1. Introduction

1.1 Introduction

This Traffic and Transport Assessment (TTA) has been prepared by Waterman Moylan to accompany a planning application to An Bord Pleanála for a proposed Strategic Housing Development (SHD) in lands around Auburn House in Malahide, Co. Dublin.

The proposed development will consist of the following:

- The preservation and protection of the existing Protected Structure of Auburn House as 1 no. residential dwelling;
- The conversion of the existing stables of Auburn House to accommodate 4 no. dwellings;
- 97 no. Houses;
- 266 no. Apartments;
- 43 no. Duplexes;
- A 173sqm childcare facility at ground floor of Apartment Block 4.

The breakdown of the proposed development is set out in the schedule of accommodation below:

Description		1-Bed	2-Bed	3-Bed	4-Bed	5-Bed or more	Total	
Houses *(including Auburn house and converted stables)*		1	2	46	39	14	102 houses*	
Apartments	Block 1	27	22	2	-	-	51	266 Apartments
	Block 2	29	27	1	-	-	57	
	Block 3	27	22	2	-	-	51	
	Block 4	9	17	1	-	-	27	
	Block 5	6	22	-	-	-	28	
	Block 6	5	14	2	-	-	21	
	Block 7	-	6	-	-	-	6	
	Block 8	6	17	2	-	-	25	
Duplexes	Block 1	1	3	2	-	-	6	43 Duplexes
	Block 2A	6	2	-	-	-	8	
	Block 2B	8	3	-	-	-	11	
	Block 2C	7	2	-	-	-	9	
	Block 2D	5	4	-	-	-	9	
Total		**137**	**163**	**58**	**39**	**14**	**411***	

* = Total figure also accounts for Auburn House (to be preserved).

Table 1 | *Schedule of Accommodation*

A new vehicular entrance is to be constructed off Malahide Road, providing for a new signalised junction with Back Road and Malahide Road, and a secondary vehicular entrance is to be provided off Carey's Lane. The existing vehicular entrance access is to be utilised as a pedestrian and cycle route only, with vehicular access retained solely for existing residential use.

The development includes all associated site works, boundary treatments, drainage and service connections.

1.2 Scope

This TTA is a comprehensive review of all the potential transport impacts of the overall development, including a detailed assessment of the transportation systems provided and the impact of the proposed development on the surrounding environment and transportation network.

1.3 Standards

This Traffic and Transport Assessment has been prepared in accordance with the requirements of the Traffic and Transport Assessment Guidelines published by National Roads Authority in May 2014.

1.4 Threshold for Transport Assessment

Section 2.1 of the Traffic and Transport Assessment Guidelines (May 2014) requires submission of a Transport Assessment where a proposed development meets one or more of the following criteria:

1- Traffic to and from the development exceeds 10% of the traffic flow on the adjoining road;

2- Traffic to and from the development exceeds 5% of the traffic flow on the adjoining road where congestion exists, or the location is sensitive;

3- Residential development in excess of 200 dwellings;

4- Retail and leisure development in excess of 1,000sqm;

5- Office, education and hospital development in excess of 2,500sqm;

6- Industrial development in excess of 5,000sqm;

7- Distribution and warehousing in excess of 10,000sqm.

In the case of the subject development, thresholds No. 1 and 3 are exceeded.

1.5 Contents of the Transport Assessment

In compliance with Section 3.3 of the Traffic and Transport Assessment Guidelines (May 2014), the contents of this TTA include:

- Description of the existing and proposed traffic/transportation conditions including information on the current traffic, critical junctions, pedestrians, cycle and public transport facilities;
- A description of the proposed development;
- The traffic and transportation implications of the development including consideration of trip generation/attraction, modal split and trip distribution;
- The time periods applicable to the TTA;
- The impact of the development on the surrounding road network including analysis of junction's capacity;
- Description and analysis of committed/potential future developments in the area;
- Description of car and cycle parking requirements and proposals;
- Review of the historical data related to road safety.

1.6 Location of Development

The site is located between the existing Abington residential development and the Malahide Road. The existing site entrance is from the Malahide Road, adjacent to the Malahide Road/Back Road junction.

The subject lands form the western, northern, and eastern boundaries of Auburn House, an eighteenth century three-storey mansion located within a wooded demesne. Malahide Castle is approximately 900m north-east of the site.

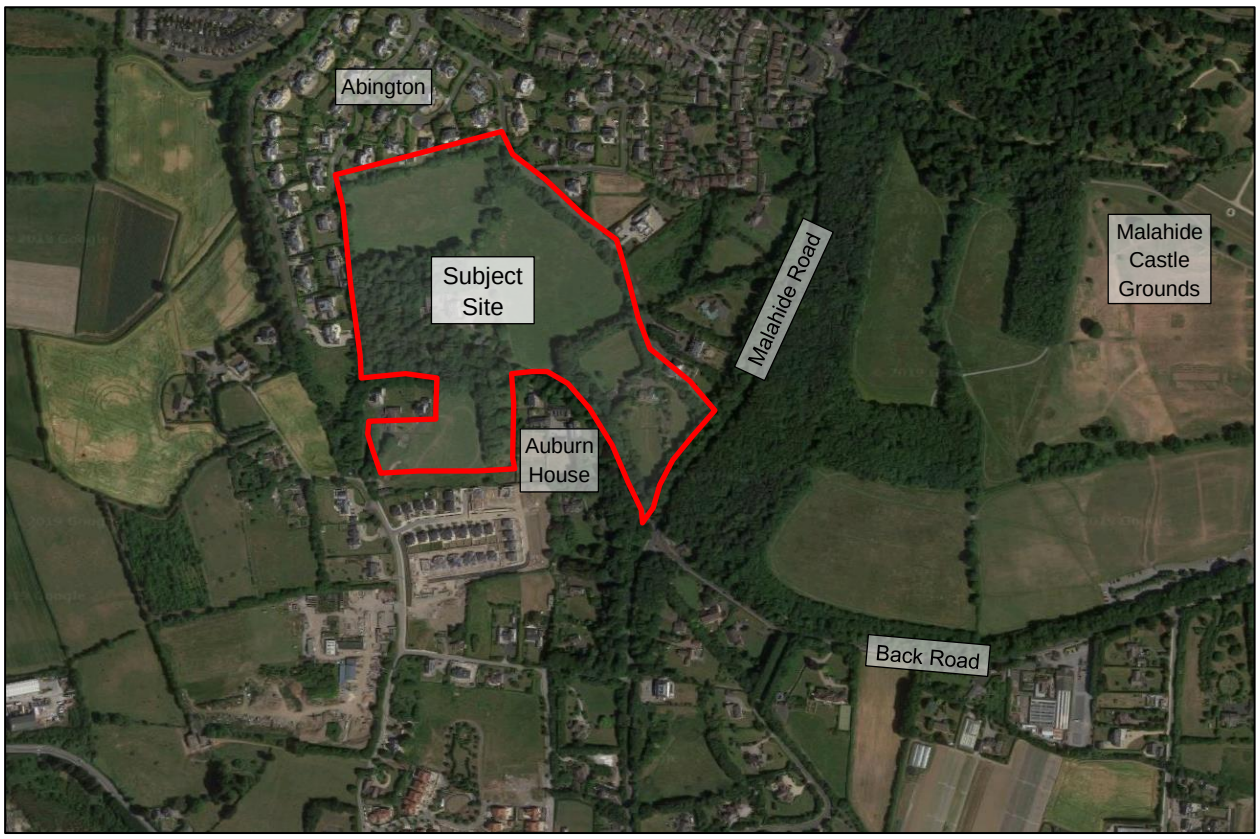

Figure 1 | *Site Location (Source: Google Maps).*

1.7 Methodology

The methodology for the preparation of this Traffic and Transport Assessment included: -

- Descriptions of the proposed and committed/potential future developments.
- Descriptions of the receiving environment including roads and junctions, public transport, cycle facilities and pedestrian facilities.
- Description of existing travel characteristics including traffic and public transport surveys.
- Descriptions of future/proposed transportation improvements to roads, junctions, public transport, cycle and pedestrian facilities.
- Calculation of trip generation and distribution for proposed and committed/potential future developments.
- Determination of future traffic movements in 2023, 2028 and 2038 (refer to Section 1.9 below).
- Estimation of public transport demand in 2028.

- Determination of transportation impact on roads, junctions, and public transport systems.

1.8 Programme

It is expected that construction of the proposed development will commence in 2021 for completion in c. 2025.

1.9 Assessment Years

The years that have been assessed within this TTA are the following:

Base Year	:	2020
Opening Year (With / Without Development)	:	2023
Opening Year + 5 Years Forecast (With / Without Development)	:	2028
Opening Year + 15 Years Forecast (With / Without Development):		2038

These assessment years are in line with the 'Transport Assessment Guidelines (May 2014)'.

Details of each assessment year is presented later in this report.

2. Policy Framework

2.1 Fingal Development Plan (2017 – 2023)

The Fingal Development Plan (2017 – 2023) sets out the policies and objectives for the development of the County for the period of 2017 to 2023. The Plan seeks to improve and expand in a sustainable manner the social, economic, cultural and environments assets of the county. In the perspective of the subject development site and the proposed residential scheme some pertinent policies include:

2.1.1 Strategic Policy

"Seek the development of a high quality public transport system throughout the County and linking to adjoining counties, including the development of the indicative route for New Metro North and Light Rail Corridor, improvements to railway infrastructure including the DART Expansion Programme, Quality Bus Corridors (QBCs) and Bus Rapid Transit (BRT) systems, together with enhanced facilities for walking and cycling."

"Promote, improve and develop a well-connected national, regional and local road and public transport infrastructure system, geared to meet the needs of the County and the Region, and providing for all road users, prioritising walking, cycling and public transport."

2.1.2 Integrated Land Use and Transportation

"***Objective MT05***: *Integrate land use with transportation by allowing higher density development along higher capacity public transport corridors."*

2.1.3 Parking

*"**Objective MT08**: Control on-street parking in the interests of the viability, vitality and amenity of commercial centres by maximising the supply of short stay parking for shoppers, while providing appropriate levels of long-term parking within a reasonable distance for employees."*

2.1.4 Walking and Cycling

*"**Objective MT13**: Promote walking and cycling as efficient, health, and environmentally-friendly modes of transport by securing the development of a network of direct, comfortable, convenient and safe cycle routes and footpaths, particularly in urban areas."*

*"**Objective MT19**: Design roads and promote the design of roads, including cycle infrastructure, in line with the Principals of Sustainable Safety in a manner consistent with the National Cycle Manual and the Design Manual for Urban Roads and Streets."*

*"**Objective MT22**: Improve pedestrian and cycle connectivity to stations and other public transport interchanges."*

2.1.5 Traffic Calming

*"**Objective MT37**: Implement traffic calming on particular roads and in appropriate areas of the County, especially residential areas, to reduce vehicle speeds in the interests of road safety and residential amenity. Ensure that where appropriate, traffic calming is included as a pre-condition as part of the development of all new estates or extensions to existing estates."*

2.1.6 Road Construction and Improvement Measures

*"**Objective MT40**: Implement a programme of road construction and improvement works closely integrated with existing and planned land uses, taking into account both car and non-car modes of transport whilst promoting road safety as a high priority. Major road construction and improvement works will include an appraisal of environmental impacts."*

2.1.7 Green Infrastructure and Planning

*"**Objective GI18**: Require all Local Area Plans to protect, enhance, provide and manage green infrastructure in an integrated and coherent manner addressing the five GI themes set out in the Development Plan – Biodiversity, Parks, Open Space and Recreation, Sustainable Water Management, Archaeological and Architectural Heritage, and Landscape."*

*"**Objective GI20**: Require all new development to contribute to the protection and enhancement of existing green infrastructure and the delivery of new green infrastructure, as appropriate."*

2.1.8 Malahide Development Plan Objectives

*"**Objective MALAHIDE 11**: Prepare and/or implement the following Masterplans during the lifetime of this Plan:*

- *Streamstown Masterplan (see Map Sheet 9, MP 9.A)*
- *Broomfield Masterplan (see Map Sheet 9, MP 9.B)"*

The proposed development falls within the Streams town Masterplan.

2.1.9 Streamstown Masterplan

"*The main elements to be included in the Streamstown Masterplan are provided below:*

- *Facilitate low density residential development reflective of the character of the area.*
- *Protect and preserve trees, woodlands and hedgerows within the Masterplan area.*
- *Preserve the tree lined approach to Malahide along the Dublin Road.*
- *Facilitate high quality sustainable development that protects and enhances the sensitive historic and natural setting of Auburn House and integrates new development with the conservation and preservation of the Protected Structure, its curtilage and protected trees.*
- *Retain visual corridors to/from Auburn House through the establishment of a visual buffer to the east of Auburn House.*
- *The area for development north of Auburn House is considered sensitive development zone, whereby a maximum ridge height of 6m should be applied.*
- *Provide for a pedestrian / cycle route along Auburn House Avenue to Malahide Road.*
- *Ensure pedestrian connectivity between Auburn House Avenue and Abington / Gaybrook.Castleheath.*
- *The lands will be the subject of a detailed flood risk assessment."*

3. Receiving Environment

3.1 Existing Roads and Junctions

3.1.1 Roads

Main vehicular access to the proposed development will be provided from south-east via a new access at the R107 Malahide Road / Back Road priority-controlled T-junction, which is proposed to be upgraded to a four-armed signalised junction with the western arm forming the Site Access Road. A secondary vehicular access is proposed off Carey's Lane to the west which will be accessed via Streamstown Lane.

R107 Malahide Road is a regional road in north Dublin which runs for approximately 10.5km from Fairview to Malahide. The speed limit along the R107 adjacent to the site is 60kph. This road is approximately 700m in length from the priority-controlled junction with Back Road through to a signalised junction with R106 Swords Road. Along this section, R107 Malahide Road comprises a carriageway of c. 7.5m wide with a narrow footpath provided on the western side and no cycle lanes.

Back Road is a single carriageway road running west-east for approximately 1.8km from the priority junction with R107 Malahide Road through to a priority junction with R124 The Hill. This road, which crosses the railway line via an existing bridge, currently comprises a carriageway of approximately 7.30m with footpaths running along both sides of the road for the majority of its length.

Carey's Lane is a local road running north-south for approximately 230m from the south-western boundary of the site through to a priority junction with Streamstown Lane. This road, which will provide vehicular access to the site, currently comprises a carriageway of approximately 5.50m with footpaths running along the eastern side.

Streamstown Lane is a single carriageway road located to the south of the subject site. This road is approximately 780m in length from the priority junction with R107 through to a priority junction with Feltrim Road. Along Streamstown Lane, an unconnected network of footpaths is provided with no pedestrian crossing points available. No cycle lanes are provided.

Feltrim Road is a single carriageway road located to the south of the subject site. This road is approximately 2.6km in length from the priority junction with R107 through to a three-way Roundabout connecting to Mountgory Way. The speed limit along Feltrim Road is 60kph. The road is c. 7.5m wide single carriageway with footpath on the north side of the road for the majority of its length and a narrow path on both sides of the road at some sections.

3.1.2 Junctions

The primary junctions which will provide access to the proposed development on Streamstown Masterplan lands are: -

- **Junction A (Existing Priority-controlled T-junction)**: R107 Malahide Road / Back Road;
- **Junction B (Existing Priority-controlled T-junction)**: Feltrim Road / Streamstown Lane.

An upgraded layout for Junction A - which will provide direct access to the proposed development site, is proposed under the subject application. Details of the proposed scheme is presented later in Section 4.1.1.

The existing road layout in the area surrounding the proposed development site is illustrated in Figure 2.

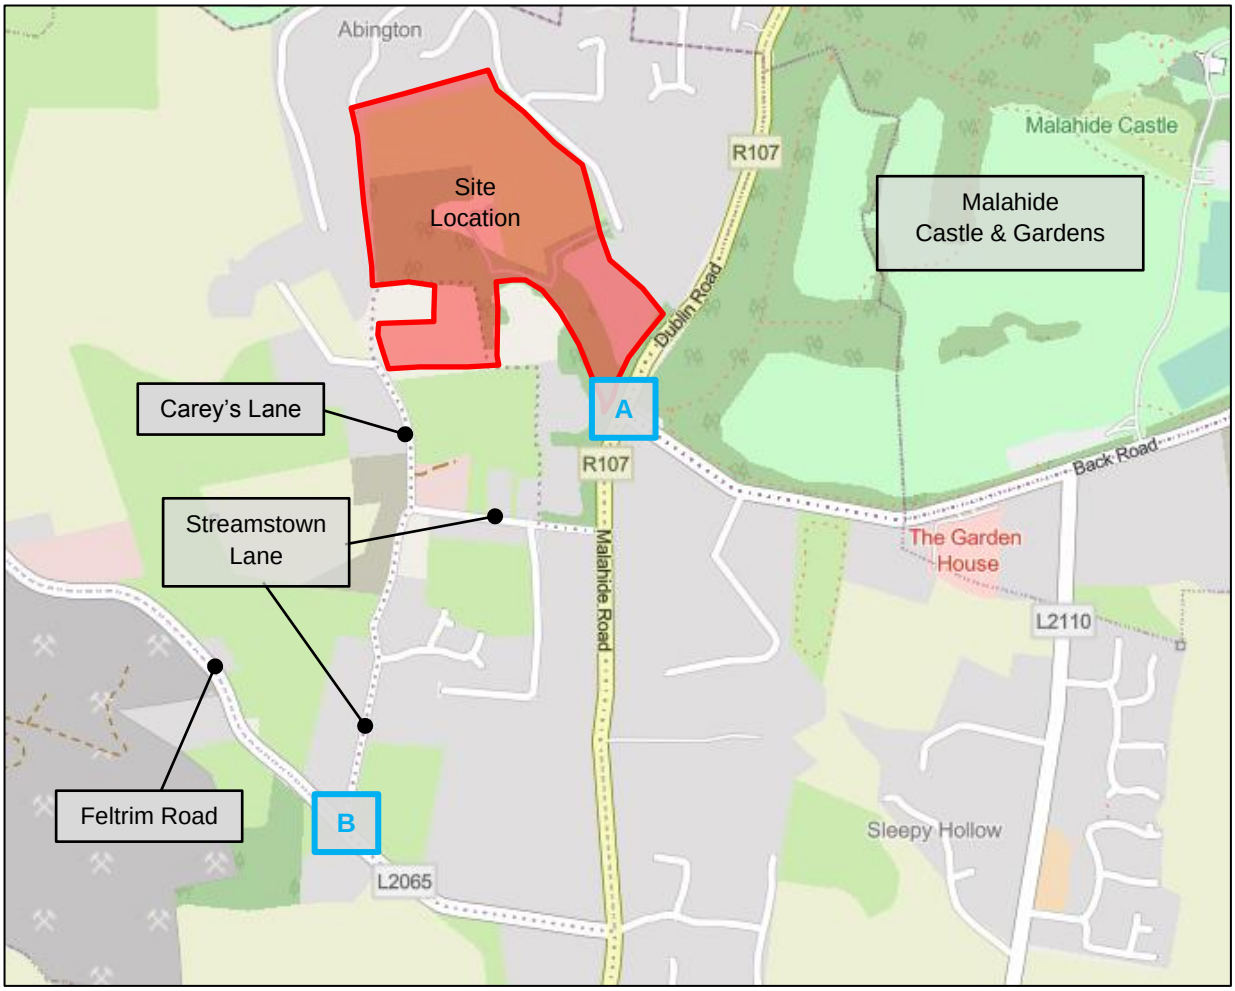

***Figure 2** | Existing Road Network Map.*

3.2 Existing Public Transport

3.2.1 Dublin Bus

The subject site is directly served by a public bus service. The closest bus stops are located on R107 Malahide Road just north of the junction with Back Road, being the Bus Stops No. 3579 (northbound) and No. 3645 (southbound). The subject bus stops are served by the Bus Route 42. This route is operated by Dublin Bus and runs from Talbot Street in Dublin City Centre through Malahide to Sand's Hotel in Portmarnock. A summary of Dublin Bus Route 42 frequency is presented in Table 2. The location of the subject bus stops in relation to the proposed development site is illustrated in Figure 3.

Route No.	From	To	Weekday Frequency	Saturday Frequency	Sunday Frequency
42	Talbot Street	Sand's Hotel (Portmarnock)	Every 15 to 30 minutes	Every 15 to 30 minutes	Every 30 to 60 minutes
42	Sand's Hotel (Portmarnock)	Talbot Street	Every 20 to 25 minutes	Every 15 to 30 minutes	Every 30 to 60 minutes

***Table 2** | Dublin Bus Route 42 – Weekday and Weekend Frequency.*

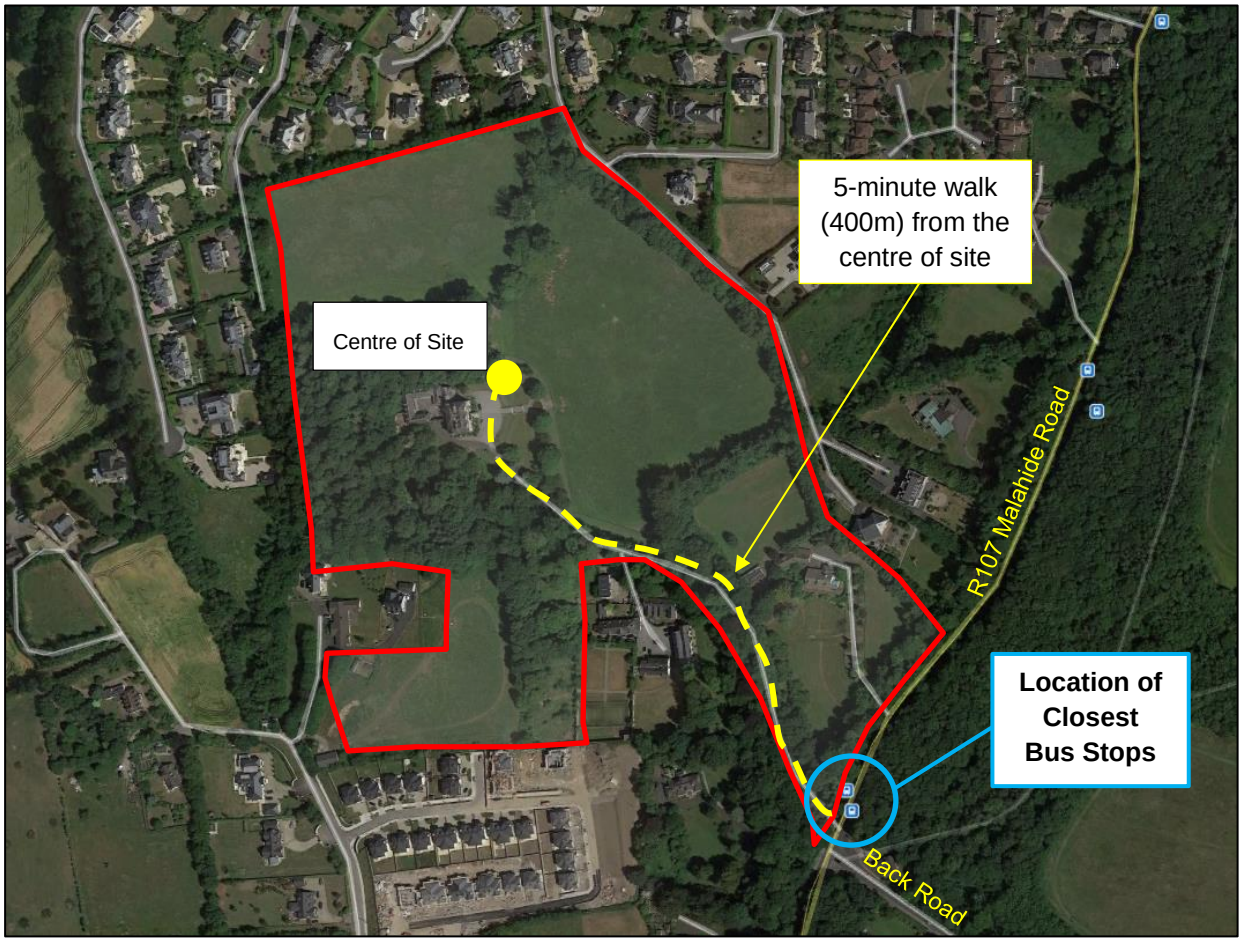

Figure 3 | *Location of Closest Bus Stops.*

Travel time from the subject bus stop on R107 Malahide Road (southbound) to Talbot Street in Dublin City Centre is approximately 32 minutes. On the opposite direction, the travel time from the subject bus stop on R107 Malahide Road (Northbound) to Malahide Centre is approximately 11 minutes, and to Sand's Hotel in Portmarnock is approximately 22 minutes.

The proposed internal layout will include pathways and pedestrian crossings throughout the site leading to the bus stops just outside the site. From the centre point of the site, it is approximately 400m (5-minute walk) to these bus stops.

The internal layout of the proposed development will provide pedestrian pathways on both sides of the road, often separated by a grass bank. All footpaths for the proposed development will be provided in accordance with Section 4.3.1 of the DMURS which suggests that a minimum 1.8m footpath should be provided.

3.2.2 Rail

The closest train station (Malahide) is located off R106 Dublin Road approximately 2.0km (24-minute walk/6-minute cycling) northeast of the existing site access off R107 Malahide Road – Refer to Figures 4 and 5. Walking access from the subject site access to the Malahide Station is via R107 Malahide Road and R106 Dublin Road. Along the route to the station, a narrow footpath, directly adjacent to the carriageway, is provided on the western side of R107 Malahide Road. On the R106 Dublin Road, a wider footpath is provided along the western side of the carriageway and on both sides of the road from Yellow Walls Road up until the Malahide Station. No cycle lanes are provided along the route.

The Malahide Station is served by Commuter Rail and DART services.

The Commuter Rail service through Malahide Station serves all stations from Dundalk through Dublin City Centre to Gorey. The service operates at 3 – 4 services per hour in both direction on weekdays.

The DART service through Malahide Station serves all station from Malahide through Dublin City Centre to Bray and Greystones. On weekdays, this service operates at a 20-minute frequency in both directions and at 40-to-60-minute frequency in both directions on weekends.

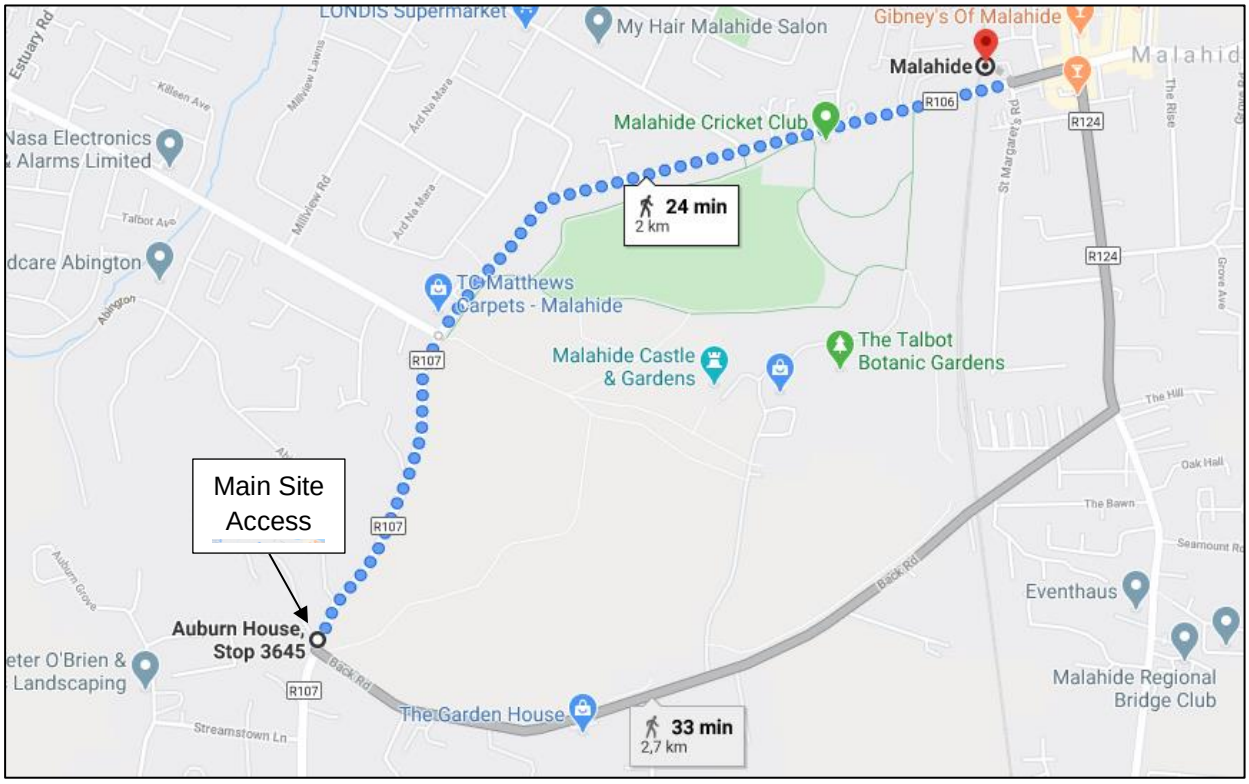

Figure 4 | *Walking Route to Malahide Station.*

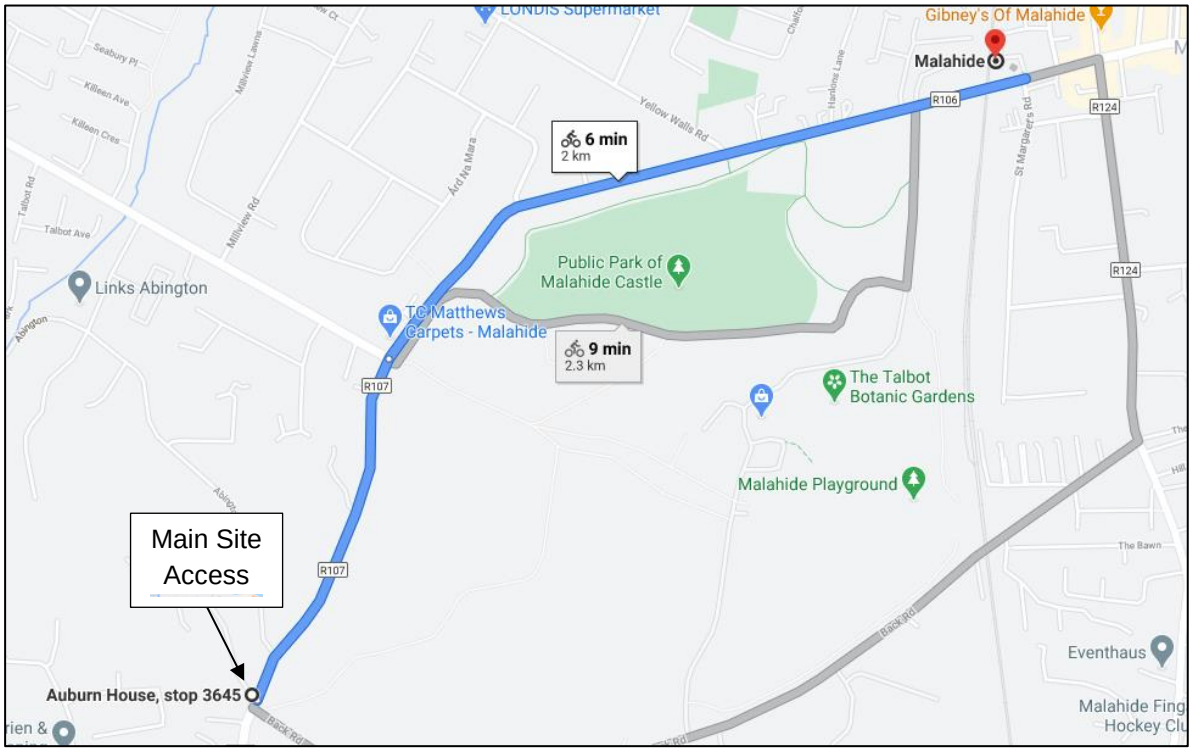

Figure 5 | *Cycling Route to Malahide Station.*

3.2.3 Car Sharing (GoCar)

The closest GoCar vehicles are located at Malahide Centre and at Ard Na Mara off Yellow Walls Road. See Figure 6. At the time of writing in March 2021 one vehicle is provided at each GoCar station, except for the Bridgefield Car Park Station which provides two.

Figure 6 | *Location of GoCar Stations (Source: www.gocar.ie)*

3.3 Existing Cycle Facilities

3.3.1 Greater Dublin Area Cycle Network Plan

In accordance with Existing Facilities Maps - Sheet E9 within the Greater Dublin Area Cycle Network Plan, Malahide town currently does not comprise any cycle tracks or cycle lane facilities. See Figure 7.

Figure 7 | *Existing Facilities Map – Sheet E9, Extracted from GDA Cycle Network Plan.*

3.3.2 Bike Parking

Sheltered bike parking is available at Malahide Station with 70 no. bike spaces provided. Alternatively, bikelocker.ie offer 20 no. additional bike lockers to rent. This existing bike parking at Malahide Station currently provides the opportunity for residents living in the surrounding area to commute to their destination (place of work, school, college, etc.) by a cycle-train combined travel and to shift away from the private car usage.

3.3.3 Bleeper Bike

Bleeper Bike scheme is Ireland's first stationless bike sharing scheme widely used in Dublin City. Stationless bikes are equipped with a smart lock fixed that controls usage of the bike by communicating with the app. Bleeper Bikes do not require custom build docking bays, however they must be parked at designated bike racks.

Three designated bike racks are provided at Malahide centre. The location of these racks is illustrated in Figure 8 below. The purple zone shown is a dedicated area where users will be able to find available Bleeper Bikes to use.

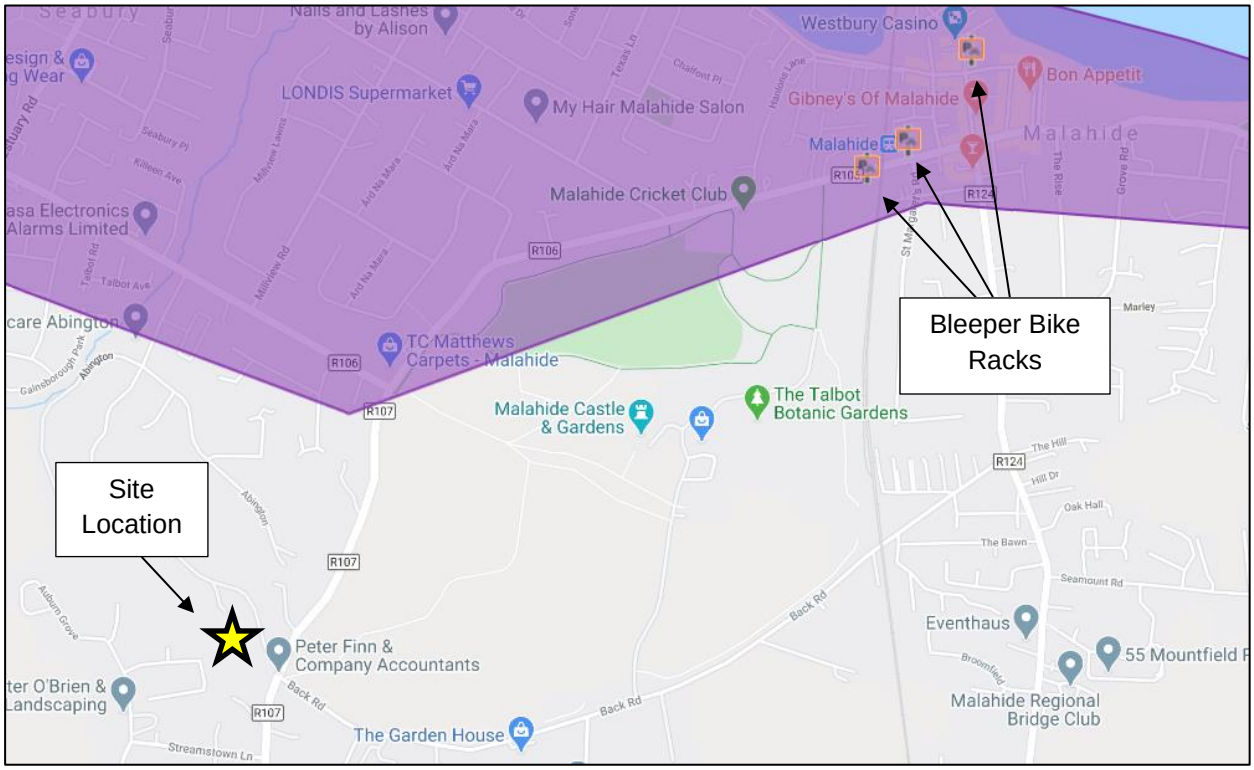

Figure 8 *| Bleeper Bike Designated Racks at Malahide.*

3.4 Existing Pedestrian Facilities

The existing pedestrian facilities in the surrounding area comprise a network of footpaths linking the various neighbourhoods to each other, to the existing schools, to the Malahide train station and village, to the Malahide Castle and Gardens and to the surrounding public network.

4. Transportation Improvements

4.1 Roads and Junctions

4.1.1 R107 Malahide Road / Back Road Junction Upgrade Scheme

As part of subject development works, it is proposed to upgrade the existing R107 Malahide Road / Back Road priority-controlled T-junction to a four-armed signalised junction. The additional fourth arm (western arm) of the proposed layout is the main vehicular access to the subject development site.

The proposed scheme will comprise:

- Construction of the fourth arm of the junction to provide controlled access to the proposed development site;
- Installation of a new traffic signal infrastructure with 4 normal traffic phases and 1 pedestrian phase;
- Provision of dedicated pedestrian crossings with dropped kerbs and tactile paving on Back Road (E) and R107 Malahide Road (N) approaches;
- Reconfiguration of the Back Road (E) approach to include a dedicated right-turning pocket lane;
- Reconfiguration of the R107 Malahide Road (S) approach to include a dedicated right-turning pocket lane;
- Improvements to the existing footpaths northeast, southwest and southeast of the junction;
- Provision of advanced stop lines for cyclists on the southern, eastern and northern approaches.
- Provision of MOVA control with loop detectors as per Fingal County Council requirements.

The proposed upgrade layout for this junction can be seen in Waterman Moylan Drawing No. 19-020-P110 accompanying the subject application.

4.2 Public Transport

4.2.1 DART Expansion Programme

The DART Expansion Programme is included within the 10-year horizon for the National Development Plan 2018 – 2027. It includes for an extension of the DART service to Balbriggan and an increased weekday frequency of 15 minutes in each direction.

4.2.2 Bus Connects

The Bus Connects project currently being promoted by the National Transport Authority aims to deliver a much-enhanced bus service to the Greater Dublin Area (GDA). The proposed route which will directly serve the subject development via R107 Malahide Road is the **Secondary Radial Routes 20** – See Figure 9. A summary of the frequency of this proposed route is presented in Table 3.

In addition to the above-mentioned route, the surrounding area will also be served by the **Secondary Radial Route 21 and** the **Peak Times Route X78**. The closest bus stops served by these routes will be located on R106 Swords Road to the north of the site and Feltrim Road to the south. A summary of the frequency of these routes is shown in Table 3.

Route No.	From	To	AM Weekday Frequency (07:00 to 09:00)	PM Weekday Frequency (17:00 to 19:00)
20	Malahide	City Centre	Every 30 minutes	Every 30 minutes
21	Swords Business Park	City Centre	Every 30 minutes	Every 30 minutes
X78	Malahide	UCD	2 Buses at 07:00	1 Bus at 16:00 1 Bus at 17:00

Table 3 | *Bus Connects Routes 20, 21 and X78 - AM and PM Weekday Frequency.*

For routes 20 and 21, the frequency of buses on weekends is 30-minutes except for hours between 06:00 – 08:00 which have a 60-minute frequency.

The nearest bus stops for Bus Route 20 are located just outside the Malahide Road access point. As illustrated in Figure 3 previously, these stops are roughly 5-minute walk from the centre of the proposed development site.

Figure 9 | *Bus Connects Routes Map.*

4.3 GoCar

It is expected that GoCar will provide 4-6 shared car club vehicles in the proposed SHD scheme. A letter to confirm GoCar's intention to provide these new car club vehicles is included in Appendix A.

4.4 Pedestrians

Additional pedestrian facilities, such as renovated footpaths and new dedicated pedestrian crossings will be provided on R107 Malahide Road / Back Road junction prior to the construction of the proposed development.

The internal layout of the site will include an interconnect network of footpaths. These footpaths will include greenways into the existing woodlands surround Auburn House and also connect to the site access point at Carey's Lane via a pathway alongside the road. The internal layout can be seen in the architect drawings accompanying the documentation package. A green route footpath will be used as another site access point connecting to the site entrance at R107 Malahide Road.

4.5 Cycle

Proposals for the Greater Dublin Area Cycle Network Plan were published by the National Transport Authority in December 2013. The plan sets out a vision and a strategy for the construction and/or designation of a comprehensive network of cycling routes throughout the Greater Dublin Area (Counties Dublin, Meath, Kildare and Wicklow).

An extract from Sheet N9 (Proposed Cycle Network Swords & Malahide) is reproduced in Figure 10 below.

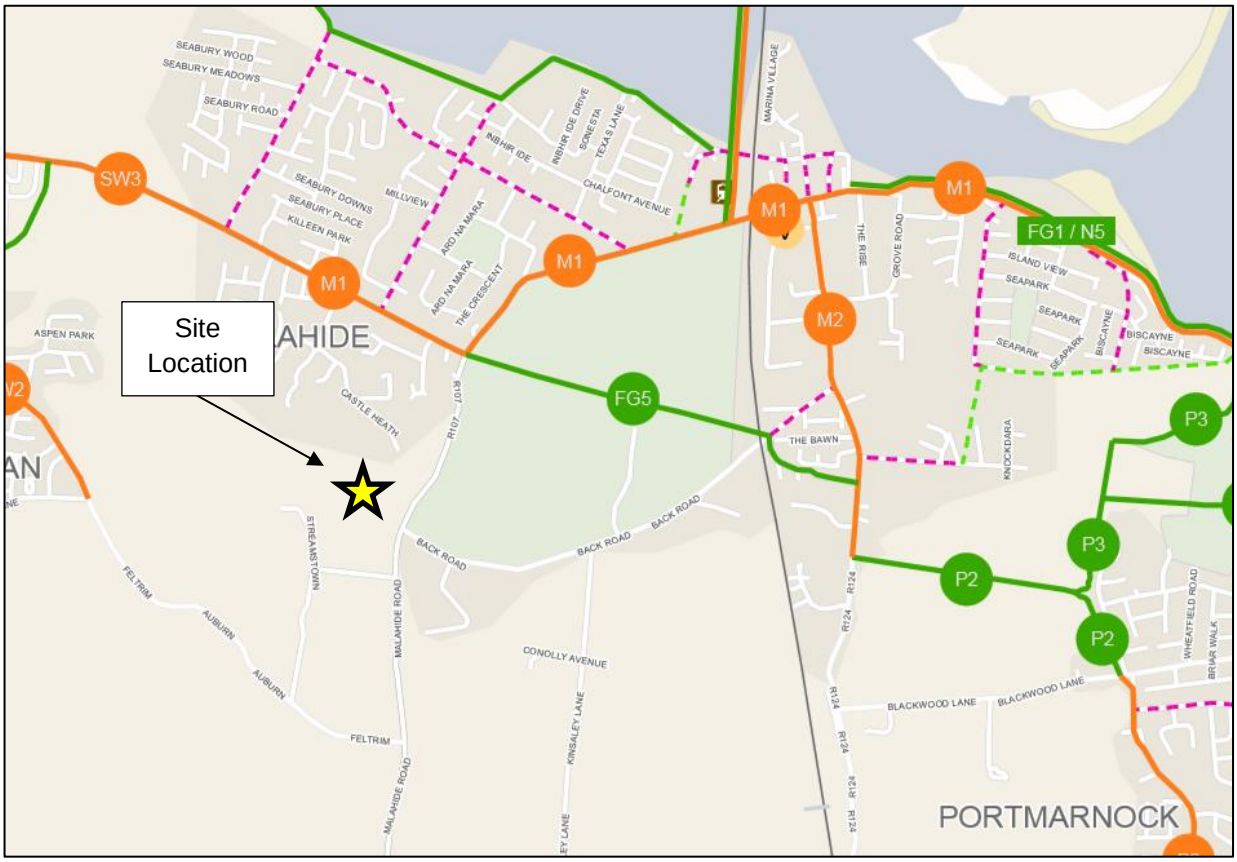

Figure 10 | *Proposed Cycle Network Upgrades.*

As can be seen from above, no cycle lanes are proposed on R107 Malahide Road and Back Road under the Cycle Network Plan. However, as previously described in Section 4.1.1, as part of the subject development works, it is proposed to provide advanced stop lines for cyclists on the southern, northern and eastern approaches of the proposed signalised junction between R107 Malahide Road / Back Road to provide with a safe area for cyclists in front of vehicular queues and help them position themselves correctly for their right/left turning movements.

5. Proposed Development at Streamstown Masterplan

5.1 Description

The development proposed as part of the subject application will be located on the northern portion of Streamstown Masterplan and will comprise:

- 102 house units (including the stables and the Auburn House);
- 43 duplex units;
- 266 apartment units over 8 apartment blocks
- A childcare facility with 173sqm of area.
- Total of 411 residential units.

As part of the proposed development works, it is also proposed to upgrade the R107 Malahide Road / Back Road from a priority-controlled T-junction to a signalised four-armed junction. The fourth arm of the proposed signalised junction (western arm) will be the main vehicular access to the proposed development site. A secondary vehicular entrance is proposed off Carey's Lane to the west which will be accessed via Streamstown Lane.

The overall proposed development is programmed to be fully constructed and occupied by the end of 2023.

5.2 Pedestrian and Cyclist Infrastructure

All footpaths for the proposed development will be provided in accordance with Section 4.3.1 of the DMURS which suggests that a minimum 1.8m footpath should be provided. The proposed internal pedestrian facility will connect to existing/planned facilities in the vicinity of the site and will provide a good quality and safe/secure network for pedestrians.

The proposed development includes a pathway around the site and woodlands surround Auburn House. This pathway will link up to the junction between Malahide Road and Back Road. The proposed development includes upgrading this junction to a signalised 4-armed junction. The upgrades include 3 sets of Toucan crossings for both pedestrians and cyclists which connect the proposed pathway to the existing pathways along Back Road and Malahide Road. The pathways along Back Road connect to the Malahide Castle and gardens which has a large network of pathways for pedestrians and cyclists connecting to Malahide Town and Malahide Train Station.

As part of the proposed development works, advanced stop lines for cyclists will be provided on the signalised junction between R107 Malahide Road and Back Road. These advanced stop lines will provide with a safe area for cyclists in front of vehicular queues and help them position themselves correctly for their right/left turning movements.

5.3 Proposed Development Population 2023

During the 2016 Census, the resident population in the areas surrounding the proposed development site (Figure 11) was 8,777 persons in 3,010 housing units equivalent to 2.92 persons per unit.

On the basis of 411 residential units and an average of 2.92 persons per unit as recorded by Census 2016, it is estimated that the proposed development will have a resident population of 1,200 persons when fully completed and occupied.

- Proposed Development: 411 units x 2.92 persons per unit : 1,200 persons

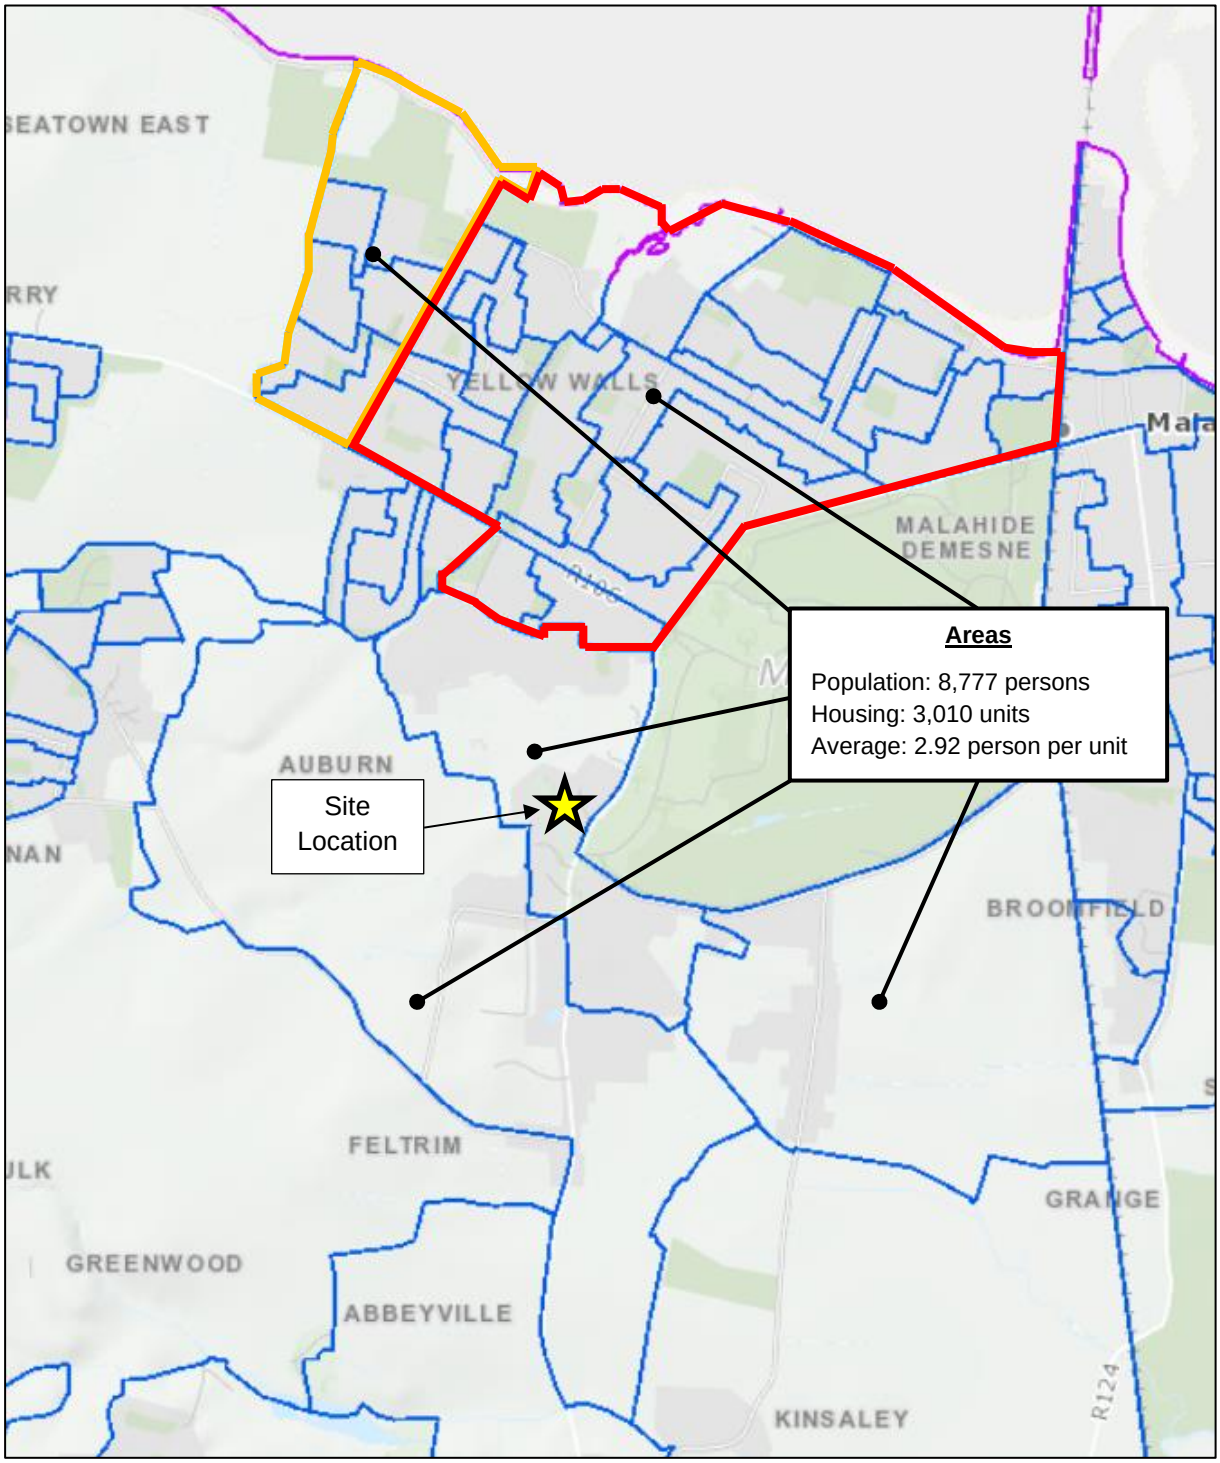

Figure 11 | *Areas for Census 2016 – Extracted from SAPMAPs.*

5.4 Site Access Points

The proposed development will have two vehicular access points. To the east of the development there is the primary vehicle access point leading to the junction between R107 Malahide Road and Back Road. This will also be an access point for pedestrians and cyclists using a green route through a woodland area which connects to the junction of R107 Malahide Road and Back Road. There will be a toucan crossing connecting the proposed development to pedestrian footpaths on both Malahide Road and Back Road. The other access point is on the west side of the site off Carey's Lane.

Each block of apartments will have undercroft parking. Apartment Blocks 1, 2 and 3 will share a single undercroft parking that will be accessed under Apartment Block 2 as shown on Waterman Moylan Drg No's 19-020-101. Apartment Block 8 will have undercroft parking accessed to the north of the block as shown on Waterman Moylan Drg No's 19-020-102. Apartment Blocks 4 and 5 will have a shared undecroft parking space. This is accessed between both apartment blocks as shown in Waterman Moylan Drg No's 19-020-P103.

5.5 Access to Refuse Vehicles/Fire Tenders

The proposed development will be accessible for refuse vehicles/fire tenders. Turning path layout for refuse vehicle and fire tender are shown on Waterman Moylan Drg No's 19-020-P140 and 19-120-P141 accompanying the subject application.

6. Site Accessibility

This section describes the accessibility of the proposed development site for pedestrians and cyclists. It is clear that high quality and extensive provision of walking and cycling facilities are key elements to support in the reduction of the private car usage.

6.1 Walking Accessibility

The national Transport Authority (NTA), formerly the Dublin Transport Office, have published the document "The Route to Sustainable Commuting" which describes acceptable walking distances for pedestrians without mobility impairment. This document states that 4,000m or approximately 50 minutes is the preferred maximum walking distance.

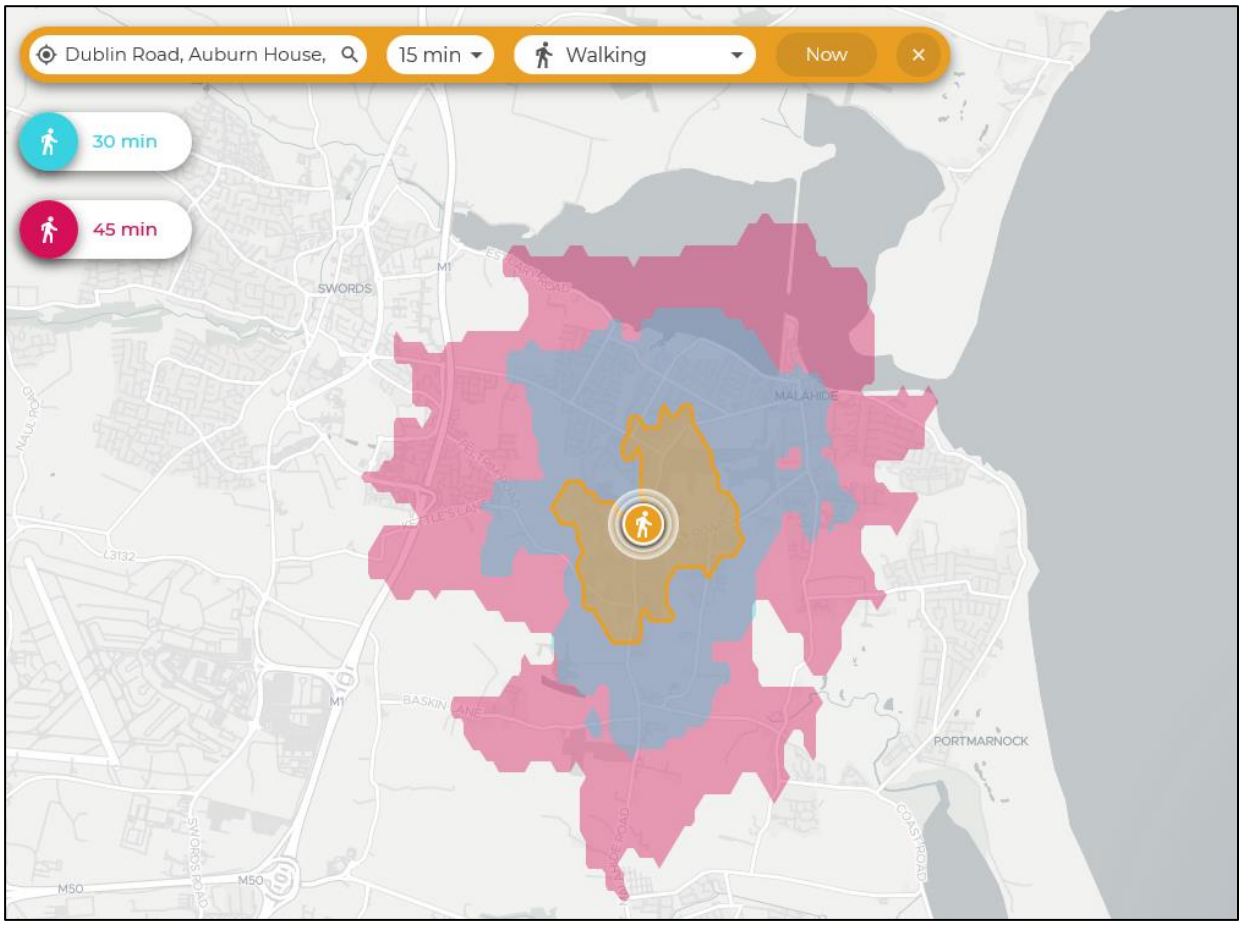

Figure 12 | *Walking Catchments from the Site.*

As illustrated in Figure 12, walkable distance from the development would allow residents to walk to Malahide Centre (northeast of the site), where currently comprises a number of facilities of all types, including leisure, retail and commercial developments within a walking time of approximately 30-45 minutes. The Malahide Rail Station is also reachable within the time range of 30-45 minutes and is currently a good option for those residents wishing to commute to Dublin City Centre.

A network of inter-connected footpaths is provided along the entire route from the subject site towards the Malahide Centre.

6.2 Cycling Accessibility

As per walking, the NTA document “The Route to Sustainable Commuting” mentioned above also describes acceptable cycling distances for cyclists without mobility impairment. According to this document, 10Km is the maximum distance people will travel by bike. There are a large number of commercial and employment areas within 10km or c.50min bike ride from the site. As show in Figure 13, those travelling by bike from the proposed development site could reach Malahide Centre within 15-minute cycling, Dublin Airport within 30-minute cycling and Dublin City Centre (North side) within 45-minute cycling.

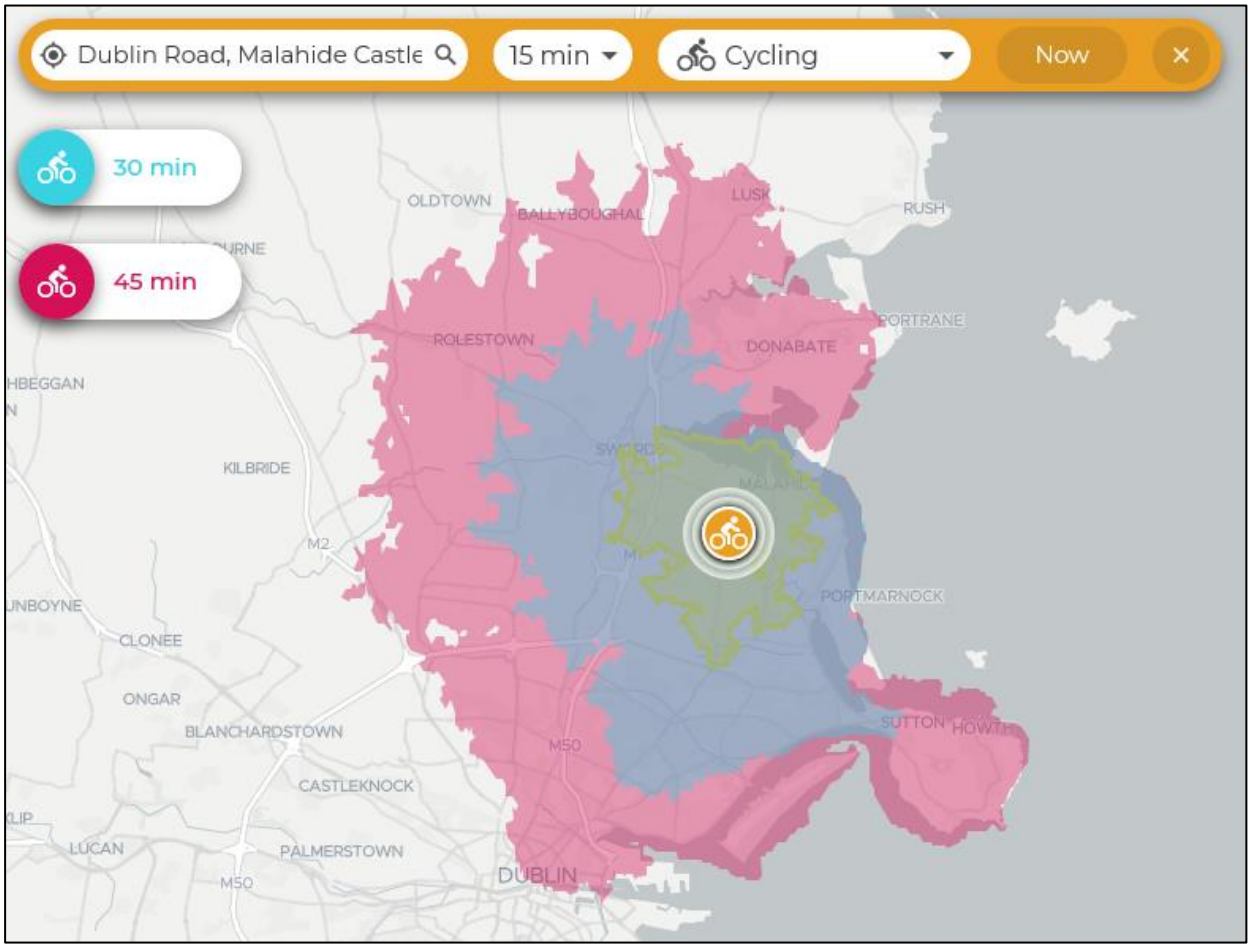

Figure 13 | *Cycle Catchments from the Site.*

7. Broomfield Masterplan

In order to provide a robust and conservative assessment of the transportation network in the local area, the Broomfield Masterplan was also analysed with regards to potential additional population and trip generation, to determine the cumulative impacts of the subject development and other proposed developments in the vicinity of the site. The location of Broomfield Masterplan is illustrated in Figure 14 – extracted from Fingal Development Plan (FDP), Sheet No. 9.

7.1 Description

In the Fingal Development Plan 2017 – 2023, Broomfield Masterplan falls within the zoning objective type of:

> "***RA – Residential Area****: provide for new residential communities subject to the provision of the necessary social and physical infrastructure.*
>
> *Ensure the provision of high quality new residential environments with good layout and design, with adequate public transport and cycle links within walking distance of community facilities. Provide an appropriate mix of house sizes, types and tenures in order to meet household needs and to promote balanced communities."*

At the time of writing in 2021, Phase 1 of Broomfield Masterplan, approved under Planning References F13A/0459 and F13A/0460, is under construction.

7.2 Phase 1 (Planning. Ref's. F13A/0459 and F13A/0460)

The under-construction Phase 1 development of Broomfield Masterplan comprises of a total of 149 residential units (61 dwelling under Planning Reference F13A/0459 and 88 dwellings under Planning Reference F13A/0460). It is expected that Phase 1 will be fully developed and occupied by 2023.

7.3 Future Phases

The subsequent phases of Broomfield Masterplan are estimated to comprise approximately 500 residential units. The last phase is assumed to be fully completed and occupied by 2028.

7.4 Overall Broomfield Masterplan Development

The overall Broomfield Masterplan development expected to be fully completed and occupied by 2028 is presented in Table 4.

Phase	Total Residential Houses + Apartments (Units)
Phase 1 (Under Construction)	149
Future Phases (Future Applications)	500
Overall Broomfield Masterplan	649

Table 4 | *Overall Broomfield Masterplan Development 2028.*

7.5 Overall Broomfield Masterplan Population 2028

On the basis of 649 residential units and an average of 2.92 persons per unit as recorded by Census 2016 (Figure 11), it is estimated that the overall Broomfield Masterplan will have a resident population of 1,895 persons when fully completed and occupied.

- Phase 1: 149 units x 2.92 persons per unit : 435 persons
- Future Phases: 500 units x 2.92 persons per unit : 1,460 persons

Broomfield Masterplan Development: 649 units x 2.92 person per unit : 1,895 persons

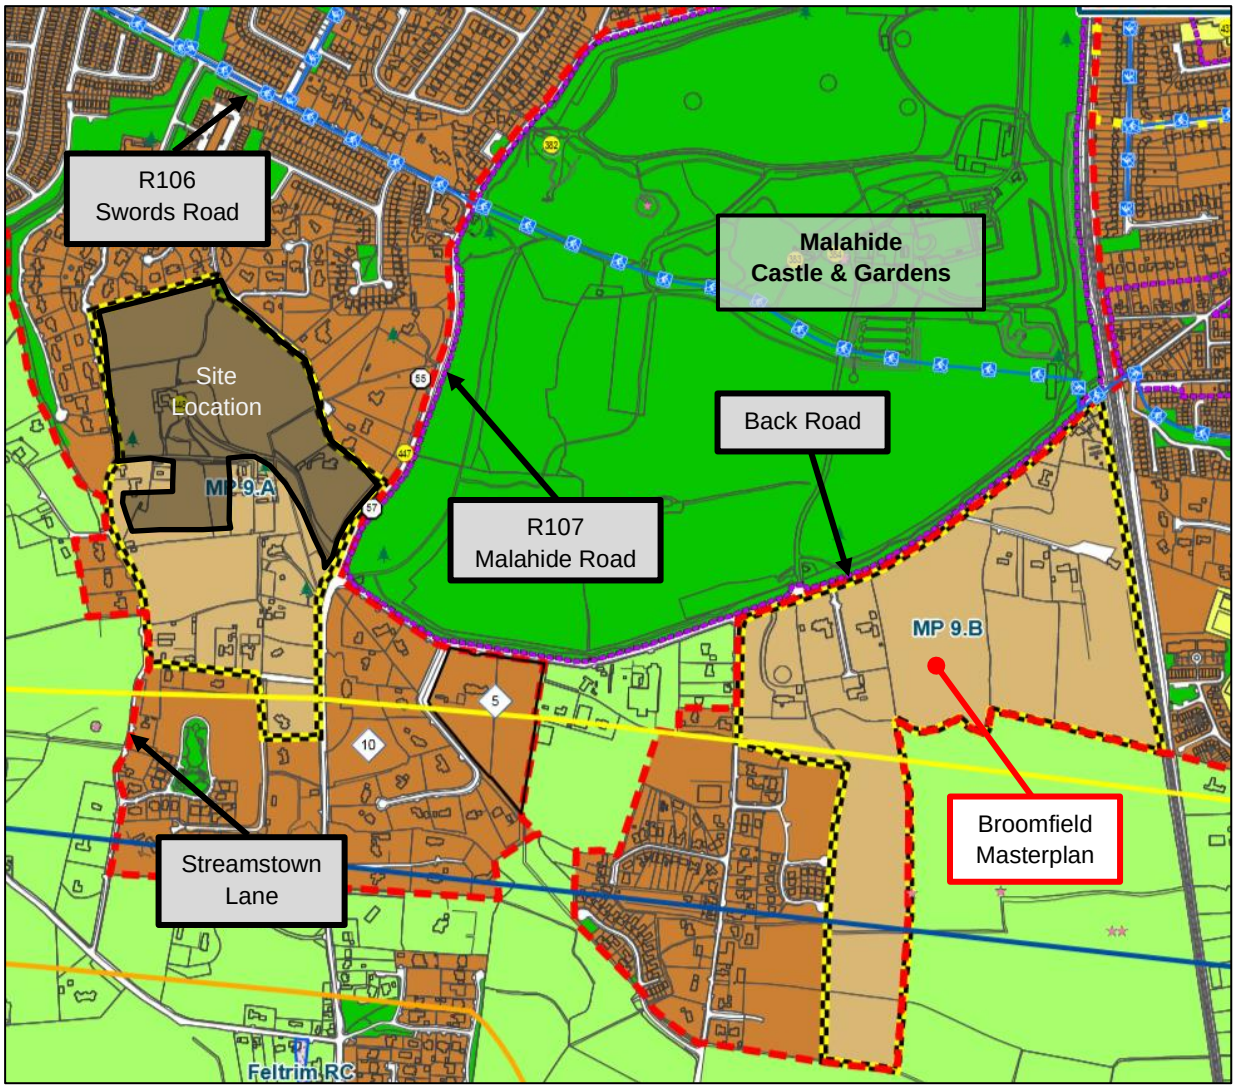

Figure 14 *| Location Map for Broomfield Masterplan – Extracted from Fingal Dev. Plan - Sheet 9.*

8. Travel Characteristics

8.1 Traffic Surveys

In order to identify the volumes of traffic movements at key points on the road network surrounding the subject site, three sets of classified turning movement traffic counts were commissioned.

A manual classified traffic survey was carried out by 'Traffinomics' on Wednesday 29th May 2019 at one priority-controlled T-junction over a period of 24 hours. The junction surveyed was:

- **Junction 1 (Priority T-junction):** R107 Malahide Road / Back Road.

A second manual classified traffic survey was also carried out by 'Traffinomics' on Tuesday 21st January 2020 at one priority-controlled T-junction over a period of 24 hours. The junction surveyed was:

- **Junction 2 (Priority T-junction):** Carrey's Lane / Streamstown Lane.

An additional manual classified traffic survey was carried out by 'IDASO' on Tuesday 24th November 2020 at two priority-controlled T-junctions over a period of 24 hours (as requested by Fingal County Council Transportation Department during the Tripartite meeting). The junctions surveyed were:

- **Junction 3 (Priority T-junction):** R107 Malahide Road / Streamstown Lane.
- **Junction 4 (Priority T-junction):** Feltrim Road / Streamstown Lane.

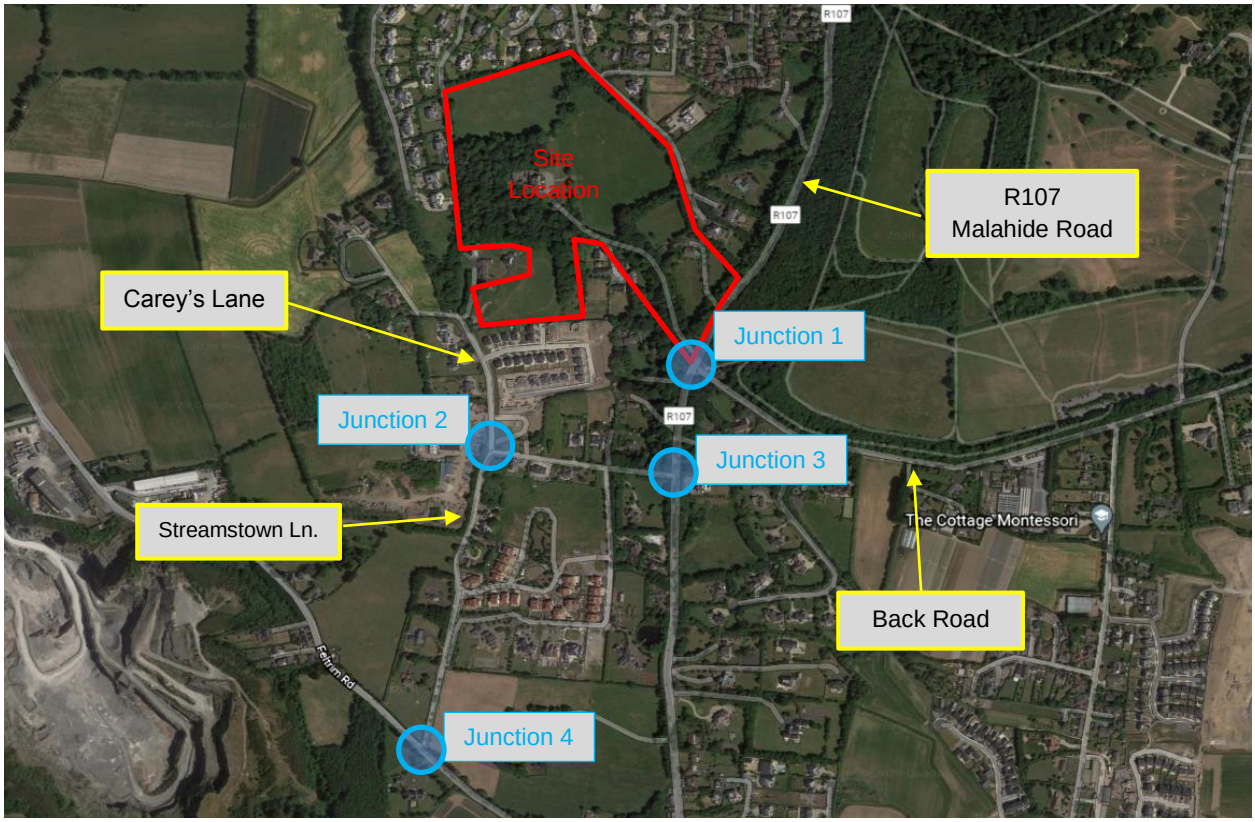

Figure 15 | *Location of Surveyed Junctions.*

As described above, the survey carried out by 'IDASO' for Junction 3 and Junction 4 was undertaken in November 2020. At that time, the country was at Lockdown Level 5 to restrict the spread of COVID-19 and as a result, the traffic flows surveyed for these junctions were considered not representative of a normal traffic day.

In order to account for the traffic reduction due to Lockdown Level 5 and identify typical traffic flows of a normal day, the surveyed flows for Junctions 3 and 4 have been factored up. To assist with the factoring up exercise, a one-page document named *'COVID-19 – Junction Turning Count Comparison'* has been provided by 'IDASO'. This document provides data of total vehicle flows surveyed at a random junction in the GDA (North Side) during each level of COVID-19 restriction (from April 2020 to November 2020) and compares them against the Pre COVID-19 scenario in February 2020. The random surveyed junction is the intersection between Oscar Traynor Road (R104), Malahide Road (R107) and Tonlegee Road (R107) in Coolock.

The results of the comparison exercise carried out by 'IDASO' identified that in November 2020 (during Level 5 restrictions), the volume of traffic getting through the surveyed junction was 14% lower when compared to the Pre COVID-19 scenario in February 2020. Based on that, the vehicle flows surveyed on Junctions 3 and 4 have been increased by a 14% factor.

It is acknowledged that the random junction is located in a distinct area in terms of traffic level and the identified traffic patterns may not be precisely representative of Junctions 3 and 4 patterns. However, given the lack of specific information for the subject junctions in this regard, the use of the patterns identified for the random junction was considered reasonable to extrapolated typical day volumes on Junctions 3 and 4.

The surveys identified different peak hours for all four junctions. For the purpose of this Traffic and Transport Assessment the assumed peak hours are 08h00 - 09h00 in the AM and 18h00 – 19h00 in the PM, being the most common among them. The AM and PM peak hour surveyed volumes are illustrated in Figure 16. The factored volumes for Junctions 3 and 4 are shown later in Figure 22 – Section 11.1.

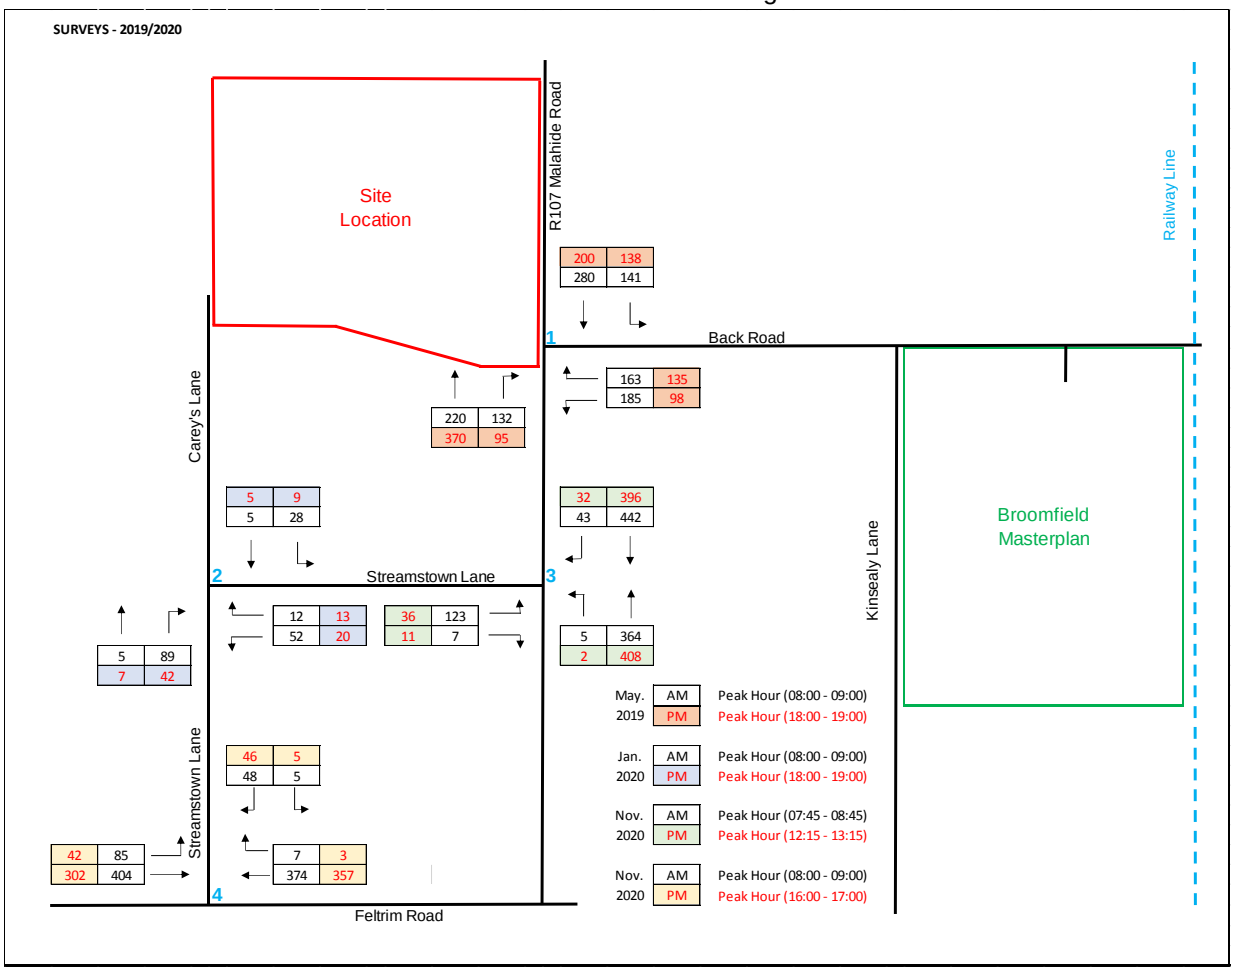

Figure 16 | *Surveyed Flows 2019 & 2020.*

8.2 Small Areas - Census 2016

Census 2016 was carried out by the Central Statistics Office (CSO) on 24th April 2016.

With the objective to obtain information regarding 'car ownership' and 'modal split for the journey to work, school or college', five areas surrounding the proposed development site have been consulted. Areas 1, 2 and 3 are Small Areas which have been defined by Central Statistics Office in 2016. Areas 4 and 5 are a grouping of some Small Areas defined by CSO. These consulted areas in relation to the proposed development site location is illustrated in Figure 17.

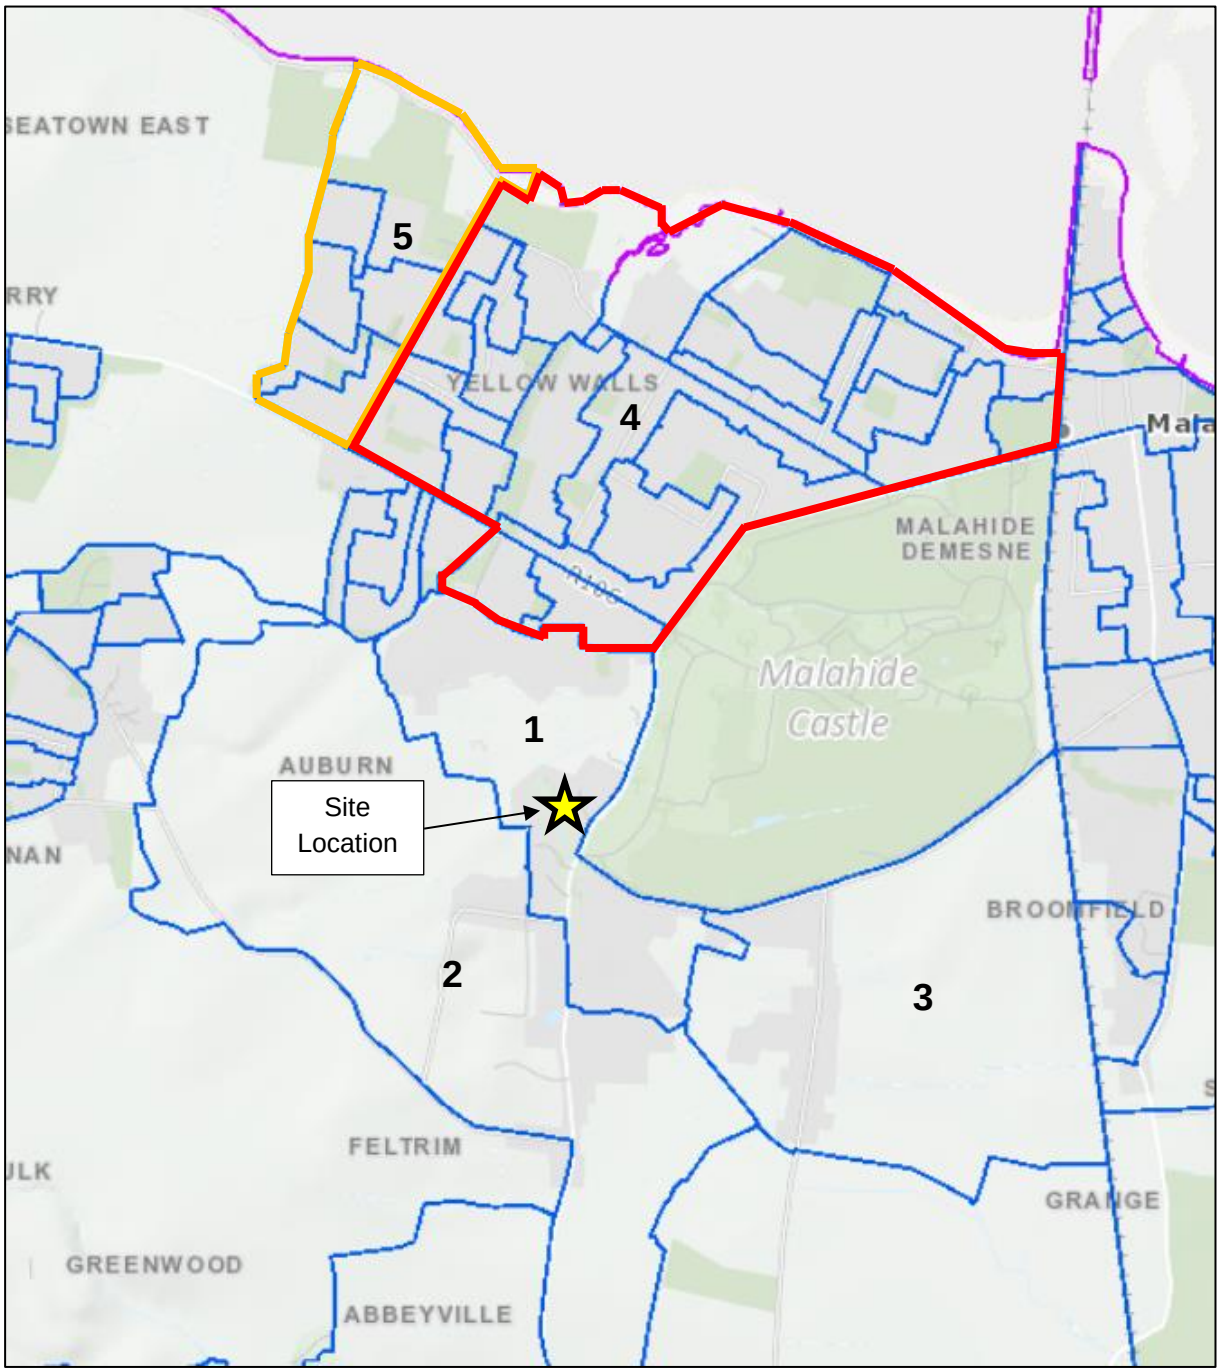

Figure 17 | *Areas for Census 2016 – Extracted from SAPMAPs.*

8.3 Car Ownership – Census 2016

The results of the census for car ownership in the consulted areas are presented in Table 5.

The survey recorded that the population of 8,777 persons living in these areas had a car ownership of 4,883 vehicles equivalent to 1 car per 1.80 persons or 1.62 car per residential unit.

CAR OWNERSHIP										
Area	Population	Housing	0	1	2	3	4+	Not Stated	Total No. Cars	Total No. Cars / Housing
1	328	89	1	15	38	19	13	3	200	2.25
2	325	88	5	17	46	13	7	0	176	2.00
3	353	107	2	35	55	8	5	2	189	1.77
4	6,224	2,148	141	850	921	175	39	22	3,373	1.57
5	1,547	578	36	198	265	55	13	11	945	1.63
TOTAL	8,777	3,010	185	1,115	1,325	270	77	38	4,883	1.62

Table 5 | *Surveyed Car Ownership - Census 2016.*

8.4 Rail Travel – Census 2019

The National Heavy Rail Census was carried out by Iarnrod Eireann in 2019 on behalf of the National Transport Authority (NTA).

The Final Report published in July 2020 recorded ongoing annual increases in passenger numbers at Malahide Station.

These increases are likely to continue for a number of years into the future.

The results of the Census for passenger numbers per day at Malahide Station are presented in Tables 6 and 7 below.

Station	Activity	2019	2018	2017	2016	2015	2014	2013	2012
Malahide	Boarding's	3,456	3,952	3,324	2,626	2,604	2,086	2,177	2,318
	Alighting's	3,597	3,629	3,030	2,158	2,508	1,992	2,178	2,302
	Total	6,953	7,581	6,354	4,784	5,112	4,078	4,355	4,620

Table 6 | *Daily Passenger Numbers at Malahide Station 2012 to 2019.*

Station	Activity	Northbound	Southbound	Total
Malahide	Boarding's	636	2,820	3,456
	Alighting's	3,101	496	3,597
	Total	3,737	3,316	7,053

Table 7 | *Daily Boarding's and Alighting's at Malahide Station 2019.*

8.5 Rail Passenger Forecasts 2020

For the purpose of forecasting future rail passenger numbers at Malahide, the methodology described below was used.

- Extraction of surveyed daily numbers from Rail Census 2019 published in 2020.
- Calculation of growth rate from the survey results for 2012 – 2019.
- Application of the growth rate to the 2019 survey results to generate the 2020 numbers.
- Calculation of passenger numbers that will be generated by the proposed residential development at Streamstown Masterplan and the overall (under-construction and potential future) development in Broomfield Masterplan. Refer to Section 13.1
- Addition of the new passenger numbers to the 2020 passenger numbers to forecast the 2028 passenger numbers (Streamstown and Broomfield Masterplans fully developed and occupied). Refer to Section 13.1.

8.6 Daily Rail Passenger Numbers 2020

The surveyed passenger numbers for Malahide Station show an average year on year increase of 7% per annum over the six years between 2012 and 2019.

This rate of increase was applied to the 2019 surveyed numbers to estimate the existing numbers in 2020. The results are presented in Table 8.

Station	Activity	Northbound	Southbound	Total
Malahide	Boarding's	681 (18%)	3,017 (82%)	3,698 (100%)
	Alighting's	3,318 (86%)	531 (14%)	3,849 (100%)
	Total	3,999	3,548	7,547

***Table 8** | Boarding's and Alighting's at Malahide Station 2020 (Existing).*

8.7 Peak Hour Rail Boardings and Alightings 2020

The hourly profile surveyed during the Census recorded that overall, 17% of daily passenger demand occurred during the AM Peak Hour and 15% of daily passenger demand occurred during the PM Peak Hour.

The proportion of passenger numbers during the AM Peak Hour and the PM Peak Hour varies significantly with the location of the rail station whether in the City Centre or the suburbs.

In the case of Malahide Station, outbound passenger numbers in the AM Peak Hour and inbound passenger numbers during the PM Peak Hour will be greater than the corresponding more balanced numbers in the City Centre. Similarly, inbound passenger numbers in the AM Peak Hour and outbound passenger numbers during the PM Peak Hour will be lower than the corresponding more balanced numbers in the City Centre.

For the purpose of this TTA, it was assumed that 20% of the daily boardings occur during the AM Peak Hour and 10% during the PM Peak Hour. It was also assumed that 10% of the alightings occur during the AM Peak Hour and 20% during the PM Peak Hour.

The Peak Hour passenger numbers estimated for Malahide in 2020 is presented in Table 9 below.

2020 (EXISTING) – MALAHIDE STATION				
Period	**Activity**	**Northbound**	**Southbound**	**Total**
AM Peak Hour	Boardings	136	603	739
	Alightings	332	53	385
PM Peak Hour	Boardings	68	302	370
	Alightings	664	106	770

Table 9 *| Peak Hours Boarding's and Alighting's at Malahide Station 2020 (Existing).*

8.8 Surveyed Modal Split – Census 2016

The surveyed 'modal split for the journey to work, school or college' by the residents at the five consulted areas as surveyed in Census 2016 recorded that 65% of 8,777 population generated 5,771 trips for the journey to work, school or college. Work trips made up for c. 60% of trips generated in the area, some 66% were by car, 17% by Train, 10% by Bus, 2% by Bicycle, 3% On foot and 2% were others or not stated. College trips made up c. 40% of the trips generated in the area, some 43% were by car (37% of these were car passenger), 11% by Train, 21% by Bus, 3% by Bicycle, 20% On Foot, and 2% were others or not stated.

The survey results for each consulted area are presented in Table 10 below.

Area	Pop.	Trip Attractor	Car Driver	Car Passenger	Train	Bus	Bicycle	On Foot	Others or Not Stated	Total
1	328	Work	92	3	8	3	2	1	4	113
			81%	3%	7%	3%	2%	1%	3%	100%
		College	18	50	17	14	3	6	2	110
			16%	45%	15%	13%	4%	5%	2%	100%
2	325	Work	78	1	14	4	3	2	3	105
			74%	1%	13%	4%	3%	2%	3%	100%
		College	6	64	8	18	1	6	3	106
			6%	60%	8%	17%	1%	6%	3%	100%

			64%	2%	17%	10%	2%	3%	2%	100%
		College	133	828	244	475	59	442	47	2228
			6%	37%	11%	21%	3%	20%	2%	100%

Table 10 *| Surveyed Modal Split for the Journey to Work, School or College - Census 2016.*

9. Trip Generation

9.1 TRICS Car Trip Rates

In order to assess the likely impact of the traffic generation arising from the proposed development, TRICS software has been consulted. TRICS is the national standard of trip generation and analysis in Ireland. It is a database system which allows users to identify representative trip rates and to establish potential levels of trip generation for a wide variety of developments.

Full car trip rates, which were sourced from the TRICS Database version 7.7.3, have been provided in Appendix C and are summarised in Table 11 below.

Land Use Category	AM (08:00 – 09:00)		PM (18:00 – 19:00)	
	Trip Rates IN	Trip Rates OUT	Trip Rates IN	Trip Rates OUT
Mixed Private Residential Development (Flats and Houses)	**0.137** per unit	**0.297** per unit	**0.294** per unit	**0.159** per unit

Table 11 | *TRICS Car Trip Rates.*

Fingal County Council raised a concern in relation to the use of TRICS trip rates for 'mixed-use residential development (flats and houses)' as opposed to 'mixed-use residential development (apartments and houses)'. This concern was noted and a new consultation of TRICS Database was undertaken. In this consultation it was observed that, as per Figure 18 below, the 'apartment' typology of use is not an option for selection, and it appears that TRICS recognises flats and apartments as being the same.

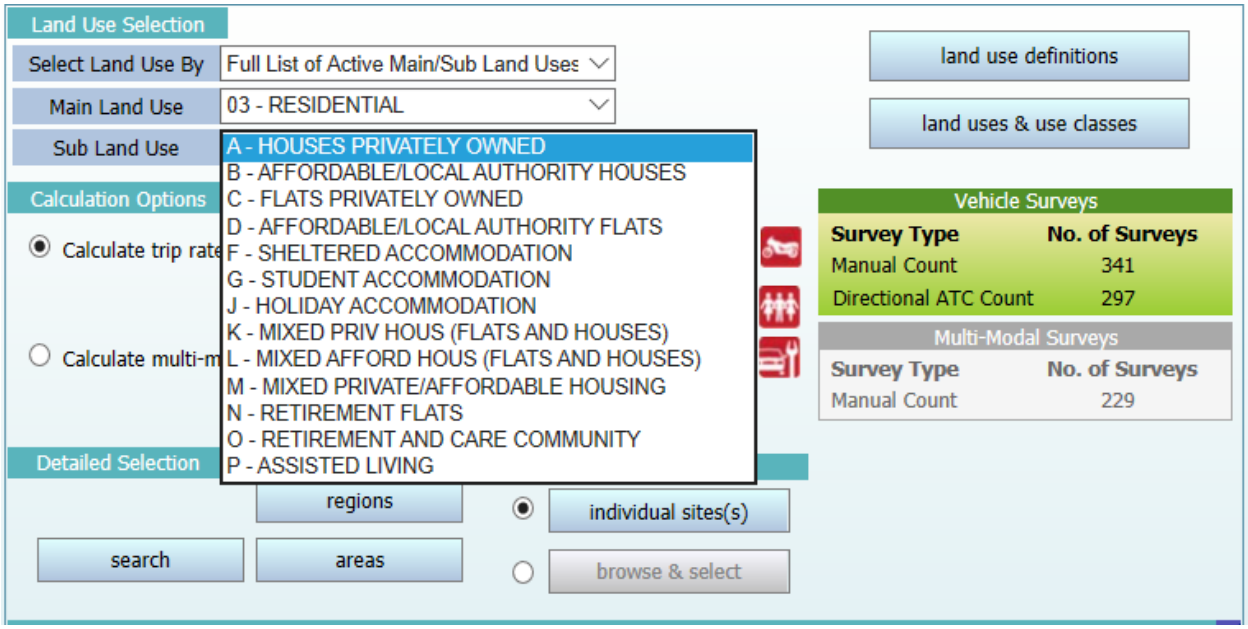

Figure 18 | *Land Use Selection – TRICS Database System.*

9.2 Peak Hour Car Trip Generation

9.2.1 2023 (Opening Year of Proposed Development)

Trip generation calculation for the assessment year of 2023 (Opening Year of Proposed Development at Streamstown Masterplan) is presented below. As described earlier in Section 5.1 and 7.4 of this report, it is expected that, by 2023, the following new developments will be in place:

- Proposed Development at Streamstown Masterplan (Subject Application) comprising 411 residential units.
- Under-construction Phase 1 of Broomfield Masterplan (Reg. Refs. F13A/0459 and F13A/0460) comprising a total of 149 residential units.

Proposed Development at Streamstown Masterplan (Subject Application)

The calculated car trips for the proposed development at the Streamstown Masterplan in 2023 is presented in Table 12. These have been based on:

- A proposed development of 411 residential units.
- A residential population of 1,200 persons.
- The car trip rates from Table 11.

As presented previously in this report, in addition to the 411 residential units proposed, as part of the subject development a Childcare Facility with 173sqm of area is also proposed in the scheme. However, given the size of this facility and the number of residential units proposed, it is assumed that the proposed Childcare Facility will primarily serve the proposed development's resident and in general will attract non-primary trips. Therefore, no additional car trips have been assumed for the Childcare Facility.

Proposed Development at Streamstown Masterplan	AM Peak Hour		PM Peak Hour	
	Car Trips In	Car Trips Out	Car Trips In	Car Trips Out
411 no. residential units	56	122	121	65

Table 12 *| AM&PM Car Trip Generation – Proposed Development at Streamstown Masterplan.*

From above, it can be seen that, in the opening year of 2023, the proposed development at Streamstown Masterplan is expected to generate a total of 178 car trips during the AM peak hour (56 inbound and 122 outbound) and a total of 186 car trips during the PM hour (121 peak hour and 65 outbound).

Under-construction Phase 1 of Broomfield Masterplan (Reg. Ref's F13A/0459 and F13A/0460)

The permission for the under-construction Phase 1 of Broomfield Masterplan provided for the construction of a total of 149 no. houses (61 no. houses under Planning Reference F13A/0459 and 88 no. houses under Planning Reference F13A/0460).

The AM and PM peak hour car trip generation to/from the under-construction Phase 1 of Broomfield – extracted from the Traffic Impact Assessment approved under Planning Reference F13A/0459, is presented in Table 13 below.

Phase 1 of Broomfield Masterplan	AM Peak Hour		PM Peak Hour	
	Car Trips In	Car Trips Out	Car Trips In	Car Trips Out
149 no. residential units	22	60	57	34

Table 13 | *AM&PM Car Trip Generation – Under-construction Broomfield Phase 1.*

As can be seen from the above, based on the TIA approved under Planning Reference F13A/0459, the under-construction Phase 1 of Broomfield Masterplan is expected to generate a total of 82 car trips during the AM peak hour (22 inbound and 60 outbound) and a total of 91 car trips during the PM peak hour (57 inbound and 34 outbound).

9.2.2 2028 (Opening Year of Proposed Development + 5 Years)

Car trip generation calculation for the assessment year of 2028 (Opening Year of Proposed Development + 5 Years) is presented below. It is expected that, in 2028, the following new developments will be in place:

- Proposed Development at Streamstown Masterplan (Subject Application) comprising 411 residential units – as per 2023.
- Broomfield Masterplan Phase 1 (Reg. Refs. F13A/0459 and F13A/0460) comprising a total of 149 residential units – as per 2023.
- Broomfield Masterplan Subsequent Phases (Potential Future Development) comprising a total of c. 500 residential units.

Subsequent Phases of Broomfield Masterplan (Potential Future Development)

The calculated car trips for the potential future development of the subsequent phases of Broomfield Masterplan is presented in Table 14. These have been based on:

- A future residential development comprising of c. 500 residential units.
- A residential population of c. 1,460 persons.
- The car trip rates from Table 11.

Subsequent Phases of Broomfield Masterplan	AM Peak Hour		PM Peak Hour	
	Car Trips In	Car Trips Out	Car Trips In	Car Trips Out
c. 500 no. residential units	69	149	147	80

Table 14 | *AM&PM Car Trip Generation – Potential Future Development at Broomfield.*

As can be seen from the above, for the future assessment year of 2028, the potential future residential development in Broomfield Masterplan is estimated to generate a total of 218 car trips during the AM peak hour (69 inbound and 149 outbound) and a total of 227 car trips during the PM peak hour (147 inbound and 80 outbound).

9.2.3 Summary of Peak Hour Car Trip Generation

Table 15 below shows a summary of the car trips estimated to be generated by the under-construction, proposed and potential future developments at Streamstown and Broomfield Masterplans in 2023 and 2028.

Development	No. units	Year	AM Peak Hour		PM Peak Hour	
			Car Trips In	Car Trips Out	Car Trips In	Car Trips Out
Proposed Development at Streamstown Masterplan (Subject Application)	411	2023	56	122	121	65
Phase 1 of Broomfield Masterplan (Under-construction)	149	2023	22	60	57	34
Subsequent Phases of Broomfield Masterplan (Potential Future)	500	2028	69	149	147	80

Table 15 | *Summary of Peak Hour Car Trip Generation – 2023 and 2028.*

10. Trip Distribution

10.1 Proposed Development at Streamstown Masterplan

In order to determine the amount of new car trips expected to travel through each surveyed junction in the vicinity of the proposed development site, the calculated car trips for the proposed development at Streamstown Masterplan presented in Table 15, have been distributed.

The estimated traffic to/from the proposed development has been divided between the following two proposed vehicle access points:

- **Access Point 1:** Proposed western arm of the proposed signalised junction between R107 Malahide Road and Back Road.
- **Access Point 2:** Proposed vehicular access via Carey's Lane.

Given its location providing more direct access to R107 Malahide Road, Access Point 1 is assumed to serve the majority of the proposed development trips (70%), whilst the Access Point 2 is assumed to serve the remaining 30%.

Generally, based on the location of the subject vehicular access points and the proposed development in relation to regional roads, to M1 motorway and to major employment and commercial centres, the estimated development car trips are assumed to have the following origin/destination distribution characteristics:

- 40% to/from south along R107 Malahide Road;
- 15% to/from north along R107 Malahide Road;
- 15% to/from east along Back Road;
- 20% to/from west along Feltrim Road

The distribution percentage of the car trips for the AM and PM peak hour is detailed in Figure 19 overleaf and the corresponding AM & PM peak hour traffic flows, based on the assumed distribution, are presented in Figure 22 – Section 11.2.

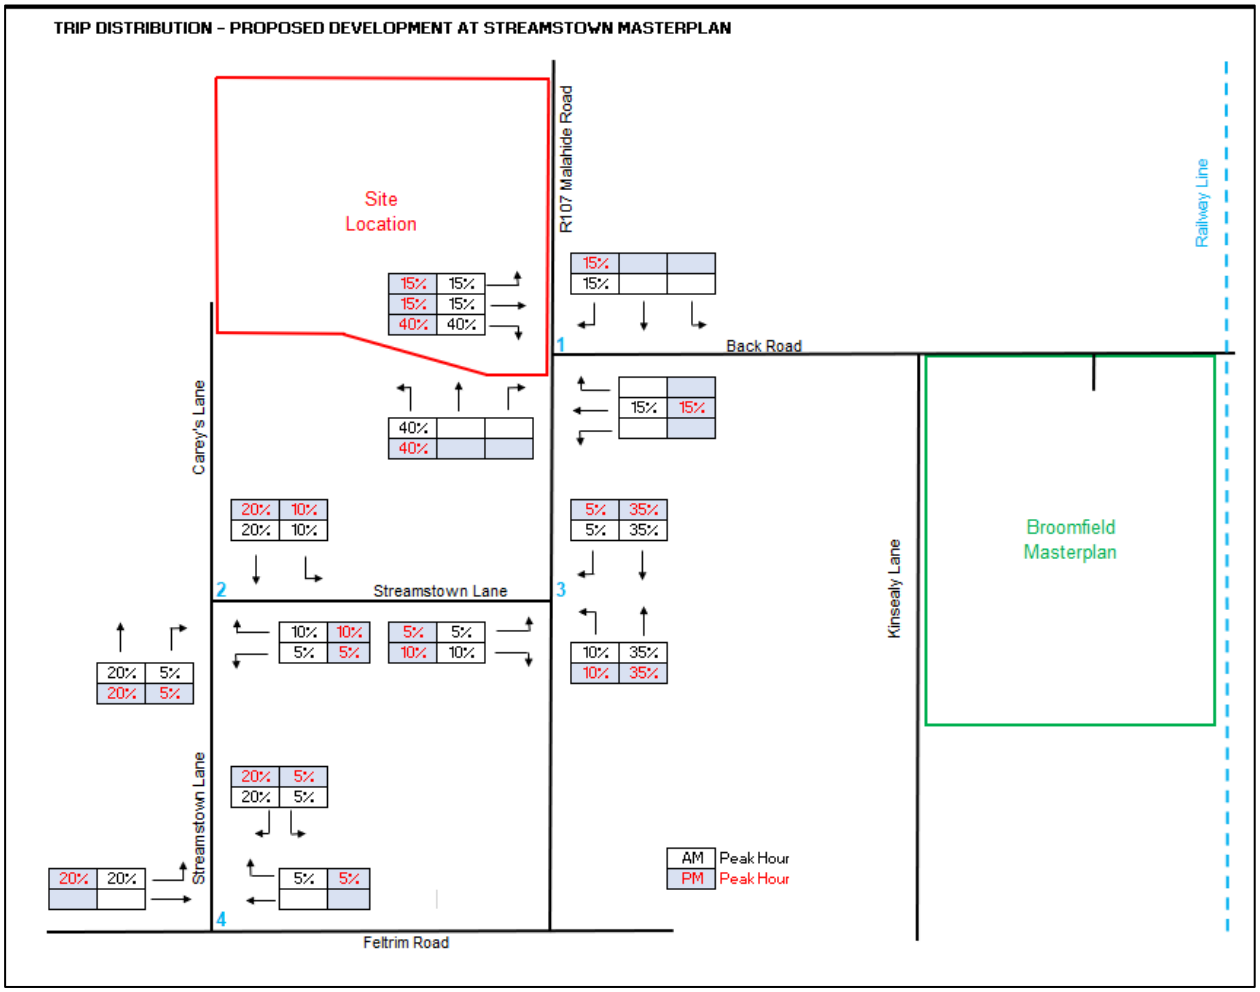

Figure 19 | *Car Trip Distribution AM & PM Peak Hours – Prop. Dev. At Streamstown Masterplan.*

10.2 Broomfield Masterplan

Similarly, with the objective to establish the amount of new car trips expected to travel through each surveyed junction, the calculated car trips for the Broomfield Masterplan development (under-construction Phase 1 in 2023 and potential future development in 2028), presented in Table 16, have been distributed.

The distribution percentage of the car trips for the AM and PM peak hour is detailed in Figure 20 and the corresponding AM & PM peak hour traffic flows, based on the assumed distribution, are presented in Section 11.3 - Figure 23 for the under-construction Phase 1 in 2023, and in Section 11.4 – Figure 24 for the potential future development in 2028. In summary, car trip distribution for Broomfield Masterplan developments was assumed as follows:

- 30% to/from east along Back Road towards R124 The Hill;
- 70% to/from west along Back Road towards R107 Malahide Road, of which:
    - 10% to/from south along Kinsealy Lane;
    - 20% to/from north along R107 Malahide Road;
    - 30% to/from south along R107 Malahide Road;
    - 10% to/from west along Streamstown Lane and Feltrim Road.

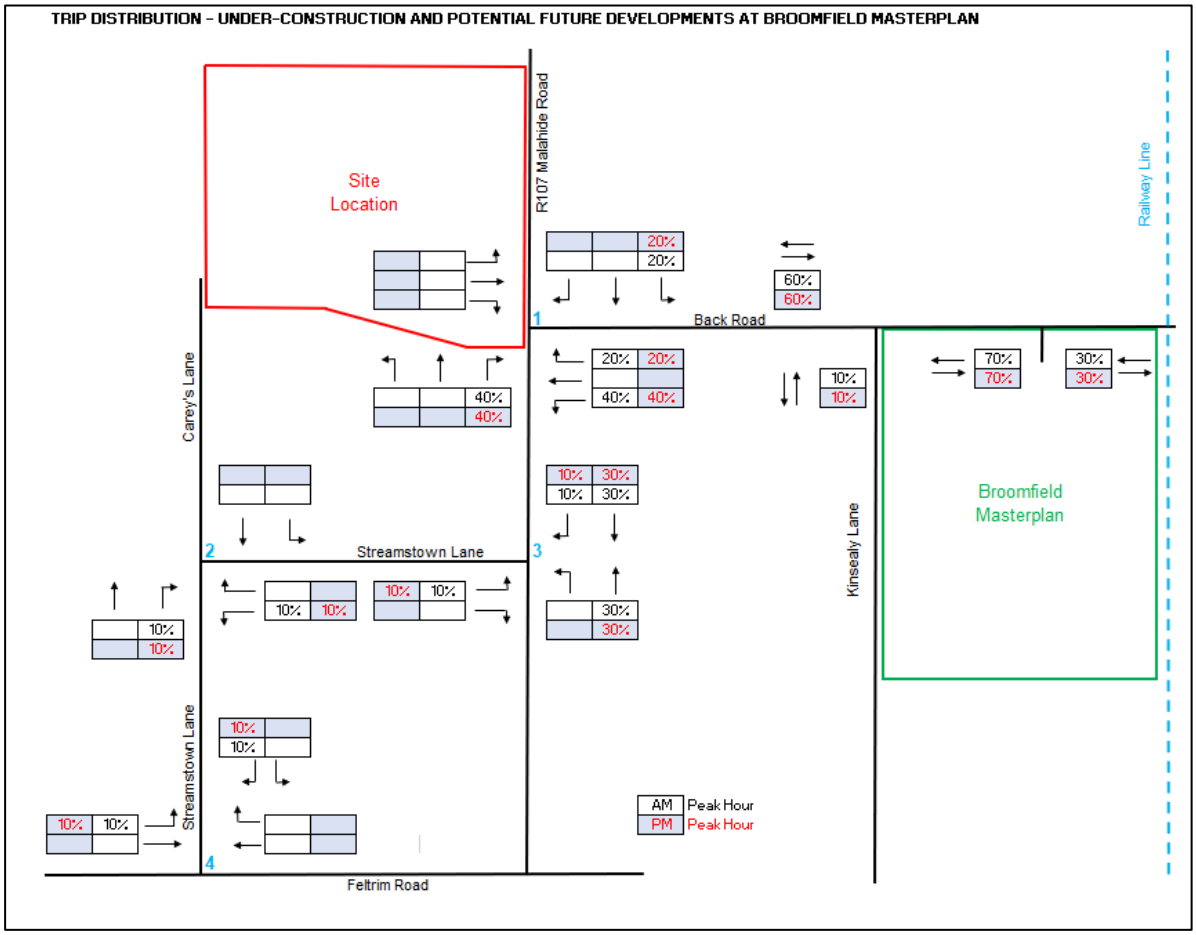

Figure 20 | *Car Trip Distribution AM & PM Peak Hours – Prop. Dev. at Broomfield Masterplan.*

11. Forecast Traffic

11.1 Base Year – 2020

For the purpose of establishing the baseline year of 2020, the 2019 peak hour flows of Junction 1 presented in Figure 16 have been factored up and the results are presented in Figure 21 below.

The background traffic growth used to factor up the 2019 surveyed traffic movements is in accordance with the *'Table 6.1: Link-Based Growth Rates: Metropolitan Area Annual Growth Rates'* within the TII Publications – Project Appraisal Guidelines for National Roads Unit 5.3 – Travel Demand Projections (May 2019). This is:

- 1.016 (Central Growth) growth factor from 2019 to 2020.

Note that only traffic flows on Junction 1 have been factored up by the above rate. Traffic surveys on Junctions 2, 3 and 4 were carried out in 2020 and therefore no growth factor was applied on these junctions' flows. However, as previously mentioned in Section 8.1, due to travel restrictions that were in place when Junctions 3 and 4 were surveyed in November 2020, both junctions' flows were factored up by 14% to account for COVID-19 restrictions.

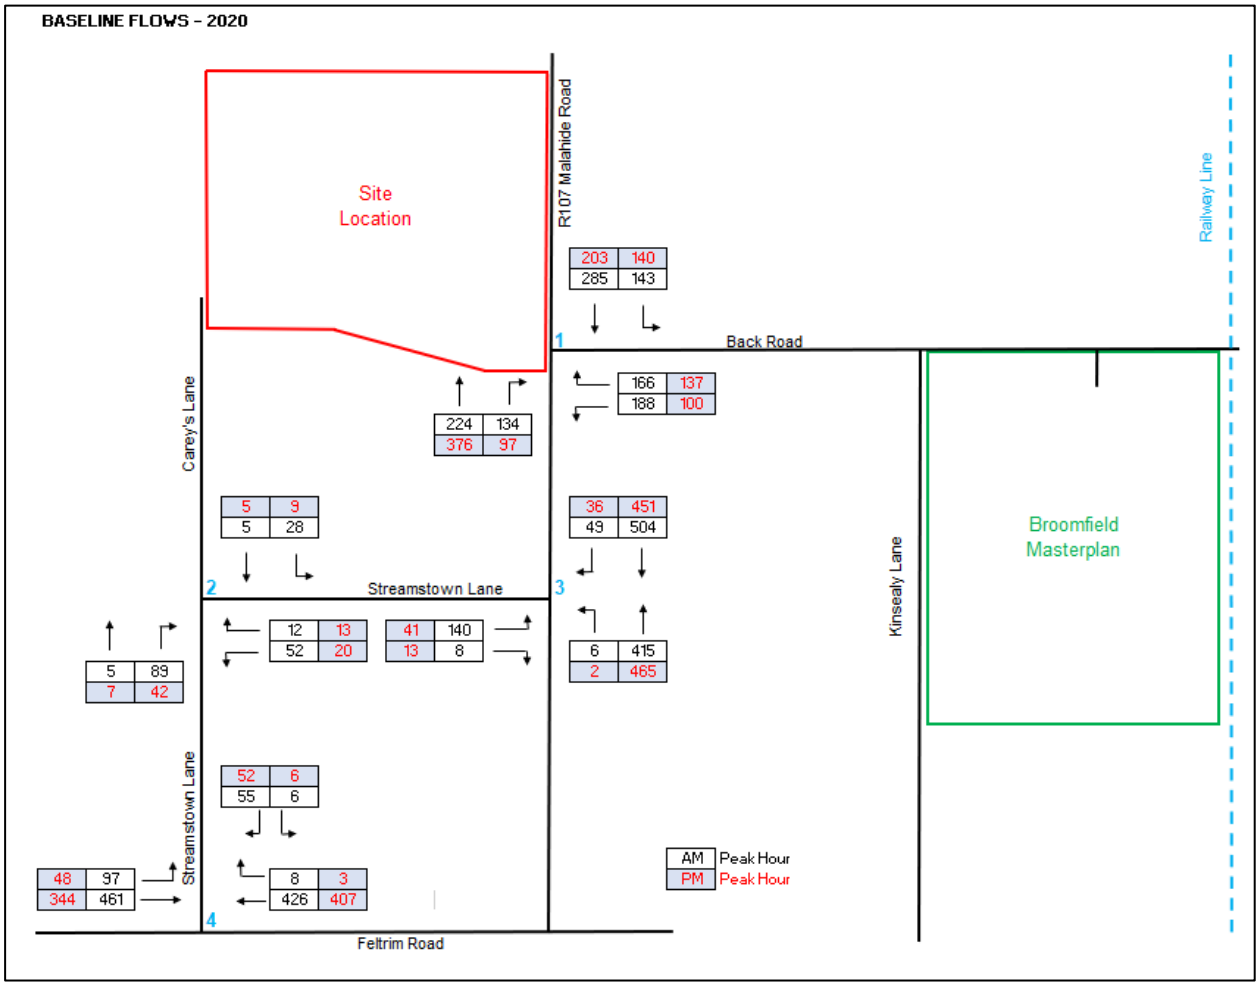

Figure 21 | *Baseline Flows 2020.*

11.2 Streamstown Masterplan – Proposed Development Traffic – 2023

Road traffic movements from/to the proposed residential development at the Streamstown Masterplan in 2023 (Opening Year) are presented in Figure 22.

These movements have been based on the car trips from Table 15 and the trip distribution from Figure 19.

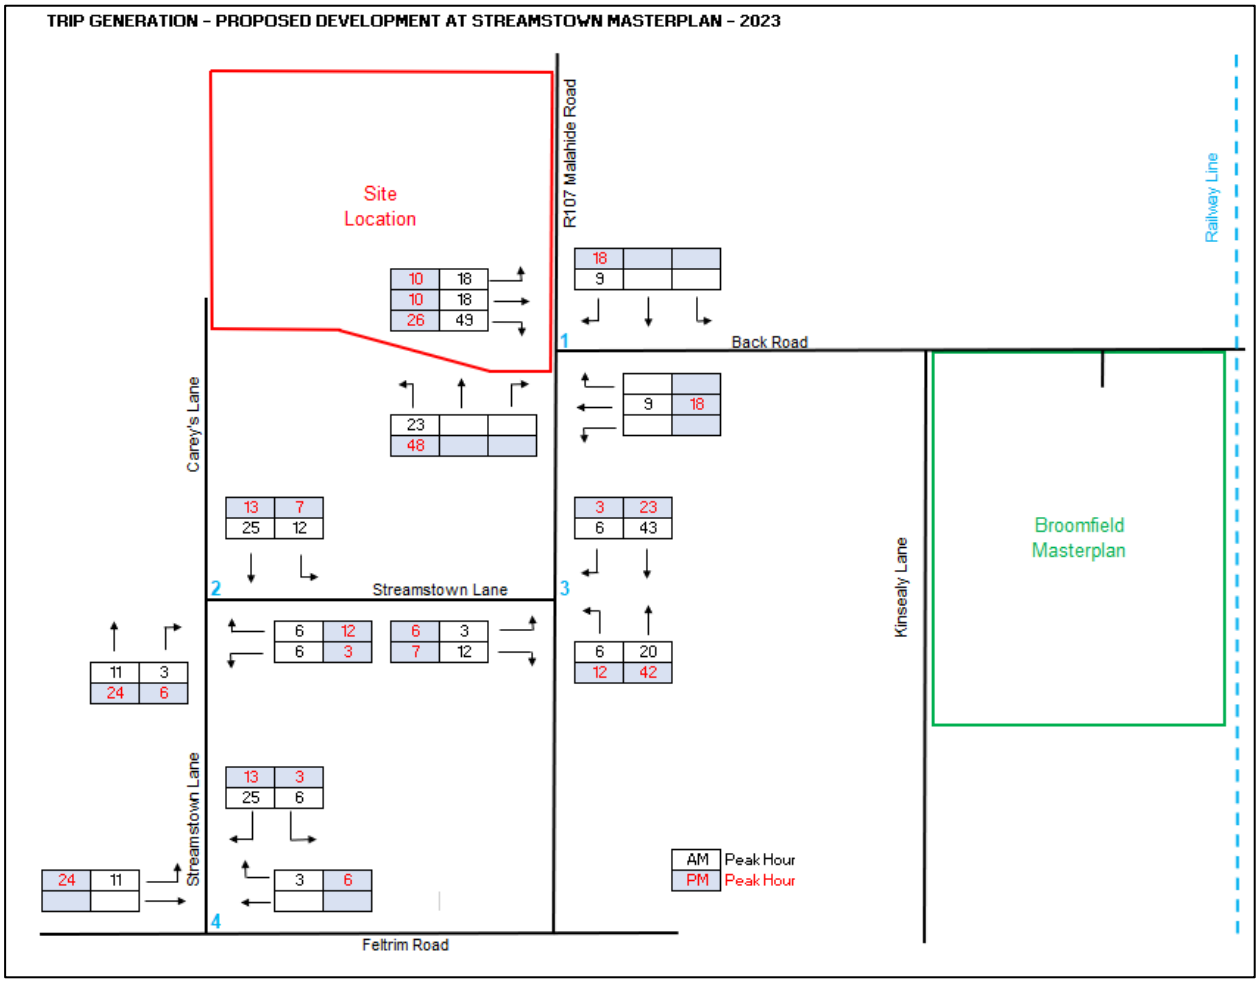

Figure 22 | *Traffic to/from the Prop. Dev. at Streamstown Masterplan – Opening Year 2023.*

11.3 Broomfield Masterplan – Phase 1 Traffic – 2023

Road traffic movements from/to the under-construction Phase 1 development at Broomfield Masterplan in 2023 are presented in Figure 23.

These movements have been based on the trips from Table 15 and the trip distribution from Figure 20.

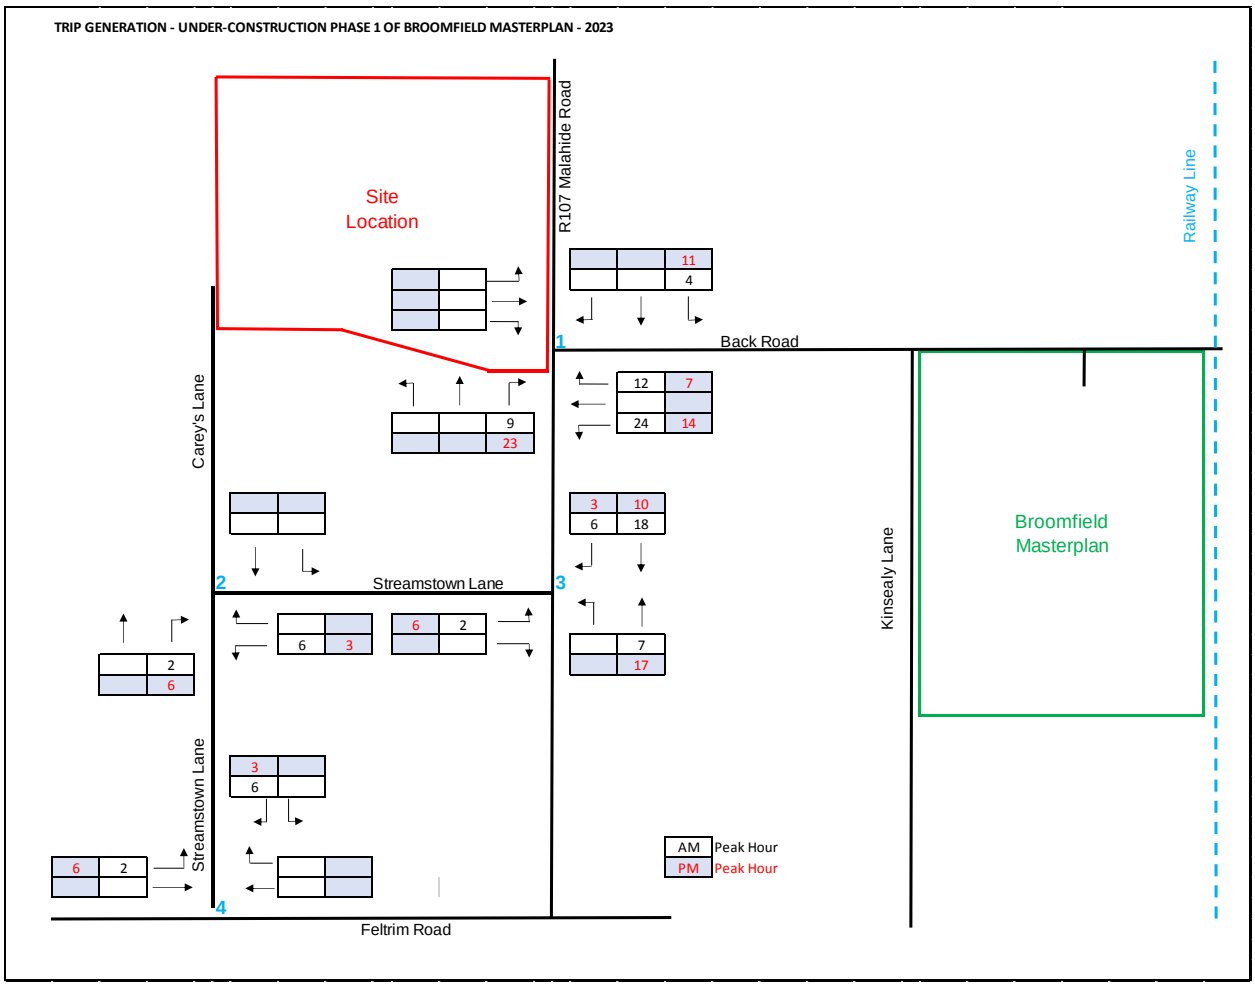

Figure 23 | *Traffic to/from the Under-construction Phase 1 of Broomfield Masterplan – 2023.*

11.4 Broomfield Masterplan – Potential Future Development Traffic – 2028

Road traffic movements from/to the potential future development at Broomfield Masterplan in 2028 are presented in Figure 24.

These movements have been based on the trips from Table 15 and the trip distribution from Figure 20.

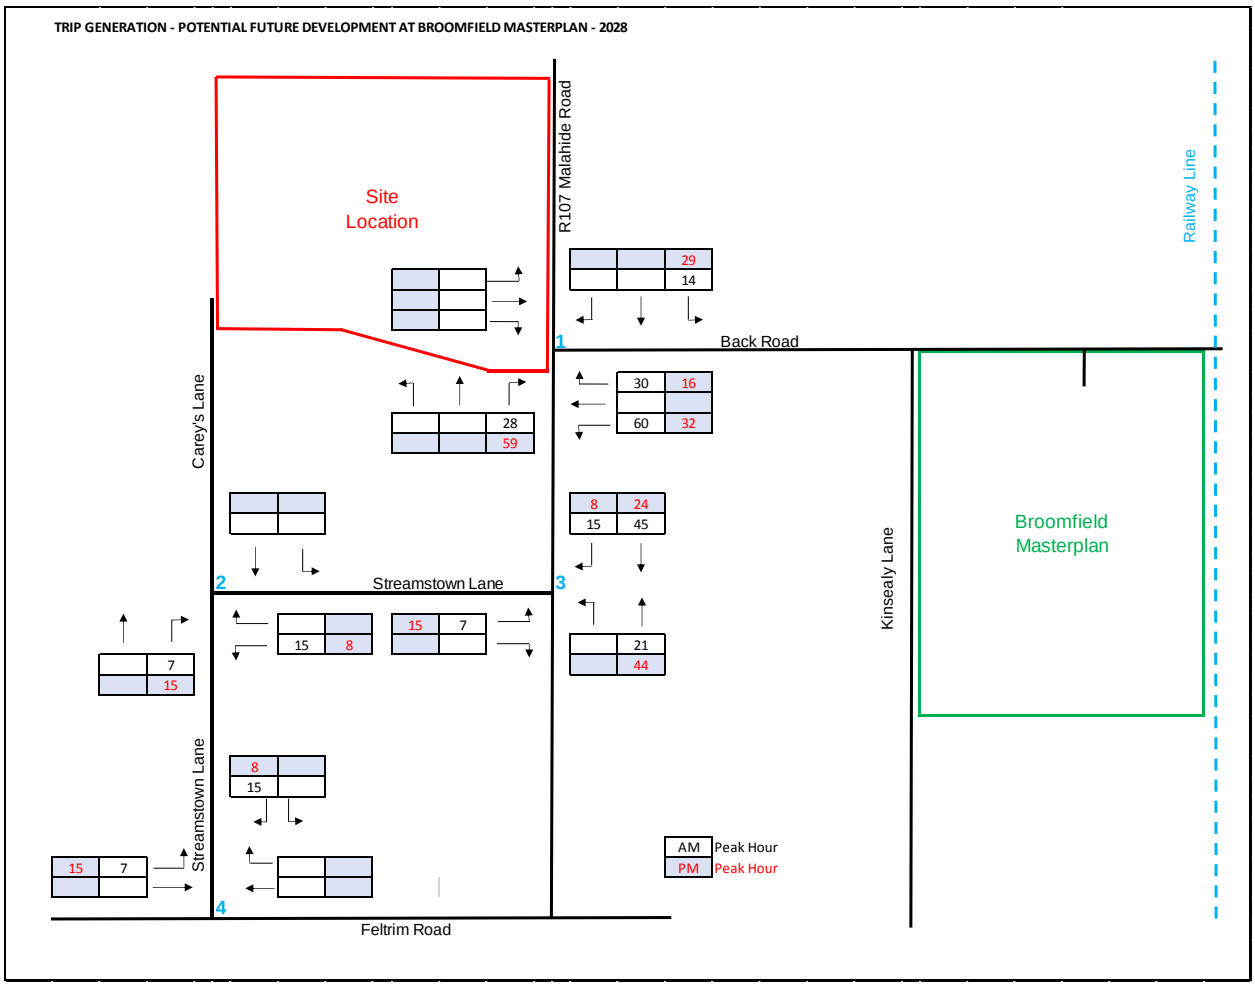

Figure 24 | *Traffic to/from the Potential Future Development at Broomfield Masterplan – 2028.*

11.5 Future Traffic 2023 (Opening Year of Proposed Development)

The future traffic on the surrounding road network in 2023 (Opening Year of Proposed Development at Streamstown Masterplan) is presented in Figure 25. It has been assumed within this TTA that the proposed development will be constructed over a period of approximately 2 years. Therefore, the assumed year of opening for the proposed development is 2023. It was also assumed that, by the year of 2023, Phase 1 of Broomfield Masterplan will also be fully occupied and operational.

Therefore, the movements illustrated in Figure 25 were obtained by factoring up the 2020 Base Year Traffic illustrated in Figure 21 and adding the movements from the proposed development in 2023 (Figure 22) and the movements from the under-construction development of Phase 1 of Broomfield Masterplan (Figure 23).

The background traffic growth used to factor up the 2020 Base Year traffic movements is in accordance with the *'Table 6.1: Link-Based Growth Rates: Metropolitan Area Annual Growth Rates'* within the TII Publications – Project Appraisal Guidelines for National Roads Unit 5.3 – Travel Demand Projections (May 2019). This is:

- 1.049 (Central Growth) growth factor from 2020 to 2023.

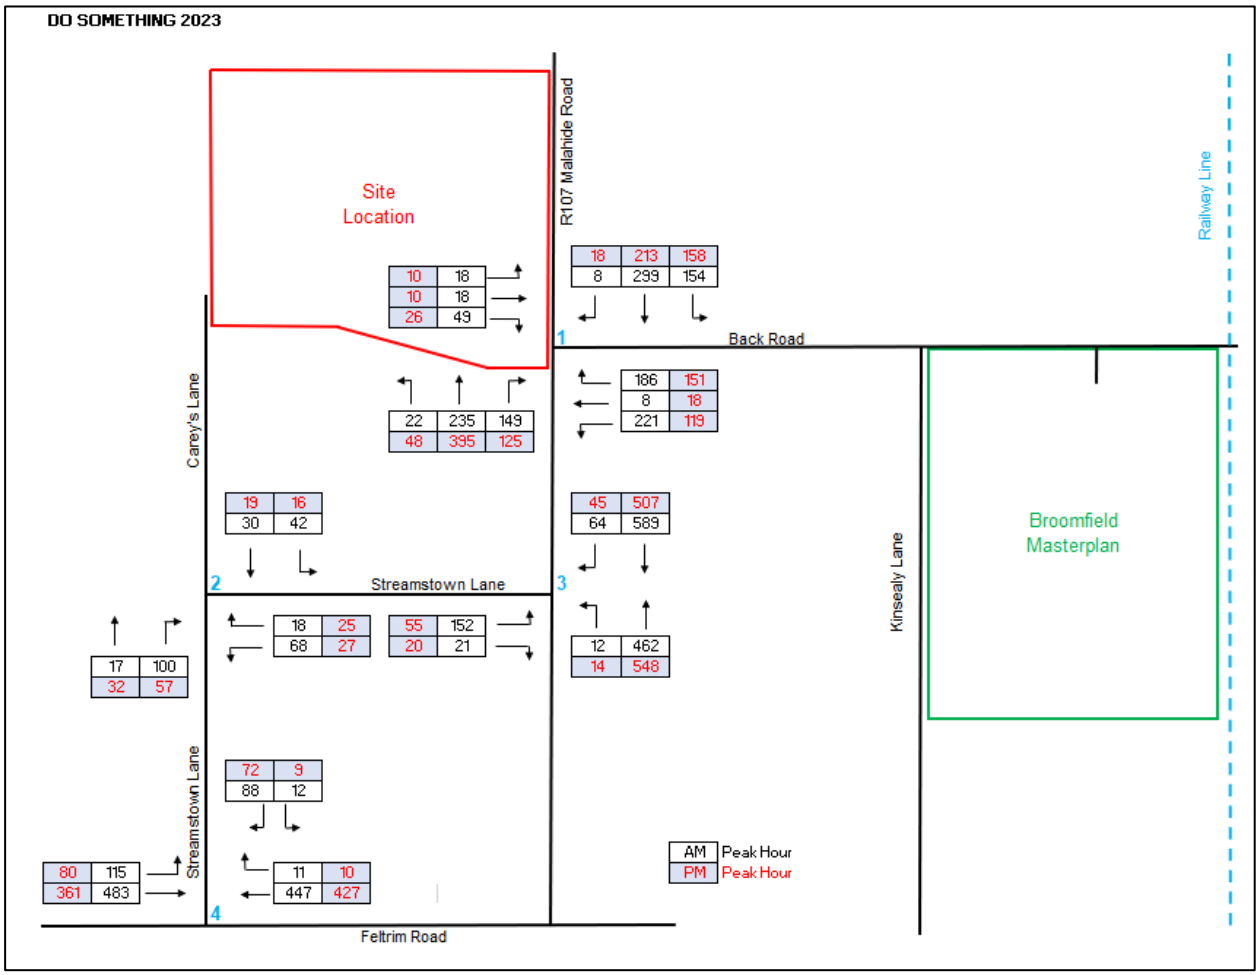

Figure 25 *| Future Traffic 2023 (Opening Year of Proposed Development).*

11.6 Future Traffic 2028 (Opening Year + 5 Years)

The future traffic on the surrounding road network in 2028 (+5 years after the Opening Year of the proposed development at Streamstown Masterplan) is presented in Figure 26. It has been assumed within this TTA that, by the future assessment year of 2028, the potential future development at Broomfield Masterplan comprising c. 500 new residential units will be completely constructed and occupied.

Therefore, the movements illustrated in Figure 26 were obtained by factoring up the 2020 Base Year Traffic illustrated in Figure 21 and adding the movements from the proposed development at Streamstown Masterplan (Figure 22), the movements from the under-construction Phase 1 development of Broomfield Masterplan (Figure 23) and the movements from the potential future development of Broomfield Masterplan (Figure 24).

The background traffic growth used to factor up the 2020 Base Year traffic movements is as follows:

- 1.137 (Central Growth) growth factor from 2020 to 2028.

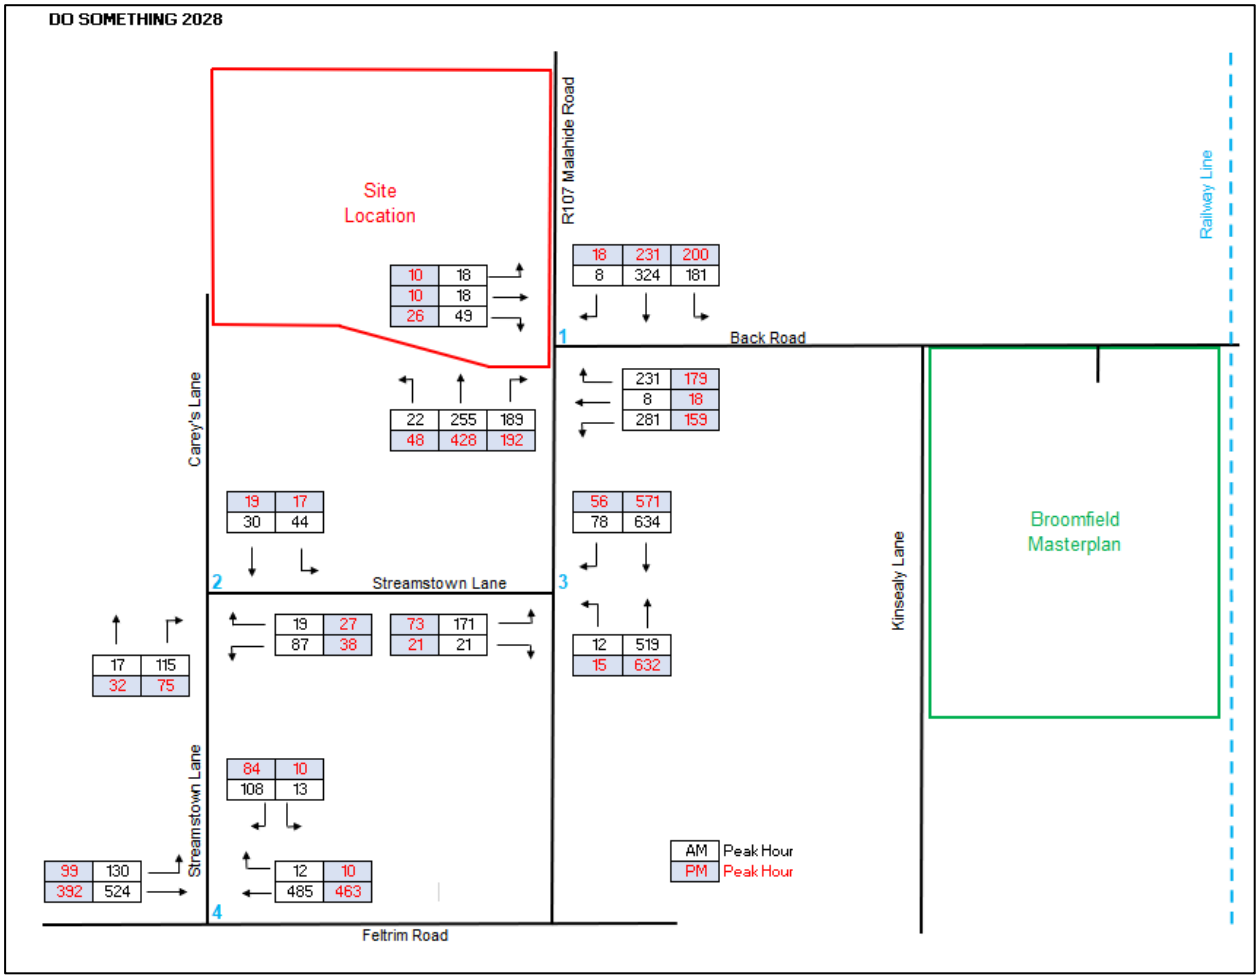

Figure 26 | *Future Traffic 2028 (Opening Year + 5 Years).*

11.7 Future Traffic 2038 (Opening Year + 15 Years)

The future traffic on the surrounding road network in 2038 (+15 years after the Opening Year of the proposed development at Streamstown Masterplan) is presented in Figure 27.

The movements illustrated in Figure 27 were obtained by factoring up the 2020 Base Year Traffic illustrated in Figure 21 and adding the movements from the proposed development at Streamstown Masterplan (Figure 22), the movements from the under-construction Phase 1 development at Broomfield Masterplan (Figure 23) and the movements from the potential future development of Broomfield Masterplan (Figure 24).

The background traffic growth used to factor up the 2020 Base Year traffic movements is as follows:

- 1.217 (Central Growth) growth factor from 2020 to 2038.

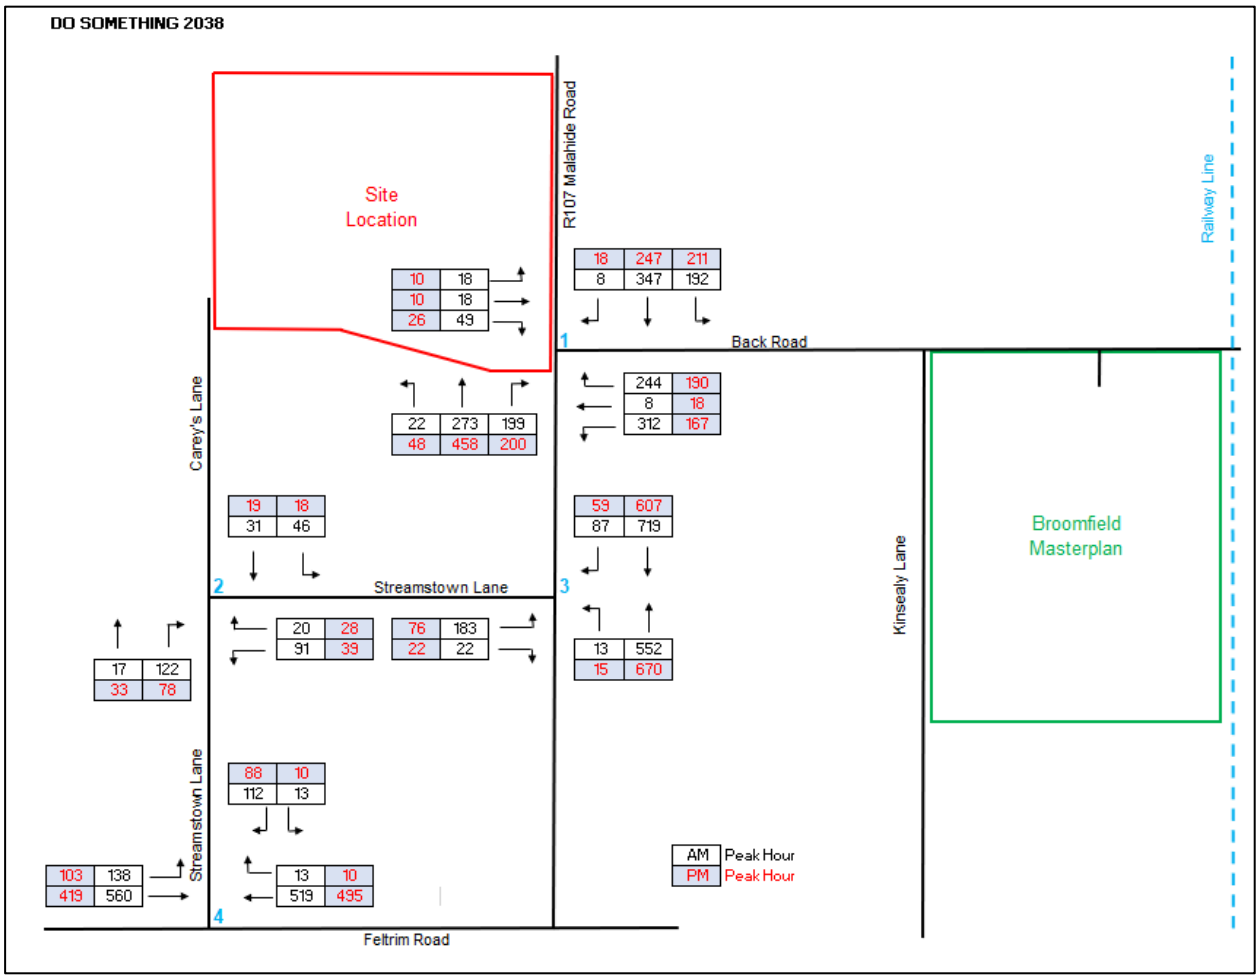

Figure 27 | *Future Traffic 2038 (Opening Year + 15 Years).*

12. Junction Assessment

12.1 Junctions Assessed

The junctions that have been assessed as part of this TTA are the following:

- **Junction 1**: R107 Malahide Road / Back Road (Existing Priority-controlled T-junction; Proposed Four-armed Signalised Junction)
- **Junction 2**: Carrey's Lane / Streamstown Lane (Priority-controlled T-junction).
- **Junction 3**: R107 Malahide Road / Streamstown Lane (Priority-controlled T-junction)
- **Junction 4**: Feltrim Road / Streamstown Lane (Priority-controlled T-junction)

12.2 Methodology

12.2.1 Cumulative Impact

The extent of traffic impact from the proposed development at Streamstown Masterplan and the under-construction and potential future developments at Broomfield Masterplan has been determined by initially checking where generated traffic would exceed 10% of the traffic flow on the adjoining road or 5% on the road where congestion exists, or the location is sensitive. This is in line with the NRA Transport Assessment Guidelines (2014). A summary of the existing two-way traffic and the expected traffic increase at each studied junction is presented below.

Junction	Junction Existing Flow (2020) - AM Peak Hour	Junction Existing Flow (2020) - PM Peak Hour	Additional Traffic Two-way Flow (AM)	Additional Traffic Two-way Flow (PM)	% Expected Increase (AM)	% Expected Increase (PM)
Junction 1	1,139	1,053	305	322	27%	31%
Junction 2	191	96	92	97	48%	101%
Junction 3	1,122	1,009	209	221	19%	22%
Junction 4	1,052	861	75	79	7%	9%

***Table 16** | Existing and Expected Two-way Flows.*

As can be seen from the above, all studied junctions are expected to receive a two-way traffic increase higher or close to 10%. Therefore, they have been modelled using, PICADY and TRANSYT.

12.2.2 Modelling Background

There are various modelling software packages available to assess every type of junction. Waterman Moylan uses TRANSYT and PICADY to analyse signalised and priority junctions, respectively.

TRANSYT (Traffic Network Study Tool) software is a widely accepted software for modelling signalled controlled junctions. This programme utilises the phases input by the user and optimises their timings over a selected cycle time. The outputs of a TRANSYT assessment include a Degree of Saturation percentage (DOS%) figure and queue length for each link on the road network.

PICADY is a software for modelling priority-controlled junctions. This programme utilises junction's geometry and traffic flows input by the user to determine Ratio of Flow to Capacity (RFC) and queue length for each link on the junction.

Typically, a junction is said to be working satisfactorily when the DOS% or RFC of each link does not exceed 85%/0.85. Acceptable DOS% or RFC values are considered to be in the range of 85%/0.85 to 100%/1.0 with higher values indicating restrained movements.

12.3 Assessment Scenarios

The performance of the junctions has been analysed for the critical AM and PM Peak Hours (08:00 – 09:00 and 18:00 – 19:00) for the following scenarios:

- **DO NOTHING - 2020 (Base Year)**: Existing road network with 2020 Base Year flows (Figure 21).
- **DO NOTHING - 2023**: Existing road network with 2020 baseline traffic flows factored up.
- **DO NOTHING - 2028**: Existing road network with 2020 baseline traffic flows factored up.
- **DO NOTHING - 2038**: Existing road network with 2020 baseline traffic flows factored up.
- **DO SOMETHING - 2023 (Opening Year)**: Proposed junction upgrades with 2020 baseline traffic flows factored up + traffic to/from proposed development at Streamstown Masterplan + traffic to/from under-construction Phase 1 development at Broomfield Masterplan (Figure 25).
- **DO SOMETHING - 2028 (Opening Year + 5 Years)**: Proposed junction upgrades with 2020 baseline traffic flows factored up + traffic to/from proposed development at Streamstown Masterplan + traffic to/from the under-construction Phase 1 development at Broomfield Masterplan + traffic to/from the potential future development at Broomfield Masterplan (Figure 26).
- **DO SOMETHING - 2038 (Opening Year + 15 Years)**: Proposed junction upgrades with 2020 baseline traffic flows factored up + traffic to/from proposed development at Streamstown Masterplan + traffic to/from the under-construction Phase 1 development at Broomfield Masterplan + traffic to/from the potential future development at Broomfield Masterplan (Figure 27).

12.4 Junction Assessment Results

12.4.1 Junction 1: R107 Malahide Road / Back Road – DO NOTHING

Junction 1 is an existing three-armed priority-controlled junction located immediately southeast of the proposed development site. For the DO NOTHING scenarios, this junction has been modelled based on its current configuration and the PICADY analysis results are summarise in Table 17. The arms of the junction were labelled as follows within the PICADY model:

- Arm A: R107 Malahide Road (N);
- Arm B: Back Road (E);
- Arm C: R107 Malahide Road (S).

Stream	AM (08:00 to 09:00)		PM (18:00 to 19:00)	
	Queue (veh.)	RFC	Queue (veh.)	RFC
2020 (BASE YEAR) – DO NOTHING				
Stream B-C	0.6	0.40	0.2	0.19
Stream B-A	0.8	0.46	0.6	0.36
Stream C-AB	0.7	0.33	0.6	0.26
2023 – DO NOTHING				
Stream B-C	0.8	0.44	0.2	0.20
Stream B-A	1.0	0.51	0.6	0.39
Stream C-AB	0.8	0.36	0.7	0.28
2028 – DO NOTHING				
Stream B-C	1.0	0.51	0.3	0.22
Stream B-A	1.4	0.59	0.7	0.43
Stream C-AB	0.9	0.40	0.8	0.32
2038 – DO NOTHING				
Stream B-C	1.5	0.61	0.3	0.26
Stream B-A	2.0	0.68	0.9	0.49
Stream C-AB	1.1	0.44	1.0	0.35

Table 17 | *Junction 1 – DO NOTHING - PICADY Analysis Results.*

The analysis results as shown above, indicate that the Junction 1 is currently operating well within capacity during both peak hour periods, with the highest RFC at 0.46 and a corresponding queue of 0.8 vehicle during the AM peak hour and a maximum RFC at 0.36 with a corresponding queue of 0.6 vehicle recorded for the PM.

For the future assessment year of 2038 - DO NOTHING, with the baseline flows factored up, the subject junction will continue to operate well within capacity during both peak hours, with the highest RFC at 0.68 and a corresponding queue of 2.0 vehicle during the AM and with the highest RFC at 0.49 and a corresponding queue of 0.9 vehicle recorded for the PM.

12.4.2 Junction 1: R107 Malahide Road / Back Road – DO SOMETHING

As described in Section 4.1.1 of this TTA, as part of the subject development works, Junction 1 is proposed to be upgraded from a priority-controlled T-junction to a four-armed signalised junction with dedicated right turning pocket lanes on the eastern and southern approaches and with the western arm forming the main access to the site. For the DO SOMETHING scenarios, the subject junction has been modelled based on the proposed layout and the TRANSYT analysis results are summarise in Table 18. The proposed upgraded scheme can be seen on Waterman Moylan Drawing No. 19-020-P110 accompanying the subject application. The arms of the proposed junction were labelled as follows within the TRANSYT model:

- Arm A: Back Road (E);
- Arm B: R107 Malahide Road (S);
- Arm C: Site Access Road (W);
- Arm D: R107 Malahide Road (N).

Arm	Mov.	AM		PM	
		Mean Max Queue (Veh.)	DOS%	Mean Max Queue (Veh.)	DOS%
2023 - DO SOMETHING					
A	S/L	3.37	48	2.95	41
	R	2.12	39	2.19	45
B	S/L	10.61	86	15.94	77
	R	2.25	15	3.33	22
C	S/L/R	4.20	81	2.16	60
D	S/L/R	12.38	71	15.13	78
2028 - DO SOMETHING					
A	S/L	5.11	60	4.79	55
	R	2.22	48	2.35	56
B	S/L	13.15	93	15.22	82
	R	2.86	19	4.08	33
C	S/L/R	4.20	81	2.16	60
D	S/L/R	21.14	93	19.29	87
2038 - DO SOMETHING					
A	S/L	6.25	67	5.17	58
	R	2.26	51	2.43	59
B	S/L	16.98	99	17.50	88
	R	3.01	20	4.09	35
C	S/L/R	4.20	81	2.00	51
D	S/L/R	27.72	99	23.92	95

Table 18 | *Junction 1 – DO SOMETHING - TRANSYT Analysis Results.*

The analysis results as shown above, indicate that Junction 1, when operating with its proposed configuration of a signalised crossroads, would operate within capacity for the future assessment year of 2023 – DO SOMETHING (Opening of Proposed Development) during both peak hours, with the highest DOS at 86% and a corresponding queue of 10.61 vehicles recorded in the AM and the highest DOS at 78% and a corresponding queue of 15.13 vehicles recorded in the PM.

For the future assessed year of 2038 – DO SOMETHING, the analysis results indicate that Junction 1 would operate with satisfactory (with restrained movements) capacity during both peak hours, with the highest DOS at 99% and a corresponding queue of 27.72 vehicles during the AM and a maximum DOS at 95% with a corresponding queue of 23.92 vehicles recorded in the PM.

Full assessment of Junction 1, including DO NOTHING and DO SOMETHING scenarios, has been provided in Appendix D.

12.4.3 Junction 2: Carrey's Lane / Streamstown Lane – DO NOTHING

Junction 2 is an existing priority-controlled T-junction located southwest of the proposed development site. For the DO NOTHING scenarios, this junction has been modelled with its current configuration and the PICADY analysis results are summarise in Table 19 below. The arms of the junction were labelled as follows within the PICADY model:

- Arm A: Streamstown Lane (S);
- Arm B: Carrey's Lane (N);
- Arm C: Streamstown Lane (E);

Stream	AM (08:00 to 09:00)		PM (18:00 to 19:00)	
	Queue (veh.)	RFC	Queue (veh.)	RFC
2020 (BASE YEAR) – DO NOTHING				
Stream B-AC	0.1	0.06	0.0	0.03
Stream C-AB	0.0	0.02	0.0	0.03
2023 – DO NOTHING				
Stream B-AC	0.1	0.07	0.0	0.03
Stream C-AB	0.0	0.03	0.0	0.03
2028 – DO NOTHING				
Stream B-AC	0.1	0.07	0.0	0.03
Stream C-AB	0.0	0.03	0.0	0.03
2038 – DO NOTHING				
Stream B-AC	0.1	0.08	0.0	0.03
Stream C-AB	0.0	0.03	0.0	0.03

Table 19 | *Junction 2 – DO NOTHING - PICADY Analysis Results.*

The analysis results in Table 19 indicate that the Junction 2 is currently operating well within capacity during both peak hour periods, with the highest RFC at 0.06 and a corresponding queue of 0.1 vehicle during the AM peak period and a maximum RFC at 0.03 with no queues recorded for the PM.

For the future assessed year of 2038 – DO NOTHING, the results indicate that the junction will continue to operate well within capacity during both peak hours, with the highest RFC at 0.08 and a corresponding queue of 0.1 vehicle during the AM, and with the highest RFC at 0.03 and no queues recorded for the PM.

12.4.4 Junction 2: Carrey's Lane / Streamstown Lane – DO SOMETHING

For the DO SOMETHING scenarios, Junction 2 has also been modelled with its current configuration and the PICADY analysis results are summarise in Table 20 below. The arms of the junction were labelled as follows within the PICADY model:

- Arm A: Streamstown Lane (S);
- Arm B: Carrey's Lane (N);
- Arm C: Streamstown Lane (E);

The analysis results in Table 20 indicate that, for the future assessed year of 2038 – DO SOMETHING, Junction 2 would continue to operate well within capacity during both peak hours, with the highest RFC at 0.16 and a corresponding queue of 0.2 vehicle during the AM and a maximum RFC at 0.08 with a corresponding queue of 0.1 vehicle recorded for the PM.

Full assessment of Junction 2, including DO NOTHING and DO SOMETHING scenarios, has been provided in Appendix D.

Stream	AM (08:00 to 09:00)		PM (18:00 to 19:00)	
	Queue (veh.)	RFC	Queue (veh.)	RFC
2023 – DO SOMETHING				
Stream B-AC	0.2	0.15	0.1	0.07
Stream C-AB	0.0	0.04	0.1	0.05
2028 – DO SOMETHING

Stream C-AB	0.1	0.04	0.1	0.06

Table 20 | *Junction 2 – DO SOMETHING - PICADY Analysis Results.*

12.4.5 Junction 3: R017 Malahide Road / Streamstown Lane – DO NOTHING

Junction 3 is a priority-controlled junction located south east of the proposed development site. For the DO NOTHING scenarios, this junction has been modelled based on its current configuration and the PICADY analysis results are summarise in Table 21 below. The arms of the junction were labelled as followed within the PICADY model:

- Arm A: R107 Malahide Road (N);
- Arm B: Streamstown Lane (E);
- Arm C: R107 Malahide Road (S);

Stream	AM (08:00 to 09:00)		PM (18:00 to 19:00)	
	Queue (veh.)	RFC	Queue (veh.)	RFC
2020 - BASELINE				
Stream B-AC	0.4	0.27	0.1	0.11
Stream C-AB	0.3	0.13	0.2	0.09
2023 – DO NOTHING				
Stream B-AC	0.4	0.28	0.1	0.12
Stream C-AB	0.4	0.14	0.2	0.10
2028 – DO NOTHING				
Stream B-AC	0.5	0.31	0.2	0.13
Stream C-AB	0.5	0.16	0.3	0.12
2038 – DO NOTHING				
Stream B-AC	0.5	0.34	0.2	0.14
Stream C-AB	0.5	0.18	0.3	0.13

Table 21 | *Junction 3 - DO NOTHING - PICADY Analysis Results.*

The analysis as shown above, indicate that Junction 3 is currently operating well within capacity during both peak hours with the highest RFC of 0.27 and a corresponding queue of 0.4 vehicles during the AM peak period and the highest RFC of 0.11 and a corresponding queue of 0.1 vehicles in the PM period.

For the future assessment year of 2038 – DO NOTHING, the results indicate that the junction will continue to operate well within capacity during both peak hours, with the highest RFC of 0.34 and a corresponding queue length of 0.5 vehicles during the AM peak hour period and the highest RFC of 0.14 and a corresponding queue of 0.2 vehicles in the PM peak hour period.

12.4.6 Junction 3: R107 Malahide Road / Streamstown Lane – DO SOMETHING

For the DO SOMETHING scenarios, Junction 3 has also been modelled based on its current configuration and the PICADY analysis are summarised in Table 22 below. The arms of the junction were labelled as follows within the PICDAY model:

- Arm A: R107 Malahide Road (N);
- Arm B: Streamstown Lane (E);
- Arm C: R107 Malahide Road (S);

Stream	AM (08:00 to 09:00)		PM (18:00 to 19:00)	
	Queue (veh.)	RFC	Queue (veh.)	RFC
2023 – DO SOMETHING				
Stream B-AC	0.5	0.34	0.2	0.17
Stream C-AB	0.5	0.19	0.3	0.13
2028 – DO SOMETHING

Stream C-AB	0.8	0.25	0.5	0.18
2038 – DO SOMETHING				
Stream B-AC	0.8	0.43	0.3	0.24
Stream C-AB	1.0	0.31	0.6	0.20

Table 22 | *Junction 3 - DO SOMETHING - PICADY Analysis Results.*

The analysis results as shown above indicate that, for the future assessed year of 2038 – DO SOMETHING, Junction 3 would continue to operate well within capacity during both peak hours, with the highest RFC at 0.43 and corresponding queue of 0.8 for the AM peak hour period and a maximum RFC 0.24 with a corresponding queue of 0.3 vehicle for the PM peak hour period.

Full assessment of Junction 3, including DO NOTHING and DO SOMETHING scenarios, has been provided in Appendix D.

12.4.7 Junction 4: Feltrim Road / Streamstown Lane – DO NOTHING

Junction 4 is a priority-controlled junction located south of the proposed development site. For the DO NOTHING scenarios, this has been modelled based on its current configuration and the PICADY analysis results are summarise in Table 23 below. The arms of the junction were labelled as follows within the PICADY model:

- Arm A: Feltrim Road (W);
- Arm B: Streamstown Lane (S);
- Arm C: Feltrim Road (E);

Stream	AM (08:00 to 09:00)		PM (18:00 to 19:00)	
	Queue (veh.)	RFC	Queue (veh.)	RFC
2020 - BASELINE				
Stream B-C	0.0	0.02	0.0	0.01
Stream B-A	0.2	0.17	0.2	0.15
Stream C-AB	0.0	0.02	0.0	0.1

2028 – DO NOTHING				
Stream B-C	0.0	0.02	0.0	0.01
Stream B-A	0.3	0.21	0.2	0.18
Stream C-AB	0.0	0.03	0.0	0.01
2038 – DO NOTHING				
Stream B-C	0.0	0.02	0.0	0.02
Stream B-A	0.4	0.24	0.3	0.20
Stream C-AB	0.1	0.03	0.0	0.01

Table 23 | *Junction 4 - DO NOTHING - PICADY Analysis Results.*

The analysis results as shown above, indicate that Junction 4 is currently operating well within capacity during both peak hours, with the highest RFC of 0.17 and a corresponding queue of 0.2 vehicles during the AM peak period and the highest RFC of 0.15 and a corresponding queue of 0.2 during the PM peak hour period.

For the future assessment year of 2038 – DO NOTHING, the results indicate that Junction 4 will continue to operate well within capacity during both peak hours, the highest RFC of 0.24 and a corresponding queue length of 0.4 vehicles during the AM peak hour period and the highest RFC of 0.20 and a corresponding queue of 0.3 vehicles in the PM peak hour period.

12.4.8 Junction 4: Feltrim Road / Streamstown Lane – DO SOMETHING

For the DO SOMETHING scenarios, Junction 4 has also been modelled based on its current configuration and the PICADY analysis are summarised in Table 24 below. The arms of the junction were labelled as follows within the PICDAY model:

- Arm A: Feltrim Road (W);
- Arm B: Streamstown Lane (S);
- Arm C: Feltrim Road (E);

The analysis results in Table 24 below indicate that, for the future assessed year of 2038 – DO SOMETHING, Junction 4 would continue to operate well within capacity during both peak hours, with the highest RFC at 0.41 and corresponding queue of 0.8 for the AM peak hour period and a maximum RFC 0.28 with a corresponding queue of 0.4 vehicle for the PM peak hour period.

Full assessment of Junction 4, including DO NOTHING and DO SOMETHING scenarios, has been provided in Appendix D.

Stream	AM (08:00 to 09:00)		PM (18:00 to 19:00)	
	Queue (veh.)	RFC	Queue (veh.)	RFC
2023 – DO SOMETHING

Table 24 | *Junction 4 - DO SOMETHING - PICADY Analysis Results.*

13. Construction Traffic

It is anticipated that the generation of HGV during the construction period of the proposed development will be evenly spread throughout the day and as such will not impact significantly during the peak traffic periods. An appropriate routing strategy for HGVs can also be implemented for the duration of site works if found necessary. Furthermore, during the construction phase, sufficient parking will be sought to be provided on site to accommodate the aforementioned construction generated vehicle movements, thereby ensuring that there is not an overspill of parked vehicles onto the surrounding local road network.

For the above reasons, we do not believe that construction traffic will generate any traffic concerns or impede upon the operational performance of the local road network and its surrounding junctions.

All construction traffic and transport will be managed strictly according to the proposed development management plan.

14. Public Transport Assessment

14.1 Additional Rail Passengers at Malahide Station

The additional rail passengers expected to be generated by the proposed development at Streamstown Masterplan and the under-construction/potential future developments at Broomfield Masterplan lands in Malahide Station during the AM and PM peak hours are presented in Table 25 and Table 26, respectively. Calculations were based on:

- Car Trip Generation presented in Table 15 (equivalent to 55% as per Census 2016 Modal Split to the journey to work, school of college – Table 10);
- 2016 Census Modal Split - Rail Use (equivalent to 14% as per Table 10), and;
- The estimated 2020 patterns of rail passengers shown in Tables 14 and 15.

It is recognised that census modal split data was obtained based on individual responses in 2016 and may not be an accurate and the most representative data for the proposed, under-construction and potential future developments in the studied area, as the use of each mode of transport is likely to change as a reflex of many factors along the years, such as the expansion of the local and surrounding areas providing for new employment/education centres; upgrades on public transport services; improvements on cycle/pedestrian facilities; amongst others. However, due to the absence of up-to-date information in this regard, it was considered reasonable to use the Census 2016 Modal Split to predict rail trips, as it represents the best available estimate of current modal split trends for the area.

PROPOSED DEVELOPMET AT STREAMSTOWN MASTERPLAN (411 RESIDENTIAL UNITS)				
Period	**Activity**	**Northbound**	**Southbound**	**Total**
AM Peak Hour	Boardings	6 (18%)	26 (82%)	32 (100%)
	Alightings	13 (86%)	2 (14%)	15 (100%)
PM Peak Hour	Boardings	3 (18%)	14 (82%)	17 (100%)
	Alightings	27 (86%)	4 (14%)	31 (100%)

Table 25 | *Additional Rail Passengers in Malahide Station - Proposed Dev. at Streamstown.*

OVERALL DEVELOPMENT AT BROOMFIELD MASTERPLAN (c. 649 RESIDENTIAL UNITS)				
Period	**Activity**	**Northbound**	**Southbound**	**Total**
AM Peak Hour	Boardings	9 (18%)	44 (82%)	53 (100%)
	Alightings	20 (86%)	3 (14%)	23 (100%)
PM Peak Hour	Boardings	5 (18%)	24 (82%)	29 (100%)
	Alightings	45 (86%)	7 (14%)	52 (100%)

Table 26 | *Additional Rail Passengers in Malahide Station – Broomfield Masterplan.*

14.2 Rail Services

Details of train capacity by type are set out in Appendix C of the National Rail Census 2018.

The commuter/DART train capacity table from Appendix C of the National Heavy Rail Census Report 2019 (NHRCR) is reproduced below.

Train Type		Capacity	
4-DART	(4 Car DART Set)	700	Seats + Standing Accommodation
6-DART	(6 Car DART Set)	1050	Seats + Standing Accommodation
8-DART	(8 Car DART Set)	1400	Seats + Standing Accommodation
2 x 2600	(2 Car Commuter Rail Car)	206	Seats + Standing Accommodation
2 x 2800	(2 Car Commuter Rail Car)	221	Seats + Standing Accommodation
4 x 29000	(4 Car Commuter Rail Car)	640	Seats + Standing Accommodation
8 x 29000	(8 Car Commuter Rail Car)	1280	Seats + Standing Accommodation
1 x 3ICR	(3 Car InterCity Rail Car)	190	Seats
1 x 6ICR	(6 Car Premier Class InterCity Rail Car)	376	Seats
1 x 6HCR	(6 Car High Capacity InterCity Rail Car)	406	Seats
7 x MkIV	(7 Car Mk IV Set)	348	Seats
7 x DD	(7 Car De Dietrich Set)	358	Seats

Table 27 | *Commuter and DART Train Capacities – Extracted from Appendix C of NHRCR.*

From Sections 3.2 and 4.2 of this TTA, it can be seen that the peak hour weekday rail service at Malahide Station will provide capacity for 6,760 – 9,440 passengers in each direction during both AM&PM peak hours.

This capacity will be provided by 2 – 3 x 8-car Commuter Rail services per hour (2,560 – 3,840 capacity) and 4 x 6 – 8 car DART services per hour (4,200 – 5,600 capacity).

These services will be adequate to cater for the estimated peak train demand of 129 passengers (to be generated by the proposed development at Streamstown Masterplan and the under-construction/potential future developments at Broomfield Masterplan) which is predicted to occur in the PM Peak Hour (Refer to Tables 25 and 26 – Section 13.1).

14.3 Additional Bus Passengers – 2028

As calculated for additional rail passengers, a similar exercise has been undertaken to estimate the additional bus passengers expected to be generated by the proposed, under-construction and potential future developments at Streamstown and Broomfield Masterplans. In carrying out the calculation the following has been used:

- Car Trip Generation presented in Table 15 (equivalent to 55% as per Census 2016 Modal Split to the journey to work, school of college – Table 10), and
- 2016 Census Modal Split - Bus Use (equivalent to 15% as per Table 10).

Development	AM Peak Hour		PM Peak Hour	
	Arrivals	Departures	Arrivals	Departures
Proposed Development at Streamstown Masterplan	16	34	34	18
Under-construction Development at Broomfield Masterplan	6	16	16	9
Potential Future Development at Broomfield Masterplan	19	41	40	22
Total	**41**	**91**	**90**	**49**

Table 28 | *Additional Bus Passengers.*

14.4 Bus Services

Services to and from the proposed development area will continue to be operated by double deck buses into the future. The passenger capacity of the double deck buses in the current Dublin Bus fleet is shown in the Table 29 below reproduced from Wikipedia.

For the purpose of this TTA, the capacity of each bus has been assumed to be 85 passengers.

Quantity	Manufacturer	Type	Fleet Code	Passengers
76	Volvo	B7TL with ALX400 bodywork	AV	91
70	Volvo	B9TLT (Euro 4) with Enviro500 bodywork	VT	119–124
192	Volvo	B7TL (Mk. II) with ALX400 bodywork	AX	91
97	Volvo	B9TL (Euro 4) with Enviro400 bodywork	EV	94
50	Volvo	B9TL (Euro 4) with Eclipse Gemini bodywork	VG	88
160	Volvo	B9TL (Euro 5) with Eclipse Gemini bodywork	GT	78–81
369	Volvo	B5TL (Euro 6) with Gemini 3 bodywork	SG	95
2	Wrightbus	StreetLite DF integral	WS	37

Table 29 | *Bus Capacity.*

Following implementation of Bus Connects, the weekday peak hour service to and from the proposed development area will comprise 5 services per direction per hour.

These services will provide capacity for 425 passengers per hour in each direction and will be adequate to cater for the expected peak hourly demand of 91 passengers (to be generated by the proposed, under-construction and potential future developments at Streamstown and Broomfield Masterplans) which is predicted to occur in the AM Peak Hour (Table 28).

It is expected that the vast majority of bus trips originating at Broomfield Masterplan would use bus routes along The Hill to the east instead of the bus routes on R107 Malahide Road which would spread the demand and not concentrate only on routes along R107 Malahide Road.

14.5 Go Car

The provision of GoCar vehicles at the proposed residential development at Streamstown Masterplan is expected to be 4 - 6 vehicles before 2023. A letter to confirm GoCar's intention to provide these new car club vehicles is included in Appendix A.

15. Car Parking

15.1 Fingal Development Plan 2017 – 2023 - Standards

Standards for car parking in new developments are set out in Table 12.8 of the Fingal Development Plan 2017 – 2023 (FDP). Based on that, Table 30 below sets out the parking requirements applicable to the subject proposed residential development at Streamstown Masterplan.

Land Use	FDP Standards	Norm or Max
House – Urban / Suburban (1 or 2 bedrooms)	1 - 2 spaces within the curtilage	Norm
House – Urban / Suburban (3 or more bedrooms)	2 spaces within the curtilage	Norm
Apartment / Townhouse (1 bedroom)	1 space per unit plus 1 visitor space per 5 units	Norm
Apartment / Townhouse (2 bedrooms)	1.5 space per unit plus 1 visitor space per 5 units	Norm
Apartment / Townhouse (3 bedrooms)	2 spaces per unit plus 1 visitor space per 5 units	Norm
Creche	0.5 space per classroom	Norm

Table 30 | *Fingal Development Plan 2017 – 2023 - Car Parking Standards.*

15.2 Car Parking Required

Based on the car parking standard set out in the FDP 2017 – 2023 (Table 30 above), the total car parking required to serve the proposed development within the Streamstown Masterplan is 667 spaces, 603 spaces for residents, 62 spaces for visitors and 3 spaces for the Creche, as calculated in Table 31.

There are no car parking standards set out for duplexes within the current Fingal Development Plan. Therefore, for the purpose of calculation, the car parking standards for apartment / townhouse have been applied for the duplex units.

Land Use	Units	FDP Standard	Required Car Parking Spaces
House – Urban / Suburban (1 or 2 bedrooms)	3	1 - 2 spaces within the curtilage	3 spaces for residents
House – Urban / Suburban (3 or more bedrooms)	99	2 spaces within the curtilage	198 spaces for residents
Apartment / Duplex (1 bedroom)	136	1 space per unit plus 1 visitor space per 5 units	136 spaces for residents + 27 spaces for visitors
Apartment / Duplex (2 bedrooms)	161	1.5 space per unit plus 1 visitor space per 5 units	242 spaces for residents + 32 spaces for visitors
Apartment / Duplex (3 bedrooms)	12	2 spaces per unit plus 1 visitor space per 5 units	24 spaces for residents + 2 spaces for visitors
Creche	6 class	0.5 spaces per classroom	3 spaces
Total	411 6 class	-	603 spaces for residents + 61 spaces for visitors + 3 spaces for the Creche

Table 31 | *Total Car Parking Spaces Required under FDP Standards.*

15.3 Design Standards for New Apartments – December 2020

In December 2020, a revised version of the document "Sustainable Urban Housing: Design Standard for New Apartments" was released. The parking standards set out in this document are considerably lower than those contained in the Fingal Development Plan 2017 – 2023 in respect to new apartment developments.

The following extracts from the "Design Standards for New Apartments – December 2020" summarise the guidelines for parking:

"*In suburban/urban locations served by public transport or close to town centres or employment areas and particularly for housing schemes with more than 45 dwellings per hectare net (18 per acre), planning authorities must consider a reduced overall car parking standard and apply an appropriate maximum car parking standard."*

15.4 Car Parking Proposed

The number of car parking spaces projected to serve the proposed development at Streamstown Masterplan is presented in Table 32 below:

Block / Land Use		No. of Units	Under Croft / Under Podium	Podium/Street	Total
Residential Parking (Including Visitor Parking)	Apartment Blocks 1, 2 and 3	159	164	8	172
	Block 6	21	-	24	24
	Block 7	6	6	-	6
	Block 8	25	-	28	28
	Duplex Block 1	6	-	10	10
	Apartment Blocks 4 and 5	92	92	5	97
	Duplexes 2A, 2B, 2C, 2D				0
	Houses	97	-	194	194
	Auburn House and Stables	5	-	9	9
Crèche		6 classes	3 *(Staff Spaces)*	4 *(Drop-off Spaces)*	7
Total Residential Parking		**411 Units**	**262**	**278**	**540**
Total Commercial Parking/Dropoff		**6 classes**	**3 (Staff Spaces)**	**4 (Drop-off Spaces)**	**7**

Table 32 | *Proposed Car Parking – Proposed Development at Streamstown Masterplan.*

As can be seen from the above, it is proposed to provide a total of 540 residential car parking spaces. There are 262 residential/visitor spaces, plus an additional 3 staff car parking spaces, provided under croft / under podium. There are 278 podium / on-street spaces for residents and visitors, plus an additional 4 drop-off spaces for the crèche. Note that the four street level drop-off spaces provided for the crèche can also be used for residential visitor drop-off outside of crèche drop-off and pickup hours.

The reduced provision of 1 car parking space per apartment / duplex unit reflects the location of the development in relation to public transport services. This is in line with the Design Standards for New Apartments as outlined above and is considered adequate to serve the proposed development.

16. Cycle Parking

16.1 Fingal Development Plan 2017 – 2023 - Standards

Standards for bicycle parking in new developments are set out in Table 12.9 of the Fingal Development Plan 2017 - 2023. Based on that, Table 33 below sets out the cycle parking requirement applicable to the proposed residential development.

Land Use	FDP Standard	Norm or Max
Houses	N/A	-
Apartment / Townhouse	1 per bedroom + 1 visitor space per 5 units	Norm

Table 33 | *Fingal Development Plan 2017 – 2023 - Cycle Parking Standards.*

16.2 Cycle Parking Required

Based on the cycle parking standard set out in the Fingal Development Plan 2017 – 2023 (FDP), the total cycle parking required to serve the proposed development at Streamstown Masterplan is 544 spaces, 482 for residents and 62 for visitors, as calculated in Table 34.

As for car parking, the cycle parking standard for apartment / townhouse have been applied for the duplex units.

Land Use	Units	Bedrooms	FDP Standard	Required Cycle Parking Spaces
Houses	102	318+	N/A	N/A
Apartment / Duplex (1 bedroom)	136	136	1 space per unit bedroom	136 for residents
Apartment / Duplex (2 bedrooms)	161	322	1 space per unit bedroom	322 for residents
Apartment / Duplex (3 bedroom)	12	24	1 space per unit bedroom	24 for residents
Apartment / Duplex (Total Units)	309	-	1 space per 5 units	62 for visitors
Total	411	800+	-	482 for residents 62 for visitors

Table 34 | *Total Cycle Parking Spaces Required under FDP Standards.*

16.3 Design Standards for New Apartments – December 2020

Section 4.17 of the Design Standard for New Apartments (December 2020) sets out a minimum standard of cycle storage space for new apartments as follows:

"A general minimum standard of 1 cycle storage space per bedroom shall be applied. For studio units, at least 1 cycle storage space shall be provided. Visitor cycle parking shall also be provided at a standard of 1 space per 2 residential units."

Land Use	Units	Bedrooms	Design Standard for New Apartments	Required Cycle Parking Spaces
Apartment / Duplex (1 bedroom)	136	136	1 space per unit bedroom	136 for residents
Apartment / Duplex (2 bedrooms)	161	322	1 space per unit bedroom	322 for residents
Apartment / Duplex (3 bedroom)	12	24	1 space per unit bedroom	24 for residents
Apartment / Duplex (Total Units)	309	-	1 space per 2 units	155 for visitors
Total	309	482	-	482 for residents 155 for visitors

Table 35 | *Total Cycle Parking Spaces Required under Design Standards for New Apartments.*

16.4 Cycle Parking Proposed

The number of cycle parking spaces projected to serve the proposed development at Streamstown Masterplan is presented in Table 36 below.

Land Use	Units	Proposed Standard	Proposed Cycle Parking Spaces
Apartment / Duplex (1 bedroom)	136	2.32 spaces per apartment / duplex unit	716 spaces for residents and visitors
Apartment / Duplex (2 bedrooms)	161		
Apartment / Duplex (3 bedrooms)	12		
Total	309	-	716 spaces

Table 36 | *Proposed Cycle Parking – Proposed Development at Streamstown Masterplan.*

As can be seen from the above, the bicycle parking project to serve the proposed development exceeds both the Fingal Development Plan 2017 – 2023 and the Design Standard for New Apartments (December 2020) requirements.

17. Road Safety

17.1 Accidents

The Road Safety Authority's website (www.rsa.ie) shows that there were a number of minor injury vehicular collisions recorded at the R107 Malahide Road / Back Road junction and one fatal collision at R107 Malahide Road between the years of 2005 to 2016.

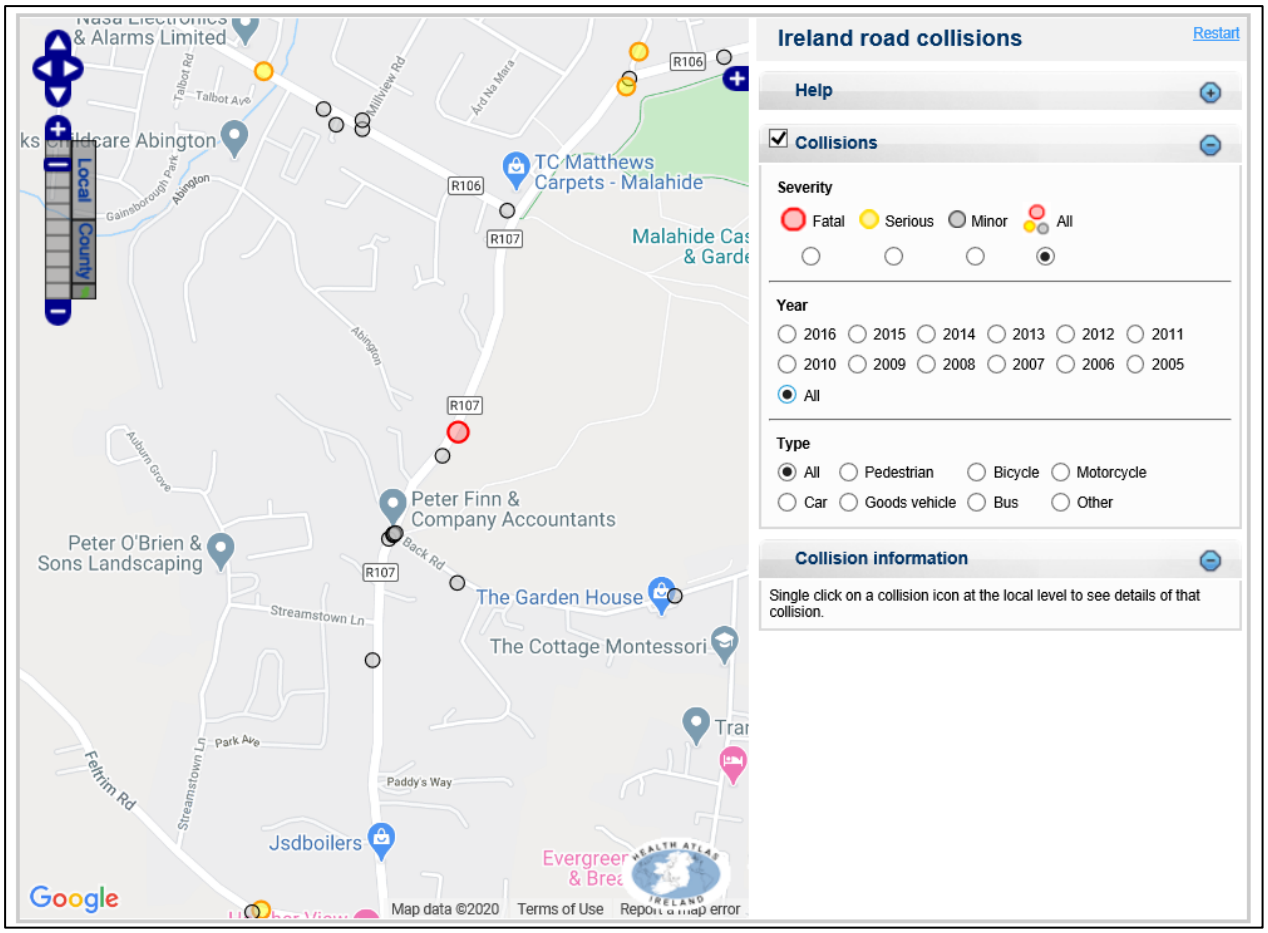

***Figure 28** | RSA Traffic Collision Data – 2005 to 2016.*

17.2 Stage 1 Road Safety Audit

A Stage 1 Road Safety Audit has been prepared by Bruton Consulting Engineers on behalf of Waterman Moylan for the strategic housing development proposed as part of the subject pre-planning submission. Details of this audit are contained within the Road Safety Audit Report included in Appendix C of the accompanying Engineering Assessment Report.

18. Conclusion

Waterman Moylan has been appointed by Kinwest Ltd. to prepare this Traffic and Transport Assessment for a proposed strategic housing development on lands around Auburn House in Malahide, Co. Dublin.

Main vehicular access to the proposed development will be provided from southeast via the R107 Malahide Road / Back Road junction, which is proposed to be upgraded to include the site access road. A secondary vehicular access is proposed off Carey's Lane to the west which will be accessed via Streamstown Lane.

It is estimated that the proposed development when fully developed and occupied will generate a total of 178 peak hour car trips during the AM (56 inbound and 122 outbound) and 186 during the PM (121 inbound and 65 outbound).

The following four junctions were modelled as part of the subject assessment:

Junction 1: R107 Malahide Road / Back Road;
Junction 2: Carrey's Lane / Streamstown Lane;
Junction 3: R107 Malahide Road / Streamstown Lane;
Junction 4: Feltirm Road / Streamstown Lane;

Junction 1 has been modelled based on its current configuration of a priority-controlled T-junction and the results indicate that it is currently operating well within capacity during both peak hour periods, with the highest RFC at 0.46 and a corresponding queue of 0.8 vehicles during the AM peak hour and a maximum RFC at 0.36 with a corresponding queue of 0.6 vehicles recorded for the PM.

Junction 1 has also been modelled based on its proposed configuration of a signalised four-armed junction and the results indicate that the proposed junction would work within capacity for the future assessed year of 2038 – DO SOMETHING during both peak hours, with the highest DOS at 99% and a corresponding queue of 27.72 vehicles during the AM and a maximum DOS at 95% with a corresponding queue of 23.92 vehicles recorded for the PM.

Junction 2 has been modelled based on its current configuration of a priority-controlled T-junction and the results indicate that this junction is currently operating well within capacity and will continue to do so for the future assessed year of 2038 – DO SOMETHING during both peak hours, with the highest RFC at 0.16 and a corresponding queue of 0.2 vehicle during the AM and a maximum RFC at 0.08 with a corresponding queue of 0.1 vehicles recorded for the PM.

Junction 3 has been modelled based on its current configuration of a priority-controlled T-junction and the results indicate that this junction is currently operating well within capacity and will continue to do so for the future assessed year of 2038 – DO SOMETHING during both peak hours, with the highest RFC at 0.43 and a corresponding queue of 0.8 vehicle during the AM and a maximum RFC at 0.24 with a corresponding queue of 0.2 vehicles recorded for the PM.

Junction 4 has been modelled based on its current configuration of a priority-controlled T-junction and the results indicate that this junction is currently operating well within capacity and will continue to do so for the future assessed year of 2038 – DO SOMETHING during both peak hours, with the highest RFC at 0.48 and a corresponding queue of 0.8 vehicle during the AM and a maximum RFC at 0.28 with a corresponding queue of 0.4 vehicles recorded for the PM.

The results of public transport assessment indicate that the capacities of both rail and bus services will be greater than demand forecast.

Based on the junction and public transport assessment, it can be confirmed that there is sufficient capacity in the road and public transport networks to facilitate the proposed development.

Appendices

A. GoCar Letter

Hatley Homes,
Kinvara House,
Northumberland Rd,
Ballsbridge,
Dublin 4

To Whom It May Concern,

This is a letter to confirm that GoCar intends to provide 4-6 shared car club vehicles in the proposed SHD scheme by Auburn House in Malahide. GoCar representatives have discussed the project with representatives of the transport engineers of the scheme at Waterman Moylan and are excited to provide a car club service at this location.

It is understood that the vehicle will be shared between residents of the scheme and residents of the surrounding areas. GoCar will work with the management company of the development to identify a need for greater numbers of vehicles if and when this might arise.

GoCar is Ireland's leading car sharing service with over 60,000 members and over 750 cars and vans on fleet. Each GoCar which is placed in a community has the potential to replace the journeys of up to 15 private cars. The Department of Housing's Design Standards for New Apartments - Guidelines for Planning Authorities 2018 outline: "For all types of location, where it is sought to eliminate or reduce car parking provision, it is necessary to ensure... provision is also to be made for alternative mobility solutions including facilities for car sharing club vehicles."

Carsharing is a sustainable service. By allowing multiple people to use the same vehicle at different times, car sharing reduces car ownership, car dependency, congestion, noise and air pollution. It frees up land which would otherwise be used for additional parking spaces. Most GoCar users only use a car when necessary, and walk and use public transport more often than car owners.

By having GoCar car club vehicles in a residential development such as this, residents will have access to pay-as-you-go driving, in close proximity to their homes, which will increase usership of the service.

I trust that this information is satisfactory. For any queries, please do not hesitate to contact me.

C. TRICS – Trip Rates

Calculation Reference: AUDIT-561501-201208-1229

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : K - MIXED PRIV HOUS (FLATS AND HOUSES)
TOTAL VEHICLES

Selected regions and areas:

01	GREATER LONDON		
	BN	BARNET	1 days
02	SOUTH EAST		
	WS	WEST SUSSEX	1 days
15	GREATER DUBLIN		
	DL	DUBLIN	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: No of Dwellings
Actual Range: 322 to 479 (units:)
Range Selected by User: 300 to 500 (units:)

Parking Spaces Range: All Surveys Included

Parking Spaces per Dwelling Range: All Surveys Included

Bedrooms per Dwelling Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/12 to 27/05/19

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Wednesday	1 days
Thursday	2 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	3 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Edge of Town	3

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Industrial Zone	1
Residential Zone	2

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

C3	3 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:

All Surveys Included

Population within 1 mile:

10,001 to 15,000	1 days
25,001 to 50,000	1 days
50,001 to 100,000	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

75,001 to 100,000	1 days
500,001 or More	2 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	2 days
1.1 to 1.5	1 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	2 days
No	1 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	2 days
2 Poor	1 days

This data displays the number of selected surveys with PTAL Ratings.

LIST OF SITES relevant to selection parameters

1	BN-03-K-02	HOUSES & FLATS		BARNET
	FRITH LANE			
	MILL HILL			
	MILL HILL EAST			
	Edge of Town			
	Residential Zone			
	Total No of Dwellings:		479	
	Survey date: THURSDAY		*07/07/16*	*Survey Type: MANUAL*
2	DL-03-K-03	HOUSES & FLATS		DUBLIN
	CHARLESTOWN			
	DUBLIN			
	Edge of Town			
	Industrial Zone			
	Total No of Dwellings:		322	
	Survey date: WEDNESDAY		*11/09/13*	*Survey Type: MANUAL*
3	WS-03-K-04	MIXED HOUSES & FLATS		WEST SUSSEX
	HILLS FARM LANE			
	HORSHAM			
	BROADBRIDGE HEATH			
	Edge of Town			
	Residential Zone			
	Total No of Dwellings:		371	
	Survey date: THURSDAY		*28/06/18*	*Survey Type: MANUAL*

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

TRIP RATE for Land Use 03 - RESIDENTIAL/K - MIXED PRIV HOUS (FLATS AND HOUSES)

22:00 - 23:00									
23:00 - 24:00									
Total Rates:			2.414			2.335			4.749

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	322 - 479 (units:)
Survey date date range:	01/01/12 - 27/05/19
Number of weekdays (Monday-Friday):	3
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

D. Junction Modelling Output Reports

Junctions 9

PICADY 9 - Priority Intersection Module

Analysis Set Details

ID	Name	Network flow scaling factor (%)
A1	JUNCTION 1 - DO NOTHING	100.000

JUNCTION 1 - DO NOTHING - 2020, AM

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way		5.58	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	R107 - Malahide Road (N)		Major
B	Back Road (E)		Minor
C	R107 - Malahide Road (S)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C	9.40			85.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B	One lane plus flare	10.00	10.00	8.00	4.00	3.30		1.00	50	50

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	601	0.093	0.236	0.148	0.337
B-C	741	0.097	0.245	-	-
C-B	623	0.206	0.206	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.
Streams may be combined, in which case capacity will be adjusted.
Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Analysis Set Details

ID	Name	Network flow scaling factor (%)
A1	JUNCTION 2 - DO NOTHING	100.000

JUNCTION 2 - DO NOTHING - 2020, AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Major arm width	Arm C - Major arm geometry	For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way		1.52	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Streamstown Lane (S)		Major
B	Carrey's Lane (N)		Minor
C	Streamstown Lane (E)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C	5.50			20.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B	One lane	2.50	90	55

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	508	0.094	0.239	0.150	0.341
B-C	626	0.098	0.248	-	-
C-B	586	0.232	0.232	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Stream C-AB		0.1	0.04		0.1	0.06

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perHour	s	-Min	perMin

Analysis Options

Calculate Queue Percentiles	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
		0.85	36.00	20.00

Demand Set Summary

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)
D1	2023	AM	ONE HOUR	08:00	09:30	15
D2	2023	PM	ONE HOUR	18:00	19:30	15
D3	2028	AM	ONE HOUR	08:00	09:30	15
D4	2028	PM	ONE HOUR	18:00	19:30	15
D5	2038	AM	ONE HOUR	08:00	09:30	15
D6	2038	PM	ONE HOUR	18:00	19:30	15

Analysis Set Details

ID	Name	Network flow scaling factor (%)
A1	JUNCTION 2 - DO SOMETHING	100.000

JUNCTION 2 - DO SOMETHING - 2023, AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Major arm width	Arm C - Major arm geometry	For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way		2.47	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Streamstown Lane (S)		Major
B	Carrey's Lane (N)		Minor
C	Streamstown Lane (E)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C	5.50			20.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B	One lane	2.50	90	55

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	508	0.094	0.239	0.150	0.341
B-C	626	0.098	0.248	-	-
C-B	586	0.232	0.232	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way		1.55	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	untitled		Major
B	untitled		Minor
C	untitled		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C	8.76			247.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B	One lane	5.00	0	0

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	574	0.092	0.232	0.146	0.332
B-C	749	0.101	0.255	-	-
C-B	717	0.244	0.244	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Summary of junction performance

	AM			PM		
	Set ID	Queue (PCU)	RFC	Set ID	Queue (PCU)	RFC
DO SOMETHING - AM & PM - 2023						
Stream B-AC	D1	0.5	0.34	D2	0.2	0.17
Stream C-AB		0.5	0.19		0.3	0.13
DO SOMETHING - AM & PM - 2028						
Stream B-AC	D3	0.7	0.39	D4	0.3	0.22
Stream C-AB		0.8	0.25		0.5	0.18
DO SOMETHING - AM & PM - 2038						
Stream B-AC	D5	0.8	0.43	D6	0.3	0.24
Stream C-AB		1.0	0.31		0.6	0.20

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

DO SOMETHING - AM & PM - 2023, AM

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way		1.90	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	untitled		Major
B	untitled		Minor
C	untitled		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C	8.76			247.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B	One lane	5.00	0	0

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	574	0.092	0.232	0.148	0.332
B-C	749	0.101	0.255	-	-
C-B	717	0.244	0.244	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.
Streams may be combined, in which case capacity will be adjusted.
Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way		0.85	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	untitled		Major
B	untitled		Minor
C	untitled		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C	6.30			148.2	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B	One lane plus flare	10.00	6.48	6.48	6.48	6.48		1.00	0	0

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	574	0.103	0.261	0.164	0.372
B-C	573	0.087	0.219	-	-
C-B	660	0.252	0.252	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.
Streams may be combined, in which case capacity will be adjusted.
Values are shown for the first time segment only; they may differ for subsequent time segments.

DO SOMETHING - 2023, AM

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way		1.47	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	untitled		Major
B	untitled		Minor
C	untitled		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C	6.30			148.2	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B	One lane plus flare	10.00	6.48	6.48	6.48	6.48		1.00	0	0

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	574	0.103	0.261	0.164	0.372
B-C	573	0.087	0.219	-	-
C-B	660	0.252	0.252	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.
