1.0. INTRODUCTION

Aramark Property were instructed by The Shoreline Partnership, to provide a Building Lifecycle Report for their proposed SHD scheme on lands referred to as Growth Area 3 within the Baldoyle-Stapolin Local Area Plan at Baldoyle, Dublin 13.

The purpose of this report is to provide an initial assessment of long term running and maintenance costs as they would apply on a per residential unit basis at the time of application, as well as demonstrating what measures have been specifically considered to effectively manage and reduce costs for the benefit of the residents. This is achieved by producing a Building Lifecycle Report.

This Building Lifecycle Report has been developed on foot of the revised guidelines for Sustainable Urban Housing: Design Standards for New Apartments - Guidelines for Planning Authorities issued under Section 28 of the Planning and Development Act 2000 (as amended) December 2020. Within the new guidelines, new guidance is being provided on residential schemes.

Section 6.13 of the Operation and Management of Apartment Development Guidelines (December 2020) requires that:

"planning applications for apartment development shall include a building lifecycle report which in turn includes an assessment of long term running and maintenance costs as they would apply on a per residential unit basis at the time of application, as well as demonstrating what measures have been specifically considered by the proposer to effectively manage and reduce costs for the benefit of residents."

2.0. DESCRIPTION OF DEVELOPMENT

The proposed development will consist of the development of 1,221 no. residential apartment/duplex dwellings in 11 no. blocks ranging in height from 2 to 15 storeys and including for residential tenant amenity, restaurant/cafe, crèche, car and bicycle parking and public realm. Residential Tenant Amenity Facilities are located in Blocks E3, E4, G3, G4 & G5 and external communal amenity space is provided at ground, podium and terrace levels throughout the scheme. Car Parking is provided in a mix of undercroft for Blocks E1-E2, F1 and F2 and at basement level for Blocks G1-G3 and G4-G5. Cycle parking spaces are provided for residents, visitors and commercial uses, in secure locations and within the public realm throughout the scheme. A new central public space between Blocks E1-E2 and E3 and E4 and a new linear space between Blocks G2-G3 and G4-G5 provides pedestrian and cycle connectivity from Longfield Road to the proposed future Racecourse Park to the north. A proposed new bus, cycle, pedestrian and taxi ramp to the south of the site and north of Stapolin Square provides access from Longfield Road to Clongriffin Train Station. For a full description of the development please see the Statutory Notices.

3.0. EXECUTIVE SUMMARY – BUILDING LIFE CYCLE REPORT

Measures to effectively manage and reduce costs for the benefit of residents

The following document reviews the outline specification set out for the proposed SHD scheme on lands referred to as Growth Area 3 within the Baldoyle-Stapolin Local Area Plan at Baldoyle, Dublin 13 and explores the practical implementation of the design and material principles which has informed design of building roofs, façades, internal layouts and detailing of the proposed development.

Building materials proposed for use on elevations and in the public realm achieve a durable standard of quality that will not need regular fabric replacement or maintenance outside general day to day care. The choice of high quality and long-lasting materials, as well as both soft and hardscape in the public, semi-public and private realm will contribute to lower maintenance costs for future residents and occupiers.

Please note that detailed specifications of building fabric and services have not been provided at this stage. This report reflects the outline material descriptions contained within Henry J. Lyons Architects' planning drawing pack received.

For any elements where information was not available, typical examples have been provided of building materials and services used for schemes of this nature and their associated lifespans and maintenance requirements. All information is therefore indicative subject to further information at detailed design stage.

As the building design develops this document will be updated and a schedule will be generated from the items below detailing maintenance and replacement costs over the lifespan of the materials and development constituent parts in a summary document. This will enable a robust schedule of building component repair and replacement costs which will be available to the property management company so that running, and maintenance costs of the development are kept within the agreed Annual operational budget, this will take the form of a Planned Preventative Maintenance Schedule (PPM)* at operational commencement of the development.

*PPM under separate instruction

4.0. EXTERNAL BUILDING FABRIC SCHEDULE

4.1. Roofing

4.1.1. Green Roofs (Manufacturer / Supplier TBC)

Location	All flat roof areas (maintenance access only)
Description	Extensive green roof system to engineer's specification.
Lifecycle	Average lifecycle of 15-35 years on most green roofs. Lifecycle will be extended with robust proven detailing to adjoining roof elements and appropriate and regular maintenance of the roof materials.
Required maintenance	Quarterly maintenance visits to include inspection of drainage layer and outlets and removal of any blockages to prevent ponding. Inspection of vegetation layer for fungus and decay. Carry out weeding as necessary. No irrigation necessary with sedum blankets.
Year	Bi-annually
Priority	Medium
Selection process	A green roof will add to the character of the overall scheme, as well as providing attenuation to storm water run-off and less burden on rainwater goods, increased thermal and sound insulation to the building and increased biodiversity. Natural soft finishes can provide visual amenity for residents where roof areas are visible or accessible from within areas of the scheme. Sedum roofs are a popular and varied choice for green roofs requiring minimal maintenance.
Reference	Henry J Lyons' planning drawings & Design Statements.

4.1.2. Roof Terraces

Location	Communal Terraces
Description	Paving with light weight slabs on;Patent pads on;
	 Cushion layer on;
	 Roof deck build up to architects' and engineers' instructions.
	As used across the industry nationally and the UK, typically longer
	lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Lifecycle	Average lifecycle of 30 years. As used across the industry nationally
	and the UK, typically longer lifecycle is achieved by regular inspection
	and maintenance regime to ensure the upkeep of materials.
Required	Quarterly maintenance visits to include inspection of drainage layer and
maintenance	outlets and removal of any blockages to prevent ponding. Inspection of
	vegetation layer for fungus and decay. Carry out weeding as necessary.
	No irrigation necessary with sedum blankets.
Year	Quarterly
Priority	Medium
Selection	Paving slabs provide a robust and long-lasting roof terrace surface,
process	requiring considerably less maintenance.
Reference	Henry J Lyons' planning drawings & Design Statements.

4.1.3. **Roof (Manufacturer / Supplier TBC)**

Location	Selected Flat Roof Areas (maintenance access only)
Description	Single layer membrane roof system to engineer's specification.
	 Selected membrane, mixture of metal coping and brick cappings.
Lifecycle	Average lifecycle of 15-25 years on most membrane roofs. Lifecycle
	will be extended with robust proven detailing to adjoining roof elements
	and appropriate and regular maintenance of the roof materials.
Required	Half-yearly maintenance visits to include inspection of membrane
maintenance	material for puncture / cracks on sheeting; seams and flashing details;
	around drainage and ventilation outlets and removal of any
	vegetation/moss blockages to prevent ponding.
Year	Half-Yearly / Annual
Priority	Medium
Selection	A membrane roof with appropriate built up system will provide
process	durability, lacks water permeability and easily maintain without shutting
	down building operations during application.
Reference	Henry J. Lyons Architects' planning drawings and design statement.

4.1.4. Fall Arrest System for Roof Maintenance Access (Manufacturer / Supplier TBC)

Location	Selected Flat Roof Areas
Description	 Fall Protection System on approved anchorage device.
	 Installation in accordance with BS 7883 by the system manufacturer
	or a contractor approved by the system manufacturer.
Lifecycle	25-30 years dependent on quality of materials. Generally steel finishes
	to skyward facing elements can be expected to maintain this life
	expectancy. Typically, longer lifecycle is achieved by regular inspection
	and maintenance regime to ensure the upkeep of materials.
Required	Check and reset tension on the line as per manufacturer's
maintenance	specifications. Check all hardware components for wear (shackles, eye
	bolts, turn buckles). Check elements for signs of wear and/or
	weathering. Lubricate all moving parts. Check for structural damage or
	modifications.
Year	Annually
Priority	High
Selection	Fall protection systems are a standard life safety system, provided for
process	safe maintenance of roofs and balconies where there is not adequate
	parapet protection. Fall protection systems must comply with relevant
	quality standards.
Reference	N/A

4.1.5. Flashings (Manufacturer / Supplier TBC)

Location	All flashing locations
Description	Metal/Lead to be used for all coping, trims and flashing to selected finish.
Lifecycle	Typical life expectancy of 70 years recorded for metal/lead flashings. Recessed joint sealing will require regular inspections. Typically, longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.

Required	Check joint fixings for metal/lead coping, trims and flashing, ground
maintenance	survey annually and close-up inspection every 5 years. Re-secure as
	necessary.
Year	Ground level inspection annually and close-up inspection every 5 years
Priority	Medium
Selection	Metal/Lead has longest life expectancy of comparable materials such
process	as copper (60 years) and zinc (50 years). Metal/Lead is easily formed
	into the required shapes for effective weathering of building junctions
	according to Lead Sheet Association details.
Reference	N/A

4.2. Rainwater Drainage (Manufacturer / Supplier TBC)

Location	All buildings
Description	 Rainwater outlets: Suitable for specified roof membranes Pipework: Cast aluminium downpipes/uPVC downpipes Below ground drainage: To M&E/ Structural Engineers design and specification Disposal: To surface water drainage to Structural Engineers design Controls: To M&E/ Structural Engineers design and specification Accessories: allow for outlet gradings, spigots, downspout nozzle, hopper heads, balcony and main roof outlets
Lifecycle	Aluminium gutters and downpipes have an expected life expectancy of 40 years in rural and suburban conditions (25 years in industrial and marine conditions), this is comparable to cast iron of 50 years and plastic, less so at 30 years. As used nationwide and in the UK, typically longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	As with roofing systems routine inspection is key to preserving the
maintenance	lifecycle of rainwater systems. Regular cleaning and rainwater heads and gutters, checking joints and fixings and regularly cleaning polyester coated surfaces (no caustic or abrasive materials).
Year	Annually, cleaning bi-annually
Priority	High
Selection	As above, aluminium fittings compare well against cast iron (in terms
process	of cost) and plastic (in terms of lifespan and aesthetic).
Reference	N/A

4.3. External Walls

4.3.1. Brick (Manufacturer / Supplier TBC)

Location	Façades
Description	 Selected facing brickwork and brick capping at various locations including soldier orientation laid on selected levels. Feature Glazed Bricks (Block F2)
Lifecycle	While bricks have a high embodied energy, they are an extremely durable material. Brickwork in this application is expected to have a lifespan of 50-80 years. The mortar pointing however has a shorter lifespan of 25-50 years. Longer lifecycle achieved by regular inspection and maintenance regime.

Required	In general, given their durability, brickwork finishes require little
maintenance	maintenance. Most maintenance is preventative: checking for hairline
	cracks, deterioration of mortar, plant growth on walls, or other factors
	that could signal problems or lead to eventual damage.
Year	Annual
Priority	Low
Selection	Aesthetic, lightweight, cost-efficient and low maintenance cladding
process	option, indistinguishable from traditional brick construction.
Reference	Henry J Lyons' planning drawings & Design Statements.

4.3.2. Metal Cladding

Location	Façades
Description	Mixture of perforated and solid metal cladding / panels to selected finish
	on walls and pergola.
Lifecycle	Typical life expectancy of over 40 years. As used nationwide and in the
	UK, typically longer lifecycle is achieved by regular inspection and
	maintenance regime to ensure the upkeep of materials.
Required	Selected cladding requires little maintenance and is resistant to
maintenance	corrosion. It can contribute to lower ongoing maintenance costs in
	comparison to exposed porous materials which may be liable to faster
	deterioration. Long term cleaning requirements should be taken into
	consideration.
Year	Inspection annually; cleaning 5 yearly
Priority	Low
Selection	Selected cladding protects the building's structure from rainwater and
process	weathering. Metal cladding systems are also chosen for their aesthetic
	impact, durability and weathering properties.
Reference	Henry J Lyons' planning drawings & Design Statements.

Location	Ground Level and Balconies
Description	Powder Protective Coating (PPC) metal flat bar balustrade.
	Powder Protective Coating (PPC) railing.
Lifecycle	PPC metal has a typical lifespan of up to 45 years. Longer lifecycle can
	be achieved by regular inspection and maintenance regime as per
	manufacturer's recommendation.
Required	Requires little maintenance and is resistant to corrosion. Long term
maintenance	cleaning requirements should be taken into consideration.
Year	Annual
Priority	Medium
Selection	PPC metal is durable, resistant to corrosion and require low
process	maintenance.
Reference	Henry J Lyons' Architects planning drawings and design statements.

4.3.3. Render

Location	Façades
Description	Textured wet dash render with smooth render feature bands at select locations.
Lifecycle	Renders in general are expected to have a lifecycle of circa 25 years. As used nationwide and in the UK, typically longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Regular inspections to check for cracking and de-bonding. Most
maintenance	maintenance is preventative.
Year	Annually
Priority	Medium
Selection	Render is a durable and low-maintenance finish with the added benefit
process	of this product being BBA certified against other render systems.
	Appropriate detailing will contribute to a long lifespan and lower
	maintenance for this installation
Reference	Henry J Lyons' planning drawings & Design Statements.

4.4. External Windows & Doors

Location	Façades
Description	 uPVC window and door frames to approved colour.
	 All units to be double/triple glazed with thermally broken frames re- enforced to take account of the dynamic pressures in relation to the height of the installation within the building. All opening sections in windows to be fitted with suitable restrictors. Include for all necessary ironmongery; include for all pointing and mastic sealant as necessary; fixed using stainless steel metal straps screwed to masonry reveals; include for all bends, drips, flashings, thermal breaks etc.
Lifecycle	uPVC has a typical lifespan of 20-30 years. Longer lifecycle can be
_	achieved by regular inspection and maintenance regime as per
	manufacturer's recommendation.
Required	Check surface of windows and doors regularly so that damage can be
maintenance	detected. Vertical mouldings can become worn and require more
	maintenance than other surface areas. Lubricate at least once a year.
	Ensure regular cleaning regime. Check for condensation on frame from
	window and ensure ventilation.
Year	Annual
Priority	Medium
Selection	uPVC is durable, energy efficient, sound-proof, resistant to corrosion
process	and require low maintenance.
Reference	Henry J Lyons' Architects planning drawings and design statements.

Location	Façades
Description	 Powder Protective Coating (PPC) window and door frames to approved colour. Selected units to be double/triple glazed with thermally efficient framework.

	 All opening sections in windows to be fitted with suitable restrictors. Include for all necessary ironmongery; include for all pointing and mastic sealant as necessary; fixed using stainless steel metal straps screwed to masonry reveals; include for all bends, drips, flashings, thermal breaks etc.
Lifecycle	PPC aluminium has a typical lifespan of up to 45 years. Longer lifecycle
	can be achieved by regular inspection and maintenance regime as per
	manufacturer's recommendation.
Required	Check surface of windows and doors regularly so that damage can be
maintenance	detected. Lubricate at least once a year. Ensure regular cleaning
	regime. Check for condensation on frame from window and ensure
	ventilation.
Year	Annual
Priority	Medium
Selection	PPC aluminium is durable, resistant to corrosion, energy efficient and
process	require low maintenance.
Reference	Henry J Lyons' Architects planning drawings and design statements.

Location	Econdon Cofe (Cround Lovel)
	Façades – Cafe (Ground Level)
Description	Full height, powder coated clear glazed curtain walling system.
	 Double glazed with thermally broken frames.
	 Any opening sections in panels to be fitted with suitable restrictors. Include for all necessary ironmongery; include for all pointing and mastic sealant as necessary; fixed using stainless steel metal straps screwed to masonry reveals; include for all bends, drips, flashings, thermal breaks etc.
Lifecycle	PCC aluminium has a typical lifespan of up to 45 years. Longer lifecycle
	can be achieved by regular inspection and maintenance regime as per
	manufacturer's recommendation.
Required	Check surface of windows and doors regularly so that damage can be
maintenance	detected. Lubricate at least once a year. Ensure regular cleaning
	regime. Check for condensation on frame from window and ensure
	ventilation.
Year	Annual
Priority	Medium
Selection	PPC aluminium is durable, resistant to corrosion, energy efficient and
process	require low maintenance.
Reference	N/A

4.5. Balconies

4.5.1. Structure

Location	Façades
Description	 Cantilevered and recessed precast concrete balcony system to engineer's details. 'Concrete to concrete connectors' to main structure of building to engineer's detail.
Lifecycle	Precast concrete structures have a high embodied energy; however, it is an extremely durable material. Concrete frame has a typical life expectancy of 80 years. As used across the industry nationally and the

	UK, longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Relatively low maintenance required. Check balcony system as per
maintenance	manufacturer's specifications. Check elements for signs of wear and/or
	weathering. Check for structural damage or modifications.
Year	Annual
Priority	High
Selection	Engineered detail; designed for strength and safety.
process	
Reference	N/A

Location	Façades
Description	 Powder-coated steel frame balcony system to engineer's detail. Thermally broken farrat plate connections to main structure of building.
Lifecycle	Metal structure has a typical life expectancy of 70 years. As used across the industry nationally and the UK, longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Relatively low maintenance required. Check balcony system as per
maintenance	manufacturer's specifications. Check all hardware components for
	wear. Check elements for signs of wear and/or weathering. Check for
	structural damage or modifications.
Year	Annual
Priority	High
Selection	Engineered detail; designed for strength and safety.
process	
Reference	N/A

4.5.2. Balustrades and Handrails

Location	Balconies
Description	Metal balustrade with PPC steel handrail to selected finish.
	 Fixings in accordance with manufacturer's details.
Lifecycle	Typical life expectancy of over 40 years. As used nationwide and in the
	UK, typically longer lifecycle is achieved by regular inspection and
	maintenance regime to ensure the upkeep of materials.
Required	Regular visual inspection of connection pieces for impact damage or
maintenance	alterations
Year	Annual
Priority	High
Selection	Designed for strength and safety. Metal finish are chosen for their
process	aesthetic impact, durability and weathering properties.
Reference	N/A

5.0. INTERNAL BUILDING FABRIC SCHEDULE

5.1. **Floors**

5.1.1. Common Areas

Location	Entrance lobbies / Common corridors
Description	Selected anti-slip porcelain or ceramic floor tile
	Provide for inset matwell
Lifecycle	 Lifespan expectation of 20-25 years in heavy wear areas, likely requirement to replace for modernisation within this period also.
	 10-15 year lifespan for carpet. Likely requirement to replace for
	modernisation within this period also.
Required	Visual inspection, intermittent replacement of chipped / loose tiles
maintenance	
Year	Annual
Priority	Low
Selection	Durable, low maintenance floor finish. Slip rating required at entrance
process	lobby, few materials provide this and are as hard wearing.
Reference	N/A

Location	Stairwells, landings / half landings
Description	Selected carpet covering. Approved anodised aluminium nosings to
	stairs.
Lifecycle	 10-15 year lifespan for carpet. Likely requirement to replace for modernisation within this period also.
	 20-year lifespan for aluminium nosings.
Required	Visual inspection with regular cleaning.
maintenance	
Year	Quarterly inspection and cleaning as necessary.
Priority	Low
Selection	Using carpet allows flexibility to alter and change as fashions alter and
process	change providing enhanced flexibility.
Reference	N/A

Location	Lift lobbies
Description	Carpet/vinyl and porcelain tiles to match adjacent apartment common
	lobbies.
Lifecycle	• Lifespan expectation of 20-30 years in heavy wear areas, likely
	requirement to replace for modernisation within this period also.
	• 10-15 year lifespan for carpet. Likely requirement to replace for
	modernisation within this period also.
Required	Visual inspection, intermittent replacement of chipped / loose tiles.
maintenance	
Year	Annual
Priority	Low
Selection	Slip rating required for lifts, few materials provide this and are as hard
process	wearing.
Reference	N/A

5.1.2. Tenant Amenity Areas

Location	Resident's amenities
Description	 Timber laminate / parquet flooring, or Carpet covering Provide for inset matwell
Lifecycle	 Laminated / parquet timber flooring has an expected life expectancy of 25-35 years dependent on use 10-15 year lifespan for carpet. Likely requirement to replace for modernisation within this period also
Required	Visual inspection. Sweep clean regularly ensuring to remove any dirt.
maintenance	Clean up spills immediately and use only recommended floor cleaners.
Year	Annual
Priority	Low
Selection	Materials chosen for aesthetics, durability and low maintenance.
process	
Reference	N/A

Location	Wet areas
Description	Selected anti-slip ceramic floor tile.
Lifecycle	Lifespan expectation of 20-25 years in heavy wear areas, likely requirement to replace for modernisation within this period also.
Required	Visual inspection, intermittent replacement of chipped / loose tiles.
maintenance	
Year	Annual
Priority	Low
Selection	Slip rating required at entrance lobby, few materials provide this and
process	are as hard wearing.
Reference	N/A

5.2. Walls

5.2.1. Common Areas

Location	Entrance lobbies / Common corridors
Description	Selected paint finish with primer to skimmed plasterboard
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Regular maintenance required, damp cloth to remove stains and
maintenance	replacement when damaged
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish.
process	
Reference	N/A

Location	Lobbies / corridors / stairs
Description	Selected paint finish with primer to skimmed plasterboard
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Regular maintenance required, damp cloth to remove stains and
maintenance	replacement when damaged
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish.
process	
Reference	N/A

5.2.2. Tenant Amenity Areas

Location	Resident's amenities & creche
Description	Selected paint finish with primer to skimmed plasterboard
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required maintenance	Regular maintenance required, damp cloth to remove stains and replacement when damaged.
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish.
process	
Reference	N/A

Location	Wet areas
Description	Selected ceramic wall tile to plasterboard (moisture board to wet areas).
Lifecycle	Typical life expectancy of 35-40 years, less in wet room areas to 20-25 years.
Required	Bi-annual inspection to review damage, local repairs as necessary,
maintenance	particular detailed inspection in wet room areas.
Year	Annually
Priority	Medium
Selection	Wet room application requires moisture board and tiling.
process	
Reference	N/A

5.3. Ceilings

Location	Common areas & residential amenity areas
Description	Selected paint finish with primer to skimmed plasterboard ceiling on M/F frame. Acoustic ceiling to lift core and apartment lobbies. Moisture board to wet areas.
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required maintenance	Regular maintenance required and replacement when damaged
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish
process	
Reference	N/A

Location	Tenant amenity wet areas
Description	Selected paint finish with primer to skimmed moisture board ceiling.
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required maintenance	Regular maintenance required and replacement when damaged
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish.
process	
Reference	N/A

5.4. Internal Handrails & Balustrades

Location	Stairs & landings
Description	Proprietary glazed panel system face fixed to stairs stringer / landing slab to manufacturer's details and specifications.
Lifecycle	25-30 years typical lifecycle. Longer lifecycle achieved by regular
	inspection and maintenance regime to ensure the upkeep of materials.
Required	Regular inspections of holding down bolts and joints
maintenance	
Year	Annually
Priority	High
Selection	Hard-wearing long-life materials against timber options
process	
Reference	N/A

Location	Stairs & landings
Description	Mild steel painted balustrade and handrail.
Lifecycle	Over 40 years typical lifecycle. Longer lifecycle achieved by regular
	inspection and maintenance regime to ensure the upkeep of materials.
Required	Regular inspections of holding down bolts and joints
maintenance	
Year	Annually
Priority	High
Selection	Hard-wearing long-life materials against timber options
process	
Reference	N/A

5.5. Carpentry & Joinery

5.5.1. Internal Doors and Frames

Location	All buildings
Description	 Selected white primed and painted/varnished solid internal doors, or hardwood veneered internal doors All fire rated doors and joinery items to be manufactured in accordance with B.S. 476. Timber saddle boards. Brushed aluminium door ironmongery or similar
Lifecycle	30 years average expected lifespan. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	General maintenance in relation to impact damage and general wear
maintenance	and tear
Year	Annual
Priority	Low, unless fire door High
Selection	Industry standard
process	
Reference	N/A

5.5.2. Skirtings & Architraves

Location	All buildings
Description	Painted timber/MDF skirtings and architraves
Lifecycle	30 years average expected lifespan. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	General maintenance in relation to impact damage and general wear
maintenance	and tear
Year	Annual
Priority	Low
Selection	Industry standard
process	
Reference	N/A

5.5.3. Window Boards

Location	All Buildings
Description	Painted timber/MDF window boards
Lifecycle	30 years average expected lifespan. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	General maintenance in relation to impact damage and general wear
maintenance	and tear
Year	Annual
Priority	Low
Selection	Industry standard
process	
Reference	N/A

6.0. BUILDING SERVICES

6.1. Mechanical Systems

6.1.1. Mechanical Plant

Location	Residential
Description	Water Heating plant is proposed to consist of Exhaust Air Source Heat Pumps, with Space heating provided by Electrical Panel Heaters. Further details to be provided by the M&E Consultant at detailed design stage.
Lifecycle	Annual Maintenance / Inspection to Electric Panel Heaters
	 Annual Maintenance / Inspection to Heating System
	 Annual Maintenance of Exhaust Air Source Heat Pumps
	 Annual Maintenance / Inspection to Heating and Water Pumps.
	 Annual Maintenance / Inspection to Water Tanks.
	 Annual Maintenance / Inspection to Water Booster - sets.
	 Annual Maintenance / Inspection to DHS Tanks.
	Cost for replacement equipment to be updated on completion of
	design matrix of equipment at detailed design stage.
	 Replacement of equipment at (End of Life) EOL to be determined at detailed design stage.
Required	Annual Service Inspections to be included as part of Development
maintenance	Planned Preventative Maintenance Programme
Year	Annually
Priority	Medium
Selection	All equipment to be detailed as part of the detailed design section of the
process	development. This equipment will be selected in conjunction with the
	design and management team to meet and exceed the CIBSE
	recommended lifecycles.
Reference	N/A

6.1.2 Soils and Wastes

Location	All Areas / Kitchens / Bathrooms etc
Description	Soils and Wastes Pipework – uPVC above basement and HDPE in
	basement.
Lifecycle	 Annual inspections required for all pipework within landlord areas.
	• Cost for replacement equipment to be updated on completion of
	design matrix of equipment at detailed design stage.
Required	Annual Service Inspections to be included as part of Development
maintenance	Planned Preventative Maintenance Programme
Year	Annually
Priority	Medium
Selection	All equipment to be detailed as part of the detailed design section of the
process	development. This equipment will be selected in conjunction with the
	design and management team to meet and exceed the CIBSE
	recommended lifecycles.
Reference	N/A

6.1.3	Water Services
-------	----------------

Location	
Location	Apartments
Description	Air Source Heat Pump (ASHP)
	 The water services installation in the Landlord basement and core areas will be copper. Within the apartments, the water services installation will be
	completed using a Pre-Insulated Multi Layered Alu-Plex type system.
Lifecycle	Annual Inspection of ASHP.
	Annual inspections required for all pipework within landlord areas.
	 Cost for replacement equipment to be updated on completion of
	design matrix of equipment at detailed design stage.
Required	Annual Inspections, including legionella testing to be included as part
maintenance	of Development Planned Preventative Maintenance Programme
Year	Annually
Priority	High
Selection	All equipment to be detailed as part of the detailed design section of the
process	development. This equipment will be selected in conjunction with the
	design and management team to meet and exceed the CIBSE
	recommended lifecycles.
Reference	N/A

6.1.4 Ventilation Services

Location	Apartments
Description	Heat Recovery Ventilation System (HRV) Ducting and Grilles
	 Continuous mechanical extract system in apartments. Mechanical Ventilation in Car Park
Lifecycle	 Annual inspection of extract fan / HRV and grilles
	Annual Inspection of operation of fan and boost / setback facility if
	provided on units.
	• Cost for replacement equipment to be updated on completion of
	design matrix of equipment at detailed design stage.
Required	Annual Service Inspections to be included as part of Development
maintenance	Planned Preventative Maintenance Programme
Year	Annually
Priority	Medium
Selection	All equipment to be detailed as part of the detailed design section of the
process	development. This equipment will be selected in conjunction with the
	design and management team to meet and exceed the CIBSE
	recommended lifecycles.
Reference	N/A

6.2 Electrical / Protective Services

6.2.1 Electrical Infrastructure

Location	Switch rooms / Risers
Description	Maintenance of Electrical Switchgear
Lifecycle	 Annual Inspection of Electrical Switchgear and switchboards. Thermographic imagining of switchgear 50% of MV Switchgear Annually and LV switchgear every 3 years. Cost for replacement equipment to be updated on completion of design matrix of equipment at detailed design stage.
Required	Annual / Every three years to be included as part of Development
maintenance	Planned Preventative Maintenance Programme
Year	Annually
Priority	High
Selection	All equipment to meet and exceed ESB, IS10101:2020, CIBSE
process	recommendations and be code compliant in all cases.
Reference	N/A

6.2.2 Lighting Services internal

Location	All Areas – Internal
Description	Lighting – LED throughout with Presence detection in circulation areas
	and locally controlled in apartments.
Lifecycle	 Annual Inspection of All Luminaires
	 Quarterly Inspection of Emergency Lighting.
	• Cost for replacement equipment to be updated on completion of
	design matrix of equipment at detailed design stage.
Required	Annual / Quarterly Inspections certification as required per above
maintenance	remedial works.
Year	Annually / Quarterly
Priority	High
Selection	All equipment to meet requirements and be in accordance with the
process	current IS3217:2013 + A1 2017, Part M and DAC Requirements.
Reference	N/A

6.2.3 Lighting Services External

Location	All Areas – Internal
Description	Lighting – All LED with Vandal Resistant Diffusers where exposed.
Lifecycle	Annual Inspection of All Luminaires
	 Quarterly Inspection of Emergency Lighting
	Cost for replacement equipment to be updated on completion of
	design matrix of equipment at detailed design stage.
Required	Annual / Quarterly Inspections certification as required as per the PPM
maintenance	schedule.
Year	Annually / Quarterly
Priority	High
Selection	All equipment to meet requirements and be in accordance with the
process	current IS3217:2013 + A1 2017, Part M and DAC Requirements.
Reference	N/A

Location	All areas – Internal
Description	Fire alarm
Lifecycle	 Quarterly Inspection of panels and 25% testing of devices as per IS3218:2013 + A1 2019 requirements.
	 Cost for replacement equipment to be updated on completion of design matrix of equipment at detailed design stage.
Required	Annual / Quarterly Inspections certification as required as per the PPM
maintenance	schedule.
Year	Annually / Quarterly
Priority	High
Selection	All equipment to meet requirements and be in accordance with the
process	current IS3218:2013 + A1 2019 and the Fire Cert
Reference	N/A

6.2.5 **Protective Services – Fire Extinguishers**

Location	All Areas – Internal
Description	Fire Extinguishers and Fire Blankets
Lifecycle	Annual Inspection
Required	Annual with Replacement of all extinguishers at year 10
maintenance	
Year	Annually
Priority	Cost for replacement equipment to be updated on completion of design
	matrix of equipment at detailed design stage.
Selection	All fire extinguishers must meet the requirements of I.S 291:2015
process	Selection, commissioning, installation, inspection and maintenance of
	portable fire extinguishers.
Reference	N/A

6.2.6 Protective Services – Apartment Sprinkler System (Where Applicable by Fire Cert)

Location	Apartments only.
Description	Apartment Sprinkler System
Lifecycle	Weekly / Annual Inspection
Required	Weekly Check of Sprinkler Pumps and plant and annual testing and
maintenance	certification of plant by specialist.
Year	All
Priority	Cost for replacement equipment to be updated on completion of design
	matrix of equipment at detailed design stage.
Selection	The Apartment sprinkler system shall be installed in accordance with
process	BS 9251:2005 - Sprinkler Systems for Residential and Domestic
	Occupancies – Code of Practice
Reference	N/A

6.2.7 **Protective Services – Dry Risers**

1 1	
Location	Common Area Cores of apartments
Description	Dry Risers
Lifecycle	Weekly / Annual Inspection
Required	Visual Weekly Checks of Pipework and Landing Valves with Annual
maintenance	testing and certification by specialist.
Year	
Priority	Cost for replacement equipment to be updated on completion of design
	matrix of equipment at detailed design stage.
Selection	The system shall be installed in accordance with BS 5041 & BS 9999
process	
Reference	N/A

6.2.8 Fire Fighting Lobby Ventilation (To Fire Consultants Design and Specification)

Location	Common Area Lobbies of apartments
Description	Smoke Extract / Exhaust Systems
Lifecycle	 Regular Tests of the system Annual inspection of Fans Annual inspection of automatic doors and AVOs All systems to be backed up by life safety systems.
Required	Annual Service Inspections to be included as part of Development
maintenance	Planned Preventative Maintenance Programme
Year	Weekly / Annually
Priority	Medium
Selection process	All equipment to be detailed as part of the detailed design section of the development. This equipment will be selected in conjunction with the design and management team to meet and exceed the CIBSE recommended lifecycles.
Reference	N/A

6.2.9 Sustainable Services

Location	Roof
Description	Photovoltaics Panels.
Lifecycle	 Regular Tests of the system. Annual inspection of Panels Annual Clean of Panels.
Required maintenance	Annual Service Inspections to be included as part of Development Planned Preventative Maintenance Programme
Year	Weekly / Annually
Priority	Medium
Selection process	All equipment to be detailed as part of the detailed design section of the development. This equipment will be selected in conjunction with the design and management team to meet and exceed the CIBSE recommended lifecycles.
Reference	N/A
