## 1.0 INTRODUCTION

Cronin & Sutton Consulting Engineers (CS Consulting) have been commissioned to prepare an Engineering Services Report to accompany a planning application for a proposed residential development at Bridgegate, Mulladrillen and Rathgory, Drogheda Road, Ardee, Co. Louth.

This report assesses the proposed development under the following headings:

- Stormwater Drainage Infrastructure
- Foul Drainage Infrastructure
- Potable Water Infrastructure

In preparing this report, CS Consulting has referred to the following:

- Louth County Development Plan 2021-2027
- Regional Code of Practice for Development Works, Version 6
- Greater Dublin Regional Code of Practice for Drainage Works
- British Standard BS EN 752:2008 (Drains and Sewer Systems Outside Buildings)
- Part H of the Building Regulations (Building Drainage)
- Irish Water Code of Practice for Water Infrastructure
- Irish Water Code of Practice for Wastewater Infrastructure
- Greater Dublin Strategic Drainage Study

The Engineering Services Report is to be read in conjunction with the engineering drawings and documents submitted by CS Consulting and with the various additional information submitted by the other members of the design team.

## 2.0 SITE LOCATION AND PROPOSED DEVELOPMENT

### 2.1 Site Location

The site of the proposed development lies on the outskirts of Ardee in County Louth, approx. 800m to the south-east of the town centre, in the townland of Rathgory and Mulladrillen. The site has a total area of 13.03ha and is located in the operational area of Louth County Council.

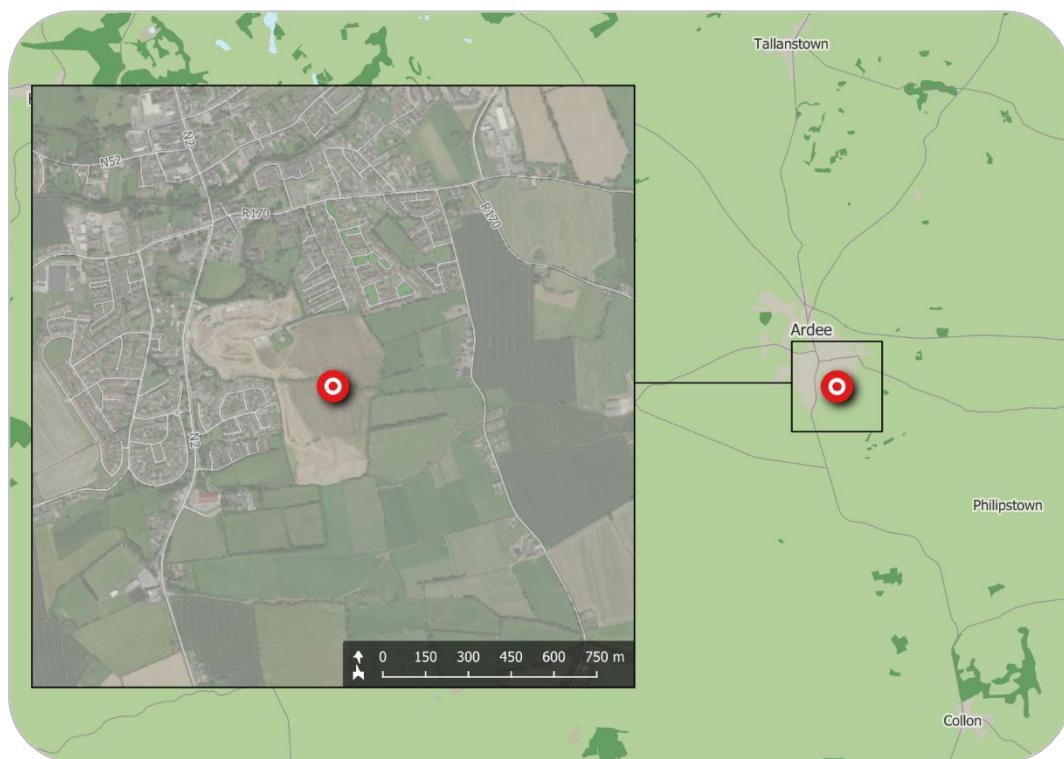

Figure 1 – Location of proposed development site  
(map data & imagery: EPA, OSM Contributors, ESRI)

The location of the proposed development site is shown in Figure 1 above; the indicative extents of the development site and the area subject to this application, as well as relevant elements of the surrounding road network, are shown in more detail in Figure 2.

The site is bounded to the north and north-east by the existing De la Salle Crescent and Moorehall residential developments, to the west by the

existing Cherrybrook residential estate and by lands currently under development (planning ref. 10/174), and on all other sides by agricultural lands.

Figure 2 – Site extents and environs  
 (map data & imagery: NTA, OSi, OSM Contributors, Microsoft)

## 2.2 Existing Land Use

The subject site is greenfield, containing an existing watercourse. Refer to CS Consulting Drawing **ARDEE-CSC-00-XX-DR-C-1000 Topographical Survey** for the existing topographical survey.

## 2.3 Description of Proposed Development

The proposed development site extends to c. 13.03 ha at Bridgegate, Rathgory & Mulladrillen, Drogheda Road, Ardee, County Louth and adjoins Phases 1-3 at Bridgegate (under construction) on lands to the west, accessed from the N2 Drogheda Road. The proposals overlap the

boundary of permitted development Reg. Ref.: 10174; ABP Ref: PL15.238053 (as amended) at the western boundary and will supersede granted development in this area which consists of 31 no. dwellings, crèche and community building and public open space.

The development will consist of:

- A) The construction of 272 no. residential units comprising a mix of 206 no. 2, 3 and 4 bedroom houses (all 2 storeys) including 50 no. 2-bedroom houses (Type 1), 145 no. 3-bedroom houses (Types 2, 3, 6) and 11 no. 4-bedroom houses (Types 4, 5) all with private open space and car parking, alongside 66 no. duplex units (all 3 storeys) including 17 no. 1-bedroom units (Types D5, D8), 24 no. 2-bedroom units (Types D1, D3, D6) and 25 no. 3-bedroom units (Types D2, D4, D7), all with private open space in the form of terrace at upper floor level and external garden space, with 499 sqm of communal open space serving Duplex Blocks A-B (48 no. units) (served by 2 no. bin and bike stores [each c. 51 sqm] adjacent) at Bridgegate Avenue, providing a total residential gross floor area of c. 28,168.9 sqm;
- B) A part 1, part 2 no. storey crèche (c. 484.1 sqm) and playground and a single storey community building (c. 165 sqm) located adjacent at a central community hub (with bin and bike store [c. 23 sqm]) accessed from Bridgegate Avenue served by car parking located on Bridgegate Green and Bridgegate Avenue;
- C) A landscaped Public Park located in the northern part of the site extending to c. 3.6 ha accessed from the community hub and between duplex Blocks B & C at Bridgegate Avenue, with 2 no. pedestrian links to permitted public park adjoining to the west and 1 no. pedestrian footpath extending to the northern perimeter at Hale Street, with a reservation for a future link road to lands to the east facilitated in the northern section of the park;

- D) Works to the Rathgory Tributary located to the south of Bridgegate Avenue comprising the realignment of the channel and regrading and reprofiling of land (as required), implementation of 2 no. vehicular crossings (including culverts and mammal passes) and the provision of a riparian corridor based around the open watercourse comprising landscaping and planting with safe access to the watercourse provided for maintenance purposes and 1 no. pedestrian and cyclist crossing;
- E) A series of landscaped public open spaces provided throughout the site with Public Open Space 01 (c. 1.05 ha) and Public Open Space 2 (c. 0.43 ha) located within the linear park (including riparian corridor) adjacent to the Rathgory Tributary with Public Open Space 03 (c. 0.29 ha) centrally located in the southern part of the site; open spaces will provide a mix of hard and soft landscaping, pedestrian and cycle access (cycle lanes provided at POS 1 and POS 2) and a range of activities including fitness spaces, kickabout area, amphitheatre and nature based play areas;
- F) Provision of shared surfaces, landscaped streetscapes including planting and landscaping at two neighbourhood streets in the southern part of the site, with roads provided to site boundaries to the east, south and west to facilitate possible future connections;
- G) All landscaping including planting to consolidate treelines and hedgerows forming existing site boundaries with agricultural lands to the east and Cherrybrook residential development to the west and all boundary treatments;
- H) Roads and access infrastructure taken from Bridgegate Avenue (permitted under Reg. Ref.: 10/174; ABP Ref: PL15.238053 [as amended]), the provision of a bus stop on the south side of Bridgegate Avenue adjacent to community hub and provision of cycle lanes at this location (continued through Public Open Space 01); a total of 480

no. car parking spaces (362 no. serving houses, 84 no. serving duplexes, 23 no. serving crèche and community building and 11 no. visitor and public open spaces), a total of 296 no. bicycle parking spaces (204 no. spaces serving duplexes [60 visitor spaces], 32 no. spaces at the community hub and 60 no. visitor spaces);

- I) Provision of 2 no. ESB substations, all associated drainage and services infrastructure (surface water, foul and water supply), public lighting, SUDS drainage and works to facilitate the development.

## 3.0 STORMWATER DRAINAGE

### 3.1 Existing Storm Water Arrangements

At present the subject lands does not have any engineered drainage system in place. The open nature of the site and the natural existing gradients has led the majority of the site to drain to the south into a tributary of the River Dee. As noted, the site does have an existing watercourse through the centre of the site. See drawing **ARDEE-CSC-00-XX-DR-C-1000 Topographical Survey** for the existing topographical survey of the site.

### 3.2 Proposed Storm Water Arrangements

The proposed new storm water drainage arrangements will be designed and carried out in accordance with:

- i) The Greater Dublin Strategic Drainage Study (GDSDS), Volume 2
- ii) The Greater Dublin Regional Code of Practice for Drainage Works
- iii) British Standard BS EN 752:2008 (Drains and Sewer Systems Outside Buildings)
- iv) Part H of the Building Regulations (Building Drainage)

The GDSDS and the Local Authority's Regional Code of Practice for Drainage Works require that four main criteria to be provided by the developer.

- Criterion 1: River Water Quality Protection – satisfied by providing interception storage and treatment of run-off within SuDS features, e.g. wetlands or bio-retention areas.
- Criterion 2: River Regime Protection - satisfied by attenuating run-off from the site.
- Criterion 3: Level of Service (flooding) for the site – satisfied by the site being outside the 1000-year coastal and fluvial flood extent areas.

Pluvial flood risk addressed by development designed to accommodate a 100-year extreme storm as noted in GDSDS. Planned flood routing for storms greater than 100-year level considered in design and development run-off contained on site.

- Criterion 4: River Flood Protection – attenuation and/or long-term storage provided within the SuDS features.

In accordance with the requirements of Louth County Council, the proposed development shall incorporate Sustainable Drainage Systems (SuDS) principles. These require a two-fold approach to address storm water management on new developments.

The **first** aspect is to reduce any post development run-off to pre-development discharge rates (i.e. greenfield runoff rates). The development is to retain storm water volumes predicted to be experienced during extreme rainfall events. This is defined as the volume of storm water generated during a 1-in-100-year storm event, increased by 20% to account for the predicted effects of climate change.

The **second** aspect requires that storm water quality be improved before disposal and, where applicable, that storm water be permitted to infiltrate into the ground on site rather than discharging to the public drainage system or to watercourses.

### 3.3 Attenuation Storage

The restriction of post development run-off to pre-development discharge rates at the subject development is to be achieved primarily through the provision of onsite attenuation storage to accommodate excess runoff during extreme rainfall events.

To ensure an accurate calculation of the required attenuation for the site, the following data were obtained:

- a) The SAAR (Standard Annual Average Rainfall) for the area, provided by Met Éireann: 781mm/year.
- b) The sliding duration table for the site indicating the 1:100 year rainwater intensities to be used, provided by Met Éireann.
- c) Soil type value, obtained from the Flood Studies Report carried out by JBA Consulting (for the subject lands this has been established as soil type 2).

The QBar value (greenfield runoff rate) for the site has been established as 2.07 l/s/ha. As the application has three distinct areas (area A, area B and area C), the required discharge rate has been calculated for all three. See drawing **ARDEE-CSC-00-XX-DR-C-1002 Drainage Layout** for details of same. Based on the site's QBar value, the required attenuation volume has been calculated for the three zones. The required storage will be provided in the form of underground storage tanks. See CS Consulting drawing **ARDEE-CSC-00-XX-DR-C-1201 Surface Water Catchments** for details of the storm drainage network and associated attenuation storage locations.

The proposed development is to retain storm water volumes predicted to be experienced during extreme rainfall events. This is defined as the volume of storm water generated during a 1-in-100-year storm event, increased by 20% to account for predicted climate change effects. The development's attenuation storage volume requirement for such an event has been calculated as 2,957m<sup>3</sup>. It is proposed to locate 4no. Stormtech attenuation systems in different areas of the development, providing a total attenuation storage volume of 2,951m<sup>3</sup>.

The proposed storm water network has been designed using the WinDes Micro Drainage Program, to check for suitable capacity in the network to ensure no flooding takes place during extreme storm events. See **Appendix B** for WinDes design, long sections, and simulation calculations for the proposed storm water system.

The outfall into the public system shall be into the adjacent storm sewers or into the River Dee's tributary. As noted above, the site has an existing open channel watercourse which is a tributary of the River Dee. It is proposed to re-align this water course to aid in the most sustainable use of the site to provide the required housing densities for the subject site area. The stream's hydraulic conveyance will be maintained and OPW hydraulic requirements (Section 9 Application) applied for post planning.

We refer to the Flood Risk Assessment Report carried out by JBA, which outlines the following:

- All residential development is located in flood zone C.
- No displacement of flood waters will be encountered as part of the proposed design.
- Finished Floor Levels have been set above the 1-in-1000-year event level, plus freeboard of 500mm.
- JBA will be providing as part of their further works reporting a detailed hydraulic model of the realigned stream based on OPW mapping.
- A Section 9 application will be made in due course for the realignment post planning based on the modelling to be undertaken.
- Section 50 applications will be made in due course for the culverts being placed in the stream, sized and designed based on the modelling to be undertaken.

Please refer to CS Consulting Drawing **ARDEE-CSC-00-XX-DR-C-1002** **Drainage Layout** for drainage details. See **Appendix A** for Attenuation Calculation.

### **3.4 Proposed Sustainable Drainage System (SuDS) Measures**

As previously noted, SuDS measures are integrated into stormwater drainage designs to improve storm water quality before disposal and,

where applicable, to permit storm water to infiltrate into the ground on site rather than discharging to the public drainage system or to watercourses. It is noted that infiltration tests were carried out on the subject site and the results indicate that the existing ground conditions are poor. The aim is to provide an effective system to mitigate the adverse effects of storm water runoff on the environments, through enhanced quality systems and on local infrastructure to aid in preventing downstream flooding. The features proposed shall reduce run-off volumes, pollution concentrations and enhance groundwater recharge and biodiversity.

The proposed SuDS features within the subject development shall consist of:

- a) low water usage sanitary appliances
- b) water butts to retain rainwater for re-use for landscaping and maintenance purposes
- c) permeable paving for car-parking bays

## 4.0 FOUL DRAINAGE

### 4.1 Existing Foul Arrangements

The current site is not currently developed and as such no sewers are located on the subject lands. All effluent generated in Ardee is conveyed to the Regional Wastewater Treatment Plant (EPA Licence Number D0117/01). The Regional Treatment Plant has recently been upgraded and has expanded capacity from 5000 PE (population equivalent) to 10,000 PE.

### 4.2 Proposed Effluent Generation

The proposed development is to consist of 272no. house and duplex units. In accordance with Irish Water guidelines, the foul effluent to be generated by the development may be calculated as follows:

- Unit generation =  $2.7 \text{ pers./unit} \times 150 \text{ l/pers./day} \times 1.1 \text{ increase factor}$   
= 446 l/day/unit
- Total generation =  $446 \text{ l/day/unit} \times 272 \text{ units}$   
= 121,312 l/day  
= 121.31m<sup>3</sup>/day;
- Average flow (DWF) =  $121,312 \text{ l/day} / 86,400 \text{ seconds/day}$   
= 1.404 l/sec
- Peak flow =  $6 \times \text{DWF}$  (for population between 0 and 750)  
=  $6 \times 1.404 \text{ l/sec}$   
= 8.424 l/sec

### 4.3 Proposed Foul Drainage Arrangements

The proposed development will require a new separate foul drainage network to collect and convey the effluent generated by the proposed

development. The drainage network for the proposed development has been designed in accordance with:

- the Greater Dublin Regional Code of Practice Drainage Works
- the Greater Dublin Strategic Drainage Study
- the Irish Water Code of Practice for Wastewater Infrastructure

The subject development's foul drainage network shall outfall into that of the adjacent permitted development (planning refs. 10/174 and 19/336) to the west, which is currently under construction. This permitted development's foul drainage network has been designed to cater for the flows from the subject site, in addition to its own.

The proposed foul drainage infrastructure has been designed using the WinDes Micro Drainage Program and a copy of the sewer design is included in **Appendix C**.

Refer to CS Consulting Drawing **ARDEE-CSC-00-XX-DR-C-1002 Drainage Layout** for further details.

#### **4.4 Irish Water Confirmation of Feasibility and Statement of Design Acceptance**

A Pre-Connection Enquiry has been submitted to Irish Water for a 300-unit residential development at the subject site and a Confirmation of Feasibility (CoF) has been received from Irish Water in response. The CoF is enclosed with this planning application submission as part of **Appendix D** to this report.

The CoF confirms that the proposed connection to the Irish Water network can be facilitated at this moment in time. We acknowledge the CoF contents, and we note the following in relation to foul drainage:

- Wastewater – Connection is feasible however upgrades are required as detailed on the COF;

*'The existing wastewater network will require upgrades to cater for the additional proposed load. The upgrade will involve upsizing of between 300 and 1000 meters of existing 225mm sewer along the public road. It is not expected that 3rd party permissions will be required outside the requirements for a road opening licence. The exact details of this upgrade can be agreed at connection application stage.'*

The applicant acknowledges the commentary on the upgrades required. CS Consulting have been in contact with IW up to the 12.05.2022 on this issue.

We state that as confirmed by Irish Water, the upgrades do not require 3<sup>rd</sup>-party permission and it will be under the remit and control of Irish Water to implement the upgrade works through the applicant's connection application process post planning grant, hence this CoF does not preclude lodgement of the present SHD planning application to An Bord Pleanála and does not preclude the upgrade works to be carried out on the public network and can be facilitated at connection application stage.

In addition to the above we have received a Statement of Design Acceptance from Irish Water on the proposed scheme (please see **Appendix D**).

## 5.0 POTABLE WATER

### 5.1 Existing Potable Water System

The current site is not developed and as such it does not have an existing connection into the local watermain network. The site is located adjacent to the regional Irish Water reservoir that currently supplies Ardee.

### 5.2 Proposed Potable Water System

The proposed development is to consist of 272no. house and duplex units. In accordance with Irish Water guidelines, the development's potable water demand may be calculated as follows:

- Unit demand = 2.7 pers./unit x 150 l/pers./day  
= 405 l/day/unit
- Total demand = 405 l/day/unit x 272 units  
= 110,160 l/day  
= 110.16 m<sup>3</sup>/day
- Average demand (AWD) = 110,160 l/day / 86,400 seconds/day  
= 1.275 l/sec
- Peak demand = 5 x AWD  
= 5 x 1.275 l/sec  
= 6.375 l/sec

The proposed watermain network system has been designed in accordance with the specifications and requirements of Irish Water. The subject development's potable water supply network has been designed to be connected into that of the adjacent permitted development (planning refs. 10/174 and 19/336) to the west, which is currently under construction.

The proposed watermain infrastructure and routing plan is shown on CS Consulting drawing **ARDEE-CSC-00-XX-DR-C-1003 Watermain Layout**, included with this submission.

### 5.3 Irish Water Confirmation of Feasibility and Statement of Design Acceptance

A Pre-Connection Enquiry has been submitted to Irish Water for a 300-unit residential development at the subject site and a Confirmation of Feasibility (CoF) has been received from Irish Water in response. The CoF is enclosed with this planning application submission as part of **Appendix D** to this report.

The CoF confirms that the proposed connection to the Irish Water network can be facilitated at this moment in time. We acknowledge the CoF contents, and we note the following in relation to potable water supply:

- Water – Connection is feasible, and we acknowledge that the exact connection location and requirements are to be agreed at connection application stage.

In addition to the above we have received a Statement of Design Acceptance from Irish Water on the proposed scheme (please see **Appendix D**).

## 6.0 COMMENTS RECEIVED FROM PLANNING AUTHORITIES

Both An Bord Pleanála and Louth County Council have reviewed the planning documentation submitted in respect of the proposed development during the pre-application consultation phase of the SHD process (including a previous version of the present Engineering Services Report). A tripartite pre-application consultation meeting has also been held with An Bord Pleanála and Louth County Council.

The relevant opinions of An Bord Pleanála that pertain to water and drainage matters, as communicated to the applicant, are reproduced below; also examined in this section are the relevant recommendations of Louth County Council, which were issued to An Bord Pleanála. In each case, we describe measures taken by the design team in response to these opinions and recommendations.

### 6.1 Opinion Issued by An Bord Pleanála

An Bord Pleanála has on the 11<sup>th</sup> of December 2020 issued an opinion enumerating the items of specific information that should be submitted with any application for permission. The following items among these are of relevance to this Engineering Services Report:

5. “*Further consideration / amendment of the design of the storm water management proposals having regard the existing high potential for flood risk to residential properties downstream of the site. Further consideration of the concerns raised in the report of the planning authority's Infrastructure Directorate dated 21<sup>st</sup> October, 2020. A site specific Flood Risk Assessment should be submitted.*”
6. “*Further consideration / amendment of the layout of the linear park having regard to Inland Fisheries Ireland: ‘Planning for Watercourses in the Urban Environment: A Guide to the Protection of Watercourses*

through the use of Buffer Zones, Sustainable Drainage Systems, Instream Rehabilitation, Climate / Flood Risk and Recreational Planning'."

7. Address issues raised in the report of Irish Water to An Bord Pleanála dated 15th October, 2020.

#### 6.1.1 Response to ABP Opinion Items 5+6

A standalone Flood Risk Assessment study has been conducted by JBA Consulting in respect of the subject development, and is submitted under separate cover as part of this planning application. Refer to this document in response to this opinion raised.

#### Response to ABP Opinion Item 7

The applicant acknowledges the commentary on the upgrades required. CS Consulting have been in contact with IW up to the 12.05.2022 on this issue. We state that as confirmed by Irish Water, the upgrades do not require 3rd-party permission and it will be under the remit and control of Irish Water to implement the upgrade works through the applicant's connection application process post planning grant, hence this CoF does not preclude lodgement of the present SHD planning application to An Bord Pleanála and does not preclude the upgrade works to be carried out on the public network and can be facilitated at connection application stage. In addition to the above we have received a Statement of Design Acceptance from Irish Water on the proposed scheme (please see Appendix D).

#### 6.2 **Recommendations of Louth County Council**

Louth County Council on the 23<sup>rd</sup> of October 2020 issued an opinion, informed by the internal report of its Infrastructure Section, requesting that further clarification or consideration be given to a number of drainage and flood risk aspects of the subject development. These are addressed below.

---

#### 6.2.1 LCC Point 7(a) – storm water management

*"Louth County Council consider that the proposed development and Storm Water Management proposal is premature pending an upgrade of the existing inadequate storm water drainage network in this area. On completion of a detailed design to upgrade the existing drainage infrastructure, a funding application will be made to the OPW. Please note that Louth County Council has grave concerns that the existing high flood risk to residential properties downstream of the subject site will be exacerbated on implementation of the applicant's proposal to discharge storm water at a controlled rate, from the developed site into the Rathgorey River via the Rathgorey Tributary. As recently as November 2019, the Rathgorey River burst its banks upstream from where it is culverted under the National Road, N2, causing road flooding and threatening properties within the neighbouring Cherrybrook Housing Estate. Furthermore, in December 2015, the bottom floor of the Riverside Apartment Block was inundated with flood waters, emanating from a constriction within the drainage channel along Stoney Lane."*

#### 6.2.2 Response to LCC Point 7(a)

The project team has engaged with Louth County Council in preparation for lodgment of this planning application and following the tripartite meeting with An Bord Pleanála. During September 2021 Louth County Council contacted the project team to note that under a series of surveys undertaken in preparation for the Ardee Flood Relief Scheme, culvert no. 7 located west and downstream and outside the subject site was observed to be a certain diameter with some pipe sections offset and out of line requiring some improvement works.

The culvert is located on third party lands not under control of the applicant.

The applicant engaged with LCC on this item to determine how this issue would be most effectively addressed and suggested undertaking like for like reparative works to realign the culvert to negate any increase in downstream flood risk, subject to relevant landowner consents. Any further alteration works to culvert no. 7 could impact lands downstream of culvert no. 7 and should not be carried out in isolation of the Ardee Flood Relief Works. The project team further demonstrated to LCC that the drainage strategy at the subject site contributes to an improved situation at the watercourse in terms of a reduction to the peak flow in reaching the channel. It is highlighted that the subject culvert is located on third party lands, it is subject to an ongoing OPW/Louth CC Flood Relief Scheme and is an OPW Arterial Drainage channel. It is considered that any such works should ultimately be the responsibility of the competent authority and should form part of the Ardee Flood Relief Scheme in due course.

The Flood Report completed by JBA consulting on a separate cover lodged as part of the application demonstrates that the peak stormwater flow reaching culvert no. 7 will be reduced as a result of the development works proposed and not increased. LCC noted “grave concerns that the existing high flood risk to residential properties downstream of the subject site will be exacerbated on implementation of the applicant's proposal to discharge storm water at a controlled rate, from the developed site into the Rathgorey River via the Rathgorey Tributary”. The Site-Specific Flood Risk Assessment prepared by JBA Consulting demonstrates that this will not be the case and, accordingly, the development is not “premature pending

---

*an upgrade of the existing inadequate storm water drainage network in this area".*

It is respectfully considered that the development should not be linked to completion of the flood relief works or other stormwater improvement works in the area, as the development in itself will provide a reduction of the peak flow of water reaching culvert no.7 and downstream areas of the town.

#### **6.2.3 LCC Point 7(b) – further flood risk assessment**

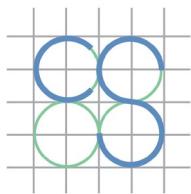

*"Undertake further assessment of flood risk to the site. Hydraulic modelling of the channel diversion, taking cognisance of the proposed culverts to facilitate vehicular and pedestrian access will be required. Consents from OPW are needed prior to implementation of these proposals. The areas of the subject site are identified and mapped as benefitting lands in the submitted preliminary Flood Risk Assessment need to be addressed within a detailed Flood Risk Assessment."*

#### **6.2.4 Response to LCC Point 7(b)**

A standalone Flood Risk Assessment study has been conducted by JBA Consulting in respect of the subject development and is submitted under separate cover as part of this planning application. Refer to this document in response to this opinion raised.

#### **6.2.5 LCC Point 8(d) – flood paths traversing site boundary**

*"Submitted drawings illustrates Road 3 having a direct link with an existing road within the adjacent Cherrybrook development and the overland flood Route map shows flood paths traversing the site boundary. Please note that the roads pertaining to Cherrybrook are within the ownership of a private entity and as such consent is required in this regard."*

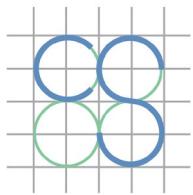

CS CONSULTING  
GROUP

---

#### 6.2.6 Response to LCC Point 8(d)

The proposed scheme overland flood route will not transverse the Cherrybrook development site boundary. Refer to drawing **ARDEE-CSC-00-XX-DR-C-1017 Overland Flood Route.**

CS CONSULTING  
GROUP

### STORM SEWER DESIGN by the Modified Rational Method

#### Design Criteria for Storm

Pipe Sizes STANDARD Manhole Sizes STANDARD

FSR Rainfall Model - Scotland and Ireland

Return Period (years)	5	Add Flow / Climate Change (%)	0
M5-60 (mm)	16.500	Minimum Backdrop Height (m)	0.000
Ratio R	0.300	Maximum Backdrop Height (m)	0.000
Maximum Rainfall (mm/hr)	50	Min Design Depth for Optimisation (m)	1.200
Foul Sewage (l/s/ha)	0.00	Min Vel for Auto Design only (m/s)	1.00
Volumetric Runoff Coeff.	0.750	Min Slope for Optimisation (1:X)	500
PIMP (%)	100		

Designed with Level Inverts

### STORM SEWER DESIGN by the Modified Rational Method

#### Design Criteria for Storm

Pipe Sizes STANDARD Manhole Sizes STANDARD

FSR Rainfall Model - Scotland and Ireland

Return Period (years)	5	Add Flow / Climate Change (%)	0
M5-60 (mm)	16.500	Minimum Backdrop Height (m)	0.000
Ratio R	0.300	Maximum Backdrop Height (m)	0.000
Maximum Rainfall (mm/hr)	50	Min Design Depth for Optimisation (m)	1.200
Foul Sewage (l/s/ha)	0.00	Min Vel for Auto Design only (m/s)	1.00
Volumetric Runoff Coeff.	0.750	Min Slope for Optimisation (1:X)	500
PIMP (%)	100		

Designed with Level Inverts

**Re: CDS20003735 pre-connection enquiry - Subject to contract | Contract denied**

**Connection for Housing Development of 300 unit(s) at Lands at Rathgory, Mulladrillen Ardee, Louth**

Dear Sir/Madam,

Irish Water has reviewed your pre-connection enquiry in relation to a Water & Wastewater connection at Lands at Rathgory, Mulladrillen Ardee, Louth (the **Premises**). Based upon the details you have provided with your pre-connection enquiry and on our desk top analysis of the capacity currently available in the Irish Water network(s) as assessed by Irish Water, we wish to advise you that your proposed connection to the Irish Water network(s) can be facilitated at this moment in time.

<b>SERVICE</b>	<b>OUTCOME OF PRE-CONNECTION ENQUIRY</b>
	<b><u>THIS IS NOT A CONNECTION OFFER. YOU MUST APPLY FOR A CONNECTION(S) TO THE IRISH WATER NETWORK(S) IF YOU WISH TO PROCEED.</u></b>
Water Connection	Feasible without infrastructure upgrade by Irish Water
Wastewater Connection	Feasible Subject to upgrades
<b>SITE SPECIFIC COMMENTS</b>	
Water Connection	Feasible. Exact location and requirements to be agreed at connection application stage.
Wastewater Connection	The existing wastewater network will require upgrades to cater for the additional proposed load. The upgrade will involve upsizing of between 300 and 1000 meters of existing 225mm sewer along the public road. It is not expected that 3 <sup>rd</sup> party permissions will be required outside the requirements for a road opening licence. The exact details of this upgrade can be agreed at connection application stage.

The design and construction of the Water & Wastewater pipes and related infrastructure to be installed in this development shall comply with the Irish Water Connections and Developer Services Standard Details and Codes of Practice that are available on the Irish Water website. Irish Water reserves the right to supplement these requirements with Codes of Practice and these will be issued with the connection agreement.

**The map included below outlines the current Irish Water infrastructure adjacent to your site:**

Reproduced from the Ordnance Survey of Ireland by Permission of the Government. License No. 3-3-34

Whilst every care has been taken in its compilation Irish Water gives this information as to the position of its underground network as a general guide only on the strict understanding that it is based on the best available information provided by each Local Authority in Ireland to Irish Water. Irish Water can assume no responsibility for and give no guarantees, undertakings or warranties concerning the accuracy, completeness or up to date nature of the information provided and does not accept any liability whatsoever arising from any errors or omissions. This information should not be relied upon in the event of excavations or any other works being carried out in the vicinity of the Irish Water underground network. The onus is on the parties carrying out excavations or any other works to ensure the exact location of the Irish Water underground network is identified prior to excavations or any other works being carried out. Service connection pipes are not generally shown but their presence should be anticipated.

#### **General Notes:**

- 1) The initial assessment referred to above is carried out taking into account water demand and wastewater discharge volumes and infrastructure details on the date of the assessment. **The availability of capacity may change at any date after this assessment.**
- 2) This feedback does not constitute a contract in whole or in part to provide a connection to any Irish Water infrastructure. All feasibility assessments are subject to the constraints of the Irish Water Capital Investment Plan.
- 3) The feedback provided is subject to a Connection Agreement/contract being signed at a later date.
- 4) A Connection Agreement will be required to commencing the connection works associated with the enquiry this can be applied for at <https://www.water.ie/connections/get-connected/>
- 5) A Connection Agreement cannot be issued until all statutory approvals are successfully in place.
- 6) Irish Water Connection Policy/ Charges can be found at  
<https://www.water.ie/connections/information/connection-charges/>
- 7) Please note the Confirmation of Feasibility does not extend to your fire flow requirements.
- 8) Irish Water is not responsible for the management or disposal of storm water or ground waters. You are advised to contact the relevant Local Authority to discuss the management or disposal of proposed storm water or ground water discharges
- 9) To access Irish Water Maps email [datarequests@water.ie](mailto:datarequests@water.ie)
- 10) All works to the Irish Water infrastructure, including works in the Public Space, shall have to be carried out by Irish Water.

If you have any further questions, please contact Jonathon Edgeworth from the design team on 01-8925808 or email [joedgeworth@water.ie](mailto:joedgeworth@water.ie) For further information, visit [www.water.ie/connections](https://www.water.ie/connections).

Yours sincerely,

**Maria O'Dwyer**

**Re: Design Submission for Lands at Rathgory, Mulladrillen Ardee, Louth (the  
“Development”)  
(the “Design Submission”) / Connection Reference No: CDS20003735**

Dear Ciaran Shields,

Many thanks for your recent Design Submission.

We have reviewed your proposal for the connection(s) at the Development. Based on the information provided, which included the documents outlined in Appendix A to this letter, Irish Water has no objection to your proposals.

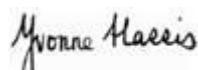

This letter does not constitute an offer, in whole or in part, to provide a connection to any Irish Water infrastructure. Before you can connect to our network you must sign a connection agreement with Irish Water. This can be applied for by completing the connection application form at [www.water.ie/connections](http://www.water.ie/connections). Irish Water's current charges for water and wastewater connections are set out in the Water Charges Plan as approved by the Commission for Regulation of Utilities (CRU) ([https://www.cru.ie/document\\_group/irish-waters-water-charges-plan-2018/](https://www.cru.ie/document_group/irish-waters-water-charges-plan-2018/)).

You the Customer (including any designers/contractors or other related parties appointed by you) is entirely responsible for the design and construction of all water and/or wastewater infrastructure within the Development which is necessary to facilitate connection(s) from the boundary of the Development to Irish Water's network(s) (the “**Self-Lay Works**”), as reflected in your Design Submission. Acceptance of the Design Submission by Irish Water does not, in any way, render Irish Water liable for any elements of the design and/or construction of the Self-Lay Works.

If you have any further questions, please contact your Irish Water representative:

Name: Dario Alvarez  
Email: [dalvarez@water.ie](mailto:dalvarez@water.ie)

Yours sincerely,

**Yvonne Harris**  
**Head of Customer Operations**

Is cuideachta ghníomhaíochta ainmnithe atá faoi theorainn scaireanna é Uisce Éireann / Irish Water is a designated activity company, limited by shares.

Uimhir Chláraithe in Éirinn / Registered in Ireland No.: 530363

## **Appendix A**

### **Document Title & Revision**

- [ARDEE-CSC-00-XX-DR-C-1002 Proposed Drainage Layout]
- [ARDEE-CSC-00-XX-DR-C-1003 Proposed Watermain Layout]
- [ARDEE-CSC-00-XX-DR-C-1021 Foul Longitudinal Sections Sheet 1 of 2]
- [ARDEE-CSC-00-XX-DR-C-1021 Foul Longitudinal Sections Sheet 2 of 2]

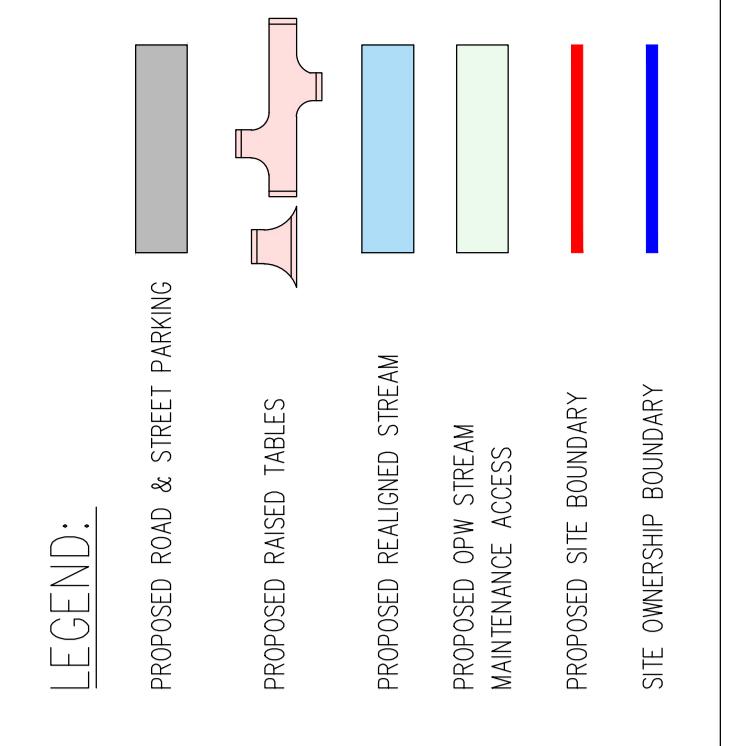

### **Standard Details/Code of Practice Exemption:**

Foul Sewer line FMH1 to FMH7 serving less than 20 units will be laid at 1:200, as future lands to the south will be discharging here, and due to topography of those lands, manhole will need to be located deep.

*For further information, visit [www.water.ie/connections](http://www.water.ie/connections)*

*Notwithstanding any matters listed above, the Customer (including any appointed designers/contractors, etc.) is entirely responsible for the design and construction of the Self-Lay Works. Acceptance of the Design Submission by Irish Water will not, in any way, render Irish Water liable for any elements of the design and/or construction of the Self-Lay Works.*

NOTE:

- ALL PIPE WORK, VALVES, CHAMBERS, NETWORK ARRANGEMENTS AND ALL ASSOCIATED WATERMAIN WORKS TO COMPLY WITH THE IRISH WATER INFRASTRUCTURE STANDARD DETAILS.
- ALL NEW WATERMAIN MATERIAL SHALL BE IN ACCORDANCE WITH SECTION 3.9 OF THE IRISH WATER CODE OF PRACTICE. MDPE PIPES SHALL BE OF A TYPE PE-80 AND HAVE AN SDR-11 RATING, THEY SHALL CONFORM TO IS EN 1220: PART 1, PART 2 AND PART 3.
- THE PROPOSED WATERMAINS WILL BE LOCATED A MINIMUM OF 300mm FROM THE WASTEWATER INFRASTRUCTURE IN ACCORDANCE WITH SECTION 3.5.18 OF THE IRISH WATER WASTEWATER CODE OF PRACTICE AND TYPICAL SERVICE LAYOUT DISTANCES (HORIZONTAL AND VERTICAL) SHALL BE AS PER IRISH WATER STANDARD DETAIL STD-W-11.
- AIR PRESSURE TESTS TO ALL WORKS TO BE TAKEN IN CHARGE TO IRISH WATER CODE OF PRACTICE SECTION 4.10.
- BULK METERS SHALL COMPLY WITH SECTION 3.15.4 OF THE IRISH WATERS CODE OF PRACTICE FOR WATER INFRASTRUCTURE.
- WATERMAIN T-JUNCTIONS SHALL BE AT 90 DEGREE ANGLES AS PER IRISH WATER DETAIL STD-W-07.
- THRUST BLOCKS TO BE PROVIDED AT DEAD ENDS, BENDS, TEE JUNCTIONS, VALVE CHAMBERS (AS PER DETAILS) OR ANY ABRUPT CHANGE IN VERTICAL OR HORIZONTAL DIRECTION AND AT ANY LOCATION WHERE WATER PRESSURE IS LIKELY TO DISTORT THE PIPE LINE INSTALLATION OR CAUSE DISPROPORTIONATE MOVEMENT. THRUST BLOCKS TO BE IN ACCORDANCE WITH SECTION 4.9 OF THE IRISH WATER CODE OF PRACTICE AND IRISH WATER STANDARD DETAIL STD-W-28.
- ANY NEW PLANTING OF TREES, SHRUBS ETC. TO BE IN STRICT ACCORDANCE WITH THE IRISH WATER STANDARD DETAIL STD-W-12A. ANY PROPOSED WATERMAIN LOCATED IN PROXIMITY TO EXISTING TREES SHALL BE IN ACCORDANCE WITH STANDARD IRISH WATER DETAIL STD-W-12.
- SCOUR VALVE TO BE LOCATED AT SITE LOW POINT. THE SCOUR CHAMBER IS TO BE PROVIDED WITH A NON-RETURN VALVE TO PREVENT BACK FLOW TO THE WATER SUPPLY NETWORK AND AGREED WITH THE LOCAL AUTHORITY. SCOUR VALVE AND CHAMBER TO COMPLY WITH SECTION 3.16.4 AND 3.21 OF THE IRISH WATER CODE OF PRACTICE.
- NOTE: THE FIRE SAFETY CERTIFICATE HAS NOT BEEN COMPLETED YET, BUT AS PART OF THIS DEVELOPMENT, IT IS CONFIRMED THAT HYDRANTS SHALL NOT BE LOCATED ANY MORE THAN 46m FROM ANY PART OF THE DEVELOPMENT UNITS.
- INDICATOR AND MARKER POSTS TO BE PROVIDED AT ALL CHAMBERS AS PER SECTION 3.23 OF THE IRISH WATER CODE OF PRACTICE FOR WATER
