

Waterside Block 9 Developments Limited

Generic Quantitative Risk Assessment

Project Waterfront, Dublin 1.

602387-R02 (01)

FINAL

DECEMBER 2020

EXECUTIVE SUMMARY

RSK Ireland Limited (RSK) was commissioned by Waterside Block 9 Developments Limited to carry out a Generic Quantitative Risk Assessment (GQRA) at Project Waterfront, Dublin 1 (the site). A site location map is presented in Figure 1. RSK are advised that this report will form part of the application documentation for a mixed commercial and residential use with multiple basement levels and that there two abutting, but separate applications for two sites on the property. The purpose of the GQRA was to establish the contamination status of the soil and groundwater underlying the site and identify any potentially significant risks to human health and / or the water environment.

The earliest available map between 1837 – 1842 shows that the site was occupied by public baths located in the north-east corner. There is some industry in the local area including a vitriol works approximately 100m west of the site, a vinegar works approximately 200m north-west and a glass works to the north. The site was bounded by Mayor Street to the north, Fish Street (now Castleforbes Road) to the west, and the River Liffey to the south and east.

The map of the period 1888 - 1913 shows a timber yard and saw mills present on the site, with cattle pens in the south-east corner. The surrounding land use is predominantly commercial with a slate and tile yard less than 100m to the west, an ironworks beyond – approximately 200m to the west, a corn store approximately 100m to the north and a coal yard and goods station (train station) immediately to the east. There were several other timber yards, over ground storage tanks (OSTs) and cattle pens noted in the general area.

The 1995 aerial photograph shows the site with commercial/industrial buildings in place. The photograph resolution is poor, and the buildings cannot be identified. The railway infrastructure to the north and east is no longer present. The point depot complex is now located to the east. More recent aerial photos (2000, 2005) show little change from the 1995 aerial photo.

Following the completion of the environmental site assessment works and receipt of laboratory analytical results, a GQRA was completed to assess risks to human health and the water environment at the site.

The soil GACs for protection of human health with regards to a residential without home grown produce land use scenario were exceeded in soil samples analysed from sample locations as detailed in Tables 5.3 to 5.6 and summarised as follows;

- BH202 with regards to PAH compounds (benzo(b)fluoranthene, benzo(a)pyrene and dibenzo(ah)anthracene);
- BH204 with regards to aliphatic hydrocarbon bands EC10-EC12;
- BH208 with regards to PAH compounds (benzo(b)fluoranthene, benzo(a)pyrene and dibenzo(ah)anthracene);

PROJECT WATERFRONT, DUBLIN 1.

- BH213 with regards to dibenzo(ah)anthracene;
- BH219 with regards to dibenzo(ah)anthracene) and arsenic.
- BH223 with regards to aliphatic hydrocarbon bands EC8-EC10;
- BH226 with regards to dibenzo(ah)anthracene and lead;
- BH229 with regards to PAH compounds (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene and dibenzo(ah)anthracene);
- BH231 with regards to benzo(b)fluoranthene and Lead;
- BH232 with regards to aliphatic hydrocarbon bands EC10-EC12, aromatic hydrocarbon bands EC16-EC21, PAH compounds (naphthalene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene and dibenzo(ah)anthracene);
- BH235 with regards to arsenic and lead;
- BH237 with regards to arsenic and lead;
- BH243 with regards to PAH compounds (benzo(b)fluoranthene, benzo(a)pyrene and dibenzo(ah)anthracene) and lead;
- BH244 with regards to lead;
- BH245 with regards to aliphatic hydrocarbon bands EC10-EC12, aromatic hydrocarbon bands EC16-EC21, PAH compounds (naphthalene, benzo(a)anthracene, benzo(b)fluoranthene and dibenzo(ah)anthracene);
- BH246 with regards to aliphatic hydrocarbon bands EC8-EC10, PAH compounds (naphthalene, benzo(b)fluoranthene, benzo(a)pyrene, and dibenzo(ah)anthracene);
- BH249 with regards to arsenic; and
- BH250 with regards to lead.

In addition, asbestos fibres (chrysotile) were identified in concentrations greater than 0.001%, indicating a potential risk to human health at the following locations and depths;

- BH212 0.0-1.0mbgl
- BH219 0.0-1.0mbgl; and
- BH249 0.0-0.5mbgl

PROJECT WATERFRONT, DUBLIN 1.

However, RSK considers that there is no risk to Human Health of future site users from the exceedences noted above as Soils on-site will be excavated to a depth of approximately 16mbgl and removed off-site as part of enabling works. This will result in the removal of all contaminated soils on-site.

The groundwater GACs for protection of human health with regards to a residential land use scenario were exceeded in groundwater samples analysed from sample locations as detailed in Tables 5.7 to 5.10 and summarised as follows;

- BH101 with regards to aliphatic hydrocarbon bands EC12-EC16;
- BH105 with regards to aliphatic hydrocarbon bands EC10-EC12;
- TP2 with regards to aliphatic hydrocarbon bands EC8-EC16;
- WS102 with regards to aliphatic hydrocarbon bands EC10-EC16; and
- WS104 with regards to aliphatic hydrocarbon bands EC10-EC16.

As outlined in section 6.1.2 these exceedences are not considered to represent a risk to human health. Therefore, no complete pollutant linkages with regards to risks to Human Health in a residential scenario have been identified at the site.

As noted in section 6.2.1, the groundwater GACs for the protection of environmental waters were exceeded in a number of boreholes on-site. Three surface water samples were retrieved from the River Liffey to assess receptor surface waters upstream, downstream and adjacent to the site. The surface water GACs for the protection of controlled freshwaters were not exceeded in any of the three samples taken along the River Liffey.

Given the results of surface water monitoring, no complete pollutant linkage has been identified between shallow groundwater contaminant concentrations on-site and the River Liffey. In addition, the boulder clay encountered at depth on-site is considered an aquitard to any downward movement of dissolved contaminants to the locally important aquifer below.

Based on the results and conclusions of the GQRA, RSK have proposed the following recommendations;

- As the site is to be excavated to a depth of approximately 16mbgl RSK does not consider it necessary to undertake any remediation measures with regards to impacted soils identified during the enabling works excavations as all soils are to be removed from site. Accordingly, RSK recommends that excavated waste soils are disposed of to an appropriately licensed landfill as per the Environmental Assessment and Soil Classification report⁽²⁾.
- Any impacted groundwater, encountered during enabling works, be pumped from the excavations and undergo treatment on-site which would enable pumped groundwaters to be disposed to sewer under discharge licence. A discharge licence will have to be attained from Dublin City Council to pump to the sewer. Treated water will require continual

monitoring to check that water quality standards are in compliance with the requirements of the discharge license.

- During enabling works, potential risks to construction workers should be mitigated through the implementation of measures by the contractor and their sub-contractor in accordance with construction health and safety legislation.
- An asbestos management plan should be put in place to manage the risks to construction workers from asbestos identified in soils on the site.
- During construction works where there is excavation and movement of soils, it is recommended that works be undertaken by appropriately trained contractors so that risks associated with the presence of asbestos in the soils on site are managed correctly.
- Surface water samples should be recovered from the Liffey upstream, adjacent to, and downstream of the site at regular intervals during the development works to monitor conditions for the potential of impacted groundwater discharging from the site to impact the quality of the River Liffey.

RSK GENERAL NOTES

Project No.: 602387 – R02 (00)

Title: Generic Quantitative Risk Assessment – Project Waterfront, Dublin 1.

Client: Waterside Block 9 Developments Limited

Date: 21st December 2020

Office: Dublin

Status: FINAL

1 INTRODUCTION

RSK Ireland Limited (RSK) was commissioned by Waterside Block 9 Developments Limited to carry out a Generic Quantitative Risk Assessment (GQRA) at Project Waterfront, Dublin 1 (the site). Whilst the site is the subject of two schemes, this report looks at the overall site identified in the 2014 planning scheme as 'City Block 9'. RSK understands that the site will be redeveloped with multiple basement levels by way of two schemes; one a Strategic Development Zone (SDZ) compliant commercial scheme; the other a Strategic Housing Development (SHD) scheme. A site location map is presented in Figure 1. The purpose of the GQRA is to:

- Characterise the soil and groundwater regimes at the site;
- establish the contamination status of the soil and groundwater underlying the site; and
- to identify any potentially significant risks to human health and/or the water environment.

The following report has been prepared specifically and solely for the above noted cumulative project. Initial sections of the report describe the site. The subsequent part of the report contains a description of the ground conditions encountered, a summary of the assessment findings, a GQRA, conclusions and recommendations.

All plans, tables, field records and borehole logs relating to this investigation are either given within the text of the report or presented in the appendices. This report is subject to RSK's Service Constraints provided in Appendix A.

1.1 Scope of work

The scope of work for the GQRA included the following:

- Review of desk-based information.
- Field programme including drilling of fifty boreholes, installation of groundwater monitoring wells at fourteen borehole locations and soil sampling.
- Completion of one groundwater monitoring event to fully characterise and assess the groundwater underlying the site.
- Completion of one surface water monitoring event in the River Liffey.
- Comparison of laboratory soil and groundwater results to in-house derived screening values for human health for residential land use.
- Comparison of laboratory surface water results to in-house derived screening values for the protection of a controlled freshwater environment.
- Provision of a GQRA report summarising the findings of the desk study, field and laboratory programmes and GQRA screening of laboratory results.

1.2 Limitations

The comments given in this report and the opinions expressed are based on the information reviewed. However, there may be conditions pertaining at the site that have not been disclosed by the investigation and therefore could not be taken into account. Groundwater levels may fluctuate seasonally and tidally and at times be significantly different than those recorded. In addition, Made Ground can vary in thickness and nature over short distances and may be significantly different within areas not subject to the intrusive investigation.

This report is subject to the RSK Ireland Limited service constraints given in Appendix A.

2 SITE DESCRIPTION

The Waterfront property (the site) is situated at North Wall Quay at the junction of North Wall Quay and Castleforbes Road, Dublin 1 at national grid reference O 17789 34507. The site covers an area of approximately 2 hectares. The site location and setting is presented in Figure 1. At the time of the investigation all above ground site buildings and infrastructure had been removed. The south-west corner of the site, approximately half an acre in size, was being used for parking of vehicles and storage of construction materials for the ongoing development of a site immediately west of the Waterfront property.

The surface of the site generally consists of concrete with smaller areas of compacted stone. The site topography is generally flat. The site location is presented in Figure 1.

2.1 Surrounding Land-use

Land use surrounding the site is predominately mixed-use commercial and residential. To the north is Mayor Street Upper with office blocks and residential properties. To the south is the North Wall Quay with the River Liffey beyond. To the west is Castleforbes Road and a construction site. There is also a construction site to the east, beyond North Wall Avenue. RSK understands that the construction sites on Castleforbes Road and beyond North Wall Avenue are for commercial and residential mixed use. Three Arena entertainment venue is located approximately 60m to the east of the site.

3 SUMMARY OF PREVIOUS WORKS

3.1 Flannery Nagel Environmental Ltd; Desktop Study and qualitative Risk Assessment of Potentially Contaminated Undeveloped Sites within North Lotts and Grand Canal Dock. Reference DU01001 (dated November 2012)

Dublin City Council (DCC) commissioned Flannery Nagel Environmental Ltd (FNE) to perform a preliminary desk-top study and qualitative risk assessment of potentially contaminated undeveloped sites in the North Lotts and the Grand Canal Dock areas.

For the purposes of this preliminary risk assessment the sites were divided up into 12 Plots of land, delineated by the grid of road networks.

The report provides a risk ranking of the 12 plots, an overview of the risk assessment methodology employed, and recommendations for the development of potentially contaminated lands, as well as a detailed Plot Risk Report for each of the 12 plots.

The Waterfront site occupies the eastern half of Plot 5. Identified contaminants of concern include metals, asbestos, diesel, hydrocarbons, ammonia, creosote and phenols. The plot risk report scores the site as Low-Medium environmental risk.

A description of works required details the development of a conceptual site model and undertaking of a qualitative risk assessment. It was noted that particular attention should be paid to potential PAH contamination.

3.2 Site Investigations

Several phases of investigations have been undertaken at the site. In addition to an RSK report the client has provided IGSL and ARUP reports for works undertaken. Please note that the site is referred to as both the City Block 9 and the Waterfront site in the below reports. The IGSL, ARUP and RSK works and reports pertaining to the site are summarised below:

3.2.1 IGSL; Ground Investigation Report. Reference 19965 (dated May 2017)

IGSL were appointed by PUNCH Consulting Engineers to conduct a ground investigation and prepare a factual report. The investigation took place at the site between March and May 2017 and included:

- 6 no. cable percussive boreholes up to 15.5mBGL;
- 6 no. rotary boreholes drilled using coring techniques in the bedrock to depths of 27.5mBGL;
- 13 no. machine-dug trial pits;
- Groundwater and gas monitoring;

PROJECT WATERFRONT, DUBLIN 1.

- Geotechnical testing; and
- Environmental laboratory testing of 41 soil samples from the made ground to assist with soil classification.

No interpretative reporting was undertaken on the environmental samples.

3.2.2 ARUP; Preliminary Site Assessment (PSA) Report – City Block 9, North Quay Wall, Dublin. Reference 257849-00 (dated 7 August 2018).

ARUP completed a PSA including a site walkover at the site during September 2017. The scope of the PSA included:

- A review of the published information showing former activities on the site;
- A review of the results of the previous site investigation;
- A site walkover carried out in September 2017;
- Interviews with the site caretaker;
- Review of information collect previously from Dublin City Council on groundwater abstractions and unlicensed landfills on their register in the area; and
- Development of a preliminary conceptual site model.

The desk-based study highlighted that the site has had a number of uses that could have caused contamination including a saw mill and timber yard operated by T&C Martin Ltd.

The PSA also reviews a previous site investigation undertaken by IGSL which is detailed in section 3.1, above. ARUP conclude that the site investigation proved contamination on the site including:

- An area of hydrocarbon odours and sheens in the top 4m of made ground in the north-central section of the site.
- Strong hydrocarbon odours at 21m below ground level in the west-central section.
- High concentrations and flows of ground gases.

The ARUP report stated that while the investigation has identified contamination the extent and source of the contamination is not clearly defined. The ARUP report also stated that the potential for the site investigation to have worsened contamination by leaving a pathway for contamination to migrate was not considered. The PSA notes a number of additional items which require further investigation :

- Removal of the IGSL groundwater monitoring boreholes;
- Preliminary stage of geophysical investigation;
- The window sampling site investigation to determine the extent of the contamination in the made ground and sample the perched groundwater;
- The excavation of trial pits in and around any tanks/pits to inspect the nature of any contamination they may contain and visually inspect their integrity;

- The drilling of boreholes (window sampling) to assess areas which were not previously investigated due to the presence of buildings and which based on this PSA could be contaminated e.g. near the substation and oil store;
- Installation of groundwater monitoring boreholes around the site and up and down gradient of the contaminated areas (around TP05 and BH02);
- Deep borehole to the top of rock with a high quality recovery of superficial deposits to investigate the extent of the potential DNAPL identified in BH02;
- Gas monitoring of the shallow boreholes for bulk gases and vapours; and
- In addition, it may be useful to collect additional information to aid waste classification of the soils in the area of the proposed basement.

3.2.3 ARUP; Detailed Site Assessment (DSA) Report – City Block 9, North Quay Wall, Dublin. Reference 257849 18_08_03 (dated 7 August 2018).

The DSA was carried out to assess potential contamination within the site boundary and identify pollutant linkages which may pose a risk to sensitive receptors as per recommendations made in the PSA summarised in 3.2.2. The DSA comprised a ground investigation, a Generic Quantitative Risk Assessment (GQRA) and waste soil classification. In addition, the IGSL drilled boreholes that were considered potential pathways for contaminants in the made ground were decommissioned. This DSA is based on the available ground investigation and monitoring data from an investigation carried out between 6th March and 5th June 2018. As part of the DSA intrusive works were undertaken which comprised;

- an unspecified number of trial pits in the north of the site;
- fourteen shallow window sample holes (WS101 to WS114); and
- eleven groundwater monitoring holes (BH101 to BH111)

The key findings of the investigation are detailed as:

- A buried pit was located in the north of the site which was likely to have been used for the treatment of timber by soaking the wood in creosote (also known as coal tar);
- Coal tar and coal tar contaminated soils (with concentrations of compounds above the human health criteria) were observed in the buried pit and the made ground around it;
- Vapours from the buried pit exceed the Occupational Exposure Limits for benzene;
- Asbestos was observed in the upper layer of made ground;
- The buried pit leaks and small amounts of coal tar contaminated water were observed in the deep made ground and in the groundwater in the sand and gravel beneath the buried pit;
- There is no evidence to show that the effect on the groundwater quality in the sand and gravel extends beyond 75m down hydraulic gradient of the buried pit and this is within the site boundary;
- No coal tar or other type of NAPL was observed in the water bearing gravel under the buried pit or in the borehole drilled adjacent to the borehole from the previous investigation which had contained NAPL; and

- The monitoring installation in BH02 is considered to have provided a pathway for contamination between the contaminated made ground and the groundwater in the sand and gravel but is now fully decommissioned and the pathway has been removed.

ARUP concluded that;

- the construction of a basement and excavation of the made ground at the site will eliminate or reduce the majority of the contamination highlighted in this assessment; and
- the results of this assessment highlight that some simple remedial measures will be needed in the north of the east of the site where soils will be retained on site. *(It should be noted that the soils mentioned are now to be removed from site as part of the proposed development enabling works).*

In addition, a number of residual risks are highlighted by ARUP which should be considered during the detailed design and construction of the site. These include, the results of this assessment are based on one round of groundwater monitoring. While these are considered to be representative, groundwater quality is subject to variations dependant on the prevailing climatic conditions. Should the development of the site be delayed, and the removal of the source not take place with 12 months, it is recommended that an additional two rounds of groundwater monitoring are carried out within 3 months of each other to confirm that the conclusions of this report remain valid.

3.3.4 RSK; Environmental Assessment and Soil Classification, Project Waterfront, Dublin 1. Reference 602387 R01 (dated April 2019).

As part of the current works RSK completed a Soil Waste Classification report for the site based on the results of 568 representative soil samples collected from fifty (50) boreholes across the site. The boreholes were drilled to a maximum depth of 17m below ground level (bgl). Made ground was encountered to a maximum depth of 9.0m bgl in BH242, the made ground was generally underlain by natural deposits of silt, sandy gravel and boulder clay.

Based on the soil classification assessment undertaken, Table 1 provides a summary of the assessment.

Suitable Landfill	European Waste Code (EWC)	Estimated m ³ of Material
Hazardous	17.05.03	6,992
Non-hazardous	17.05.04	179,822
Inert	17.05.04	129,751

Table 1: Summary of Waste Quantities & Classification on Soil Samples

RSK have also undertaken an environmental assessment (EA) of the natural, undeveloped silts gravels and clay material to be excavated from depth at the site during the construction of the basement. The EA comprises a quantitative risk assessment (QRA) of the laboratory analytical data.

RSK have assessed the laboratory results of samples of natural material (i.e. non made ground) collected from the fifty (50) boreholes (BH201 – BH250) drilled on a 20m grid across the site. Samples collected from these locations have been described and logged as Natural Silts, Gravels / Sands and Boulder Clay. In total, the results of laboratory analysis for two hundred and eighty-nine (289) samples of natural silts, gravels /sands and boulder clay were screened for the QRA.

The results of laboratory analysis were compared to generic assessment criteria (GAC) derived by RSK for phytotoxic impact (environmental) and public open space impact (human health) to complete a QRA of the Natural Silts, Gravels and Boulder Clay material to be excavated at the site.

Based on the results of a Quantitative Risk Assessment we have made the following conclusions:

- Based on the adopted GAC, natural soils underlying the site do not present a risk to the environment or human health.

RSK consider that identified natural soils identified at the site are uncontaminated and suitable to be classified as a by-product under Article 27 of the *European Communities (Waste Directive) Regulations 2011* for the following reasons:

- The material underlying the site has not been impacted by any anthropogenic activities at the site.
- No visual or olfactory evidence of contamination was noted by RSK in the material.
- An environmental risk assessment comprising a QRA did not report any potential risk to human health.
- An environmental risk assessment comprising a QRA did not report any risk to the environment.

4 DESK STUDY REVIEW

The desk study review is detailed in the following section and summarises information obtained from the Ordinance Survey of Ireland (OSI) database located at <http://map.geohive.ie/mapviewer.html>

4.1 Site Geology

According to mapping compiled by the Geological Survey of Ireland (GSI) and site observations the site is underlain by made ground overlying alluvial deposits and glacial Limestone till. the solid geology comprises the Calp, Marine Shelf Facies Formation of Carboniferous age, which is described as limestone and calcareous shale of the Tobercolleen and Lucan formations.

4.2 Hydrogeology

According to the GSI, aquifers in the Republic of Ireland are classified as follows:

- Regionally Important – An aquifer which is sufficiently productive to be able to yield enough water to boreholes or springs to supply major regional water schemes. These are divided into: extensive sand/gravel aquifers; karst aquifers; and fissured aquifers.
- Locally Important – An aquifer which is moderately productive, i.e. capable of yielding enough water to boreholes or springs to supply villages, small towns or factories. These are divided into: Sand/gravel aquifers; Bedrock aquifers which are generally moderately productive; and Bedrock aquifers which are moderately productive only in local zones.
- Poor – An aquifer which is normally capable of yielding only sufficient water from wells or springs to supply single houses, small farms or small group water schemes. These can be sub divided into: Bedrock aquifers which are generally unproductive except for local zones and Bedrock aquifers which are generally unproductive.

The aquifer underlying the site has been classified by the GSI as a locally important aquifer. The vulnerability of the aquifer has been classified as Low.

4.2.1 Licensed Groundwater Abstractions

There are no licensed groundwater abstractions identified by the GSI within a 1km radius of the site.

4.3 Hydrology

The nearest surface watercourse is the River Liffey approximately 30m to the south of the site. The River Liffey is described as ‘transitional’ at this location. The river water quality status for the River Liffey at this location is classified by the EPA as “unpolluted”.

4.4 Historical Land Uses

A review of the site history was undertaken by assessing the available historical maps and land use data (available at <http://map.geohive.ie/mapviewer.html>)

The earliest available map between 1837 – 1842 shows that the only feature on site was a public baths located in the north-east corner. There is some industry in the local area including a vitriol works approximately 100m west of the site, a vinegar works approximately 200m north-west and a glass works to the north. The site was bounded by Mayor Street to the north, Fish Street (now Castleforbes Road) to the west, and the River Liffey to the south and east.

The map of the period 1888 - 1913 shows a timber yard and saw mills present on the site, with cattle pens in the south-east corner. The surrounding land use is predominantly commercial with a slate and tile yard less than 100m to the west, an ironworks beyond – approximately 200m to the west, a corn store approximately 100m to the north and a coal yard and goods station (train station) immediately to the east. There were several other timber yards, over ground storage tanks (OSTs) and cattle pens noted in the general area.

The 1995 aerial photograph shows the site with commercial/industrial buildings in place. The photograph resolution is poor, and the buildings cannot be identified. The railway infrastructure to the north and east is no longer present. The point depot complex is now located to the east. More recent aerial photos (2000, 2005) show little change from the 1995 aerial photo.

4 FIELDWORK

4.1 Borehole Drilling & Monitoring Well Installation

A total of fifty (50) boreholes were drilled between December 11th 2018 and February 1st 2019 using a Commacchio 305 rotary drilling rig. Boreholes were advanced to a maximum depth of 17.0 metres below ground level (mbgl). Drill cuttings were logged, groundwater conditions were noted, and representative soil samples collected by the supervising engineer. The locations of the boreholes are shown on Figure 2.

Fourteen (14) selected boreholes were completed as monitoring wells by installing 50 mm internal diameter HDPE screen and casing. The borehole annulus was backfilled with 6 mm to 10 mm graded gravels with a bentonite seal placed above the filter pack to prevent any downward migration of surface water and or perched groundwater. The wells were finished with stand-up lockable covers.

Details of the monitoring well construction are presented on the borehole logs in Appendix B.

4.2 On-site Screening and Soil Sampling

During borehole drilling, soil samples were screened for volatile hydrocarbons using a photo ionisation detector (PID) equipped with a 10.6 eV lamp. The results of this are shown on the borehole logs in Appendix B. Selected soil samples were submitted to ALS for laboratory chemical analysis for potential contaminants of concern (COC).

4.3 Groundwater and Surface Water Sampling

Following installation, all fourteen (14) monitoring wells and twenty-four (24) existing monitoring wells were gauged for depth to water and the presence of light non-aqueous phase liquid (LNAPL) and dense non-aqueous phase liquid (DNAPL) if present, using an electronic interface probe. The wells were then purged and left to allow equilibration of groundwater levels.

Groundwater samples were retrieved from the newly installed monitoring wells and the existing monitoring wells using a USEPA approved 'Low-Flow' Purging and Sampling Methodology between February 18th and February 26th 2019. The low-flow method relies on moving groundwater through the well screen at approximately the same rate as it flows through the geological formation. This results in a significant reduction in the volume of water extracted before sampling and significantly reduces the amount of disturbance of the water in the monitoring well during purging and sampling. Drawdown levels in the monitoring well and water quality indicator parameters (pH, temperature, electrical conductivity, redox potential and dissolved oxygen) are monitored during low-flow purging and sampling, with stabilisation indicating that purging is complete, and sampling can begin. As the flow rate used for purging is, in most cases, the same or only slightly higher than the flow rate used for sampling, and because purging and sampling are conducted as one continuous operation in the field, the process is referred to as Low-Flow Purging and Sampling. Low flow sampling forms can be provided upon request.

Samples were then collected in the required laboratory-supplied containers prior to dispatch via chilled storage to ALS for laboratory chemical analysis for potential COCs.

A subsequent groundwater gauging exercise was undertaken on 7th June 2019. It should be noted that monitoring wells BH218, BH225 and BH231 were destroyed by construction traffic prior to groundwater gauging on the 7th June 2019.

Surface water samples were retrieved from the River Liffey located approximately 30 m to the south of the site on 24th May 2019. The samples were taken at accessible locations, with an upstream sample, recovered adjacent to 73 North Wall Quay (US); a downstream sample, recovered adjacent to the 3 Arena (DS); and a sample recovered adjacent to the site (ADJ).

Samples were collected in glass containers prior to forwarding, via chilled storage, to ALS Environmental.

4.4 Laboratory Testing

Five-hundred and sixty-eight (568) selected soil samples, thirty-one (31) groundwater samples and three (3) surface water samples were analysed for a suite of parameters, which consisted of:

Total petroleum hydrocarbons (TPH), split into aliphatic and aromatic carbon bands, metals, polycyclic aromatic hydrocarbons (PAH), benzene, toluene, ethylbenzene and xylene (BTEX), methyl tertiary-butyl ether (MTBE), PCBs, Phenols, Cyanide and SVOCs. In addition, the water samples were analysed for ammoniacal nitrogen.

Soil samples was also analysed for the presence of asbestos and waste acceptance criteria (WAC) determinants.

5 RESULTS OF THE INVESTIGATION

5.1 Fieldwork

The following sections present the results of the intrusive investigation. Descriptions of the strata encountered, together with comments on tests *in situ*, well design and groundwater conditions are given in Appendix B.

5.1.1 Encountered Ground Conditions

The site investigation identified made ground to a maximum depth of 9.0 mbgl. The made ground was found to be quite variable but generally comprised a concrete slab on top of sandy gravel fill, overlying sandy gravelly clay or silt; which in turn overlay reworked silt layers.

Below the reworked silts were alluvial deposits consisting of natural silts overlying sands and gravels. The sands and gravels were underlain by boulder clay.

5.1.2 Soil Screening

PID concentrations ranged from < 0.1 ppm for the majority of samples across the site, up to 26.3 ppm in BH230 0.5 - 1.0 mbgl. The full results of the soil screening are presented on the borehole logs in Appendix B.

5.1.3 Groundwater Gauging

The results of the groundwater gauging exercise undertaken on 7th June 2019 indicated that it is unlikely that there is a continuous 'shallow' groundwater table within the overburden soils encountered beneath the site. Of the thirteen shallow wells, installed within the made ground, only five had groundwater present.

Groundwater gauging on the 'deep' wells, installed within the gravel layer indicated the presence of a continuous groundwater body within the gravels. The depth to water ranged between -0.081 mAOD (metres above ordinance datum) (BH110a) and -0.195 mAOD (BH229). It was not possible to determine a groundwater flow direction as it is likely that there is a degree of tidal influence on the groundwater underlying the site. It is assumed however, that groundwater in the shallow gravel aquifer is likely to flow in a south to south easterly direction towards the River Liffey.

The results for the second groundwater gauging visit are tabulated in table 5-1 and table 5-2.

5.2.1 Soil Asbestos Analysis

Five hundred and sixty-eight (568) soil samples were analysed for the presence of asbestos. The laboratory reports are presented in Appendix C.

Asbestos was detected in twelve (12) of the samples forwarded for analysis. The samples in which asbestos has been identified including asbestos type and quantification are detailed in Table 5-6 below.

Table 5-6: Asbestos Soil Analytical Results

Location	Asbestos Type and Depth (mbgl)	Dry Weight %	Comments
BH209	Amosite (0-0.5)	<0.001	Fibre bundle in soil
	Amosite (0.5-1)	<0.001	Fibre bundle in soil
BH212*	Chrysotile (0.0-1)	Not quantified	Debris typical of asbestos cement
BH217	Chrysotile (12.5-14)	<0.001	ACM debris
BH219	Chrysotile (0.0-0.5)	0.0112	ACM debris and loose fibres
	Chrysotile (0.5-1)	0.0026	ACM debris
BH220	Chrysotile (2-3)	<0.001	Loose fibres and ACM debris
BH224	Chrysotile (2-3)	<0.001	Fibre bundle in soil
BH232	Chrysotile (10-12.5)	<0.001	Loose fibres in soil
BH248	Chrysotile (0-0.5),	<0.001	ACM debris
	Chrysotile (1-2)	<0.001	ACM debris
BH249	Chrysotile (0.0-0.5)	3.14	Debris typical of asbestos cement

Where values are in **bold** they have exceeded the 0.001% asbestos content indicating a risk to human health

*Asbestos in BH212 from 0-1.0 mbgl was not quantified. Therefore, it has been assumed, conservatively, that asbestos in this sample has exceeded the 0.001% quantification.

5.3 Groundwater Analytical Results

The results of the laboratory analysis of the thirty-one (31) groundwater samples taken are presented in Table 5-7 to Table 5-10 inclusive. The results of the groundwater laboratory analysis are included in Appendix D.

* GAC not calculated owing to low volatility of substance and therefore no pathway, or an absence of toxicological data

** GAC is set below the LMDL. Where the analysis indicates concentrations below the LMDL a non-exceedence of the criteria will be inferred.

*** No GAC available in legislation or guidance

**** Converted to Ammonium for risk assessment purposes (Analytical result x 1.29)

5.3 Surface Water Analytical Results

The results of the laboratory analysis of the three (3) surface water samples taken are presented in Table 5-11 and Table 5-13 inclusive. The samples were taken from sample locations upstream (US), adjacent to (ADJ) and downstream (DS) of the site. The full laboratory reports of the surface water laboratory analysis are included in Appendix D.

6 GENERIC QUANTITATIVE RISK ASSESSMENT

6.1 Human Health

6.1.1 Soil

The soil results have been compared to generic assessment criteria (GAC) derived by RSK for a residential without home-grown produce use. We have adopted this approach to provide conservative assessment of the likely mixed use commercial and residential development.

Soils have been assessed using a GAC for soils with SOM content of 2.5% which reflects the calculated SOM results recorded during this investigation. The screening values for human health and their derivation are included in Appendix E.

Concentrations were reported in soil samples at levels which exceeded the GAC for residential without home-grown produce as follows:

- **Aliphatic EC8-EC10** – BH223 (3.0-4.0 mbgl), BH246 (2.0-3.0 mbgl)
- **Aliphatic EC10-EC12** – BH204 (1.0-2.0 mbgl), BH232 (0.5-1.0 mbgl), BH245 (4.0-5.0 mbgl)
- **Aromatic EC12-EC16** – BH245 (3.0-4.0 mbgl), BH245 (4.0-5.0 mbgl)
- **Aromatic EC16-EC21** – BH232 (0.5-1.0 mbgl), BH245 (3.0-4.0 mbgl), BH245 (4.0-5.0 mbgl)
- **Naphthalene** – BH232 (0.5-1.0 mbgl), BH245 (3.0-4.0 mbgl), BH245 (4.0-5.0 mbgl), BH246 (3.0-4.0 mbgl)
- **Benzo(a)anthracene** – BH229 (0.0-0.5 mbgl), BH232 (0.0-0.5 mbgl), BH232 (0.5-1.0 mbgl), BH245 (3.0-4.0 mbgl)
- **Benzo(b)fluoranthene** – BH202 (0.5-1.0 mbgl), BH208 (0.0-0.5 mbgl), BH229 (0.0-0.5 mbgl), BH231 (0.0-0.5 mbgl), BH232 (0.0-0.5 mbgl), BH232 (0.5-1.0 mbgl), BH232 (1.0-2.0 mbgl), BH243 (0.0-0.5 mbgl), BH243 (0.5-1.0 mbgl), BH245 (3.0-4.0 mbgl), BH245 (4.0-5.0 mbgl), BH246 (3.0-4.0 mbgl)
- **Benzo(a)pyrene** - BH208 (0.0-0.5 mbgl), BH229 (0.0-0.5 mbgl), BH232 (0.0-0.5 mbgl), BH232 (0.5-1.0 mbgl), BH243 (0.0-0.5 mbgl), BH243 (0.5-1.0 mbgl), BH246 (3.0-4.0 mbgl)
- **Dibenzo(ah)anthracene** - BH202 (0.5-1.0 mbgl), BH208 (0.0-0.5 mbgl), BH219 (0.5-1.0 mbgl), BH226 (0.0-0.5 mbgl), BH213 (0.5-1.0 mbgl), BH229 (0.0-0.5 mbgl), BH232 (0.0-0.5 mbgl), BH232 (0.5-1.0 mbgl), BH232 (1.0-2.0 mbgl), BH232 (2.0-3.0 mbgl), BH243 (0.0-0.5 mbgl), BH243 (0.5-1.0 mbgl), BH245 (3.0-4.0 mbgl), BH245 (4.0-5.0 mbgl), BH246 (2.0-3.0 mbgl), BH246 (3.0-4.0 mbgl)

PROJECT WATERFRONT, DUBLIN 1.

- **Arsenic** - BH219 (0.0-0.5 mbgl), BH219 (0.5-1.0 mbgl), BH235 (8.0-9.0 mbgl), BH237 (0.0-0.5 mbgl), BH237 (0.5-1.0 mbgl), BH249 (6.0-7.0 mbgl)
- **Lead** - BH216 (0.5-1.0 mbgl), BH224 (1.0-2.0 mbgl), BH226 (0.0-0.5 mbgl), BH231 (0.0-0.5 mbgl), BH235 (0.0-0.5 mbgl), BH237 (0.0-0.5 mbgl), BH237 (0.5-1.0 mbgl), BH243 (0.0-0.5 mbgl), BH244 (0.0-0.5 mbgl), BH250 (0.5-1.0 mbgl)
- **Asbestos** - BH212 (0.0-1.0 mbgl), BH219 (0.0-0.5 mbgl), BH219 (0.5-1.0 mbgl), BH249 (0.0-0.5 mbgl)

All other results were reported at concentrations which did not exceed the GACs for the protection of human health.

6.1.2 Groundwater

The groundwater results have been compared to Generic Assessment Criteria (GAC) derived by RSK conservatively assuming a residential end use. The GACs for a sandy loam and a depth to groundwater of 5.00mbgl, most reflective of site conditions, have been used. The screening values for human health and their derivation are included in Appendix F.

Concentrations were reported in groundwater samples at levels which exceeded the GAC for residential use as follows:

- **Aliphatic EC8-EC10** – TP2;
- **Aliphatic EC10-EC12** – TP2, WS102, WS104, BH105 and BH244;
- **Aliphatic EC12-EC16** – TP2, WS102, WS104, BH101 and BH244;

As noted above, aliphatic hydrocarbon bands C₈-C₁₆ are present in groundwater in concentrations that exceed the GAC for human health with residential use. However, the respective GAC values exceed the theoretical solubility limit used by the RBCA model, which was used in the generation of groundwater screening values, presented in Appendix F. Theoretically these compounds could not dissolve into a solution with high enough concentrations to pose a risk to human health. As LNAPL was not identified in any of the monitoring wells installed at the site it is considered that the potential pathway is incomplete with respect to these determinants.

6.2 Water Environment

6.2.1 Groundwater

Where available Irish Environmental Quality Standard (EQS) values have been used which have been obtained from Statutory Instrument No. 366 '*European Union Environmental Objectives (Groundwater) (Amendment) Regulations 2016*'. These values have been supplemented by the Irish interim values presented in the EPA report '*Interim Report Towards Setting Guideline Values for the Protection of Groundwater in Ireland*' dated 2003.

Concentrations were reported in monitoring wells at levels which exceeded the GACs for the protection of the water environment as follows:

PROJECT WATERFRONT, DUBLIN 1.

- **Total TPH** – BH101, BH105, BH229, BH237, BH244, TP2, WS102, WS104
- **Benzene** –TP2, WS104
- **Toluene** – TP2
- **Ethylbenzene** – TP2, WS104
- **Xylene** – BH105, BH244, TP2, WS104
- **Naphthalene** – BH237, TP2, WS104
- **Fluoranthene** – BH105, BH237, BH244, WS104
- **Benzo(b)fluoranthene** – BH237, TP2, WS104
- **Benzo(k)fluoranthene** – Bh237, BH244, TP2, WS104
- **Benzo(a)pyrene** – BH101, BH104, BH105, BH111a, BH113, BH206, BH214, BH231, BH237, BH243, BH244, BH249, TP2, WS102, WS104
- **Indeno(123cd)pyrene** – BH105, BH237, BH244, WS104
- **Benzo(ghi)perylene** – BH237, BH244, WS104
- **Arsenic** – BH101, BH104, BH105, BH206, BH214, BH218, BH225, BH229, BH231, BH243, BH244, BH249, TP2, WS104
- **Nickel** – TP2
- **Zinc** – BH110a
- **Vinyl Chloride** – BH243, BH244
- **Phenol** – BH105, BH109a, BH111a, BH244, TP2, WS104
- **Ammoniacal Nitrogen** – BH101, BH102, BH103, BH104, BH105, BH107, BH108, BH108a, BH109, BH109a, BH110, BH110a, BH111a, BH206, BH213, BH214, BH217, BH218, BH225, BH229, BH231, BH237, BH243, BH244, BH249, TP2, WS102, WS104, WS112, WS113, WS114

All other results were reported at concentrations which did not exceed the GACs for the protection of the water environment.

6.2.2 Surface Water

The surface water results have been compared to Generic Assessment Criteria (GAC) derived by RSK for the protection of a controlled freshwater environment with reference to the Water Framework Directive (standards and classification) directions 2015. The screening values and their

PROJECT WATERFRONT, DUBLIN 1.

derivation are included in Appendix G. These values have been supplemented by EQS presented in the EPA report '*Interim Report Towards Setting Guideline Values for the Protection of Groundwater in Ireland*' dated 2003.

Laboratory analysis reported all contaminants at concentrations below the laboratory detection limit or below the adopted GAC.

6.3 Summary of Pollutant Linkages

Table 6-1 records the potential pollutant linkages that have been identified at the site. Justifications for the identification of a potential pollutant linkage together with the likelihood are also discussed.

Table 6-1: Summary of Pollutant Linkages

Asbestos, Metals, PAH, BTEX, MTBE and TPH in soil	Direct Contact	Future residents and Users	Incomplete. Soils on-site will be excavated to a depth of approximately 16mbgl and removed off-site as part of enabling works for disposal at appropriate licensed facilities or as soil and stone by-product for reuse under article 27 of the EC (waste directive) regs 2011. This will result in the removal of all contaminated soils on-site. Clean and certified fill material will be imported to site to achieve finished levels where necessary. The majority of the site will be within building footprints or covered hard standing.
		Off-site workers and residents	
		Maintenance Workers	
	Leaching	Groundwater	Incomplete. Soils on-site will be excavated to a depth of approximately 16mbgl and removed off-site as part of enabling works for disposal at appropriate licensed facilities or as soil and stone by-product for reuse under article 27 of the EC (waste directive) regs 2011. This will result in the removal of all contaminated soils on-site. Clean and certified fill material will be imported to site to achieve finished levels where necessary. The majority of the site will be within building footprints or covered hard standing.
	Vapour migration along fill, services and permeable strata	Future site residents and users	Incomplete. Soils on-site will be excavated to a depth of approximately 16mbgl and removed off-site as part of enabling works for disposal at appropriate licensed facilities or as soil and stone by-product for reuse under article 27 of the EC (waste directive) regs 2011. This will result in the removal of all contaminated soils on-site. Clean and certified fill material will be imported to site to achieve finished levels where necessary. The majority of the site will be within building footprints or covered hard standing.
		Off-site workers and residents	
Maintenance Workers			
Metals, PAH, BTEX, MTBE, Vinyl Chloride, Phenol, Ammoniacal Nitrogen and TPH in groundwater and surface water	Direct contact and ingestion	Future residents /users	Incomplete. The GACs protective of Human Health have been exceeded with regards to Aliphatic C8-C16, however, as outlined in section 6.1.2 these exceedences do not represent a risk to human health. LNAPL and/or DNAPL has not been identified on-site in measurable thicknesses during the investigation.
		Off-site workers and residents	
		Maintenance workers	
	Migration	Locally Important Aquifer	Incomplete. TPH, BTEX, Metals, PAH's, Vinyl Chloride, Phenol and Ammoniacal Nitrogen have exceeded the GAC's for environmental waters on site. However, the Dublin Boulder clay encountered at depth is considered to be an aquitard and therefore downward migration of contaminants is considered unlikely.
		River Liffey to the South of the site.	Incomplete. TPH, BTEX, Metals, PAH's, Vinyl Chloride, Phenol and Ammoniacal Nitrogen have exceeded the GAC's for environmental waters on site. However, surface water samples have been taken from the Liffey up and down stream of the site and adjacent to the site and no surface transitional waters GAC's have been exceeded. Therefore, the linkage is considered incomplete.
	Vapour migration along fill, services and permeable strata	Future residents /users	Incomplete. The GACs protective of Human health have not been exceeded. LNAPL and/or DNAPL has not been identified on-site in measurable thicknesses as part of this investigation.
Off-site workers and residents			
Maintenance/ Workers			

Based upon the above information pollution no complete pollutant linkages have been identified at the site with regards to the proposed future site use.

8 CONCLUSIONS

Following the completion of the environmental site assessment works and receipt of laboratory analytical results, a GQRA was completed to assess risks to human health and the water environment at the site.

The soil GACs for protection of human health with regards to a residential without home grown produce land use scenario were exceeded in soil samples analysed from sample locations as detailed in Tables 5.3 to 5.6 and summarised as follows;

- BH202 with regards to PAH compounds (benzo(b)fluoranthene, benzo(a)pyrene and dibenzo(ah)anthracene);
- BH204 with regards to aliphatic hydrocarbon bands EC10-EC12;
- BH208 with regards to PAH compounds (benzo(b)fluoranthene, benzo(a)pyrene and dibenzo(ah)anthracene);
- BH213 with regards to dibenzo(ah)anthracene;
- BH219 with regards to dibenzo(ah)anthracene) and arsenic.
- BH223 with regards to aliphatic hydrocarbon bands EC8-EC10;
- BH226 with regards to dibenzo(ah)anthracene and lead;
- BH229 with regards to PAH compounds (benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene and dibenzo(ah)anthracene);
- BH231 with regards to benzo(b)fluoranthene and Lead;
- BH232 with regards to aliphatic hydrocarbon bands EC10-EC12, aromatic hydrocarbon bands EC16-EC21, PAH compounds (naphthalene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene and dibenzo(ah)anthracene);
- BH235 with regards to arsenic and lead;
- BH237 with regards to arsenic and lead;
- BH243 with regards to PAH compounds (benzo(b)fluoranthene, benzo(a)pyrene and dibenzo(ah)anthracene) and lead;
- BH244 with regards to lead;
- BH245 with regards to aliphatic hydrocarbon bands EC10-EC12, aromatic hydrocarbon bands EC16-EC21, PAH compounds (naphthalene, benzo(a)anthracene, benzo(b)fluoranthene and dibenzo(ah)anthracene);

PROJECT WATERFRONT, DUBLIN 1.

- BH246 with regards to aliphatic hydrocarbon bands EC8-EC10, PAH compounds (naphthalene, benzo(b)fluoranthene, benzo(a)pyrene, and dibenzo(ah)anthracene);
- BH249 with regards to arsenic; and
- BH250 with regards to lead.

In addition, asbestos fibres (chrysotile) were identified in concentrations greater than 0.001%, indicating a potential risk to human health at the following locations and depths;

- BH212 0.0-1.0mbgl
- BH219 0.0-1.0mbgl; and
- BH249 0.0-0.5mbgl

However, RSK considers that there is no risk to Human Health of future site users from the exceedences noted above as soils on-site will be excavated to a depth of approximately 16mbgl and removed off-site as part of enabling works. This will result in the removal of all contaminated soils on-site.

The groundwater GACs for protection of human health with regards to a residential land use scenario were exceeded in groundwater samples analysed from sample locations as detailed in Tables 5.7 to 5.10 and summarised as follows;

- BH101 with regards to aliphatic hydrocarbon bands EC12-EC16;
- BH105 with regards to aliphatic hydrocarbon bands EC10-EC12;
- TP2 with regards to aliphatic hydrocarbon bands EC8-EC16;
- WS102 with regards to aliphatic hydrocarbon bands EC10-EC16; and
- WS104 with regards to aliphatic hydrocarbon bands EC10-EC16.

As outlined in section 6.1.2 these exceedences are not considered to represent a risk to human health. Therefore, no complete pollutant linkages with regards to risks to Human Health in a residential scenario have been identified at the site.

As noted in section 6.2.1, the groundwater GACs for the protection of environmental waters were exceeded in a number of boreholes on-site. Three surface water samples were retrieved from the River Liffey to assess receptor surface waters upstream, downstream and adjacent to the site. The surface water GACs for the protection of controlled freshwaters were not exceeded in any of the three samples taken along the River Liffey.

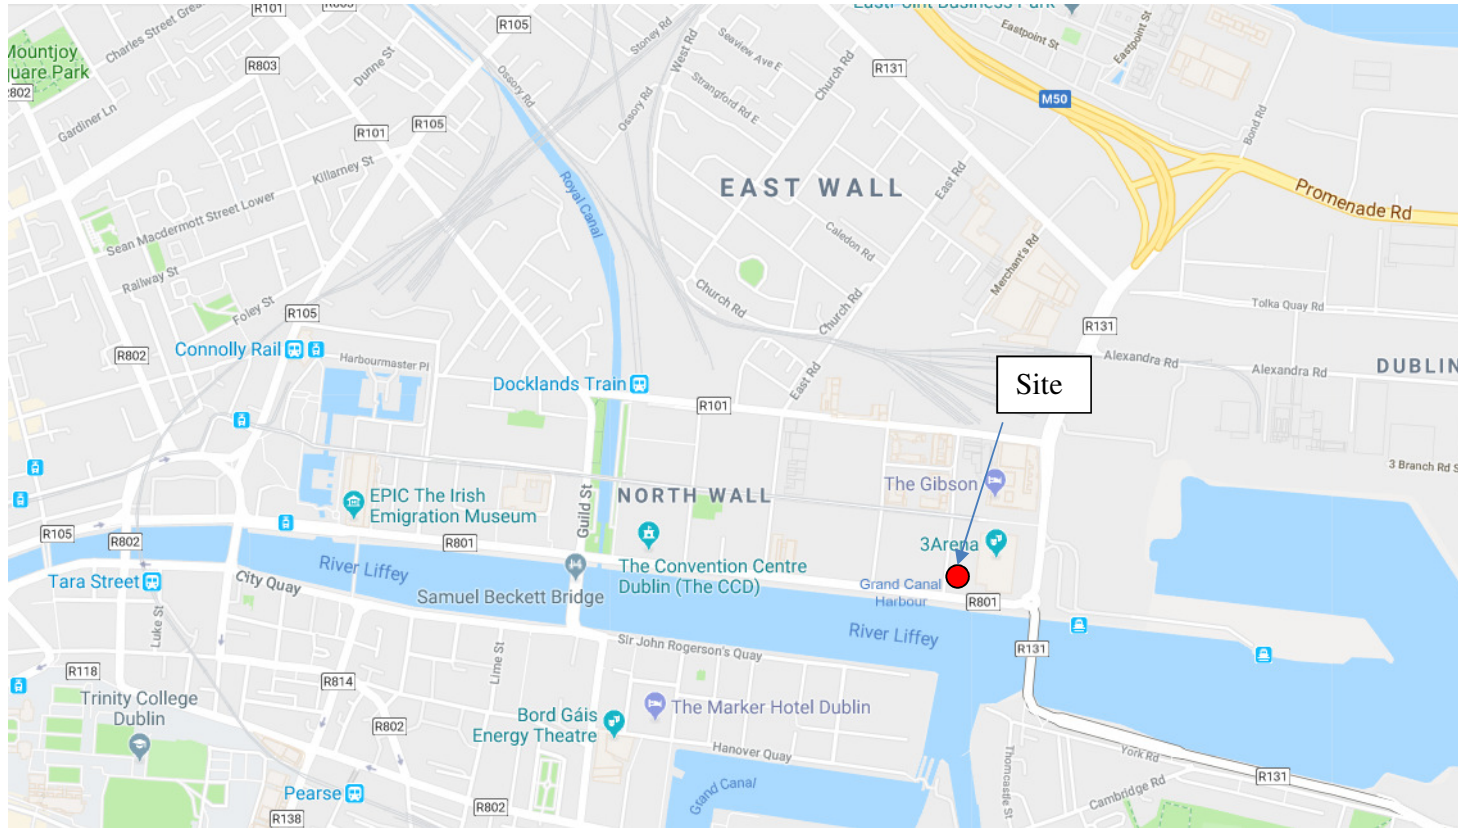

Given the results of surface water monitoring, no complete pollutant linkage has been identified between shallow groundwater contaminant concentrations on-site and the River Liffey. In addition, the boulder clay encountered at depth on-site is considered an aquitard to any downward movement of dissolved contaminants to the locally important aquifer below.

9 RECOMMENDATIONS

Based on the results and conclusions of the GQRA, RSK have proposed the following recommendations;

- As the site is to be excavated to a depth of approximately 16mbgl RSK does not consider it necessary to undertake any remediation measures with regards to impacted soils identified during the enabling works excavations as all soils are to be removed from site. Accordingly, RSK recommends that excavated waste soils are disposed of to an appropriately licensed landfill as per the Environmental Assessment and Soil Classification report⁽²⁾.
- Any impacted groundwater, encountered during enabling works, be pumped from the excavations and undergo treatment on-site which would enable pumped groundwaters to be disposed to sewer under discharge licence. A discharge license will have to be attained from Dublin City Council to pump to the sewer. Treated water will require continual monitoring to check that water quality standards are in compliance with the requirements of the discharge license.
- During enabling works, potential risks to construction workers should be mitigated through the implementation of measures by the contractor and their sub-contractor in accordance with construction health and safety legislation.
- An asbestos management plan should be put in place to manage the risks to construction workers from asbestos identified in soils on the site.
- During construction works where there is excavation and movement of soils, it is recommended that works be undertaken by appropriately trained contractors so that risks associated with the presence of asbestos in the soils on site are managed correctly.
- Surface water samples should be recovered from the Liffey upstream, adjacent to, and downstream of the site at regular intervals during the development works to monitor conditions for the potential of impacted groundwater discharging from the site to impact the quality of the River Liffey.

Service Constraints

RSK IRELAND LIMITED SERVICE CONSTRAINTS

1. This report and the Environmental Site Assessment carried out in connection with the report (together the "Services") were compiled and carried out by RSK Ireland Ltd (RSK) for Waterside Block 9 Developments Limited (the "client") in accordance with the terms of a contract between RSK and the "client" dated November 2018. The Services were performed by RSK with the skill and care ordinarily exercised by a reasonable Environmental consultant at the time the Services were performed. Further, and in particular, the Services were performed by RSK taking into account the limits of the scope of works required by the client, the time scale involved and the resources, including financial and manpower resources, agreed between RSK and the client.
2. Other than that expressly contained in paragraph 1 above, RSK provides no other representation or warranty whether express or implied, in relation to the Services.
3. Unless otherwise agreed in writing the Services were performed by RSK exclusively for the purposes of the client. RSK is not aware of any interest of or reliance by any party other than the client in or on the Services. Unless expressly provided in writing, RSK does not authorise, consent or condone any party other than the client relying upon the Services. Should this report or any part of this report, or otherwise details of the Services or any part of the Services be made known to any such party, and such party relies thereon that party does so wholly at its own and sole risk and RSK disclaims any liability to such parties. **Any such party would be well advised to seek independent advice from a competent environmental consultant and/or lawyer.**
4. It is RSK's understanding that this report is to be used for the purpose described in the introduction to the report. That purpose was a significant factor in determining the scope and level of the Services. Should the purpose for which the report is used, or the proposed use of the site change, this report may no longer be valid and any further use of or reliance upon the report in those circumstances by the client without RSK's review and advice shall be at the client's sole and own risk. Should RSK be requested to review the report after the date of this report, RSK shall be entitled to additional payment at the then existing rates or such other terms as agreed between RSK and the client.
5. The passage of time may result in changes in site conditions, regulatory or other legal provisions, technology or economic conditions which could render the report inaccurate or unreliable. The information and conclusions contained in this report should not be relied upon in the future without the written advice of RSK. In the absence of such written advice of RSK, reliance on the report in the future shall be at the client's own and sole risk. Should RSK be requested to review the report in the future, RSK shall be entitled to additional payment at the then existing rate or such other terms as may be agreed between RSK and the client.
6. The observations and conclusions described in this report are based solely upon the Services which were provided pursuant to the agreement between the client and RSK. RSK has not performed any observations, investigations, studies or testing not specifically set out or required by the contract between the client and RSK. RSK is not liable for the existence of any condition, the discovery of which would require performance of services not otherwise contained in the Services. For the avoidance of doubt, unless otherwise expressly referred to in the introduction to this report, RSK did not seek to evaluate the presence on or off the site of asbestos, electromagnetic fields, lead paint, heavy metals, radon gas or other radioactive or hazardous materials.
7. The Services are based upon RSK's observations of existing physical conditions at the Site gained from a walk-over survey of the site together with RSK's interpretation of information including documentation, obtained from third parties and from the client on the history and usage of the site. The Services are also based on information and/or analysis provided by independent testing and information services or laboratories upon which RSK was reasonably entitled to rely. The Services clearly are limited by the accuracy of the information, including documentation, reviewed by RSK and the observations possible at the time of the walk-over survey. Further RSK was not authorised and did not attempt to independently verify the accuracy or completeness of information, documentation or materials received from the client or third parties, including laboratories and information services, during the performance of the Services. RSK is not liable for any inaccurate information or conclusions, the discovery of which inaccuracies required the doing of any act including the gathering of any information which was not reasonably available to RSK and including the doing of any independent investigation of the information provided to RSK save as otherwise provided in the terms of the contract between the client and RSK.
8. The intrusive environmental site investigation aspects of the Services is a limited sampling of the site at pre-determined borehole and soil vapour locations based on the operational configuration of the site. The conclusions given in this report are based on information gathered at the specific test locations and can only be extrapolated to an undefined limited area around those locations. The extent of the limited area depends on the soil and groundwater conditions, together with the position of any current structures and underground facilities and natural and other activities on site. In addition chemical analysis was carried out for a limited number of parameters [as stipulated in the contract between the client and RSK] [based on an understanding of the available operational and historical information], and it should not be inferred that other chemical species are not present.
9. Any site drawing(s) provided in this report is (are) not meant to be an accurate base plan, but is (are) used to present the general relative locations of features on, and surrounding, the site. Features (boreholes, trial pits etc) annotated on site plans are not drawn to scale but are centred over the approximate location. Such features should not be used for setting out and should be considered indicative only.

APPENDIX B

Borehole Logs

RSK (IRELAND) LTD					Site: 602387 Project Waterfront		BH No: BH201	
Drilling Method: Commachio			Date: 11/12/2018		Client: Ronan Group Real Estate		Engineer: JS	
Sample Depth (m)	Sample Type	PID (ppm)	Water Depth (m)	Field Records	MW Depth (m)	Description:		
				No visual / olfactory evidence	0.0	MADE GROUND –Concrete slab		
				No visual / olfactory evidence	0.2	MADE GROUND – Brown, clayey, sandy, medium to coarse, angular GRAVEL (fill)		
0.0-1.0	ES	0		No visual / olfactory evidence	0.3	MADE GROUND – Light brown, slightly sandy, gravelly (medium to coarse, angular to sub-angular) CLAY		
1.0-2.0	ES ES	0 0		No visual / olfactory evidence	1.0	MADE GROUND – Blackish grey, slightly sandy SILT with some old brick fragments. Becomes natural ground ~ 2.0 mbgl		
3.0-4.0 4.0-5.0	ES ES	0 0		No visual / olfactory evidence	3.0	MADE GROUND - Black, slightly gravelly (fine & rounded-sub-rounded), SILT (reworked)		
5.0-6.0 6.0-7.0	ES ES	0 0	6.5	No visual / olfactory evidence	5.3	NATURAL GROUND – Greyish black, slightly sandy, slightly silty, clayey, fine to medium, sub-rounded to sub-angular GRAVELS		
7.0-8.0 8.0-9.0	ES ES ES ES	0 0 0 0		No visual / olfactory evidence	7.0	NATURAL GROUND – Light grey, slightly sandy, silty GRAVELS		
				No visual / olfactory evidence	11.5	NATURAL GROUND – Greyish brown, gravelly, slightly silty, sandy (fine) GRAVEL		
13.0-14.0 14.0-15.0 15.0-16.0 17.0-18.0	ES ES ES ES	0 0 0 0		No visual / olfactory evidence	13.0	NATURAL GROUND – Greyish black, slightly gravelly (medium to coarse, angular to sub-angular) CLAY (BOULDER CLAY)		
Remarks: Groundwater strike at 6.5 mbgl						Borehole terminated at 17.0 mbgl

Post Certification Report

RSK Group Plc
Unit B
Bluebell Business Centre
Old Naas Road
Dublin
Dublin 12
Attention: James Stretton

Date:	05/04/2019	Location:	City Block 9
Customer:	RSK Group Plc	No. Of Samples Received:	21
Your Reference:	602387	Samples Scheduled:	21

Accredited laboratory tests are defined within the report, but opinions, interpretations and on-site data expressed herein are outside the scope of ISO 17025 accreditation.

Chemical testing (unless subcontracted) performed at ALS Life Sciences Ltd Hawarden (Method codes TM) or ALS Life Sciences Ltd Aberdeen (Method codes S).

ISO5667-3 Water quality - Sampling - Part3 -

During Transportation samples shall be stored in a cooling device capable of maintaining a temperature of (5±3)°C.

ALS have data which show that a cool box with 4 frozen icepacks is capable of maintaining pre-chilled samples at a temperature of (5±3)°C for a period of up to 24hrs.

Only received samples which have had analysis scheduled will be shown on the following pages.

Leach Test Information

Date Prepared	18-Feb-2019
pH (pH Units)	7.86
Conductivity (µS/cm)	214
Temperature (°C)	18.10
Volume Leachant (Litres)	0.873

Solid Results are expressed on a dry weight basis, after correction for moisture content where applicable
 Stated limits are for guidance only and ALS Environmental cannot be held responsible for any discrepancies with current legislation
 Mcerts Certification does not apply to leachates

Table of Results - Appendix

REPORT KEY

Results expressed as (e.g.) 1.03E-07 is equivalent to 1.03x10⁻⁷

NDP	No Determination Possible	#	ISO 17025 Accredited	*	Subcontracted Test	M	MCERTS Accredited
NFD	No Fibres Detected	PFD	Possible Fibres Detected	»	Result previously reported (Incremental reports only)	EC	Equivalent Carbon (Aromatics C8-C35)

Note: Method detection limits are not always achievable due to various circumstances beyond our control

Method No	Reference	Description
ASB_PREP		
PM001		Preparation of Samples for Metals Analysis
PM024	Modified BS 1377	Soil preparation including homogenisation, moisture screens of soils for Asbestos Containing Material
PM115		Leaching Procedure for CEN One Stage Leach Test 2:1 & 10:1 1 Step
TM018	BS 1377: Part 3 1990	Determination of Loss on Ignition
TM048	HSG 248, Asbestos: The analysts' guide for sampling, analysis and clearance procedures	Identification of Asbestos in Bulk Material
TM061	Method for the Determination of EPH, Massachusetts Dept. of EP, 1998	Determination of Extractable Petroleum Hydrocarbons by GC-FID (C10-C40)
TM062 (S)	National Grid Property Holdings Methods for the Collection & Analysis of Samples from National Grid Sites version 1 Sec 3.9	Determination of Phenols in Soils by HPLC
TM089	Modified: US EPA Methods 8020 & 602	Determination of Gasoline Range Hydrocarbons (GRO) by Headspace GC-FID (C4-C12)
TM090	Method 5310, AWWA/APHA, 20th Ed., 1999 / Modified: US EPA Method 415.1 & 9060	Determination of Total Organic Carbon/Total Inorganic Carbon in Water and Waste Water
TM104	Method 4500F, AWWA/APHA, 20th Ed., 1999	Determination of Fluoride using the Kone Analyser
TM116	Modified: US EPA Method 8260, 8120, 8020, 624, 610 & 602	Determination of Volatile Organic Compounds by Headspace / GC-MS
TM123	BS 2690: Part 121:1981	The Determination of Total Dissolved Solids in Water
TM132	In - house Method	ELTRA CS800 Operators Guide
TM133	BS 1377: Part 3 1990; BS 6068-2.5	Determination of pH in Soil and Water using the GLpH pH Meter
TM151	Method 3500D, AWWA/APHA, 20th Ed., 1999	Determination of Hexavalent Chromium using Kone analyser
TM152	Method 3125B, AWWA/APHA, 20th Ed., 1999	Analysis of Aqueous Samples by ICP-MS
TM168	EPA Method 8082, Polychlorinated Biphenyls by Gas Chromatography	Determination of WHO12 and EC7 Polychlorinated Biphenyl Congeners by GC-MS in Soils
TM173	Analysis of Petroleum Hydrocarbons in Environmental Media – Total Petroleum Hydrocarbon Criteria	Determination of Speciated Extractable Petroleum Hydrocarbons in Soils by GC-FID
TM181	US EPA Method 6010B	Determination of Routine Metals in Soil by iCap 6500 Duo ICP-OES
TM182	CEN/TC 292 - WI 292046-characterization of waste-leaching Behaviour Tests- Acid and Base Neutralization Capacity Test	Determination of Acid Neutralisation Capacity (ANC) Using Autotitration in Soils
TM183	BS EN 23506:2002, (BS 6068-2.74:2002) ISBN 0 580 38924 3	Determination of Trace Level Mercury in Waters and Leachates by PSA Cold Vapour Atomic Fluorescence Spectrometry
TM184	EPA Methods 325.1 & 325.2,	The Determination of Anions in Aqueous Matrices using the Kone Spectrophotometric Analysers
TM218	Shaker extraction - EPA method 3546.	The determination of PAH in soil samples by GC-MS
TM259	by HPLC	Determination of Phenols in Waters and Leachates by HPLC
TM410	Shaker extraction-In house coronene method	Determination of Coronene in soils by GCMS

NA = not applicable.

Chemical testing (unless subcontracted) performed at ALS Life Sciences Ltd Hawarden (Method codes TM) or ALS Life Sciences Ltd Aberdeen (Method codes S).

Appendix

General

1. Results are expressed on a dry weight basis (dried at 35°C) for all soil analyses except for the following: NRA and CEN Leach tests, flash point LOI, pH, ammonium as NH4 by the BRE method, VOC TICs and SVOC TICs.

2. Samples will be run in duplicate upon request, but an additional charge may be incurred

3. If sufficient sample is received a sub sample will be retained free of charge for 30 days after analysis is completed (e-mailed) for all sample types unless the sample is destroyed on testing. The prepared soil sub sample that is analysed for asbestos will be retained for a period of 6 months after the analysis date. All bulk samples will be retained for a period of 6 months after the analysis date. All samples received and not scheduled will be disposed of one month after the date of receipt unless we are instructed to the contrary. Once the initial period has expired, a storage charge will be applied for each month or part thereof until the client cancels the request for sample storage. ALcontrol Laboratories reserve the right to charge for samples received and stored but not analysed.

4. With respect to turnaround, we will always endeavour to meet client requirements wherever possible, but turnaround times cannot be absolutely guaranteed due to so many variables beyond our control.

5. We take responsibility for any test performed by sub-contractors (marked with an asterisk). We endeavour to use UKAS/MCERTS Accredited Laboratories, who either complete a quality questionnaire or are audited by ourselves. For some determinands there are no UKAS/MCERTS Accredited Laboratories, in this instance a laboratory with a known track record will be utilised.

6. When requested, the individual sub sample scheduled will be analysed in house for the presence of asbestos fibres and asbestos containing material by our documented in house method TM048 based on HSG 248 (2005), which is accredited to ISO17025. If a specific asbestos fibre type is not found this will be reported as "Not detected". If no asbestos fibre types are found all will be reported as "Not detected" and the sub sample analysed deemed to be clear of asbestos. If an asbestos fibre type is found it will be reported as detected (for each fibre type found). Testing can be carried out on asbestos positive samples, but, due to Health and Safety considerations, may be replaced by alternative tests or reported as No Determination Possible (NDP). The quantity of asbestos present is not determined unless specifically requested.

7. If no separate volatile sample is supplied by the client, or if a headspace or sediment is present in the volatile sample, the integrity of the data may be compromised. This will be flagged up as an invalid VOC on the test schedule and the result marked as deviating on the test certificate.

8. If appropriate preserved bottles are not received preservation will take place on receipt. However, the integrity of the data may be compromised.

9. NDP - No determination possible due to insufficient/unsuitable sample.

10. Metals in water are performed on a filtered sample, and therefore represent dissolved metals - total metals must be requested separately.

11. Results relate only to the items tested.

12. LoDs (Limit of Detection) for wet tests reported on a dry weight basis are not corrected for moisture content.

13. **Surrogate recoveries** - Surrogates are added to your sample to monitor recovery of the test requested. A % recovery is reported, results are not corrected for the recovery measured. Typical recoveries for organics tests are 70-130%, they are generally wider for volatiles analysis, 50-150%. Recoveries in soils are affected by organic rich or clay rich matrices. Waters can be affected by remediation fluids or high amounts of sediment. Test results are only ever reported if all of the associated quality checks pass; it is assumed that all recoveries outside of the values above are due to matrix affect.

14. **Product analyses** - Organic analyses on products can only be semi-quantitative due to the matrix effects and high dilution factors employed.

15. Phenols monohydric by HPLC include phenol, cresols (2-Methylphenol, 3-Methylphenol and 4-Methylphenol) and Xylenols (2,3 Dimethylphenol, 2,4 Dimethylphenol, 2,5 Dimethylphenol, 2,6 Dimethylphenol, 3,4 Dimethylphenol, 3,5 Dimethylphenol).

16. Total of 5 speciated phenols by HPLC includes Phenol, 2,3,5-Trimethyl Phenol, 2-Isopropylphenol, Cresols and Xylenols (as detailed in 15).

17. Stones/debris are not routinely removed. We always endeavour to take a representative sub sample from the received sample.

18. In certain circumstances the method detection limit may be elevated due to the sample being outside the calibration range. Other factors that may contribute to this include possible interferences. In both cases the sample would be diluted which would cause the method detection limit to be raised.

19. Mercury results quoted on soils will not include volatile mercury as the analysis is performed on a dried and crushed sample.

20. For leachate preparations other than Zero Headspace Extraction (ZHE) volatile loss may occur.

21. For the BSEN 12457-3 two batch process to allow the cumulative release to be calculated, the volume of the leachate produced is measured and filtered for all tests. We therefore cannot carry out any unfiltered analysis. The tests affected include volatiles GCFID/GCMS and all subcontracted analysis.

22. We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample. Other coarse granular material such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

23. Analysis and identification of specific compounds using GCFID is by retention time only, and we routinely calibrate and quantify for benzene, toluene, ethylbenzenes and xylenes (BTEX). For total volatiles in the C5-C12 range, the total area of the chromatogram is integrated and expressed as ug/kg or ug/l. Although this analysis is commonly used for the quantification of gasoline range organics (GRO), the system will also detect other compounds such as chlorinated solvents, and this may lead to a falsely high result with respect to hydrocarbons only. It is not possible to specifically identify these non-hydrocarbons, as standards are not routinely run for any other compounds, and for more definitive identification, volatiles by GCMS should be utilised.

24. **Tentatively Identified Compounds (TICs)** are non-target peaks in VOC and SVOC analysis. All non-target peaks detected with a concentration above the LoD are subjected to a mass spectral library search. Non-target peaks with a library search confidence of >75% are reported based on the best mass spectral library match. When a non-target peak with a library search confidence of <75% is detected it is reported as "mixed hydrocarbons". Non-target compounds identified from the scan data are semi-quantified relative to one of the deuterated internal standards, under the same chromatographic conditions as the target compounds. This result is reported as a semi-quantitative value and reported as Tentatively Identified Compounds (TICs). TICs are outside the scope of UKAS accreditation and are not moisture corrected.

Sample Deviations

If a sample is classed as deviated then the associated results may be compromised.

1	Container with Headspace provided for volatiles analysis
2	Incorrect container received
3	Deviation from method
4	Holding time exceeded before sample received
5	Samples exceeded holding time before preservation was performed
§	Sampled on date not provided
◆	Sample holding time exceeded in laboratory
@	Sample holding time exceeded due to sampled on date
&	Sample Holding Time exceeded - Late arrival of instructions.

Asbestos

Identification of Asbestos in Bulk Materials & Soils

The results for identification of asbestos in bulk materials are obtained from supplied bulk materials which have been examined to determine the presence of asbestos fibres using ALcontrol Laboratories (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2005).

The results for identification of asbestos in soils are obtained from a homogenised sub sample which has been examined to determine the presence of asbestos fibres using ALcontrol Laboratories (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2005).

Asbestos Type	Common Name
Chrysotile	White Asbestos
Amosite	Brown Asbestos
Crocidolite	Blue Asbestos
Fibrous Actinolite	-
Fibrous Anorthophyllite	-
Fibrous Tremolite	-

Visual Estimation Of Fibre Content

Estimation of fibre content is not permitted as part of our UKAS accredited test other than: - Trace - Where only one or two asbestos fibres were identified.

Further guidance on typical asbestos fibre content of manufactured products can be found in HSG 264.

The identification of asbestos containing materials and soils falls within our schedule of tests for which we hold UKAS accreditation, however opinions, interpretations and all other information contained in the report are outside the scope of UKAS accreditation.

ISO5667-3 Water quality - Sampling - Part3 -
During Transportation samples shall be stored in a cooling device capable of
maintaining a temperature of (5±3)°C.

ALS have data which show that a cool box with 4 frozen icepacks is capable of
maintaining pre-chilled samples at a temperature of (5±3)°C for a period of up to
24hrs.

Only received samples which have had analysis scheduled will be shown on the following pages.

Leach Test Information

Date Prepared	15-Feb-2019
pH (pH Units)	7.84
Conductivity (µS/cm)	644
Temperature (°C)	10.70
Volume Leachant (Litres)	0.892

Solid Results are expressed on a dry weight basis, after correction for moisture content where applicable
 Stated limits are for guidance only and ALS Environmental cannot be held responsible for any discrepancies with current legislation
 Mcerts Certification does not apply to leachates
 05/04/2019 13:54:58

Table of Results - Appendix

REPORT KEY

Results expressed as (e.g.) 1.03E-07 is equivalent to 1.03x10⁻⁷

NDP	No Determination Possible	#	ISO 17025 Accredited	*	Subcontracted Test	M	MCERTS Accredited
NFD	No Fibres Detected	PFD	Possible Fibres Detected	»	Result previously reported (Incremental reports only)	EC	Equivalent Carbon (Aromatics C8-C35)

Note: Method detection limits are not always achievable due to various circumstances beyond our control

Method No	Reference	Description
ASB_PREP		
PM001		Preparation of Samples for Metals Analysis
PM024	Modified BS 1377	Soil preparation including homogenisation, moisture screens of soils for Asbestos Containing Material
PM115		Leaching Procedure for CEN One Stage Leach Test 2:1 & 10:1 1 Step
TM018	BS 1377: Part 3 1990	Determination of Loss on Ignition
TM048	HSG 248, Asbestos: The analysts' guide for sampling, analysis and clearance procedures	Identification of Asbestos in Bulk Material
TM061	Method for the Determination of EPH, Massachusetts Dept. of EP, 1998	Determination of Extractable Petroleum Hydrocarbons by GC-FID (C10-C40)
TM062 (S)	National Grid Property Holdings Methods for the Collection & Analysis of Samples from National Grid Sites version 1 Sec 3.9	Determination of Phenols in Soils by HPLC
TM089	Modified: US EPA Methods 8020 & 602	Determination of Gasoline Range Hydrocarbons (GRO) by Headspace GC-FID (C4-C12)
TM090	Method 5310, AWWA/APHA, 20th Ed., 1999 / Modified: US EPA Method 415.1 & 9060	Determination of Total Organic Carbon/Total Inorganic Carbon in Water and Waste Water
TM104	Method 4500F, AWWA/APHA, 20th Ed., 1999	Determination of Fluoride using the Kone Analyser
TM116	Modified: US EPA Method 8260, 8120, 8020, 624, 610 & 602	Determination of Volatile Organic Compounds by Headspace / GC-MS
TM123	BS 2690: Part 121:1981	The Determination of Total Dissolved Solids in Water
TM132	In - house Method	ELTRA CS800 Operators Guide
TM133	BS 1377: Part 3 1990;BS 6068-2.5	Determination of pH in Soil and Water using the GLpH pH Meter
TM151	Method 3500D, AWWA/APHA, 20th Ed., 1999	Determination of Hexavalent Chromium using Kone analyser
TM152	Method 3125B, AWWA/APHA, 20th Ed., 1999	Analysis of Aqueous Samples by ICP-MS
TM168	EPA Method 8082, Polychlorinated Biphenyls by Gas Chromatography	Determination of WHO12 and EC7 Polychlorinated Biphenyl Congeners by GC-MS in Soils
TM173	Analysis of Petroleum Hydrocarbons in Environmental Media – Total Petroleum Hydrocarbon Criteria	Determination of Speciated Extractable Petroleum Hydrocarbons in Soils by GC-FID
TM181	US EPA Method 6010B	Determination of Routine Metals in Soil by iCap 6500 Duo ICP-OES
TM182	CEN/TC 292 - WI 292046-characterization of waste-leaching Behaviour Tests- Acid and Base Neutralization Capacity Test	Determination of Acid Neutralisation Capacity (ANC) Using Autotitration in Soils
TM183	BS EN 23506:2002, (BS 6068-2.74:2002) ISBN 0 580 38924 3	Determination of Trace Level Mercury in Waters and Leachates by PSA Cold Vapour Atomic Fluorescence Spectrometry
TM184	EPA Methods 325.1 & 325.2,	The Determination of Anions in Aqueous Matrices using the Kone Spectrophotometric Analysers
TM218	Shaker extraction - EPA method 3546.	The determination of PAH in soil samples by GC-MS
TM259	by HPLC	Determination of Phenols in Waters and Leachates by HPLC
TM304	HSE Contract research Report no 83/1996	Asbestos Quantification in Soil: Fibres identified by morphology only
TM410	Shaker extraction-In house coronene method	Determination of Coronene in soils by GCMS

NA = not applicable.

Chemical testing (unless subcontracted) performed at ALS Life Sciences Ltd Hawarden (Method codes TM) or ALS Life Sciences Ltd Aberdeen (Method codes S).

Appendix

General

1. Results are expressed on a dry weight basis (dried at 35°C) for all soil analyses except for the following: NRA and CEN Leach tests, flash point LOI, pH, ammonium as NH4 by the BRE method, VOC TICs and SVOC TICs.

2. Samples will be run in duplicate upon request, but an additional charge may be incurred

3. If sufficient sample is received a sub sample will be retained free of charge for 30 days after analysis is completed (e-mailed) for all sample types unless the sample is destroyed on testing. The prepared soil sub sample that is analysed for asbestos will be retained for a period of 6 months after the analysis date. All bulk samples will be retained for a period of 6 months after the analysis date. All samples received and not scheduled will be disposed of one month after the date of receipt unless we are instructed to the contrary. Once the initial period has expired, a storage charge will be applied for each month or part thereof until the client cancels the request for sample storage. ALcontrol Laboratories reserve the right to charge for samples received and stored but not analysed.

4. With respect to turnaround, we will always endeavour to meet client requirements wherever possible, but turnaround times cannot be absolutely guaranteed due to so many variables beyond our control.

5. We take responsibility for any test performed by sub-contractors (marked with an asterisk). We endeavour to use UKAS/MCERTS Accredited Laboratories, who either complete a quality questionnaire or are audited by ourselves. For some determinands there are no UKAS/MCERTS Accredited Laboratories, in this instance a laboratory with a known track record will be utilised.

6. When requested, the individual sub sample scheduled will be analysed in house for the presence of asbestos fibres and asbestos containing material by our documented in house method TM048 based on HSG 248 (2005), which is accredited to ISO17025. If a specific asbestos fibre type is not found this will be reported as "Not detected". If no asbestos fibre types are found all will be reported as "Not detected" and the sub sample analysed deemed to be clear of asbestos. If an asbestos fibre type is found it will be reported as detected (for each fibre type found). Testing can be carried out on asbestos positive samples, but, due to Health and Safety considerations, may be replaced by alternative tests or reported as No Determination Possible (NDP). The quantity of asbestos present is not determined unless specifically requested.

7. If no separate volatile sample is supplied by the client, or if a headspace or sediment is present in the volatile sample, the integrity of the data may be compromised. This will be flagged up as an invalid VOC on the test schedule and the result marked as deviating on the test certificate.

8. If appropriate preserved bottles are not received preservation will take place on receipt. However, the integrity of the data may be compromised.

9. NDP - No determination possible due to insufficient/unsuitable sample.

10. Metals in water are performed on a filtered sample, and therefore represent dissolved metals - total metals must be requested separately.

11. Results relate only to the items tested.

12. LoDs (Limit of Detection) for wet tests reported on a dry weight basis are not corrected for moisture content.

13. **Surrogate recoveries** - Surrogates are added to your sample to monitor recovery of the test requested. A % recovery is reported, results are not corrected for the recovery measured. Typical recoveries for organics tests are 70-130%, they are generally wider for volatiles analysis, 50-150%. Recoveries in soils are affected by organic rich or clay rich matrices. Waters can be affected by remediation fluids or high amounts of sediment. Test results are only ever reported if all of the associated quality checks pass; it is assumed that all recoveries outside of the values above are due to matrix affect.

14. **Product analyses** - Organic analyses on products can only be semi-quantitative due to the matrix effects and high dilution factors employed.

15. Phenols monohydric by HPLC include phenol, cresols (2-Methylphenol, 3-Methylphenol and 4-Methylphenol) and Xylenols (2,3 Dimethylphenol, 2,4 Dimethylphenol, 2,5 Dimethylphenol, 2,6 Dimethylphenol, 3,4 Dimethylphenol, 3,5 Dimethylphenol).

16. Total of 5 speciated phenols by HPLC includes Phenol, 2,3,5-Trimethyl Phenol, 2-Isopropylphenol, Cresols and Xylenols (as detailed in 15).

17. Stones/debris are not routinely removed. We always endeavour to take a representative sub sample from the received sample.

18. In certain circumstances the method detection limit may be elevated due to the sample being outside the calibration range. Other factors that may contribute to this include possible interferences. In both cases the sample would be diluted which would cause the method detection limit to be raised.

19. Mercury results quoted on soils will not include volatile mercury as the analysis is performed on a dried and crushed sample.

20. For leachate preparations other than Zero Headspace Extraction (ZHE) volatile loss may occur.

21. For the BSEN 12457-3 two batch process to allow the cumulative release to be calculated, the volume of the leachate produced is measured and filtered for all tests. We therefore cannot carry out any unfiltered analysis. The tests affected include volatiles GCFID/GCMS and all subcontracted analysis.

22. We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample. Other coarse granular material such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

23. Analysis and identification of specific compounds using GCFID is by retention time only, and we routinely calibrate and quantify for benzene, toluene, ethylbenzenes and xylenes (BTEX). For total volatiles in the C5-C12 range, the total area of the chromatogram is integrated and expressed as ug/kg or ug/l. Although this analysis is commonly used for the quantification of gasoline range organics (GRO), the system will also detect other compounds such as chlorinated solvents, and this may lead to a falsely high result with respect to hydrocarbons only. It is not possible to specifically identify these non-hydrocarbons, as standards are not routinely run for any other compounds, and for more definitive identification, volatiles by GCMS should be utilised.

24. **Tentatively Identified Compounds (TICs)** are non-target peaks in VOC and SVOC analysis. All non-target peaks detected with a concentration above the LoD are subjected to a mass spectral library search. Non-target peaks with a library search confidence of >75% are reported based on the best mass spectral library match. When a non-target peak with a library search confidence of <75% is detected it is reported as "mixed hydrocarbons". Non-target compounds identified from the scan data are semi-quantified relative to one of the deuterated internal standards, under the same chromatographic conditions as the target compounds. This result is reported as a semi-quantitative value and reported as Tentatively Identified Compounds (TICs). TICs are outside the scope of UKAS accreditation and are not moisture corrected.

Sample Deviations

If a sample is classed as deviated then the associated results may be compromised.

1	Container with Headspace provided for volatiles analysis
2	Incorrect container received
3	Deviation from method
4	Holding time exceeded before sample received
5	Samples exceeded holding time before preservation was performed
§	Sampled on date not provided
◆	Sample holding time exceeded in laboratory
@	Sample holding time exceeded due to sampled on date
&	Sample Holding Time exceeded - Late arrival of instructions.

Asbestos

Identification of Asbestos in Bulk Materials & Soils

The results for identification of asbestos in bulk materials are obtained from supplied bulk materials which have been examined to determine the presence of asbestos fibres using ALcontrol Laboratories (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2005).

The results for identification of asbestos in soils are obtained from a homogenised sub sample which has been examined to determine the presence of asbestos fibres using ALcontrol Laboratories (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2005).

Asbestos Type	Common Name
Chrysotile	White Asbestos
Amosite	Brown Asbestos
Crocidolite	Blue Asbestos
Fibrous Actinolite	-
Fibrous Anorthophyllite	-
Fibrous Tremolite	-

Visual Estimation Of Fibre Content

Estimation of fibre content is not permitted as part of our UKAS accredited test other than: - Trace - Where only one or two asbestos fibres were identified.

Further guidance on typical asbestos fibre content of manufactured products can be found in HSG 264.

The identification of asbestos containing materials and soils falls within our schedule of tests for which we hold UKAS accreditation, however opinions, interpretations and all other information contained in the report are outside the scope of UKAS accreditation.

ISO5667-3 Water quality - Sampling - Part3 -

During Transportation samples shall be stored in a cooling device capable of maintaining a temperature of (5±3)°C.

ALS have data which show that a cool box with 4 frozen icepacks is capable of maintaining pre-chilled samples at a temperature of (5±3)°C for a period of up to 24hrs.

Only received samples which have had analysis scheduled will be shown on the following pages.

Solid Waste Analysis	Result
Total Organic Carbon (%)	0.662
Loss on Ignition (%)	1.89
Sum of BTEX (mg/kg)	-
Sum of 7 PCBs (mg/kg)	<0.021
Mineral Oil (mg/kg)	10.9
PAH Sum of 17 (mg/kg)	<10.0
pH (pH Units)	8.37
ANC to pH 6 (mol/kg)	0.312
ANC to pH 4 (mol/kg)	1.27

Eluate Analysis	C ₂ Conc ⁿ in 10:1 eluate (mg/l)		A ₂ 10:1 conc ⁿ leached (mg/kg)		Limit values for compliance leaching test using BS EN 12457-3 at L/S 10 l/kg
	Result	Limit of Detection	Result	Limit of Detection	
Metal Prep	0	<0	0	<0	-

Leach Test Information

Date Prepared	12-Feb-2019
pH (pH Units)	8.12
Conductivity (µS/cm)	564
Temperature (°C)	18.30
Volume Leachant (Litres)	0.893

Solid Results are expressed on a dry weight basis, after correction for moisture content where applicable
 Stated limits are for guidance only and ALS Environmental cannot be held responsible for any discrepancies with current legislation
 Mcerts Certification does not apply to leachates

Table of Results - Appendix

REPORT KEY

Results expressed as (e.g.) 1.03E-07 is equivalent to 1.03x10⁻⁷

NDP	No Determination Possible	#	ISO 17025 Accredited	*	Subcontracted Test	M	MCERTS Accredited
NFD	No Fibres Detected	PFD	Possible Fibres Detected	»	Result previously reported (Incremental reports only)	EC	Equivalent Carbon (Aromatics C8-C35)

Note: Method detection limits are not always achievable due to various circumstances beyond our control

Method No	Reference	Description
ASB_PREP		
PM001		Preparation of Samples for Metals Analysis
PM024	Modified BS 1377	Soil preparation including homogenisation, moisture screens of soils for Asbestos Containing Material
PM115		Leaching Procedure for CEN One Stage Leach Test 2:1 & 10:1 1 Step
TM018	BS 1377: Part 3 1990	Determination of Loss on Ignition
TM048	HSG 248, Asbestos: The analysts' guide for sampling, analysis and clearance procedures	Identification of Asbestos in Bulk Material
TM061	Method for the Determination of EPH, Massachusetts Dept. of EP, 1998	Determination of Extractable Petroleum Hydrocarbons by GC-FID (C10-C40)
TM062 (S)	National Grid Property Holdings Methods for the Collection & Analysis of Samples from National Grid Sites version 1 Sec 3.9	Determination of Phenols in Soils by HPLC
TM089	Modified: US EPA Methods 8020 & 602	Determination of Gasoline Range Hydrocarbons (GRO) by Headspace GC-FID (C4-C12)
TM090	Method 5310, AWWA/APHA, 20th Ed., 1999 / Modified: US EPA Method 415.1 & 9060	Determination of Total Organic Carbon/Total Inorganic Carbon in Water and Waste Water
TM104	Method 4500F, AWWA/APHA, 20th Ed., 1999	Determination of Fluoride using the Kone Analyser
TM116	Modified: US EPA Method 8260, 8120, 8020, 624, 610 & 602	Determination of Volatile Organic Compounds by Headspace / GC-MS
TM123	BS 2690: Part 121:1981	The Determination of Total Dissolved Solids in Water
TM132	In - house Method	ELTRA CS800 Operators Guide
TM133	BS 1377: Part 3 1990;BS 6068-2.5	Determination of pH in Soil and Water using the GLpH pH Meter
TM151	Method 3500D, AWWA/APHA, 20th Ed., 1999	Determination of Hexavalent Chromium using Kone analyser
TM152	Method 3125B, AWWA/APHA, 20th Ed., 1999	Analysis of Aqueous Samples by ICP-MS
TM168	EPA Method 8082, Polychlorinated Biphenyls by Gas Chromatography	Determination of WHO12 and EC7 Polychlorinated Biphenyl Congeners by GC-MS in Soils
TM173	Analysis of Petroleum Hydrocarbons in Environmental Media – Total Petroleum Hydrocarbon Criteria	Determination of Speciated Extractable Petroleum Hydrocarbons in Soils by GC-FID
TM181	US EPA Method 6010B	Determination of Routine Metals in Soil by iCap 6500 Duo ICP-OES
TM182	CEN/TC 292 - WI 292046-characterization of waste-leaching Behaviour Tests- Acid and Base Neutralization Capacity Test	Determination of Acid Neutralisation Capacity (ANC) Using Autotitration in Soils
TM183	BS EN 23506:2002, (BS 6068-2.74:2002) ISBN 0 580 38924 3	Determination of Trace Level Mercury in Waters and Leachates by PSA Cold Vapour Atomic Fluorescence Spectrometry
TM184	EPA Methods 325.1 & 325.2,	The Determination of Anions in Aqueous Matrices using the Kone Spectrophotometric Analysers
TM218	Shaker extraction - EPA method 3546.	The determination of PAH in soil samples by GC-MS
TM259	by HPLC	Determination of Phenols in Waters and Leachates by HPLC
TM304	HSE Contract research Report no 83/1996	Asbestos Quantification in Soil: Fibres identified by morphology only
TM410	Shaker extraction-In house coronene method	Determination of Coronene in soils by GCMS

NA = not applicable.

Chemical testing (unless subcontracted) performed at ALS Life Sciences Ltd Hawarden (Method codes TM) or ALS Life Sciences Ltd Aberdeen (Method codes S).

Appendix

General

1. Results are expressed on a dry weight basis (dried at 35°C) for all soil analyses except for the following: NRA and CEN Leach tests, flash point LOI, pH, ammonium as NH₄ by the BRE method, VOC TICs and SVOC TICs.

2. Samples will be run in duplicate upon request, but an additional charge may be incurred

3. If sufficient sample is received a sub sample will be retained free of charge for 30 days after analysis is completed (e-mailed) for all sample types unless the sample is destroyed on testing. The prepared soil sub sample that is analysed for asbestos will be retained for a period of 6 months after the analysis date. All bulk samples will be retained for a period of 6 months after the analysis date. All samples received and not scheduled will be disposed of one month after the date of receipt unless we are instructed to the contrary. Once the initial period has expired, a storage charge will be applied for each month or part thereof until the client cancels the request for sample storage. ALcontrol Laboratories reserve the right to charge for samples received and stored but not analysed.

4. With respect to turnaround, we will always endeavour to meet client requirements wherever possible, but turnaround times cannot be absolutely guaranteed due to so many variables beyond our control.

5. We take responsibility for any test performed by sub-contractors (marked with an asterisk). We endeavour to use UKAS/MCERTS Accredited Laboratories, who either complete a quality questionnaire or are audited by ourselves. For some determinands there are no UKAS/MCERTS Accredited Laboratories, in this instance a laboratory with a known track record will be utilised.

6. When requested, the individual sub sample scheduled will be analysed in house for the presence of asbestos fibres and asbestos containing material by our documented in house method TM048 based on HSG 248 (2005), which is accredited to ISO17025. If a specific asbestos fibre type is not found this will be reported as "Not detected". If no asbestos fibre types are found all will be reported as "Not detected" and the sub sample analysed deemed to be clear of asbestos. If an asbestos fibre type is found it will be reported as detected (for each fibre type found). Testing can be carried out on asbestos positive samples, but, due to Health and Safety considerations, may be replaced by alternative tests or reported as No Determination Possible (NDP). The quantity of asbestos present is not determined unless specifically requested.

7. If no separate volatile sample is supplied by the client, or if a headspace or sediment is present in the volatile sample, the integrity of the data may be compromised. This will be flagged up as an invalid VOC on the test schedule and the result marked as deviating on the test certificate.

8. If appropriate preserved bottles are not received preservation will take place on receipt. However, the integrity of the data may be compromised.

9. NDP - No determination possible due to insufficient/unsuitable sample.

10. Metals in water are performed on a filtered sample, and therefore represent dissolved metals - total metals must be requested separately.

11. Results relate only to the items tested.

12. LoDs (Limit of Detection) for wet tests reported on a dry weight basis are not corrected for moisture content.

13. **Surrogate recoveries** - Surrogates are added to your sample to monitor recovery of the test requested. A % recovery is reported, results are not corrected for the recovery measured. Typical recoveries for organics tests are 70-130%, they are generally wider for volatiles analysis, 50-150%. Recoveries in soils are affected by organic rich or clay rich matrices. Waters can be affected by remediation fluids or high amounts of sediment. Test results are only ever reported if all of the associated quality checks pass; it is assumed that all recoveries outside of the values above are due to matrix affect.

14. **Product analyses** - Organic analyses on products can only be semi-quantitative due to the matrix effects and high dilution factors employed.

15. Phenols monohydric by HPLC include phenol, cresols (2-Methylphenol, 3-Methylphenol and 4-Methylphenol) and Xylenols (2,3 Dimethylphenol, 2,4 Dimethylphenol, 2,5 Dimethylphenol, 2,6 Dimethylphenol, 3,4 Dimethylphenol, 3,5 Dimethylphenol).

16. Total of 5 speciated phenols by HPLC includes Phenol, 2,3,5-Trimethyl Phenol, 2-Isopropylphenol, Cresols and Xylenols (as detailed in 15).

17. Stones/debris are not routinely removed. We always endeavour to take a representative sub sample from the received sample.

18. In certain circumstances the method detection limit may be elevated due to the sample being outside the calibration range. Other factors that may contribute to this include possible interferences. In both cases the sample would be diluted which would cause the method detection limit to be raised.

19. Mercury results quoted on soils will not include volatile mercury as the analysis is performed on a dried and crushed sample.

20. For leachate preparations other than Zero Headspace Extraction (ZHE) volatile loss may occur.

21. For the BSEN 12457-3 two batch process to allow the cumulative release to be calculated, the volume of the leachate produced is measured and filtered for all tests. We therefore cannot carry out any unfiltered analysis. The tests affected include volatiles GCFID/GCMS and all subcontracted analysis.

22. We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample. Other coarse granular material such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

23. Analysis and identification of specific compounds using GCFID is by retention time only, and we routinely calibrate and quantify for benzene, toluene, ethylbenzenes and xylenes (BTEX). For total volatiles in the C5-C12 range, the total area of the chromatogram is integrated and expressed as ug/kg or ug/l. Although this analysis is commonly used for the quantification of gasoline range organics (GRO), the system will also detect other compounds such as chlorinated solvents, and this may lead to a falsely high result with respect to hydrocarbons only. It is not possible to specifically identify these non-hydrocarbons, as standards are not routinely run for any other compounds, and for more definitive identification, volatiles by GCMS should be utilised.

24. **Tentatively Identified Compounds (TICs)** are non-target peaks in VOC and SVOC analysis. All non-target peaks detected with a concentration above the LoD are subjected to a mass spectral library search. Non-target peaks with a library search confidence of >75% are reported based on the best mass spectral library match. When a non-target peak with a library search confidence of <75% is detected it is reported as "mixed hydrocarbons". Non-target compounds identified from the scan data are semi-quantified relative to one of the deuterated internal standards, under the same chromatographic conditions as the target compounds. This result is reported as a semi-quantitative value and reported as Tentatively Identified Compounds (TICs). TICs are outside the scope of UKAS accreditation and are not moisture corrected.

Sample Deviations

If a sample is classed as deviated then the associated results may be compromised.

1	Container with Headspace provided for volatiles analysis
2	Incorrect container received
3	Deviation from method
4	Holding time exceeded before sample received
5	Samples exceeded holding time before preservation was performed
§	Sampled on date not provided
◆	Sample holding time exceeded in laboratory
@	Sample holding time exceeded due to sampled on date
&	Sample Holding Time exceeded - Late arrival of instructions.

Asbestos

Identification of Asbestos in Bulk Materials & Soils

The results for identification of asbestos in bulk materials are obtained from supplied bulk materials which have been examined to determine the presence of asbestos fibres using ALcontrol Laboratories (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2005).

The results for identification of asbestos in soils are obtained from a homogenised sub sample which has been examined to determine the presence of asbestos fibres using ALcontrol Laboratories (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2005).

Asbestos Type	Common Name
Chrysotile	White Asbestos
Amosite	Brown Asbestos
Crocidolite	Blue Asbestos
Fibrous Actinolite	-
Fibrous Anorthophyllite	-
Fibrous Tremolite	-

Visual Estimation Of Fibre Content

Estimation of fibre content is not permitted as part of our UKAS accredited test other than: - Trace - Where only one or two asbestos fibres were identified.

Further guidance on typical asbestos fibre content of manufactured products can be found in HSG 264.

The identification of asbestos containing materials and soils falls within our schedule of tests for which we hold UKAS accreditation, however opinions, interpretations and all other information contained in the report are outside the scope of UKAS accreditation.

Attention: James Stretton

Date:	05/04/2019	Location:	City Block 9
Customer:	RSK Group Plc	No. Of Samples Received:	34
Your Reference:	602387	Samples Scheduled:	33

Accredited laboratory tests are defined within the report, but opinions, interpretations and on-site data expressed herein are outside the scope of ISO 17025 accreditation.

Chemical testing (unless subcontracted) performed at ALS Life Sciences Ltd Hawarden (Method codes TM) or ALS Life Sciences Ltd Aberdeen (Method codes S).

ISO5667-3 Water quality - Sampling - Part3 -

During Transportation samples shall be stored in a cooling device capable of maintaining a temperature of (5±3)°C.

ALS have data which show that a cool box with 4 frozen icepacks is capable of maintaining pre-chilled samples at a temperature of (5±3)°C for a period of up to 24hrs.

Only received samples which have had analysis scheduled will be shown on the following pages.

Table of Results - Appendix

REPORT KEY

Results expressed as (e.g.) 1.03E-07 is equivalent to 1.03x10⁻⁷

NDP	No Determination Possible	#	ISO 17025 Accredited	*	Subcontracted Test	M	MCERTS Accredited
NFD	No Fibres Detected	PFD	Possible Fibres Detected	»	Result previously reported (Incremental reports only)	EC	Equivalent Carbon (Aromatics C8-C35)

Note: Method detection limits are not always achievable due to various circumstances beyond our control

Method No	Reference	Description
ASB_PREP		
PM001		Preparation of Samples for Metals Analysis
PM024	Modified BS 1377	Soil preparation including homogenisation, moisture screens of soils for Asbestos Containing Material
PM115		Leaching Procedure for CEN One Stage Leach Test 2:1 & 10:1 1 Step
TM018	BS 1377: Part 3 1990	Determination of Loss on Ignition
TM048	HSG 248, Asbestos: The analysts' guide for sampling, analysis and clearance procedures	Identification of Asbestos in Bulk Material
TM061	Method for the Determination of EPH, Massachusetts Dept. of EP, 1998	Determination of Extractable Petroleum Hydrocarbons by GC-FID (C10-C40)
TM062 (S)	National Grid Property Holdings Methods for the Collection & Analysis of Samples from National Grid Sites version 1 Sec 3.9	Determination of Phenols in Soils by HPLC
TM089	Modified: US EPA Methods 8020 & 602	Determination of Gasoline Range Hydrocarbons (GRO) by Headspace GC-FID (C4-C12)
TM090	Method 5310, AWWA/APHA, 20th Ed., 1999 / Modified: US EPA Method 415.1 & 9060	Determination of Total Organic Carbon/Total Inorganic Carbon in Water and Waste Water
TM104	Method 4500F, AWWA/APHA, 20th Ed., 1999	Determination of Fluoride using the Kone Analyser
TM116	Modified: US EPA Method 8260, 8120, 8020, 624, 610 & 602	Determination of Volatile Organic Compounds by Headspace / GC-MS
TM123	BS 2690: Part 121:1981	The Determination of Total Dissolved Solids in Water
TM132	In - house Method	ELTRA CS800 Operators Guide
TM133	BS 1377: Part 3 1990;BS 6068-2.5	Determination of pH in Soil and Water using the GLpH pH Meter
TM151	Method 3500D, AWWA/APHA, 20th Ed., 1999	Determination of Hexavalent Chromium using Kone analyser
TM152	Method 3125B, AWWA/APHA, 20th Ed., 1999	Analysis of Aqueous Samples by ICP-MS
TM168	EPA Method 8082, Polychlorinated Biphenyls by Gas Chromatography	Determination of WHO12 and EC7 Polychlorinated Biphenyl Congeners by GC-MS in Soils
TM173	Analysis of Petroleum Hydrocarbons in Environmental Media – Total Petroleum Hydrocarbon Criteria	Determination of Speciated Extractable Petroleum Hydrocarbons in Soils by GC-FID
TM181	US EPA Method 6010B	Determination of Routine Metals in Soil by iCap 6500 Duo ICP-OES
TM182	CEN/TC 292 - WI 292046-characterization of waste-leaching Behaviour Tests- Acid and Base Neutralization Capacity Test	Determination of Acid Neutralisation Capacity (ANC) Using Autotitration in Soils
TM183	BS EN 23506:2002, (BS 6068-2.74:2002) ISBN 0 580 38924 3	Determination of Trace Level Mercury in Waters and Leachates by PSA Cold Vapour Atomic Fluorescence Spectrometry
TM184	EPA Methods 325.1 & 325.2,	The Determination of Anions in Aqueous Matrices using the Kone Spectrophotometric Analysers
TM218	Shaker extraction - EPA method 3546.	The determination of PAH in soil samples by GC-MS
TM259	by HPLC	Determination of Phenols in Waters and Leachates by HPLC
TM410	Shaker extraction-In house coronene method	Determination of Coronene in soils by GCMS

NA = not applicable.

Chemical testing (unless subcontracted) performed at ALS Life Sciences Ltd Hawarden (Method codes TM) or ALS Life Sciences Ltd Aberdeen (Method codes S).

Appendix

General

1. Results are expressed on a dry weight basis (dried at 35°C) for all soil analyses except for the following: NRA and CEN Leach tests, flash point LOI, pH, ammonium as NH4 by the BRE method, VOC TICs and SVOC TICs.

2. Samples will be run in duplicate upon request, but an additional charge may be incurred

3. If sufficient sample is received a sub sample will be retained free of charge for 30 days after analysis is completed (e-mailed) for all sample types unless the sample is destroyed on testing. The prepared soil sub sample that is analysed for asbestos will be retained for a period of 6 months after the analysis date. All bulk samples will be retained for a period of 6 months after the analysis date. All samples received and not scheduled will be disposed of one month after the date of receipt unless we are instructed to the contrary. Once the initial period has expired, a storage charge will be applied for each month or part thereof until the client cancels the request for sample storage. ALcontrol Laboratories reserve the right to charge for samples received and stored but not analysed.

4. With respect to turnaround, we will always endeavour to meet client requirements wherever possible, but turnaround times cannot be absolutely guaranteed due to so many variables beyond our control.

5. We take responsibility for any test performed by sub-contractors (marked with an asterisk). We endeavour to use UKAS/MCERTS Accredited Laboratories, who either complete a quality questionnaire or are audited by ourselves. For some determinands there are no UKAS/MCERTS Accredited Laboratories, in this instance a laboratory with a known track record will be utilised.

6. When requested, the individual sub sample scheduled will be analysed in house for the presence of asbestos fibres and asbestos containing material by our documented in house method TM048 based on HSG 248 (2005), which is accredited to ISO17025. If a specific asbestos fibre type is not found this will be reported as "Not detected". If no asbestos fibre types are found all will be reported as "Not detected" and the sub sample analysed deemed to be clear of asbestos. If an asbestos fibre type is found it will be reported as detected (for each fibre type found). Testing can be carried out on asbestos positive samples, but, due to Health and Safety considerations, may be replaced by alternative tests or reported as No Determination Possible (NDP). The quantity of asbestos present is not determined unless specifically requested.

7. If no separate volatile sample is supplied by the client, or if a headspace or sediment is present in the volatile sample, the integrity of the data may be compromised. This will be flagged up as an invalid VOC on the test schedule and the result marked as deviating on the test certificate.

8. If appropriate preserved bottles are not received preservation will take place on receipt. However, the integrity of the data may be compromised.

9. NDP - No determination possible due to insufficient/unsuitable sample.

10. Metals in water are performed on a filtered sample, and therefore represent dissolved metals - total metals must be requested separately.

11. Results relate only to the items tested.

12. LoDs (Limit of Detection) for wet tests reported on a dry weight basis are not corrected for moisture content.

13. **Surrogate recoveries** - Surrogates are added to your sample to monitor recovery of the test requested. A % recovery is reported, results are not corrected for the recovery measured. Typical recoveries for organics tests are 70-130%, they are generally wider for volatiles analysis, 50-150%. Recoveries in soils are affected by organic rich or clay rich matrices. Waters can be affected by remediation fluids or high amounts of sediment. Test results are only ever reported if all of the associated quality checks pass; it is assumed that all recoveries outside of the values above are due to matrix affect.

14. **Product analyses** - Organic analyses on products can only be semi-quantitative due to the matrix effects and high dilution factors employed.

15. Phenols monohydric by HPLC include phenol, cresols (2-Methylphenol, 3-Methylphenol and 4-Methylphenol) and Xylenols (2,3 Dimethylphenol, 2,4 Dimethylphenol, 2,5 Dimethylphenol, 2,6 Dimethylphenol, 3,4 Dimethylphenol, 3,5 Dimethylphenol).

16. Total of 5 speciated phenols by HPLC includes Phenol, 2,3,5-Trimethyl Phenol, 2-Isopropylphenol, Cresols and Xylenols (as detailed in 15).

17. Stones/debris are not routinely removed. We always endeavour to take a representative sub sample from the received sample.

18. In certain circumstances the method detection limit may be elevated due to the sample being outside the calibration range. Other factors that may contribute to this include possible interferences. In both cases the sample would be diluted which would cause the method detection limit to be raised.

19. Mercury results quoted on soils will not include volatile mercury as the analysis is performed on a dried and crushed sample.

20. For leachate preparations other than Zero Headspace Extraction (ZHE) volatile loss may occur.

21. For the BSEN 12457-3 two batch process to allow the cumulative release to be calculated, the volume of the leachate produced is measured and filtered for all tests. We therefore cannot carry out any unfiltered analysis. The tests affected include volatiles GCFID/GCMS and all subcontracted analysis.

22. We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample. Other coarse granular material such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

23. Analysis and identification of specific compounds using GCFID is by retention time only, and we routinely calibrate and quantify for benzene, toluene, ethylbenzenes and xylenes (BTEX). For total volatiles in the C5-C12 range, the total area of the chromatogram is integrated and expressed as ug/kg or ug/l. Although this analysis is commonly used for the quantification of gasoline range organics (GRO), the system will also detect other compounds such as chlorinated solvents, and this may lead to a falsely high result with respect to hydrocarbons only. It is not possible to specifically identify these non-hydrocarbons, as standards are not routinely run for any other compounds, and for more definitive identification, volatiles by GCMS should be utilised.

24. **Tentatively Identified Compounds (TICs)** are non-target peaks in VOC and SVOC analysis. All non-target peaks detected with a concentration above the LoD are subjected to a mass spectral library search. Non-target peaks with a library search confidence of >75% are reported based on the best mass spectral library match. When a non-target peak with a library search confidence of <75% is detected it is reported as "mixed hydrocarbons". Non-target compounds identified from the scan data are semi-quantified relative to one of the deuterated internal standards, under the same chromatographic conditions as the target compounds. This result is reported as a semi-quantitative value and reported as Tentatively Identified Compounds (TICs). TICs are outside the scope of UKAS accreditation and are not moisture corrected.

Sample Deviations

If a sample is classed as deviated then the associated results may be compromised.

1	Container with Headspace provided for volatiles analysis
2	Incorrect container received
3	Deviation from method
4	Holding time exceeded before sample received
5	Samples exceeded holding time before preservation was performed
§	Sampled on date not provided
◆	Sample holding time exceeded in laboratory
@	Sample holding time exceeded due to sampled on date
&	Sample Holding Time exceeded - Late arrival of instructions.

Asbestos

Identification of Asbestos in Bulk Materials & Soils

The results for identification of asbestos in bulk materials are obtained from supplied bulk materials which have been examined to determine the presence of asbestos fibres using ALcontrol Laboratories (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2005).

The results for identification of asbestos in soils are obtained from a homogenised sub sample which has been examined to determine the presence of asbestos fibres using ALcontrol Laboratories (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2005).

Asbestos Type	Common Name
Chrysotile	White Asbestos
Amosite	Brown Asbestos
Crocidolite	Blue Asbestos
Fibrous Actinolite	-
Fibrous Anorthophyllite	-
Fibrous Tremolite	-

Visual Estimation Of Fibre Content

Estimation of fibre content is not permitted as part of our UKAS accredited test other than: - Trace - Where only one or two asbestos fibres were identified.

Further guidance on typical asbestos fibre content of manufactured products can be found in HSG 264.

The identification of asbestos containing materials and soils falls within our schedule of tests for which we hold UKAS accreditation, however opinions, interpretations and all other information contained in the report are outside the scope of UKAS accreditation.

ISO5667-3 Water quality - Sampling - Part3 -

During Transportation samples shall be stored in a cooling device capable of maintaining a temperature of (5±3)°C.

ALS have data which show that a cool box with 4 frozen icepacks is capable of maintaining pre-chilled samples at a temperature of (5±3)°C for a period of up to 24hrs.

Only received samples which have had analysis scheduled will be shown on the following pages.

PAH Sum of 17 (mg/kg)	<10.0
pH (pH Units)	8.29
ANC to pH 6 (mol/kg)	0.145
ANC to pH 4 (mol/kg)	0.818

Eluate Analysis	C ₂ Conc ⁿ in 10:1 eluate (mg/l)		A ₂ 10:1 conc ⁿ leached (mg/kg)		Limit values for compliance leaching test using BS EN 12457-3 at L/S 10 l/kg
	Result	Limit of Detection	Result	Limit of Detection	
Metal Prep	0	<0	0	<0	-

Leach Test Information

Date Prepared	11-Feb-2019
pH (pH Units)	6.74
Conductivity (µS/cm)	556
Temperature (°C)	17.70
Volume Leachant (Litres)	0.894

Solid Results are expressed on a dry weight basis, after correction for moisture content where applicable
 Stated limits are for guidance only and ALS Environmental cannot be held responsible for any discrepancies with current legislation
 Mcerts Certification does not apply to leachates

Table of Results - Appendix

REPORT KEY

Results expressed as (e.g.) 1.03E-07 is equivalent to 1.03x10⁻⁷

NDP	No Determination Possible	#	ISO 17025 Accredited	*	Subcontracted Test	M	MCERTS Accredited
NFD	No Fibres Detected	PFD	Possible Fibres Detected	»	Result previously reported (Incremental reports only)	EC	Equivalent Carbon (Aromatics C8-C35)

Note: Method detection limits are not always achievable due to various circumstances beyond our control

Method No	Reference	Description
ASB_PREP		
PM001		Preparation of Samples for Metals Analysis
PM024	Modified BS 1377	Soil preparation including homogenisation, moisture screens of soils for Asbestos Containing Material
PM115		Leaching Procedure for CEN One Stage Leach Test 2:1 & 10:1 1 Step
TM018	BS 1377: Part 3 1990	Determination of Loss on Ignition
TM048	HSG 248, Asbestos: The analysts' guide for sampling, analysis and clearance procedures	Identification of Asbestos in Bulk Material
TM061	Method for the Determination of EPH, Massachusetts Dept. of EP, 1998	Determination of Extractable Petroleum Hydrocarbons by GC-FID (C10-C40)
TM062 (S)	National Grid Property Holdings Methods for the Collection & Analysis of Samples from National Grid Sites version 1 Sec 3.9	Determination of Phenols in Soils by HPLC
TM089	Modified: US EPA Methods 8020 & 602	Determination of Gasoline Range Hydrocarbons (GRO) by Headspace GC-FID (C4-C12)
TM090	Method 5310, AWWA/APHA, 20th Ed., 1999 / Modified: US EPA Method 415.1 & 9060	Determination of Total Organic Carbon/Total Inorganic Carbon in Water and Waste Water
TM104	Method 4500F, AWWA/APHA, 20th Ed., 1999	Determination of Fluoride using the Kone Analyser
TM116	Modified: US EPA Method 8260, 8120, 8020, 624, 610 & 602	Determination of Volatile Organic Compounds by Headspace / GC-MS
TM123	BS 2690: Part 121:1981	The Determination of Total Dissolved Solids in Water
TM132	In - house Method	ELTRA CS800 Operators Guide
TM133	BS 1377: Part 3 1990; BS 6068-2.5	Determination of pH in Soil and Water using the GLpH pH Meter
TM151	Method 3500D, AWWA/APHA, 20th Ed., 1999	Determination of Hexavalent Chromium using Kone analyser
TM152	Method 3125B, AWWA/APHA, 20th Ed., 1999	Analysis of Aqueous Samples by ICP-MS
TM168	EPA Method 8082, Polychlorinated Biphenyls by Gas Chromatography	Determination of WHO12 and EC7 Polychlorinated Biphenyl Congeners by GC-MS in Soils
TM173	Analysis of Petroleum Hydrocarbons in Environmental Media – Total Petroleum Hydrocarbon Criteria	Determination of Speciated Extractable Petroleum Hydrocarbons in Soils by GC-FID
TM181	US EPA Method 6010B	Determination of Routine Metals in Soil by iCap 6500 Duo ICP-OES
TM182	CEN/TC 292 - WI 292046-characterization of waste-leaching Behaviour Tests- Acid and Base Neutralization Capacity Test	Determination of Acid Neutralisation Capacity (ANC) Using Autotitration in Soils
TM183	BS EN 23506:2002, (BS 6068-2.74:2002) ISBN 0 580 38924 3	Determination of Trace Level Mercury in Waters and Leachates by PSA Cold Vapour Atomic Fluorescence Spectrometry
TM184	EPA Methods 325.1 & 325.2,	The Determination of Anions in Aqueous Matrices using the Kone Spectrophotometric Analysers
TM218	Shaker extraction - EPA method 3546.	The determination of PAH in soil samples by GC-MS
TM259	by HPLC	Determination of Phenols in Waters and Leachates by HPLC
TM410	Shaker extraction-In house coronene method	Determination of Coronene in soils by GCMS

NA = not applicable.

Chemical testing (unless subcontracted) performed at ALS Life Sciences Ltd Hawarden (Method codes TM) or ALS Life Sciences Ltd Aberdeen (Method codes S).

Client Reference : 602387

Location : City Block 9

Appendix

General

1. Results are expressed on a dry weight basis (dried at 35°C) for all soil analyses except for the following: NRA and CEN Leach tests, flash point LOI, pH, ammonium as NH₄ by the BRE method, VOC TICs and SVOC TICs.

2. Samples will be run in duplicate upon request, but an additional charge may be incurred

3. If sufficient sample is received a sub sample will be retained free of charge for 30 days after analysis is completed (e-mailed) for all sample types unless the sample is destroyed on testing. The prepared soil sub sample that is analysed for asbestos will be retained for a period of 6 months after the analysis date. All bulk samples will be retained for a period of 6 months after the analysis date. All samples received and not scheduled will be disposed of one month after the date of receipt unless we are instructed to the contrary. Once the initial period has expired, a storage charge will be applied for each month or part thereof until the client cancels the request for sample storage. ALcontrol Laboratories reserve the right to charge for samples received and stored but not analysed.

4. With respect to turnaround, we will always endeavour to meet client requirements wherever possible, but turnaround times cannot be absolutely guaranteed due to so many variables beyond our control.

5. We take responsibility for any test performed by sub-contractors (marked with an asterisk). We endeavour to use UKAS/MCERTS Accredited Laboratories, who either complete a quality questionnaire or are audited by ourselves. For some determinands there are no UKAS/MCERTS Accredited Laboratories, in this instance a laboratory with a known track record will be utilised.

6. When requested, the individual sub sample scheduled will be analysed in house for the presence of asbestos fibres and asbestos containing material by our documented in house method TM048 based on HSG 248 (2005), which is accredited to ISO17025. If a specific asbestos fibre type is not found this will be reported as "Not detected". If no asbestos fibre types are found all will be reported as "Not detected" and the sub sample analysed deemed to be clear of asbestos. If an asbestos fibre type is found it will be reported as detected (for each fibre type found). Testing can be carried out on asbestos positive samples, but, due to Health and Safety considerations, may be replaced by alternative tests or reported as No Determination Possible (NDP). The quantity of asbestos present is not determined unless specifically requested.

7. If no separate volatile sample is supplied by the client, or if a headspace or sediment is present in the volatile sample, the integrity of the data may be compromised. This will be flagged up as an invalid VOC on the test schedule and the result marked as deviating on the test certificate.

8. If appropriate preserved bottles are not received preservation will take place on receipt. However, the integrity of the data may be compromised.

9. NDP - No determination possible due to insufficient/unsuitable sample.

10. Metals in water are performed on a filtered sample, and therefore represent dissolved metals - total metals must be requested separately.

11. Results relate only to the items tested.

12. LoDs (Limit of Detection) for wet tests reported on a dry weight basis are not corrected for moisture content.

13. **Surrogate recoveries** - Surrogates are added to your sample to monitor recovery of the test requested. A % recovery is reported, results are not corrected for the recovery measured. Typical recoveries for organics tests are 70-130%, they are generally wider for volatiles analysis, 50-150%. Recoveries in soils are affected by organic rich or clay rich matrices. Waters can be affected by remediation fluids or high amounts of sediment. Test results are only ever reported if all of the associated quality checks pass; it is assumed that all recoveries outside of the values above are due to matrix affect.

14. **Product analyses** - Organic analyses on products can only be semi-quantitative due to the matrix effects and high dilution factors employed.

15. Phenols monohydric by HPLC include phenol, cresols (2-Methylphenol, 3-Methylphenol and 4-Methylphenol) and Xylenols (2,3 Dimethylphenol, 2,4 Dimethylphenol, 2,5 Dimethylphenol, 2,6 Dimethylphenol, 3,4 Dimethylphenol, 3,5 Dimethylphenol).

16. Total of 5 speciated phenols by HPLC includes Phenol, 2,3,5-Trimethyl Phenol, 2-Isopropylphenol, Cresols and Xylenols (as detailed in 15).

17. Stones/debris are not routinely removed. We always endeavour to take a representative sub sample from the received sample.

18. In certain circumstances the method detection limit may be elevated due to the sample being outside the calibration range. Other factors that may contribute to this include possible interferences. In both cases the sample would be diluted which would cause the method detection limit to be raised.

19. Mercury results quoted on soils will not include volatile mercury as the analysis is performed on a dried and crushed sample.

20. For leachate preparations other than Zero Headspace Extraction (ZHE) volatile loss may occur.

21. For the BSEN 12457-3 two batch process to allow the cumulative release to be calculated, the volume of the leachate produced is measured and filtered for all tests. We therefore cannot carry out any unfiltered analysis. The tests affected include volatiles GCFID/GCMS and all subcontracted analysis.

22. We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample. Other coarse granular material such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

23. Analysis and identification of specific compounds using GCFID is by retention time only, and we routinely calibrate and quantify for benzene, toluene, ethylbenzenes and xylenes (BTEX). For total volatiles in the C5-C12 range, the total area of the chromatogram is integrated and expressed as ug/kg or ug/l. Although this analysis is commonly used for the quantification of gasoline range organics (GRO), the system will also detect other compounds such as chlorinated solvents, and this may lead to a falsely high result with respect to hydrocarbons only. It is not possible to specifically identify these non-hydrocarbons, as standards are not routinely run for any other compounds, and for more definitive identification, volatiles by GCMS should be utilised.

24. **Tentatively Identified Compounds (TICs)** are non-target peaks in VOC and SVOC analysis. All non-target peaks detected with a concentration above the LoD are subjected to a mass spectral library search. Non-target peaks with a library search confidence of >75% are reported based on the best mass spectral library match. When a non-target peak with a library search confidence of <75% is detected it is reported as "mixed hydrocarbons". Non-target compounds identified from the scan data are semi-quantified relative to one of the deuterated internal standards, under the same chromatographic conditions as the target compounds. This result is reported as a semi-quantitative value and reported as Tentatively Identified Compounds (TICs). TICs are outside the scope of UKAS accreditation and are not moisture corrected.

Sample Deviations

If a sample is classed as deviated then the associated results may be compromised.

1	Container with Headspace provided for volatiles analysis
2	Incorrect container received
3	Deviation from method
4	Holding time exceeded before sample received
5	Samples exceeded holding time before preservation was performed
§	Sampled on date not provided
◆	Sample holding time exceeded in laboratory
@	Sample holding time exceeded due to sampled on date
&	Sample Holding Time exceeded - Late arrival of instructions.

Asbestos

Identification of Asbestos in Bulk Materials & Soils

The results for identification of asbestos in bulk materials are obtained from supplied bulk materials which have been examined to determine the presence of asbestos fibres using ALcontrol Laboratories (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2005).

The results for identification of asbestos in soils are obtained from a homogenised sub sample which has been examined to determine the presence of asbestos fibres using ALcontrol Laboratories (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2005).

Asbestos Type	Common Name
Chrysotile	White Asbestos
Amosite	Brown Asbestos
Crocidolite	Blue Asbestos
Fibrous Actinolite	-
Fibrous Anorthophyllite	-
Fibrous Tremolite	-

Visual Estimation Of Fibre Content

Estimation of fibre content is not permitted as part of our UKAS accredited test other than: - Trace - Where only one or two asbestos fibres were identified.

Further guidance on typical asbestos fibre content of manufactured products can be found in HSG 264.

The identification of asbestos containing materials and soils falls within our schedule of tests for which we hold UKAS accreditation, however opinions, interpretations and all other information contained in the report are outside the scope of UKAS accreditation.

CERTIFICATE OF ANALYSIS

Date of report Generation: 26 February 2019
Customer: D_RSK_DUB
Sample Delivery Group (SDG): 190126-152
Your Reference: 602387
Location: City Block 9
Report No: 494343

This report has been revised and directly supersedes 492554 in its entirety.

We received 18 samples on Friday January 25, 2019 and 12 of these samples were scheduled for analysis which was completed on Tuesday February 26, 2019. Accredited laboratory tests are defined within the report, but opinions, interpretations and on-site data expressed herein are outside the scope of ISO 17025 accreditation.

Should this report require incorporation into client reports, it must be used in its entirety and not simply with the data sections alone.

Chemical testing (unless subcontracted) performed at ALS Environmental Hawarden (Method codes TM) or ALS Environmental Aberdeen (Method codes S).

All sample data is provided by the customer. The reported results relate to the sample supplied, and on the basis that this data is correct.

Incorrect sampling dates and/or sample information will affect the validity of results.

The customer is not permitted to reproduce this report except in full without the approval of the laboratory.

Maximum Sample/Coolbox Temperature (°C) :

9.2

ISO5667-3 Water quality - Sampling - Part3 -

During Transportation samples shall be stored in a cooling device capable of maintaining a temperature of (5±3)°C.

ALS have data which show that a cool box with 4 frozen icepacks is capable of maintaining pre-chilled samples at a temperature of (5±3)°C for a period of up to 24hrs.

Only received samples which have had analysis scheduled will be shown on the following pages.

These descriptions are only intended to act as a cross check if sample identities are questioned, and to provide a log of sample matrices with respect to MCERTS validation. They are not intended as full geological descriptions.

We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample.

Other coarse granular materials such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

Table of Results - Appendix

Method No	Reference	Description
PM001		Preparation of Samples for Metals Analysis
PM024	Modified BS 1377	Soil preparation including homogenisation, moisture screens of soils for Asbestos Containing Material
PM115		Leaching Procedure for CEN One Stage Leach Test 2:1 & 10:1 1 Step
TM018	BS 1377: Part 3 1990	Determination of Loss on Ignition
TM048	HSG 248, Asbestos: The analysts' guide for sampling, analysis and clearance procedures	Identification of Asbestos in Bulk Material
TM061	Method for the Determination of EPH, Massachusetts Dept. of EP, 1998	Determination of Extractable Petroleum Hydrocarbons by GC-FID (C10-C40)
TM062 (S)	National Grid Property Holdings Methods for the Collection & Analysis of Samples from National Grid Sites version 1 Sec 3.9	Determination of Phenols in Soils by HPLC
TM089	Modified: US EPA Methods 8020 & 602	Determination of Gasoline Range Hydrocarbons (GRO) by Headspace GC-FID (C4-C12)
TM090	Method 5310, AWWA/APHA, 20th Ed., 1999 / Modified: US EPA Method 415.1 & 9060	Determination of Total Organic Carbon/Total Inorganic Carbon in Water and Waste Water
TM104	Method 4500F, AWWA/APHA, 20th Ed., 1999	Determination of Fluoride using the Kone Analyser
TM116	Modified: US EPA Method 8260, 8120, 8020, 624, 610 & 602	Determination of Volatile Organic Compounds by Headspace / GC-MS
TM123	BS 2690: Part 121:1981	The Determination of Total Dissolved Solids in Water
TM132	In - house Method	ELTRA CS800 Operators Guide
TM133	BS 1377: Part 3 1990; BS 6068-2.5	Determination of pH in Soil and Water using the GLpH pH Meter
TM151	Method 3500D, AWWA/APHA, 20th Ed., 1999	Determination of Hexavalent Chromium using Kone analyser
TM152	Method 3125B, AWWA/APHA, 20th Ed., 1999	Analysis of Aqueous Samples by ICP-MS
TM168	EPA Method 8082, Polychlorinated Biphenyls by Gas Chromatography	Determination of WHO12 and EC7 Polychlorinated Biphenyl Congeners by GC-MS in Soils
TM173	Analysis of Petroleum Hydrocarbons in Environmental Media – Total Petroleum Hydrocarbon Criteria	Determination of Speciated Extractable Petroleum Hydrocarbons in Soils by GC-FID
TM181	US EPA Method 6010B	Determination of Routine Metals in Soil by iCap 6500 Duo ICP-OES
TM182	CEN/TC 292 - WI 292046-characterization of waste-leaching Behaviour Tests- Acid and Base Neutralization Capacity Test	Determination of Acid Neutralisation Capacity (ANC) Using Autotitration in Soils
TM183	BS EN 23506:2002, (BS 6068-2.74:2002) ISBN 0 580 38924 3	Determination of Trace Level Mercury in Waters and Leachates by PSA Cold Vapour Atomic Fluorescence Spectrometry
TM184	EPA Methods 325.1 & 325.2,	The Determination of Anions in Aqueous Matrices using the Kone Spectrophotometric Analysers
TM218	Shaker extraction - EPA method 3546.	The determination of PAH in soil samples by GC-MS
TM259	by HPLC	Determination of Phenols in Waters and Leachates by HPLC
TM410	Shaker extraction-In house coronene method	Determination of Coronene in soils by GCMS

NA = not applicable.

Chemical testing (unless subcontracted) performed at ALS Environmental Hawarden (Method codes TM) or ALS Environmental Aberdeen (Method codes S).

Total Organic Carbon	08-Feb-2019	11-Feb-2019
TPH CWG GC (S)	12-Feb-2019	12-Feb-2019
VOC MS (S)	07-Feb-2019	08-Feb-2019

CERTIFICATE OF ANALYSIS

Validated

SDG: 190126-152
Location: City Block 9

Client Reference: 602387
Order Number: P2021550

Report Number: 494343
Superseded Report: 492554

Chromatogram

Analysis: EPH CWG (Aliphatic) GC (S)

Sample No : 19267195
Sample ID : BH243

Depth : 6.00 - 7.00

Alcontrol/Geochem Analytical Services
Speciated TPH - SATS (C12 - C40)

Sample Identity: 18092527-
Date Acquired : 08/02/19 06:07:01
Units : ppb
Dilution :
CF : 1
Multiplier : 1.020

SDG:	190126-152	Client Reference:	602387	Report Number:	494343
Location:	City Block 9	Order Number:	P2021550	Superseded Report:	492554

Appendix

1. Results are expressed on a dry weight basis (dried at 35°C) for all soil analyses except for the following: NRA and CEN Leach tests, flash point LOI, pH, ammonium as NH4 by the BRE method, VOC TICs and SVOC TICs.

2. Samples will be run in duplicate upon request, but an additional charge may be incurred.

3. If sufficient sample is received a sub sample will be retained free of charge for 30 days after analysis is completed (e-mailed) for all sample types unless the sample is destroyed on testing. The prepared soil sub sample that is analysed for asbestos will be retained for a period of 6 months after the analysis date. All bulk samples will be retained for a period of 6 months after the analysis date. All samples received and not scheduled will be disposed of one month after the date of receipt unless we are instructed to the contrary. Once the initial period has expired, a storage charge will be applied for each month or part thereof until the client cancels the request for sample storage. ALS reserve the right to charge for samples received and stored but not analysed.

4. With respect to turnaround, we will always endeavour to meet client requirements wherever possible, but turnaround times cannot be absolutely guaranteed due to so many variables beyond our control.

5. We take responsibility for any test performed by sub-contractors (marked with an asterisk). We endeavour to use UKAS/MCERTS Accredited Laboratories, who either complete a quality questionnaire or are audited by ourselves. For some determinands there are no UKAS/MCERTS Accredited Laboratories, in this instance a laboratory with a known track record will be utilised.

6. When requested, the individual sub sample scheduled will be analysed in house for the presence of asbestos fibres and asbestos containing material by our documented in house method TM048 based on HSG 248 (2005), which is accredited to ISO17025. If a specific asbestos fibre type is not found this will be reported as "Not detected". If no asbestos fibre types are found all will be reported as "Not detected" and the sub sample analysed deemed to be clear of asbestos. If an asbestos fibre type is found it will be reported as detected (for each fibre type found). Testing can be carried out on asbestos positive samples, but, due to Health and Safety considerations, may be replaced by alternative tests or reported as No Determination Possible (NDP). The quantity of asbestos present is not determined unless specifically requested.

7. If no separate volatile sample is supplied by the client, or if a headspace or sediment is present in the volatile sample, the integrity of the data may be compromised. This will be flagged up as an invalid VOC on the test schedule and the result marked as deviating on the test certificate.

8. If appropriate preserved bottles are not received preservation will take place on receipt. However, the integrity of the data may be compromised.

9. NDP - No determination possible due to insufficient/unsuitable sample.

10. Metals in water are performed on a filtered sample, and therefore represent dissolved metals - total metals must be requested separately.

11. Results relate only to the items tested.

12. LoDs (Limit of Detection) for wet tests reported on a dry weight basis are not corrected for moisture content.

13. **Surrogate recoveries** - Surrogates are added to your sample to monitor recovery of the test requested. A % recovery is reported, results are not corrected for the recovery measured. Typical recoveries for organics tests are 70-130%. Recoveries in soils are affected by organic rich or clay rich matrices. Waters can be affected by remediation fluids or high amounts of sediment. Test results are only ever reported if all of the associated quality checks pass; it is assumed that all recoveries outside of the values above are due to matrix affect.

14. **Product analyses** - Organic analyses on products can only be semi-quantitative due to the matrix effects and high dilution factors employed.

15. Phenols monohydric by HPLC include phenol, cresols (2-Methylphenol, 3-Methylphenol and 4-Methylphenol) and Xylenols (2,3 Dimethylphenol, 2,4 Dimethylphenol, 2,5 Dimethylphenol, 2,6 Dimethylphenol, 3,4 Dimethylphenol, 3,5 Dimethylphenol).

16. Total of 5 speciated phenols by HPLC includes Phenol, 2,3,5-Trimethyl Phenol, 2-Isopropylphenol, Cresols and Xylenols (as detailed in 15).

17. Stones/debris are not routinely removed. We always endeavour to take a representative sub sample from the received sample.

18. In certain circumstances the method detection limit may be elevated due to the sample being outside the calibration range. Other factors that may contribute to this include possible interferences. In both cases the sample would be diluted which would cause the method detection limit to be raised.

19. Mercury results quoted on soils will not include volatile mercury as the analysis is performed on a dried and crushed sample.

20. For leachate preparations other than Zero Headspace Extraction (ZHE) volatile loss may occur.

General

21. For the BSEN 12457-3 two batch process to allow the cumulative release to be calculated, the volume of the leachate produced is measured and filtered for all tests. We therefore cannot carry out any unfiltered analysis. The tests affected include volatiles GCFID/GCMS and all subcontracted analysis.

22. We are accredited to MCERTS for sand, clay and loam/topsoil, or any of these materials - whether these are derived from naturally occurring soil profiles, or from fill/made ground, as long as these materials constitute the major part of the sample. Other coarse granular material such as concrete, gravel and brick are not accredited if they comprise the major part of the sample.

23. Analysis and identification of specific compounds using GCFID is by retention time only, and we routinely calibrate and quantify for benzene, toluene, ethylbenzenes and xylenes (BTEX). For total volatiles in the C5-C12 range, the total area of the chromatogram is integrated and expressed as ug/kg or ug/l. Although this analysis is commonly used for the quantification of gasoline range organics (GRO), the system will also detect other compounds such as chlorinated solvents, and this may lead to a falsely high result with respect to hydrocarbons only. It is not possible to specifically identify these non-hydrocarbons, as standards are not routinely run for any other compounds, and for more definitive identification, volatiles by GCMS should be utilised.

24. **Tentatively Identified Compounds (TICs)** are non-target peaks in VOC and SVOC analysis. All non-target peaks detected with a concentration above the LoD are subjected to a mass spectral library search. Non-target peaks with a library search confidence of >75% are reported based on the best mass spectral library match. When a non-target peak with a library search confidence of <75% is detected it is reported as "mixed hydrocarbons". Non-target compounds identified from the scan data are semi-quantified relative to one of the deuterated internal standards, under the same chromatographic conditions as the target compounds. This result is reported as a semi-quantitative value and reported as Tentatively Identified Compounds (TICs). TICs are outside the scope of UKAS accreditation and are not moisture corrected.

Sample Deviations

If a sample is classed as deviated then the associated results may be compromised.

1	Container with Headspace provided for volatiles analysis
2	Incorrect container received
3	Deviation from method
§	Sampled on date not provided
◆	Sample holding time exceeded in laboratory
@	Sample holding time exceeded due to late arrival of instructions or samples

Asbestos

Identification of Asbestos in Bulk Materials & Soils

The results for identification of asbestos in bulk materials are obtained from supplied bulk materials which have been examined to determine the presence of asbestos fibres using ALS (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2005).

The results for identification of asbestos in soils are obtained from a homogenised sub sample which has been examined to determine the presence of asbestos fibres using ALS (Hawarden) in-house method of transmitted/polarised light microscopy and central stop dispersion staining, based on HSG 248 (2005).

Astestost Type	Common Name
Chrysotile	White Asbestos
Amosite	Brown Asbestos
Crocidolite	Blue Asbestos
Fibrous Actinolite	-
Fibrous Anthophyllite	-
Fibrous Tremolite	-

Visual Estimation Of Fibre Content

Estimation of fibre content is not permitted as part of our UKAS accredited test other than: - Trace - Where only one or two asbestos fibres were identified.

Further guidance on typical asbestos fibre content of manufactured products can be found in HSG 264.

The identification of asbestos containing materials and soils falls within our schedule of tests for which we hold UKAS accreditation, however opinions, interpretations and all other information contained in the report are outside the scope of UKAS accreditation.
