## EXECUTIVE SUMMARY

Passive Dynamics Sustainability Consultants has prepared this Daylight, Sunlight and Overshadowing report for and on behalf of Kieran Curtin, Receiver over certain assets of Maplewood Developments Unlimited Company (in Liquidation and in receivership) to accompany the strategic housing development application for the proposed residential development on lands at Ballyoulster, Celbridge, Co. Kildare. This assessment makes reference to the prescribed methodologies of the BRE guide and applied the specific daylight / sunlight quantitative performance standards contained therein. The BRE guidance refers to the BRE document 'Site Layout Planning for Sunlight and Daylight: A Guide to Good Practice' (2022) (herein referred to as the "BRE Guide") by P J Littlefair, which is based on the previous British daylighting standard (BS EN 17037). It is recognised that this updated BRE Guidance were published on the 9th June 2022 and update the previous issue of BRE 209 (2011) to reflect that BS 8206-2:2008: Lighting for Buildings - Part 2: Code of practice for daylighting was recently replaced with EN 17037:2018 Daylight in Buildings.

The BRE Guide gives advice on site layout to achieve provision of daylight and sunlight both within buildings, and in the open spaces between them. In general, it aims to aid designers in considering the relationship between new and existing buildings to ensure that each retains the potential to achieve good daylighting and sunlight levels. This authoritative document is widely used to provide guidance during the planning and design stages of building development in the UK and Ireland.

Prior to the new BRE Guides release, the position of BRE could be summarised from a post by Dr. Littlefair on the LinkedIn Planning Daylight & Sunlight Group (BRE BR209):

***"BR209 currently refers to the former British Standard BS 8206 Part 2. For the time being, until BR209 is rewritten, we are adopting a flexible approach to applying the two standards, for example in assessing the daylight and sunlight available in new buildings. So for example if we were reviewing a daylight report for a local authority, we would consider it reasonable to accept either average daylight factor tables calculated using BS8206 or median daylight factors/median illuminances calculated using EN17037, provided they were calculated and presented properly.***

***EN17037 does not deal with loss of daylight or sunlight to existing buildings, so the current BR209 methodology can be used here, until the revised version is published."***

The British implementation of this standard (BS EN 17037) includes a “National Annex” with requirements for dwellings that mean it is comparable with the previous standard (BS8206). In Ireland, there is only IS EN 17037:2018. Unlike the British Standard (BS EN 17037), the Irish implementation does not contain a National Annex. Furthermore, the ‘Sustainable Urban Housing: Design Standards for New Apartments’ (last revised 23 December 2020), the ‘Urban Development and Building Heights Guidelines for Planning Authorities’ (published December 2018) do not specifically mention, address or require compliance with the European Standard (published 12 December 2018) or the Irish implementation (published 28 January 2019). In particular, paragraph 6.6 of the Apartment Guidelines 2020 states: ‘Planning authorities should have regard to quantitative performance approaches to daylight provision outlined in guides like the BRE guide ‘Site Layout Planning for Daylight and Sunlight’ (2nd edition) or BS 8206-2: 2008 – ‘Lighting for Buildings – Part 2: Code of Practice for Daylighting’ when undertaken by development proposers which offer the capability to satisfy minimum standards of daylight provision.’

As a consequence, during this transitional period given the new BRE Guidelines have only very recently been published,, we have carried out a comprehensive daylighting analysis using both standards, providing daylighting results in terms of Average Daylight Factor (based on previous British Standard – BS 8206-2) and Spatial Daylight Autonomy (based on current European Standard – EN 17037) and the National Annex within the British implementation of the European Standard (BS EN 17037). The Sunlight component of this assessment has also been carried out in accordance with both the standards where they differ in methodology.

**It is important that the guidelines that exist in relation to daylight and sunlight are read in the correct context and are not viewed as mandatory requirements. Requirements for daylight should be balanced against other elements of the design such as thermal performance (which is directly impacted by the size, shape and location of glazing) and the risk of overheating due to excessive glazing areas. This approach will ensure an optimal overall solution is reached for the development.**

A summary of the overall Daylight, Sunlight and Overshadowing Assessment for this proposed project is presented below.

## Proposal

Kieran Curtin, Receiver over certain assets of Maplewood Developments Unlimited Company (in liquidation and in receivership), intends to apply for a seven year planning permission for a Strategic Housing Development at lands at Dublin Road and the Shinkeen Road, within the townlands of Donaghcumper and Ballyoulster, Celbridge, Co. Kildare. The application site has an area of c. 13.5 ha and bound by a greenfield site, Donaghcumper Cemetery, Retronix Semiconductor company and the Dublin Road to the north, the Rye River Brewing Company and the Ballyoulster Park housing estate to the north east, the Primrose Gate housing estate to the south, agricultural lands to the east and Shinkeen Road to the west. Donaghcumper Medieval Church Ruins (RPS No. B11-02) and the house on Dublin Road, Donaghcumper (RPS No. B11-26), are protected structures located north of the application site

The proposed development comprises a Strategic Housing Development of 344 no. residential units (comprising 54 no. 1 beds, 30 no. 2 beds, 210 no. 3 beds and 50 no. 4 beds), a childcare facility with a GFA of c. 369 sq.m, public and communal open space, landscaping, car and cycle parking spaces, provision of an access road from Dublin Road and Shinkeen Road, associated vehicular accesses, internal roads, pedestrian and cycle paths, bin storage, pumping station and all associated site and infrastructural works.

The residential component of the development consists 214 no. apartments / duplex units, and 130 no. houses of to be provided as follows:

- 4 no. 3 bed two storey detached houses;
- 28 no. 3 bed two storey semi-detached houses;
- 48 no. 3 bed two storey terraced houses;
- 50 no. 4 bed three storey semi-detached houses;
- 214 no. duplex apartments / apartments (54 no. 1 beds, 30 no. 2 beds, and 130 no. 3 beds) in a series of 15 no. duplex apartment / apartment blocks of 3 no. storeys in height, all duplex apartments / apartment to have a terrace or private garden;

The development includes a total of 585 no. car parking spaces, 4 no. loading bays and a total of 770 no. cycle spaces. The proposal includes hard and soft landscaping, lighting, boundary treatments, the provision of public and communal open space, including 3 no. Local Parks, children's play areas, and an ancillary play area for the childcare facility.

The proposed development includes road upgrades, alterations and improvements to the Dublin Road / R403 and the Shinkeen Road, including the provision of new vehicular accesses and signalised

junctions, pedestrian crossing points, and associated works to facilitate the same. The proposal includes internal roads, cycle paths, footpaths, with proposed infrastructure and access points provided up to the application site boundary to facilitate potential future connections to adjoining lands.

The development includes foul and surface water drainage, pumping station, bin storage, PV panels at roof level, 3 no. ESB Substations and control rooms, services and all associated and ancillary site works and development.

### **Impact of loss of daylight to neighbouring properties**

A simulation was run to quantify any reduction in VSC resulting from the proposed development massing. Where the VSC is greater than 27% reasonable daylighting levels are available according to the BRE Industry standard. Even where the VSC is found to be less than 27% if the reduction comparing the “before and after scenarios” is less than a 20% reduction daylighting is unlikely to be significantly affected / noticed. The daylight assessment methodology for neighbouring properties and their identification is covered in *Section 6* of this report.

The Vertical Sky Component (VSC) Analysis is covered in *Section 7* of this report. A summary of the results are as follows;

The VSC analysis carried out confirms that none of the surrounding properties assessed will experience a noticeable reduction in their vertical sky component result with the inclusion of the proposed development. Each window assessed meets the required VSC criteria as per the recommendation of the BRE Guide.

### Average Daylight Factor within the proposed Apartments/Houses

Average Daylight Factor results are covered in detail in Section 8 of this report. A summary of the results is as follows.

Minimum recommended Average Daylight Factors (ADF) are:

- Bedrooms – 1.00 %
- Living Rooms – 1.50 %
- Kitchens – 2.00 %
- Kitchen/Living/Dining – 2.00 %

Calculated ADF results are as follows:

- **100%** of Bedrooms achieve the BRE recommended ADF of  $\geq 1.00\%$
- **100%** of Living Rooms achieve the BRE recommended ADF of  $\geq 1.50\%$
- **100%** of the Kitchen/Living/Dining achieve the BRE recommended ADF of  $\geq 2.00\%$

The calculated ADF results for each space assessed are presented in *Section 8* and Appendix B of this report.

### Spatial Daylight Autonomy (EN 17037:2018)

In order to comply with the daylighting standard set out in EN 17037, each space assessed must achieve the following:

- 300 Lux over at least 50% of its floor area for over 50% of annual daylit hours, and
- 100 Lux over at least 95% of its floor area for over 50% of annual daylit hours

The results of this spatial daylight autonomy assessment are summarised below and tabulated in detail in Appendix D of this report in accordance with EN 17037.

- **98.1%** of the total number of spaces assessed achieve the annual required illuminance according to EN 17037 (Bedrooms and Kitchen/Living spaces assessed using the EN17037 metric outlined above).

### Spatial Daylight Autonomy using British National Annex Illuminance Targets (BS EN 17037:2018)

The spaces were also assessed for spatial daylight autonomy using the British National Annex illuminance targets shown below. This BS EN standard includes a national annex which provides adjusted illuminance targets for each room type as shown in *Table NA.1 — Values of target illuminance for room*

types in UK dwellings, the minimum target daylight provisions for bedrooms and kitchen/living spaces are:

- Kitchen/Living/Dining – 200 Lux achieved over at least 50% of the reference plane (0.85m)
- Living room – 150 Lux achieved over at least 50% of the reference plane (0.85m)
- Bedrooms – 100 Lux achieved over at least 50% of the reference plane (0.85m)

**Table NA.1 — Values of target illuminance for room types in UK dwellings**

Room type	Target illuminance $E_T$ (lx)
Bedroom	100
Living room	150
Kitchen	200

A summary of the results are as follows;

- **100%** of bedrooms achieve the required annual illuminance according to BS EN 17037 (100 Lux test)
- **100%** of kitchens/living/dining rooms achieve the required annual illuminance according to BS EN 17037 (200 Lux test)
- **100%** of Living rooms achieve the required annual illuminance according to BS EN 17037 (150 Lux test)
- **100%** of the total number of spaces assessed achieve the annual required illuminance according to the National Annex within BS EN 17037.

The results of this spatial daylight autonomy assessment are summarised below and tabulated in detail in Appendix E of this report in accordance with EN 17037.

#### Sunlight availability – proposed living spaces

The BRE guidance document states that rooms will appear reasonably sunlit provided:

- at least one main window wall faces within 90° of due south and
- a habitable room, preferably a main living room, can receive a total of at least 1.5 hours of sunlight on 21 March. This is assessed at the inside centre of the window(s); sunlight received by different windows can be added provided they occur at different times and sunlight hours are not double counted.

Analysis was carried out in line with the current BRE 209 guidance, ensuring that the proposed development receives adequate levels of sunlight and no substantial loss of sunlight is incurred in the

surrounding buildings. For this assessment the medium level of three hours as stated in BRE 209 20022 was targeted. At least one habitable room in each dwelling achieve this target.

The previous BRE guidance document states that rooms will appear reasonably sunlit provided:

- at least one main window wall faces within 90° of due south and
- the centre of at least one window to a main living room can receive 25% of annual probable sunlight hours, including at least 5% of annual probable sunlight hours in the winter months between 21st September and 21st March.

The openings of the proposed building living spaces that face within 90° of due south receive at least 25% of annual probable sunlight hours after the inclusion of the proposed development, in line with BRE guidance.

The openings of the proposed building living spaces that face within 90° of due south achieve at least 5% of probable sunlight hours during winter months after the inclusion of the proposed development, in line with BRE guidance.

This information for each assessment is presented in detail in *Section 9* of this report.

#### **Sunlight availability – surrounding building living spaces**

The BRE guidance document states that rooms will appear reasonably sunlit provided:

- at least one main window wall faces within 90° of due south and
- the centre of at least one window to a main living room can receive 25% of annual probable sunlight hours, including at least 5% of annual probable sunlight hours in the winter months between 21<sup>st</sup> September and 21<sup>st</sup> March.

The openings of the surrounding building living spaces that face within 90° of due south receive at least 25% of annual probable sunlight hours after the inclusion of the proposed development, in line with BRE guidance.

The openings of the surrounding building living spaces that face within 90° of due south achieve at least 5% of probable sunlight hours during winter months after the inclusion of the proposed development, in line with BRE guidance.

This information is presented in detail in *Section 9* of this report.

### Sunlight availability within the amenity space

Sunlight availability results are covered in detail in *Section 9* of this report. The front and back gardens of the proposed houses, along with all communal amenity areas (pocket parks) were assessed for sunlight availability.

BRE Guidelines recommend that for an amenity space to appear adequately sunlit throughout the year, at least half of the amenity space should receive at least two hours of sunlight on the design day, March 21<sup>st</sup>. If a garden or amenity area does not meet the above, then the loss of sunlight is likely to be noticeable.

The analysis confirms that the amenity areas of the proposed development achieve upward of 2 hours of sunlight on the design day (21<sup>st</sup> March) across over 50% of the area, complying with the BRE Guidelines. The majority of the existing surrounding amenity space adjacent to the development faces due north and do not achieve the BRE Guidance in the current scenario. However for a holistic approach these gardens were included. While there are some minor reductions in sunlight in two of the north facing gardens in the proposed scenario, these areas achieve adequate levels of sunlight in the existing scenario regardless of the proposed development. It can also be seen that adequate sunlight levels in any East or West facing amenity spaces have been safeguarded with the proposed development in place as there are no reductions in sunlight levels as per the BRE Guidance.

### Overshadowing Analysis

The overshadowing assessment images for the proposed development can be seen in Appendix A of this document. Any instances of overshadowing are limited to short time periods at the beginning and the end of the day, mainly during winter months. Any minor overshadowing impacts occur within the proposed development itself.

#### **March 21st**

Any minor overshadowing is limited to short time periods at the beginning and the end of the day, mainly during winter months. Any minor overshadowing impacts occur within the proposed development itself.

#### **June 21st**

Any minor overshadowing is limited to short time periods at the beginning and the end of the day, mainly during winter months. Any minor overshadowing impacts occur within the proposed development itself.

#### **December 21st**

Any minor overshadowing is limited to short time periods at the beginning and the end of the day, mainly during winter months. Any minor overshadowing impacts occur within the proposed development itself. Overshadowing assessment imagery is provided in Appendix A of this report.

## 1. INTRODUCTION

Passive Dynamics Sustainability Consultants has prepared this Daylight, Sunlight and Overshadowing report for and on behalf of Kieran Curtin, Receiver over certain assets of Maplewood Developments Unlimited Company (in Liquidation and in receivership) to accompany the strategic housing development application for the proposed residential development on lands at Ballyoulster, Celbridge, Co. Kildare. The scope of the assessment was to determine the following:

- Impact of loss of daylight to neighbouring properties
- Average Daylight Factor within the proposed apartments
- Sunlight availability within the proposed development and the amenity space
- Overshadowing analysis and impact to neighbouring properties

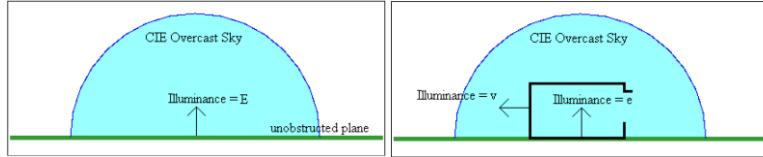

Daylight and Sunlight calculations have been carried out in accordance with BRE's 'Site Layout Planning for Sunlight and Daylight: A Guide to Good Practice' (2022) (herein referred to as the "BRE Guide") by P J Littlefair, and also the withdrawn BRE's 'Site Layout Planning for Sunlight and Daylight: A Guide to Good Practice' (2011) which is accepted as good practice by Planning Authorities where there are any differences in methodology. The Design Standards for New Apartments - Guidelines for Planning Authorities (March 2018) were also considered as part of this study.

The BRE Guide gives advice on site layout to achieve provision of daylight and sunlight both within buildings, and in the open spaces between them. In general, it aims to aid designers in considering the relationship between new and existing buildings to ensure that each retains the potential to achieve good daylighting and sunlight levels.

The BRE Guide states in the introduction that: "The guide is intended for building designers and their clients, consultants and planning officials. **The advice given here is not mandatory and the guide should not be seen as an instrument of planning policy; its aim is to help rather than constrain the designer.** Although it gives numerical guidelines, **these should be interpreted flexibly since natural lighting is only one of many factors in site layout design.** In special circumstances the developer or planning authority may wish to use different target values. For example, in a historic city centre, or in an area with modern high-rise buildings, a higher degree of obstruction may be unavoidable if new developments are to match the height and proportions of existing buildings". **It is therefore important that the guidelines that exist in relation to daylight and sunlight are read in the correct context and are not viewed as mandatory requirements.**

## 2. DEFINITIONS

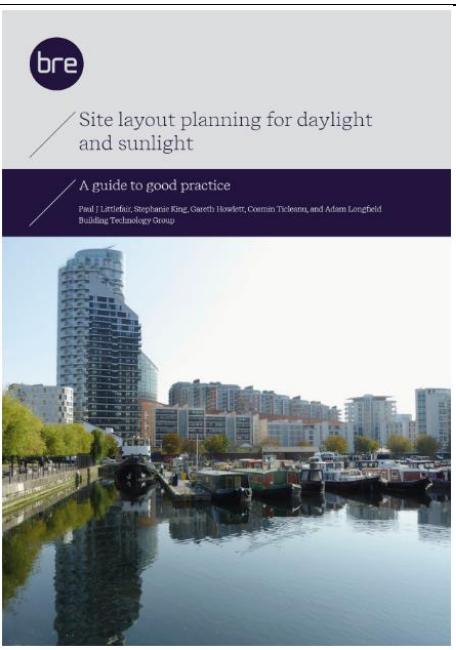

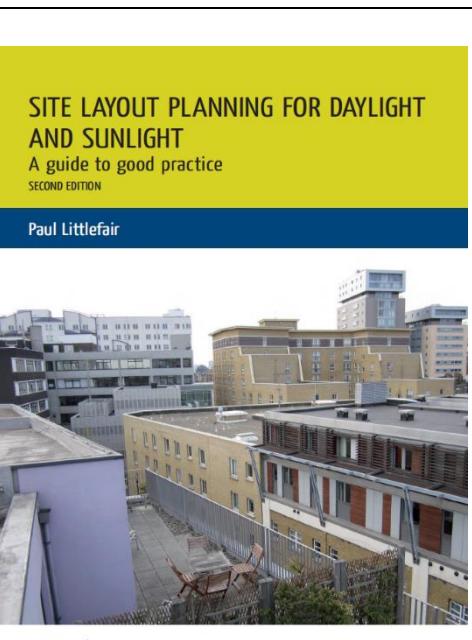

The technical definitions that are referred to in this report are explained below.

<b>BRE</b>	Building Research Establishment.
<b>Vertical Sky Component (VSC)</b>	<p>The Vertical Sky Component (VSC) measures the amount of skylight available to a window. This represents the amount of daylight available to the window. The BRE Guide describes the VSC as the “Ratio of that part of illuminance, at a point on a given vertical plane that is received directly from a CIE standard overcast sky, to illuminance on a horizontal plane due to an unobstructed hemisphere of this sky. Usually the “given vertical plane” is the outside of a window wall. The VSC does not include reflected light, either from the ground or from other buildings.”</p>  <p>E= illuminance on an unobstructed plane. (the amount of daylight available in an open space with no obstructions)  v= illuminance at a point in the centre of a vertical opening (the amount of daylight available at a point in the centre of a vertical opening)  Vertical Sky Component = v/E</p>
<b>CIE Standard Overcast Sky</b>	<p>A completely overcast sky for which the ratio of its luminance Ly at an angle of elevation y above the horizontal to the luminance Lz at the zenith is given by:</p> $L_y = L_z \frac{(1 + 2 \sin y)}{3}$ <p>The CIE standard overcast sky is darkest at the horizon and brightest at the zenith (vertically overhead).</p>
<b>Average Daylight Factor (ADF)</b>	<p>This is a measure of the amount of daylight available to a space relative to the level of light outside. The ratio of total daylight flux incident on a reference area to total area of reference area, expressed as a percentage of outdoor illuminance on a horizontal plane due to an unobstructed hemisphere of sky of assumed or known luminance distribution. Thus a 1% ADF would mean that the average indoor illuminance would be one hundredth the outdoor unobstructed illuminance.</p>

<b>Annual Probable Sunlight Hours (APSH)</b>	Annual Probable Sun Hours (APSH) represents the sunlight that a given window may expect over a year period. APSH is expressed as the percentage of direct sunlight hours divided by number of hours when sky was clear with sun. The sunny hours information is provided by the weather data file.
<b>sDA</b>	Spatial Daylight Autonomy (sDA) examines whether a space receives enough daylight during standard operating hours (8 a.m. to 6 p.m.) on an annual basis using hourly illuminance grids on the horizontal work plane. sDA is calculated virtually through computational simulation with precise parameters. It references a local climate file to run hourly illuminance maps in the lighting software package.
<b>EN</b>	European Norm (EN) abbreviation verifies that the technical standard referenced throughout this report (EN 17037) is drafted and maintained by the European Committee for Standardisation (CEN).

### 3. GUIDANCE DOCUMENTS REFERENCED DURING THIS STUDY

This Daylight, Sunlight and Overshadowing Assessment has been carried out in accordance with the following best practice standard as outlined by the BRE and cross referenced by the Department of Housing, Planning and Local Government.

	<p>This document gives advice on site layout planning to achieve good sun lighting and daylighting, both within buildings and in the open spaces between them in line with BS EN 17037.</p> <p>Guidance is also given on site layout for good sun lighting and daylighting; safeguarding of daylight and sunlight within existing buildings nearby; and the protection of daylighting of adjoining land for future development.</p>
	<p>This document has now been withdrawn with the publication of BRE 209 2022. This document gives advice on site layout planning to achieve good sun lighting and daylighting, both within buildings and in the open spaces between them. This authoritative document has been widely used to provide advice during the planning and design stages of building development in the UK and Ireland.</p> <p>Guidance is given on site layout for good sun lighting and daylighting; safeguarding of daylight and sunlight within existing buildings nearby; and the protection of daylighting of adjoining land for future development.</p>

 <p>An Roinn Tábhachtach, Rialtais Áitiúil agus Oidhreachta Department of Housing, Local Government and Heritage</p> <p><b>Sustainable Urban Housing: Design Standards for New Apartments</b></p> <p>Guidelines for Planning Authorities issued under Section 28 of the Planning and Development Act, 2000 (as amended)</p> <p>December 2020</p>	<p>Design Standards for New Apartments - Guidelines for Planning Authorities (December 2020). This document outlines the design guides that should be used to assess daylight provision for new apartments.</p> <p>6.6 Planning authorities should have regard to quantitative performance approaches to daylight provision outlined in guides like the BRE guide 'Site Layout Planning for Daylight and Sunlight' (2nd edition) or BS 8206-2: 2008 – 'Lighting for Buildings – Part 2: Code of Practice for Daylighting' when undertaken by development proposers which offer the capability to satisfy minimum standards of daylight provision.</p>
<p>I.S. EN 17037:2018</p> <p><b>EUROPEAN STANDARD</b>                   <b>EN 17037</b></p> <p><b>NORME EUROPÉENNE</b></p> <p><b>EUROPÄISCHE NORM</b>                   December 2018</p> <p>ICS 91.160.01</p> <p>English Version                           Tageslicht in Gebäuden</p> <p>L'éclairage naturel des bâtiments                   Tageslicht in Gebäuden</p> <p>This European Standard was approved by CEN on 29 July 2018.</p> <p>CEN members are bound to comply with the CEN/CENELEC Internal Regulation, which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.</p> <p>This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has same status as the official versions.</p> <p>CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.</p> <p><b>cen</b> EUROPEAN COMMITTEE FOR STANDARDIZATION COMITÉ EUROPÉEN DE NORMALISATION EUROPAISCHES KOMITEE FÜR NORMUNG</p> <p>CEN-CENELEC Management Centre: Rue de la Science 23, B-1040 Brussels</p> <p>© 2018 CEN All rights of exploitation in any form and by any means reserved worldwide for CEN national Members.</p> <p>Ref. No. EN 17037:2018 E</p>	<p><b>EN 17037:2018</b></p> <p>This European standard provides target illuminance levels to be achieved within a horizontal plane in a space in order for the space to be considered adequately daylit.</p> <p>The standard “encourages building designers to assess and ensure successfully daylit spaces. It also allows building designers and developers to target ambitions with respect to daylighting, as well as addressing other issues related to daylight design”.</p> <p>The document defines metrics used for the evaluation of daylighting conditions and gives principles of calculation and verification. These principles address the issue of variability of daylight over the days and the year.</p>

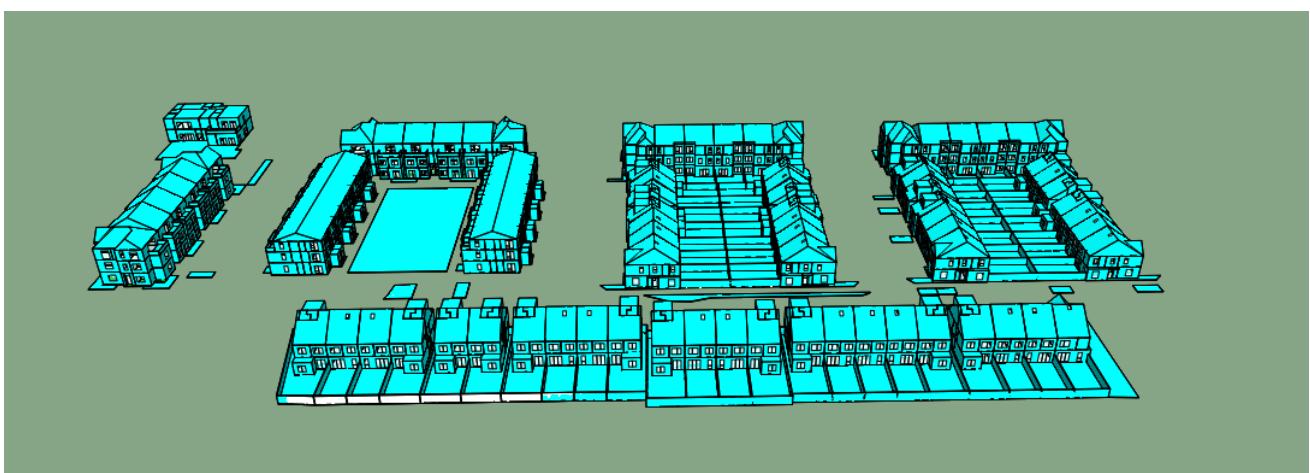

#### 4. SIMULATION MODEL IMAGES

The following images show the simulation model used to analyse the daylight, sunlight, and overshadowing performance for this proposed scheme. It should be noted that due to the scale of the development that the site is split up into three distinctive areas ( Site A, B and C) for easy of reference.

##### Site A Model Imagery

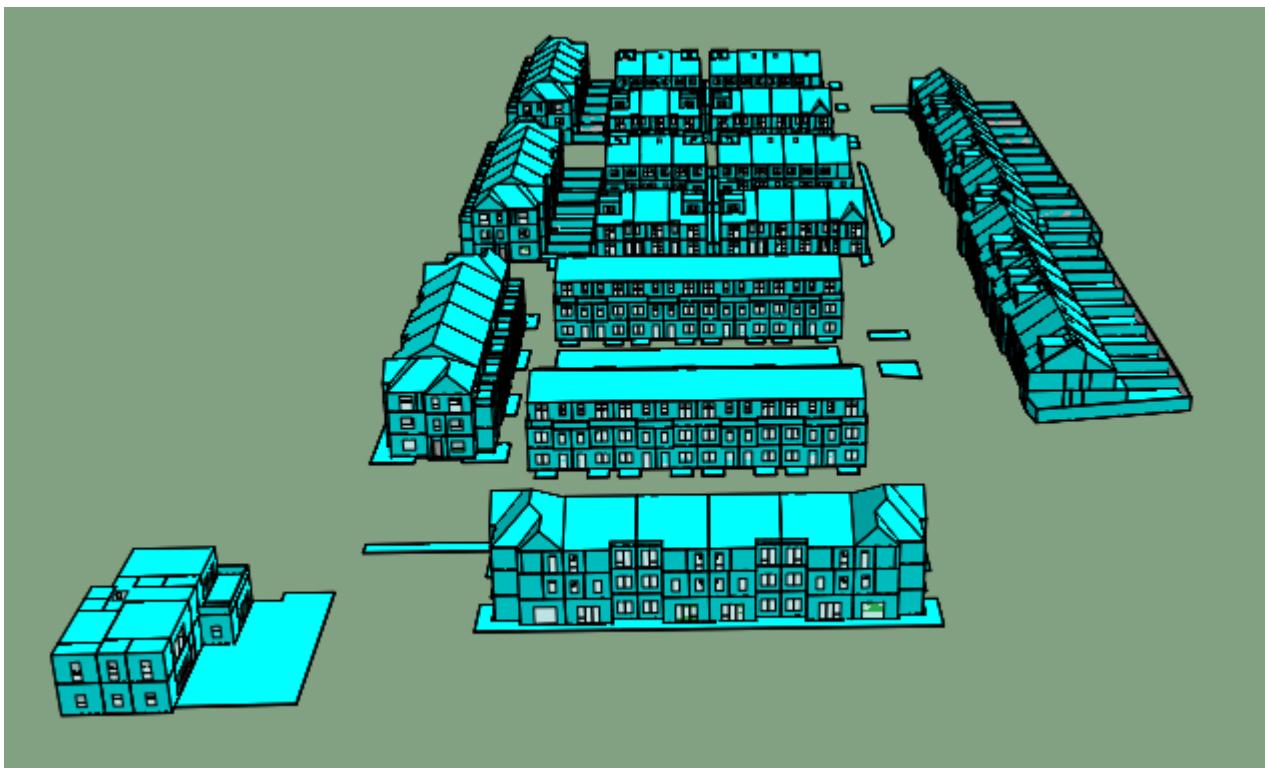

**Above:** Model Site A viewed from the North

**Above:** Model Site A viewed from the South

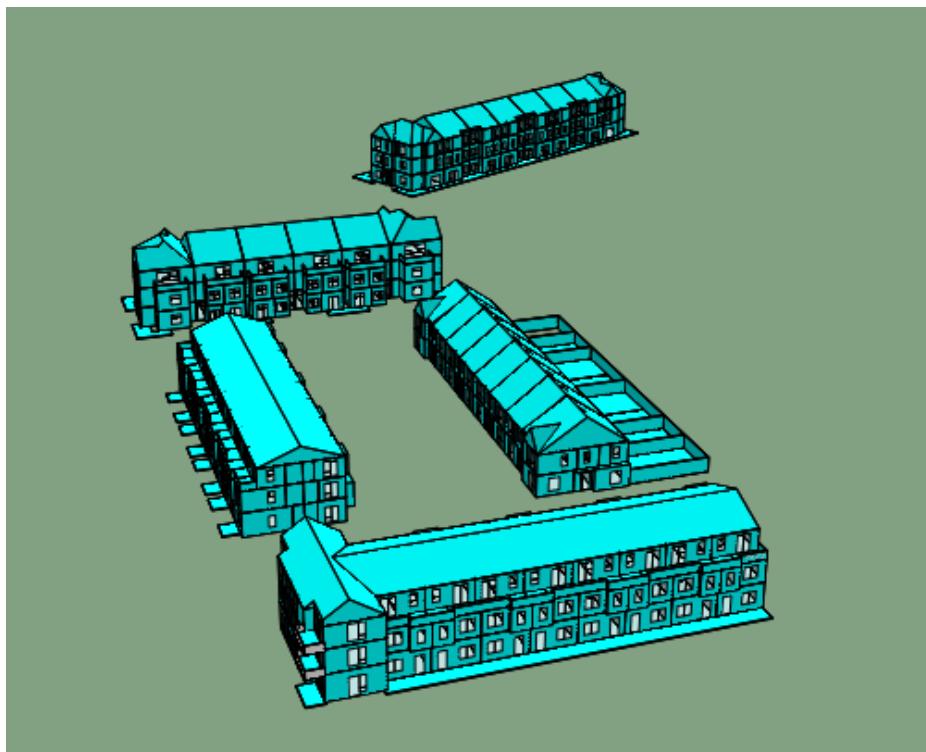

**Above:** Model Site A viewed from the East

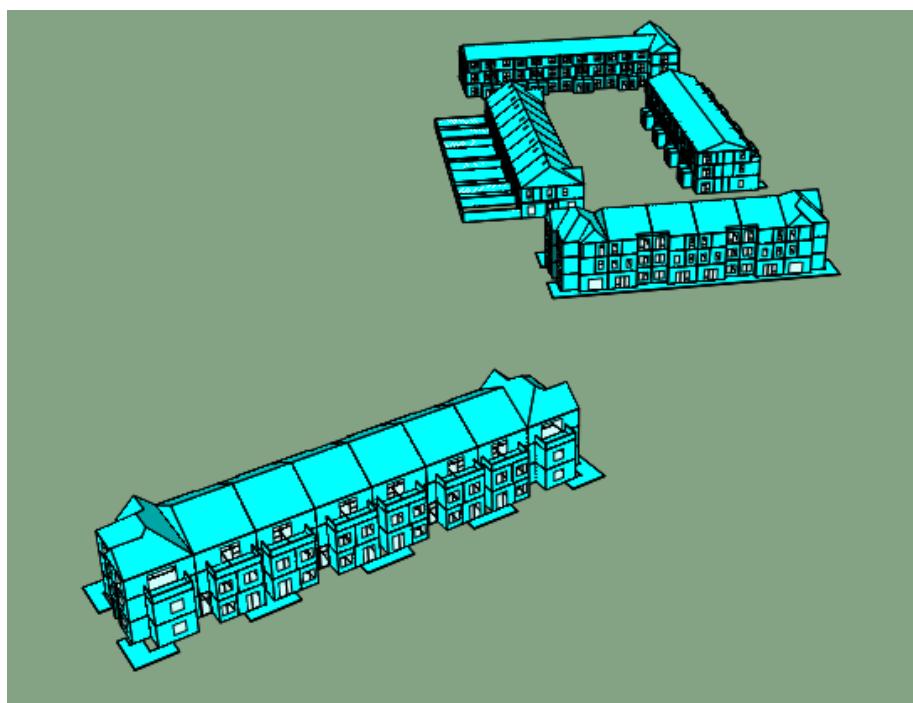

**Above:** Model Site A viewed from the West

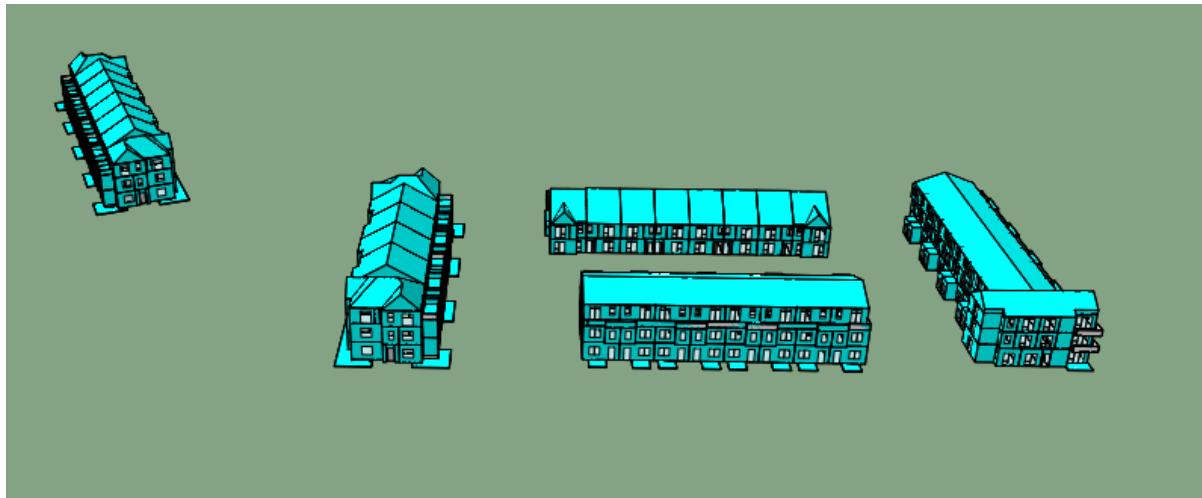

**Site B Model Imagery**

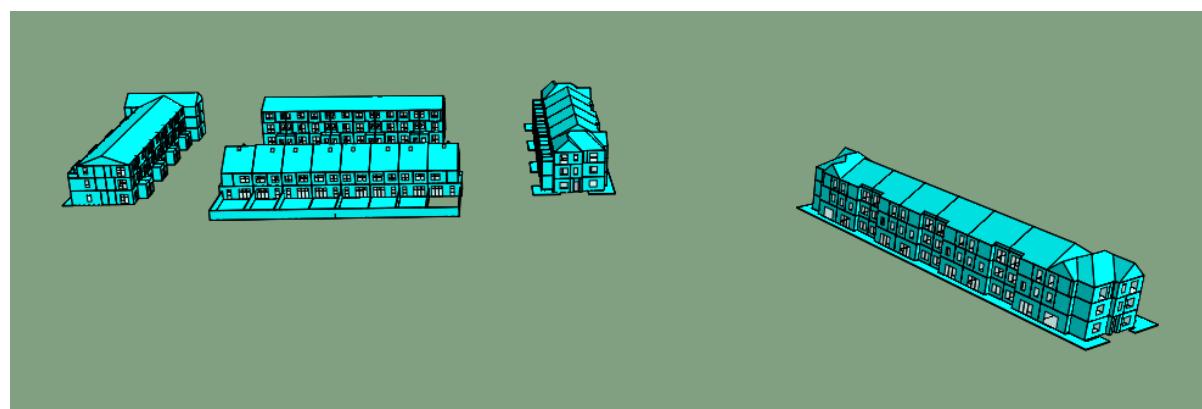

**Above:** Model Site B viewed from the North

**Above:** Model Site C viewed from the South

**Above:** Model Site C viewed from the West

**Above:** Model Site C viewed from the East

## 5. SIMULATION SOFTWARE DESCRIPTION

### **IES VIRTUAL ENVIRONMENT**

IES Virtual Environment is the world's leading building performance analysis tool. The software provides an in-depth suite of integrated analysis tools which allow an integrated design approach and highly detailed results.

### **IES VIRTUAL ENVIRONMENT - RADIANCE**

Radiance is a software package developed by the Lighting Systems Research group at the Lawrence Berkeley Laboratory in California, USA. Radiance was developed as a research tool for predicting the distribution of visible radiation in illuminated spaces.

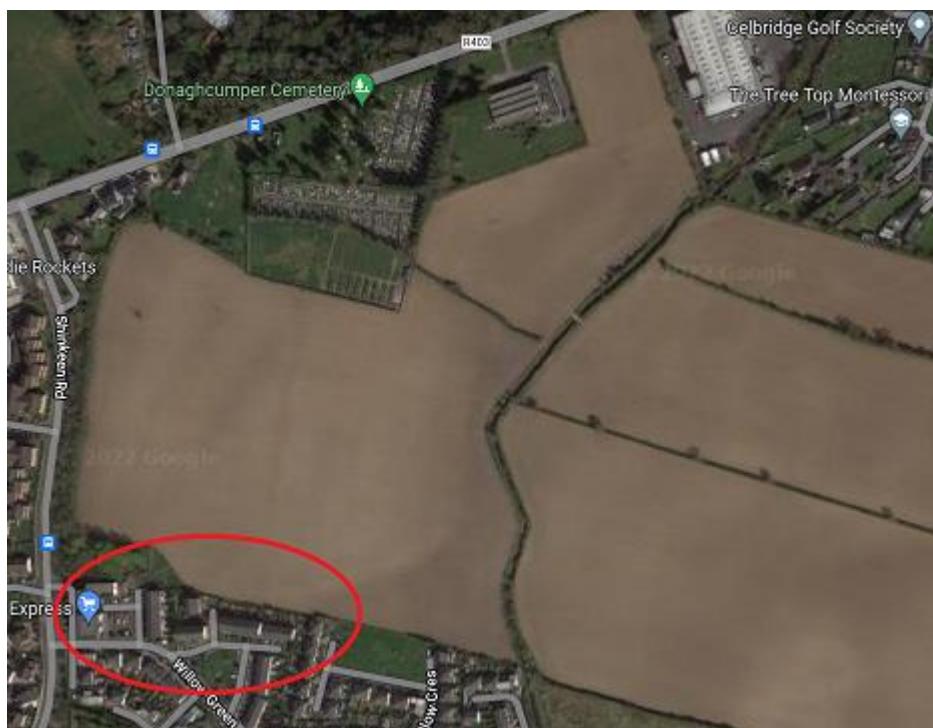

### **IES VIRTUAL ENVIRONMENT - SUNCAST**

SunCast enables engineers to perform shading and solar insolation analysis studies and can generate images and animations. SunCast generates shadows and internal solar insolation from any sun position defined by date, time, orientation, site latitude and longitude. SunCast can be used at any stage of the design process from a model created by the IES Model Builder.

## 6. ASSESSMENT METHODOLOGY

### DAYLIGHT ASSESSMENT – NEIGHBOURING PROPERTIES

The guidelines given within BRE 209 are intended for use for rooms in adjoining dwellings where daylight is required, including living rooms, kitchens, and bedrooms. Windows to bathrooms, toilets, storerooms, and circulation areas need not be analysed. The guidelines may also be applied to any existing non-domestic building where the occupants have a reasonable expectation of daylight; this would normally include schools, hospitals, hotels and hostels, small workshops, and some offices. We have not identified any non-domestic building of this nature within the surrounding area of impact and as such have included within our analysis the relevant dwellings at Willow Green, Willow Crescent, Willow Square, Willow Dale.

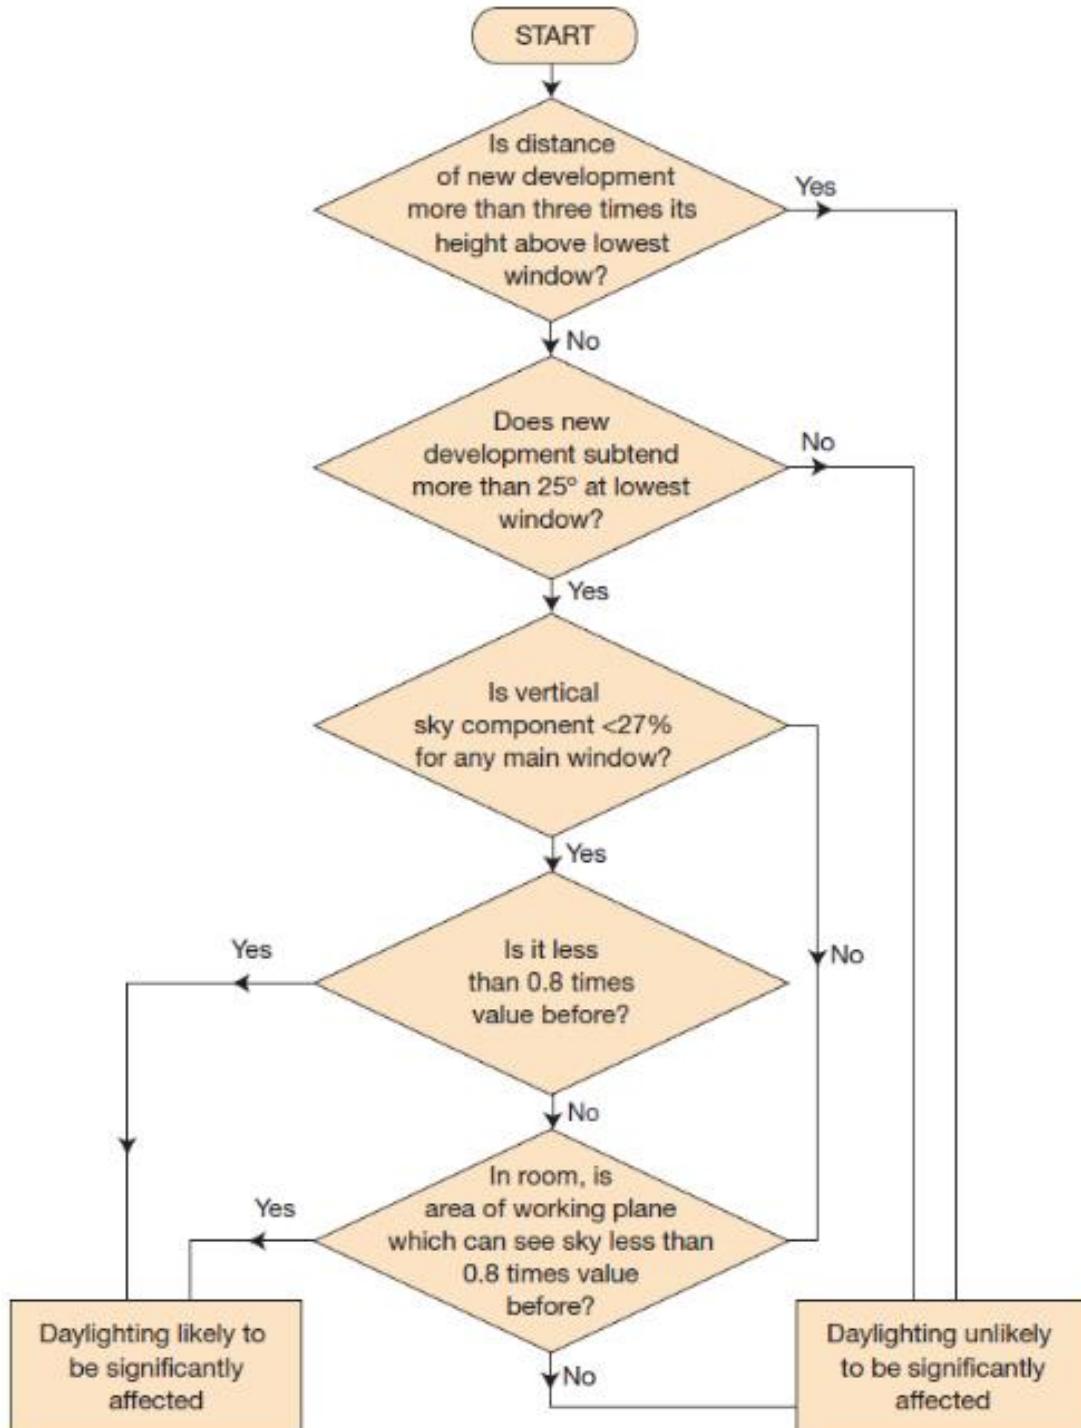

**Above:** Image of proposed site and relevant surrounding properties

Surrounding properties that have been part of the assessment are highlighted in red above, these properties were selected as they are the most likely to be affected by the development of the Sites proposed. The results of the selected surrounding buildings are to a standard which allows us to assume any other buildings beyond that point will receive sufficient Daylight and not be affected by the proposed development.

To analyse the effects of the proposed development on the adjacent applicable buildings in the immediate surrounding area, a Vertical Sky Component (VSC) simulation was carried out using the IES Radiance software package. For the VSC definition refer to Section 2.0 of this report. The VSC was calculated with the proposed development in place using a simulation model. In accordance with Section 2.2 of the BRE Guide, where a VSC of 27% or greater is achieved, “enough skylight should still be reaching the existing building” and therefore daylighting will not be significantly affected. The BRE Methodology is summarised in Section 6 of this report. Where a VSC less than 27% is achieved, further analysis is required to determine the likely daylight levels that will be achieved in affected spaces. Any reductions in VSC should be limited to 20%.

### Methodology (as referenced in Section 2.2 of the BRE Guide)

**Above:** Decision chart / methodology used to quantify the impact of a new development on daylight levels of nearby buildings / dwellings.

## DAYLIGHT ASSESSMENT – PROPOSED DEVELOPMENT

The assessment methodology used for this analysis is taken from the BRE Guidance document (BR209) based on the standards set out in the British Standard BS8206:2. This analysis also refers to the standards outlined in European Standard EN 17037:2018 and the British national annex provided in the BS EN 17037 standard for additional information.

### Average Daylight Factor (ADF) Using BS 8206-2:2008 / BR209

BRE's 2011 guidance document Site Layout Planning for Daylight and Sunlight states the following with respect to Average Daylight Factors (ADF).

C4 If a predominantly daylit appearance is required, then the ADF should be 5% or more if there is no supplementary electric lighting, or 2% or more if supplementary electric lighting is provided. There are additional recommendations for dwellings of 2% for kitchens, 1.5% for living rooms and 1% for bedrooms. These additional recommendations are minimum values of ADF which should be attained even if a predominantly daylit appearance is not achievable.

**Above:** From BRE's 2011 guidance document Site Layout Planning for Daylight and Sunlight  
Therefore, in line with this guidance, minimum recommended average daylight factors are:

- **Bedrooms – 1.00 %**
- **Living – 1.50 %**
- **Kitchen – 2.00 %**
- **Kitchen/Living – 2.00 % (Note: Duplex / Maisonettes kitchen/living assessed at 2%)**

The following assumptions have been applied in this study:

- Sky Conditions: Standard CIE overcast sky
- Time (24hr): 12:00
- Date: 21 September
- Working Plane: 0.85m

## Spatial Daylight Autonomy (sDA) Using EN 17037:2018

*EN 17037:2018 – Daylight in Buildings* states the following with respect to daylight provision within a space:

### 5.1.2 Criteria for daylight provision

A space is considered to provide adequate daylight if a target illuminance level is achieved across a fraction of the reference plane within a space for at least half of the daylight hours.

In addition, for spaces with vertical or inclined daylight openings, a minimum target illuminance level is also to be achieved across the reference plane.

The reference plane of the space is located 0,85 m above the floor, unless otherwise specified. A small fraction of the reference plane may be disregarded to account for singularities.

Values for target illuminances, minimum target illuminances and fractions of reference plane are given in Table A.1.

This assessment was carried out in accordance with *Method 2* which is described below:

**Method 2)** Calculation method of illuminance levels on the reference plane using climatic data for the given site and an adequate time step. Annex A gives values for target illuminances and minimum target illuminances to be achieve.

*Table A.1 – Recommendations of daylight provision by daylight openings in vertical and inclined surfaces* provides target illuminance values which are required to meet the minimum level of recommendation for daylight provision.

In line with the European standard, the following targets were adopted for all spaces assessed during this analysis:

- **300 Lux achieved over at least 50% of the reference plane (0.85m) and**
- **100 Lux achieved over at least 95% of the reference plane (0.85m)**

A space is considered to provide adequate daylight if both target illuminance levels above are achieved across the specified fraction of the space (as per above) for at least 50% of the daylight hours.

**Table A.1 — Recommendations of daylight provision by daylight openings in vertical and inclined surface**

Level of recommendation for vertical and inclined daylight opening	Target illuminance $E_T$ lx	Fraction of space for target level $F_{plane, \%}$	Minimum target illuminance $E_{TM}$ lx	Fraction of space for minimum target level $F_{plane, \%}$	Fraction of daylight hours $F_{time, \%}$
Minimum	300	50 %	100	95 %	50 %
Medium	500	50 %	300	95 %	50 %
High	750	50 %	500	95 %	50 %

NOTE Table A.3 gives target daylight factor ( $D_T$ ) and minimum target daylight factor ( $D_{TM}$ ) corresponding to target illuminance level and minimum target illuminance, respectively, for the CEN capital cities.

**Above:** Table A.1 – Recommendations of daylight provision by daylight openings in vertical and inclined surfaces taken from EN 17037:2018

The working plane has been set at 0.85m in accordance with EN17037.

### Spatial Daylight Autonomy (sDA) Using BS EN 17037:2018

This study also assessed the daylight performance of the scheme using the British national annex within BS EN 17037. This National Annex recommends that the target illuminance values provided in *Table NA.1* are achieved over at least 50% of the area of the working plane (0.85m from floor level).

**Table NA.1 — Values of target illuminance for room types in UK dwellings**

Room type	Target illuminance $E_T$ (lx)
Bedroom	100
Living room	150
Kitchen	200

Where one room in a UK dwelling serves more than a single purpose, the UK committee recommends that the target illuminance is that for the room type with the highest value – for example, in a space that combines a living room and a kitchen the target illuminance is recommended to be 200 lx.

In line with the recommendation of the British National Annex, an additional spatial daylight autonomy assessment was carried out to assess the number of Bedrooms that achieve the target illuminance of 100 lux over 50% of their areas, as well as the percentage of Kitchen/Living spaces achieving 200 lux over at least 50% of the areas. Following the recommendation of the British national annex above, an illuminance test for 95% of the floor area of each space was not conducted. If the analysed rooms achieve the specified illuminance level over at least 50% of their area, they are deemed to be adequately daylit according to the British national annex.

The following surface reflectance's were applied in this study:

Material Surface	Reflectance Value	Glass/Window Details
External Wall	0.82	-
Internal Partition	0.82	-
Roof (external)	0.20	-
Ground (external)	0.20	-
Floor/Ceiling (Floor)	0.40	-
Floor/Ceiling (Ceiling)	0.88	-
Glass Light Transmittance	-	70%
Window Frame Thickness	-	50 mm

## SUNLIGHT ASSESSMENT – PROPOSED AND SURROUNDING AMENITY SPACE

BRE Guidelines recommend that in order for an amenity space to appear adequately sunlit throughout the year, at least half of the amenity space should receive at least two hours of sunlight on the design day, March 21st. If, as a result of a new development, an existing garden or amenity area does not meet the above, and the area which can receive two hours of sun on March 21st is less than 0.8 times its former value, then the loss of sunlight is likely to be noticeable.

### Summary

3.3.17 It is recommended that for it to appear adequately sunlit throughout the year, at least half of a garden or amenity area should receive at least two hours of sunlight on 21 March. If as a result of new development an existing garden or amenity area does not meet the above, and the area that can receive two hours of sun on 21 March is less than 0.80 times its former value, then the loss of sunlight is likely to be noticeable. If a detailed calculation cannot be carried out, it is recommended that the centre of the area should receive at least two hours of sunlight on 21 March.

**Above:** BRE Guidance in relation to protecting Sunlight in Gardens, Open Spaces and Amenity spaces.

The amount of sunlight available to proposed and surrounding amenity spaces (proposed and surrounding gardens and pocket park areas) is assessed as part of this analysis. The results are outlined in *Section 9* of this report.

## SUNLIGHT ASSESSMENT – PROPOSED AND SURROUNDING BUILDINGS

According to the BRE guide, habitable rooms (preferably main living rooms) will appear reasonably sunlit if they receive a minimum of 1.5 hours on March 21st. The medium level of recommendation is three hours and the high level of recommendation four hours. For dwellings, at least one habitable room, preferably a main living room, should meet at least the minimum criterion. Analysis was carried out in line with the current BRE 209 guidance, ensuring that the proposed development receives adequate levels of sunlight and no substantial loss of sunlight is incurred in the surrounding buildings.

It should be noted, the BRE guidance in relation to this applies to rooms of all orientations, although if a room faces significantly north of due east or west it is unlikely to be met.

For Information, the sunlight assessment outlined in the now withdrawn BRE 209 (2011 edition) has also been included during this transitional period. It is imperative to provide a robust, comprehensive and transparent Daylight and Sunlight assessment. Including the superseded assessment allows for ease of review for Planning Authorities.

### Summary (new buildings)

3.1.15 In general a dwelling, or non-domestic building that has a particular requirement for sunlight, will appear reasonably sunlit provided:

- at least one main window wall faces within 90° of due south and
- a habitable room, preferably a main living room, can receive a total of at least 1.5 hours of sunlight on 21 March. This is assessed at the inside centre of the window(s); sunlight received by different windows can be added provided they occur at different times and sunlight hours are not double counted.

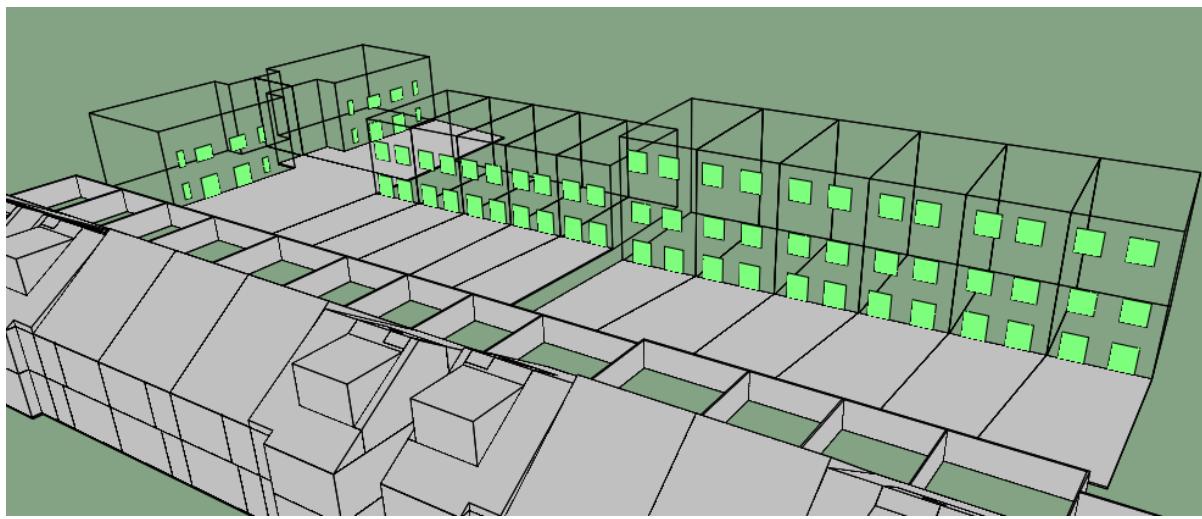

3.1.16 Where groups of dwellings are planned, site layout design should aim to maximise the number of dwellings with a main living room that meets the above recommendations.

**Above:** BRE Guidance in relation to achieving adequate levels of sunlight in new buildings.

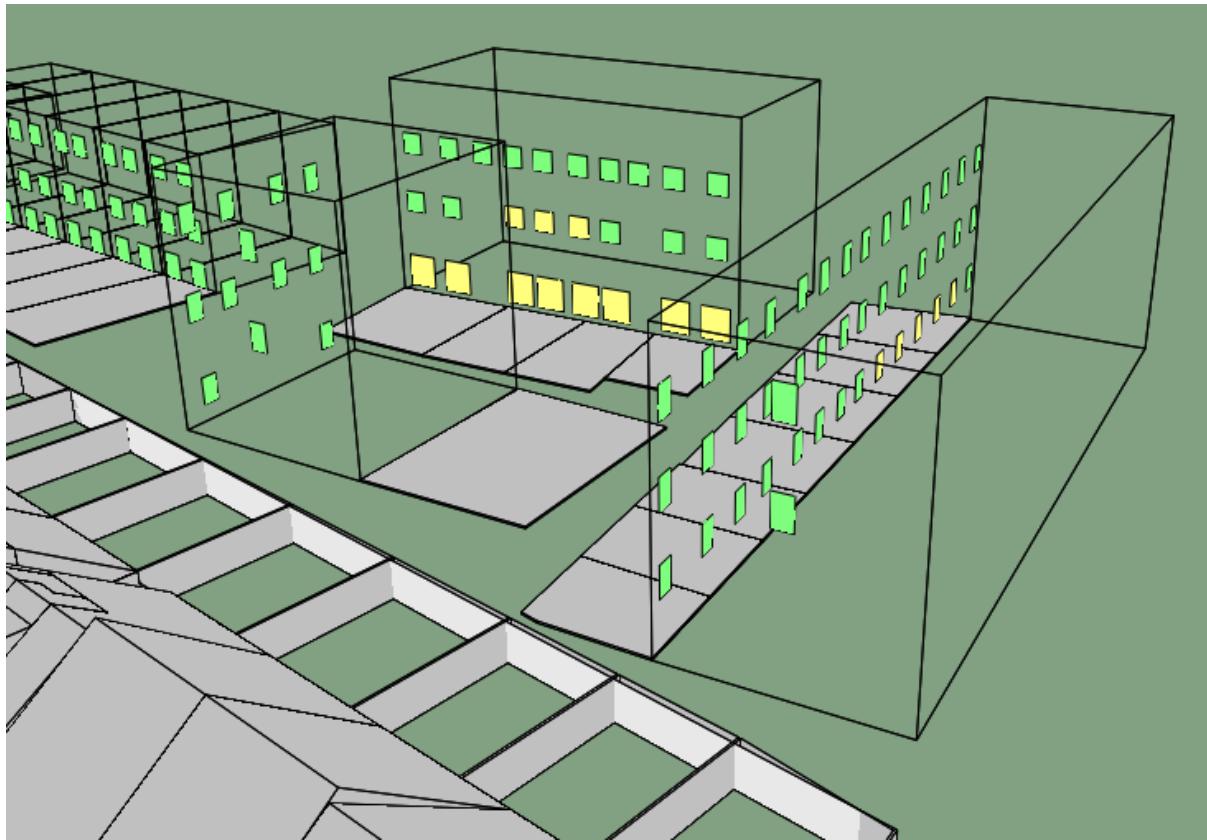

Results for both assessments are shown in *Section 9* of this report.

## 7. VSC RESULTS

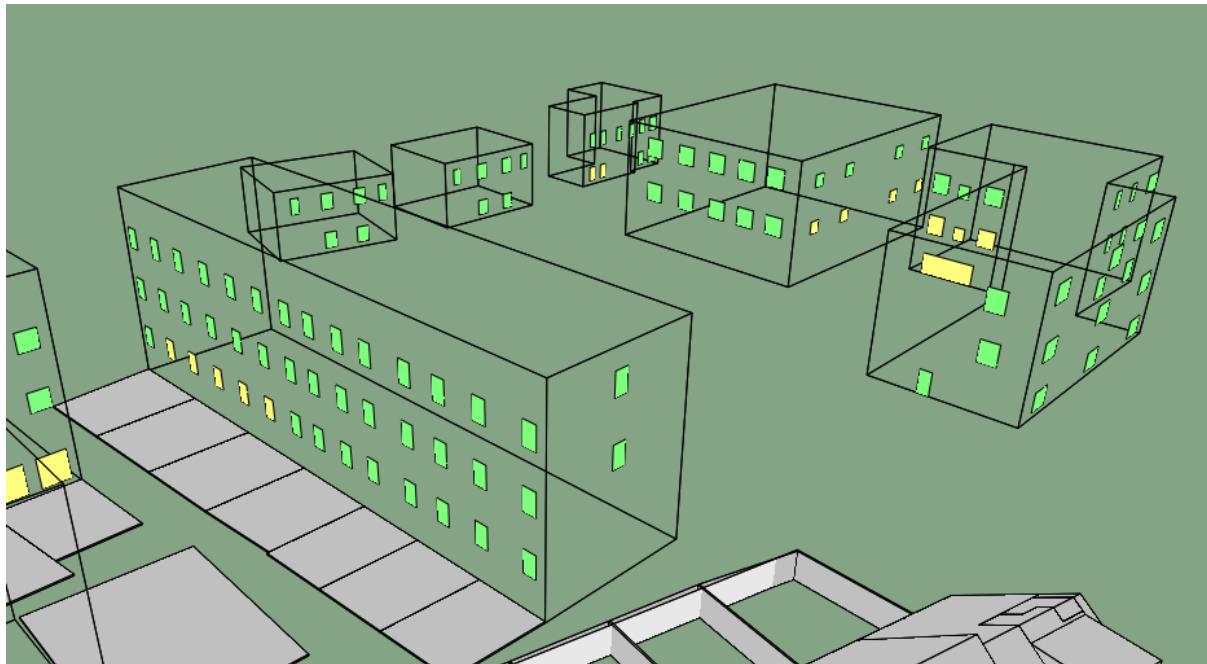

The VSC analysis carried out confirms that none of the surrounding properties assessed will experience a noticeable reduction in their vertical sky component result with the inclusion of the proposed development. For the BRE Guidance on Vertical Sky Component refer to Section 6 of this report.

**Above:** Surrounding properties – 27-43 Willow Square and 36-39 Willow Crescent. Windows shown in green have achieved a VSC of  $\geq 27\%$ . If the VSC is greater than 27% then enough skylight should be reaching the window of the existing buildings. The windows in yellow achieve a VSC of less than 27% but the new VSC is greater than or equal to 80% of its initial value pre-development in line with the recommendation of the BRE Guide.

**Above:** Surrounding properties – 1-26 Willow Square. Windows shown in green have achieved a VSC of  $\geq 27\%$ . If the VSC is greater than 27% then enough skylight should be reaching the window of the existing buildings. The windows in yellow achieve a VSC of less than 27% but the new VSC is greater than or equal to 80% of its initial value pre-development in line with the recommendation of the BRE Guide.

**Above:** Surrounding properties – Willow Green Apartments, 1 Willow Dale, 2, 4, 6 and 8 Willow Green. Windows shown in green have achieved a VSC of  $\geq 27\%$ . If the VSC is greater than 27% then enough skylight should be reaching the window of the existing buildings. The windows in yellow achieve a VSC of less than 27% but the new VSC is greater than or equal to 80% of its initial value pre-development in line with the recommendation of the BRE Guide.

As shown above, the windows of properties surrounding the proposed development will not incur a noticeable loss of skylight in accordance with BRE Guidance (shown in green and yellow).

A full breakdown of the VSC results for each opening analysed can be found in *Appendix C* of this report.

## 8. AVERAGE DAYLIGHT FACTOR RESULTS – PROPOSED SCHEME

The calculated ADF results are summarised below:

### **Site A Results Summary**

- **100%** of Bedrooms achieve the BRE recommended ADF of  $\geq 1.00\%$
- **100%** of Living Rooms achieve the BRE recommended ADF of  $\geq 1.50\%$
- **100%** of the Kitchen/Living achieve the BRE recommended ADF of  $\geq 2.00\%$

### **Site B Results Summary**

- **100%** of Bedrooms achieve the BRE recommended ADF of  $\geq 1.00\%$
- **100%** of Living Rooms achieve the BRE recommended ADF of  $\geq 1.50\%$
- **100%** of the Living/Kitchen achieve the BRE recommended ADF of  $\geq 2.00\%$

### **Site C Results Summary**

- **100%** of Bedrooms achieve the BRE recommended ADF of  $\geq 1.00\%$
- **100%** of the Kitchen/Living achieve the BRE recommended ADF of  $\geq 2.00\%$
- **100%** of Living Rooms achieve the BRE recommended ADF of  $\geq 1.50\%$

Detailed ADF results are outlined in Appendix B of this report.

### sDA Results Summary (EN17037 and BS EN17037)

This scheme was also assessed using the latest European Standard EN17037 as well as the British national annex provided in BS EN17037.

<b>Spatial Daylight Autonomy - EN17037</b>	
All spaces recommended to achieve 300 lux over 50% of area <b>and</b> 100 Lux over 95% of area for at least 50% of daylight hours	
<b>Room Type</b>	<b>Passing (%)</b>
<b>Overall</b>	<b>98.1%</b>

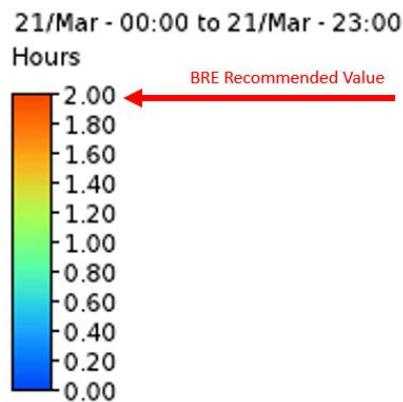

<b>Spatial Daylight Autonomy – BS EN17037 British National Annex</b>	
KLD recommended to achieve 200 lux over 50% area for at least 50% of daylight hours Living rooms recommended to achieve 150 Lux over 50% area for at least 50% of daylight hours Bedrooms recommended to achieve 100 lux over 50% area for at least 50% of daylight hours	
<b>Room Type</b>	<b>Passing (%)</b>
<b>Overall</b>	<b>100.0</b>

The results of these assessments are tabulated in detail in Appendix D and Appendix E of this document.

## 9. SUNLIGHT RESULTS

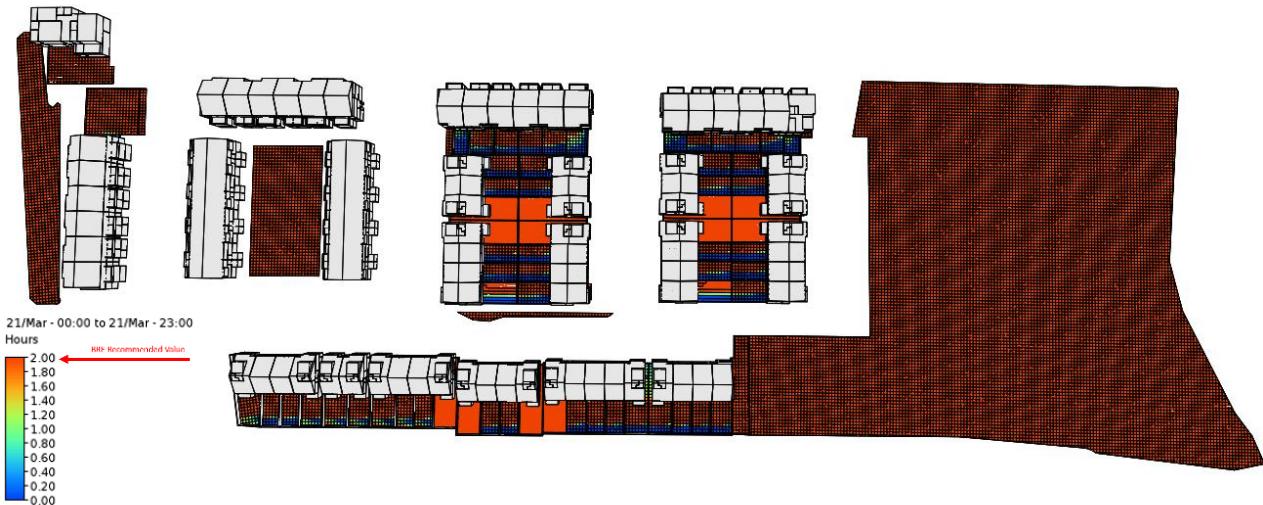

BRE Guidelines recommend that in order for an amenity space to appear adequately sunlit throughout the year, at least half of the amenity space should receive at least two hours of sunlight on the design day, 21<sup>st</sup> March. For the purpose of this assessment, the front and back gardens of each house, designated amenity areas such as the pocket parks along with any Existing surrounding building amenity spaces.

### Annual Probable Sunlight Hours – Amenity Spaces

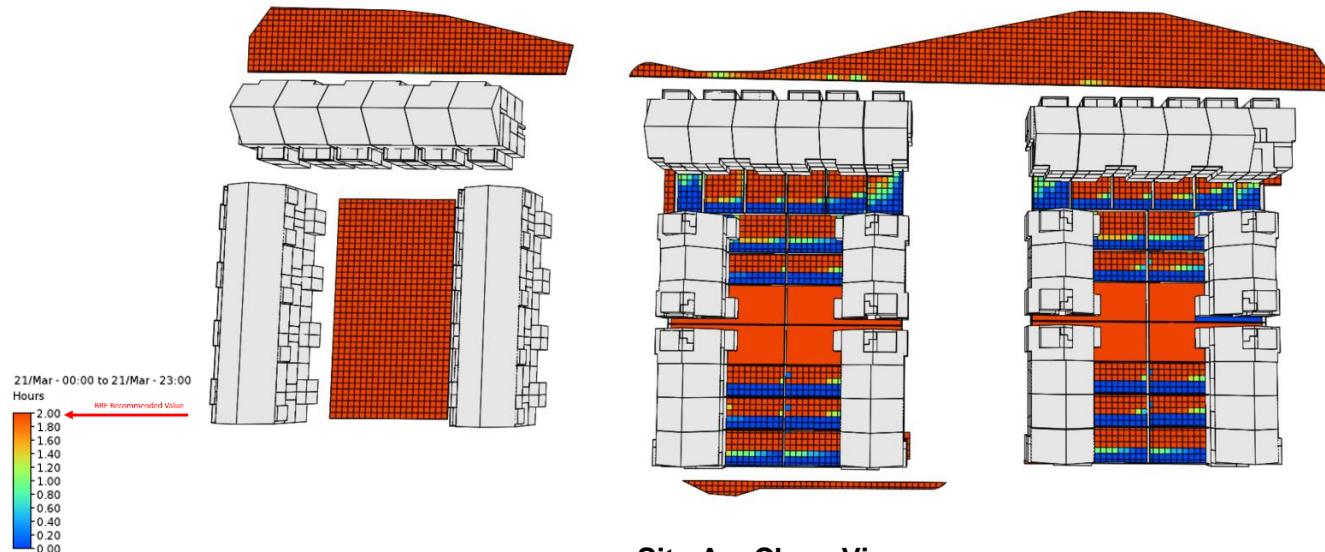

**Above:** Probable sunlight hours on March 21<sup>st</sup> (hours) legend

## Site A Amenity Area Sunlight Assessment

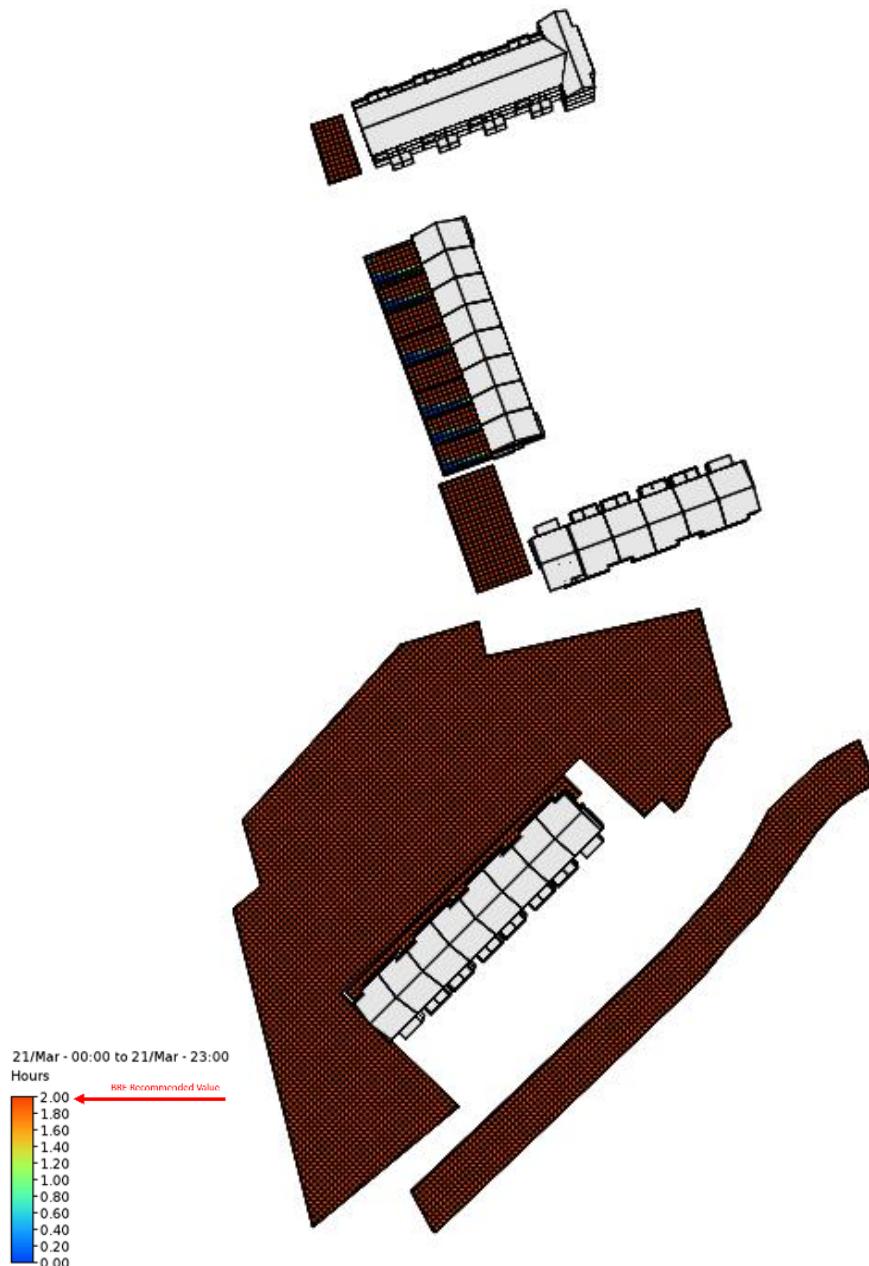

**Site A**

**Site A – Close View**

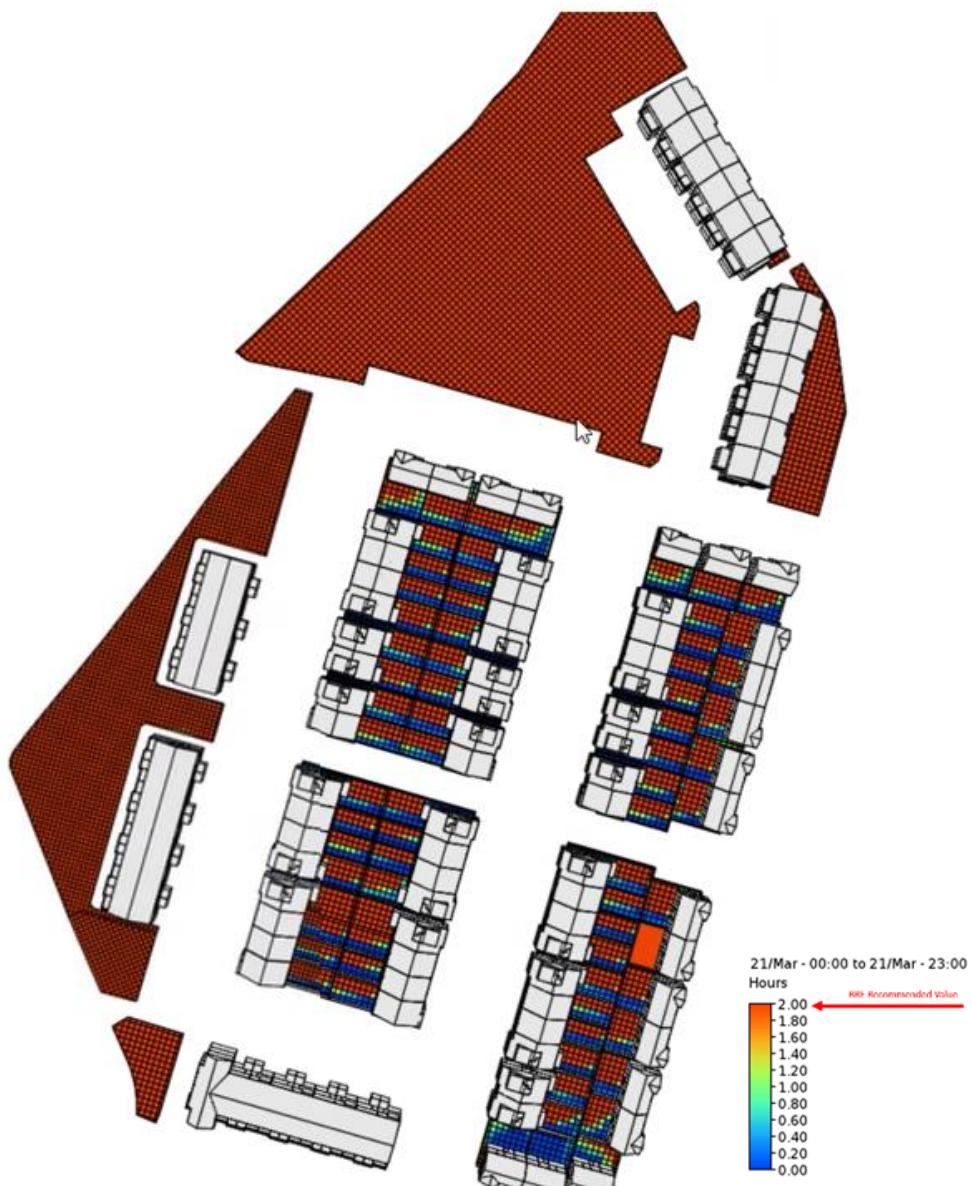

**Above:** The amenity/garden areas shown in red above are achieving 2 hours of sunlight on the 21<sup>st</sup> March as per the BRE Industry Guidelines. Any areas where 2 hours of sunlight is not available over at least 50% of the area (shown in blue & green above) is due to shading as a result of the proposed houses themselves or garden fencing. The vast majority of individual amenity spaces within Site A of the proposed development will achieve 2 hours of sunlight on the 21<sup>st</sup> of March in line with BRE recommendations. All communal open areas receive at least 2 hours of sunlight on the design day as shown in red above.

### Site B Amenity Area Sunlight Assessment

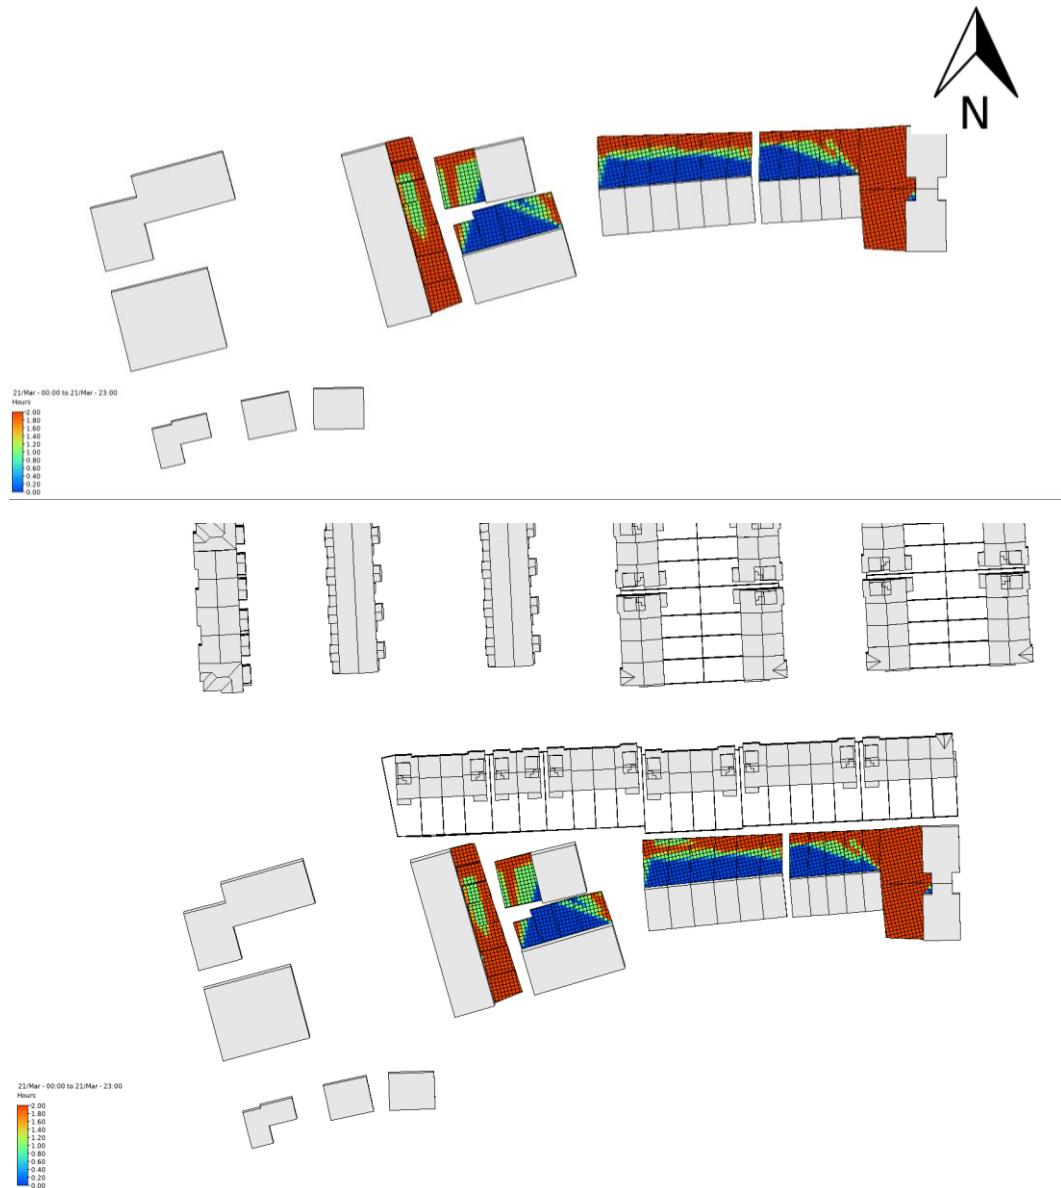

**Above:** The amenity/garden areas shown in red above are achieving 2 hours of sunlight on the 21<sup>st</sup> March as per the BRE Industry Guidelines. Any areas where 2 hours of sunlight is not available over at least 50% of the area (shown in blue & green above) is due to shading as a result of the proposed houses themselves or garden fencing. Each of the individual amenity spaces assessed within Site B of the proposed development will achieve 2 hours of sunlight on the 21<sup>st</sup> of March in line with BRE recommendations. All communal open areas receive at least 2 hours of sunlight on the design day as shown in red above.

### Site C Amenity Area Sunlight Assessment

**Above:** The amenity/garden areas shown in red above are achieving 2 hours of sunlight on the 21<sup>st</sup> March as per the BRE Industry Guidelines. Any areas where 2 hours of sunlight is not available over at least 50% of the area (shown in blue & green above) is due to shading as a result of the proposed houses themselves or garden fencing. Each of the individual amenity spaces assessed within Site B of the proposed development will achieve 2 hours of sunlight on the 21<sup>st</sup> of March in line with BRE recommendations. All communal open areas receive at least 2 hours of sunlight on the design day as shown in red above.

### Surrounding Building Amenity area

**ABOVE:** As per BRE 209 “*to appear adequately sunlit throughout the year, at least half of a garden or amenity area should receive at least two hours of sunlight on 21 March*”. Where surrounding amenity space adjacent to the development faces due north it can be seen that the existing scenario does not meet the BRE Guidance. While there are some minor reductions in sunlight in two of the north facing gardens in the proposed scenario, these areas achieve inadequate levels of sunlight in the existing scenario regardless of the proposed development. It can also be seen that adequate sunlight levels in any East or West facing amenity spaces have been safeguarded with the proposed development in place as there are no reductions in sunlight levels as per the BRE Guidance.

## Sunlight in New developments (BRE 209 2022)

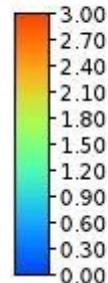

As stated in Section 6 of this report, habitable rooms (preferably main living rooms) will appear reasonably sunlit if they receive a minimum of 1.5 hours on March 21st. The medium level of recommendation is three hours and the high level of recommendation four hours.

For dwellings, at least one habitable room, preferably a main living room, should meet at least the minimum criterion. Analysis was carried out in line with the current BRE 209 guidance, ensuring that the proposed development receives adequate levels of sunlight and no substantial loss of sunlight is incurred in the surrounding buildings. For this assessment we have targeted the medium level recommendation of three hours.

It should be noted, the BRE guidance in relation to this applies to rooms of all orientations, although if a room faces significantly north of due east or west it is unlikely to be met.

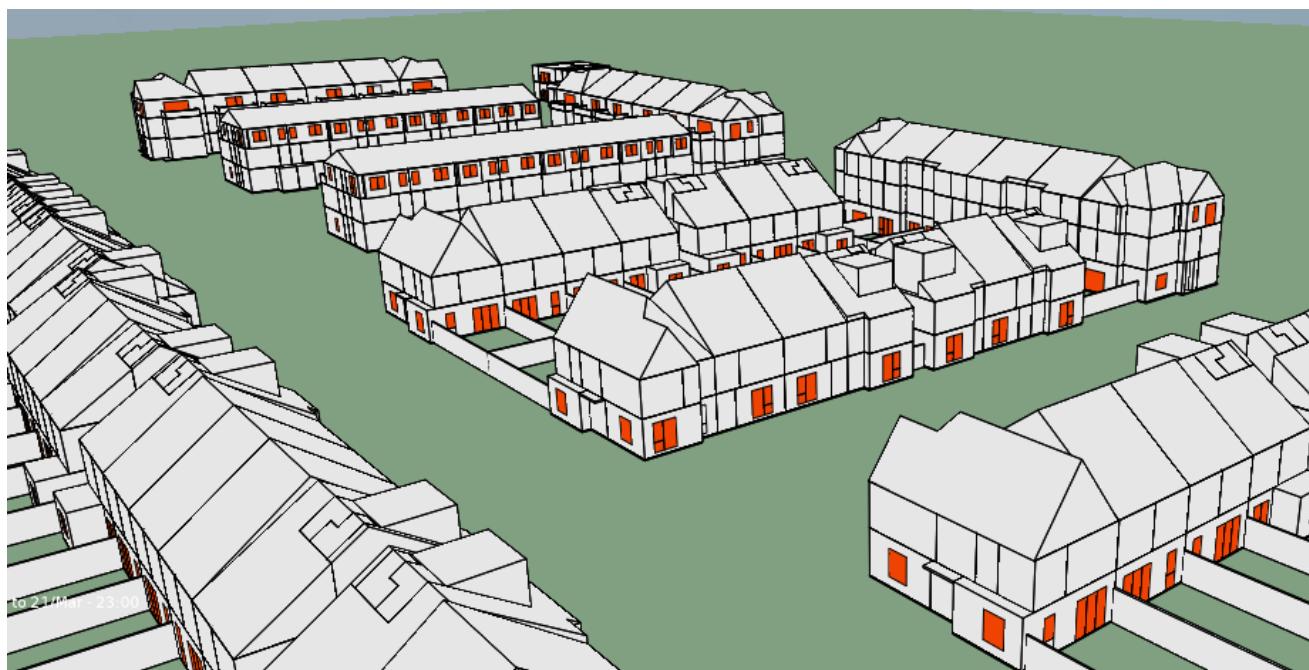

21/Mar - 00:00 to 21/Mar - 23:00

Hours

**Above:** Sunlight hours on March 21<sup>st</sup> (hours) legend

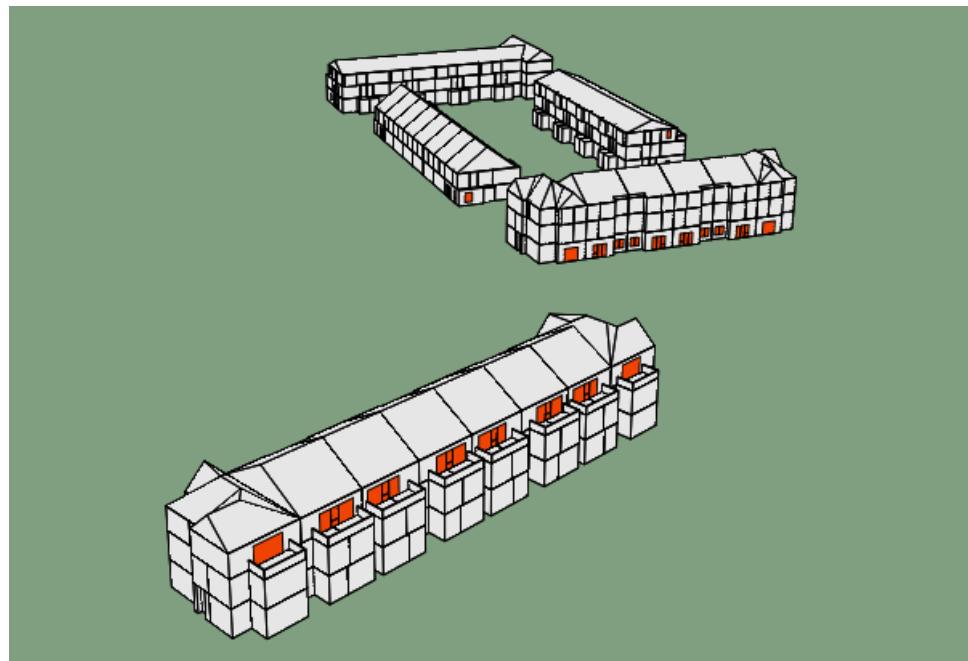

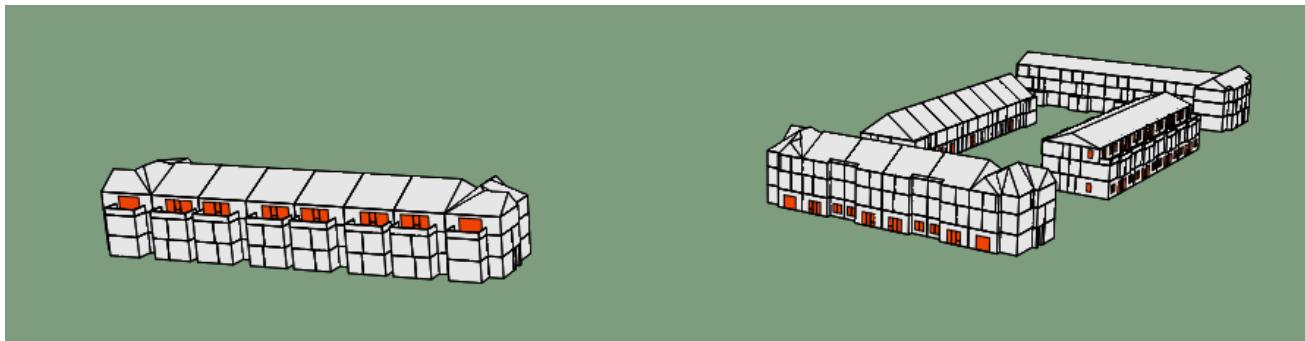

### Site A

**Above:** View of the proposed Site A from the south

The images above show that at least one habitable room in these spaces achieve 3 hours of Sunlight on March 21<sup>st</sup> and therefore will appear reasonably sunlit in line with BRE guidance.

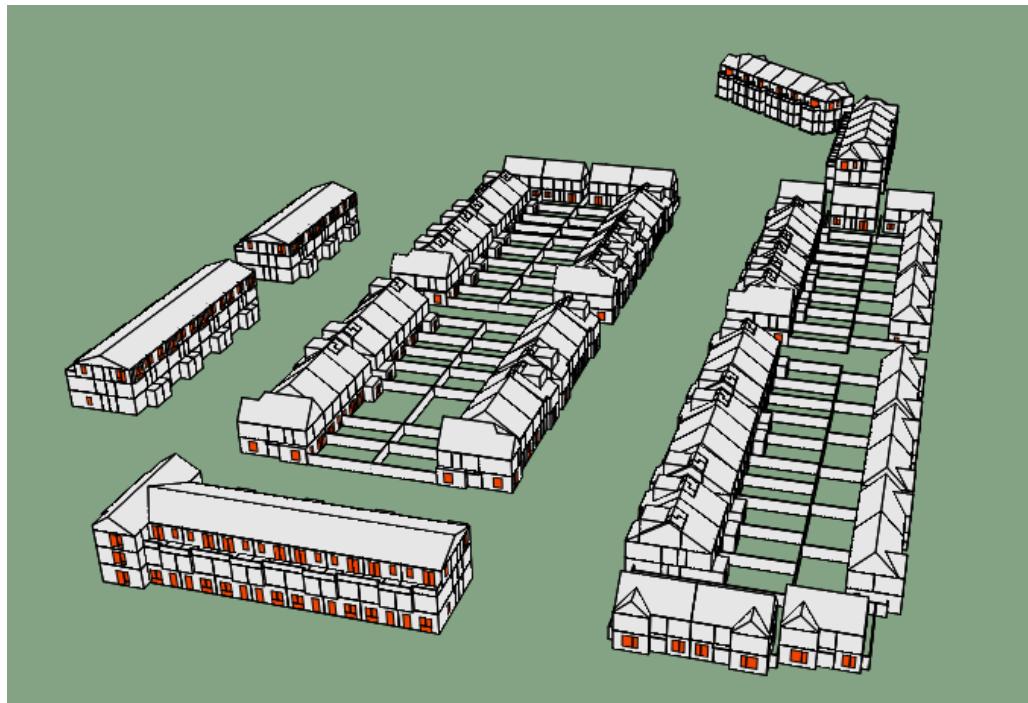

## Site B

**Above:** View of the proposed Site B from the south

The images above show that at least one habitable room in each space will achieve 3 hours of Sunlight on March 21<sup>st</sup> and therefore will appear reasonably sunlit in line with BRE guidance.

## Site C

**Above:** View of the proposed Site C from the south

The images above show that at least one habitable room in each space will achieve 3 hours of Sunlight on March 21<sup>st</sup> and therefore will appear reasonably sunlit in line with BRE guidance.

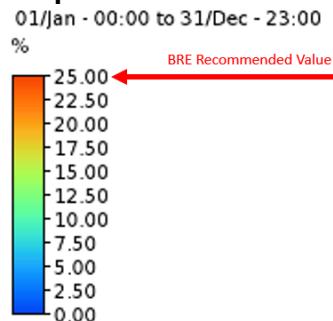

## Sunlight in New developments (BRE 209 2011)

### Annual Probable Sunlight Hours – Proposed Development

As stated in *Section 6* of this report, the sunlight assessment outlined in the now withdrawn BRE 209 (2011 edition) has also been included in this report. Including the superseded assessment allows for ease of review for Planning Authorities.

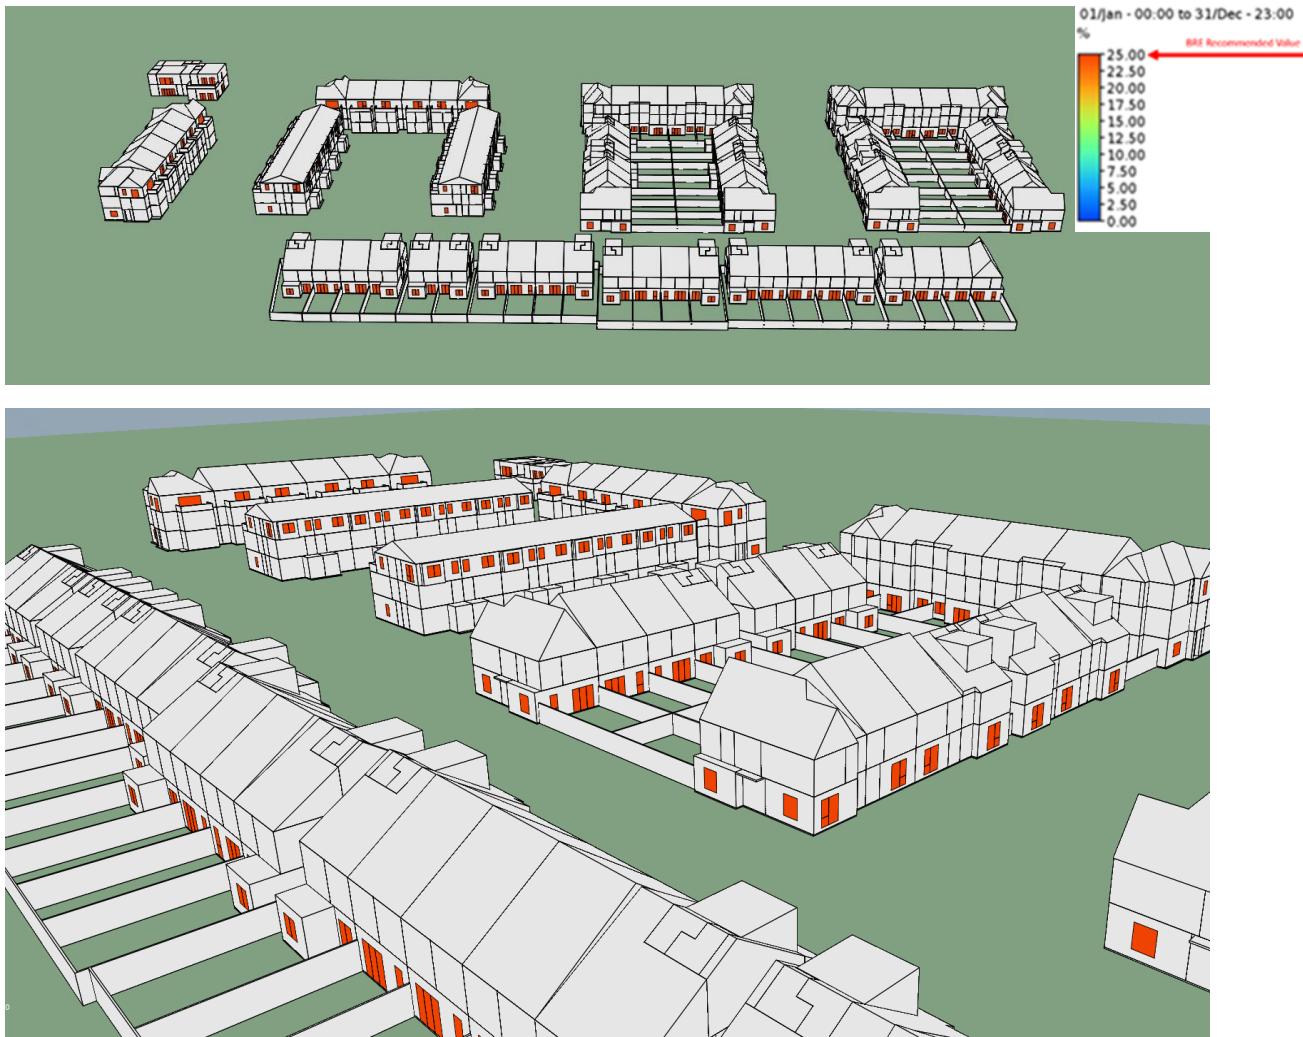

This Guidance states that the living spaces of these developments will appear adequately sunlit provided they receive 25% of their annual probable sunlight hours during the year and 5% of their probable sunlight hours during the winter months.

### Annual Assessment – Proposed Development

**Above:** Annual probable sunlight hours (%) legend

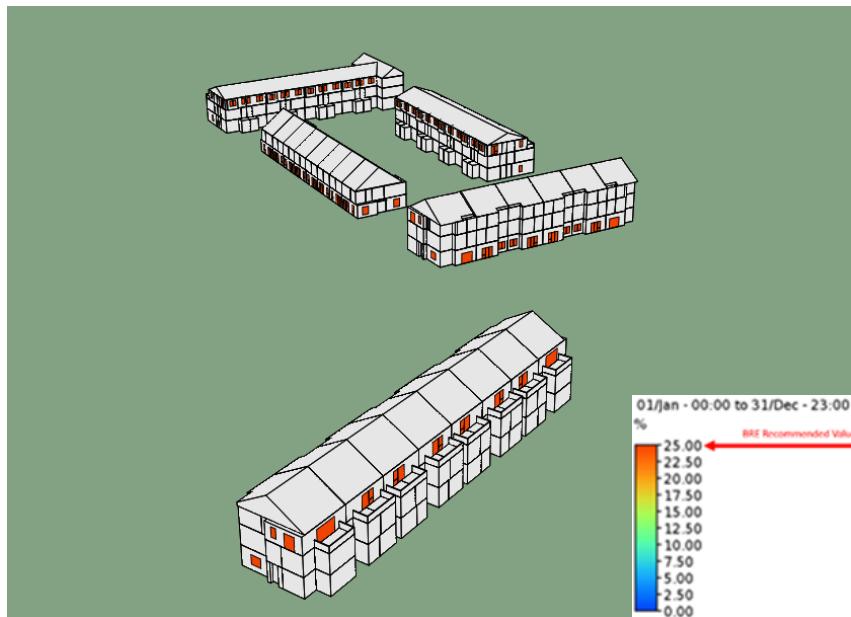

### Site A Living Spaces Annual Probable Sunlight Hours Assessment

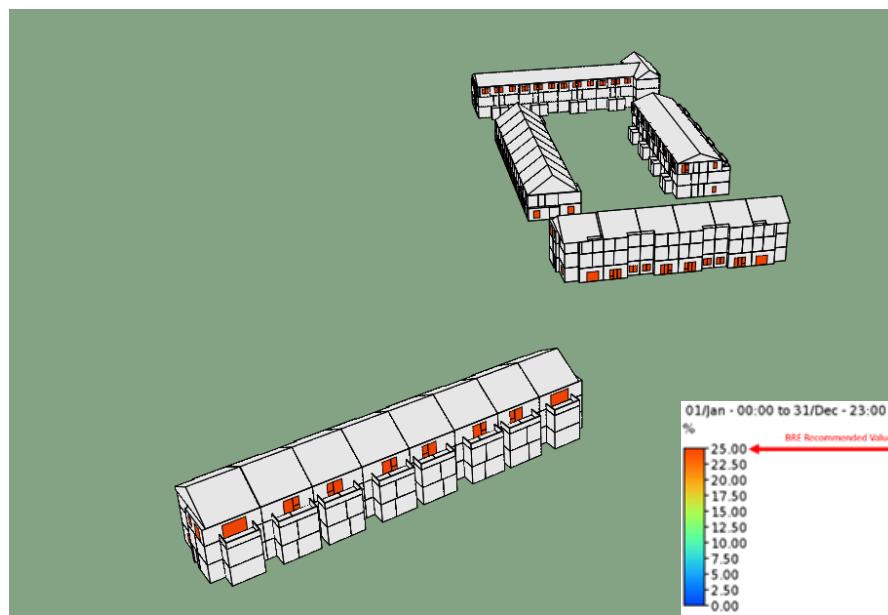

**Above:** View of the proposed Site A from the south

The images above show that all eligible living space windows within Site A of the proposed development achieve 25% of their annual probable sunlight hours (highlighted in red) meaning these spaces will appear reasonably sunlit in line with BRE guidance.

### Site B Living Spaces Annual Probable Sunlight Hours Assessment

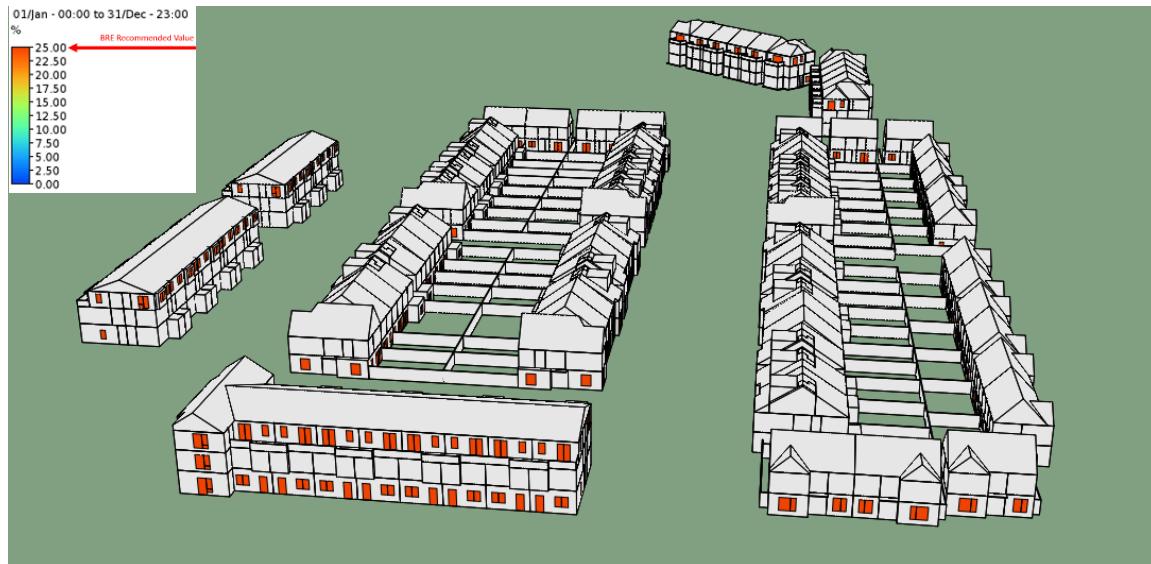

**Above:** View of the proposed Site B from the south

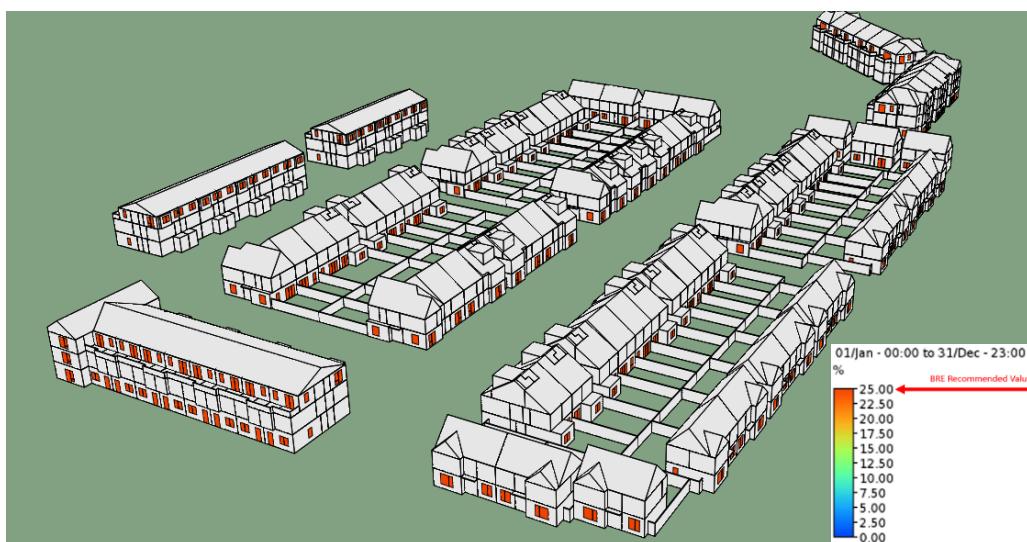

**Above:** View of the proposed Site B from the southwest

The images above show that all eligible living space windows within Site B of the proposed development achieve 25% of their annual probable sunlight hours (highlighted in red) meaning these spaces will appear reasonably sunlit in line with BRE guidance.

### Site C Living Spaces Annual Probable Sunlight Hours Assessment

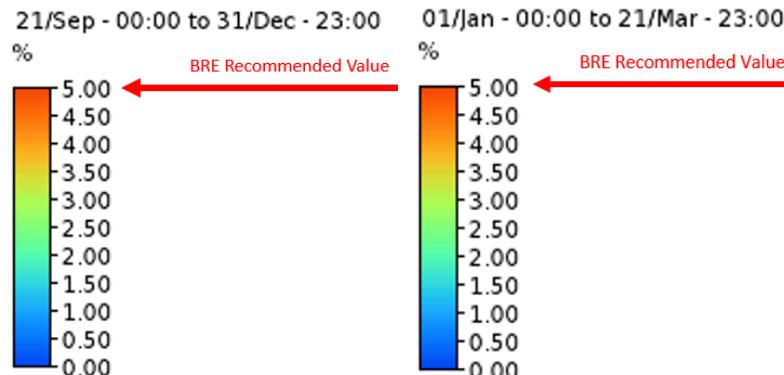

**Above:** View of the proposed Site C from the south

**Above:** View of the proposed Site C from the

The images above show that all eligible living space windows within Site C of the proposed development achieve 25% of their annual probable sunlight hours (highlighted in red) meaning these spaces will appear reasonably sunlit in line with BRE guidance.

### Annual Probable Sunlight Hours – Proposed Development: Winter Assessment

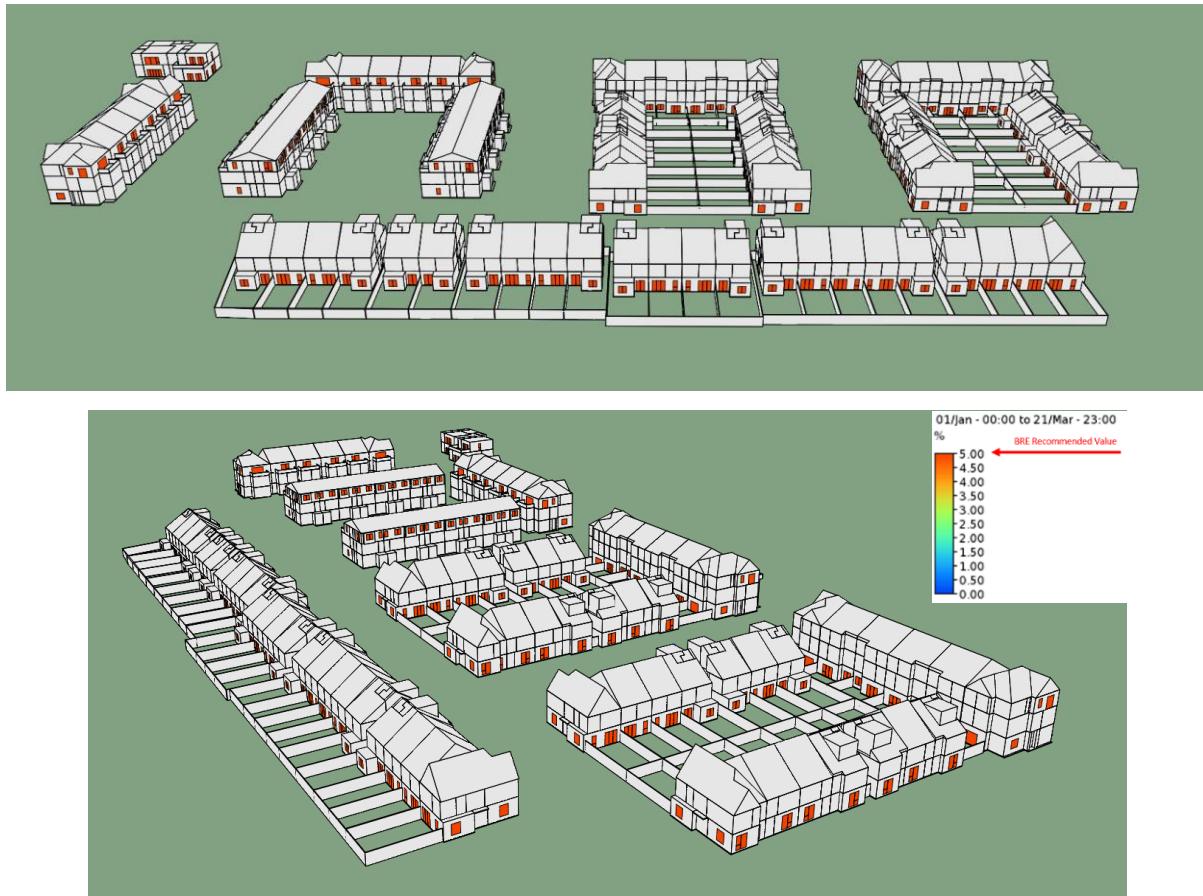

**Above:** Winter probable sunlight hours (%) legend

### Site A Living Spaces Winter Probable Sunlight Hours Assessment

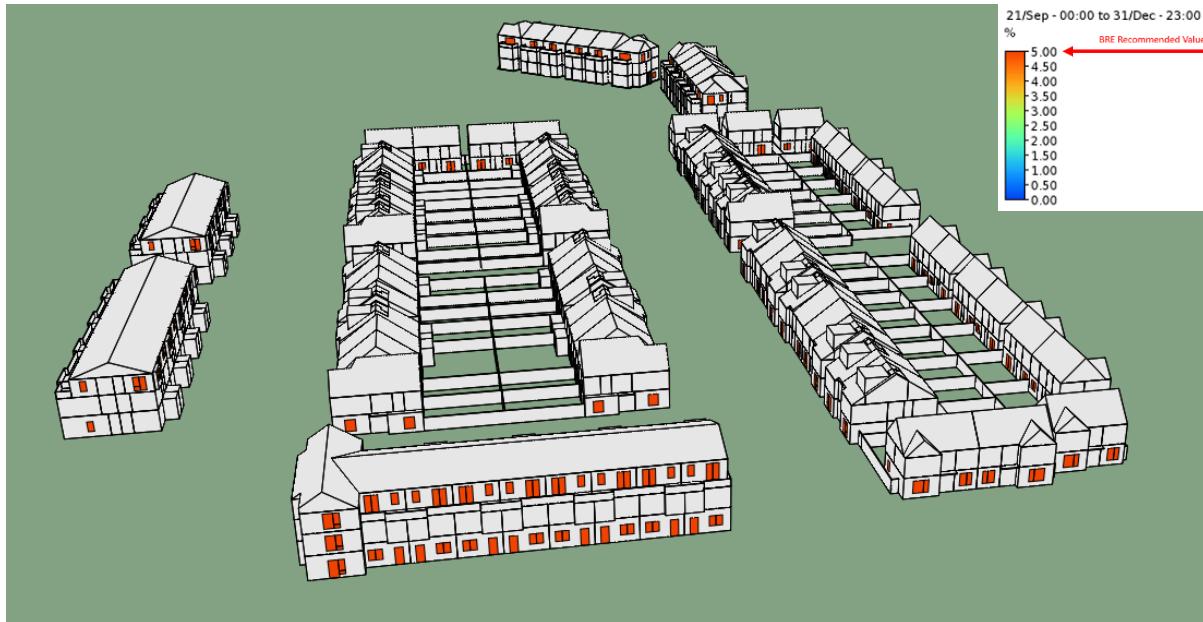

**Above:** View of the proposed Site A from the south

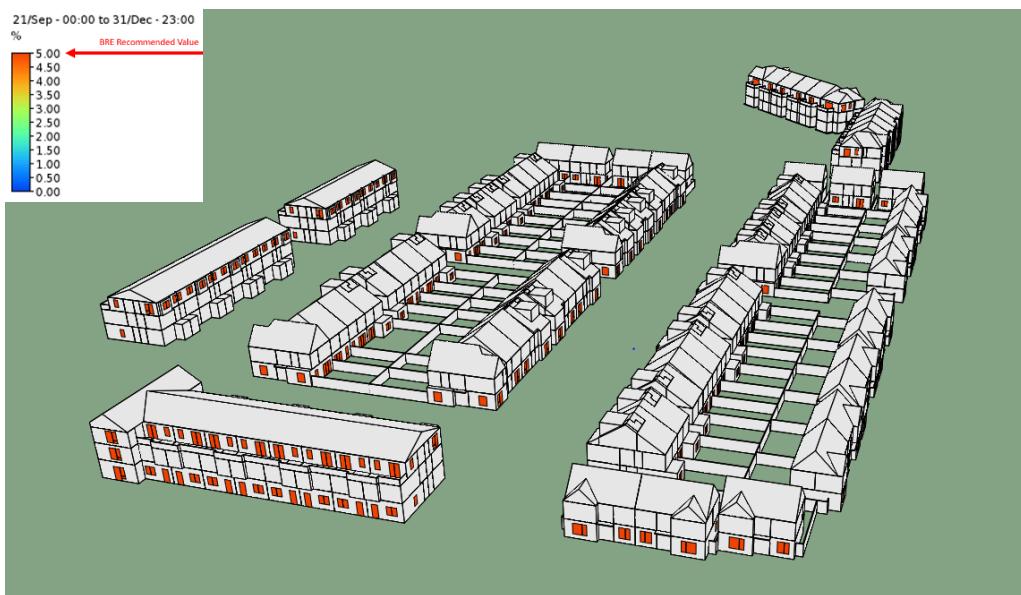

**Above:** View of the proposed Site A from the south

The images above show that all eligible living space windows within Site A of the proposed development achieve 5% of their probable sunlight hours during winter months (highlighted in red) meaning these spaces will appear reasonably sunlit in line with BRE guidance.

### Site C Living Spaces Winter Probable Sunlight Hours Assessment

**Above:** View of the proposed Site C from the south

**Above:** View of the proposed Site C from the west

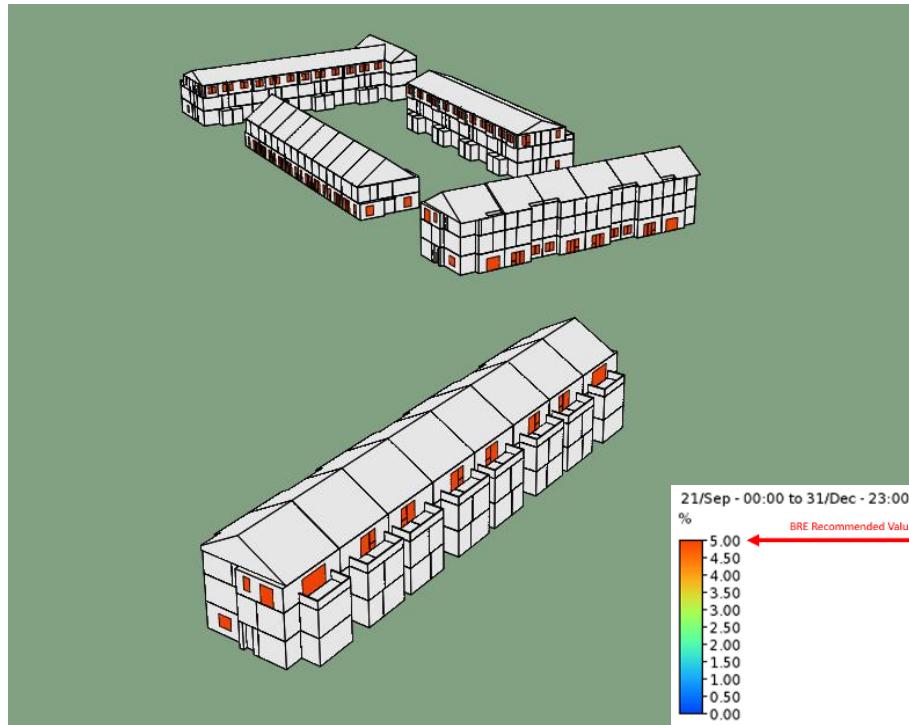

**Above:** View of the proposed Site C from the south

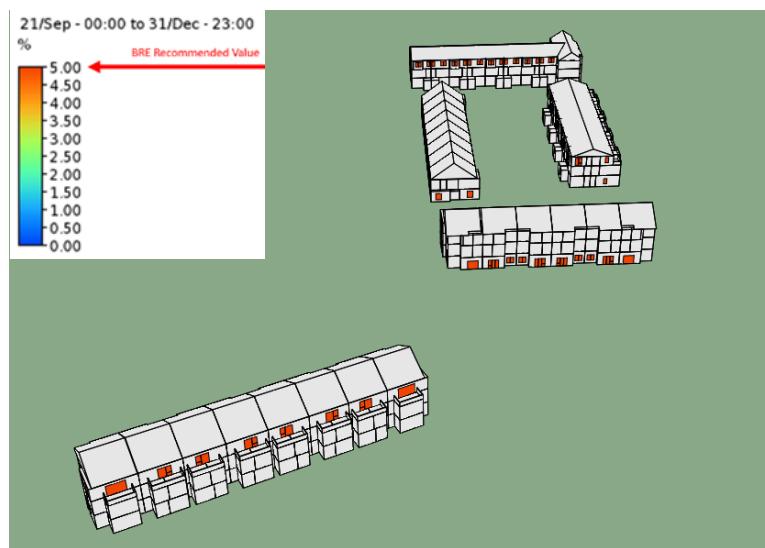

**Above:** View of the proposed Site C from the west

The images above show that all eligible living space windows within Site C of the proposed development achieve 5% of their probable sunlight hours during winter months (highlighted in red) meaning these spaces will appear reasonably sunlit in line with BRE guidance.

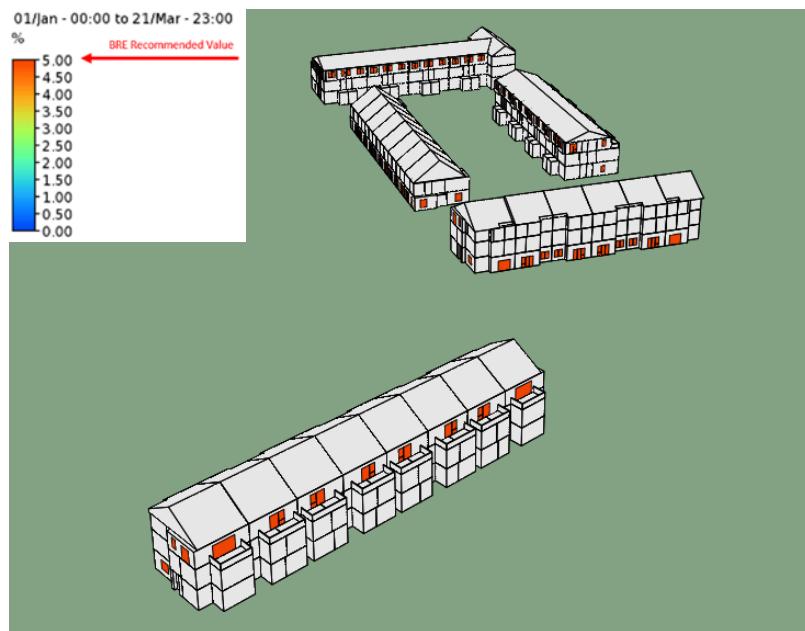

### Site B Living Spaces Winter Probable Sunlight Hours Assessment

**Above:** View of the proposed Site B from the south

**Above:** View of the proposed Site B from the southwest

**Above:** View of the proposed Site B from the South

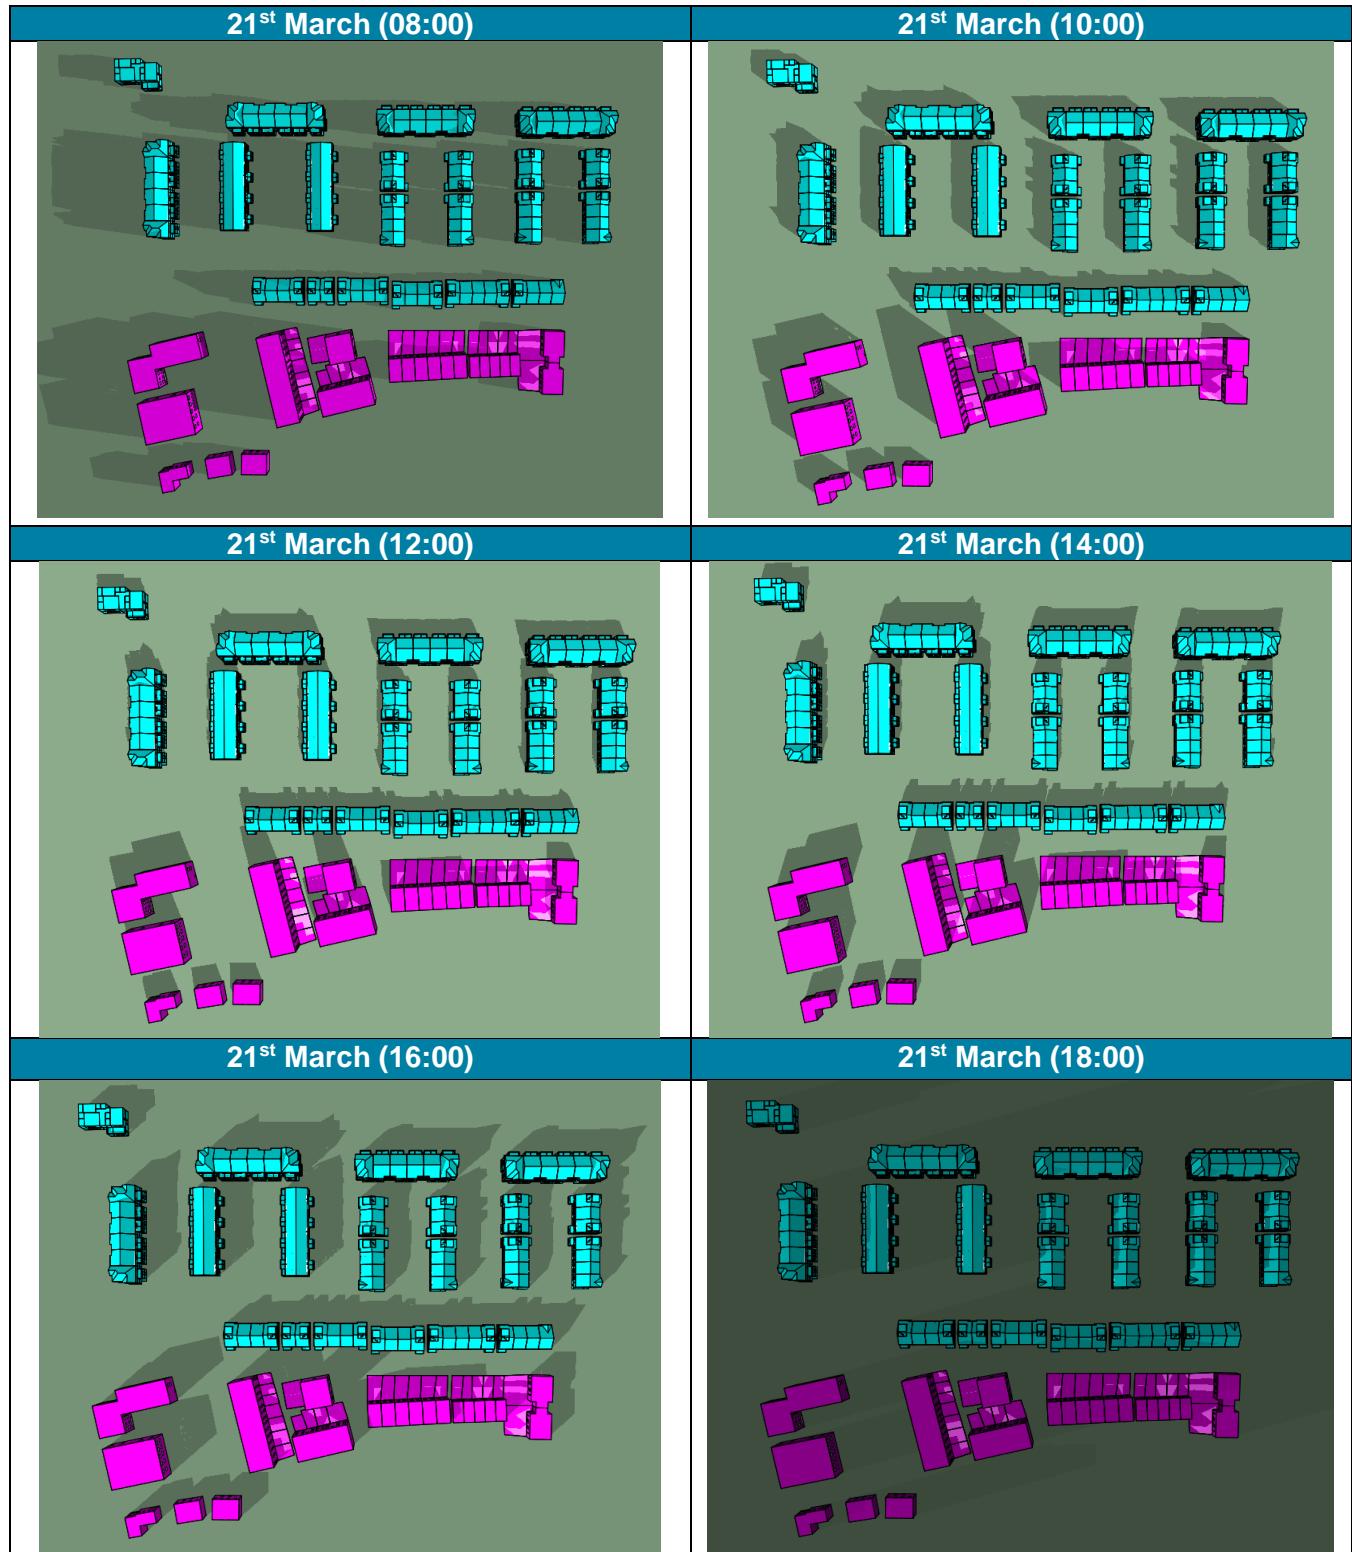

**Above:** View of the proposed Site B from the Southwest

The images above show that all eligible living space windows within Site B of the proposed development achieve 5% of their probable sunlight hours during winter months (highlighted in red) meaning these spaces will appear reasonably sunlit in line with BRE guidance.
