

11.0 TRAFFIC & TRANSPORTATION

11.1 Introduction

The lands that are the subject of this rEIAR extend to 23.7ha, which reflects the quarry area declared under the S.261 quarry registration in 2005. The quarry area that makes up the application for the substitute consent planning unit currently extends to approximately 20.16ha., which is located central to the project site. The lands surrounding the Site are used for agricultural purposes (including pasture and tillage), with plantations of trees located along the western, and eastern edges of the Site. An area of 'heath' and scrub occurs immediately adjacent to the south of the Site. Farmyards and one-off residential properties also occur in the vicinity of the Site.

The Site's existing and historical access is onto the L5155, which is located in the Site's south-eastern corner (see Figure 11-1). The L5155 joins the L1152 to the north, which is a local road linking Rathdrum and the R772 to the west, and the M11 to the east. Access to the Site is by means of an existing gravel road, extending predominantly north approximately 800m from the L5155. Planning permission (Ref. 06/4577) was granted by Wicklow County Council for a new access road and entrance to the sand and gravel pit in 2007, however, the use of this access is only permitted to an authorised quarry development and use of this access was suspended on refusal of the previous substitute consent under SU0121. It is proposed to revert to use this route should substitute consent be granted in this instance.

The current quarry void is centrally located within the EIA unit and roughly square in shape with the existing administration, maintenance, storage, and welfare facilities located at the southern edge of the Site, with the aggregate processing plant area located towards the centre of the Site.

Figure 11-1: Site Location Map (Source: www.openstreetmap.org)

It is understood that extraction on these lands has occurred since the c.1940. The requirement for EIA arose in 1990, and, therefore, this is the effective or baseline year from which the development is required to be assessed. This rEIAR supports an application for substitute consent that is retrospective in nature and thus the development is assessed in this rEIAR from 1990 to 2022 (current year). At the baseline in 1990 the quarried area has been determined in the Land, Soils and Geology Section of this rEIAR to extend to 0.75 ha with an average working base of 124mOD., and in 2022 to have expanded laterally to 20.16 ha. with an average working base of 114m AOD.

This section of the rEIAR considers and assesses traffic effects resulting from quarrying related activities that have been carried out on the subject Site.

11.2 Description of Development

The quarry extraction area, overburden stockpile area and plant processing lands, the subject of this rEIAR [the subject lands] are located at Ballynabarney North and Bolagh Lower, Redcross, Co. Wicklow approximately 3.5km southeast of Rathdrum and 3.5km northwest of Redcross.

As noted in section 11.1, the Site is currently accessed from the southeast from the L5155 that joins the L1152 to the north. Access to the Site is by means of an existing gravel road, extending approximately 800m north to the quarry.

The subject site is approximately 23.7ha. in size consisting of a sand and gravel quarry to an extant excavated floor depth of generally around 114 AOD which dips to approximately 111mOD in the Northwest corner. The operations at the quarry include the extraction of sand and gravel together with processing and stockpiling areas where materials are stored prior to being sold on the market.

11.3 Methodology

In order to meet the objective of this Chapter, to assess impacts the subject site may have had on the historical and existing road network, the traffic profile arising from the activities on the subject lands from baseline year (1990) to today (2022) was calculated.

The capacity of the surveyed junctions was assessed using the Transport Research Laboratory's (TRL) Junctions 9 computer programme.

The development traffic was assigned to the entrance/exit of the subject lands, and distributed on the public road network, the commensurate receiving environment, in so far as that is reasonable and practical to evidence.

11.4 Primary Sources of Information

An estimation of traffic generation, including trips relating to export of materials and staff trips, for the subject lands and its impact, including interaction with traffic in the surrounding area, was calculated with reference to historical levels of extraction and importation of material since 1990.

The quarry has historically operated for 5.5 days per week, 50 weeks per year. The historical annual extraction rate (tonnes per annum) has been used in determining the trips generated by the facility since 1990. Material leaving the site is transported in an average load of 25 tonnes.

Detailed trip generation figures since 1990, taking into account material extraction operations and staff trips, are examined in section 0 of this report.

11.5 Receiving Environment

11.5.1 Quarry Access

The Site is accessed via a priority-controlled T-Junction with the L5155, with the quarry located approximately 800m north of the L5155 junction. The access includes a gravel surface, which also provides access for a private development (Oakwood Stables) approximately 100m west of the L5155.

11.5.2 L5155

The L5155 local road is a two-way single carriageway running in a southwest-northeast direction. In the vicinity of the site, the road is approximately 4.5 - 5.0m wide with no footways or hard strips. The posted speed limit of the L5155 is 80kph. The L5155 connects development traffic to the L1152 local road.

11.5.3 L1152

The L1152 local road is a two-way single carriageway running in a northwest-southeast direction providing connection to the R752 Regional Road in the west, and the M11 in the East. The road is approximately 5.0m wide with no footways or hard strips. The posted speed limit of the L1152 is 80kph.

11.5.4 Network Improvements between 1990-2022

There has been one significant network improvement between 1990 and 2022, which includes the Transport Infrastructure Ireland's (TII) upgrade to the N11:

- The M11 Motorway between Arklow and Rathnew was opened in 2015 and consisted of 16km of dual carriageway on the Arklow to Rathnew section of the N11, along with associated link roads, side roads and junctions which connect the existing N11 Arklow Bypass with the N11 Rathnew/Ashford Bypass. This section of road is currently used by approximately 80% of the HGV development traffic entering the site.

11.5.5 Historical Traffic Conditions

The operations at the Site include the extraction of sand and gravel and the processing of this extracted material.

The quarry has always operated for 5.5 days per week for approximately 50 weeks per year. The historical annual extraction rate (tonnes per annum) has been used in determining the trips generated by the facility since 1990. Material leaving the site is transported in an average load of 25 tonnes.

Observed trip generation figures since 1990, taking into account material extraction operations and staff trips are provided in Table 11-1 and Table 11-2.

Table 11-1: Derived Trip Generation - Extraction of Material and Staff Trips

Year	Material Extraction					Staff Trips (LVs)
	Tonnes per annum	Tonnes per week	Loads per week	Loads per day	Trips per day (HGVs)	
1990*	25,000	500	20	3.6	8	8
1991	25,000	500	20	3.6	8	8
1992	25,000	500	20	3.6	8	8

2020	20	12	32	37.5%
2021	20	12	32	37.5%

11.6 Trip Distribution

Generally, there were four haulage routes used between 1990 and 2022. These included:

- 1) HGVs exit the site access and turn right, travelling south on the L5155.
- 2) HGVs exit the site access and turn left, travelling north on the L5155. At the junction of the L5515 and L1152 local roads, they turn left and travel west along the L1152 to join the R752 at the railway bridge 1.5km north-east of Rathdrum.
- 3) HGVs exit the site access and turn left, travelling north on the L5155. At the junction of the L5515 and L1152 local roads, they turn right and travel east before joining the L1113. HGVs then turn right onto the L1157 to join the N11 at 'The Tap' on the R772.
- 4) HGVs arrive at the site access from the M11 at 'The Beehive'. They enter the L1113 from the M11 and travel southwest to join the L1152 before turning left onto the L5515 and arriving at the site access.

11.7 Road Impact

11.7.1 Traffic Volumes

Traffic counts (12-Hour classified counts) were carried out on the 9th of March 2022 at the following 8 junctions (the detailed results of the traffic survey are summarised in Appendix A):

- Junction 1 – L5155/Existing & Historical Site Access T-Junction
- Junction 2 – L5155/L5665 T-Junction
- Junction 3 – L1152/L5155 T-Junction
- Junction 4 – R752/L1152 T-Junction
- Junction 5 – L1152/L1113 T-Junction
- Junction 6 – L1113/L1157 T-Junction
- Junction 7 – R772/L1157/L5159 Staggered Crossroads Junction
- Junction 8 – N11/R772/L1113 Roundabout

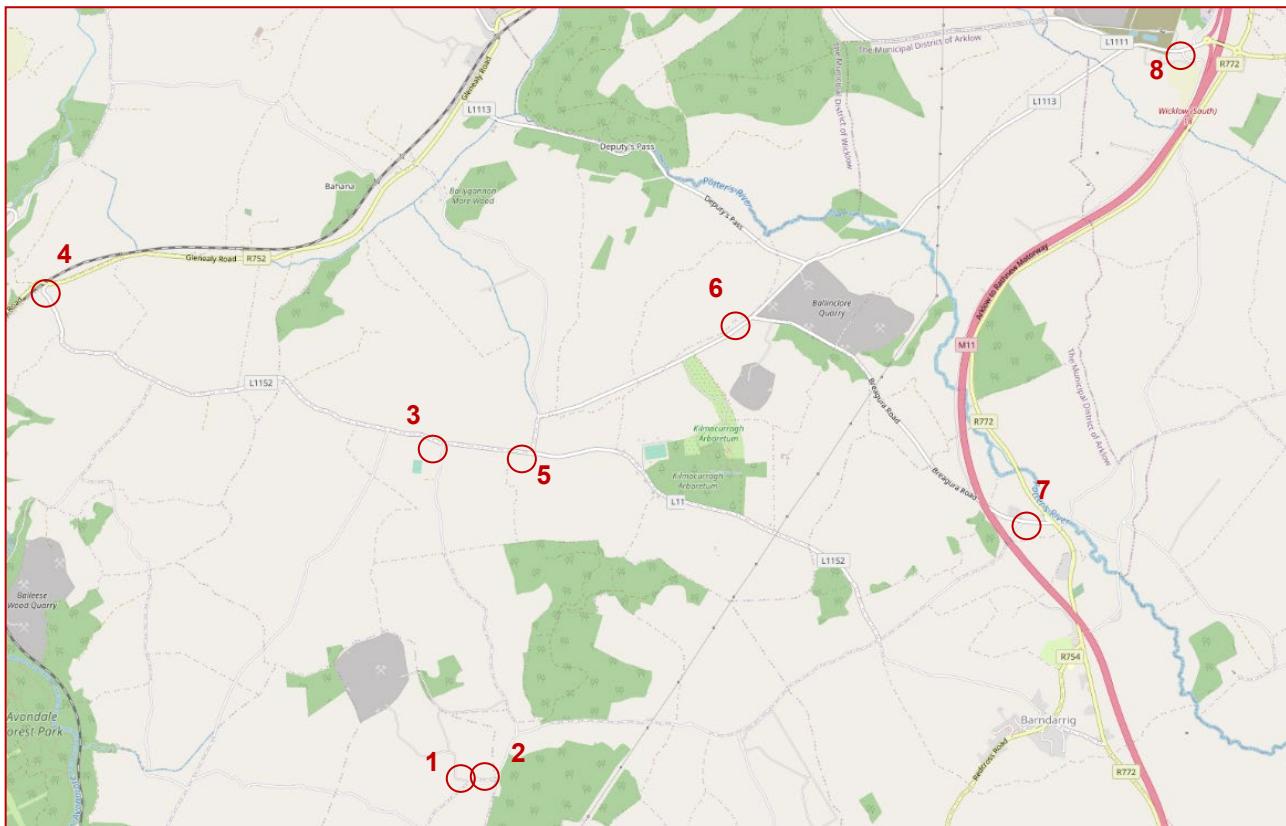

Figure 11-2: Location of Assessed Junctions (Source: www.openstreetmap.org)

Each of the traffic counts were carried out between 7:00am and 7:00pm, this time period encompassing the main operating hours of the quarry. This time period also includes the peak hours on the adjacent road network.

Surveyed vehicles were broken down into five categories as follows: -

- 1) Cars.
- 2) LGV's (Light Goods Vehicles).
- 3) OGV1 (Two and three axle goods vehicles).
- 4) OGV2 (Four and five axle goods vehicles).
- 5) Buses.

Three documents published by TII, formerly known as the National Roads Authority (NRA), have been used to estimate the historical daily traffic flows on the network from the 2022 traffic count data.

- 1) Growth rates from TII Publication PE-PAG-02017 "Project Appraisal Guidelines – Unit 5.3" (2021) have been used to reduce the traffic counts annually from 2022 to 2016.
- 2) Growth rates from TII Publication PE-PAG-02017 "Project Appraisal Guidelines – Unit 5.3" (2016) have been used to reduce the traffic counts annually from 2016 to 2013.
- 3) Growth rates from the "Project Appraisal Guidelines - Unit 5.5" published by the NRA in 2011, have been used to reduce the traffic counts annually from 2013 to 1990.

In the documents listed above, a medium growth scenario has been adopted (a ‘medium’ growth scenario was assumed given the site location and scale).

Table 11-3: Historical Years Traffic Growth Factors (County Wicklow)

Year	Low Growth		Medium Growth		High Growth	
	LV	HV	LV	HV	LV	HV
2016 - 2030	1.0140	1.0361	1.0157	1.0377	1.0189	1.0412
2013 - 2030	1.0109	1.0221	1.0140	1.0237	1.0154	1.0242
2006 - 2025	1.009	1.005	1.011	1.008	1.020	1.017

Section 2.1 of the “Traffic and Transport Assessment Guidelines” published by TII recommends that in an urban or congested setting, a traffic assessment should be undertaken at junctions where the development traffic exceeds 5% of the existing or background traffic, or 10% of background traffic when located in rural areas. As the subject site is located in a rural area, the threshold used for this assessment is 10%. As such, where development traffic is below the 10% threshold at any given junction, the development’s impact on that junction is deemed to be negligible.

The historical development traffic and the historical background traffic were used to determine the percentage of development traffic at each junction between 1990 to 2022 (See Appendix B). Following assessment, it was found that Junctions 1 and 2 exceeded the 10% threshold between 1990 and 2022, so warranted further investigation and assessment. As junctions 3 to 8 did not exceed the threshold between 1990 and 2022, no further assessment was required at these junctions, as the impacts are deemed to be negligible.

The following section outlines capacity analysis at junctions 1 and 2.

11.7.2 Junction Capacity Analysis

Using the data provided in Appendix B, capacity analysis was undertaken at Junction 1 and 2. As the percentage of development traffic changes at each junction between 1990 and 2022, this assessment identifies the year with the highest percentage of development traffic at each junction (i.e. the worst case scenario), and undertakes capacity analysis of that junction in that year. The Transport Research Laboratory’s (TRL) Junctions 9 computer programme was used to model the junction’s performance. Table -11-4 identifies the junctions to be assessed, including the year and percentage of development traffic in that year.

Table -11-4 Junctions Requiring Further Assessment

Junction	Year	% of Development Traffic
Junction 1	2004	31.60
Junction 2	2004	25.15

Junction performance is measured as a ratio between the flow and capacity (RFC). The capacity analysis has been carried out for a period of 12-hours, which corresponds to the operational hours of the Sand and Gravel pit for the respective assessment year. A rural junction with an RFC below 0.85 is considered to be operating within capacity, and an RFC of 0.85 indicates a junction operating at capacity.

The detailed junction capacity analysis outputs for the analysed junctions are contained within Appendix C to this report. As can be seen in Appendix C, the results indicate that each of the junctions assessed have operated within capacity. Therefore, the development traffic between 1990 and 2022 was found to have a negligible impact on the local road network.

11.7.3 Collision History

The Road Safety Authority website (www.rsa.ie) was consulted to identify historical collisions in the vicinity of both the current and historical quarry accesses. The website includes summary information on recorded collision occurrence for the period 2005 to 2016 (see Figure 11-3).

Four minor collisions were identified on the local road network between 2005 and 2016. The Road Safety Authority website does not permit a forensic assessment of the collision data, however, the low number of collisions, and the minor severity of the collisions recorded, do not indicate a collision pattern or clusters at, or near, the development site.

Operation of the development site between 2005-2016 (only available data) is deemed to have had a negligible impact on road safety.

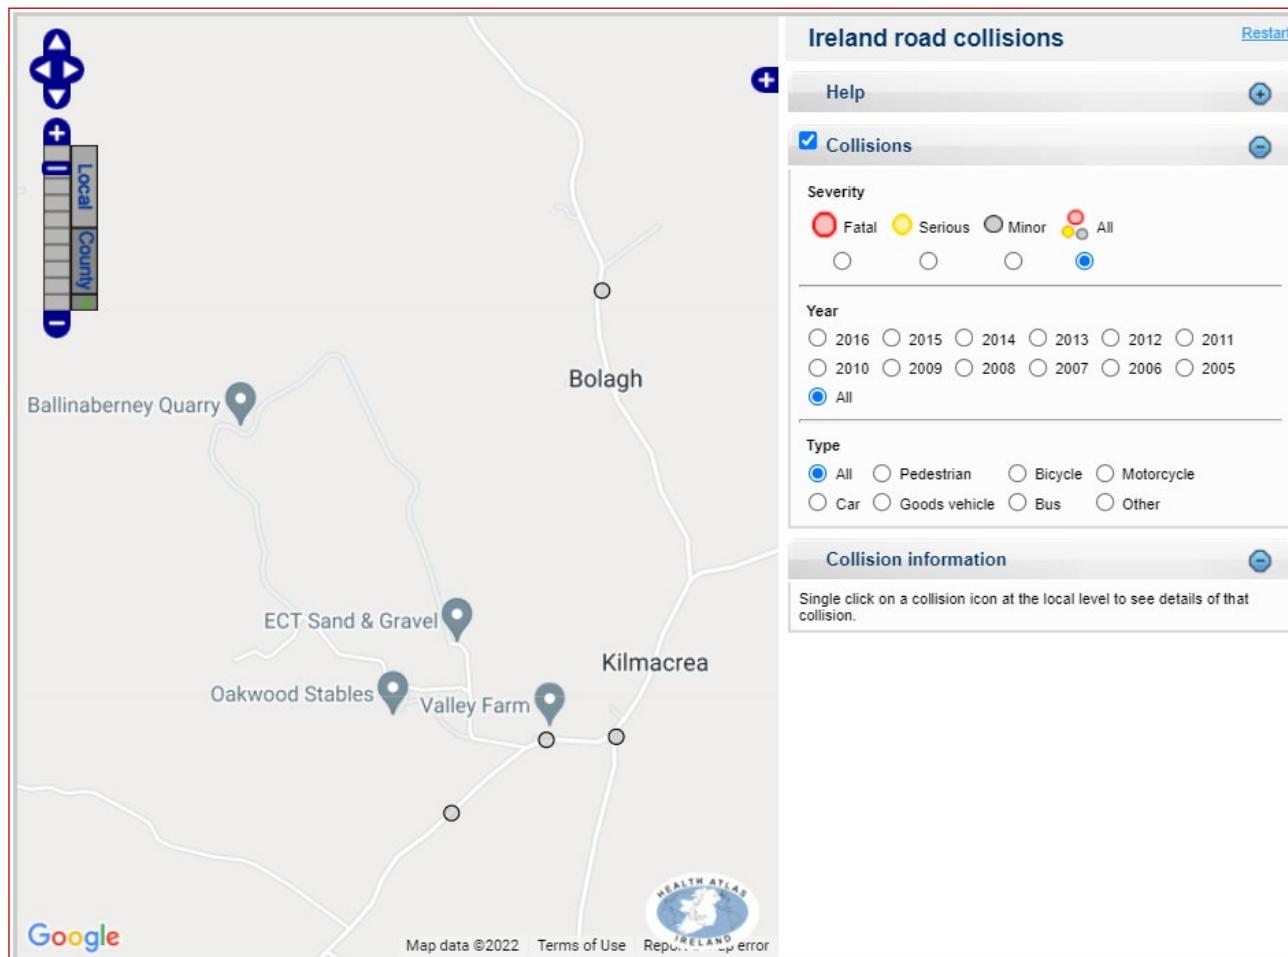

Figure 11-3: Historical Collisions in the Vicinity of the Quarry Access (Source: www.RSA.ie)

11.7.4 Sightlines

The visibility splays at the existing/historical development access were assessed based on the criteria in TII Publication DN-GEO-03060 “Geometric Design of Junctions (priority junctions, direct accesses, roundabouts, grade-separated and compact grade-separated junctions)”.

The entrance to the quarry is located on the L5155. The L5155 continues northeast of the Site access in one direction and southwest of the Site access in the other direction. Vehicles travelling on the L5155 have priority over vehicles entering/leaving the Site. The posted speed limit on this road is 80kph. Therefore, visibility was assessed from a 3.0m setback for 160m in both directions from the Site access.

- **Visibility to the southwest:** Visibility to the southwest was found to exceed the 160m requirement.
- **Visibility to the northeast:** Visibility to the northeast was measured at approximately 65m, which is below the required 160m. Visibility is restricted by the L5155 horizontal alignment, and mature trees and vegetation.

Whilst visibility is below that required in TII Publication DN-GEO-03060, there have been no recorded collisions at the quarry access/L5155 junction. Also, as the predominant movement of traffic exiting the quarry turns east on the L5155, the opportunity for westbound traffic (traffic most affected by the reduced visibility) to conflict with HGVs exiting the quarry access is removed.

11.8 Mitigation Measures

The mitigation measures currently employed on the subject lands and surrounding road network by the development are set out here. Where possible, the origin of those mitigation measures is noted in order to provide an assessment to historical mitigation measures.

11.8.1 Roads and Access

A new quarry access has been granted planning approval by Wicklow County Council (permission granted in 2007). The new access has been constructed and accesses the L5155 north of Kilmacrea crossroads. The use of this access is only permitted to an authorised quarry development and use of this access was suspended on refusal of the previous substitute consent under SU0121 until such time the quarry lands are authorised. It is proposed to revert to use this route should substitute consent be granted in this instance.

The new access shall be located on the L5155, approximately 680m north of the existing/historical access.

11.8.2 Parking Provision

A total of 8No. car parking spaces are provided on-site, this level of parking provision is considered to be sufficient for the number of staff working on site, and any miscellaneous trips that may occur.

11.8.3 Pedestrians & Cyclists

There are no footpaths or cyclist provisions in the vicinity of the site due to the site being located in a rural area.

11.8.4 Public Transport

There are no public transport provisions in the vicinity of the site.

11.9 Access for People with Disabilities

Due to the nature of the development, it likely was not, and is not, considered necessary to provide specific disabled access facilities on the subject site. Workers who have a disability will have had or be provided with adapted equipment.

12.0 CUMULATIVE EFFECTS

There is a permitted C&D waste recycling facility located approximately 400m to the southeast of the quarry that accepts low volumes of C&D wastes (c.5,000t per annum) such as waste concrete and soil and stone for recovery and recycling. The facility is owned and operated by Mr. Vincent Cousins who also operates the quarry. Deliveries to the recycling facilities are low with about 2 No. deliveries per day and are typically made by the trucks associated with the quarry as a backload from sand and gravel deliveries offsetting any additional traffic movements. It is considered that no significant cumulative impacts have arisen as a result of the activities at the Site since 1990.

13.0 CONCLUSIONS AND RECOMMENDATIONS

- 5) The Site's existing, historical, access is located on the L5155, in the site's south-eastern corner. Access to the Site is by means of an existing gravel road, approximately 800m long. Planning permission (Ref. 06/4577) was granted by Wicklow County Council for a new access road and entrance to the sand and gravel pit in 2007, which has been constructed and use is only permitted to an authorised development. It is proposed to revert to use this route should substitute consent and further planning permissions be granted in respect of the quarry
- 6) An estimation of traffic generation, including trips relating to export, and import, of materials and staff trips, for the subject lands and its impact, including interaction with existing and expected traffic in the surrounding area, was calculated with reference to historical levels of extraction and importation of material since 1990.
- 7) The quarry has always operated for 5.5 days per week for approximately 50 weeks per year. The historical annual extraction rate (tonnes per annum) has been used in determining the trips generated by the facility since 1990. Material leaving the site is transported in an average load of 25 tonnes.
- 8) The historical development traffic and the historical background traffic were used to determine the percentage of development traffic at each junction between 1990 to 2022. Following assessment, it was found that Junctions 1 and 2 exceeded the 10% threshold between 1990 and 2022, so warranted further investigation and assessment. As junctions 3 to 8 did not exceed the threshold between 1990 and 2022, no further assessment was required at these junctions, as the impacts are deemed to be negligible.
- 9) A junction capacity analysis was undertaken at Junction 1 and 2 based on an analysis of the historical background and development traffic at that location in accordance with Section 2.1 of the "Traffic and Transport Assessment Guidelines" published by TII. The results of the junction analysis indicates that the junctions have continued to operate within capacity between 1990 and 2022. Therefore, the development traffic between 1990 and 2022 was found to have a **negligible** impact on the local road network.
- 10) The low number of collisions, and the minor severity of the collisions recorded, do not indicate a collision pattern or cluster at, or near, the development site. Operation of the development site between 2005-2016 (only available data) is therefore deemed to have had a **negligible** impact on road safety.
- 11) Sightlines have been assessed against Section 5.6.3 of TII Publications document DN-GEO-03060, which requires 160m of unobstructed visibility (where the design speed is 80kph) at a point 3.0m back from the edge of the carriageway.

Whilst visibility is below that required in TII Publication DN-GEO-03060, there have been no recorded collisions at the quarry access/L5155 junction. Also, as the predominant movement of traffic exiting the quarry turns east on the L5155, the opportunity for westbound traffic (most affected by the reduced visibility) to conflict with HGVs exiting the quarry access is removed.

Additionally, a new quarry access has been granted planning approval by Wicklow County Council (permission granted in 2007). The new access has been constructed; however, use is only permitted to an authorised development. It is proposed to use this entrance on the grant of substitute consent and further permissions which will offer improvements over the sightlines at the existing and historical access. The new access shall be located on the L5155, approximately 680m north of the existing/historical access.

Summary of junction performance

	12hrs			
	Queue (Veh)	Delay (s)	RFC	LOS
Base Year				
Stream B-C	0.0	10.07	0.02	B
Stream B-A	0.0	11.89	0.01	B
Stream C-AB	0.0	11.78	0.03	B
2004 Year				
Stream B-C	0.0	9.99	0.01	A
Stream B-A	0.0	11.34	0.01	B
Stream C-AB	0.0	11.70	0.02	B
2004 Year + Dev Traffic				
Stream B-C	0.0	13.16	0.03	B
Stream B-A	0.0	17.37	0.02	C
Stream C-AB	0.0	11.94	0.05	B

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

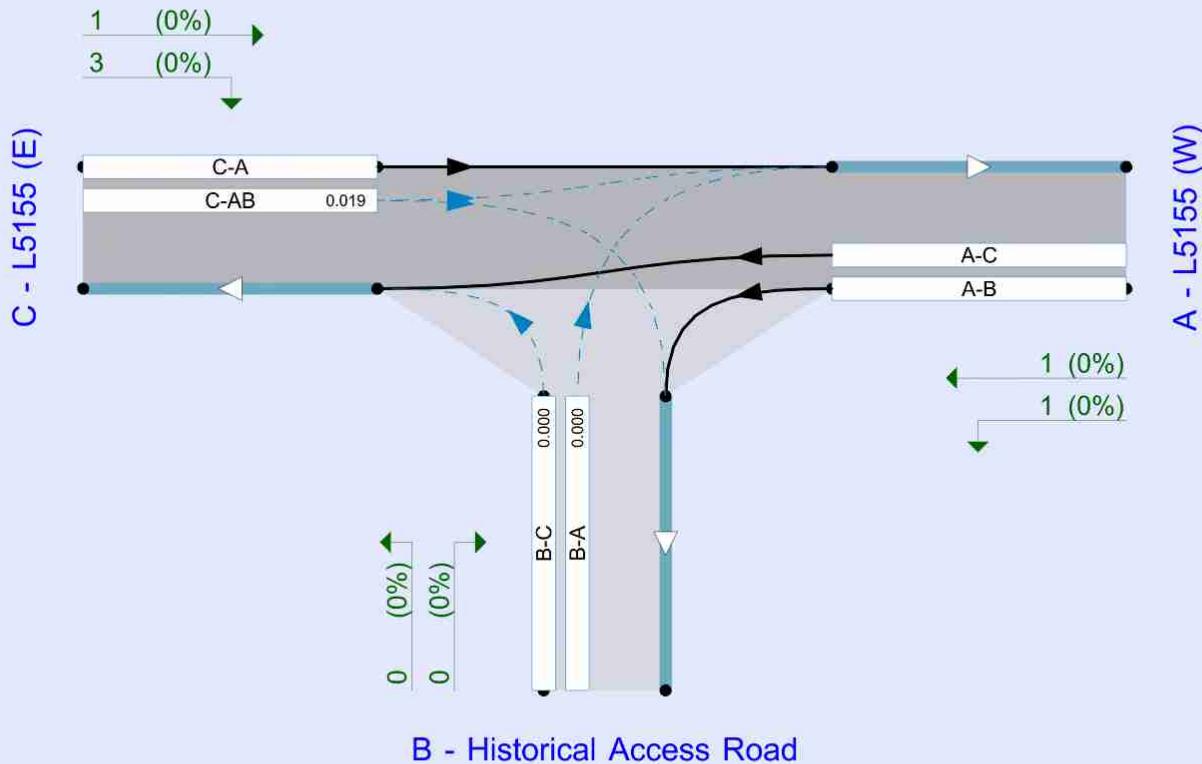

File summary

File Description

Title	
Location	
Site number

Jobnumber	
Enumerator	PMCE\farnanr
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perTimeSegment	s	-Min	perMin

Flows show original traffic demand (Veh/TS).
 Streams (downstream end) show RFC. ()
 Time Segment: 07:00-07:15

The junction diagram reflects the last run of Junctions.

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

Analysis Set Details

ID	Include in report	Network flow scaling factor (%)	Network capacity scaling factor (%)
A1	✓	100.000	100.000

Demand Set Details

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time period length (min)	Time segment length (min)	Run automatically
D1	Base Year	12hrs	DIRECT	07:00	19:00	720	15	✓

Base Year, 12hrs

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Major arm width	C - L5155 (E) - Major arm geometry	For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Junction 1	T-Junction	Two-way		4.72	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	L5155 (W)		Major
B	Historical Access Road		Minor
C	L5155 (E)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - L5155 (E)	5.00			80.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B - Historical Access Road	One lane plus flare	8.00	6.30	4.50	4.00	4.00		1.00	60	20

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (Veh/TS)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	128.386	0.098	0.247	0.155	0.352
1	B-C	161.256	0.103	0.261	-	-
1	C-B	155.073	0.251	0.251	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Vehicle mix varies over time	Vehicle mix varies over turn	Vehicle mix varies over entry	Vehicle mix source	PCU Factor for a HV (PCU)	O-D data varies over time
✓	✓	✓	HV Percentages	2.00	✓

Demand overview (Traffic)

Arm	Linked arm	Profile type	Use O-D data	Scaling Factor (%)
A - L5155 (W)		DIRECT	✓	100.000
B - Historical Access Road		DIRECT	✓	100.000
C - L5155 (E)		DIRECT	✓	100.000

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

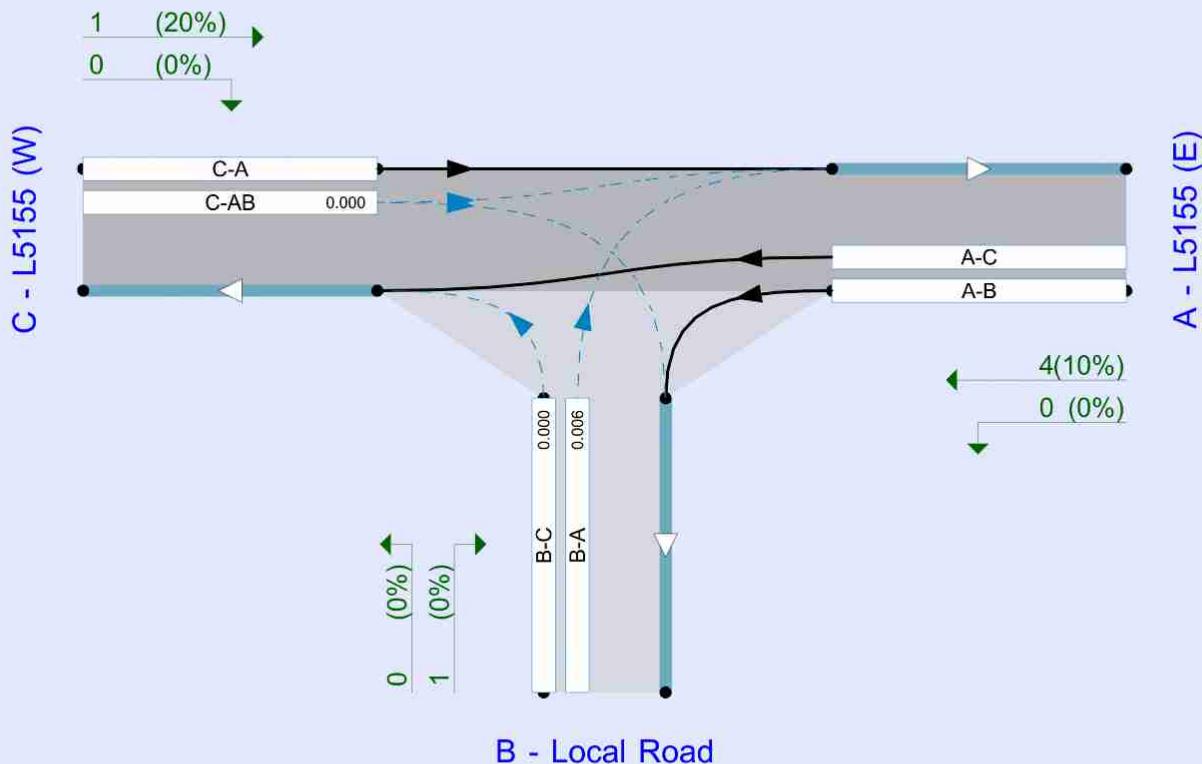

File summary

File Description

Enumerator	PMCE\farnanr
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perTimeSegment	s	-Min	perMin

Flows show original traffic demand (Veh/TS).
Streams (downstream end) show RFC.
Time Segment: 07:00-07:15

The junction diagram reflects the last run of Junctions.

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

Analysis Set Details

ID	Include in report	Network flow scaling factor (%)	Network capacity scaling factor (%)

2004 Year + Dev Traffic, 12hrs

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Major arm width	C - L5155 (W) - Major arm geometry	For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Junction 2	T-Junction	Two-way		1.07	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	L5155 (E)		Major
B	Local Road		Minor
C	L5155 (W)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - L5155 (W)	5.50			45.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B - Local Road	One lane plus flare	7.00	3.80	2.60	2.20	2.20		1.00	50	100

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (Veh/TS)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
1	B-A	138.028	0.103	0.260	0.163	0.371
1	B-C	154.530	0.097	0.245	-	-
1	C-B	150.006	0.238	0.238	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Vehicle mix varies over time	Vehicle mix varies over turn	Vehicle mix varies over entry	Vehicle mix source	PCU Factor for a HV (PCU)	O-D data varies over time
✓	✓	✓	HV Percentages	2.00	✓

Demand overview (Traffic)

Arm	Linked arm	Profile type	Use O-D data	Scaling Factor (%)
A - L5155 (E)		DIRECT	✓	100.000
B - Local Road		DIRECT	✓	100.000
C - L5155 (W)		DIRECT	✓	100.000
