Executive Summary

In response to the opinion of the Board and relevant local and national policy, this report presents a comprehensive daylight and sunlight assessment. This assessment examines the performance of the proposed development and the impact of the proposed development on the surrounding environment. This includes the permitted development to the south east (ABP reference 309059-20 - the Ford site) and the adjacent future school site to south west.

In doing so, the analysis within the report is split into two distinct sections:

- The impact of the proposed development on the surrounding environment.
- The performance of the proposed development.

When considering the results presented in the body of this report, the following observations can be made:

- The proposed development will have a negligible impact on the permitted development to the south east (ABP reference 309059-20 - the Ford site).
- There will be good daylight and sunlight availability at the future proposed school site to the southwest after the proposed development is constructed.
- The final analysis for the performance of the proposed development included ADF in every relevant room (~2,300 rooms), NSL in every relevant room (~2,300 rooms), PASH and PWSH at every South facing window (1,262 points) and Sun Hours On Ground for all external amenity spaces (9 spaces).
- Eight of the nine proposed amenity spaces will be greater than the BR 209 target for direct sunlight (SHOG).
- 92% of the south facing windows meet or exceed the BR 209 recommended target of 25% for annual sunlight (PASH).
- 97% of the south facing windows meet or exceed the BR 209 recommended target of 5% for winter sunlight (PWSH).
- 91% of rooms meet the target for No Sky Line (NSL).
- When combined kitchen and living rooms are benchmarked against 1.5% ADF, 89% of relevant rooms within the development meet the relevant BR 209 / BS 8206-2 targets.
- When combined kitchen and living rooms are benchmarked against 2.0% ADF, 84% of the relevant rooms within the development meet the relevant BR 209 / BS 8206-2 targets.

In summary, the proposed development could be said to:

- Have a negligible impact on the levels of daylight and sunlight availability in the permitted development to the south east and ensure that good daylight and sunlighting is possible at the future school site to the west.

- Produce an environment that allows for sunlight penetration into the created amenity spaces and the south facing apartment windows, in addition to producing appropriate levels of daylight within the apartments themselves.

1 Introduction and Background

This report considers the performance of the proposed City Park Development at the Former Tedcastles Site when daylight and sunlight availability is examined. It also considers the impact of the scheme on the surrounding environment. This includes the permitted development to the south east (ABP reference 309059-20 - the Ford site) and the future school site to the southwest.

The report is split into two distinct sections:

- The impact of the proposed development on the surrounding environment.
- The performance of the proposed development.

1.1 Relevant Policy

The Urban Development and Building Height Guidelines for Planning Authorities (2018) and Sustainable Urban Housing: Design Standards for New Apartments (December 2020) both reference daylight. The relevant sections are copied below for clarity.

1.2 Urban Development and Building Height Guidelines for Planning Authorities (2018)

The form, massing and height of proposed developments should be carefully modulated so as to maximise access to natural daylight, ventilation and views and minimise overshadowing and loss of light.

Appropriate and reasonable regard should be taken of quantitative performance approaches to daylight provision outlined in guides like the Building Research Establishment's 'Site Layout Planning for Daylight and Sunlight' (2nd edition) or BS 8206-2: 2008 – 'Lighting for Buildings – Part 2: Code of Practice for Daylighting'.

Where a proposal may not be able to fully meet all the requirements of the daylight provisions above, this must be clearly identified and a rationale for any alternative, compensatory design solutions must be set out, in respect of which the planning authority or An Bord Pleanála should apply their discretion, having regard to local factors including specific site constraints and the balancing of that assessment against the desirability of achieving wider planning objectives. Such objectives might include securing comprehensive urban regeneration and or an effective urban design and streetscape solution.

1.3 Sustainable Urban Housing: Design Standards for New Apartments (December 2020)

The provision of acceptable levels of natural light in new apartment developments is an important planning consideration as it contributes to the liveability and amenity enjoyed by apartment residents. In assessing

development proposals, planning authorities must however weigh up the overall quality of the design and layout of the scheme and the measures proposed to maximise daylight provision with the location of the site and the need to ensure an appropriate scale of urban residential development.

Planning authorities should have regard to quantitative performance approaches to daylight provision outlined in guides like the BRE guide ‘Site Layout Planning for Daylight and Sunlight’ (2nd edition) or BS 8206-2: 2008 – ‘Lighting for Buildings – Part 2: Code of Practice for Daylighting’ when undertaken by development proposers which offer the capability to satisfy minimum standards of daylight provision.

Where an applicant cannot fully meet all of the requirements of the daylight provisions above, this must be clearly identified and a rationale for any alternative, compensatory design solutions must be set out, which planning authorities should apply their discretion in accepting taking account of its assessment of specific. This may arise due to a design constraints associated with the site or location and the balancing of that assessment against the desirability of achieving wider planning objectives. Such objectives might include securing comprehensive urban regeneration and or an effective urban design and streetscape solution.

1.4 Opinion of the Board

The opinion of the Board stated:

The application should include a comprehensive daylight and sunlight assessment examining the proposed dwelling units and amenity / open spaces, as well as potential impacts on daylight and sunlight to adjoining properties, including permitted development to the east and the adjoining zoned school site. This assessment should consider the relationship between the proposed development and future development on the wider masterplan lands.

In preparing such assessment regard should be had to the provisions of section 3.2 of the Urban Development and Building Heights Guidelines for Planning Authorities (2018) and to the approach outlined in guides like the BRE ‘Site Layout Planning for Daylight and Sunlight’ (2nd edition) or BS 8206-2: 2008 – ‘Lighting for Buildings – Part 2: Code of Practice for Daylighting’.

The assessment should provide a comprehensive view of the performance of the entire development in respect of daylight provision. Where any alternative, compensatory design solutions in respect of daylight are proposed, these should be clearly identified and justified, and their effect appropriately described and / or quantified.

1.5 Standards and Guidance

From the relevant policies and correlating with the opinion received from the Board, there are two documents that require consideration. These are:

- BR 209 (2011) – Site Layout Planning for Daylight and Sunlight, A Guide to Good Practice (Second Edition) and;
- BS 8206-2:2008 – Lighting for Buildings, Part 2: Code of Practice for Daylighting

As such, both of the above guidance documents / standards have been used in the assessments presented within this report.

2 Methodology

The methodology applied in this report follows that outlined within BR 209 (2011) and BS 8206-2 : 2008. It is split across two distinct parts:

- The first examines how the proposed development will impact the adjoining sites.
- The second investigates the performance of the proposed development itself.

When assessing the daylight and sunlight availability for each of the above, the metrics described below are applied.

We note that BS 8206 has been superseded by BS EN 17037, but we also note that Annex F within this document recommends similar values but through definitive illuminance recommendations. We also note that, in the main, the application of BS 8206-2 : 2008 remains acceptable in recent decisions by both An Bord Pleanála and during judicial reviews.

An example during judicial review is the 2021 Atlantic Diamond case, where the methods used followed BS 8206-2 : 2008 only. The paragraph below is quoted from the ruling of this case (point 34).

British Standard BS 8206-2 Code of Practice for Daylighting, 2008 is the other standard referred to in the Building Height Guidelines. I am informed that that has since been revoked and replaced by BS EN 17037:2018, but that these two documents appear to be in similar terms for present purposes.

A recent permission through the strategic housing process using BS 8206-2 : 2008 is ABP-310860-21 Holy Cross College, Clonliffe Road, Dublin 3.

2.1 Availability of Daylight

2.1.1 Vertical Sky Component

Vertical Sky Component (VSC) gives a measure of daylight received on the outside of a window. The following is stated within BR 209:

In general, a building will retain potential for good interior diffuse daylighting provided that on all its main faces:

No obstruction, measured in a vertical section perpendicular to the main face, from a point 2m above the ground level, subtends an angle of more than 25° to the horizontal;

or

if the above is not satisfied, then all points have a vertical sky component of 27% or more

BR 209 continues that, for existing properties, a VSC of 27% or, where this is not achieved, a figure that is 80% of the existing condition, is acceptable. When using the VSC to assess the impact of a proposed development on existing

surrounding properties, appendix F in BR 209 offers the designer a clear methodology to set alternate target values for VSC that differ from 27% as standard.

2.1.2 No Sky Line

The No Sky Line (NSL) is an outline on the working plane of the area from which no sky can be seen. It is a measure of the distribution of diffuse daylight within a space. In setting a target, BR 209 outlines:

If a significant area of the working plane (normally more than 20%) lies beyond the no sky line (i.e. it receives no direct skylight) then the distribution of daylight in the room will look poor and supplementary electric lighting will be required.

2.1.3 Average Daylight Factor

The Average Daylight Factor (ADF) is a measure of the diffuse quantity of daylight within a space. It is defined as the ratio between the quantity of the average diffuse daylight within a space against the diffuse daylight under an unobstructed sky, where that sky is the standard CIE overcast sky.

BR 209 and BS 8206-2 contain an obvious amount of overlap. In determining appropriate ADF targets for various spaces within the scheme, both documents offer the targets below:

- Bedrooms greater than 1% ADF.
- Living Rooms greater than 1.5% ADF.
- Kitchens greater than 2% ADF.

Beyond the above targets, BS 8206-2 offers guidance on ADF targets within combined kitchen and living spaces. The document states the following:

Where one room serves more than one purpose, the minimum average daylight factor should be that for the room type with the highest value. For example, in a space which combines a living room and a kitchen the minimum average daylight factor should be 2%.

However, BR 209 is clear in the concept that the document is not intended to be prescriptive. Clause 1.6 within BR 209 states:

The guide is intended for building designers and their clients, consultants and planning officials. This advice given here is not mandatory and the guide should not be seen as an instrument of planning policy; its aim is to help rather than constrain the designer. Although it gives numerical guidelines, these should be interpreted flexibly since natural light is only one of many factors in site layout design.

Within the Foreword (p.iii) of BS 8206-2, the document offers a parallel sentiment that the values it recommends should be viewed in the context of the wider set of design objectives within the planning process:

The aim of the standard is to give guidance to architects, engineers, builders and others who carry out lighting design. It is recognized that lighting is only one of many matters that influence fenestration. These include other aspects of environmental performance (such as noise, thermal equilibrium and the control of energy use) fire hazards, constructional requirements, the external appearance and the surroundings of the site. The best design for a building does not necessarily incorporate the ideal solution for any individual function. For this reason, careful judgement needs to be exercised when using the criteria given in the standard for other purposes, particularly town planning control.

Rather than make a definitive call on which target is, or is not, appropriate, the report here proposes to benchmark the results across the scheme for combined kitchen and living spaces against both 1.5% and 2%. Doing so results in a set of ADF targets as shown in the table below.

Room Usage	ADF Target
Bedroom	1%
Living Room	1.5%
Combined Kitchen / Dining	Both 1.5% and 2%

The following parameters have been considered for the calculation of ADF:

- Glazing Transmittance: 0.80
- Internal Surface reflectance: Floors 20%, Walls 70%, Ceilings 85%
- Glazing Maintenance Factor: 0.94 (taken from BS 8602-2)

2.2 Availability of Sunlight

2.2.1 Availability of Sunlight in Dwellings

The percentage of probable annual sunlight hours is calculated and presented in terms of total annual values and winter values. Taken from BR 209, a target of 25% of total Probable Annual Sunlight Hours (PASH) and of 5% of total Probable Winter Sunlight Hours (PWSH) has been applied. As stated within BR 209, this target for sunlight hours in dwellings is applied only to windows that face within 90° of due South.

For the assessment, all windows in the proposed development facing due South have been tested for sunlight provision. Windows facing North are not expected to meet a sunlight availability target, hence have not been included in the assessment.

2.2.2 Availability of Sunlight in Amenity Spaces

Within BR 209, recommendations are given as to the quantity of sunlight penetration in amenity areas that is required to produce a well sunlit space throughout the year. This text is given below:

“It is recommended that for it to appear adequately sunlit throughout the year, at least half of a garden or amenity area should receive at least two hours of sunlight on 21 March. If as a result of new development, an existing garden or amenity area does not meet the above, and the area which can receive two hours of sun on 21 March is less than 0.8 times its former value, then the loss of sunlight is likely to be noticeable.”

All the amenity spaces within the proposed site have been tested for sunlight provision.

2.3 Impact of the Proposed Development on the Surrounding Environment

This report presents two scenarios, being:

- The impact of the proposed development on the permitted development to the southeast (ABP reference 309059-20 - the Ford site) and:
- The potential for good daylight and sunlight availability at the adjoining zoned school site to the west.

2.3.1 Impact of the Proposed Development on the Permitted Development to the East (ABP reference 309059-20 - the Ford site)

The following massing models have been considered in the assessment of daylight and sunlight availability at the adjacent permitted development:

- **The Baseline Condition:** This configuration is the existing site condition before any proposed development works begin. The mirror building method described within section 2.3 of BR 209 has been used to set the baseline condition and determine targets in accordance with this.
- **The Proposed Condition:** This configuration is the proposal offered within the relevant planning documentation.

These models and their comparative masses are used to demonstrate the difference in daylight and sunlight performance in surrounding areas between the Baseline Condition and the Proposed Condition.

In line with BR 209 (2.3 *Adjoining Development Land*), the benchmark for the daylight and sunlight assessment has been set using a “mirror image building” criterion. A mirrored image building has been copied across the site boundary, considering the same distance and geometry of the existing mass, and has been taken as baseline model for the simulations.

The following metrics have been used to assess the effects of the proposed development on the surrounding environment:

- Vertical Sky Component (VSC)
- Probable Annual Sunlight Hours (PASH)

- Probable Winter Sunlight Hours (PWSH)

In the adjacent permitted development, there are no defined amenity spaces that fall within the 25° rule outlined in BR 209. As such, no testing for these amenity spaces is required.

In simulating the impact on the adjacent facades, many points were applied at a spacing of 5m on each facade. The selection of points to be tested was completed in accordance with the guidance in BR 209:

“One approach is to calculate the VSC at a series of points on each main face of the building 1.6m above the ground (or lowest storey base) and no more than 5m apart.”

2.3.2 Impact of the Proposed Development on the Future School Site to the Southwest

The opinion of the board notes that the lands to the southwest that are zoned for school use in the future be included in the daylight and sunlight assessment.

In determining the potential for future daylight and sunlight availability at this site once the proposed development is constructed, the 25° rule from section 2.3 of BR 209 has been applied.

2.3.3 Classification of Reduction

Appendix I in BR 209 outlines four categories of impact when conducting environmental impact assessments. These are:

- Negligible
- Minor Adverse
- Moderate Adverse
- Major Adverse

Alongside these classifications, BR 209 gives outline descriptions of how each should be applied:

“Where the loss of skylight or sunlight fully meets the guidelines in this book, the impact is assessed as negligible or minor adverse. Where the loss of light is well within the guidelines, or only a small number of windows or limited area of open space lose light (within the guidelines), a classification of negligible impact is more appropriate. Where the loss of light is only just within the guidelines, and a larger number of windows or open space are affected, a minor adverse impact would be more appropriate, especially if there is a particularly strong requirement for daylight and sunlight in the affected building or open space.

Where the loss of skylight or sunlight does not meet the guidelines in this book, the impact is assessed as minor, moderate or major adverse. Factors tending toward a minor adverse impact include:

- *Only a small number of windows or limited area of open space are affected*

- *The loss of light is only marginally outside of the guidelines*
- *An affected room has other sources of skylight or sunlight*
- *The affected building or open space has only a low level requirement for skylight or sunlight*
- *There are particular reasons why an alternative, less stringent, guideline should be applied (see appendix F).*

Factors tendering towards a major adverse impact include:

- *A large number of windows or large area of open space are affected*
- *The loss of light is substantially outside of the guidelines*
- *All the windows in a particular property are affected*
- *The affected indoor or outdoor spaces have a particularly strong requirement for skylight or sunlight, e.g. a living room in a dwelling or a children's playground."*

These classifications, along with their descriptors and characterisations, have been applied in determining the impact of the proposed extension on the surrounding existing properties.

2.4 Performance of the Proposed Development

The performance of the proposed development is assessed using the Proposed Condition massing and architectural arrangements. The metrics below have been used to assess the performance of the proposed development:

- Average Daylight Factor (ADF)
- No Sky Line (NSL)
- Probable Annual Sunlight Hours (PASH)
- Probable Winter Sunlight Hours (PWSH)
- Sun Hours On Ground (SHOG)

Definitions for the above are as described previously. These metrics are calculated for the proposed site layout and massing, with these results then being compared to the targets set out within BR 209 and BS 8206-2.

3 Results

3.1 Impact of the Proposed Development on the Surrounding Environment

The two sections following present a summary of the results for:

- The impact of the proposed development on the permitted development to the south east (ABP reference 309059-20 - the Ford site) and:
- The potential for good daylight and sunlight availability at the adjoining zoned school site/s to the southwest.

3.1.1 Impact of the Proposed Development on the Adjacent Permitted Development (ABP reference 309059-20 - the Ford site)

The following sections summarise the effect of the Proposed Condition, compared with the Baseline Condition. Results are presented for each metric separately.

Full tabulated results for each point are given within the appendix.

3.1.2 Baseline vs. Proposed

3.1.2.1 Vertical Sky Component (VSC)

Of the surrounding points tested:

- 98.5% experienced a condition in excess of 0.8 times their baseline value;
- 1.4% experienced a condition between 0.6 and 0.8 times their baseline value;
- 0.1% experienced a condition below 0.6 times their baseline value.

3.1.2.2 Probable Annual Sunlight Hours (PASH)

100% of the points tested for annual sunlight experienced values in excess of 0.8 times their baseline value.

3.1.2.3 Probable Winter Sunlight Hours (PWSH)

100% of the points tested for annual sunlight experienced values in excess of 0.8 times their baseline value.

3.1.3 Impact of the Proposed Development on the Future School Site to the Southwest

The 25° rule (as outlined in BR 209) was applied to each of the facades of the new school development/s to the west. The graphic below shows the facades and how they relate to the 25° rule and the new development.

All facades, bar one, will be largely unobstructed as a result of the construction of the proposed development. This will include skylight and sunlight at the adjacent facades. The proposed development will not impact on the ability of the future school site to produce a well sunlit amenity space.

Figure 2: Shown in green are facades that are completely unobstructed (i.e. vectors as a result of the 25° rule will not intersect the proposed development). Shown in yellow are facades that are partially obstructed (i.e. where vectors as a result of the 25° rule intersect the façade in some capacity). The proposed development does little to obstruct direct sunlight the amenity space.

3.2 Performance of the Proposed Development

The final analysis completed for this submission examined the following:

- ADF in every relevant room (~2,300 rooms)
- NSL in every relevant room (~2,300 rooms)
- PASH and PWSH at every South facing window (1,262 points).
- Sun Hours On Ground for all external amenity spaces (9 spaces).

3.2.1 No Sky Line

91% of relevant rooms in the development meet the requirement for No Sky Line set in BR 209.

3.2.2 Average Daylight Factor (ADF)

Every relevant room in the proposed development (kitchens, living rooms and bedrooms) was tested. This amounted to a sample in the region of 2,300 rooms.

From the analysis completed, the following results can be drawn:

- When combined kitchen and living rooms are benchmarked against 1.5% ADF, 89% of the rooms tested within the development meet the relevant BR 209 / BS 8206-2 targets.
- When combined kitchen and living rooms are benchmarked against 2.0% ADF, 84% of the rooms tested within the development meet the relevant BR 209 / BS 8206-2 targets.

3.2.3 Probable Annual Sunlight Hours (PASH)

Of the points tested on the proposed development for PASH, 92% of these met the BR 209 recommended target of 25%.

3.2.4 Probable Winter Sunlight Hours (PWSH)

Of the points tested on the proposed development for PWSH, 97% of these met the BR 209 recommended target of 5%.

3.2.5 Sunhours on Ground (SHOG)

All proposed amenity areas have been tested for sunlight provision. Eight out of nine amenity areas meet the BR 209 recommendation. A reference plan and associated results are given within the appendix.

4 Commentary on Results

4.1 Impact of the Proposed Development on the Surrounding Environment

The impact of the proposed development on the surrounding environment is discussed in two sections. These respond to the opinion of the Board and include how the proposed development will impact the permitted development to the south east and the future school site to the southwest.

4.1.1 Impact of the Proposed Development on the Permitted Buildings to the East

When examining the results given within the appendix and the summaries outlined in the results section of this report, it can be stated that the proposed development will have a negligible impact on levels of daylight and sunlight availability in the permitted development to the south east (ABP reference 309059-20 - the Ford site).

4.1.2 Impact of the Proposed Development on the Future School Site to the Southwest

When apply the 25° rule to the facades of the future school outline, it can be stated that the site will retain potential for good daylight and sunlight once the proposed development is constructed.

4.2 Performance of the Proposed Development

4.2.1 Sunlight Availability

The proposed scheme allows for almost all of the external amenity areas to receive adequate levels of sunlight across the year, exceeding the target outlined in BR 209. All amenity spaces, excluding one, are well sunlit.

Beyond the sunlight available at windows within the proposed development, some units also contain a balcony. Each of these balconies will receive direct sunlight (both PASH and PWSH) that is in excess of the results reported here, as these results are measured at the window and include the obstruction caused by the balcony itself.

4.2.2 Daylight Availability

Whilst the design development process paid due attention to the skylight availability on the exterior facades of the proposed blocks, there will inevitably be lower levels of skylight available when obstructions are more prominent – i.e. below balconies, at the lower levels or at buildings corners.

When benchmarking these results against the expectations of the reader, we would like to note the following:

- The overall percentage of units that either meet or do not meet the offered ADF targets is only one factor within a wider series of planning objectives.
- The figures for ADF given are:
 - 89% of rooms tested pass when combined kitchen and living rooms are benchmarked vs 1.5% and;
 - 84% of rooms tested pass when combined kitchen and living rooms benchmarked vs 2%.
- The simulation method for combined kitchen and living spaces considered the full extent of the area within the room. The kitchen portion of the space was not excluded.
- Of the rooms tested, 91% meet the target for NSL.

The reader is also urged to assess the points above in the context of the following items:

- The development delivers ample access to direct sunlight at unit windows.
- The development delivers good access to sunlight in amenity spaces.

4.2.3 Compensatory Design Solutions

Relevant policy outlines “*Where a proposal may not be able to fully meet all the requirements of the daylight provisions above, this must be clearly identified and a rationale for any alternative, compensatory design solutions must be set out...*”.

To address this, the following compensatory measures have been introduced to the design. A summary is given here, while a full description is available in the architecture design statement.

- Maximising the expanse of floor-to-ceiling glazing across the proposed building facades to allow for maximum sunlight penetration while being conscious to allow for buildability of the scheme.
- Where possible residential units have been oversized to provide for additional amenity
- Balcony size and position have been reviewed to mitigate further impact on Average Daylight Factor with balconies offset to the living areas to maximise daylight to the units while maintaining access to the private amenity area. In some instances balconies have been repositioned to allow for access from bedrooms as well as the living areas.
- Internal open plan living arrangements have been designed to maximise daylight penetration and usability of the spaces.
- Where the building layout allows and in compliance with the design principles set out within the architectural dual aspect appendix, residential units benefit from additional glazing.

- Consideration has been given to taller floor to ceiling at lower levels.

4.3 Observations

From reading the above and in conjunction with the full suite of results and analysis given within the appendix, the below observations can be drawn in summary:

- The proposed development will have a negligible impact on the levels of daylight and sunlight availability in the surrounding properties and amenity spaces.
- The proposed development will produce an environment that allows for plentiful sunlight penetration into the amenity spaces and almost all south facing apartment windows, in addition to producing appropriate levels of diffuse daylight within the apartments themselves.

5 Summary

In response to the opinion of the Board and relevant local and national policy, this report presents a comprehensive daylight and sunlight assessment. This assessment examines the performance of the proposed development and the impact of the proposed development on the surrounding environment. This includes the permitted development to the south east (ABP reference 309059-20 - the Ford site) and the adjacent future school site to west.

In doing so, the analysis within the report is split into two distinct sections:

- The impact of the proposed development on the surrounding environment.
- The performance of the proposed development.

When considering the results presented in the body of this report, the following observations can be made:

- The proposed development will have a negligible impact on the permitted development to the south east (ABP reference 309059-20 - the Ford site).
- There will be good daylight and sunlight availability at the future proposed school site to the southwest after the proposed development is constructed.
- The final analysis for the performance of the proposed development included ADF in every relevant room (~2,300 rooms), NSL in every relevant room (~2,300 rooms), PASH and PWSH at every South facing window (1,262 points) and Sun Hours On Ground for all external amenity spaces (9 spaces).
- Eight of the nine proposed amenity spaces will be greater than the BR 209 target for direct sunlight (SHOG).
- 92% of the south facing windows meet or exceed the BR 209 recommended target of 25% for annual sunlight (PASH).
- 97% of the south facing windows meet or exceed the BR 209 recommended target of 5% for winter sunlight (PWSH).
- 91% of rooms meet the target for No Sky Line (NSL).
- When combined kitchen and living rooms are benchmarked against 1.5% ADF, 89% of relevant rooms within the development meet the relevant BR 209 / BS 8206-2 targets.
- When combined kitchen and living rooms are benchmarked against 2.0% ADF, 84% of the relevant rooms within the development meet the relevant BR 209 / BS 8206-2 targets.

In summary, the proposed development could be said to:

- Have a negligible impact on the levels of daylight and sunlight availability in the permitted development to the south east and ensure that good daylight and sunlighting is possible at the future school site to the west.

- Produce an environment that allows for sunlight penetration into the created amenity spaces and the south facing apartment windows, in addition to producing appropriate levels of daylight within the apartments themselves.

A1 Performance of the Proposed Development

A1.1 ADF Results (against 2% target)

The following tables present the results for ADF in the various blocks within the proposed development. This section shows the results benchmarked against an ADF target of 2%.

A1.1.1 Block A – Living, Kitchen and Dining Rooms

Block A			
Grid ref	Room type	ADF	Meet target?
