1.0 INTRODUCTION

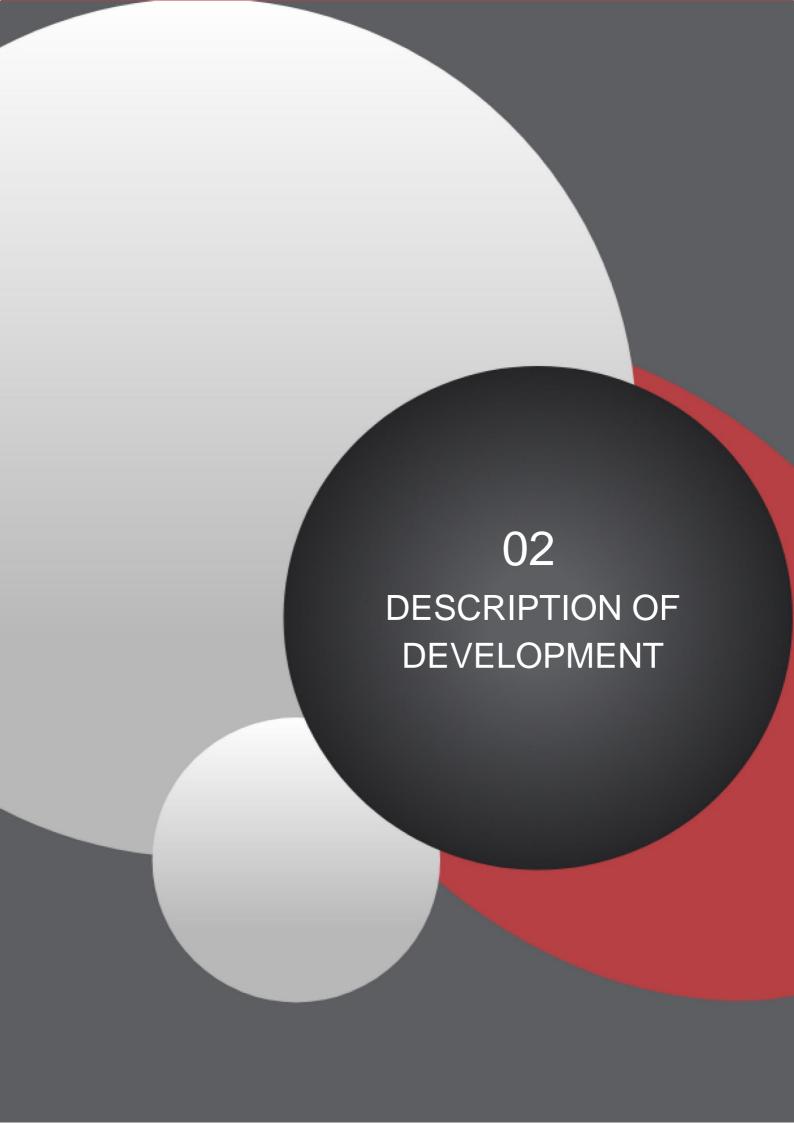

Aramark Property were instructed by Cornel Living Limited, to provide a Building Lifecycle Report for their proposed 'Build-to-Rent' residential scheme at Cornelscourt Village, Old Bray Road, Cornelscourt, Dublin 18.

The purpose of this report is to provide an initial assessment of long-term running and maintenance costs as they would apply on a per residential unit basis at the time of application, as well as demonstrating what measures have been specifically considered to effectively manage and reduce costs for the benefit of the residents. This is achieved by producing a Building Lifecycle Report.

This Building Lifecycle Report has been developed on foot of the revised guidelines for Sustainable Urban Housing: Design Standards for New Apartments - Guidelines for Planning Authorities issued under Section 28 of the Planning and Development Act 2000 (as amended) December 2020. Within the new guidelines, new guidance is being provided on residential schemes.

Section 6.13 of the Operation and Management of Apartment Development Guidelines (December 2020) requires that:

"planning applications for apartment development shall include a building lifecycle report which in turn includes an assessment of long-term running and maintenance costs as they would apply on a per residential unit basis at the time of application, as well as demonstrating what measures have been specifically considered by the proposer to effectively manage and reduce costs for the benefit of residents."

2.0 DESCRIPTION OF DEVELOPMENT

The proposed residential development provides for 419 no. Build-to-Rent dwellings on a site located at Cornelscourt Village, Dublin 18.

The proposed residential development comprises 412 no. apartment units (consisting of 294 no. one-bed apartments, 111 no. two-bed apartments, and 7 no. three-bed apartment units) and 7 no. three-bed houses. The proposed apartments are arranged in 5 no. Blocks which range in height from 4 no. storeys to 12 no. storeys over basement/podium level. The proposed houses are two storey in height.

The proposed development will be for long-term rental and will remain owned and operated by an institutional entity for a minimum period of not less than 15 years. The apartments benefit from a range of internal residential amenities and facilities provided throughout the scheme and include a gym; a variety of tenant amenity lounges including a concierge; a single storey multipurpose pavilion building within the communal courtyard between Blocks A and B; and a clearly defined range and hierarchy of public, communal, and private open spaces.

In addition, the proposed development provides a childcare facility (approximately 258sqm) with capacity for in the order of 50-60 children to serve the needs of the proposed development. A café/retail unit is proposed fronting onto the Old Bray Road (total 264sqm GFA).

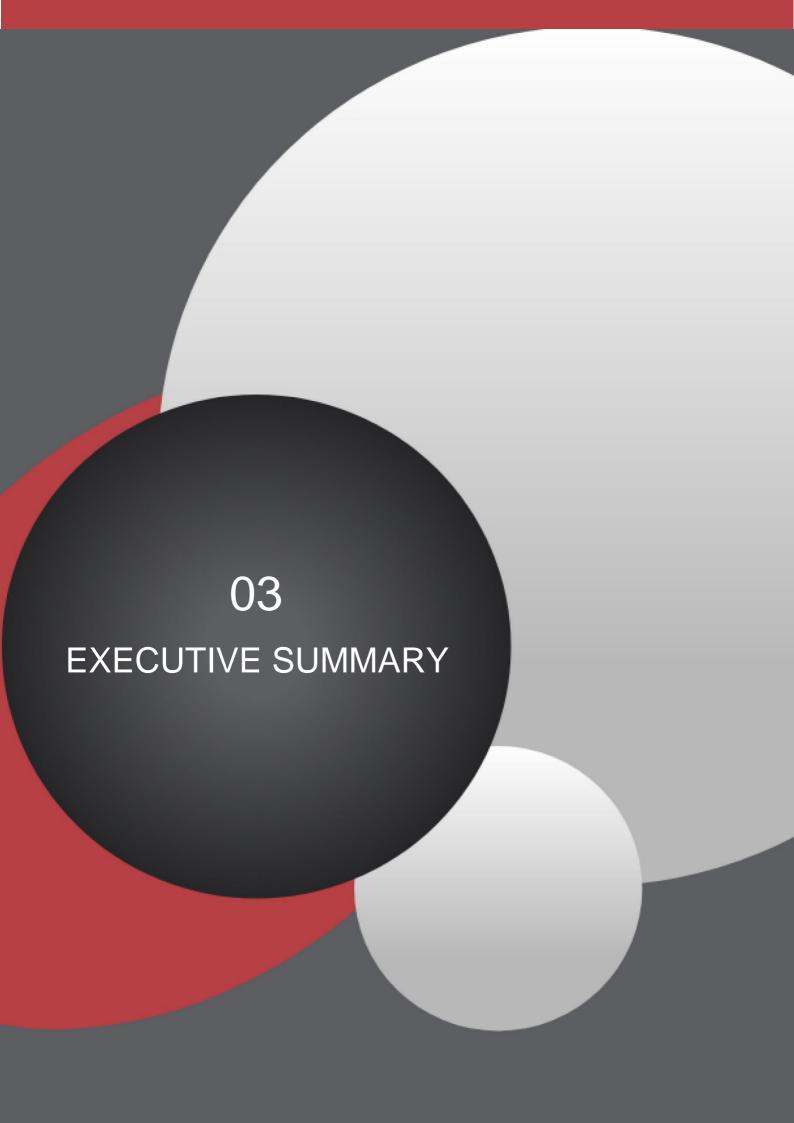

Vehicular access to basement level will be via the existing vehicular access point from the Old Bray Road. A total of 237 no. car parking spaces (236 no. at basement level and 1 no. at ground level), 819 no. bicycle parking spaces (664 no. at basement level and 155 no. at ground level), and 10 motorcycle spaces (all at basement level), are proposed.

The proposed development includes on-site pump station integrated with an underground foul sewer balancing storage tank (approx. 2,150m³), at the eastern corner of the site, together with all associated works.

The proposed development includes an upgrade to the existing cycle lane to include a segregated pedestrian connection along the N11, from the subject site to N11/Old Bray Road junction, with the bus stop beyond, together with future potential pedestrian and/or cycle connections to the Old Bray Road and Willow Grove.

The proposed development provides for all associated and ancillary infrastructure, landscaping, boundary treatments and development works on a total site of approximately 2.15 hectares.

3.0 EXECUTIVE SUMMARY – BUILDING LIFE CYCLE REPORT

Measures to effectively manage and reduce costs for the benefit of residents

The following document reviews the outline specification set out for the proposed 'Build-to-Rent' residential scheme at Cornelscourt Village, Old Bray Road, Cornelscourt, Dublin 18 and explores the practical implementation of the design and material principles which has informed design of building roofs, façades, internal layouts and detailing of the proposed development.

Building materials proposed for use on elevations and in the public realm achieve a durable standard of quality that will not need regular fabric replacement or maintenance outside general day to day care. The choice of high quality and long-lasting materials, as well as both soft and hardscape in the public, semi-public and private realm will contribute to lower maintenance costs for future residents and occupiers.

Please note that detailed specifications of building fabric and services have not been provided at this stage. This report reflects the outline material descriptions contained within Henry J. Lyons Architects' planning drawings received.

For any elements where information was not available, typical examples have been provided of building materials and services used for schemes of this nature and their associated lifespans and maintenance requirements. All information is therefore indicative subject to further information at detailed design stage.

As the building design develops this document will be updated and a schedule will be generated from the items below detailing maintenance and replacement costs over the lifespan of the materials and development constituent parts in a summary document. This will enable a robust schedule of building component repair and replacement costs which will be available to the property management company so that running, and maintenance costs of the development are kept within the agreed Annual operational budget, this will take the form of a Planned Preventative Maintenance Schedule (PPM)* at operational commencement of the development.

*PPM under separate instruction

4.0 EXTERNAL BUILDING FABRIC SCHEDULE

4.1 Roofing

4.1.1 Green Roofs (Manufacturer / Supplier TBC)

Location	All flat roof areas (maintenance access only)
Description	Extensive green roof system to engineer's specification.
Lifecycle	Average lifecycle of 35 years on most green roofs. As used across the industry nationally and in the UK, long lifecycle typically achieved by robust detailing to adjoining roof elements, regular inspection and maintenance regime to ensure the upkeep of roofing product / materials.
Required maintenance	Quarterly maintenance visits to include inspection of drainage layer and outlets and removal of any blockages to prevent ponding. Inspection of vegetation layer for fungus and decay. Carry out weeding as necessary. No irrigation necessary with sedum blankets.
Year	Quarterly
Priority	Medium
Selection process	A green roof will add to the character of the overall scheme, as well as providing attenuation to storm water run-off and less burden on rainwater goods, increased thermal and sound insulation to the building and increased biodiversity. Natural soft finishes can provide visual amenity for residents where roof areas are visible or accessible from within areas of the scheme. Sedum roofs are a popular and varied choice for green roofs requiring minimal maintenance.
Reference	Henry J. Lyons Architects' planning drawings & design statement.

4.1.2 Roofs (Manufacturer / Supplier TBC)

Location	2-Storey Houses (maintenance access only)
Description	Single layer membrane roof system to engineer's specification.
Lifecycle	Average lifecycle of 15-25 years on most membrane roofs. Lifecycle will be extended with robust proven detailing to adjoining roof elements and appropriate and regular maintenance of the roof materials.
Required	Half-yearly maintenance visits to include inspection of membrane
maintenance	material for puncture / cracks on sheeting; seams and flashing details;
	around drainage and ventilation outlets and removal of any
	vegetation/moss blockages to prevent ponding.
Year	Half-Yearly / Annual
Priority	Medium
Selection	A membrane roof with appropriate built-up system will provide
process	durability, lacks water permeability and easily maintain without shutting
	down building operations during application.
Reference	Henry J. Lyons Architects planning drawings & design statement.

4.1.3 Fall Arrest System for Roof Maintenance Access

	·
Location	Flat roof areas to all blocks (maintenance access only)
Description	 Fall Protection System on approved anchorage device. Installation in accordance with BS 7883 by the system manufacturer or a contractor approved by the system manufacturer.
Lifecycle	25-30 years dependent on quality of materials. Generally, steel finishes to skyward facing elements can be expected to maintain this life expectancy. As used across the industry nationally and the UK, long lifecycle is typically achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required maintenance	Check and reset tension on the line as per manufacturer's specifications. Check all hardware components for wear (shackles, eye bolts, turn buckles). Check elements for signs of wear and/or weathering. Lubricate all moving parts. Check for structural damage or modifications.
Year	Annually
Priority	High
Selection process	Fall protection systems are a standard life safety system, provided for safe maintenance of roofs and balconies where there is not adequate parapet protection. Fall protection systems must comply with relevant quality standards.
Reference	N/A

4.1.4 Roof Cowls

Location	Selected Flat Roof Areas
Description	Roof Cowl System to be supplied with weather apron for flat roofs.
Lifecycle	25-35 years. As used across the industry nationally and the UK, typically longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required maintenance	Check fixings annually, inspect for onset of leading-edge corrosion if epoxy powder coat finish and treat.
Year	Annually
Priority	Low
Selection process	Standard fitting for roof termination of mechanical ventilation system.
Reference	N/A

4.1.5 Flashings

Location	All flashing locations
Description	Code 5 lead to be used for all flashing and counter flashings.
Lifecycle	Typical life expectancy of 70 years recorded for lead flashings. Recessed joint sealing will require regular inspections. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required maintenance	Check joint fixings for lead flashing, ground survey annually and close-up inspection every 5 years. Re-secure as necessary.
Year	Ground level inspection annually and close-up inspection every 5 years
Priority	Medium

Selection process	Lead has longest life expectancy of comparable materials such as copper (60 years) and zinc (50 years). Lead is easily formed into the required shapes for effective weathering of building junctions according to standard Lead Sheet Association details.
Reference	N/A

4.2` Rainwater Drainage

Location	All buildings
Description	 Rainwater outlets: Suitable for specified roof membranes. Pipework: Cast aluminium downpipes/uPVC downpipes. Below ground drainage: To M&E/ Structural Engineers design and specification. Disposal: To surface water drainage to Structural Engineers design. Controls: To M&E/ Structural Engineers design and specification. Accessories: allow for outlet gradings, spigots, downspout nozzle, hopper heads, balcony and main roof outlets
Lifecycle	Metal gutters and downpipes have an expected life expectancy of 40 years in rural and suburban conditions (25 years in industrial and marine conditions), this is comparable to cast iron of 50 years and plastic, less so at 30 years. As used across the industry nationally and the UK, typically longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required maintenance	As with roofing systems routine inspection is key to preserving the lifecycle of rainwater systems. Regular cleaning and rainwater heads and gutters, checking joints and fixings and regularly cleaning polyester coated surfaces (no caustic or abrasive materials).
Year	Annually, cleaning bi-annually
Priority	High
Selection process	As above, metal fittings compare well against cast iron (in terms of cost) and plastic (in terms of lifespan and aesthetic).
Reference	N/A

4.3 External Walls

4.3.1 Brick

Location	Façades
Description	Contrasting light and dark tone brickwork.
Lifecycle	Selected colour bricks have a high embodied energy, they are an extremely durable material. Brickwork in this application is expected to have a lifespan of 50-80 years. The mortar pointing however has a shorter lifespan of 25-50 years. Longer lifecycle achieved by regular inspection and maintenance regime.
Required maintenance	In general, given their durability, brickwork finishes require little maintenance. Most maintenance is preventative: checking for hairline cracks, deterioration of mortar, plant growth on walls, or other factors that could signal problems or lead to eventual damage.
Year	Annual
Priority	Low

Selection	Aesthetic, lightweight, cost-efficient and low maintenance cladding
process	option, indistinguishable from traditional brick construction.
Reference	Henry J. Lyons Architects' drawings & design statement.

4.3.2 Metal Cladding

Location	Façades
Description	 Vertically Ribbed Aluminium Cladding in Selected Powder Coated Colour. Aluminium Cladding in Selected Powder Coated Colour. Cladding in Selected Bronze Coloured Aluminium. Retractable Awning within Recessed Bronze Coloured Cladding. Aluminium clad canopy in selected powder coated colour. Aluminium framed ventilation louvre in selected powder coated colour.
Lifecycle	Lifespan expectancy generally in excess of 40 years. As used across the industry nationally and the UK, typically longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required maintenance	Selected cladding requires little maintenance and is resistant to corrosion. It can contribute to lower ongoing maintenance costs in comparison to exposed porous materials which may be liable to faster deterioration. Long term cleaning requirements should be taken into consideration.
Year	Inspection annually; cleaning 5 yearly
Priority	Low
Selection process	Selected cladding protects the building's structure from rainwater and weathering. Metal cladding systems are also chosen for their aesthetic impact, durability and weathering properties.
Reference	Henry J. Lyons Architects' drawings & design statement.

4.3.3 Render

Location	Façades
Description	Plaster Render Finish in Selected Colour
Lifecycle	Renders in general are expected to have a lifecycle of circa 25 years. Longer lifecycle achieved by regular inspection and maintenance regime.
Required maintenance	Regular inspections to check for cracking and de-bonding. Most maintenance is preventative. Coloured render requires less maintenance than traditional renders.
Year	Annually
Priority	Medium
Selection process	Appropriate detailing will contribute to a long lifespan for this installation. Insulated render is a durable and low-maintenance finish with the added benefit of this product being BBA certified against other render systems.
Reference	Henry J. Lyons Architects' drawings & design statement.

4.4 External Windows & Doors

Location	Façades
Description	 Aluminium Framed Door and Window System with Integrated Ventilation Grille in Selected Powder Coated Colour. Aluminium Framed Window System in Selected Powder Coated Colour. All units to be double/triple-glazed with thermally broken frames. All opening sections in windows to be fitted with suitable restrictors. Include for all necessary ironmongery; include for all pointing and mastic sealant as necessary; fixed using stainless steel metal straps screwed to masonry reveals; include for all bends, drips, flashings, thermal breaks etc.
Lifecycle	Aluminium has a typical lifespan of 45-60 years in comparison to uPVC which has a typical lifespan of 30-40 years. Timber windows have a typical lifespan of 35-50 years, aluminium cladding can extend this lifespan by 10-15 years. As used nationwide and in the UK, typically longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required maintenance	Check surface of windows and doors regularly so that damage can be detected. Vertical mouldings can become worn and require more maintenance than other surface areas. Lubricate at least once a year. Ensure regular cleaning regime. Check for condensation on frame from window and ensure ventilation.
Year	Annual
Priority	Medium
Selection process	Aluminium is durable and low maintenance with an average lifespan of 45-60 years, exceeding uPVC (30-40 years). Alu-clad timber windows compare favorably when compared to the above, extending timber windows typical lifespan of 35-50 years by 10-15 years.
Reference	Henry J. Lyons Architects' drawings & design statement.

4.5 Balconies

4.5.1 Structure

Location	Façades
Description	 Concrete balcony system to engineer's detail, or Powder-coated steel frame balcony system to engineer's detail. Thermally broken farrat plate connections to main structure of building.
Lifecycle	 Metal structure has a typical life expectancy of 70 years dependent on maintenance of components. Precast concrete structures have a high embodied energy; however, it is an extremely durable material. Concrete frame has a typical life expectancy of 80 years.
	As used across the industry nationally and the UK, longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.

Required maintenance	Relatively low maintenance required. Check balcony system as per manufacturer's specifications. Check all hardware components for wear. Check elements for signs of wear and/or weathering. Check for structural damage or modifications.
Year	Annual
Priority	High
Selection	Engineered detail; designed for strength and safety.
process	
Reference	N/A

4.5.2 Balustrades and Handrails

Location	Balconies
Description	 Frameless tempered glass (safety glass) Prefabricated Balcony with Selected Aluminium Powder Coated Facia and Balustrade. Approved toughened safety glass and steel including fixings in accordance with manufacturer's details.
Lifecycle	General glass and metal items have a lifespan of 25-45 years. Longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required maintenance	Annual visual inspection of connection pieces for impact damage or alterations.
Year	Annual
Priority	High
Selection process	Metal and glass options will have a longer lifespan and require less maintenance than timber options (10-20 years).
Reference	N/A

5.0 INTERNAL BUILDING FABRIC SCHEDULE

5.1 Floors

5.1.1 Common Areas

Location	Entrance lobbies / Common corridors
Description	Selected anti-slip porcelain or ceramic floor tile complete with inset matwell.
	Selected loop pile carpet tiles.
Lifecycle	 Lifespan expectation of 20-25 years in heavy wear areas, likely requirement to replace for modernisation within this period also.
	 10-15 year lifespan for carpet. Likely requirement to replace for modernisation within this period also.
Required	Visual inspection with regular cleaning, intermittent replacement of
maintenance	chipped / loose tiles
Year	Annual for floor tiles.
	Quarterly inspection and cleaning of carpets as necessary
Priority	Low
Selection	Durable, low maintenance floor finish. Slip rating required at entrance
process	lobby, few materials provide this and are as hard wearing. Using carpet
	allows flexibility to alter and change as fashions alter and change
	providing enhanced flexibility.
Reference	N/A

Location	Stairwells, landings / half landings
Description	Selected carpet covering. Approved anodised aluminium nosings to
	stairs.
Lifecycle	 10-15 year lifespan for carpet. Likely requirement to replace for modernisation within this period also.
	20-year lifespan for aluminium nosings.
Required	Visual inspection with regular cleaning.
maintenance	
Year	Quarterly inspection and cleaning as necessary.
Priority	Low
Selection	Using carpet allows flexibility to alter and change as fashions alter and
process	change providing enhanced flexibility.
Reference	N/A

Location	Lift Lobbies
Description	Carpet/vinyl and porcelain tiles to match adjacent apartment common
-	lobbies.
Lifecycle	 Lifespan expectation of 20-30 years in heavy wear areas, likely requirement to replace for modernisation within this period also. 10-15 year lifespan for carpet. Likely requirement to replace for modernisation within this period also.
Required	Visual inspection with regular cleaning, intermittent replacement of
maintenance	chipped / loose tiles.
Year	Annual
Priority	Low
Selection	Slip rating required for lifts, few materials provide this and are as hard
process	wearing. Using carpet allows flexibility to alter and change as fashions
	alter and change providing enhanced flexibility.
Reference	N/A

5.1.2 Tenant Amenity Areas

Location	Residential amenity (e.g. Concierge, creche, lounge, etc)
Description	Timber laminate / parquet flooring, or
	Carpet covering
	Provide for inset matwell
Lifecycle	 Laminated / parquet timber flooring has an expected life expectancy of 25-35 years dependent on use
	10-15 year lifespan for carpet. Likely requirement to replace for
	modernisation within this period also
Required	Visual inspection. Sweep clean regularly ensuring to remove any dirt.
maintenance	Clean up spills immediately and use only recommended floor cleaners.
Year	Annual
Priority	Low
Selection	Materials chosen for aesthetics, durability and low maintenance.
process	
Reference	N/A

Location	All wet areas (e.g. Gymnasium, WC's)
Description	Selected anti-slip ceramic floor tile.
Lifecycle	Lifespan expectation of 20-25 years in heavy wear areas, likely requirement to replace for modernisation within this period also.
Required	Visual inspection, intermittent replacement of chipped / loose tiles.
maintenance	
Year	Annual
Priority	Low
Selection	Slip rating required at entrance lobby, few materials provide this and
process	are as hard wearing.
Reference	N/A

5.2 Walls

5.2.1 Common Areas

Location	Entrance lobbies / Corridors
Description	Selected paint finish with primer to skimmed plasterboard.
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Regular maintenance required and replacement when damaged.
maintenance	
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish.
process	
Reference	N/A

Location	Lift cores / lobbies / corridors / stairs
Description	Selected paint finish with primer to skimmed plasterboard.
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Regular maintenance required and replacement when damaged.
maintenance	
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish.
process	
Reference	N/A

5.2.2 Tenant Amenity Areas

Location	Residential Amenity (e.g. Concierge, creche, lounge, etc)
Description	Selected paint finish with primer to skimmed plasterboard
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Regular maintenance required and replacement when damaged.
maintenance	
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish.
process	
Reference	N/A

Location	Wet areas (e.g. Gymnasium, WC's)
Description	Selected ceramic wall tile to plasterboard (moisture board to wet areas).
Lifecycle	Typical life expectancy of 35-40 years, less in wet room areas to 20-25 years.
Required	Bi-annual inspection to review damage, local repairs as necessary,
maintenance	particular detailed inspection in wet room areas.
Year	Annually
Priority	Medium
Selection	Wet room application requires moisture board and tiling.
process	
Reference	N/A

5.3 Ceilings

Location	Common areas & tenant amenity areas
Description	Selected paint finish with primer to skimmed plasterboard ceiling on M/F frame. Acoustic ceiling to lift core and apartment lobbies. Moisture
	board to wet areas.
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle
	achieved by regular inspection and maintenance regime to ensure the
	upkeep of materials.
Required	Regular maintenance required and replacement when damaged.
maintenance	
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish
process	
Reference	N/A

Location	Tenant amenity wet areas
Description	Selected paint finish with primer to skimmed moisture board ceiling.
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Regular maintenance required and replacement when damaged.
maintenance	
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish.
process	
Reference	N/A

5.4 Internal Handrails & Balustrades

Location	Stairs & landings
Description	Mild steel painted balustrade and handrail.
Lifecycle	Over 40 years typical lifecycle. Longer lifecycle achieved by regular
	inspection and maintenance regime to ensure the upkeep of materials.
Required	Regular inspections of holding down bolts and joints
maintenance	
Year	Annually
Priority	High
Selection	Hard-wearing long-life materials against timber options
process	
Reference	N/A

5.5 Carpentry & Joinery

5.5.1 Internal Doors and Frames

Location	All buildings
Description	 Selected white primed and painted/varnished solid internal doors, or hardwood veneered internal doors All fire rated doors and joinery items to be manufactured in
	accordance with B.S. 476. Timber saddle boards.
	Brushed aluminium door ironmongery or similar
Lifecycle	30 years average expected lifespan. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	General maintenance in relation to impact damage and general wear
maintenance	and tear
Year	Annual
Priority	Low, unless fire door High
Selection	Industry standard
process	
Reference	N/A

5.5.2 Skirtings & Architraves

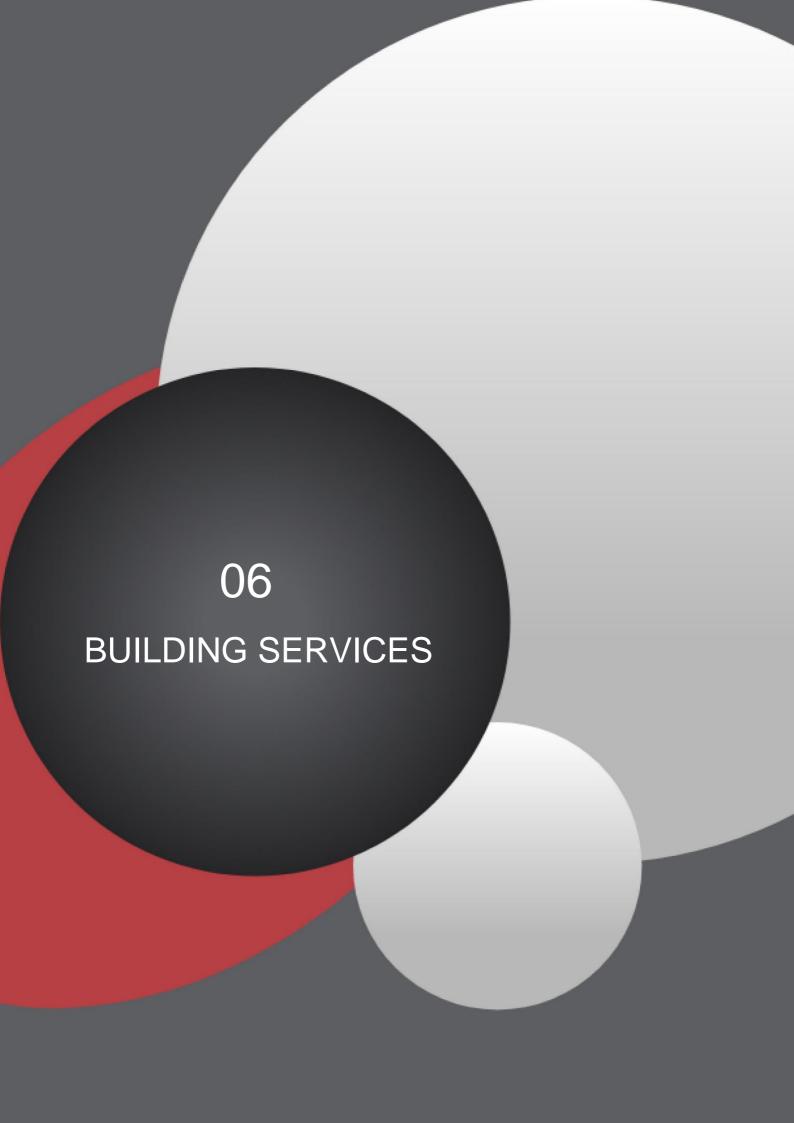

Location	All buildings
Description	Painted timber/MDF skirtings and architraves
Lifecycle	30 years average expected lifespan. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	General maintenance in relation to impact damage and general wear
maintenance	and tear
Year	Annual
Priority	Low
Selection	Industry standard
process	
Reference	N/A

5.5.3 Window Boards

Location	All Buildings
Description	Painted timber/MDF window boards
Lifecycle	30 years average expected lifespan
Required	General maintenance in relation to impact damage and general wear
maintenance	and tear
Year	Annual
Priority	Low
Selection	Industry standard
process	
Reference	N/A

6.0 BUILDING SERVICES

6.1 Mechanical Systems

6.1.1 Mechanical Plant

Location	Residential
	1.32.0.33.0.1.1.00.
Description	Water Heating plant is proposed to consist of Exhaust Air Source Heat
	Pumps, with supplementary immersion heaters. Further details to be
	provided by the M&E Consultant at detailed design stage.
Lifecycle	Annual Maintenance / Inspection to Heating System
	Annual Maintenance of Exhaust Air Source Heat Pumps
	Annual Maintenance / Inspection to Heating and Water Pumps.
	Annual Maintenance / Inspection to Water Tanks.
	Annual Maintenance / Inspection to Water Booster - sets.
	Annual Maintenance / Inspection to DHS Tanks.
	Cost for replacement equipment to be updated on completion of
	design matrix of equipment at detailed design stage.
	Replacement of equipment at (End of Life) EOL to be determined at
	detailed design stage.
Required	Annual Service Inspections to be included as part of Development
maintenance	Planned Preventative Maintenance Programme
Year	Annually
Priority	Medium
Selection	All equipment to be detailed as part of the detailed design section of the
process	development. This equipment will be selected in conjunction with the
	design and management team to meet and exceed the CIBSE
	recommended lifecycles.
Reference	N/A

6.1.2 Soils and Wastes

Location	All Areas / Kitchens / Bathrooms etc
Description	Soils and Wastes Pipework – uPVC above basement and HDPE in basement.
Lifecycle	 Annual inspections required for all pipework within landlord areas. Cost for replacement equipment to be updated on completion of design matrix of equipment at detailed design stage.
Required	Annual Service Inspections to be included as part of Development
maintenance	Planned Preventative Maintenance Programme
Year	Annually
Priority	Medium
Selection	All equipment to be detailed as part of the detailed design section of
process	the development. This equipment will be selected in conjunction with
	the design and management team to meet and exceed the CIBSE
	recommended lifecycles.
Reference	N/A

6.1.3 Water Services

Location	Apartments
Description	 Exhaust Air Heat Pump (EAHP) The water services installation in the Landlord basement and core areas will be copper. Within the apartments, the water services installation will be completed using a Pre-Insulated Multi Layered Alu-Plex type system.
Lifecycle	 Annual Inspection of EAHP. Annual inspections required for all pipework within landlord areas. Cost for replacement equipment to be updated on completion of design matrix of equipment at detailed design stage.
Required maintenance	Annual Inspections, including legionella testing to be included as part of Development Planned Preventative Maintenance Programme
Year	Annually
Priority	High
Selection process	All equipment to be detailed as part of the detailed design section of the development. This equipment will be selected in conjunction with the design and management team to meet and exceed the CIBSE recommended lifecycles.
Reference	N/A

6.1.4 Ventilation Services

Location	Apartments
Description	Exhaust Air Heat Pump
	Continuous mechanical extract system in apartments.
Lifecycle	Annual inspection of extract fan / and grilles
	 Annual Inspection of operation of fan and boost / setback facility if provided on units.
	 Cost for replacement equipment to be updated on completion of design matrix of equipment at detailed design stage.
Required	Annual Service Inspections to be included as part of Development
maintenance	Planned Preventative Maintenance Programme
Year	Annually
Priority	Medium
Selection	All equipment to be detailed as part of the detailed design section of the
process	development. This equipment will be selected in conjunction with the
	design and management team to meet and exceed the CIBSE
	recommended lifecycles.
Reference	N/A

6.2 Electrical / Protective Services

6.2.1 Electrical Infrastructure

Location	Switch rooms / Risers
Description	Maintenance of Electrical Switchgear
Lifecycle	 Annual Inspection of Electrical Switchgear and switchboards. Thermographic imagining of switchgear 50% of MV Switchgear Annually and LV switchgear every 3 years. Cost for replacement equipment to be updated on completion of design matrix of equipment at detailed design stage.
Required	Annual / Every three years to be included as part of Development
maintenance	Planned Preventative Maintenance Programme
Year	Annually
Priority	High
Selection	All equipment to meet and exceed ESB, IS10101:2020, CIBSE
process	recommendations and be code compliant in all cases.
Reference	N/A

6.2.2 Lighting Services internal

Location	All Areas – Internal					
Description	Lighting – LED throughout with Presence detection in circulation areas					
	and locally controlled in apartments.					
Lifecycle	Annual Inspection of All Luminaires					
	Quarterly Inspection of Emergency Lighting.					
	Cost for replacement equipment to be updated on completion of					
	design matrix of equipment at detailed design stage.					
Required	Annual / Quarterly Inspections certification as required per above					
maintenance	remedial works.					
Year	Annually / Quarterly					
Priority	High					
Selection	All equipment to meet requirements and be in accordance with the					
process	current IS3217:2013 + A1 2017, Part M and DAC Requirements.					
Reference	N/A					

6.2.3 Lighting Services External

Location	All Areas – Internal					
Description	Lighting – All LED with Vandal Resistant Diffusers where exposed.					
Lifecycle	Annual Inspection of All Luminaires					
	Quarterly Inspection of Emergency Lighting					
	Cost for replacement equipment to be updated on completion of					
	design matrix of equipment at detailed design stage.					
Required	Annual / Quarterly Inspections certification as required as per the PPM					
maintenance	schedule.					
Year	Annually / Quarterly					
Priority	High					
Selection	All equipment to meet requirements and be in accordance with the					
process	current IS3217:2013 + A1 2017, Part M and DAC Requirements.					
Reference	N/A					

6.2.4 Protective Services - Fire Alarm

Location	All areas – Internal				
Description	Fire alarm				
Lifecycle	 Quarterly Inspection of panels and 25% testing of devices as per IS3218:2013 + A1 2019 requirements. 				
	 Cost for replacement equipment to be updated on completion of design matrix of equipment at detailed design stage. 				
Required	Annual / Quarterly Inspections certification as required as per the PPM				
maintenance	schedule.				
Year	Annually / Quarterly				
Priority	High				
Selection	All equipment to meet requirements and be in accordance with the				
process	current IS3218:2013 + A1 2019 and the Fire Cert				
Reference	N/A				

6.2.5 Protective Services – Fire Extinguishers

Location	All Areas – Internal			
Description	Fire Extinguishers and Fire Blankets			
Lifecycle	Annual Inspection			
Required	Annual with Replacement of all extinguishers at year 10			
maintenance				
Year	Annually			
Priority	Cost for replacement equipment to be updated on completion of design			
	matrix of equipment at detailed design stage.			
Selection	All fire extinguishers must meet the requirements of I.S 291:2015			
process	Selection, commissioning, installation, inspection and maintenance of			
	portable fire extinguishers.			
Reference	N/A
