The development, within an application area of 32.5 hectares, will comprise:

- I. construction and operation of an inert landfill facility to backfill the existing quarry to original (pre-development) ground level using approximately 6,165,000 tonnes of imported inert waste and (non-waste) by-product, principally soil and stone. - III. development and operation of a construction and demolition (C&D) waste recovery facility at the pre-existing concrete blockyard area; and

- (vi) Construction of an on-site (passive) wetland treatment system and attendant drainage infrastructure to treat surface water run-off / groundwater collecting in the sump / floor of the quarry area during landfilling operations and any surface water run-off from the C&D waste recovery area prior to its discharge off-site;
