESSMENT

6.6.1 In order to assess the appropriateness of the proposed site access junctions with the emerging Distributor Road corridor internal junctions, the predicted 2036 Future Design Year AADT values for the Distributor and site access links have been determined.

Figure 6.3: Masterplans Internal Junctions Location

6.6.2 In reference to Figure 6.4 below (extract of Diagram 8.1 from the Traffic Management Guidelines), it is possible to establish that, for the 2036 Future Design Year, a simple priority-controlled junction is more than acceptable to serve the predicted levels of traffic movements travelling through all site access junctions. Accordingly, it can be concluded that all site access junctions along the emerging Distributor Road will operate well within capacity in the 2036 Future Design Year.

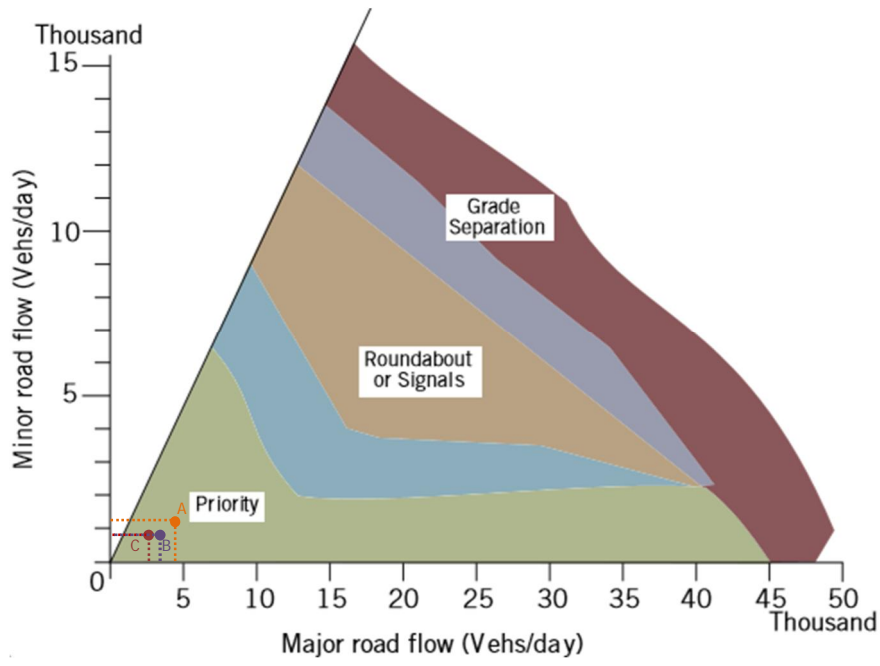

Figure 6.4: Identification of Junction Type (Extract from Figure 8.1 of the Traffic Management Guidelines)

7.0 SUMMARY AND CONCLUSION

7.1 OVERVIEW

- 7.1.1 DBFL Consulting Engineers (DBFL) have been commissioned by McGarrell Reilly Homes to prepare a Traffic and Transport Assessment (TTA) for a proposed residential development on 2 no. greenfield sites located at Newtownmoyaghy, Kilcock, Co. Meath.
- 7.1.2 The proposals seek permission for a 575 unit residential development comprising 388 no. houses and 187 no. apartments / duplex apartments. A 623m² neighbourhood focused Creche is also included in the proposals.
- 7.1.3 The Southern site comprises a total of 266 residential units including 147 no. houses and 103 apartments / duplex apartments. The Northern site comprises a total of 309 residential units including 241 no. houses and 68 no. apartments / duplex apartments. A 623m² creche facility is also proposed within the Southern site which is predicted to accommodate 18 staff and 119 children.
- 7.1.4 The purpose of this TTA is to quantify the existing transport environment and to detail the results of assessment work undertaken to identify the potential level of transport impact generated as a result of the proposed 575 residential units.

7.2 SUMMARY

- 7.2.1 The R148 Maynooth Road is subject to a speed limit of 50kph. It benefits from recently upgraded pedestrian and cycle infrastructure including a good quality footway along the northern side of the R148 road corridor between the new roundabout junction and the Kilcock Town Centre. A shared cycle / pedestrian facility, which forms part of the royal Canal Greenway, is available to the south of the R148 Road corridor along the Royal Canal bank.
- 7.2.2 Along the R145 Road corridor, pedestrians can benefit from the provision of a footway along the western side of the corridor between the Town Centre and the upgraded R145 / Distributor Road junction which benefits from pedestrian footways on both sides of the road in the immediate vicinity of the upgraded junction.

- 7.2.3 The development proposals include the provision of 1019 car parking spaces on-site comprising 561 no. within the Northern site and 458 no. within the Southern (including 40 no. GAA changing room car parking spaces).
- 7.2.4 The proposals include the provision of a total 314 cycle parking spaces including 242 no. residential, 40 no. crèche and 32 no. GAA club cycle parking spaces on-site. The 242 no. residential cycle parking spaces comprise 163 long stay parking spaces and 97 short stay parking spaces. Residents of residential housing units can accommodate long and short stay bicycle parking in-curtilage. It is expected that duplex units can accommodate long stay cycle parking in-curtilage however 24 no. dedicated short stay cycle parking spaces have been provided.
- 7.2.5 The provision of 242 no. residential cycle parking spaces is significantly higher than the development plan minimum requirement of 101 no. spaces and represents a good compromise between the development plan and generous DHPLG requirements (416). A total of 40 no. cycle parking spaces are proposed to be provided at the crèche facility comprising 18 no. long stay (1 per staff) and 22 no. short stay spaces (approximately 1 per 5 children). The proposed overall provision of 40 no. crèche cycle parking spaces is 26 no. spaces higher than the minimum development plan requirement.
- 7.2.6 The review of the RSA data reveals that the local road network exhibits a good safety record considering the volume of traffic traveling across the local road network. The review confirms that no significant incident trends or significant safety concerns are evident across the local road network.
- 7.2.7 The section of the distributor road which runs through the Masterplan Lands, (and approved by An Bord Pleanala under PL17.239375, PL17.238370 and PL09.238818, is approximately 0.86km in length and will consist of a 7.3m wide carriageway, with a 1.5m wide verge, 1.5m cycle track and a 2.0 m wide footpath on each side of the road. This road will run in a north-west direction from a new roundabout on the R148, Maynooth Road. The road will form approximately 32% of the overall distributor road identified in the Kilcock LAP (approximately 2.7 km in length) and will stretch from the R148 Maynooth Road to the R125 Dunshaughlin Road. We note that all other sections of the distributor road outside the subject masterplan lands between the R148 and R158 have been granted planning permission by An Bord Pleanla. Works on the approved sections of distributor road within the overall Masterplan lands have commenced.

7.2.8 The purpose of this TTA is to quantify the existing transport environment and to detail the results of assessment work undertaken to identify the potential level of transport impact generated as a result of the proposed residential development. Accordingly, the TTA has carried out a range of assessments; specifically investigating the proposed developments adopted Opening Year of 2021, and the subsequent future design year assessments of 2026 (plus 5 years) and 2036 (plus 15 years) in accordance with best practice guidance.

7.2.9 The TTA adopted the following construction schedule which seeks to allow an appropriate period of time for the proposed development to be rolled out (gain planning permission, construction etc) and occupied;

- 2021 – The first 100 residential houses are built and occupied on the southern site.
- 2026 – The remaining elements of the proposed scheme are completed and occupied.

7.2.10 Based on the TRICS derived trip rates, the potential peak hour vehicle trip generation for both development sites is calculated as presented in Table 7.1.

Description	Southern Site				Northern Site			
	AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
	Arr	Dep	Arr	Dep	Arr	Dep	Arr	Dep
Houses	22	55	47	32	36	90	76	52
Apartments/Duplexes	10	21	23	18	6	12	13	10
Crèche	18	13	3	8	-	-	-	-
Total	50	88	72	57	42	101	89	62

Table 7.1: Potential Development Vehicle Trip Generation

7.2.11 It is expected that a large proportion of trips generated by the proposed crèche development will be internal trips with a high level of walk / cycle trips due to crèche facility located in close proximity to the residential units. Accordingly, the TRICS predicted development trips have been discounted by 50%. In reality, it is expected that this discounted proportion could actually be much greater and therefore the assumed 50% discount is considered robust.

7.3 CONCLUSIONS

7.3.1 Based upon the information and analysis detailed within this Traffic and Transport Assessment it has been demonstrated that: -

- The proposed mixed-use development complies fully with the sites land use zoning as detailed within the Meath County Development Plan 2013-2019.
- The design and internal layout of the proposed development has actively sought to provide real viable opportunities for future pedestrian / cycle connections to the external cycle / pedestrian network.
- The subject site is highly accessible by sustainable modes of travel being within a convenient walking / cycle distance of Kilcock town centre, and a range of public transport interchange opportunities which provide access to a number of Bus Eireann and Irish Rail services.

7.3.2 Based on the network impact as a result of the subject proposals at key off-site junctions in the 2036 Future Design Year (Figure 7.1), the following junctions have been subject to further analysis. Whilst the impact level at Junction 4 is predicted to be less than 10%, this junction has also been subject to further assessment in order to determine this junction's performance once the existing priority controlled junction is upgraded to a signal controlled junction;

- Junction 1: R148 Harbour St / R125 Bridge St Signal Controlled Junction
- Junction 2: R148 Harbour St / New Lane Priority Controlled Junction
- Junction 3: R148 Maynooth Rd / Distributor Road Roundabout
- Junction 4: Distributor Road / R125 / Moyglare Rd Junction

7.3.3 Based on the network analysis undertaken it is concluded that a modest impact is predicted on the surrounding road network as a result of the implementation of the proposed residential development.

**Figure 7.1: Increase in Vehicle Trips Generated Through Key Local Junctions
(2036 Future Design Year)**

- 7.3.4 There are future proposals to upgrade the existing New Road / Harbour Street priority controlled junction to a signal controlled junction and therefore both the Do-Minimum and Do-Something scenarios incorporate the upgraded New Road / Harbour Street junction layout. Whilst the results of this 2019 base assessment reveal that, i) before the application of growth factors to the base traffic and ii) the introduction of the proposed and committed development traffic, the existing junction arrangement is currently operating over capacity during the morning and evening peak hours. Nevertheless, with the introduction of the aforementioned future junction enhancements, the upgraded junction arrangement is predicted to operate well within capacity during all assessment scenarios.
- 7.3.5 An assessment has been undertaken to assess the appropriateness of the proposed site access junctions with the emerging Distributor Road. It has been established that, for the 2036 Future Design Year, a simple priority-controlled junction is more

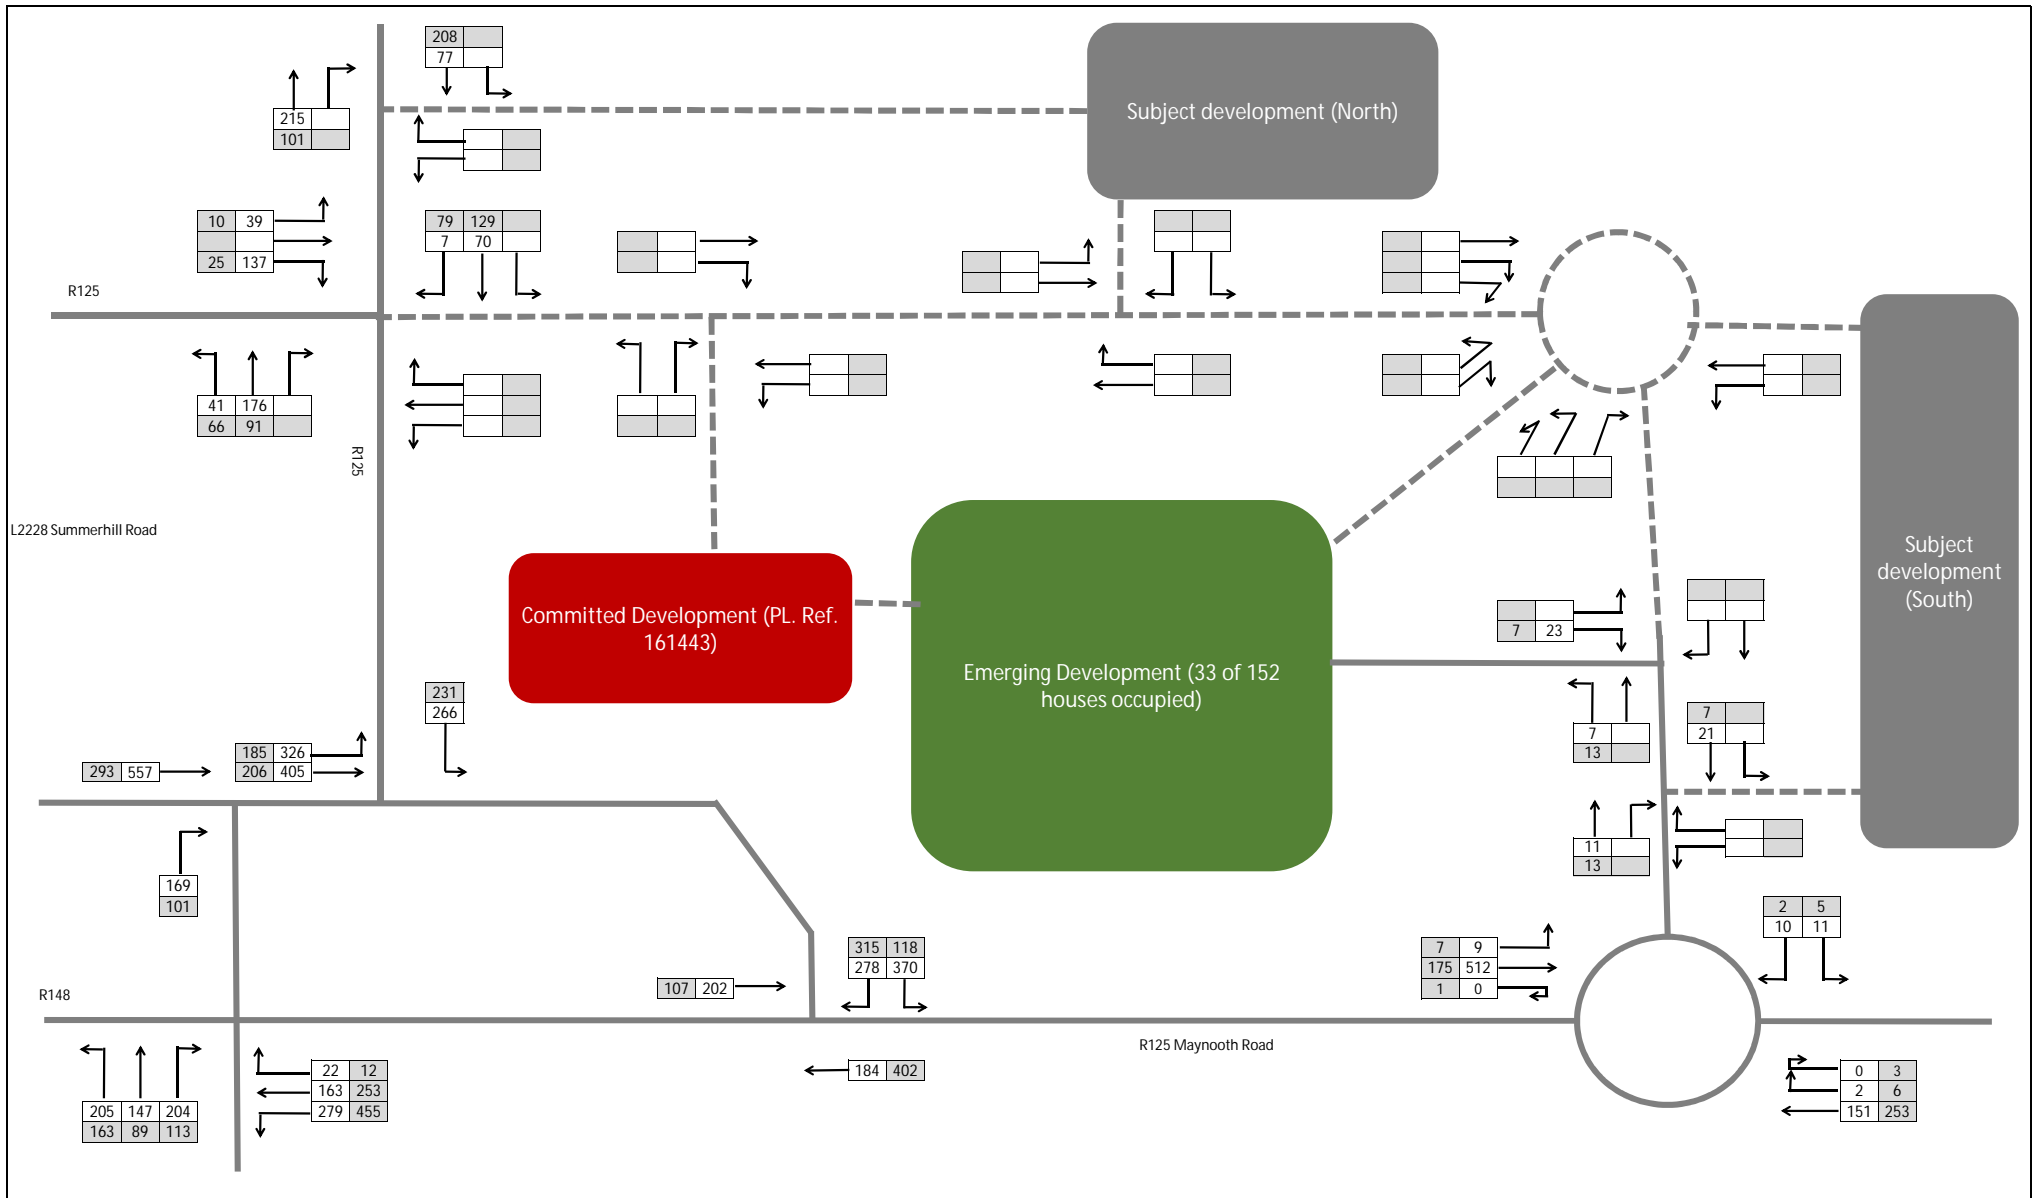

than acceptable to serve the predicted levels of traffic movements travelling through all site access junctions.

- 7.3.6 In conclusion, it is considered that the impact on the surrounding road network, as a result of the proposed development will be minimal. This is based on the anticipated levels of traffic generated by the proposed development, the existing and future road infrastructure and the information and analysis summarised in the above report. It is concluded that there are no traffic or transportation related reasons that should prevent the granting of planning permission for the proposed development.

APPENDIX B
TRICS Database Outputs

Calculation Reference: AUDIT-638801-190325-0320

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
 Category : C - FLATS PRIVATELY OWNED
 VEHI CLES

Selected regions and areas:

03	SOUTH WEST	
	DC DORSET	1 days
04	EAST ANGLIA	
	SF SUFFOLK	1 days
07	YORKSHIRE & NORTH LINCOLNSHIRE	
	RI EAST RIDING OF YORKSHIRE	1 days
09	NORTH	
	CB CUMBRIA	1 days
12	CONNLAUGHT	
	GA GALWAY	1 days
13	MUNSTER	
	WA WATERFORD	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Secondary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Number of dwellings
 Actual Range: 14 to 51 (units:)
 Range Selected by User: 8 to 215 (units:)

Parking Spaces Range: Selected: 0 to 140 Actual: 0 to 140

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/10 to 26/03/18

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Tuesday	2 days
Wednesday	2 days
Thursday	1 days
Friday	1 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	6 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre)	4
Edge of Town	2

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	4
No Sub Category	2

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

C3	6 days
----	--------

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 1 mile:

5,001 to 10,000	1 days
10,001 to 15,000	4 days
15,001 to 20,000	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	1 days
50,001 to 75,000	5 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	2 days
1.1 to 1.5	4 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	6 days
----	--------

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	6 days
-----------------	--------

This data displays the number of selected surveys with PTAL Ratings.

LIST OF SITES relevant to selection parameters

1	CB-03-C-02 BLOCK OF FLATS CUMBRIA		
	BRIDGE LANE PENRITH		
	Edge of Town		
	No Sub Category		
	Total Number of dwellings:	35	
	Survey date: WEDNESDAY	11/06/14	Survey Type: MANUAL
2	DC-03-C-02 FLATS IN BLOCKS DORSET		
	PALM COURT WEYMOUTH SPA ROAD		
	Suburban Area (PPS6 Out of Centre)		
	Residential Zone		
	Total Number of dwellings:	14	
	Survey date: FRIDAY	28/03/14	Survey Type: MANUAL
3	GA-03-C-01 FLATS GALWAY		
	BALLYLOUGHANE ROAD GALWAY		
	Suburban Area (PPS6 Out of Centre)		
	No Sub Category		
	Total Number of dwellings:	34	
	Survey date: THURSDAY	31/10/13	Survey Type: MANUAL
4	RI-03-C-01 FLATS EAST RIDING OF YORKSHIRE		
	465 PRIORY ROAD HULL		
	Edge of Town		
	Residential Zone		
	Total Number of dwellings:	20	
	Survey date: TUESDAY	13/05/14	Survey Type: MANUAL
5	SF-03-C-03 BLOCKS OF FLATS SUFFOLK		
	TOLLGATE LANE BURY ST EDMUNDS		
	Suburban Area (PPS6 Out of Centre)		
	Residential Zone		
	Total Number of dwellings:	30	
	Survey date: WEDNESDAY	03/12/14	Survey Type: MANUAL
6	WA-03-C-01 BLOCKS OF FLATS WATERFORD		
	UPPER YELLOW ROAD WATERFORD		
	Suburban Area (PPS6 Out of Centre)		
	Residential Zone		
	Total Number of dwellings:	51	
	Survey date: TUESDAY	12/05/15	Survey Type: MANUAL

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

Total Rates:			1.391			1.469			2.860

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. Parameter summary

Trip rate parameter range selected: 14 - 51 (units:)
 Survey date date range: 01/01/10 - 26/03/18
 Number of weekdays (Monday-Friday): 6
 Number of Saturdays: 0
 Number of Sundays: 0
 Surveys automatically removed from selection: 0
 Surveys manually removed from selection: 0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

This section displays the number of survey days per TRICS® sub-region in the selected set

Secondary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Number of dwellings
 Actual Range: 7 to 432 (units:)
 Range Selected by User: 4 to 792 (units:)
 Parking Spaces Range: Selected: 12 to 982 Actual: 12 to 982

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:
 Selection by: Include all surveys

Date Range: 01/01/10 to 22/06/18

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:
 Monday 6 days
 Tuesday 3 days
 Wednesday 7 days
 Thursday 3 days
 Friday 3 days

This data displays the number of selected surveys by day of the week.

Selected survey types:
 Manual count 22 days
 Directional ATC Count 0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:
 Suburban Area (PPS6 Out of Centre) 11
 Edge of Town 11

This data displays the number of surveys per main location category within the selected set. The main location categories

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:
 C3 22 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 1 mile:
 5,001 to 10,000 7 days
 10,001 to 15,000 9 days
 15,001 to 20,000 5 days
 20,001 to 25,000 1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:
 5,001 to 25,000 9 days
 25,001 to 50,000 6 days
 50,001 to 75,000 7 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:
 0.6 to 1.0 8 days
 1.1 to 1.5 14 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:
 No 22 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:
 No PTAL Present 22 days

This data displays the number of selected surveys with PTAL Ratings.

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

Total Rates:			2.563			2.676			5.239

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. The Company authorises those who possess a current TRICS licence to access the TRICS Database and copy the data contained within the TRICS Database for the licence holders' use only. Parameter summary

Trip rate parameter range selected: 7 - 432 (units:)
 Survey date date range: 01/01/10 - 22/06/18
 Number of weekdays (Monday-Friday): 22
 Number of Saturdays: 0
 Number of Sundays: 0
 Surveys automatically removed from selection: 0
 Surveys manually removed from selection: 0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Total Rates:			0.047			0.049			0.096

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the columns) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

Calculation Reference: AUDIT-638801-190328-0350

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 04 - EDUCATION
 Category : D - NURSERY
 VEHI CLES

Selected regions and areas:

- 06 WEST MIDLANDS
- WK WARWICKSHIRE 1 days
- 09 NORTH
- TV TEES VALLEY 1 days
- 10 WALES
- BG BRIDGEND 1 days
- 11 SCOTLAND
- SR STIRLING 1 days
- 12 CONNAUGHT
- RO ROSCOMMON 1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Secondary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Gross floor area
 Actual Range: 150 to 500 (units: sqm)
 Range Selected by User: 150 to 2350 (units: sqm)

Parking Spaces Range: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/11 to 12/07/18

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

- Monday 2 days
- Friday 3 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

- Manual count 5 days
- Directional ATC Count 0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

- Edge of Town 5

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub-Categories:

- Industrial Zone 1
- Residential Zone 3
- No Sub Category 1

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

- D1 5 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 1 mile:

- 1,001 to 5,000 1 days
- 5,001 to 10,000 2 days
- 10,001 to 15,000 1 days
- 15,001 to 20,000 1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

- 5,001 to 25,000 1 days
- 50,001 to 75,000 1 days
- 75,001 to 100,000 3 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

- 0.6 to 1.0 1 days
- 1.1 to 1.5 4 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

- No 5 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

- No PTAL Present 5 days

This data displays the number of selected surveys with PTAL Ratings.

3	SR-04-D-01 HENDERSON STREET STIRLING BRIDGE OF ALLAN Edge of Town No Sub Category Total Gross floor area: 250 sqm Survey date: MONDAY 16/06/14	NURSERY	STIRLING	Survey Type: MANUAL
4	TV-04-D-01 COTSWOLD DRIVE REDCAR Edge of Town Residential Zone Total Gross floor area: 150 sqm Survey date: FRIDAY 19/05/17	NURSERY	TEES VALLEY	Survey Type: MANUAL
5	WK-04-D-01 THE RIDGEWAY STRATFORD UPON AVON Edge of Town Residential Zone Total Gross floor area: 340 sqm Survey date: FRIDAY 29/06/18	NURSERY	WARWICKSHIRE	Survey Type: MANUAL

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

Parameter summary

Trip rate parameter range selected:	150 - 500 (units: sqm)
Survey date date range:	01/01/11 - 12/07/18
Number of weekdays (Monday-Friday):	5
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

22:00 - 23:00									
23:00 - 24:00									
Total Rates:			27.033			27.523			54.556

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Give-Way Data	Arm A - Traffic Stream 2 - All movements	Traffic Stream A/2: Opposed Saturation Flow is the same as or greater than Unopposed Saturation Flow.
Warning	Give-Way Data	Arm C - Traffic Stream 2 - All movements	Traffic Stream C/2: Opposed Saturation Flow is the same as or greater than Unopposed Saturation Flow.
Info	Link Signals	Link P1 - Signals (1, G)	Link P1 and Phase G phase type both expected to be pedestrian.
Info	Link Signals	Link P2 - Signals (1, G)	Link P2 and Phase G phase type both expected to be pedestrian.
Info	Link Signals	Link P3 - Signals (1, G)	Link P3 and Phase G phase type both expected to be pedestrian.

Run Summary

Analysis set used	Run start time	Run finish time	Modelling start time (HH:mm)	Network Cycle Time (s)	Performance Index (E per hr)	Total network delay (PCU-hr/hr)	Highest DOS (%)	Item with highest DOS	Number of oversaturated items	Percentage of oversaturated items (%)	Item with worst signalised PRC	Item with worst unsignalised PRC	Item with worst over PR
1	08/10/2019 13:55:47	13:55:48	08:30	120	60.58	3.82	54.30	D/1	0	0	D/1	A/1/1	D/1

A2 - 2021 PM Do Minimum
D2 - 2021 PM Peak*

Summary

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Give-Way Data	Arm A - Traffic Stream 2 - All movements	Traffic Stream A/2: Opposed Saturation Flow is the same as or greater than Unopposed Saturation Flow.
Warning	Give-Way Data	Arm C - Traffic Stream 2 - All movements	Traffic Stream C/2: Opposed Saturation Flow is the same as or greater than Unopposed Saturation Flow.
Info	Link Signals	Link P1 - Signals (1, G)	Link P1 and Phase G phase type both expected to be pedestrian.
Info	Link Signals	Link P2 - Signals (1, G)	Link P2 and Phase G phase type both expected to be pedestrian.
Info	Link Signals	Link P3 - Signals (1, G)	Link P3 and Phase G phase type both expected to be pedestrian.

A5 - 2036 AM Do Minimum
D5 - 2036 AM Peak*

Summary

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Give-Way Data	Arm A - Traffic Stream 2 - All movements	Traffic Stream A/2: Opposed Saturation Flow is the same as or greater than Unopposed Saturation Flow.
Warning	Give-Way Data	Arm C - Traffic Stream 2 - All movements	Traffic Stream C/2: Opposed Saturation Flow is the same as or greater than Unopposed Saturation Flow.
Info	Link Signals	Link P1 - Signals (T, G)	Link P1 and Phase G phase type both expected to be pedestrian.
Info	Link Signals	Link P2 - Signals (T, G)	Link P2 and Phase G phase type both expected to be pedestrian.
Info	Link Signals	Link P3 - Signals (T, G)	Link P3 and Phase G phase type both expected to be pedestrian.

A3 - 2026 AM Do Something D3 - 2026 AM Peak*

Summary

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Give-Way Data	Arm A - Traffic Stream 2 - All movements	Traffic Stream A/2: Opposed Saturation Flow is the same as or greater than Unopposed Saturation Flow.
Warning	Give-Way Data	Arm C - Traffic Stream 2 - All movements	Traffic Stream C/2: Opposed Saturation Flow is the same as or greater than Unopposed Saturation Flow.
Info	Link Signals	Link P1 - Signals (1, G)	Link P1 and Phase G phase type both expected to be pedestrian.
Info	Link Signals	Link P2 - Signals (1, G)	Link P2 and Phase G phase type both expected to be pedestrian.
Info	Link Signals	Link P3 - Signals (1, G)	Link P3 and Phase G phase type both expected to be pedestrian.

A4 - 2026 PM Do Something D4 - 2026 PM Peak*

Summary

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Give-Way Data	Arm A - Traffic Stream 2 - All movements	Traffic Stream A/2: Opposed Saturation Flow is the same as or greater than Unopposed Saturation Flow.
Warning	Give-Way Data	Arm C - Traffic Stream 2 - All movements	Traffic Stream C/2: Opposed Saturation Flow is the same as or greater than Unopposed Saturation Flow.
Info	Link Signals	Link P1 - Signals (1, G)	Link P1 and Phase G phase type both expected to be pedestrian.
Info	Link Signals	Link P2 - Signals (1, G)	Link P2 and Phase G phase type both expected to be pedestrian.
Info	Link Signals	Link P3 - Signals (1, G)	Link P3 and Phase G phase type both expected to be pedestrian.

Run Summary

Analysis set used	Run start time	Run finish time	Modelling start time (HH:mm)	Network Cycle Time (s)	Performance Index (£ per hr)	Total network delay (PCU-hr/hr)	Highest DOS (%)	Item with highest DOS	Number of oversaturated items	Percentage of oversaturated items (%)	Item with worst signalised PRC	Item with worst unsignalised PRC	Item with worst over PR
4	08/10/2019 14:03:25	08/10/2019 14:03:26	17:30	120	81.17	5.14	54.44	B/1	0	0	B/1	C/1/1	B/1

A5 - 2036 AM Do Something

D5 - 2036 AM Peak*

Summary

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Give-Way Data	Arm A - Traffic Stream 2 - All movements	Traffic Stream A/2: Opposed Saturation Flow is the same as or greater than Unopposed Saturation Flow.
Warning	Give-Way Data	Arm C - Traffic Stream 2 - All movements	Traffic Stream C/2: Opposed Saturation Flow is the same as or greater than Unopposed Saturation Flow.
Info	Link Signals	Link P1 - Signals (T, G)	Link P1 and Phase G phase type both expected to be pedestrian.
Info	Link Signals	Link P2 - Signals (T, G)	Link P2 and Phase G phase type both expected to be pedestrian.
Info	Link Signals	Link P3 - Signals (T, G)	Link P3 and Phase G phase type both expected to be pedestrian.

Run Summary

Analysis set used	Run start time	Run finish time	Modelling start time (HH:mm)	Network Cycle Time (s)	Performance Index (£ per hr)	Total network delay (PCU-hr/hr)	Highest DOS (%)	Item with highest DOS	Number of oversaturated items	Percentage of oversaturated items (%)	Item with worst signalised PRC	Item with worst unsignalised PRC	Item with worst over PR
5	08/10/2019 14:03:26	08/10/2019 14:03:27	08:30	120	84.34	5.33	61.26	D/1	0	0	D/1	A/1/1	D/1

A6 - 2036 PM Do Something

D6 - 2036 PM Peak*

Summary

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Give-Way Data	Arm A - Traffic Stream 2 - All movements	Traffic Stream A/2: Opposed Saturation Flow is the same as or greater than Unopposed Saturation Flow.
Warning	Give-Way Data	Arm C - Traffic Stream 2 - All movements	Traffic Stream C/2: Opposed Saturation Flow is the same as or greater than Unopposed Saturation Flow.
Info	Link Signals	Link P1 - Signals (1, G)	Link P1 and Phase G phase type both expected to be pedestrian.
Info	Link Signals	Link P2 - Signals (1, G)	Link P2 and Phase G phase type both expected to be pedestrian.
Info	Link Signals	Link P3 - Signals (1, G)	Link P3 and Phase G phase type both expected to be pedestrian.

Run Summary

Summary of junction performance

	AM					PM				
	Queue (PCU)	Delay (s)	RFC	LOS	Network Residual Capacity	Queue (PCU)	Delay (s)	RFC	LOS	Network Residual Capacity
Do Minumim - 2021										
A - R148 (East)	0.2	4.38	0.17	A	68 %	0.4	5.06	0.28	A	207 %
B - R148 (West)	1.3	7.59	0.54	A		0.3	4.45	0.23	A	
C - Distributor Road	0.1	4.36	0.08	A	[B - R148 (West)]	0.0	3.39	0.04	A	[A - R148 (East)]
Do Minumim - 2026										
A - R148 (East)	0.2	4.38	0.18	A	68 %	0.5	5.16	0.31	A	180 %
B - R148 (West)	1.2	7.57	0.53	A		0.3	4.38	0.20	A	
C - Distributor Road	0.2	4.78	0.18	A	[B - R148 (West)]	0.1	3.61	0.12	A	[A - R148 (East)]
Do Minumim - 2036										
A - R148 (East)	0.3	4.48	0.20	A	49 %	0.6	5.42	0.34	A	155 %
B - R148 (West)	1.6	8.91	0.60	A		0.3	4.56	0.23	A	
C - Distributor Road	0.2	5.00	0.17	A	[B - R148 (West)]	0.1	3.65	0.12	A	[A - R148 (East)]

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Network Residual Capacity indicates the amount by which network flow could be increased before a user-definable threshold (see Analysis Options) is met.

File summary

File Description	
Title	Do Minimum
Location	Kilcock
Site number	Junction 3
Date	01/04/2019
Version	
Status	TTA
Identifier	
Client	MGR
Jobnumber	190009
Enumerator	HEADOFFICE\mckennam
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	km/h	FCU	FCU	perHour	s	-/h	perMin

The junction diagram reflects the last run of Junctions.

Analysis Options

Calculate Queue Percentiles	Calculate residual capacity	Residual capacity criteria type	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
	✓	Delay	0.85	36.00	20.00

Demand Set Summary

Scenario name	Time Period name	Traffic profile type	Model start time (HH:mm)	Model finish time (HH:mm)	Time segment length (min)

C - Distributor Road	0.1	4.58	0.13	A	[B - R148 (West)]	0.1	3.47	0.06	A	[A - R148 (East)]
Do Something - 2026										
A - R148 (East)	0.3	4.73	0.20	A	51 %	0.5	5.55	0.34	A	143 %
B - R148 (West)	1.6	8.68	0.60	A		0.5	4.99	0.31	A	
C - Distributor Road	0.5	5.84	0.32	A	[B - R148 (West)]	0.2	3.95	0.20	A	[A - R148 (East)]
Do Something - 2036										
A - R148 (East)	0.3	4.85	0.22	A	35 %	0.6	5.85	0.37	A	124 %
B - R148 (West)	2.1	10.52	0.67	B		0.5	5.23	0.34	A	
C - Distributor Road	0.5	6.17	0.33	A	[B - R148 (West)]	0.2	4.00	0.20	A	[A - R148 (East)]

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Network Residual Capacity indicates the amount by which network flow could be increased before a user-definable threshold (see Analysis Options) is met.

File summary

File Description

Title	Do Minimum
Location	Kilcock
Site number	Junction 3
Date	01/04/2019
Version	
Status	TTA
Identifier	
Client	MGR
Jobnumber	190009
Enumerator	HEADOFFICE\mckennam
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	km/h	FCU	FCU	perHour	s	-/h	perMin

The junction diagram reflects the last run of Junctions.

Analysis Options

Calculate Queue Percentiles	Calculate residual capacity	Residual capacity criteria type	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
	✓	Delay	0.85	36.00	20.00

Demand Set Summary
