APPENDIX 11.6 OMNI-DIRECTIONAL NOISE PREDICTIONS – PROPOSED DEVELOPMENT ONLY

The following table presented the results of the omni-direction noise predictions from the Proposed Development only. The predicted turbine noise levels are worst-case as they assume all noise sensitive locations are downwind of all turbines at the same time, an impossible scenario. The calculations have been undertaken using the ISO 9613-2 standard and relate to worst-case conditions favorable to noise propagation (typically downwind propagation from source to receiver and/or downward refraction under temperature inversions).
