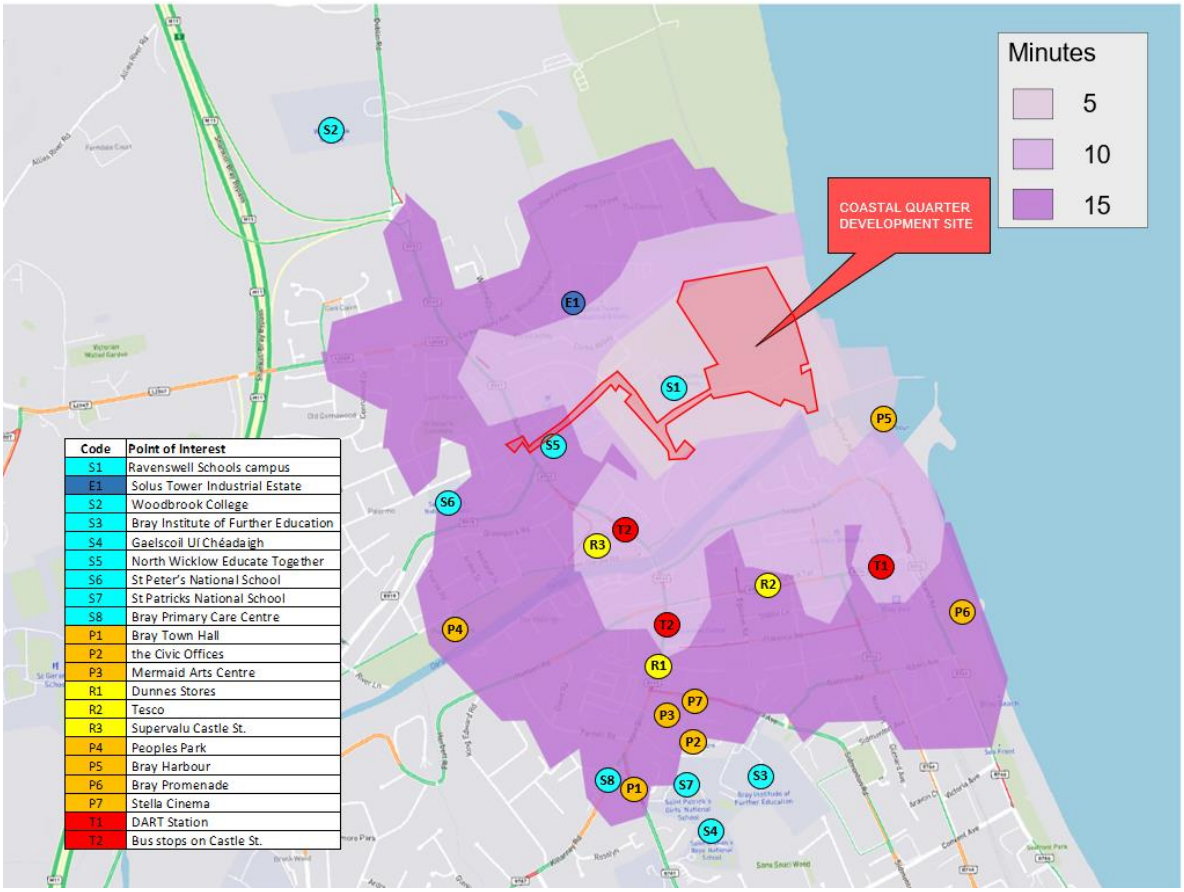
Executive Summary

The proposed Coastal Quarter development consists of 586 no. residential units in a mix of apartments, duplexes and houses. In addition, a childcare facility, café, retail unit and 1 no. commercial unit (incorporating a gym and a juice bar) are proposed along with all associated and ancillary development and infrastructural works, hard and soft landscaping, open spaces, boundary treatment works, ancillary car and bicycle parking spaces at surface, undercroft and basement levels. The site is approximately 9.37 ha straddling the boundary between Wicklow Co. Co and Dun Laoghaire Rathdown Co Co in Bray.

The proposed development is the 1st phase of a larger redevelopment of the former Bray Golf Course lands, now known as Harbour Point. This will be a mixed-use development that has been identified in the Bray Municipal District LAP (Local Area Plan) as an extension to Bray Town Centre.

The proposed development includes development as permitted under ABP-311181-21 together with minor revisions chiefly addressing conditions and new proposals for Blocks A and B which were previously refused.

The proposed development embraces the 15 Minute City concept, minimising the need for private transport. While the development proposal includes a childcare facility, café, convenience store, gym and juice bar, retail and recreational facilities within the scheme in addition to houses and apartments, all other essential services are within a 15-minute walk (1.5km) of the subject site. The following figure represents the 5, 10 and 15 minute walking isochrones relative to the Coastal Quarter.



Code	Point of Interest
S1	Ravenswell Schools campus
E1	Solus Tower Industrial Estate
S2	Woodbrook College
S3	Bray Institute of Further Education
S4	Gaelscoil Uí Chéadaigh
S5	North Wicklow Educate Together
S6	St Peter's National School
S7	St Patricks National School
S8	Bray Primary Care Centre
P1	Bray Town Hall
P2	the Civic Offices
P3	Mermaid Arts Centre
R1	Dunnes Stores
R2	Tesco
R3	Supervalu Castle St.
P4	Peoples Park
P5	Bray Harbour
P6	Bray Promenade
P7	Stella Cinema
T1	DART Station
T2	Bus stops on Castle St.

The site is exceptionally well served by existing public transport with Bray DART station 700m to the south and Bray-Dublin Bus routes (bus stops 4131 and 106331) 600m to the west of the subject lands. Whilst not required for the subject application, connectivity will be further enhanced in the coming years through the realisation of the following projects;

- Bus Connects: Bray to UCD and onwards to Dublin City Centre Due for construction commencement between 2022 - 2027

- Wicklow County Council (WCC) is undertaking Part 8 approval procedures to carry out the design and construction of the Bray Sustainable Transport Bridge (Ref. PRR 21/869). Part 8 planning has been granted and is currently under judicial review.
- Luas extension to Bray: post 2035
- National Cycle Network Route 5 (Dundalk to Wexford): this route will pass immediately to the east of the site and link the site to the north to Shankill and beyond to Dublin.

Thus, it is expected that car ownership will be well below traditional suburban residential development rates. In anticipation of this it is proposed to provide parking spaces at an overall rate of 0.82 / unit (not including commercial or visitor parking), significantly below traditional development plan standards. A car club parking space is also provided to further minimise the need for car ownership.

In contrast to car parking provision, bicycle parking is proposed at a rate of 2 spaces per house and 1 space per apartment bedroom, in line with the National Cycle Manual Standards and that of the Design Standards for New Apartments. All bike parking is secure and easily accessible.

In January 2021 the National Remote Work Strategy was published by the Department of Enterprise Trade and Employment which lays out the long-term strategy to promote home and remote working for public sector and private sector employees. The strategy mandates that 20% of the public sector workforce move to home and remote working in 2021. Furthermore, the strategy notes that more than 25% of the private sector workers in Ireland are capable of working remotely.

Therefore, in addition to the significant opportunities to travel to work by active travel and public transport modes, residents of the Coastal Quarter development may avail of the home and remote working opportunities, including flexible working opportunities, as promoted by the National Remote Work Strategy. This change in work practice will reduce overall work trips and optimise flexible working opportunities that will enable residents to avoid travel to work and to also facilitate residents to commute to their place of employment outside of the peak traffic and travel periods.

In overall terms, the Coastal Quarter development will be fully consistent with the National Planning Framework objective of compact growth in a location that will optimise the resident's opportunities to travel by active travel and public transport modes, fully consistent with the overall objectives of the NTA Greater Dublin Area Transport Strategy.

The development therefore presents as an exemplar of integrated land use and transportation planning that is fully consistent with the 'Avoid - Shift -Improve Model' as set out in the Dun Laoghaire Rathdown Development Plan. This approach, which is based on avoiding or reducing the need to travel, shifting to more environmentally friendly modes and improving the efficiency of motorised transport modes, is echoed in the transport objectives of the current and draft Wicklow County Development Plan, the Bray Municipal District Local Area Plan and the Bray and Environs Transport Study.

In this context, and in the more general context of rapidly changing lifestyles and work patterns it is anticipated that the impact of the proposed development on the existing road network will be modest and well within the carrying capacity of existing infrastructure.

This TTA should be read with reference to all other submitted planning application documentation including the Engineering Reports and Drawings, and the Architectural and Landscape Architectural Drawings.

1. Introduction

1.1. Overview

This report details the Traffic and Transportation Assessment (TTA) associated with the planning application for the proposed Coastal Quarter, Bray. The development constitutes Phase 1 of the proposed Harbour Point development. It should be noted that this planning application is a revised application following a recent submission to An Bord Pleanála (Ref: ABP-311181-21). Permission was granted for the development with the exception of Block A and Block B. From a traffic and transportation perspective, based on recent consideration by An Bord Pleanála, the TTA was found to be robust and determined to be fit for purpose. Ultimately the Bord determined that there were no grounds for refusal based on traffic, transportation or roads. This TTA is therefore a modified version of the TTA that was submitted with the previous planning application with updates to reflect relatively minor modifications to the traffic and transport characteristics of the proposed development. Furthermore, the data used to inform the traffic modelling which underpins this TTA has been reviewed and remains relevant. The transportation characteristics and impact of both the Coastal Quarter Development and of the full Harbour Point Masterplan Development are addressed in this TTA.

The Coastal Quarter lands are bounded to the west by the R761 Road, to the east by the main line rail DART line, to the south by the Dargle River and to the north by Corke Abbey residential development and Woodbrook Glen. The site location is shown in Figure 1-1 below.

Figure 1-1 - Coastal Quarter Site Location (Approximate Location)

1.2. Harbour Point Masterplan Description

In overall master planning terms, the Harbour Point Masterplan Development (as noted in the Harbour Point Masterplan Document) is to consist of the Coastal Quarter and Riverside Quarter. The overall

indicative masterplan layout is shown in Figure 1-2 below and will consist of residential, creche, restaurant & café, local shops and community centre.

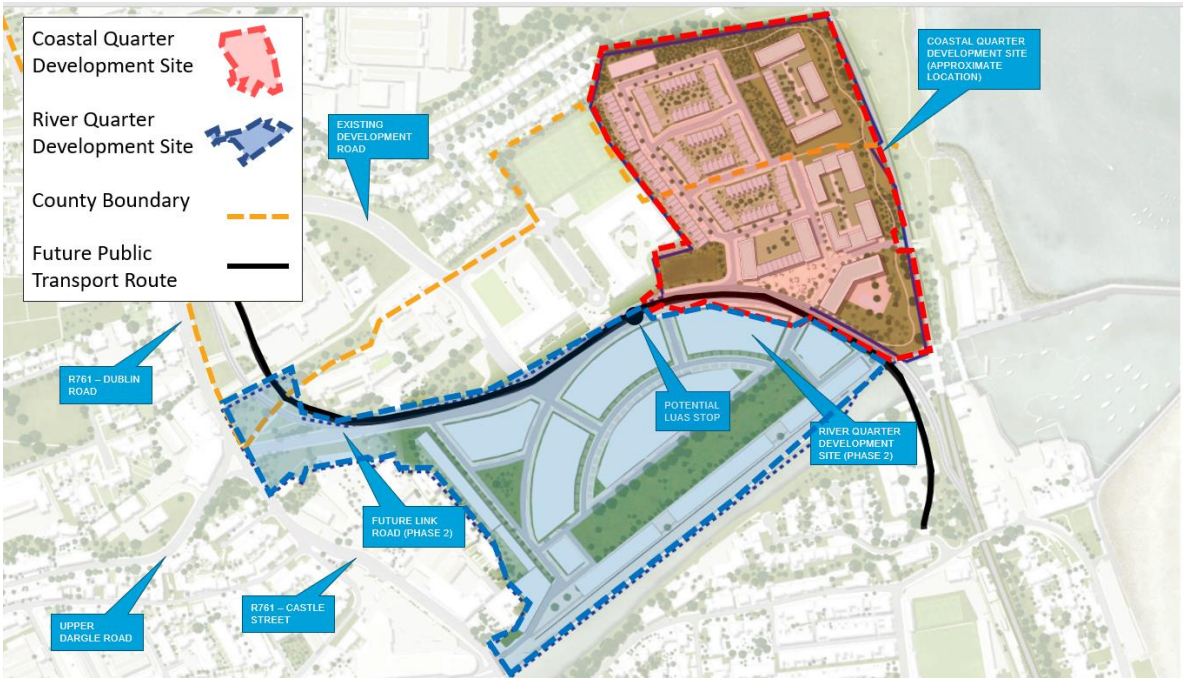


Figure 1-2 - Harbour Point Masterplan Development Layout

1.3. Coastal Quarter Development Description

The Coastal Quarter consists of:

- 586 no. residential units;
- 627 m^2 Creche;
- 249 m^2 Retail unit;
- 195 m^2 Café;
- 512 m^2 Gym & Juice Bar.

A full description of the proposed development is included in the Planning Report & Statement of Consistency and full details of all pedestrian and cycle connections, road and street layouts, car parking and cycle parking are contained on the Architects, Landscape Architects and Engineering drawings and in the Engineering Report. The rational for the quantum of car parking and cycle parking is provided within this TTA.

Consultation with ABP, DLRCC and WCC in respect to the pre-application consultation ref ABP-308291-20 on part of the subject site for the permitted development for 234 no. residential units, a childcare facility, café and retail unit ref ABP-311181-21 remain relevant to this planning application. These have been fully addressed as part of this planning submission comprising of 586 no. residential units in a mix of apartments, duplexes and houses within the same site boundary.

As such, the transport planning aspects of the proposed site have been developed through close consultation, as noted above, between the Applicant, Wicklow County Council and Dun Laoghaire Rathdown County Council and other key stakeholders including Irish Rail. This consultation has

included an extensive quantum of pre-planning meetings in the context of the proposed site layout for the master plan of the Harbour Point development and the Phase 1 Coastal Quarter Development.

1.4. Transport Planning Context

A summary of the key policy documents pertinent to the proposed development and which have underpinned the development proposals and the preparation of this TTA are summarised below. Further details, including maps, of existing and proposed infrastructure are contained in Section 2 of this report and are illustrated in Drawing 5214419/CE/SK/2001 as per Appendix G.

1.4.1. National Sustainable Mobility Policy

The Department of Transport published the National Sustainable Mobility Policy in April 2022. The Policy sets out a strategic framework for active and sustainable travel for the period up to 2030 to help Ireland meet its international and national climate obligations to achieve a 51% reduction in carbon emissions by end of this decade.

The overall target is to "deliver at least 500,000 additional daily active travel and public transport journeys by 2030 and a 10% reduction in the number of kilometres driven by fossil fuelled cars. It will make it easier for people to choose walking, cycling and use public transport daily instead of having to use a petrol or diesel car.

To achieve this target there are a number of initiatives including:

- Integrated land use and transport planning;
- Improvement to walking and cycle infrastructure;
- Improved public transport capacity;
- Identifying and implementation of suitable demand management measures;
- Behavioural change programmes and measure; and
- Improved safe, accessible, comfortable, safe and affordable journey for all people and all trips.

The policy document is supported by Action Plan 2022-2025 to measure performance of the aims, targets or objective identified in the Policy.

The MMP will align with this Policy document through the identification of measures which cater for and enhance access for active travel modes, public transport, facilitating new and enhanced access and connections to services and amenities in the local area.

1.4.2. Transport Strategy for the Greater Dublin Area 2022 -2042

The Transport Strategy for the Greater Dublin Area (GDA) 2022-2042 established the framework for transport provision for the city region. This Strategy, which is underpinned by the capital investment program set out in the National Development Plan 2018-2027, is based on the following over-riding objective: *"To contribute to the economic, social and cultural progress of the Greater Dublin Area by providing for the efficient, effective and sustainable movement of people and goods."*

In particular, the Strategy aims to achieve a work commuting modal share target of 55% for sustainable travel modes, reducing the single occupancy private car modal share to a maximum 45%, as set out in Smarter Travel Policy. The Strategy presents infrastructure proposals by mode of transport. Albeit not a requirement for the subject site as demonstrated later in this document, those that may benefit the development in the future are as follows:

Transport Strategy Objective	Proposed Site Context
Extension of Luas Green Line to Bray	Proposed route will run through the masterplan lands into the existing Bray Dart Station. LUAS stops can be accommodated within the masterplan lands serving the development.
Core Radial Bus Network	Existing bus corridor on Dublin Road on western masterplan lands boundary to be upgraded as Core Bus Corridor 13 of Bus Connects.
Greater Dublin Area Cycle Network Plan	Primary Route B1 is located on R761 Dublin Road along the western masterplan lands boundary. This route will be upgraded as part of Core Bus Corridor 13 of Bus Connects. Route 14 /N5, The East Coast Trail, is located to the east of the Dart east coast rail line on the masterplan lands site boundary. Connection to this route from the development will be facilitated via the Rail Underpass. Route BG1 is located to the north of the Dargle River on the southern masterplan lands boundary, this scheme has been implemented as part of the completed Bray Flood Defence Scheme. This route will be maintained as part of the masterplan lands layout and provides a high quality link from the Coastal Quarter to Bray Town Centre in under 5 minutes walking

1.4.3. Bray and Environs Transport Study

In April 2019 the National Transport Authority, in consultation with TII, Wicklow County Council and Dun Laoghaire Rathdown County Council, published the Bray and Environs Transport Study. The overarching purpose in undertaking this study was to facilitate the land use objectives of Wicklow County Council and Dun Laoghaire-Rathdown County Council as provided for in statutory regional, county and local plan.

The Study is set in the context of the overarching transport objectives set out in the Transport Strategy for the Greater Dublin Area and sets out more detailed transport requirements to facilitate planned development sites in the south of Dun Laoghaire Rathdown and the Bray area. These development sites include the subject Masterplan Lands, and the Study specifically sets out the following requirements to serve the full build out of the lands:

- Golf Club Lands development roads;
- Pedestrian and cycle links from the Golf Club to Bray Town Centre;
- Dublin Road bus priority (part of Bray Core Bus Corridor);
- Wicklow County Council (WCC) is undertaking Part 8 approval procedures to carry out the design and construction of the Bray Sustainable Transport Bridge (Ref. PRR 21/869). Part 8 planning has been granted and is currently under judicial review.
- Development of interchange at Bray DART Station; and
- Commitment to the phased introduction of bus and enhanced rail services in line with increased demand.

The Coastal Quarter will incorporate the required street network to facilitate the development of these lands and the full requirement of development roads will be completed through the development of the Riverside Quarter.

Existing and substantive pedestrian and cycle links from the lands to the town, centre, seafront and other parts of Bray will be further enhanced by linkages to be developed as part of the Coastal Quarter and Riverside Quarter developments.

Upon delivery of the public transport, pedestrian and cycle bridge (Part 8 – Bray Sustainable Transport Bridge) the development will avail of an additional access to the Station. This bridge, which is subject to Urban Regeneration and Development Fund (URDF) funding, is subject to a planning application by Wicklow County Council which has been submitted as of July 2021 (Planning Reference PRR 21/869). The layout of the Coastal Quarter and the proposed bridge has been coordinated with Wicklow County Council. A number of meetings have been held between Wicklow

County Council and representatives of the former Golf Club Lands including pre-planning meetings in relation to the SHD planning application (Ref ABP 308291-20). While the subject scheme has been designed to the existing road network (refer to drawing 5214419-ATK-01-ZZ-DR-CE-104 for further detail), it can also be adapted to the above referenced scheme should it be granted permission in the future.

In terms of bus services, the development will have direct access to existing high frequency bus services on R761 Dublin Road immediately adjacent the site. As noted above, the NTA are planning the implementation of enhanced bus services on the entire bus network including enhancements to the capacity and efficiency of services on Corridor 13 to the city centre along the R761. The Development will directly benefit from these planned improvements. The development will also facilitate and directly benefit from the proposed bus service and infrastructure improvements along Bus Corridor 13 as and when these are rolled out by the NTA.

The development and improvement of the new interchange at Bray DART station is currently at detailed design stage.

1.4.4. Bray Municipal District Local Area Plan 2018 - 2024

The purpose of the Bray Municipal District LAP is to put in place a land use framework that will guide the future sustainable development of the Bray Municipal District, which includes the settlement of Bray. The key objective for the Bray Municipal District LAP is for

… development to be based around environmental protection (in particular to identify which key natural and built assets to protect given the pressure for development), sustainability and developing the town in a manner that would generate the minimal number of car journeys and maximum use of public transport.

Listed below are the key relevant sustainable transport policies of the Bray Municipal District LAP together with a summary of the corresponding characteristics of the proposed development that relate to the delivery of these policies.

Table 1-1 – Relevant Bray Municipal District LAP Transport Policies

Policy Reference	Policy Description	Development Approach
PT1	To cooperate with NTA and other relevant transport planning bodies in the delivery of a high quality, integrated transport system in the Bray MD area.	Both the Coastal Quarter and Harbour Point development facilitates the future further provision of high-quality public transport improvements i.e, extension of LUAS to Bray and Bus Connects Core Corridor 13 on the R761
PT2	To support and facilitate the implementation of measures to improve overall accessibility, public transport and walking / cycling opportunities within the Municipal District and between the Municipal District and other centres of population and activity identified in the Bray and Environs Local Transport Study.	The development allows the delivery of the proposed public transport, pedestrian and cycle bridge (Part 8 – Bray Sustainable Transport Bridge, Planning Reference PRR 21/869) to Bray Dart Station, the relevant routes contained within the Greater Dublin Area Cycle Network Plan and further local pedestrian and cycle linkages.
PT3	To promote the development of transport interchanges and 'nodes' in the Bray MD where	The Coastal Quarter development allows the delivery of the public

Policy Reference	Policy Description	Development Approach
	a number of transport types can interchange with ease	transport, pedestrian and cycle bridge (Part 8 – Bray Sustainable Transport Bridge, Planning Reference PRR 21/869) to Bray Dart Station allowing for the provision of the transport interchange at the Bray Dart Station with future Luas services.
PT7	To promote the delivery of improved and new bus services both in and out of the District but also within the District.	The Coastal Quarter development allows for the bus connection to the Bray Dart Station via the proposed public transport, pedestrian and cycle bridge (Part 8 – Bray Sustainable Transport Bridge, Planning Reference PRR 21/869) and delivery of the proposed Bus Connects Core Corridor 13 on the R761
CW1	To improve existing or provide new foot and cycleways on existing public roads, as funding allows, and to facilitate the development of a cycling and walking amenity routes throughout the District in accordance with the NTA's "Permeability Best Practice Guide" including foot and cycleways off road (e.g. through open spaces, along established rights-of-way etc), in order to achieve the most direct route to the principal destination (be that town centre, schools, community facilities or transport nodes), while ensuring that personal safety, particularly at night time, is of the utmost priority	The Coastal Quarter development provides connections to the existing pedestrian and cycle facilities and includes the provision of offline facilities within the developments open spaces serving the development and allowing future connections into existing parklands and adjacent existing residential development.
CW4	To ensure that cycle infrastructure provided in the Bray MD is delivered in a manner consistent with the National Cycle Manual.	Cycle infrastructure for the Coastal Quarter development is designed in accordance with the National Cycle Manual.
RO5	With respect to the major development area at the former Bray Golf Course, excellent linkages shall be provided from the site to surrounding areas; multiple access points for both vehicles and cyclists / pedestrians shall be developed and in particular, the development shall include linkages through the site between the Dublin Road and Bray seafront / the DART station and public walking route along the river.	Both the Coastal Quarter and the Harbour Point development will incorporate two vehicular access routes on to the Dublin Road. The site will be further connected to the DART Station via the proposed public transport, pedestrian and cycle bridge (Part 8 – Bray Sustainable Transport Bridge, Planning Reference PRR 21/869). The site will be directly connected to the existing walking and cycling route along the river frontage.
R10	To improve existing or provide new foot and cycle links (as funding allows) at the following locations in Bray MD, and ensure developments along these routes are so designed as to allow for / not impede the delivery of required improvements.	These are as noted above and further detailed in Section 2 of this report.

1.4.5. Wicklow Development Plan 2016-2022

The Wicklow County Development Plan 2016-2022 contains specific policies in terms of sustainable travel and transportation. The proposed development, by virtue of its location, scale and typology is consistent with both the strategic sustainable transportation policies of the Plan and the specific transportation objectives. In terms of overall policy, the Councils transport strategy is to

"Craft land use policies to produce settlements of such form and layout that facilitates and encourages sustainable forms of movement and transport, prioritising walking and cycling, and for larger settlements, bus transport."

Listed below are the key relevant sustainable transport policies of the current County Development Plan together with a summary of the corresponding characteristics of the proposed development that relate to the delivery of these policies.

Table 1-2 – Relevant Wicklow County Development Plan Transport Policies

Policy Reference	Policy Description	Development Approach
TR1	To cooperate with NTA and other relevant transport planning bodies in the delivery of a high quality, integrated transport system in the Greater Dublin Area.	The Coastal Quarter development facilitates the future provision of high-quality public transport improvements i.e, extension of LUAS to Bray and Bus Connects Core Corridor 13 on the R761 Road
TR2	To promote the development of transport interchanges and 'nodes' where a number of transport types can interchange with ease.	The Coastal Quarter development allows the delivery of the public transport, pedestrian and cycle bridge (Part 8 – Bray Sustainable Transport Bridge, Planning Reference PRR 21/869) to Bray Dart Station allowing for the future provision Luas services to the transport interchange at the Bray Dart Station.
TR5	To facilitate, through both the zoning of land and the tie-in of new facilities with the development of land and the application of supplementary development contributions, the extension of the LUAS or other mass transit to Bray town centre, Bray train station and Fassaroe.	The Coastal Quarter development allows the delivery of the public transport, pedestrian and cycle bridge (Part 8 – Bray Sustainable Transport Bridge, Planning Reference PRR 21/869) to Bray Dart Station allowing for the future provision Luas services to the transport interchange at the Bray Dart Station.
TR7	To promote the delivery of improved and new bus services both in and out of the County but also within the County	The Coastal Quarter development facilitates the future provision of the NTA BusConnects network improvements and core bus corridor 13 along the R761 Dublin Road
TR9	To improve existing or provide new foot and cycleways on existing public roads, as funding allows	The Coastal Quarter development facilities the delivery of the proposed public transport, pedestrian and cycle bridge (Part 8 – Bray Sustainable Transport Bridge, Planning Reference PRR 21/869) to Bray Dart Station.
TR11	To facilitate the development of foot and cycleways off road (e.g. through open spaces, along established rights-of-way etc), in order	The Coastal Quarter development provides connections to the existing pedestrian and cycle facilities and

Policy Reference	Policy Description	Development Approach
	to achieve the most direct route to the principal destination (be that town centre, schools, community facilities or transport nodes), while ensuring that personal safety, particularly at night time, is of the utmost priority.	includes the provision of offline facilities within the developments open spaces serving the development and allowing future connections into existing parklands and adjacent existing residential development.
TR15	Traffic Impact Assessments will be required for new developments in accordance with the thresholds set out in the 'Design Manual for Roads and Bridges' the 'Traffic & Transport Assessment Guidelines' (TII) and the Design Manual for Urban Roads and Streets (DoECLG & DoTTS).	The traffic and transport assessment for the Coastal Quarter development has taken account of the thresholds set out in the 'Design Manual for Urban Roads and Streets' the 'Traffic & Transport Assessment Guidelines'.
TR16	Road Safety Audits and/or Road Safety Impact Assessments shall be required at the discretion of the Planning Authority, but shall generally be required where new road construction or a permanent change to the existing road layout is proposed.	A road safety audit has been carried out for the Coastal Quarter development.
TR35	New / expanded developments shall be accompanied by appropriate car parking provision, with particular regard being taken of the potential to reduce private car use in locations where public transport and parking enforcement are available. At such locations, the car parking standards set out in Appendix 1 Table 7.1 shall be taken as maximum standards, and such a quantum of car parking will only be permitted where it can be justified	The parking strategy for the Coastal Quarter development has taken account of the specifics of the site location and proximity to public transport.
TR36	Provision shall be made in all new / expanded developments for disabled parking (and associated facilities such as signage, dished kerbs etc), at a suitable and convenient location for users.	The Coastal Quarter development has provided disabled parking at the required quantum and at convenient locations within the development.
TR37	Provision shall be made for off street loading / unloading facilities in all new / expanded developments which are to receive regular deliveries.	Loading bays and drop off / pick up bays have been incorporated in the Coastal Quarter development.

1.4.6. Draft Wicklow County Development Plan 2022-2028

Wicklow County Council have prepared a draft of a new County Development Plan for the period 2022 - 2028. Relevant objectives that will be facilitated by the proposed Coastal Quarter and overall Harbour Point development are as follows:

- The new plan will support the need for compact growth and better integration of transport and land use planning, including walking and cycling infrastructure, public transport, park-and-ride facilities, etc.
- Any land zoned for residential development will be located in close proximity and/or be well connected to existing / planned services (e.g. schools, retail, community/health centres, sports/amenity facilities, etc.) and employment sites. The new plan will have as a key 'plan dynamic' the encouragement of a shift from car-orientated urban patterns to walkable, cyclable, and transit orientated development patterns.
- To integrate climate change mitigation and adaptation as guiding principles throughout the plan and address the areas of sustainable and low carbon transportation and enhancing public transport and access to same

- Include a policy to require that the design and layout of new residential development achieves highly permeable, well connected streets in accordance with best practice as set out in the Design Manual Urban Roads and Streets (DTTS & DECLG 2013).
- To retain existing foot and cycle way objectives in the new County Development Plan and to enhance in accordance with any advice or updated strategies / requirements of the NTA.
- To retain existing public transport objectives in the new County Development Plan and to enhance the policy framework to encourage and facilitate the improvement of public transport in accordance with any national advice or updated strategies / requirements.
- To provide strong policy support for improvement to public transport in the County, for the provision of enhanced walking and cycling networks.

1.4.7. Dun Laoghaire Rathdown County Development Plan 2022-2028

The Dun Laoghaire Rathdown County Council Development Plan 2022 – 2028 contains specific policies in terms of sustainable travel and transportation. The development plan proposes that a holistic approach to transport is required with the aim to reduce dependency on the private car in favour of walking, cycling and public transport. The plan notes that there has been a move away from the traditional approach of supplying ever more road space to meet increased transport demand and is facilitated by the adoption of the 'Avoid–Shift- Improve' approach. The 'Avoid-Shift-Improve' approach model is detailed below:

- Avoid – reduce or avoid the need to travel, i.e Irish governments Remote Working Strategy
- Shift – shift to more environmentally friendly modes, i.e walking, cycling, e-bikes, e-scooters
- Improve – improve energy efficiency of transport modes and vehicle technology, i.e electrification of public transport vehicles

This document sets out the following relevant objectives which are supported and facilitated by the Coastal Quarter and overall Harbour Point development.

Table 1-3 - DLRCC County Development (2022 – 2028) Plan Policy

Policy Reference	Policy Description	Development Approach
Policy Objective T1: Integration of Land Use and Transport Policies	It is a Policy Objective to actively support sustainable modes of transport and ensure that land use and zoning are aligned with the provision and development of high-quality public transport systems.	Bray DART Station is located within walking and cycling distance of the Coastal Quarter development. The Coastal Quarter development site is located adjacent the R761 Road bus corridor that will be upgraded as Bus Connects Core Bus Route 13. The Coastal Quarter development site is within walking distance of the R761 Road bus stops.
Policy Objective T3: Delivery of Enabling Transport Infrastructure	It is a Policy Objective to support the delivery of enabling transport infrastructure so as to allow development take place in accordance with the Core Strategy of this Plan and the settlement strategy of the RSES	The Coastal Quarter development allows the delivery of the public transport, pedestrian and cycle bridge (Part 8 – Bray Sustainable Transport Bridge, Planning Reference PRR 21/869) to Bray Dart Station allowing for the future provision of the Luas transport interchange at the Bray Dart Station.

Policy Reference	Policy Description	Development Approach
		The site facilitates the upgrade of the Dublin Road bus corridor per the NTA plans for Bus Connects Core Bus Route 13.
Policy Objective T4: Development of Sustainable Travel and Transportation Policies	"It is Council policy to promote, facilitate and cooperate with other transport agencies in securing the implementation of the transportation strategy for the County and the wider Dublin Region as set out in Department of Transport's 'Smarter Travel, A Sustainable Transport Future 2009 – 2020' and the NTA's 'Greater Dublin Area Draft Transport Strategy 2011-2030'.	The Coastal Quarter development allows the delivery of the public transport, pedestrian and cycle bridge (Part 8 – Bray Sustainable Transport Bridge, Planning Reference PRR 21/869) to Bray Dart Station allowing for the future provision of the Luas transport interchange at the Bray Dart Station. The site facilitates the upgrade of the Dublin Road bus corridor per the NTA plans for Bus Connects Core Bus Route 13.
Policy Objective T5: Public Transport Improvements	It is a Policy Objective to expand attractive public transport alternatives to car transport as set out in 'Smarter Travel, A Sustainable Transport Future 2009-2020', the NTA's 'Greater Dublin Area Transport Strategy 2016-2035' and the NTAs 'Integrated Implementation Plan 2019-2024'.	The Coastal Quarter development allows the delivery of the public transport, pedestrian and cycle bridge (Part 8 – Bray Sustainable Transport Bridge, Planning Reference PRR 21/869) to Bray Dart Station allowing for the future provision of the Luas transport interchange at the Bray Dart Station. The site facilitates the upgrade of the Dublin Road bus corridor per the NTA plans for Bus Connects Core Bus Route 13.
Policy Objective T6: Quality Bus Network/Bus Connects	It is a Policy Objective to co-operate with the NTA and other relevant agencies to facilitate the implementation of the bus network measures as set out in the NTA's 'Greater Dublin Area Transport 2016-2035' and 'Draft Integrated Implementation Plan 2019-2024' and the BusConnects Programme.	The Coastal Quarter development site is located adjacent the R761 Road bus corridor that will be upgraded as Bus Connects Core Bus Route 13. It facilitates the upgrade of the Dublin Road bus corridor per the NTA plans for Bus Connects Core Bus Route 13.
Policy Objective T7: Public Transport Interchanges	It is a Policy Objective to facilitate the provision of quality public transport interchanges at strategic rail, Luas stations and Core Bus Corridors within the County in accordance with national and regional guidelines in order to facilitate focussed access to multiple public transport modes and to maximize the movement of people via sustainable modes.	The proposed development allows for the future provision of the Luas transport interchange at the Bray Dart Station along with development of Core Bus Route 13 as part of the Bus connect project.
Policy Objective T9: Luas Extension and MetroLink	It is a Policy Objective to promote, facilitate and cooperate with other agencies in securing the extension of the Luas network in the County as set out in the NTA's 'Greater Dublin Area Transport Strategy	The proposed development allows for the future provision of the Luas transport interchange at the Bray Dart Station.

Policy Reference	Policy Description	Development Approach
	2016-2035' and including any future upgrade to Metro.	
Policy Objective T11: Walking and Cycling	It is a Policy Objective to secure the development of a high quality, fully connected and inclusive walking and cycling network across the County and the integration of walking, cycling and physical activity with placemaking including public realm improvements.	The Coastal Quarter development provides connections to the existing pedestrian and cycle facilities and includes the provision of offline facilities within the developments open spaces serving the development and allowing future connections into existing parklands and adjacent existing residential development.
Policy Objective T12: Footways and Pedestrian Routes	It is a Policy Objective to maintain and expand the footway and pedestrian route network to provide for accessible, safe pedestrian routes within the County in accordance with best accessibility practice.	The Coastal Quarter development allows for the future provision of pedestrian and cyclists connections to the existing Woodbrook Glen Community Park and Corke Abbey Valley Park subject to agreement to DLRCC. It also facilitates pedestrian and cycle bridge (Part 8 – Bray Sustainable Transport Bridge, Planning Reference PRR 21/869) to Bray Dart Station.
Policy Objective T16: Travel Demand Management	"It is Council policy, in conjunction and co-operation with other agencies, to implement Travel Demand Management measures aimed at reducing the demand for travel and increasing the efficiency of the transport network with due consideration given to the effect of parking controls on nearby residential roads."	The Coastal Quarter development is planned in the context of a Mobility Management Plan based on the physical infrastructure provisions of walking and cycling links and access to public transport bus and DART rail services and Bray Town Centre services. Demand Management is also underpinned by the co-location of residential, education, local retail and leisure and amenity facilities to be provided by the overall Harbour Point Development Masterplan development and the adjacent urban area and town centre. The propensity for car ownership and car use is managed through measures that include reduced residential parking provision and increased cycle parking provision in line the 'Design Standards for New Apartments'. The provision of car club parking spaces will facilitate a lower level of car ownership. The development supports the Irish governments Remote Working Strategy January 2021.

Policy Reference	Policy Description	Development Approach
Policy Objective T19: Car parking Standards	It is a Policy Objective to manage car parking as part of the overall strategic transport needs of the County in accordance with the parking standards.	The Coastal Quarter development has proposed car parking spaces for all land uses which is in line with the County Development Plan and has been discussed in detail in the section 5 of the TTA.
Policy Objective T23: Roads and Streets	It is a Policy Objective, in conjunction and co-operation with other transport bodies and authorities such as the TII and the NTA, to secure improvements to the County road network – including improved pedestrian and cycle facilities, subject to the outcome of environmental assessment (SEA, EIA and AA), flood risk assessment and the planning process.	The coastal Quarter development consists of the following: Link Street Local Street Home zones The street hierarchy and the provided facilities have been detailed in the DMURS statement (doc ref 5214419DG0021)
Policy Objective T26: Traffic and Transport Assessments and Road Safety Audits	It is a Policy Objective to require Traffic and Transport Assessments and/or Road Safety Audits for major developments – in accordance with the TII's 'Traffic and Transport Assessment Guidelines' (2014) - to assess the traffic impacts on the surrounding road network and provide measures to mitigate any adverse impacts - all in accordance with best practice guidelines.	A Quality audit (including road safety audit, walking and cycling audit) has been carried out for the Coastal Quarter development.

1.4.8. Best Practice and Planning Guidance Documents

The following best practice and planning guidance documents have fundamentally informed the development of the site layout and the compilation of this TTA:

- Transport Infrastructure Ireland: Traffic and Transport Assessments Guidelines;
- Department of Transport Tourism and Sport: Design Manual for Urban Roads and Streets;
- National Transport Authority: National Cycle Manual; and
- National Transport Authority: Permeability Best Practice Guidance.

Of particular importance is the Design Manual for Urban Roads and Streets (DMURS) published in 2013. This document is founded on an integrated design approach that is based on safety, sustainable communities, heritage protection and creating a sense of place. DMURS recognises the higher priority of pedestrians and cyclists in the urban environment within a fundamental design objective to create self-regulating streets that are inherently convenient and safe for use by all vulnerable road users. A DMURS Statement of Consistency (5214419DG0021) accompanies this planning submission.

1.5. Scoping Document

The pre-application consultation, ref ABP-308291-20, on part of the subject site for the permitted development for 234 no. residential units, a childcare facility, café and retail unit ref ABP-311181-21 remain relevant to this planning application. These have been fully addressed as part of this planning submission comprising of 586 no. residential units in a mix of apartments, duplexes and houses within the same site boundary.

As requested at the Stage 1 S247 consultation meeting, as undertaken during the previous consultation noted above, a Scoping Document was issued to both Wicklow County Council and Dún Laoghaire Rathdown County Council (DLRCC) in December 2020. The content of this Scoping Document is based on feedback from both Wicklow County Council and Dún Laoghaire Rathdown County Council through pre-application meetings and communications. This all remains relevant for this planning application. The Scoping Document is contained within Appendix A.

1.6. Methodology

The methodology for the traffic and transport impact is consistent with the Traffic and Transport Assessments Guidelines. The methodology is summarised as follows:

- **Baseline Transportation Review:** Undertake a review of current planning policies and objectives, existing public transport services, walking and cycling network and existing and roads infrastructure.
- **Baseline Traffic Flow Review:** Undertake site visits to review current traffic conditions and to make observations on same. Identify key junctions where traffic count survey information is required.
- **Future Transport Infrastructure Review:** Undertake a review of current transport policies, plans and strategy to identify future short, medium and long terms transport proposals which may have a material impact on the travel behaviour associated with the proposed development.
- **Development Proposals Review:** Review the proposed development in terms of provision for access by walking, cycling, public transport and car.
- **Transport Characteristics Review:** Undertake an assessment of the likely modal share, trip generation, assignment and distribution having regard to existing and potential future traffic patterns on the local road network.
- **Identification of Local Road Network Proposals**: Identify proposed junction works on the local road network in terms of new junctions, improvements for pedestrians, cyclists and traffic at existing junctions.
- **Assessment of Road Impact- Operational Phase:** Undertake an assessment of the key junctions during the operational base year, opening year, opening year plus five and opening year plus fifteen assessment years for both 'without development' and 'with development' scenarios in order to determine future operation and any necessary mitigation measures required.

1.7. Consultation

The responses to the comments received from ABP, DLRCC and WCC in respect to the pre-application consultation ref ABP-308291-20, on part of the subject site for the permitted development (ref ABP-311181-21), remain relevant to this planning application. These have been fully addressed as part of this planning submission comprising of 586 no. residential units in a mix of apartments, duplexes and houses within the same site boundary.

A table which references the items raised has been prepared to include responses to these items. The responses made are concise but refer to appropriate section within this TTA and or reference the appropriate engineering drawing. This table is contained within Appendix F 'Record of Consultation' of this TTA report.

1.8. Related Documents

This TTA should be read in conjunction with the submitted Quality Audit (inclusive of the Road Safety Audit) document (Ref: 5214419DG0013), the Engineering and Planning Report document (Ref: 5214419DG0018), the Mobility Management Plan (Ref: 5214419DG0020), the DMURS Statement (Ref: 5214419DG0021) as well as the Roads Engineering drawings and the Environmental Impact Assessment Report.

1.9. References

The following documents have been referenced in preparation of this TTA.

2. Receiving Environment - Pedestrian and Cyclist Facilities

2.1. Current Provision

Figure 2-1 - Existing Pedestrian & Cyclist Connections

The existing pedestrian & cyclist connections are identified in Figure 2-1 above and summarised as follows:

- Existing connection from the Harbour Point Masterplan Lands to Bray Dart Station and Bray Promenade via the existing Rail Underpass. Through Consultation referred to in Section 1.3 above, the applicant can confirm that Irish Rail and Wicklow County Council have concluded a License Agreement allowing Wicklow County Council to continue to operate the underpass for pedestrian and cycle access on a 24 hour basis, along with installing appropriate and approved vehicle barriers on both approaches.

  The underpass is part of the BG1 National Cycle Route which runs along the existing Dargle Flood Defence Wall to the underpass, connecting to the future Route 14/N5 East Coast Trail which will be upgraded in conjunction with WCC. This cycle route borders runs, externally, along the perimeter of the proposed development.
- Existing connection to Bray Town Centre via Riverwalk along Dargle River and via Development Roads
- Existing connections to R761 via existing road network
- Existing provision along the R761 Dublin Road
- Existing link between 'The Green' and 'Corke Abbey' north of the proposed development site
- Existing Connection from broader masterplan lands to the existing greenway route along the River Dargle and towards the town centre.

A walking isochrone map indicating the existing walking connectivity for 5, 10 and 15min intervals is shown in Figure 2-2 below. This shows that existing connectivity is greatest towards the south and west while connectivity towards the north is restricted.

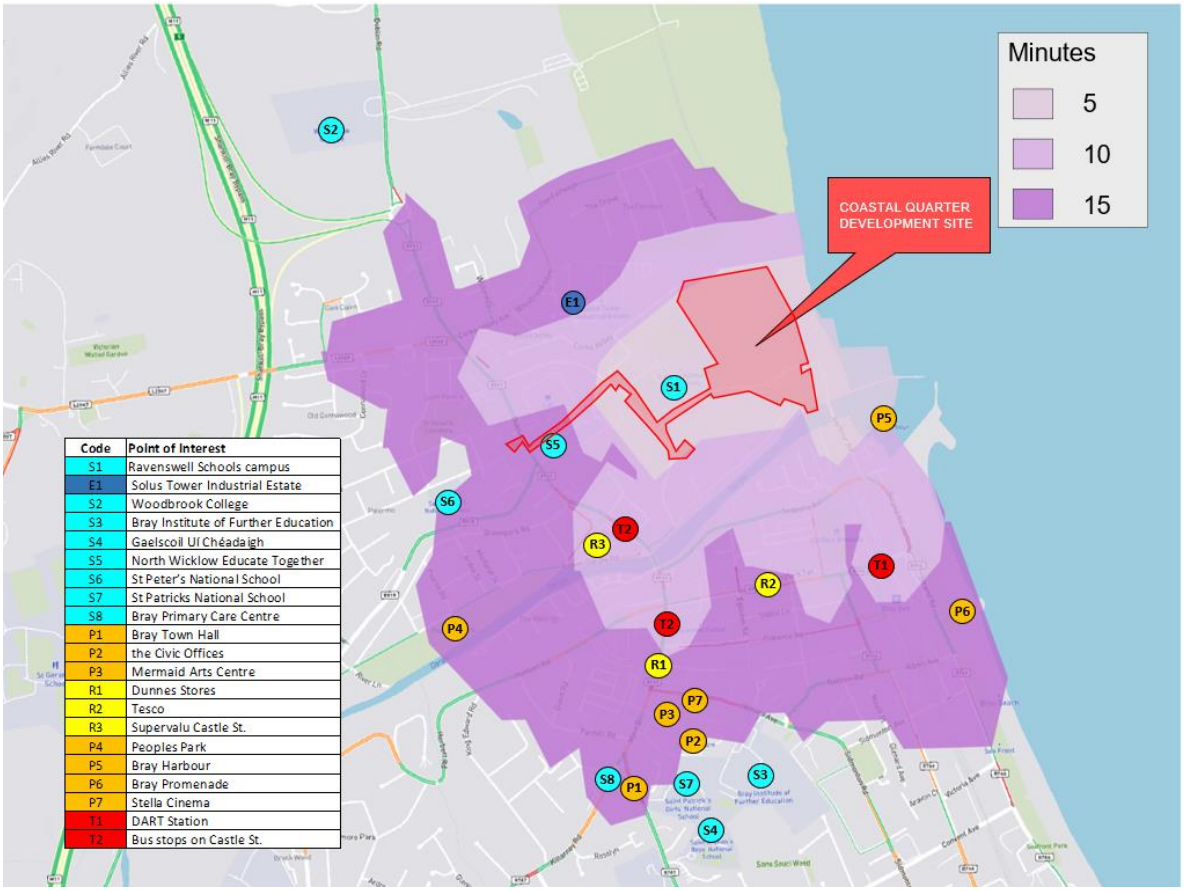

Figure 2-2 : Walking Isochrone for Existing Area

2.2. Future Provision

The existing and future pedestrian & cyclist connections are detailed in Figure 2-3 below.

Figure 2-3 - Existing & Future Pedestrian & Cyclist Connections

- 2 no. pedestrian and cycle connections to the north into Corke Abbey Valley Park & adjacent Woodbrook Glen Residential Development to be provided as part of development;
- Enhanced pedestrian and cycle connectivity to the River Dargle on the south will be provided by way of upgrading the existing WCC owned footpath such that it is integrated into the proposed Coastal Gardens. This will provide a high quality, continuous and seamless connection from north to south, through the proposed development. The upgrade portion, including removal of the existing fence and upgrading the existing street lighting will be done in collaboration and with agreement from WCC;
- Wicklow County Council (WCC) is undertaking Part 8 approval procedures to carry out the design and construction of the Bray Sustainable Transport Bridge (Ref. PRR 21/869). Part 8 planning has been granted and is currently under judicial review;
- Proposed Pedestrian & Cyclist Improvements on Castle Street Bridge (Fran O'Toole Bridge), provision of pedestrian and cycle footbridges either side of the existing bridge, to be provided by WCC;
- Improved pedestrian and cyclist facilities along the R761 Dublin Road provided as part of BusConnects - Core Corridor 13 Scheme;
- East Coast Greenway Scheme Greater Dublin Cycle Network route N5 – incorporated within WCC and DLRCC development plans; and

  It should be noted that the N5 East Coast Trail is currently envisaged to run to the east of the DART and does not lie within the development boundary. Cycle paths within the development site are therefore local links only. The detailed design of the underpass area will be undertaken in conjunction with WCC, Irish Rail as well as the NTA in order to facilitate the N5-BG1 link. Since this area is to be a pedestrian priority area, it will be designed for low speeds (less than 20kph). The combined cycle/footpath to the north (east of Block B) is similarly designed for low cycle speeds and is for local access only.

An extract of the Greater Dublin Cycle Network Plan (NTA 2011) is illustrated in Figure 2-4 below.

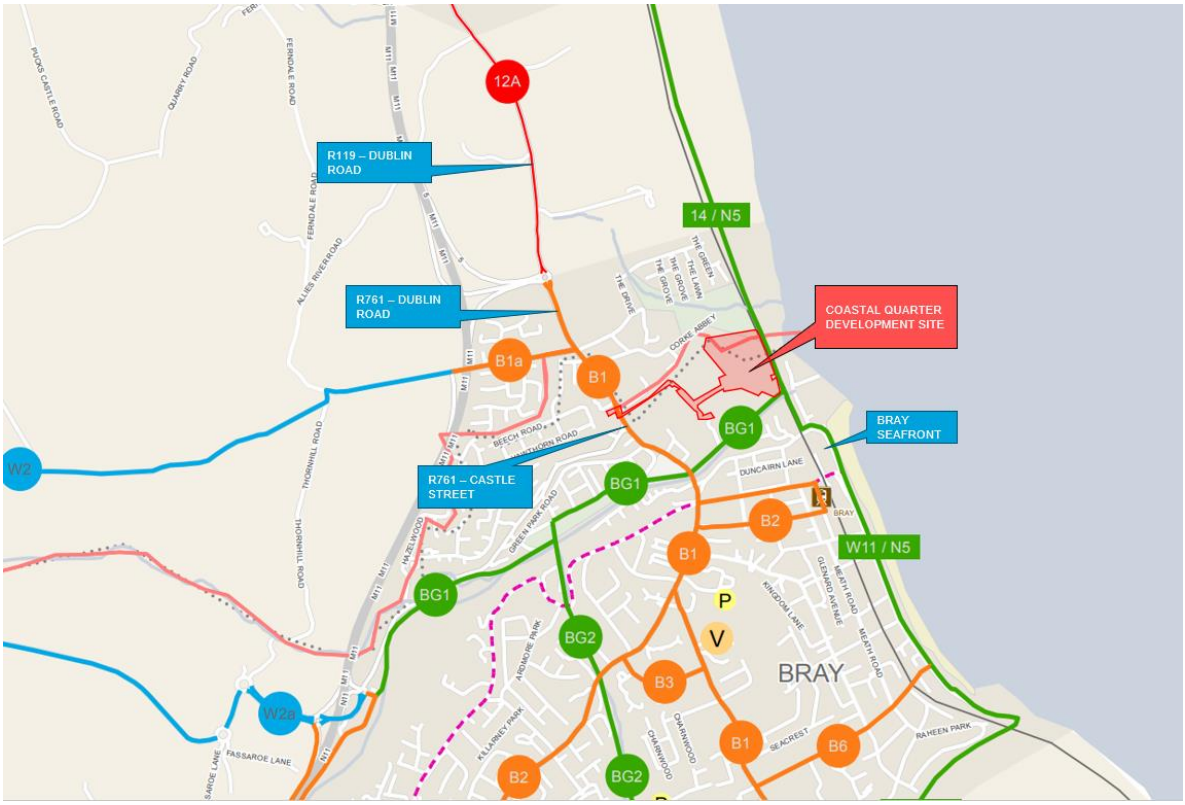

Figure 2-4 - Greater Dublin Cycle Network Plan Cycle Routes (Sheet 20)

The schemes that provide the facilities for the cycle network routes adjacent the development are noted below:

- Route B1 – BusConnects Core Corridor 13 Scheme will provide the facilities associated with this route
- Route BG1 – the facilities associated with the section of greenway route have been implemented along the river front as part of the completed Dargle flood relief scheme
- Route 14/N5 – East Coast Greenway Scheme will provide the facilities associated with this route
- RouteN5/W11 – Stand Road Cycle Scheme provides the facilities associated with this route.

2.3. Pedestrian & Cyclist Summary

In the current context, the proposed development will be well served by the current pedestrian and cyclist provision and the proposed connections provided as part of the Coastal Quarter development. The future pedestrian & cyclist improvements will serve the entire Bray area and whilst not a necessity will no doubt enhance connectivity that will serve the full development of the former Bray Golf Club lands.

3. Receiving Environment - Public Transport

3.1. Current Services

The current public transport services associated with the site is detailed in Figure 3-1.

Figure 3-1 - Current Public Transport Provision

Both the Bray Dart Station and the nearest bus stops on Dublin road are within 800m from the development site, this equates to a walking time within 10 minutes along safe and secure walking routes. The bus services in Table 3-1 serve the proposed development site, these operate along the Dublin Road adjacent the development.

Table 3-1 - Existing Bus Services

Bus Service	Route	Frequency (Mon-Friday)
45a	Dún Laoghaire Rail Station to Kilmacanogue	15-20min
45b	Kilmacanogue - Dun Laoghaire Rail Station	15-20min
84	Blackrock to Newcastle	25-35mins
84a	Blackrock to Bray	25-35mins
145	Heuston Rail Station to Ballywaltrim	10mins
155	IKEA (Ballymun) Towards Bray Rail Station	20mins
184	Newcastle Hospital to Bray Rail Station	30mins

In addition to the existing bus services noted above the development is also served by the existing rail services in Table 3-2 below.

Table 3-2 - Existing Rail Services

Rail Service	Route	Frequency (Mon-Friday)
Dart	Malahide to Greystones / Howth to Greystones	5-10mins
Commuter / Intercity Services	Dublin to Rosslare	10 services

The existing transport services detailed above provide a high level of service and capacity to serve the development.

3.2. Future Services

The future public transport services associated with the proposed development are shown in Figure 3-2 below.

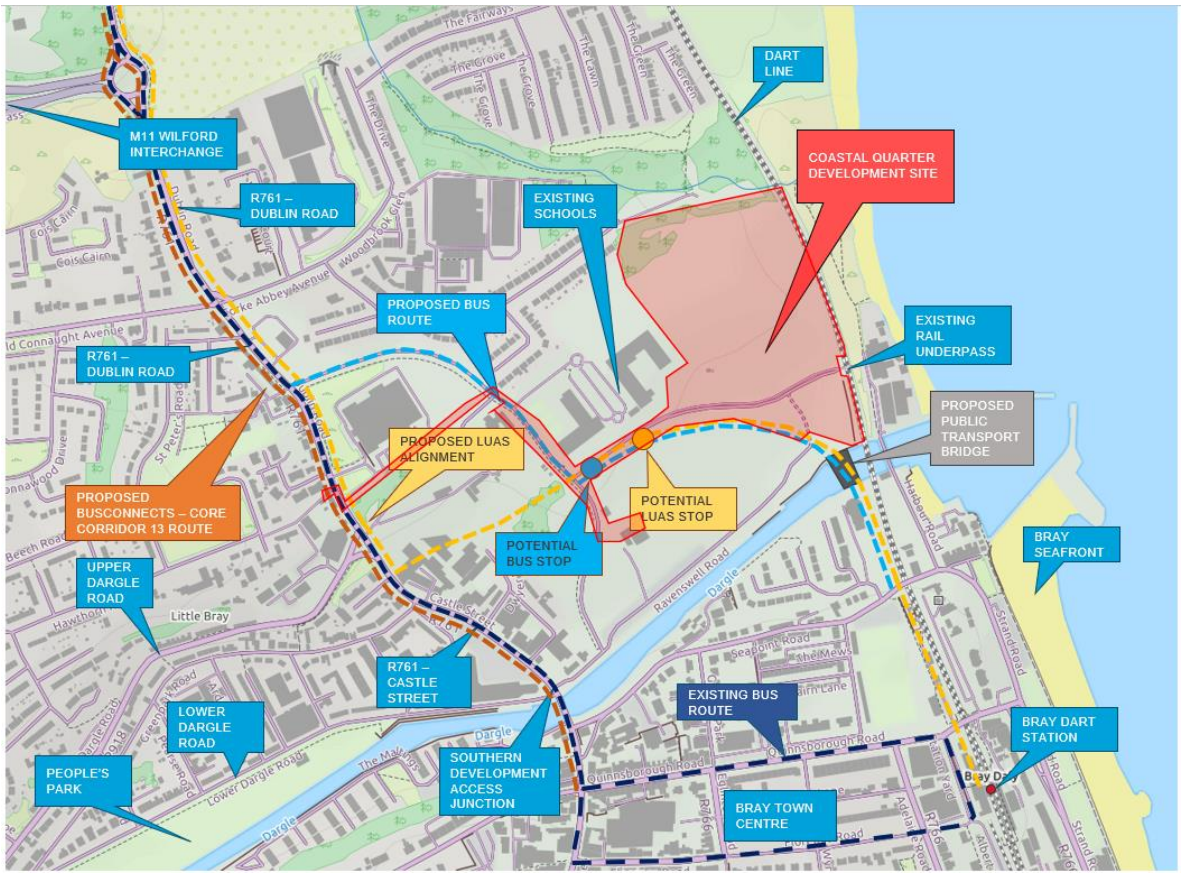

Figure 3-2 : Future Public Transport Provision

3.2.1. Public Transport Bridge

Wicklow County Council (WCC) are continuing to progress matters associated with the Part 8 application for the Bray Sustainable Transport Bridge (Ref PRR 21/869). The layout of the Coastal Quarter and the proposed bridge has been coordinated with Wicklow County Council. A number of meetings have been held between Wicklow County Council and representatives of the former Golf Club Lands including pre-planning meetings in relation to the SHD planning application (Ref ABP 308291-20). While the subject scheme has been designed to the existing road network (refer to drawing 5214419-ATK-01-ZZ-DR-CE-104 for further detail), it can also be adapted to the above referenced scheme should it be granted permission in the future.

This is in line with the requirements of Road Objectives R05 of the Bray Municipal District Local Area Plan. Whilst this bridge will provide for improved connectivity to the site it is not required to serve the proposed development which will have appropriate access to the DART station via both the existing

rail underpass and Riverwalk along with appropriate access to existing bus services along Dublin Road. Indicative location of future bus stop detailed on Figure 3-2.

3.2.2. Luas Route

The future Luas proposals, as set out in the Greater Dublin Area Transport Strategy include the extension of Luas Green line to Bray. This line is not proposed to be developed until after 2035 but it is anticipated that the alignment will be adjacent the R761, into the development lands and into Bray Dart Station via the proposed Public Transport Bridge.

The proposals for the Phase 2 Riverside Quarter of the full Masterplan Development will include for the provision for the potential of LUAS Stops within the development lands with an indicative location detailed on Figure 3-2. The masterplan for the development lands takes cognisance of the provision of the Luas extension and its interface with the development and locations of LUAS stops.

3.2.3. BusConnects – Core Bus Corridor

The NTA are currently developing the BusConnects Scheme, which includes Corridor 13 Bray to UCD and City Centre. As the R761 lies on BusConnects Route 13 Bray to the City Centre, a full upgrade of the carriageway and associated junctions will be provided along the R761. The BusConnects Route 13 layout adjacent the site is detailed in Figure 3-3 and 3-4 below.

Figure 3-3 - BusConnects Route 13 (bus connects.ie – Core Bus Corridor 13 Bray to City Centre Information Brochure Map 53)

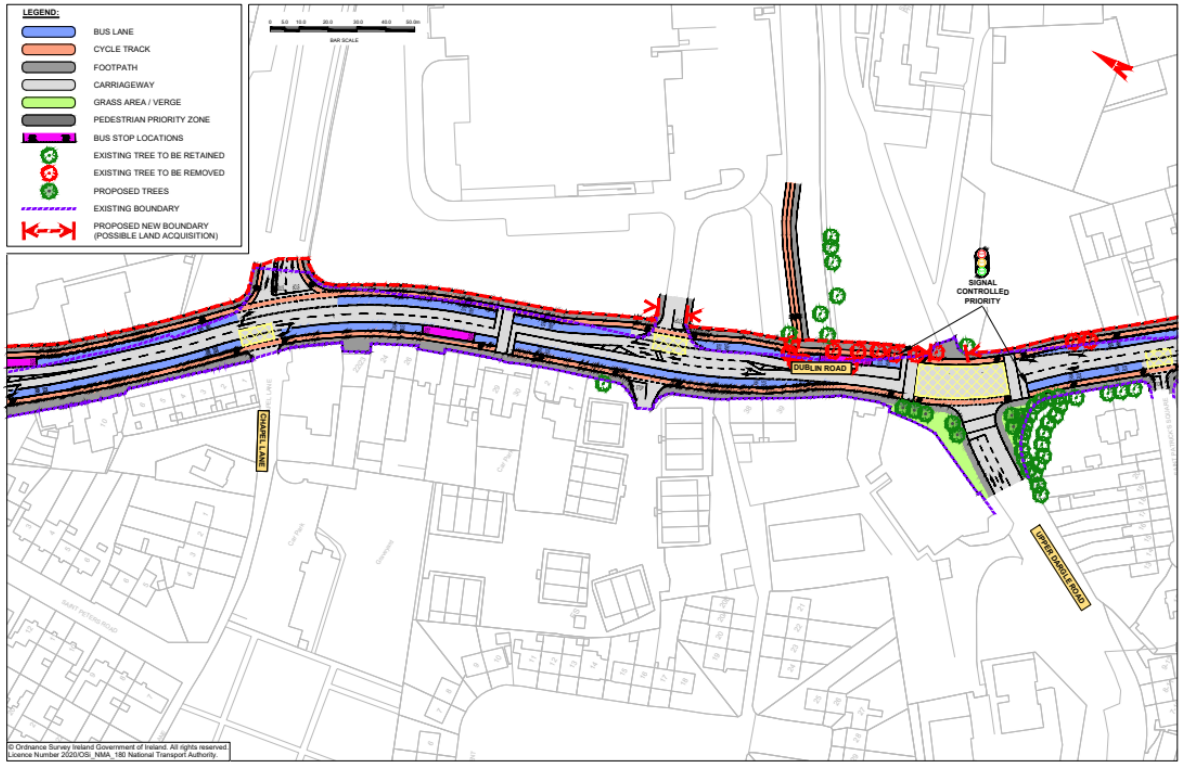

Figure 3-4 - BusConnects Route 13 (bus connects.ie – Core Bus Corridor 13 Bray to City Centre Information Brochure Map 54)

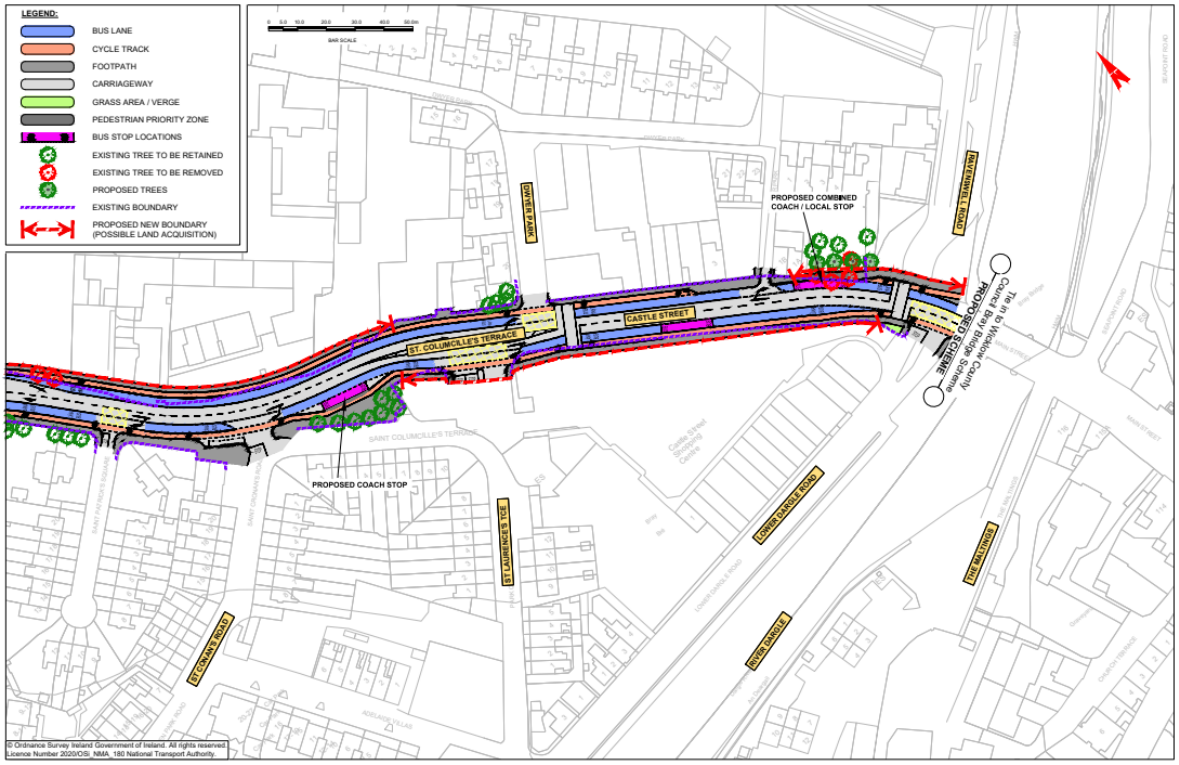

This will include for two-way provision for traffic, buses, cyclist and pedestrians as per Figure 3-5 below. This upgrade will have no impact on the Coastal Quarter development proposals.

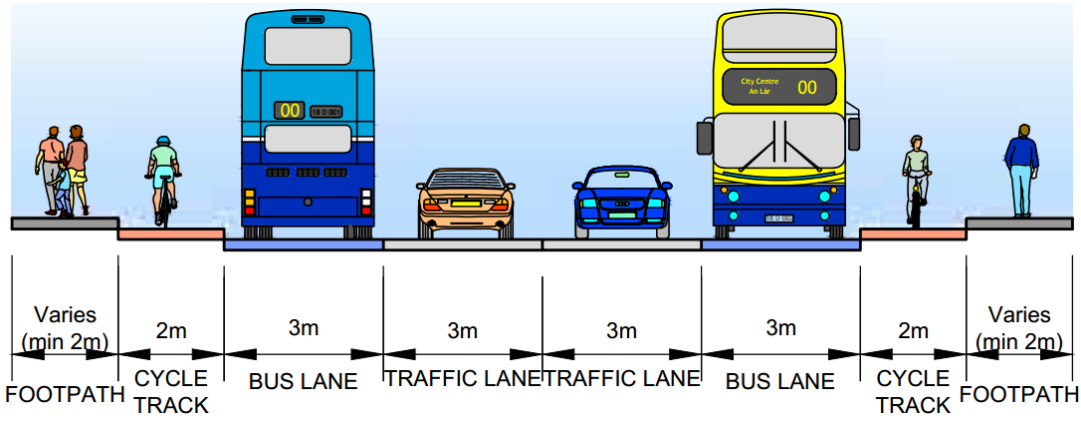

Figure 3-5 - BusConnects Typical Cross Section(busconnects.ie - Core Bus Corridor 13 Bray to City Centre – Information Brochure)

3.2.4. BusConnects - Bus Network Proposals

As part of the BusConnects project the NTA are also proposing a redesign of the bus network to provide a more efficient network with high frequency spines, new orbital routes and increased bus services. Figure 3-6 shows the proposed redesigned routes serving Bray and the development and Figure3-7 provides details of these routes. The main spine route E1, serving Bray along the R761 Dublin Road, incorporates AM & PM peak hour services every 8 minutes.

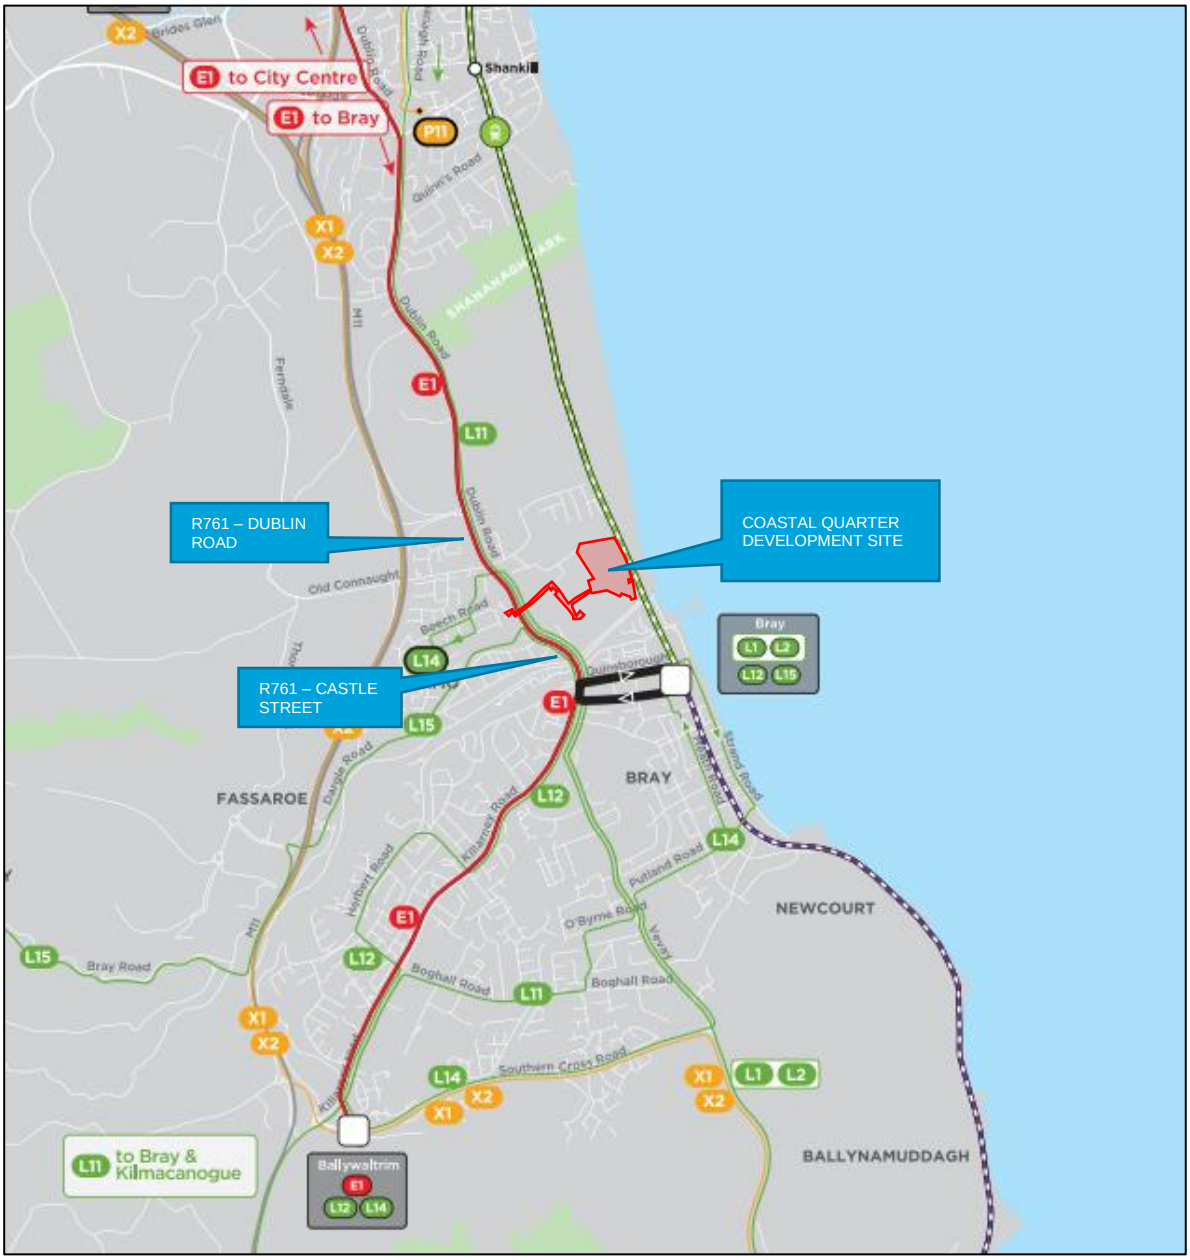

Figure 3-6 - BusConnects Bus Network Map – Bray (busconnects.ie – busconnects final summary report)

		Route	From	Via	To	How Often*
Spine and Branch Routes (all via City Centre)	Spines are very frequent routes made up of individual bus services timetabled to work together along a corridor. At the end of the corridor, the individual services branch o to serve di erent areas. E.g. where bus services A1, A2, A3 and A4 join together that forms the A-Spine.	E1	Bray	Shankill - N - Stillorgan Rd - Donnybrook - City Centre (O Connell St St Stephen s Green) - Phibsborough - St Mobhi Rd - Glasnevin -Ballymun	Balbutcher Lane	Every 10-15 mins
Other City Bound Routes	Other city bound services operate into Dublin City Centre. These services are not part of any Spine, and operate to their own timetable.	11	Belarmine	Sandyford Village - Dundrum Rd - Milltown - Ranelagh - Merrion Sq	Mountjoy Sq	Every 60 mins
		12	Enniskerry	Stepaside - Belarmine - Sandyford Village - Dundrum Rd - Milltown - Ranelagh - Merrion Sq	Mountjoy Sq	Every 60 mins
		98	Loughlinstown Park	Sallynoggin - Dún Laoghaire - Blackrock - Merrion Rd - Ballsbridge - City Centre (Merrion Sq)	Mountjoy Sq	Every 60 mins
Local Routes	Local services provide important connections within local areas, linking to local retail centres and to onward transport connections (e.g. to Rail and Luas, or Spine routes).	198	Glencullen	Blackglen Rd - Sandyford Rd - Balally	Dundrum Luas	Every 120 mins
		201	Bray Station	Greystones - Kilcoole - Newcastle - Newtownmountkennedy - Kilpedder - Glenview (Loop Service)	Bray Station	Every 40 mins
		202	Bray Station	Greystones - Kilcoole - Newcastle - Newtownmountkennedy - Kilpedder - Glenview (Loop Service)	Bray Station	Every 40 mins
		211	Kilmacanogue	Killarney Rd - Boghall Rd - Bray - Shankill - Shanganagh Rd - Sallynoggin	Dun Laoghaire	Every 20 mins
		212	Bray Station	Killarney Rd - Herbert Rd	Southern Cross	Every 10-15 mins
		213	Kiltiernan	Stepaside - Sandyford Ind Est - Stillorgan - Nutley Lane - St Vincent s Hospital - Sydney Parade - Sandymount	Ringsend Bus Garage	Every 60 mins
		214	Palermo	Bray Main St - Putland Rd	Southern Cross	Every 30 mins
		215	Bray Station	Upper Dargle Rd - M - Enniskerry	Shop River	Every 60 mins
		222	Bride s Glen Luas	Wyatville Rd - Churchview Rd -Sallynoggin	Dun Laoghaire	Every 10-15 mins
		226	Kiltiernan	Glenamuck Rd - Carrickmines - Cornelscourt Hill Rd - Deansgrange Rd - Benamore Rd - Carysfort Ave	Blackrock	Every 30 mins
For clarity, Peak Only services are also illustrated on a separate map available on the BusConnects website.						
Peak-time Routes	Peak-time services operate during the peak travel periods, generally weekday mornings and evenings.	301	Kilcoole	Charlesland - Greystones - Bray Southern Cross - N - UCD - St Stephen s Green	Townsend St	Peak - Only
		302	Newcastle	Kilcoole - Charlesland - Greystones - Bray Southern Cross - Cherrywood - UCD - St Stephen s Green	Townsend St	Peak - Only
		311	Shankill	Ballybrack - Baker s Corner - Stillorgan - UCD - St Stephen s Green	Townsend St	Peak - Only
		313	Kiltiernan	Stepaside - Sandyford Ind Est - Stillorgan	UCD	Peak - Only
*Midday frequency shown in table. Services may be more frequent in peak hours. Less frequent at weekends/evenings.						

Figure 3-7 - BusConnects Bus Network Proposals – Bray (busconnects.ie – busconnects final summary report)

3.3. Public Transport Summary

The future corridor and network improvements will serve the entire Bray area and enhance services that will serve the full development of the former Bray Golf Club lands, however the proposed Coastal Quarter development will be adequately served by current bus services and Dart service provision.

The proposed development is aligned with existing planning from WCC in relation to the proposed link road and public transport bridge (Part 8 – Bray Sustainable Transport Bridge, Planning Reference PRR 21/869).

The proposed Coastal Quarter Development does not impede on the delivery of these future transport proposals and will be appropriately incorporated into the next phase of development in consultation with relevant bodies

4. Receiving Environment - Road Network

4.1. Existing Local Road Network

The Proposed development accesses onto existing development roads providing access to the wider street network, the R761 Dublin and R761 Castle Street. The existing development road onto the R761 Dublin Road to the north provides access to Junction 5 of the N11 / M11. The existing development road onto the R761 Castle Street to the south provides access to Bray Town Centre and the N11 road via the Lower Dargle Road & Upper Dargle Road. These road connections are detailed in Figure 4-1 below.

Figure 4-1 - Local Road Network

A description of the key roads is provided below.

4.1.1. Existing Northern Development Road

The existing northern development access road is in full ownership of the Applicant. Please refer to Atkins Drawing 5214419-ATK-ZZ-ZZ-SK-SD-2001 for information on its status. This development road consists of the elements below:

- two traffic lanes
- hatched median with traffic islands
- northbound / westbound bus lane (terminated at the school access junction)
- raised adjacent cycle paths both sides
- footpath both sides

A typical cross-section of the road is shown in Figure 4-2 below.

Figure 4-2 - Existing Northern Development Road

4.1.2. Existing Southern Development Road

The existing southern development access road is in full ownership of the Applicant. Refer to Atkins Drawing 5214419-ATK-ZZ-ZZ-SK-SD-2001 for information on its status. This development road consists of the following elements:

- two traffic lanes;
- raised adjacent cycle paths both sides; and
- footpath on the western side.

A typical cross-section of the road is shown in Figure 4-3 below.

Figure 4-3 - Existing Southern Development Road

4.1.3. Existing Eastern Development Road

The existing eastern development access road is in full ownership of the Applicant. Please refer to Atkins Drawing 5214419-ATK-ZZ-ZZ-SK-SD-2001 for information on its status. This development road consists of the elements below:

- two traffic lanes
- raised adjacent cycle paths both sides
- footpath on the northern side

A typical cross-section of the road is shown in Figure 4-4 below.

Figure 4-4 – Existing Eastern Development Road

4.1.4. R761 Dublin Road

The R761 Dublin Road consists of the following elements:

- two traffic lanes;
- wide central hatched median with turning lane pockets at major junctions;
- on-road cycle lanes both sides; and
- footpath on both sides.

A typical cross-section of the road is shown in Figure 4-5 below.

Figure 4-5 - R761 Dublin Road

4.1.5. R761 Castle Street

The R761 Dublin Road consists of the elements below:

- two traffic lanes
- bus lane on one side southbound
- on-road cycle lane on one side northbound
- footpath on both sides

A typical cross-section of the road is shown in Figure 4-6 below.

Figure 4-6 - R761 Castle Street

4.2. Future Road Network

The existing and proposed road network is shown in Figure 4-7 below and consists of the following elements:

- The proposed BusConnects Core Corridor 13 scheme upgrade of the R761 and associated junctions to facilitate a widened road corridor incorporating improved bus, cycle and pedestrian facilities as detailed in Section 3.
- A Wicklow County Council (WCC) is undertaking Part 8 approval procedures to carry out the design and construction of the Bray Sustainable Transport Bridge (Ref. PRR 21/869). Part 8 planning has been granted and is currently under judicial review. The project has not yet been confirmed by the Planning Authority. This is in line with the requirements of Road Objectives R05 of the Bray Municipal District Local Area Plan and will cater for public transport bus and Luas services together with pedestrians and cyclists.
- Improvements for pedestrians & cyclists are proposed on Castle Street Bridge as per the requirement of Transport Objective R10 of the Bray Municipal District Local Area Plan as detailed in Section 2. As outlined previously, these consist of new pedestrian and cyclist bridges on both sides of the existing bridge and the provision of southbound bus lane across the bridge.
- As part of the Masterplan for the full Harbour Point Masterplan a further development road (shown in dashed purple below) linkage is proposed at the existing traffic signal-controlled junction of the Upper Dargle Road. This is in line with the requirements of Road Objectives R05 of the Bray Municipal District Local Area Plan. This link will further improve permeability of pedestrians, cyclists to and through the development and general traffic onto the local road network.

Figure 4-7 : Existing & Future Road Provision

4.3. Local Road Junctions

The key junctions in the area of influence of the proposed development in terms of potential vehicular traffic impact are illustrated in Figure 4-8 and described in the following sections.

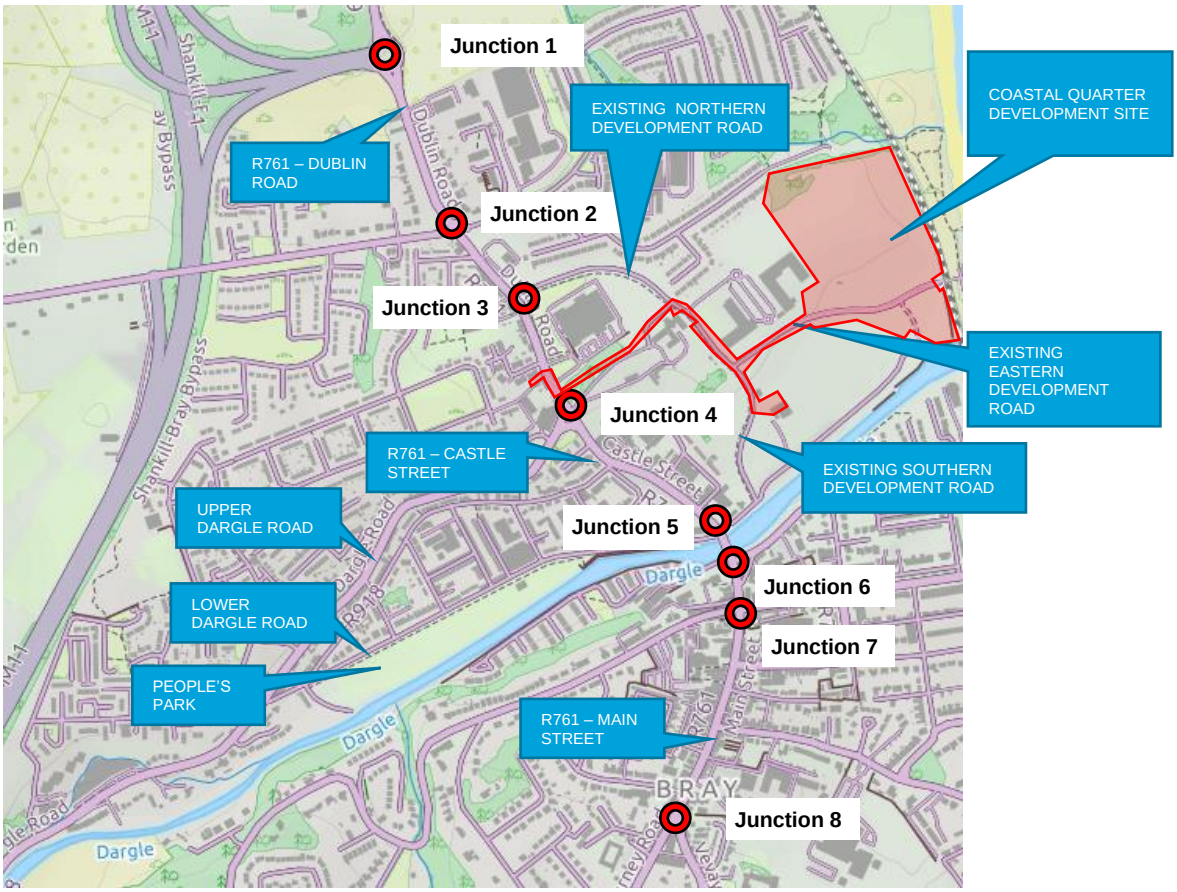

Figure 4-8 - Local Road Network Junction Locations

4.3.1. Junction 1 - Wilford Roundabout

Junction 1 is a large three-arm roundabout between the M11 Wilford Interchange Link arm and the Dublin Road (R119 and R761). The approach along the western and southern arms accommodate double lane configuration whilst a single lane approach exists on the northern arm. Figure 4-9 illustrates the junction layout. There are no pedestrian crossing facilities on any arm, however a cycle lane is provided on both sides of the northern arm and this continues northwards along the R119 Dublin Road.

Figure 4-9 - Junction 1 - Wilford Interchange Link Road / Dublin Rd (R119 / R761)

There are proposals currently being prepared by DLRCC to redesign this junction as a Traffic Signal junction which will incorporate an additional right turning lane on the northern arm, a left slip on the southern arm and pedestrian crossing facilities. This layout is illustrated in Figure 4-10. BusConnects will further advance this layout with the incorporation of north and southbound bus lanes and cycle tracks as detailed in Figure 4-11.

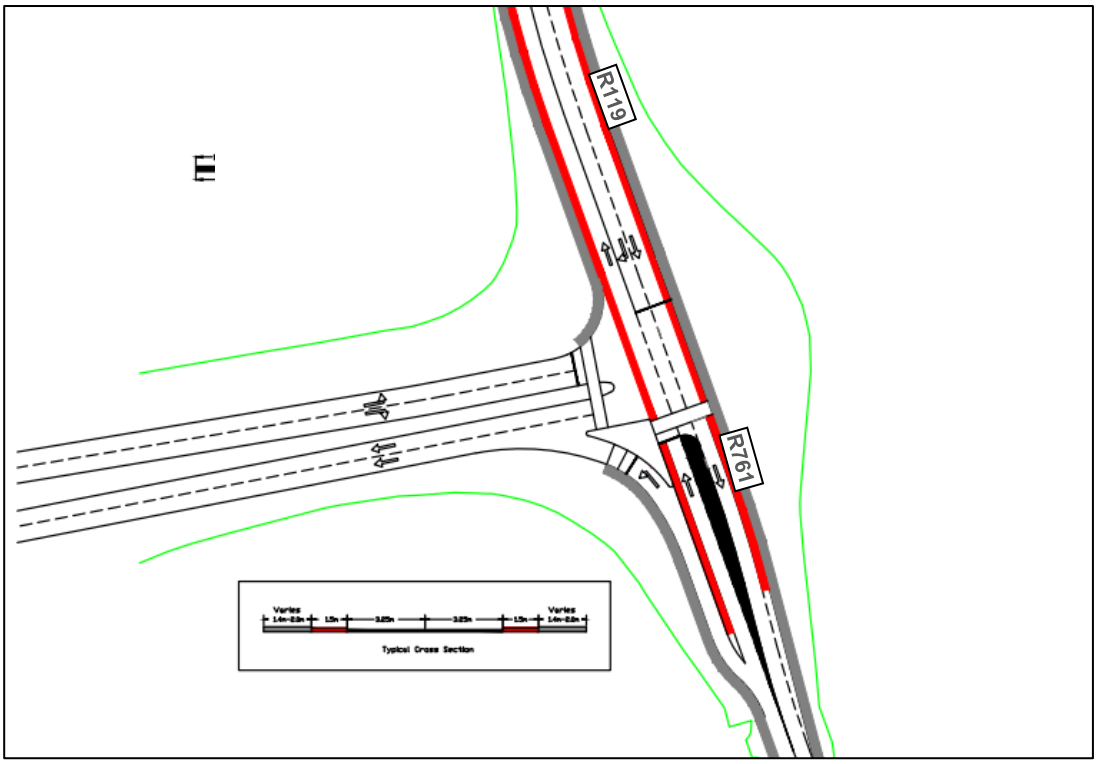

Figure 4-10 - Junction 1 - Wilford Interchange Proposed DLRCC Traffic Signal Junction

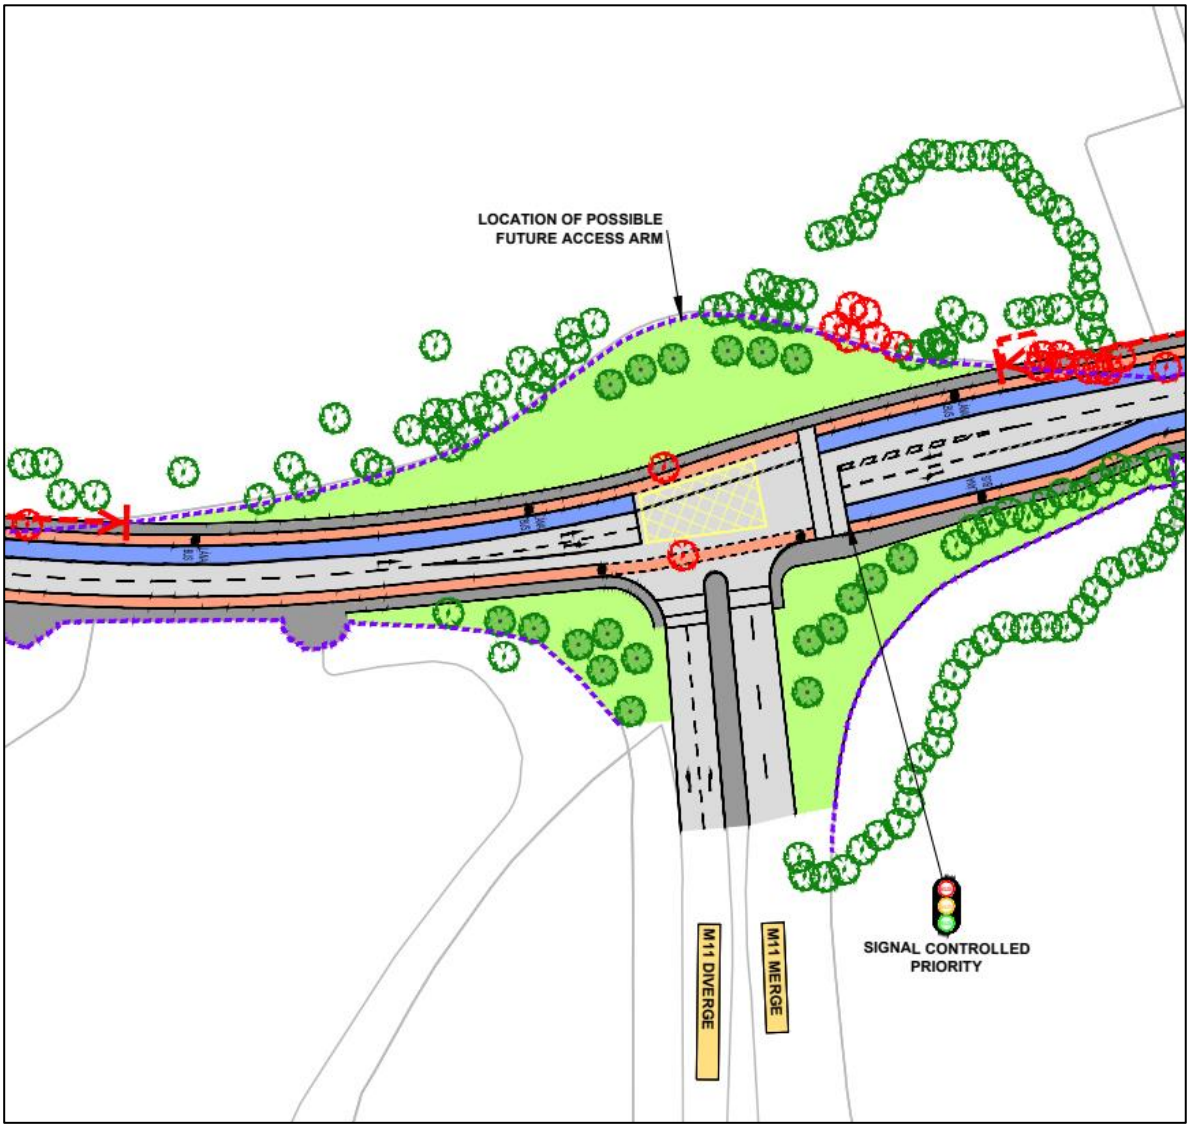

Figure 4-11 - Junction 1 - Wilford Interchange Proposed BusConnects Junction Layout

4.3.2. Junction 2 - Old Connaught Avenue / Corke Abbey Avenue / R761

Junction 2 is a traffic signal junction between R761 Dublin Road and the side road arms of Old Connaught Avenue and Corke Abbey Avenue. Double lane approaches are provided on all arms for a short distance. Left slip lanes are provided on the northern Dublin Road arm and the Corke Abbey arm. Signalised pedestrian crossing facilities are provided on the Old Connaught Avenue arm and the southern Dublin Road arm. Figure 4-12 details the junction layout.

Figure 4-12 - Junction 2 - Old Connaught Avenue / Corke Abbey Avenue / R761 Dublin Rd

4.3.3. Junction 3 - R761 & Northern Development Access Road

Junction 3 is effectively a T-junction between the R761 Dublin Road and the Northern Development Road and operates under priority control with the Northern Development Access Road being the minor arm. Double lane approaches are provided on the Dublin Road southern arm and the Northern Development Access Road. This is a right turn pocket from the Dublin Road northern arm in to Chapel Lane which is a short cul de sac on the western side of the Dublin Road. for a short distance except for Chapel Lane arm.

Pedestrian crossing facilities consist of dropped kerbs crossing on both the Northern Development Access Road and Chapel Lane Figure 4-13 details the junction layout. There is also a mid-block dropped kerb pedestrian crossing due south of the junction on Dublin Road.

Figure 4-13 - Junction 3 - Junction of R761 Dublin Road & Northern Development Access Road

4.3.4. Junction 4 - R761 Castle Street & Upper Dargle Road

Junction 4 is a T-junction between R761 Castle Street & Upper Dargle Road and operates under signalised control. Double lane approaches are provided on Upper Dargle Road with single lane approaches on the R761 Castle Street arms. Left turn slip is provided on the northbound R761 Castle

Street arm onto the Upper Dargle Road. Signalised pedestrian crossing facilities are provided on the R671 Southern arm and the Upper Dargle Road arm. Figure 4-14 details the junction layout.

Figure 4-14 - Junction 4 - Junction of R761 Castle Street & Upper Dargle Road

4.3.5. Junction 5 - R761 Castle Street, Lower Dargle Road & Ravenswell Road

Junction 5 is a crossroad junction between R761 Castle Street, Lower Dargle Road & Ravenswell Road and operates under priority control with the Lower Dargle Road & Ravenswell Road being the minor arms. Single lane approaches are provided on all arms. Pedestrian crossing facilities consist of dropped kerbs crossing on both the Lower Dargle Road and Ravenswell Road. Figure 4-15 details the junction layout.

Figure 4-15 - Junction 5 - Junction of R761 Castle Street, Lower Dargle Road & Ravenswell Road

4.3.6. Junction 6 - R761 Castle Street, The Maltings & Seapoint Road

Junction 6 is a traffic signal junction between R761 Castle Street, The Maltings & Seapoint Road Single lane approaches are provided on all arms. Pedestrian crossing facilities consist of dropped kerbs crossing on both the The Maltings & Seapoint Road. Figure 4-16 details the junction layout.

Figure 4-16 - Junction 6 - Junction of R761 Castle Street, The Maltings & Seapoint Road

4.3.7. Junction 7 - R761 Castle Street, Herbert Road & Quinsborough Road

Junction 7 is a traffic signal junction between R761 Castle Street, Herbert Road & Quinsborough Road. Double lane approaches are provided on all arms for a short distance except for Quinsborough Road which operates as a one-way street heading eastbound away from the junction. Signalised pedestrian crossing facilities are provided on all arms of the junction. Figure 4-17 details the junction layout.

Figure 4-17 - Junction 7 - Junction of R761 Castle Street, Herbert Road & Quinsborough Road

4.3.8. Junction 8 - R761 Main Street, Killarney Road & Vevay Road

Junction 8 is a traffic signal junction between R761 Main Street, R767 Killarney Road & R761 Vevay Road. Double lane approaches are provided on all arms for a short distance except for Vevay Road which has single approaches. There is a slip lane provided between Vevay Road and Killarney Road. Signalised pedestrian crossing facilities are provided on Killarney Road & Vevay Road arms. There is a signalised pedestrian crossing due south of the junction on Main Street. Figure 4-18 details the junction layout.

Figure 4-18 - Junction 8 - R761 Main Street, Killarney Road & Vevay Road

4.4. Proposed Coastal Quarter Development Access Junctions

The proposed Coastal Quarter Development access onto the existing Eastern Development Road is via two priority-controlled junctions as shown in Figure 4-19 below. These junctions are further detailed in the Engineering and Planning Report.

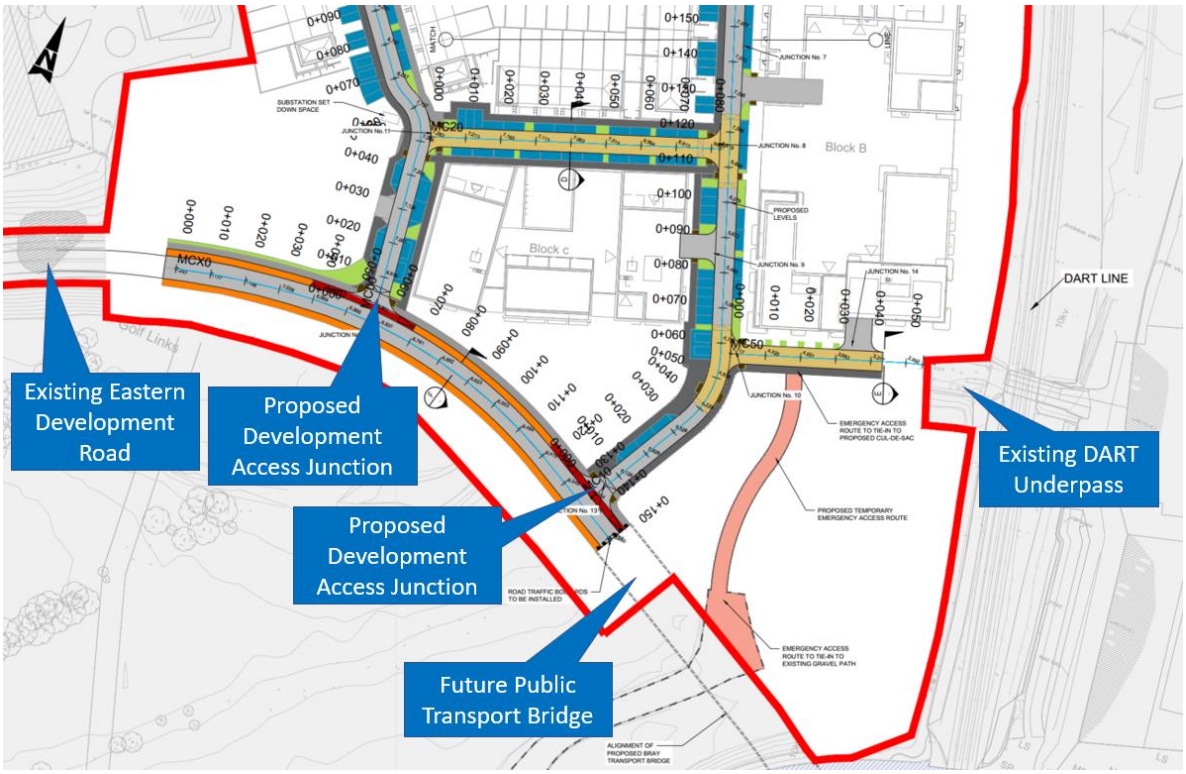

Figure 4-19 - Proposed Coastal Quarter Development Access Junctions

5. Car Parking Provision

5.1. Residential House & Duplex Units Car Parking

5.1.1. Dun Laoghaire-Rathdown Development Plan Requirements

The Dun Laoghaire-Rathdown County Development Plan (2022-2028), Table 12.5, notes the residential dwelling parking requirements in Figure 5-1 below.

Table 12.5 *Car Parking Zones and Standards*

Land Use		Zone 1 MTC Areas and Blackrock	Zone 2 Near Public Transport	Zone 3 Remainder of County (non-rural)	Zone 4 Rural
Houses:	Criterion	Maximum	Standard	Standard	Standard
House 1 bed	unit	1	1	1	Case by case
House 2 bed	unit	1	1	1	Case by case
House 3 bed or more	unit	1	2	2	Case by case
Apartments and Sheltered Housing:					
Apt 1 bed	unit	1	1	1*	Case by Case
Apt 2 bed	unit	1	1	1*	Case by Case
Apt 3 bed +	unit	1	2	2*	Case by Case

Figure 5-1 - DLRCC Residential Car Parking Requirements

The Costal Quarter development is deemed to be classified as Zone 2 (development located near public transport). Under the DLRCC Development Plan, reduced car parking standards for any development may be acceptable dependant on specific criteria, the main criteria relevant to the Coastal Quarter Development is provided below:

- The location of the proposed development in relation to Town Centres and District Centres as well as high density commercial/business areas; and
- The proximity of the proposed development to public transport (both current and future).

5.1.2. Wicklow Development Plan Requirements

Section 1 of Volume 3 - Appendix 1 - Development Design Standards of the Wicklow County Development Plan noted below notes the residential dwelling parking requirements in Figure 5-2 below.

Car parking

- 2 off street car parking spaces shall normally be required for all dwelling units over 2 bedrooms in size. For every 5 residential units provided with only 1 space, 1 visitor space shall be provided. Parking for non-

Figure 5-2 - Wicklow Development Plan Residential Car Parking Requirements

5.1.3. Development Proposal

Given the sites location within the developed urban area and direct proximity to both DART and bus public transport services, Bray town centre, schools, retail, leisure amenities etc. the car parking proposal to be applied to the house and duplex units is outlined below:

- 1 resident space for 2 Bed Units;
- 1.5 resident spaces for 3 Bed Units;
- 2 resident spaces for 4 Bed Units; and
- 1 visitor space per 10 units.

This parking proposal is below the maximum requirements of both the DLRCC and Wicklow Development plan requirements and is in accordance with both councils' policies to promote the reduction of car use in new developments in close proximity to public transport services and proximity to Town Centre. The parking proposal for the house and duplex units is detailed in the Table 5-1 below.

Table 5-1 - House & Duplex Units Car Parking Proposal

Unit Type	No of Units	Resident Parking Ratio	Resident Parking Requirement	Visitor Parking Ratio	Visitor Parking Requirement
2 Bed Houses	13	1 per unit	13	1 per 10 units	1
3 Bed Houses	51	1.5 per unit	77	1 per 10 units	5
4 Bed House	12	2 per unit	24	1 per 10 units	1
2 Bed Duplex	26	1 per unit	26	1 per 10 units	3
3 Bed Duplex	26	1.5 per unit	39	1 per 10 units	3
Total	**128**	**Total Resident Requirement**	**179**	**Total Visitor Requirement**	**13**

A total of 192 no. parking spaces are therefore required for the house and duplex units (including visitor parking). A total of 192 no. will be provided with 179 no. assigned to the residents and a further 13 no. for the visitors. Allocation of these spaces is as shown on Atkins drawings 5214419-ATK-01-ZZ-DR-CE-0119 and 5214419-ATK-01-ZZ-DR-CE-0120 .

5.2. Apartment Units Car Parking

5.2.1. Design Standards for New Apartments

Parking requirements from Section 4.21 of the Design Standards for New Apartments (DHLGH 2020) for all three location classifications are summarised as follows:

Peripheral and/or Less Accessible Urban Locations:

As a benchmark guideline for apartments in relatively peripheral or less accessible urban locations, one car parking space per unit, together with an element of visitor parking, such as one space for every 3-4 apartments, should generally be required.

Intermediate Urban Locations:

In suburban/urban locations served by public transport or close to town centres or employment areas and particularly for housing schemes with more than 45 dwellings per hectare net (18 per acre), planning authorities must consider a reduced overall car parking standard and apply an appropriate maximum car parking standard.

Central and/or Accessible Urban Locations:

In larger scale and higher density developments, comprising wholly of apartments in more central locations that are well served by public transport, the default policy is for car parking provision to be minimised, substantially reduced or wholly eliminated in certain circumstances. The policies above would be particularly applicable in highly accessible areas such as in or adjoining city cores or at a confluence of public transport systems such rail and bus stations located in close proximity.

These locations are most likely to be in cities, especially in or adjacent to (i.e. within 15 minutes walking distance of) city centres or centrally located employment locations. This includes 10 minutes walking distance of DART, commuter rail or Luas stops or within 5 minutes walking distance of high frequency (min 10 minute peak hour frequency) bus services."

Given the development site characteristics noted in Section 1 the development site would be classified as an intermediate urban location with central location characteristics. Whilst a specific standard for intermediate locations is not stated, the range of provision extends from 1 car space per unit for residential and 1 car space per 3-4 units for visitor in peripheral locations to potentially zero provision in a central location.

5.2.2. Development Proposal

The car parking provision for apartments is considered an appropriate provision which is well below the potential one space per unit provision in peripheral locations, but which also affords the residents a reasonable and balanced potential to avail of car ownership whilst not necessarily availing of travel by car for day to day trip purposes. The car parking proposal to be applied to the apartment units is outlined below:

- A range of 0.72 to 0.60 per unit for residential parking; and
- 1 visitor space per 20 units.

This parking proposal is in accordance with both councils' policies to promote the reduction of car use in new developments in close proximity to public transport services. The parking proposal for the apartment units is detailed Table 5-2 below.

Table 5-2 - Apartment Units Car Parking Proposal

Apartment Unit	No of Apartment Units	Resident Parking Ratio	Resident Parking Requirement	Visitor Parking Ratio	Visitor Parking Requirement
Block A Undercroft	162	0.72 per unit	117	1 per 20 units	8
Block B Undercroft & Basement	190	0.62 per unit	118	1 per 20 units	10
Block C Undercroft	80	0.6 per unit	48	1 per 20 units	4
Block D Undercroft	26	0.6 per unit	16	1 per 20 units	1
Total	**458**	**Total Resident Requirement**	**299**	**Total Visitor Requirement**	**23**

A total of 322 no. parking spaces are therefore required for the apartment units. A total of 322 no. will be provided with 299 no. to be assigned to residents and 23 no. for visitors. Allocation of these spaces is as shown on Atkins drawings 5214419-ATK-01-ZZ-DR-CE-0119 and 5214419-ATK-01-ZZ-DR-CE-0120.

5.3. Non-Residential Uses Car Parking

The non-residential uses are located within the Wicklow County Council area and parking is to be provided in accordance with the Wicklow County Development Plan. In line with the residential parking provision, the non-residential uses parking provision are below or aligned with the maximum rate for the Non-Residential Uses as detailed in Table 5-1 of the Wicklow County Development Plan. Table 5-3 Below details the WCC maximum rate and the development provision. The development provision is set out in the context of the local catchment of both the creche and retail units and therefore the very strong potential for short distance trips to these uses to be made on foot.

Table 5-3 - Non-Residential Use Car Parking Proposal

Non-Resi Use	Area/ Details	WCC Maximum Car Parking Rate Table 7.1	WCC Maximum Parking Requirement	Development Proposed Parking Rate	Development Parking Proposal
Gym & Juice Bar	512m^2	5/100m^2 floor area	25	1/100m^2 floor area	5
Convenience Store (Block C)	249m^2	4/100m^2 floor area	10	2/100m^2 floor area	5
Cafe	195m^2	4/100m^2 floor area	8	2/100m^2 floor area	4
Creche (16 Staff & 80 Children)	627m^2	0.5 spaces per staff member + 1 car parking space per 10 children	16 (8 for staff + 8 for set-down)	0.5 spaces per staff member + 1 car parking space per 20 children	12 (8 for staff + 4 for set-down)
Total			47 (39 + 8 Set down)		26 (22 + 4 Set down)

The non-residential uses will be accommodated with 26 no. spaces to be located in a combination of Block B and Surface parking spaces around Block C. A total of 2 no. dedicated set-down spaces will be provided on street adjacent the Creche with the adjacent visitor spaces utilised to allow for the remaining 2 no. set-down spaces. This will allow for a dual use of parking spaces throughout the day, avoiding an over provision of parking.

5.4. Car Parking Location and Allocation

The allocation and location of the proposed car parking to be provided is detailed in Table 5-4 below. The allocation of these spaces is as shown on Atkins drawings 5214419-ATK-01-ZZ-DR-CE-0119 and 5214419-ATK-01-ZZ-DR-CE-0120.

Table 5-4 - Development Car Parking Provision

Parking Location	Total Car Parking Provision	Resident Car Parking	Visitor	Gym & Juice Bar	Staff	Set-down / Club Car
At Grade (on-street & In-Curtilage)	223	182	14	4 – Café 5 – Retail 5 – Juice Bar / Gym	0	8 - set down 4 - creche set down 2 - car share
Block A Undercroft	125	117	8		0	0
Block B Undercroft & Basement	165	143	14		8	0
Block C Undercroft	23	23			0	0
Block D Undercroft	13	13			0	0
Total	**549**	**478**	**36**	**14**	**8**	**14**

Notes:

At Grade - 4 spaces are to be allocated to serve Block D (3 no. for residents and 1 no visitor bay)

Block B - 29 spaces are to be allocated to serve Block C, of which, 25 are resident spaces while 4 are visitor

Block B: All creche staff parking (8 no. in total) to be in basement

Creche: 4 no. set -down spaces for creche (1 no. space is shared with visitor spaces).
Set-down / Club Car: 2 no. car club space, other 8 no. spaces are general set-down spaces.

5.5. Accessible Parking

The Dun Laoghaire-Rathdown County Development Plan notes that 4% of the total number of spaces to be suitable for use by disabled persons. The Development Design Standards of the Wicklow County Development Plan notes that 5% of the total number of spaces to be suitable for use by disabled persons.

The development will provide disabled parking at a rate of 4% as detailed in Table 5-5 below.

Table 5-5 - Accessible Parking Proposal

Parking Location	Total Car Parking Provision	Accessible Parking (>4%)
On-Street & On Curtilage	223	8
Block A Undercroft	125	6
Block B Undercroft & Basement	165	7
Block C Undercroft	23	1
Block D Undercroft	13	1
Total	**549**	**23**

5.6. Electric Vehicle (EV) Charging

The DLRCC Development Plan requires for electric charging points to be provided according to the following:

- Installation of external recharging point for electric vehicles in each dwelling;
- Installation of 1 charging point for every 10 car parking spaces and the installation of ducting for all parking spaces within the property.

The Wicklow County Development Plan (2016 – 2022) requires that 10% of all residential car parking spaces are capable of accommodating E-Charging. The draft Wicklow County Development Plan (2022 – 2028) states that a minimum of one car parking space per five car parking spaces should be equipped with one fully functional EV charging point. Ducting for every parking space is also required.

With all requirements considered, it is proposed that a minimum of 10% of all spaces will be delivered as EV Charging upfront and, in addition, all remaining spaces will be provided with the infrastructure to enable E-Charging in the future.

A total of 223 no. surface car parking spaces have been proposed, of which 113 no. are in-curtilage and 110 no. are on-street. In addition, there are 330 no. under croft spaces proposed.

The proposed E-Charging provision is shown in Table 5-6 below. It should be noted that all of the on-curtilage parking is fully served by EV ducting to be activated by the owner.

Table 5-6 - EV Parking Proposal

Parking Location	Total Car Parking Provision	EV Parking
On-Street & On Curtilage	223	20
Block A Undercroft	125	25
Block B Undercroft & Basement	165	13
Block C Undercroft	23	5
Block D Undercroft	13	3
Total	**549**	**66**

Allocation of these spaces is as shown on Atkins drawings 5214419-ATK-01-ZZ-DR-CE-0119 and 5214419-ATK-01-ZZ-DR-CE-0120.

5.7. Car Club Scheme and Set Down

A Car Club scheme is a sustainable service which allows multiple people to use the same vehicle at different times. The scheme reduces car ownership, car dependency, congestion, noise and air pollution as well as frees up land which would otherwise be used for additional parking spaces. Most Car Club users only use a car when necessary and walk and use public transport more often than car owners. The addition of Car Club vehicles in the proposed Coastal Quarter development would allow residents to have access to pay-as-you-go driving, in close proximity to their homes, which will increase usership of the service.

It is proposed to provide 2 no. Car Club spaces within the proposed Coastal Quarter development. Based on the uptake of the scheme, there is potential to provide additional car sharing spaces. In overall terms car sharing spaces can replace up to 15 no. traditional car parking spaces. Allocation of these spaces is as shown on Atkins drawings 5214419-ATK-01-ZZ-DR-CE-0119 and 5214419-ATK-01-ZZ-DR-CE-0120.

5.8. Motorcycle Spaces

Motorcycle parking is provided within the apartment under-croft areas in line with the DLR Development Plan at 4 spaces per 100 car parking spaces. As such a total of 24 no. motorcycle spaces are provided as follows:

- Block A – 12 no. spaces
- Block B – 10 no. spaces
- Block C – 2 no. spaces
- Block D – no spaces

Allocation of these spaces is as shown on Atkins drawings 5214419-ATK-01-ZZ-DR-CE-0119 and 5214419-ATK-01-ZZ-DR-CE-0120.

6. Bicycle Parking Provision

6.1. House & Duplex Units Bicycle Parking

6.1.1. Dun Laoghaire-Rathdown Development Plan Requirements

Dun Laoghaire-Rathdown Standards for Cycle Parking and associated Cycling Facilities for New Developments (DLR 2015) details the cycle parking requirement, Table 4.1 notes the residential dwelling parking requirements as shown in Figure 6-1 below.

Table 4.1 Cycle parking for residential development

Residential Development type	1 short stay (visitor) parking space per: (Minimum of 2 spaces)	1 long stay parking space per: (Minimum of 2 spaces)
Apartments, Flats, Sheltered housing	5 units	1 unit
Houses - 2 bed dwelling	5 units	1 unit
Houses - 3+ bed dwelling	5 units	1 unit
Sheltered housing	5 units	1 unit
Student Accommodation	5 bedrooms	2 bedrooms

The following should be noted when providing cycle parking for residential areas:

- **Private houses:** Cycle parking should preferably be provided within the footprint of the dwelling but should not require the bike to be brought through the house. Where no private or communal garage is provided, bikes should be stored in private garages, a shed in the garden or secure communal cycle parking compounds. Wall bars or rings are acceptable at the front of a house for short term parking.

Figure 6-1 - DLRCC Residential Bicycle Parking Requirements

6.1.2. Wicklow Development Plan Requirements

Section 7 of Volume 3 - Appendix 1 - Development Design Standards of the Wicklow County Development Plan noted below notes the residential dwelling parking requirements in Figure 6-4 below.

Bicycle parking standards ***Table 7.2***

Type of Development	Cycle Parking Standard
Residential units	1 space per bedroom + 1 visitor space per 2 units

Figure 6-2 - Wicklow Development Plan Residential Bicycle Parking Requirements

6.1.3. Development Proposal

Bicycle parking for the House & Duplex Units is provided on curtilage as secure bike stores to the front of the units. It is proposed to provide bicycle stores that facilitate 2 bicycles per unit. This equates to 256 no. bicycle storage spaces. This is considered to be a sufficient provision to cater for resident bicycles and also allows for the accommodation of visitor bicycles to the units.

6.2. Apartment Units Bicycle Parking Proposal

6.2.1. Apartment Guidelines Bicycle Parking Requirements

The apartment buildings will have secure residents bike storage rooms in the individual building undercrofts. All bike storage areas in undercrofts and the basement of Block B can be reached from at grade either by ramp or entrances from grade. Each apartment block has been designed to have high quality and immediately accessible bike parking adjacent to entrances

Bicycle Parking requirements from Section 4.17 of the Design Standards for New Apartments is detailed below in figure 6-3.

- *Location* – cycle storage facilities should be directly accessible from the public road or from a shared private area that gives direct access to the public road avoiding unnecessarily long access routes with poor passive security or, slopes that can become hazardous in winter weather.
- *Quantity* – a general minimum standard of 1 cycle storage space per bedroom shall be applied. For studio units, at least 1 cycle storage space shall be provided. Visitor cycle parking shall also be provided at a standard of 1 space per 2 residential units. Any deviation from these standards shall be at the discretion of the planning authority and shall be justified with respect to factors such as location, quality of facilities proposed, flexibility for future enhancement/enlargement, etc.

Figure 6-3 - Apartment Guidelines Bicycle Parking Requirements

6.2.2. Development Proposal

The minimum bicycle parking rates within the 'Design Standards for New Apartments' of 1 bicycle space per bedroom for residential and 1 bicycle space per 2 units for visitor as to be provided. The bicycle parking requirements for the apartment units is detailed Table 6-1 below.

Table 6-1 - Apartment Units Bicycle Parking Requirements

Apartment Unit	No of Apartment Units	Resident Parking Ratio	Resident Parking Requirement	Visitor Parking Ratio	Visitor Parking Requirement
Block A	162 (79 no. one bed 76 no. two bed & 7 no three bed)	1 per bedroom	252	1 per 2 units	81
Block B	190 (94 no. one bed, 86 no. two bed & 10 no 3 bed)	1 per bedroom	296	1 per 2 units	95
Block C	80 (45 no. one bed, 31 two bed & 4no. three bed)	1 per bedroom	119	1 per 2 units	40
Block D	26 (20 no. one bed & 6no. two bed)	1 per bedroom	32	1 per 2 units	13

Total	**458**	**Total Resident Requirement**	**699**	**Total Visitor Requirement**	**229**

A total of 928 no. bicycle parking spaces are required for the apartment units with 699 no. for the residents and 229 no. for the visitors. The following provision is proposed.

Table 6-2 - Apartment Units Bicycle Parking Proposal

Apartment Unit	Resident (located within curtilage of Apartment Blocks)	Visitor (located within Under-croft of Apartment Blocks)	Visitor (located at convenient locations adjacent Apartment Blocks))	Total Visitor
Block A	277	58	23	81
Block B	326	48	47	95
Block C	126	20	44	64
Block D	62	8	6	14
Total	**791**	**134**	**120**	**254**

In total 1,045 no. resident spaces have been provided for, 791 no. of these within accessible and secure locations within the under croft allocated for residents, and 254 no. allocated for visitors, 134 no. of which are located within the under croft and 120 no. of which are located at convenient locations outside the apartment blocks. The allocation of these spaces is as shown on Atkins drawings 5214419-ATK-01-ZZ-DR-CE-0119 and 5214419-ATK-01-ZZ-DR-CE-0120.

6.3. Non-Residential Uses Bicycle Parking

The non-residential uses are located within the Wicklow County Council area and bicycle parking is to be provided in accordance with the requirement for Non-Residential Uses as detailed in Table 7.2 of the Wicklow County Council development plan. Table 6-3 Below details the WCC maximum rate and the development provision.

Table 6-3 - Non-Residential Use Bicycle Parking Proposal

Non-Resi Use	Area/Details	WCC Minimum Bicycle Parking Rate Table 7.2	WCC Minimum Bicycle Parking Requirement	Development Proposed Bicycle Parking Rate	Development Bicycle Parking Proposal
Gym & Juice Bar	512m^2	20% of employee numbers subject to minimum of 10 bicycle places or one bike space for every car space, whichever is the greatest.	-	1 per parking space	5
Creche	627m^2 (16 Staff & 80 Children)	None provided	-	1 per 4 Staff and 1 per 10 children	4 for staff + 8 for drop off

Convenience Store	249m^2	1 space for every 10 car spaces	1	1 space for every 10 car spaces	1
Cafe	195m^2	1 space for every 10 car spaces	1	1 space for every 10 car spaces	1

The non-residential uses will be provided with 19 no. cycle parking spaces. 4 no. staff spaces and 8 no. set-down spaces will be provided for the creche. As the development will provide visitor cycling parking for the apartment residential units this can also be utilised for the creche drop-off cycle parking and as additional cycle parking for non-residential uses. The allocation of these spaces is as shown on Atkins drawings 5214419-ATK-01-ZZ-DR-CE-0119 and 5214419-ATK-01-ZZ-DR-CE-0120.

6.4. Mobility Hub at the Orchard Site

The Orchard area of communal open space within the development will serve as a 'Mobility Hub', which will be a key component to the proposed Coastal Quarter.

This hub will accommodate standard bike rental and e-bike rental bikes and an electric cargo bike that will be for the exclusive use of residents of the scheme. This facility will be accessed by key fob, with bikes booked via an App. The rental e-cargo bike owned by the Owner Man Co. is an innovative concept that will encourage residents to use the bike for short trips such as to the local supermarket rather than use a car. The hub will also offer additional secure bike parking facilities to residents who may have non-standard sized bikes and trailers. The Mobility Hub will also offer car club parking spaces located opposite the creche.

The location of the car sharing sites are shown on Atkins drawings 5214419-ATK-01-ZZ-DR-CE-0119 and 5214419-ATK-01-ZZ-DR-CE-0120.

7. Service and Emergency Vehicle Access

7.1. Emergency Access

In accordance with Sections 8.2.4.15 of Dún Laoghaire Rathdown County Development Plan an additional access for emergency use is required to be provided for developments of over 300 units on a case-by-case basis. The development is served by two vehicle access points onto the Eastern Development Road with a further fire tender access via the open space adjacent the DART Line as indicated on Figure 7-1 below. Therefore, the development provides appropriate emergency access.

The character of the development access roads connecting the development to the R761, as detailed in Section 4-1, illustrates there are two existing access routes on to the Dublin Road via the Northern Development Road and Southern Development Road. In addition, the Eastern Development Road facilitates emergency vehicles to mount the kerb and traverse the footpath and cycle path in the unlikely event that the main carriageway of this road is blocked. The use of the footpath and cycle track provision by vehicles mounting the kerb will act as the primary emergency access route.

Figure 7-1 - Emergency Access

However, in the rare event that the primary access route may be potentially impassable a further secondary emergency access point has been provided. This proposed secondary emergency access point is provided towards the south of the site and connects via a vehicle crossover with the Cul-De-Sac adjacent Apartment Block B and will route through the open space provision south of this, before tying in with the existing gravel path which ultimately leads to the public car park and onto the R761 Castle Street.

The emergency access road which routes through the open space provision will be of reinforced grass construction and will in part overlap with the paths proposed within the open space. The landscape scheme has been designed to accommodate the emergency access and road levels can be accommodated by the existing ground levels so as not to raise levels in this flood zone area.

This proposed secondary emergency access road will intersect with the alignment of the future public transport road. The need for this secondary emergency access route will be replaced either once the street network of the River Quarter (Phase 2 of the Harbour Point Masterplan) is built along with the street connection out towards the Upper Dargle Road / Dublin Road Junction or once the public transport bridge (Part 8 – Bray Sustainable Transport Bridge, Planning Reference PRR 21/869) and road connecting into the Eastern Development Road is built, whichever occurs first.

Figure 7-2 below, extract taken from Drawing 5214419-ATK-01-ZZ-DR-CE-0108, illustrates the route of the proposed temporary secondary emergency access route.

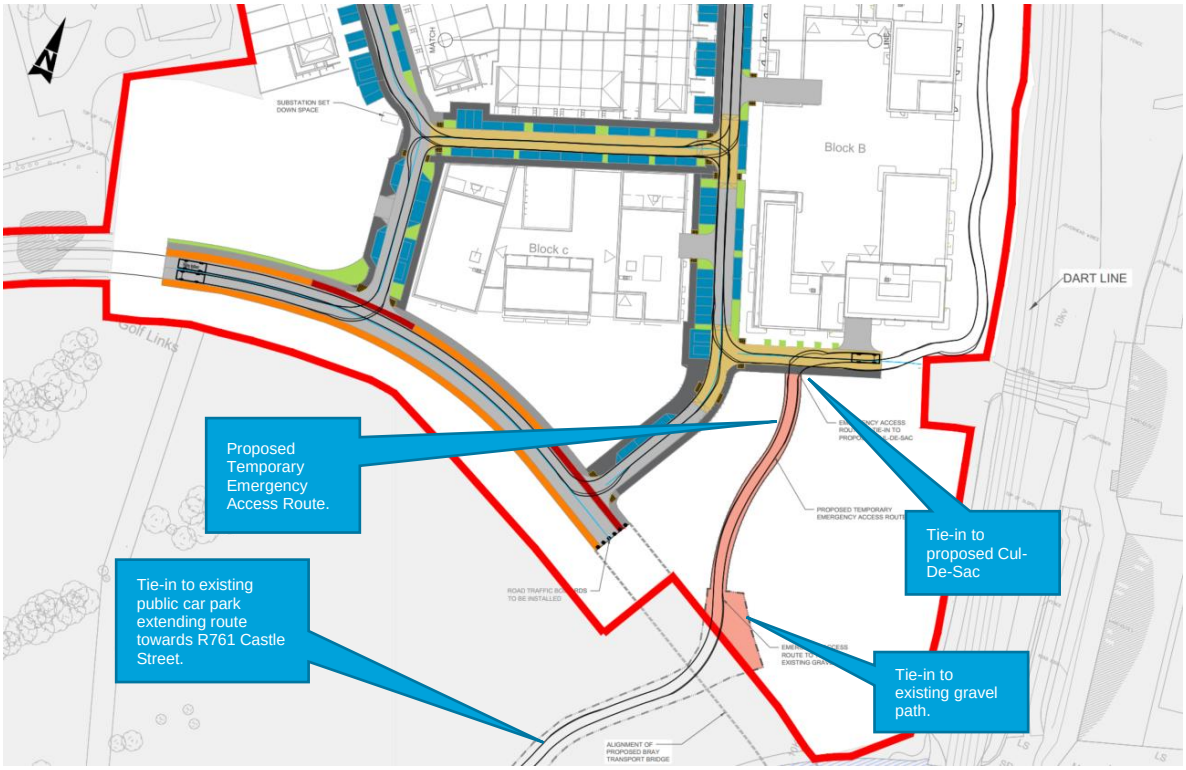

Figure 7-2 – Temporary Secondary Emergency Access

It should be noted that the proposed secondary emergency access road is located within the in 1000-year (0.1% AEP) fluvial flood extents. Discussion on this and its acceptability is outlined in Section 8.1.4 of the accompanying Flood Risk Assessment (5214419DG0019).

The internal road design incorporates appropriate access on all streets for fire tender and ambulance access and incorporates the fire tender route via the open space, as per Figure 7-1, adjacent to Block A and Block B apartment units. This is illustrated on the fire tender vehicle auto-tracking layouts contained within the engineering drawings and the surfacing of the route is appropriately treated as detailed by Park Hood Landscape Architects.

7.2. Refuse and Delivery

Refuse collection and deliveries will be facilitated through the design of the streets to a design vehicle refuse truck. This is illustrated on the refuse vehicle auto-tracking layouts contained within the engineering drawings.

Deliveries and refuse servicing the houses, duplex units and the Block D apartment units will be appropriately accommodated by parking on street which will carry low traffic volumes and wherein there is adequate space for other traffic to pass a delivery vehicle.

Delivery and refuse vehicles servicing the Block A, Block B and Block C apartment units will be appropriately accommodated within the bays provided adjacent these units.

7.3. Existing Underground Irish Water Foul Storage Tank Access

The Orchard is designed as communal amenity space for the development. Access to the Existing Underground Irish Water Foul Storage Tank will be via the access point to the Orchard off the proposed development access road. This access will incorporate a drop-down barrier which will be controlled by the management company and will be accessible on a 24 hour daily basis. The vehicle tracking for this car park has been undertaken to ensure that the standard 18m3 tanker used by Irish Water can be facilitated. All existing manhole lids and vented access point cover lids that are proposed to be trafficked shall be adequately designed at detailed design stage to be suitable for vehicle trafficking. Vehicle swept paths have been undertaken with a similar sized vehicle with a three axle wheelbase of 4.3m (+1.3). Figure 7-3 below from drawing 5214419-ATK-01-ZZ-DR-CE-0126 demonstrates this clearly.

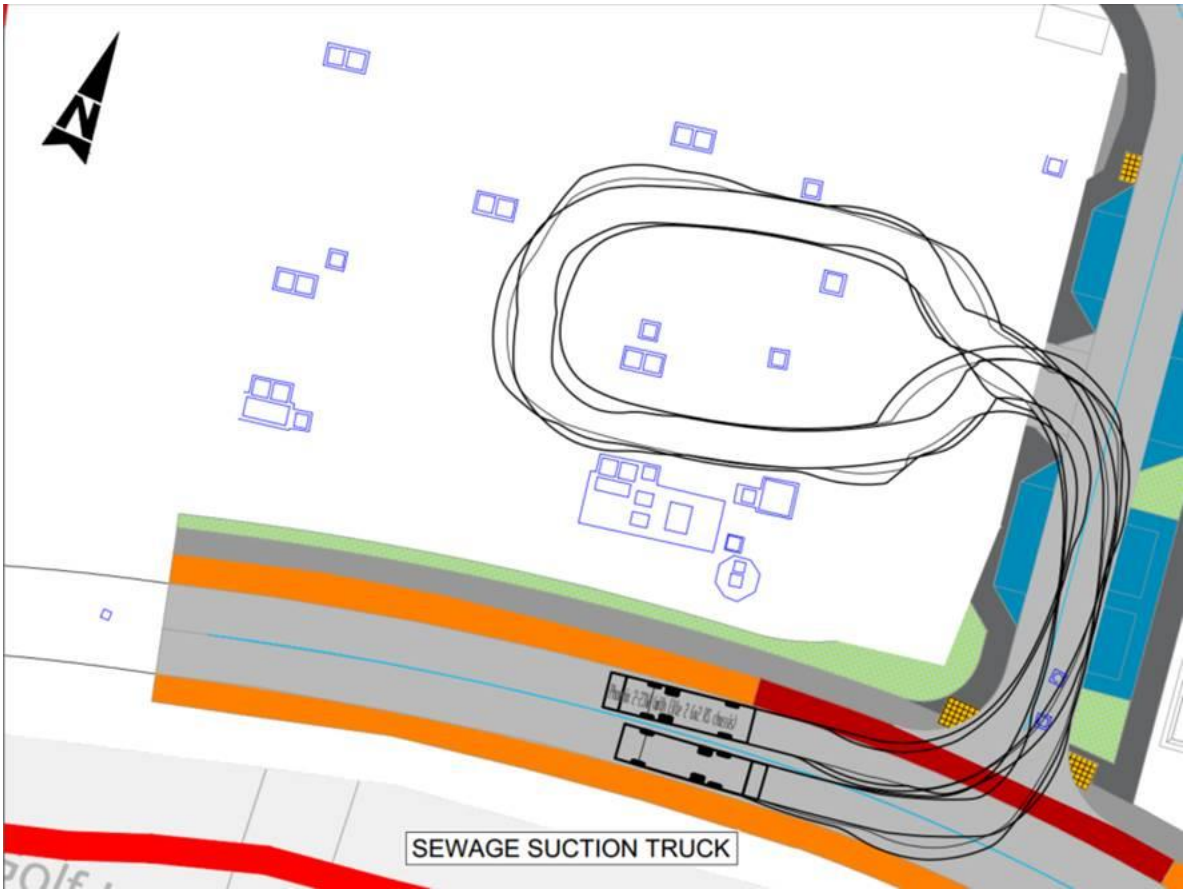

Figure 7-3 : Existing Underground Irish Water Foul Storage Tank Access

8. Traffic Characteristics

8.1. Traffic Surveys

Junction turning counts were undertaken at the relevant junctions in the vicinity of the site on the 29th May 2019 of which 5 no. of these counts will be utilised for the traffic assessment of this development. In addition to the junction turning counts noted above, several Automatic Traffic Counts (ATC) were also undertaken in 2019. These 2019 counts were undertaken prior to the Covid19 impacts. The traffic surveys are provided in Appendix B.

Additional junction turning counts at 3 no. junctions were carried out on the 22nd October 2020, along with 4 no. ATCs that aligned with the 2019 locations. These traffic counts were then compared in order to determine the total reduction in traffic as a result of the Covid19 measures. It was found that the 2020 traffic counts were approximately 15% lower than pre-covid19 levels. As a result, the 2020 traffic counts were all adjusted by 15% in order to account for Covid19.

The traffic counts locations are identified in Figure 8-1 and detailed in Table 8-1 below.

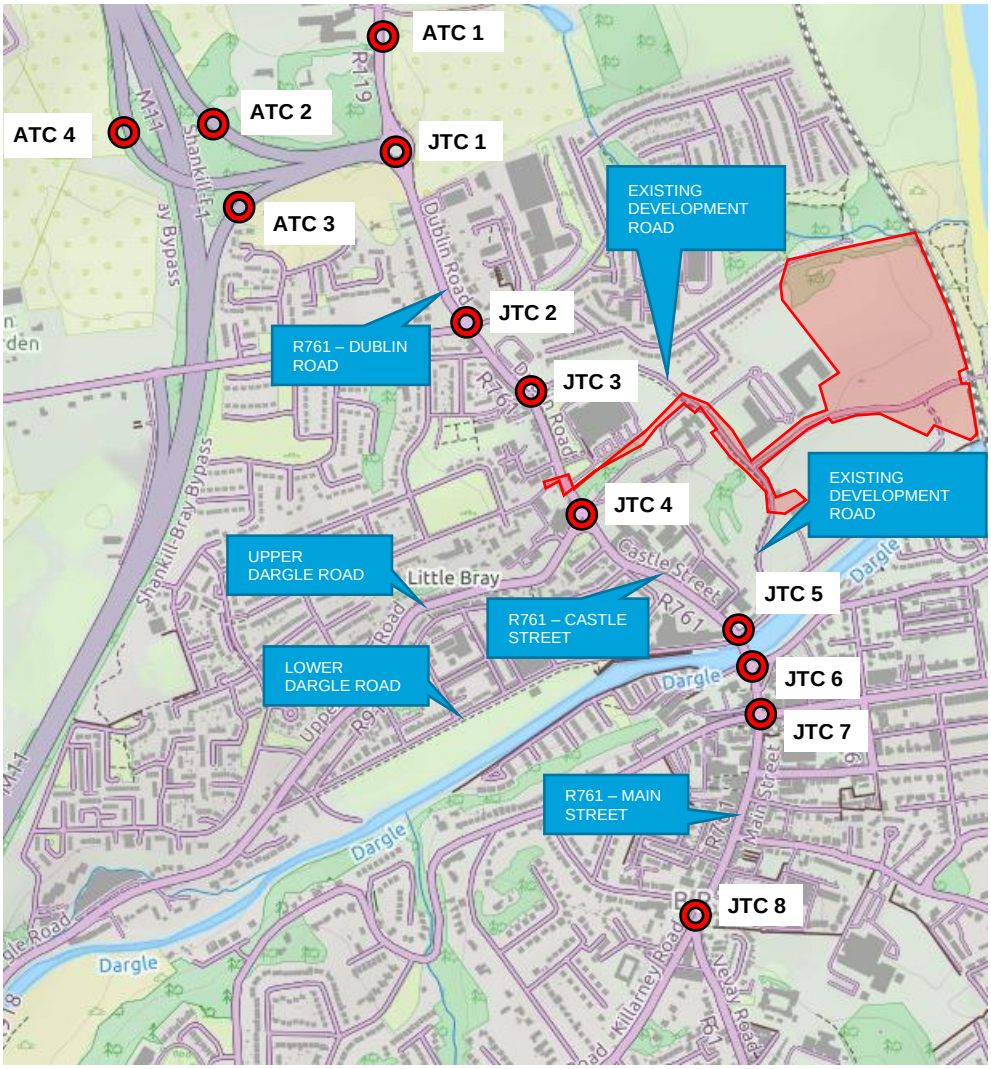

Figure 8-1 - Traffic Survey Locations

Table 8-1 - Traffic Count Locations

8.2. Assessment Years and Traffic Growth

The following assessment years are identified to inform the Traffic and Transport Assessment in line with the TII guidelines.

- Opening Year 2024
- Opening Year +5 2029
- Opening Year +15 2039

The yearly traffic growth for traffic counter TMU M11 010.0 N on the adjacent N11 for the periods of 2016 to 2020 is shown in table 8-2. This data was used to assess general growth in traffic over the last five years.

Table 8-2 – N11 Counter TMU M11 015 Growth Percentage

Year	AADT	% Growth from Pervious Year
2018	77400	-
2019	78145	+1.0%
2020	53975	-30.9%
2021	64819	+20.0%
2022	75987	+17.2%

The N11 traffic data indicates 20% and 17% increase in traffic flow in the period 2020 to 2021 and 2021 to 2022. The recovery from the impact of Covid19 has resulted in an increase in traffic volumes on the road network. The assessment of potential growth in background traffic volumes in the Bray area must also consider the following factors:

- Future public transport improvements, including BusConnects and Luas together with improvements to the Bray transport interchange and other projects in north Bray being carried out by Wicklow County Council to improve bus service provision.
- Existing and significant planned improvements to the walking and cycling network in Bray
- Promotion of reduced car use in national and regional planning policy and in both Councils Draft Development plans in favour of walking, cycling and public transport
- A reduction of traffic on the local road network in Bray as a result of Covid19 restrictions.
- Impacts of the National Remote Work Strategy that will see a permanent change in work travel behaviour following the substantive move to remote working during the Covid19 restrictions

In specific terms, when considering the traffic flow data on the adjacent N11 in comparison to the Dublin Road, Castle Street and Main Street in Bray, the latter three form part of an established urban street network wherein the road traffic capacity is limited and, more relevantly, wherein the plans by both the NTA and Local Authority to increase travel capacity are based on the reallocation of existing road space to public transport bus services, cycle tracks and improved footpath and pedestrian crossing provisions. Therefore, not only is there limited carrying capacity on the street network in Bray, as is the case in all such urban street environments, it is the overt policy of both the NTA, Wicklow County Council and Dun Laoghaire Rathdown County Council to upgrade the network in favour of increased capacity for sustainable transport modes. This will result in an increase in travel by these modes.

Furthermore, the specifics of future development in Bray, most relevantly characterised by the lack of potential large development sites in the town, apart from the Harbour Point lands, dictates that travel demand will be dictated by a finite growth in population in the established urban area of the town. This growth will be substantially focussed in Harbour Point. Therefore, apart from the travel demand that will be created by Harbour Point, there will be very limited growth in travel demand in the Bray area and any such growth will be facilitated predominantly by sustainable modes. Moreover, existing travel demand, in line with the national, regional and local transport policies and transport project plans, will see a transfer in mode from car travel to public transport, walking and cycling.

In this context it is considered that the application of a ‘no growth rate’ in terms of existing traffic on Dublin Road, Castle Street and Main Street is the appropriate worst case scenario in terms of the basis for modelling the traffic and transport impacts of the Harbour Point development. Indeed, there is a strong case for assuming a reduction in existing traffic and this scenario has been considered, in a qualitative sense, in the assessment of the future year scenarios.

The proposed assessment years incorporate analysis of both the AM Peak between 08:00 to 09:00 and PM Peak 17:00 to 18:00 as determined from the traffic surveys.

8.3. Total Person Trip Rates

A trip rate estimation exercise has been undertaken using TRICS (Trip Rate Information Computer System) to determine total person trip rates for the residential elements of the development. The total person trip rates estimated from the TRICS database are summarised below with further details contained within Appendix C.

Table 8-3 - Total Person Trip Rates

Use	Units	Period	Arrivals	Departures
Houses & Duplex	Per Unit	AM	0.200	0.765
		PM	0.615	0.282
Apartments	Per Unit	AM	0.106	0.552
		PM	0.368	0.177

8.4. Mode Share

The existing mode share for the development site has been taken from the CSO Census 2016 'Small Areas' data. The image below details the site location in relation to 'Small Area' Ref: Sa2017_257081012.

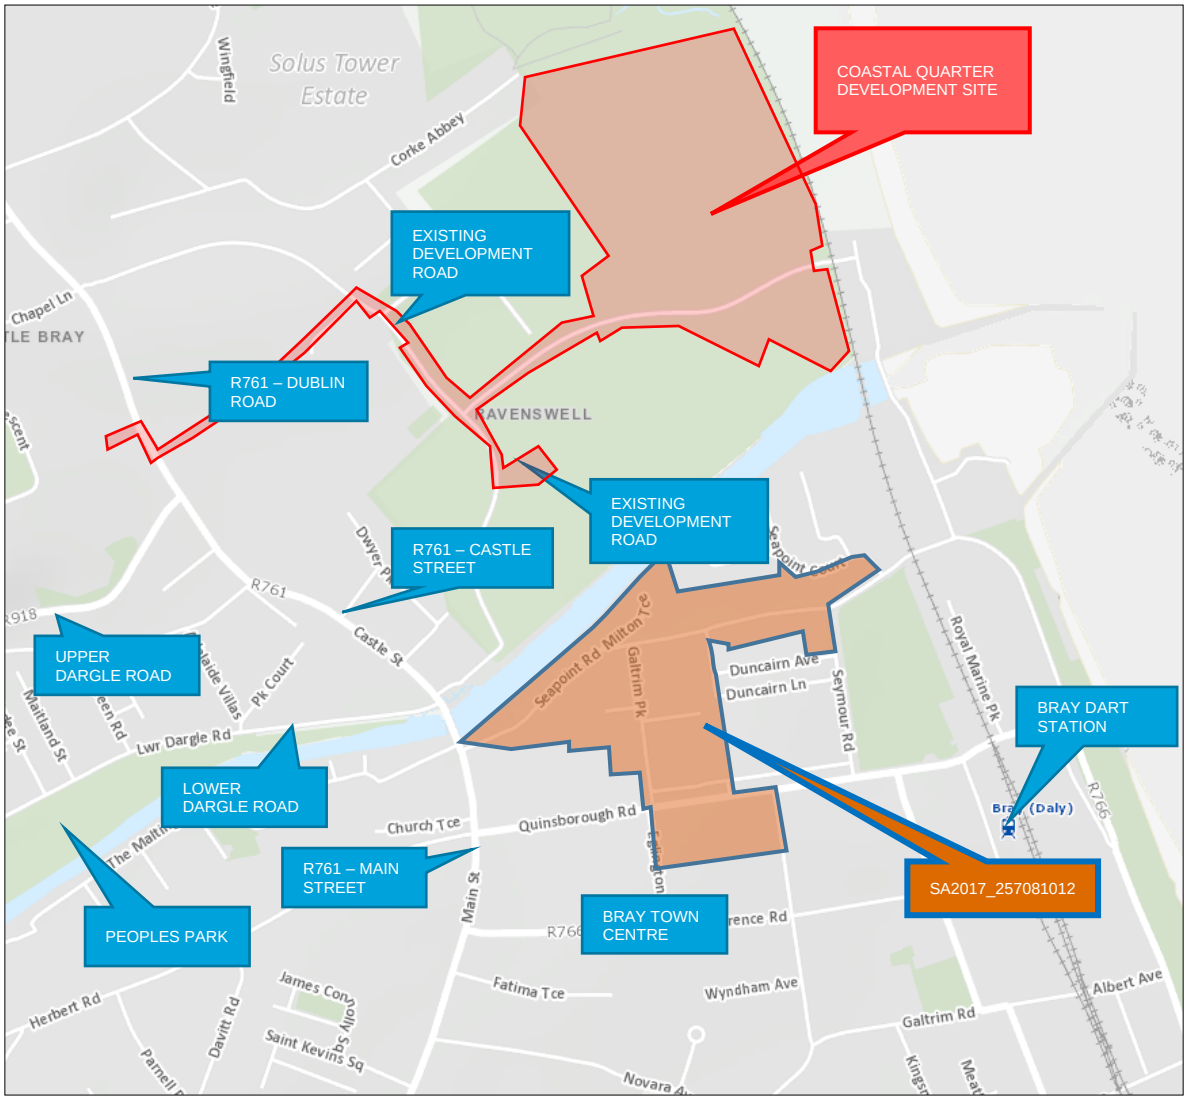

Figure 8-2 - 'Small Area' Ref: Sa2017_257081012.

This location shares similar characteristics with the proposed development site as outlined below

- Low parking provision
- Proximity to Bray Town & Bray Dart Station
- Proximity to Dublin Road Bus Services

The mode share for 'Small Area' Ref: Sa2017_257081012 is provided in Figure 8-3.

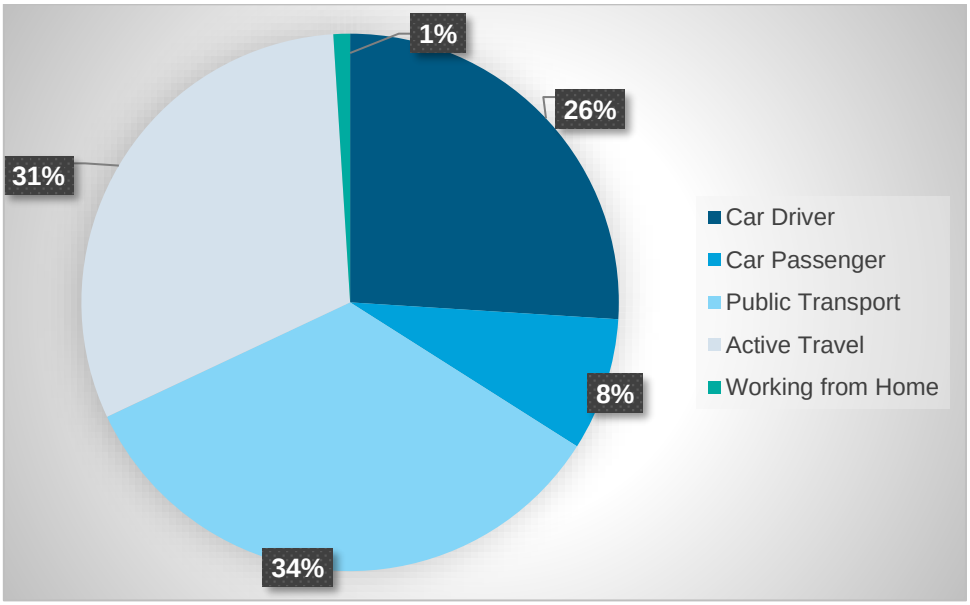

Figure 8-3 - 'Small Area' Ref: Sa2017_257081012 Mode Share - CSO

The proposed development will deliver similar active travel mode shares as detailed in Figure 8-3 through delivery of pedestrian and cyclists' facilities and connections to public transport and Bray Town.

In January 2021 the National Remote Work Strategy was published by the Department of Enterprise Trade and Employment which sets out the long-term strategy to promote home and remote working for public sector and private sector employees. The strategy mandates that 20% of the public sector workforce to move to home and remote working in 2021. The strategy notes that the Regional Working Analysis study carried out in 2020 shows that more than 25% of the private sector workers in Ireland are capable of working remotely. A key aspect of the strategy is to implement legislation in Q3 of 2021 to provide employees the right to request remote work to ensure that work from home opportunities are available to employees after the removal of Covid-19 restrictions.

Therefore, it can be reasonably assumed that the remote working patterns that have developed from the Covid19 restrictions will continue to be substantial in the post Covid19 scenario. Indeed, it can be reasonably assumed that this will be the case regardless of any legislative provisions given the ability of organisations, both public and private, to adapt to remote working and the clear benefits that maintaining a remote working capability will bring to both employees and employers. In overall terms this longer-term change in working patterns will help achieve a longer-term fundamental change in travel behaviour by reducing the need travel to work on a daily basis.

The residents of the Harbour Point development will avail of the home and remote working opportunities including flexible working opportunities as promoted by the National Remote Work Strategy. The estimated opening year mode share for the site based on the increase in working from home is detailed in Figure 8-4 below.

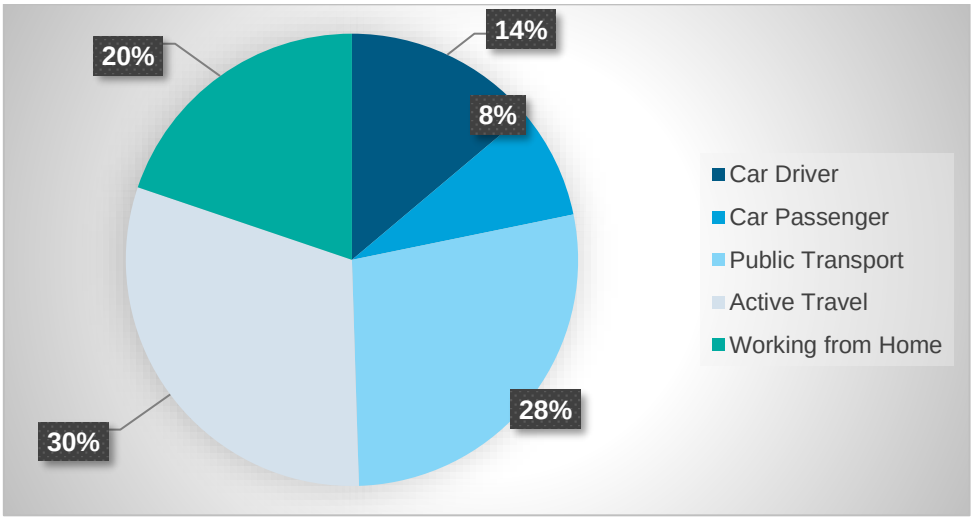

Figure 8-4 - Proposed Development Opening Year Mode Share

The work from home percentage has been applied based on 20% of both the public & private sector workforce moving to home and remote working. The increase in the work from home percentage has been incorporated as a reduction of car driver and public transport mode shares. Furthermore, the National Remote Work Strategy also promotes flexible working allowing employees the opportunity to avoid peak time travel. Therefore, the application of the 20% work from home percentage is appropriate as it allows for both home working on any given day and also a flexible working approach that will facilitate employees travelling to work to do so outside of normal peak hour periods.

Furthermore, the NTA have published a note on the Alternative Future Scenario for Travel Demand (November 2020). This note sets out the approach adopted by the NTA to assess the potential legacy that the Covid-19 pandemic will have on travel demand and travel patterns into the future. The note outlines the following alternative trip rates adjustments for commuter and school related trips:

- Blue Collar Workers – no change
- White Collar Workers – 25% reduction
- Education Primary Level – no change
- Education Secondary Level – 10 % reduction
- Education Tertiary Level – 25% reduction

The above adjustments correlate well to the 20% mode share reduction applied on the basis of the remote work strategy and gives further evidential support to the continued shift in behaviour and travel patterns experienced over the past year and its ongoing maintenance into the future.

8.5. Vehicle Trip Rates

The car driver percentage from the Development Opening Year Mode Share (Figure 7-4) has been applied to the above person trip rates to determine the vehicle trip rate for the Coastal Quarter development as detailed in Table 8-4.

In terms of the assessment the impact of the full development of Harbour Point, creche, restaurant & café, local shops, community centre & leisure centre will predominantly serve the residents and therefore will have minimal additional traffic impact on the adjacent road and street network. Office and retail uses will contribute to additional trip generation. The vehicle trip rates for the office and retail uses are detailed in the table below and provided in Appendix C.

Table 8-4 - Total Vehicle Trip Rates

Use	Units	Period	Arrivals	Departures
Houses & Duplex	Per Unit	AM	0.028	0.107
		PM	0.086	0.039
Apartments	Per Unit	AM	0.015	0.073
		PM	0.052	0.025
Commercial	Per 100m^2	AM	0.370	0.026
		PM	0.032	0.320
Retail	Per 100m^2	AM	0.421	0.178
		PM	0.320	0.451

8.6. Coastal Quarter Public Transport Trip Generation

The public transport percentage from the Coastal Quarter Development Opening Year Mode Share (Figure 8-4) has been applied to the person trip rates to determine the public transport trips for the Coastal Quarter development as detailed in Table 8-5.

Table 8-5 - Coastal Quarter Public Transport Trip Generation

Development Type	No.	Period	Person Trip Rate		Person Trip Generation	
			Arrival	Departure	Arrival	Departure
Houses & Duplex	128 units	AM	0.060	0.229	8	30
		PM	0.175	0.085	23	11
Apartments	458 units	AM	0.032	0.157	15	73
		PM	0.110	0.053	51	25
Total				**AM**	**23**	**103**
				PM	**74**	**36**

The anticipated public transport trip generation by the proposed Coastal Quarter development during the network peaks is estimated to be 126 people during the AM peak hour and 110 people during the PM peak.

A similar exercise has been undertaken for the full residential element of the Harbour Point Masterplan as follows.

Table 8-6 – Harbour Point Masterplan Public Transport Trip Generation

Development Type	No.	Period	Person Trip Rate		Person Trip Generation	
			Arrival	Departure	Arrival	Departure
Houses & Duplex	358 units	AM	0.060	0.229	21	82
		PM	0.175	0.085	63	30
Apartments	879 units	AM	0.032	0.157	28	138
		PM	0.110	0.053	97	47
Total				**AM**	**50**	**220**
				PM	**159**	**77**

The anticipated public transport trip generation by the proposed Harbour Point masterplan (residential only) development during the network peaks is estimated to be 270 people during the AM peak hour and 236 people during the PM peak.

Based on the public transport services noted in Section 3 the peak hour capacity of the services is detailed in Table 8-6 below.

Table 8-7 - Coastal Quarter Public Transport Capacity

Public Transport Type	Period	No. of Services	Capacity
Dart & Rail	AM (08:00-09:00)	9	10080
	PM (17:00-18:00)	8	8960
Bus Services	AM (08:00-09:00)	21	1554
	PM (17:00-18:00)	20	1480
Total	**AM**	**30**	**11635**
	PM	**28**	**10440**

The public transport trip generation of the Coastal Quarter development constitutes less than a 1% of the public transport capacity and can be readily accommodated within the existing public transport services.

The public transport trip generation of the Harbour Point Masterplan residential element constitutes less than 2.5% of the public transport capacity and can be readily accommodated within the existing public transport services.

8.7. Traffic Generation

The traffic generation volumes, taking into account the trip rates and modal splits presented in the previous sections are detailed in the Table 8-8 for the Coastal Quarter Development and Table 8-6 for the full buildout of the Harbour Point Masterplan Development.

Table 8-8 - Coastal Quarter Development Traffic Generation

Development Type	No./Area	Period	Vehicle Trip Rate		Units	Vehicle Trip Generation	
			Arrival	Departure		Arrival	Departure
House & Duplex Units	128 units	AM	0.028	0.107	Per Unit	4	14
		PM	0.086	0.039		11	5
Apartment Units	463 units	AM	0.015	0.073	Per Unit	7	33
		PM	0.052	0.025		23	11
Gym & Juice Bar	512m^2	AM	0.370	0.026	Per 100m^2	2	0
		PM	0.032	0.320		0	2
Total					**AM**	**13**	**48**
					PM	**35**	**18**

Table 8-7 - Harbour Point Development Masterplan Development Traffic Generation

Development Type	No./Area	Period	Vehicle Trip Rate		Units	Vehicle Trip Generation	
			Arrival	Departure		Arrival	Departure
House & Duplex Units	358 units	AM	0.028	0.107	Per Unit	10	38
		PM	0.086	0.039		31	14
Apartment Units	879 units	AM	0.015	0.073	Per Unit	13	64
		PM	0.052	0.025		46	11
Office	5000m^2	AM	0.370	0.026	Per 100m^2	19	2
		PM	0.032	0.320		1	16
Retail Park	12000m^2	AM	0.421	0.178	Per 100m^2	51	2
		PM	0.320	0.451		38	54
Total					**AM**	**93**	**74**
					PM	**116**	**95**

8.8. Trip Distribution and Assignment

The trip distribution of vehicles originating and terminating at the proposed development has been based on the distribution of traffic arriving and departing the local road network as defined by the traffic survey locations agreed as part of the Traffic and Transport Assessment scoping exercise. In terms of traffic assignment at junctions, these have been applied logically through manual assignment. Traffic Movement Diagrams showing the trip distribution and assignment of vehicular traffic is provided in Appendix D.

9. Traffic Impact - Coastal Quarter

As noted in Section 1.1 Overview, the traffic impact assessment in this report supports the revised application following the previous recent submission to An Bord Pleanála (Ref: ABP-311181-21). The differences between the previous development proposals and the current proposals amount to a reduction of 6 number residential units and the addition of a 512sqm (GFA) gym and juice bar. As such these changes to the proposals are considered negligible from a traffic and transport perspective and the traffic impact assessment as presented following is the same as per the assessment for the previous recent proposal.

9.1. Modelled Scenarios

In order to appropriately assess the traffic impact of the Coastal Quarter development the required modelling scenarios to be tested are based in the first instance on the assumption of growth in background traffic and in the second instance on the assumed period for the full build out of the Coastal Quarter development. Given that the growth in background traffic was been estimated to be a 'no growth' scenario then the base year assessment of the relevant junctions based on the 2019 and 2020 traffic surveys also acts as the future year 'without development' scenario.

In terms of the build out period for the Coastal Quarter this is assumed to begin in the opening year of 2024 and be completed by 2029, the 'Opening Year +5' scenario. Therefore, the only 'with development scenario' that needs to be tested, mindful of the 'no growth' scenario in background traffic, is the 'Opening Year +5'

Table 9-1 - Proposed Development Scenarios

Scenario	Development
Base Year	No development
Opening +5 Year with development: 2029	Full buildout of Coastal Quarter Development

This assessment has been carried out with development and existing traffic utilising both the Northern Development Road Assess Junction (Northern Access Junction) onto the R761 Dublin Road and the Ravenswell Road Access Junction onto the R761 Castle Street (Southern Access Junction).

The modelled scenarios were also extended to consider two sensitivity tests. In the first instance, the existing Southern Access junction onto Castle Street was assumed to be closed to vehicular traffic. A further sensitivity analysis was then carried out to assess the traffic impact if the working from home mode share was adjusted from the estimated 20% to a lower value of 10%.

9.2. Percentage Traffic Impact

An initial assessment was undertaken to quantify the additional traffic from the development that will be distributed onto the local road network and the potentially impacted junctions. In order to determine what level of increase is considered above threshold, reference is made to the TII Traffic and Transport Assessment Guidelines (May 2014). This document outlines the following thresholds:

- Traffic to and from the development exceeds 10% of the traffic flow on the adjoining road;
- Traffic to and from the development exceeds 5% of the traffic flow on the adjoining road where congestion exists, or the location is sensitive.

In the context of the urban road environment in the vicinity of the development it was considered appropriate to apply the 5% threshold. Junctions which are predicted to be impacted by an increase in traffic in excess of 5%, due to development traffic, were considered for further detailed junction assessment and modelling.

The traffic increase resulting from the proposed development was compared to the base year existing traffic volumes at each junction and the percentage increases are presented in the table below. The

assessment was carried out in relation to the traffic generation of the proposed Phase 1 Coastal Quarter.

Table 9-2 - Percentage Traffic Increase

Ref:	Description	Period	Development Traffic	Existing Traffic	Average Traffic Increase
Junction 1	Wilford Roundabout	AM	92	1998	4.1%
		PM	68	1950	
Junction 2	Junction of R761 Dublin Road, Old Connaught Avenue & Corke Abbey Avenue	AM	121	2069	5.5%
		PM	99	1939	
Junction 3	Junction of R761 Dublin Road & Development Access Road	AM	121	1771	6.7%
		PM	99	1461	
Junction 4	Junction of R761 Castle Street & Upper Dargle Road	AM	85	1408	5.6%
		PM	81	1559	
Junction 5	Junction of R761 Castle Street, Lower Dargle Road & Ravenswell Road	AM	89	1871	5.9%
		PM	112	1583	
Junction 6	Junction of R761 Castle Street, The Maltings & Seapoint Road	AM	79	1913	5.0%
		PM	95	1581	
Junction 7	Junction of R761 Castle Street, Herbert Road & Quinsborough Road	AM	58	1353	4.7%
		PM	72	1397	
Junction 8	Junction of R761 Main Street, Killarney Road & Vevay Road	AM	40	1092	4.3%
		PM	51	1007	

The junctions wherein the increase in traffic due the full Coastal Quarter development **does not** exceed 5% are:

- Junction 1: Wilford Roundabout
- Junction 6: Junction of R761 Castle Street, The Maltings & Seapoint Road
- Junction 7: Junction of R761 Castle Street, Herbert Road & Quinsborough Road
- Junction 8: Junction of R761 Main Street, Killarney Road & Vevay Road

The junctions wherein the increase in traffic due the full Coastal Quarter development **does** exceed 5% are:

- Junction 2: Junction of R761 Dublin Road, Old Connaught Avenue & Corke Abbey Avenue
- Junction 3: Junction of R761 Dublin Road & Development Access Road
- Junction 4: Junction of R761 Castle Street & Upper Dargle Road
- Junction 5: Junction of R761 Castle Street, Lower Dargle Road & Ravenswell Road

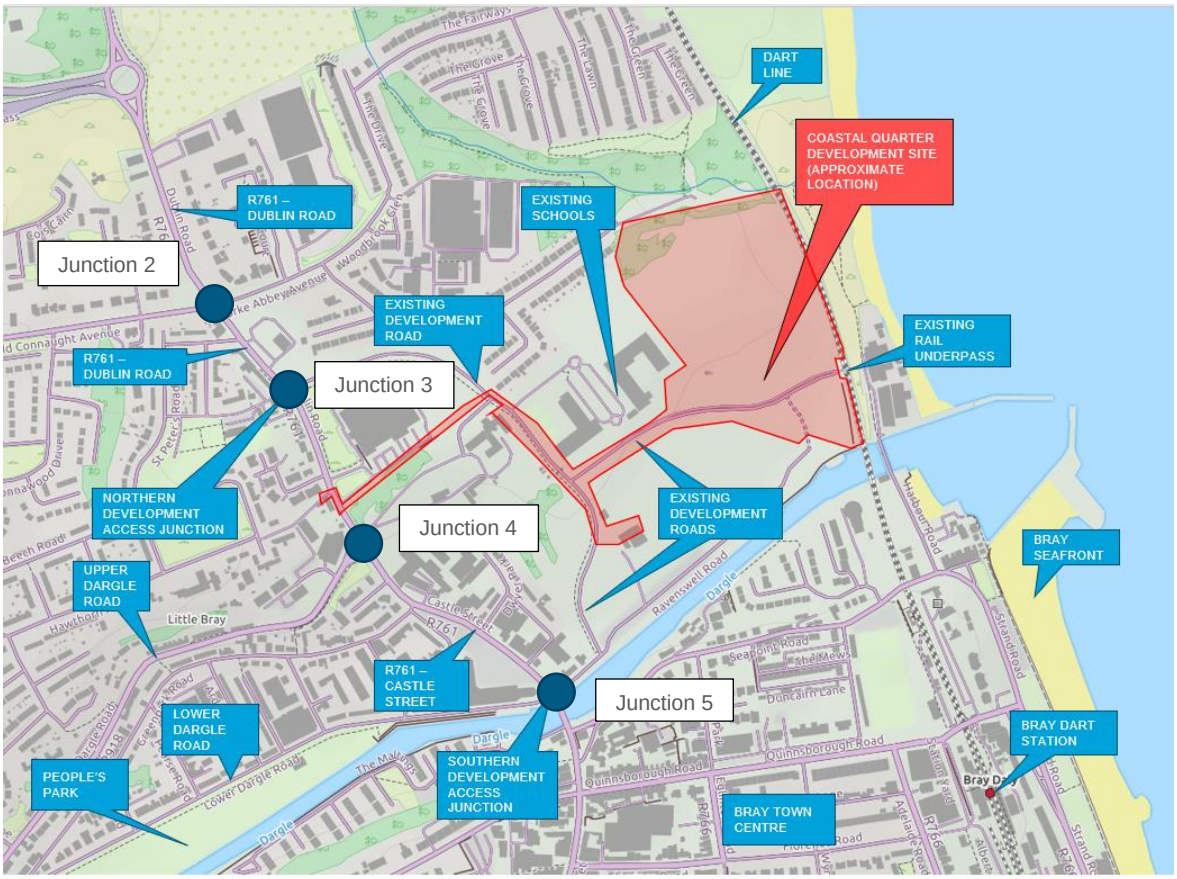

Figure 9-1 - Coastal Quarter Junction Assessment Location

9.3. Junctions Assessment

Detailed results of the modelling scenarios assessments for all junctions is provided within Appendix E of this TTA. Summary results are outlined in the sections below.

9.3.1. Base Year and Opening Year + 5 Assessment

9.3.1.1. Junction 2 R761 Dublin Road, Old Connaught Avenue & Corke Abbey Avenue

Figure 9-2 Junction 2 Diagram

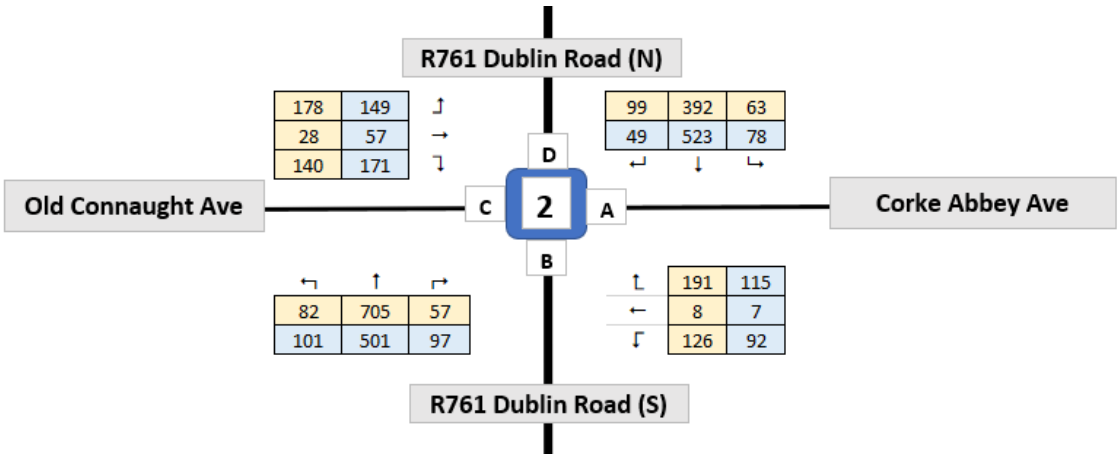

Table 9-3 Junction 2 Base Year and Opening Year +5 Modelling Scenario Analysis

Scenario	Arm / Lane	Description	AM			PM		
			Delay (S/PCU)	Deg. Sat.	Mean Max Queue (PCU)	Delay (S/PCU)	Deg. Sat	Mean Max Queue (PCU)
Base Year	A (1/1+1/2)	Corke Abbey Ave	258.7	105.3%	33.9	110.2	80.7%	12.9
	B (2/1+2/2)	Dublin Rd (S)	209.6	106.9%	75.2	39.9	82.3%	22.8
	C (3/1+3/2)	Old Connaught Ave	57.3	68.1%	10.2	54.0	75.7%	9.7
	D (4/1+4/2)	Dublin Rd (N)	40.0	68.8%	15.3	25.7	40.8%	14.6
Opening Year +5	A (1/1+1/2)	Corke Abbey Ave	278.8	108.8%	31.5	110.4	80.9%	13.1
	B (2/1+2/2)	Dublin Rd (S)	291.7	111.9%	92.3	40.8	83.3%	23.2
	C (3/1+3/2)	Old Connaught Ave	46.6	67.3%	8.2	54.1	76.0%	9.8
	D (4/1+4/2)	Dublin Rd (N)	36.7	68.8%	12.5	25.8	41.3%	14.8

In the Base Year the Old Connaught Avenue Junction has been modelled as per its current layout as a Signalised Junction. The Without Development Scenario operates over the capacity during the AM peak hour. The AM peak hour is the more critical of the two peak periods, where the Degree Of Saturation (DOS) of above 90% is experienced. Arm A and B are operating above capacity.

In the Opening Year +5 the DOS during the AM peak hour is increased for both the concerned arms. However, the % increase on the arms is between 3%-6% which is a marginal impact on the junction due to the proposed development.

9.3.1.2. Junction 3 R761 Dublin Road & Northern Development Access Road

Figure 9-3 Junction 3 Diagram

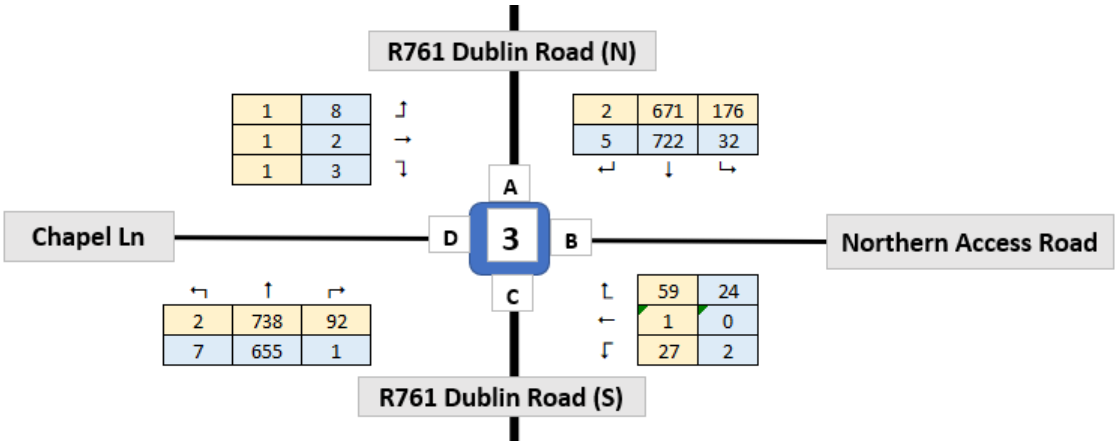

Table 9-4 Junction 3 Base Year and Opening Year +5 Modelling Scenario Analysis

Scenario	Arm/Stream	AM			PM		
		Max Queue (PCU)	Average Delay (S)	RFC	Max Queue (PCU)	Average Delay (S)	RFC
Base Year	Stream B-CD	0.1	8.63	0.07	0.0	7.42	0.00
	Stream B-AD	0.4	22.89	0.29	0.1	15.12	0.10

	Stream A-BCD	0.0	8.56	0.01	0.0	7.66	0.01
	Stream D-ABC	0.0	0.00	0.00	0.0	10.65	0.04
	Stream C-B	0.3	11.19	0.24	0.0	8.14	0.00
Opening Year +5	Stream B-CD	0.1	9.11	0.07	0.0	7.52	0.00
	Stream B-AD	0.8	29.52	0.45	0.2	15.87	0.14
	Stream A-BCD	0.0	8.56	0.01	0.0	7.66	0.01
	Stream D-ABC	0.0	0.00	0.00	0.0	10.69	0.04
	Stream C-B	0.3	11.22	0.24	0.0	8.19	0.00

The Opening Year Scenario +5 proposed Northern development access junction was modelled as a Priority Controlled Junction per its current layout.

During the AM and PM with Opening Year +5 all arms of this junction are operating within capacity with a maximum RFC of 0.45 occurring on the Northern Access arm during the AM peak hour. The resultant queueing and delay experienced are all of an acceptable level and in overall terms the impact of development traffic, in comparison to the base year is negligible.

9.3.1.3. Junction 4 R761 Castle Street & Upper Dargle Road

Figure 9-4 Junction 4 Diagram

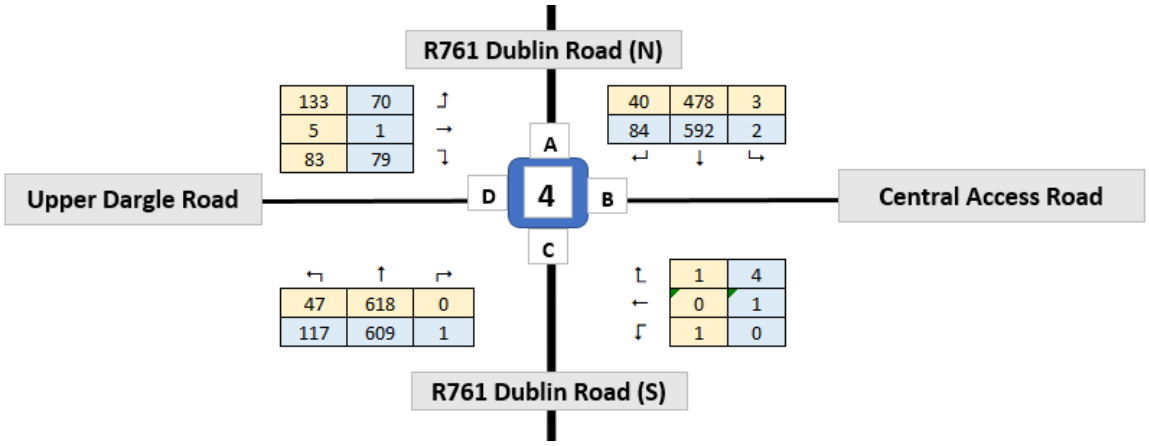

Table 9-5 Junction 4 Base Year and Opening Year +5 Modelling Scenario Analysis

Scenario	Arm / Lane	Description	AM			PM		
			Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)	Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)
Base Year	A (1/1+1/2)	Dublin Rd (N)	24.2	52.7%	13.2	23.2	62.1%	17.6
	B (2/1+2/2)	Minor Arm	50.9	0.6%	0.0	56.3	2.5%	0.1
	C (3/1+3/2)	Dublin Rd (S)	27.8	66.8%	19.7	24.1	66.8%	20.8
	D (4/1+4/2)	Upper Dargle Rd	62.5	66.9%	5.4	65.8	58.5%	3.0
Opening Year +5	A (1/1+1/2)	Dublin Rd (N)	24.2	52.7%	13.2	23.2	62.1%	17.6
	B (2/1+2/2)	Minor Arm	50.9	0.6%	0.0	56.3	2.5%	0.1
	C (3/1+3/2)	Dublin Rd (S)	27.8	66.8%	19.7	24.1	66.8%	20.8
	D (4/1+4/2)	Upper Dargle Rd	62.5	66.9%	5.4	65.8	58.5%	3.0

The junction is modelled per its existing signalised layout in the Opening Year +5 scenario. The impact of development traffic in the Opening Year +5 compared to the Base Year is insignificant. This is due to the fact that development traffic would generally not route through this junction but would travel northbound from the development, towards the M11 / N11 through Junction 3 or southbound through Bray through Junction 5.

9.3.1.4. Junction 5 R761 Castle Street, Lower Dargle Road & Ravenswell Road

Figure 9-5 Junction 5 Diagram

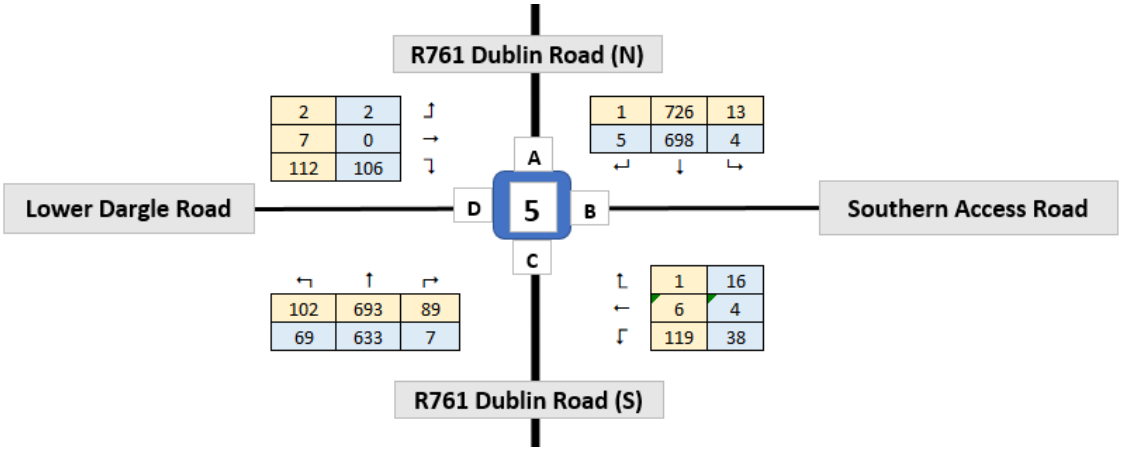

Table 9-6 Junction 5 Base Year and Opening Year +5 Modelling Scenario Analysis

Scenario	Arm / Streams	AM			PM		
		Max Queue (PCU)	Average Delay (S)	RFC	Max Queue (PCU)	Average Delay (S)	RFC

	Stream A-BCD	0.0	4.19	0.01	0.0	4.20	0.02
	Stream D-ABC	4.1	119.03	0.86	1.3	37.55	0.58
	Stream C-ABD	2.4	6.55	0.49	0.2	4.35	0.09

In overall terms the impact of development traffic at the junction is negligible. The Lower Dargle Road arm (Stream D) is operating over capacity in the morning peak hour in the base year. This is somewhat exacerbated in the Opening Year +5 scenario but in relative terms this arm carries only modest traffic flows and there is only a modest increase in queuing on this arm.

9.4. Junction Sensitivity Scenario Assessment

This sensitivity analysis assessment has been carried out with development and existing traffic utilising only the Junction 3, Northern Access Junction, onto the R761 Dublin Road with Junction 5, Southern Access Junction onto the R761 Castle Street, assumed to be closed to traffic.

9.4.1. Base Year & Opening Year + 5 Assessment

9.4.1.1. Junction 2 R761 Dublin Road, Old Connaught Avenue & Corke Abbey Avenue

Table 9-7 Junction 2 Base Year & Opening Year +5 Junction Sensitivity Analysis

Scenario	Arm / Lane	Description	AM			PM		
			Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)	Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)
Base Year	A (1/1+1/2)	Corke Abbey Ave	258.7	105.3%	33.9	110.2	80.7%	12.9
	B (2/1+2/2)	Dublin Rd (S)	209.6	106.9%	75.2	39.9	82.3%	22.8
	C (3/1+3/2)	Old Connaught Ave	57.3	68.1%	10.2	54.0	75.7%	9.7
	D (4/1+4/2)	Dublin Rd (N)	40.0	68.8%	15.3	25.7	40.8%	14.6
Opening Year +5	A (1/1+1/2)	Corke Abbey Ave	278.8	108.8%	31.5	110.4	80.9%	13.1
	B (2/1+2/2)	Dublin Rd (S)	291.7	111.9%	92.3	40.8	83.3%	23.2
	C (3/1+3/2)	Old Connaught Ave	46.6	67.3%	8.2	54.1	76.0%	9.8
	D (4/1+4/2)	Dublin Rd (N)	36.7	68.8%	12.5	25.8	41.3%	14.8

The analysis shows that there are minimal changes to the junction performance in the Opening Year + 5 scenario compared to without development scenario.

9.4.1.2. Junction 3 R761 Dublin Road & Northern Development Access Road

Table 9-8 Junction 3 Base Year & Opening Year +5 Junction Sensitivity Analysis

Scenario	Arm/Stream	AM			PM		
		Max Queue (PCU)	Average Delay (S)	RFC	Max Queue (PCU)	Average Delay (S)	RFC
Base Year	Stream B-CD	0.1	8.63	0.07	0.0	7.42	0.00
	Stream B-AD	0.4	22.89	0.29	0.1	15.12	0.10
	Stream A-BCD	0.0	8.56	0.01	0.0	7.66	0.01
	Stream D-ABC	0.0	0.00	0.00	0.0	10.65	0.04
	Stream C-B	0.3	11.19	0.24	0.0	8.14	0.00
Opening Year +5	Stream B-CD	0.8	15.27	0.44	0.2	8.91	0.16
	Stream B-AD	1.2	43.84	0.55	0.2	16.71	0.14
	Stream A-BCD	0.0	9.41	0.01	0.0	7.83	0.01
	Stream D-ABC	0.0	0.00	0.00	0.0	11.12	0.04
	Stream C-B	1.1	18.50	0.54	0.1	8.93	0.09

The analysis shows that all arms on the junctions are operating significantly within capacity on all arms in both scenarios.

9.4.1.3. Junction 4 R761 Castle Street & Upper Dargle Road

Table 9-9 Junction 4 Base Year & Opening Year +5 Junction Sensitivity Analysis

Scenario	Arm / Lane	Description	AM			PM		
			Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)	Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)
Base Year	A (1/1+1/2)	Dublin Rd (N)	24.2	52.7%	13.2	23.2	62.1%	17.6
	B (2/1+2/2)	Central Access	50.9	0.6%	0.0	56.3	2.5%	0.1
	C (3/1+3/2)	Dublin Rd (S)	27.8	66.8%	19.7	24.1	66.8%	20.8
	D (4/1+4/2)	Upper Dargle Rd	62.5	66.9%	5.4	65.8	58.5%	3.0
Opening Year +5	A (1/1+1/2)	Dublin Rd (N)	27.8	66.6%	19.3	25.0	68.1%	20.6
	B (2/1+2/2)	Central Access	52.0	0.6%	0.0	58.5	2.6%	0.1
	C (3/1+3/2)	Dublin Rd (S)	31.4	76.4%	25.0	25.0	69.4%	22.3
	D (4/1+4/2)	Upper Dargle Rd	70.4	74.3%	6.3	69.9	61.8%	3.6

The junction is operating within capacity for both the base year and with development scenarios.

9.4.1.4. Junction 5 R761 Castle Street, Lower Dargle Road & Ravenswell Road

Table 9-10 Junction 5 Base Year & Opening Year +5 Junction Sensitivity Analysis

Scenario	Arm / Streams	AM			PM		
		Max Queue (PCU)	Average Delay (S)	RFC	Max Queue (PCU)	Average Delay (S)	RFC
Base Year	Stream B-ACD	0.5	12.40	0.32	0.2	12.80	0.19
	Stream A-BCD	0.0	4.18	0.01	0.0	4.19	0.02
	Stream D-ABC	3.4	100.94	0.82	1.0	32.55	0.52
	Stream C-ABD	2.3	6.28	0.47	0.0	4.22	0.03
Opening Year +5	Stream B-ACD	0.0	0.00	0.00	0.0	0.00	0.00
	Stream A-BCD	0.1	3.92	0.05	0.1	4.13	0.04
	Stream D-ABC	2.7	76.56	0.76	1.1	32.33	0.54
	Stream C-ABD	0.0	0.00	0.00	0.0	0.00	0.00

The Lower Dargle Road arm (Stream D) is operating slightly over capacity in terms of average delay in the morning peak hour in the base year. In the base year the Southern Access junction (Stream B) is modelled as still operational. In the Opening Year +5 this road access is modelled as closed and all arms of the junction are indicated to be operating within capacity.

9.5. Mode Share Sensitivity Scenario Assessment

This sensitivity analysis assessed the scenario of a reduced work from home percentage of 10%, compared to the 20% target set in the National Remote Work Strategy. The mode share for this scenario is detailed in Figure 9-1 Below.

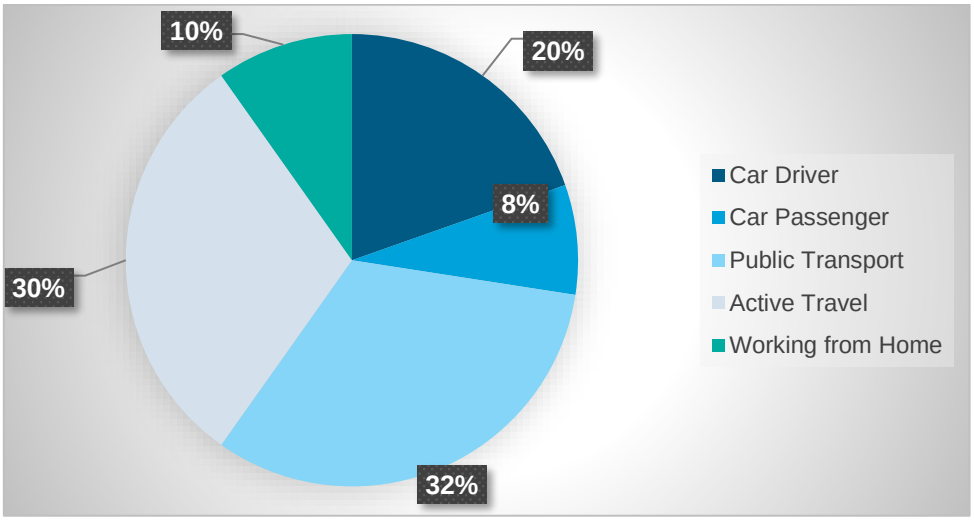

Figure 9-6 - Proposed Sensitivity Analysis Opening Year Mode Share

9.5.1. Base Year & Opening Year +5 Assessment

9.5.1.1. Junction 2 R761 Dublin Road, Old Connaught Avenue & Corke Abbey Avenue

Table 9-11 Junction 2 Base Year & Opening Year +5 Mode Share Sensitivity Analysis

Scenario	Arm / Lane	Description	AM			PM		
			Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)	Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)
Base Year	A (1/1+1/2)	Corke Abbey Ave	258.7	105.3%	33.9	110.2	80.7%	12.9
	B (2/1+2/2)	Dublin Rd (S)	209.6	106.9%	75.2	39.9	82.3%	22.8
	C (3/1+3/2)	Old Connaught Ave	57.3	68.1%	10.2	54.0	75.7%	9.7
	D (4/1+4/2)	Dublin Rd (N)	40.0	68.8%	15.3	25.7	40.8%	14.6
Opening Year +5	A (1/1+1/2)	Corke Abbey Ave	314.7	108.9%	39.0	110.3	81.6%	13.2
	B (2/1+2/2)	Dublin Rd (S)	283.9	111.3%	95.1	41.2	83.7%	23.8
	C (3/1+3/2)	Old Connaught Ave	57.6	69.3%	10.1	55.3	76.7%	10.7
	D (4/1+4/2)	Dublin Rd (N)	39.4	68.8%	15.3	25.9	41.5%	15.0

Comparing the Opening Year + 5 results in this scenario to the Opening Year + 5 with the higher working from home assumption, per Section 9.3.1.1, the operating characteristics of the junction are very similar. This is reflective of the very minor relative increase in vehicular traffic due to the assumed lower working from home cohort.

9.5.1.2. Junction 3 R761 Dublin Road & Northern Development Access Road

Table 9-12 Junction 3 Base Year & Opening Year +5 Mode Share Sensitivity Analysis

Scenario	Arm/Stream	AM			PM		
		Max Queue (PCU)	Average Delay (S)	RFC	Max Queue (PCU)	Average Delay (S)	RFC
Base Year	Stream B-CD	0.1	8.63	0.07	0.0	7.42	0.00
	Stream B-AD	0.4	22.89	0.29	0.1	15.12	0.10
	Stream A-BCD	0.0	8.56	0.01	0.0	7.66	0.01
	Stream D-ABC	0.0	0.00	0.00	0.0	10.65	0.04
	Stream C-B	0.3	11.19	0.24	0.0	8.14	0.00
Opening Year +5	Stream B-CD	0.1	9.32	0.07	0.0	7.71	0.00
	Stream B-AD	1.0	33.44	0.52	0.2	17.26	0.17
	Stream A-BCD	0.0	8.56	0.01	0.0	7.74	0.01
	Stream D-ABC	0.0	0.00	0.00	0.0	11.39	0.05
	Stream C-B	0.3	11.24	0.24	0.0	8.35	0.00

In the Opening Year +5 all arms of the junction are operating with significant reserve capacity and nominal queuing.

9.5.1.3. Junction 4 R761 Castle Street & Upper Dargle Road

Table 9-13 Junction 4 Base Year & Opening Year +5 Mode Share Sensitivity Analysis

Scenario	Arm / Lane	Description	AM			PM		
			Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)	Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)
Base Year	A (1/1+1/2)	Dublin Rd (N)	24.2	52.7%	13.2	23.2	62.1%	17.6
	B (2/1+2/2)	Central Access	50.9	0.6%	0.0	56.3	2.5%	0.1
	C (3/1+3/2)	Dublin Rd (S)	27.8	66.8%	19.7	24.1	66.8%	20.8
	D (4/1+4/2)	Upper Dargle Rd	62.5	66.9%	5.4	65.8	58.5%	3.0
Opening Year +5	A (1/1+1/2)	Dublin Rd (N)	24.2	52.7%	13.2	23.2	62.1%	17.6
	B (2/1+2/2)	Central Access	50.9	0.6%	0.0	56.3	2.5%	0.1
	C (3/1+3/2)	Dublin Rd (S)	27.8	66.8%	19.7	24.1	66.8%	20.8
	D (4/1+4/2)	Upper Dargle Rd	62.5	66.9%	5.4	65.8	58.5%	3.0

Similarly, the analysis is made with the assumption that both Northern and Southern access are operational. The junction appears to be operating well within capacity.

9.5.1.4. Junction 5 R761 Castle Street, Lower Dargle Road & Ravenswell Road

Table 9-14 Junction 5 Base Year & Opening Year +5 Mode Share Sensitivity Analysis

Scenario	Arm / Streams	AM			PM		
		Max Queue (PCU)	Average Delay (S)	RFC	Max Queue (PCU)	Average Delay (S)	RFC
Without Development	Stream B-ACD	0.5	12.40	0.32	0.2	12.80	0.19
	Stream A-BCD	0.0	4.18	0.01	0.0	4.19	0.02
	Stream D-ABC	3.4	100.94	0.82	1.0	32.55	0.52
	Stream C-ABD	2.3	6.28	0.47	0.0	4.22	0.03
With Development (Phase 1: 0.2 split)	Stream B-ACD	0.6	13.61	0.38	0.3	13.16	0.22
	Stream A-BCD	0.0	4.19	0.01	0.0	4.21	0.02
	Stream D-ABC	4.5	129.83	0.88	1.4	39.86	0.60
	Stream C-ABD	2.5	6.70	0.50	0.3	4.41	0.12

In overall terms the impact of development traffic at the junction is negligible. The Lower Dargle Road arm (Stream D) is operating over capacity in the morning peak hour in the base year. This is somewhat exacerbated in the Opening Year +5 scenario but in relative terms this arm carries only modest traffic flows and there is only a modest increase in queuing on this arm.

9.6. Conclusion

Given that the growth in background traffic has been estimated to be a 'no growth' scenario, the base year traffic was also used for all future scenarios which considered the "without development" scenario. Similarly, since the background traffic is not expected to grow – only the Opening Year + 5 assessment was required to be assessed (based on development completion in 2029).

The assessment has been subject to sensitivity testing. The sensitivity testing scenarios were as follows:

- The existing Southern Access junction onto Castle Street was assumed to be closed to vehicular traffic; and
- To assess the traffic impact if the working from home mode share was adjusted from the estimated 20% to a lower value of 10%.

TII's Traffic and Transport Assessment Guidelines (May 2014) were used to determine thresholds for junction assessment based on the traffic data collected. It was found that 4 no. of the total 8 no. junctions required assessment. The junctions which required assessment were as follows:

- Junction 2: R761 Dublin Road, Old Connaught Avenue & Corke Abbey Avenue;
- Junction 3: R761 Dublin Road & Northern Development Access Road;
- Junction 4: R761 Castle Street & Upper Dargle Road; and
- Junction 5: R761 Castle Street, Lower Dargle Road & Ravenswell Road.

The junctions 3, 4 and 5 are expected to perform well within capacity for all future scenarios/sensitivity analyses while junctions 2 is expected to operate over capacity during both peak hours. It was found that the AM peak hour is the more critical of the two peak periods.

Although junction 2 is expected to operate over capacity, the Opening Year + 5 "Do Something" scenario indicates that the maximum degree of saturation increases on the arms is only 5% above that of the existing traffic scenario. Given the urban nature of this junction, it is not unexpected that this junction is at or slightly over capacity at certain periods of the day. The increase in degree of saturation is therefore represents a marginal impact on the junction due to the proposed development.

10. Cumulative Impact - Harbour Point Masterplan Full Buildout

10.1. Modelled Scenarios

In order to appropriately assess the traffic impact of the full Harbour Point development the required modelling scenarios to be tested are similar to the Coastal Quarter and based in the first instance on the assumption of growth in background traffic and in the second instance on the assumed period for the full build out of the full development. Given that the growth in background traffic was been estimated to be a 'no growth' scenario then the base year assessment of the relevant junctions based on the 2019 and 2020 traffic surveys also acts as the future year 'without development' scenario.

In terms of the build out period for the full Harbour Point development, this is assumed, for the purposes of the traffic assessment, to begin in the opening year of 2024 and be completed by 2039, the 'Opening Year + 15' scenario. Therefore, the only 'with development scenario' that needs to be tested, mindful of the 'no growth' scenario in background traffic, is the 'Opening Year + 15'

Table 10-1 - Proposed Development Scenarios

Scenario	Development
Base Year	No development
Opening +15 Year with development - 2039	Harbour Point Masterplan Full Buildout

This assessment has been carried out with development and existing traffic utilising both the Northern Development Road Access Junction (Northern Access Junction) onto the R761 Dublin Road and the upgraded Upper Dargle Road Signalised Junction (Central Access Junction) onto the Dublin Road. The Ravenswell Road Access Junction onto the R761 Castle Street (Southern Access Junction) is assumed to be closed to through traffic and will cater to only a minor volume of development traffic.

10.1.1. Base Year & Opening Year +15 Assessment

10.1.1.1. Junction 2 R761 Dublin Road, Old Connaught Avenue & Corke Abbey Avenue

Figure 10-1 Junction 2 Diagram

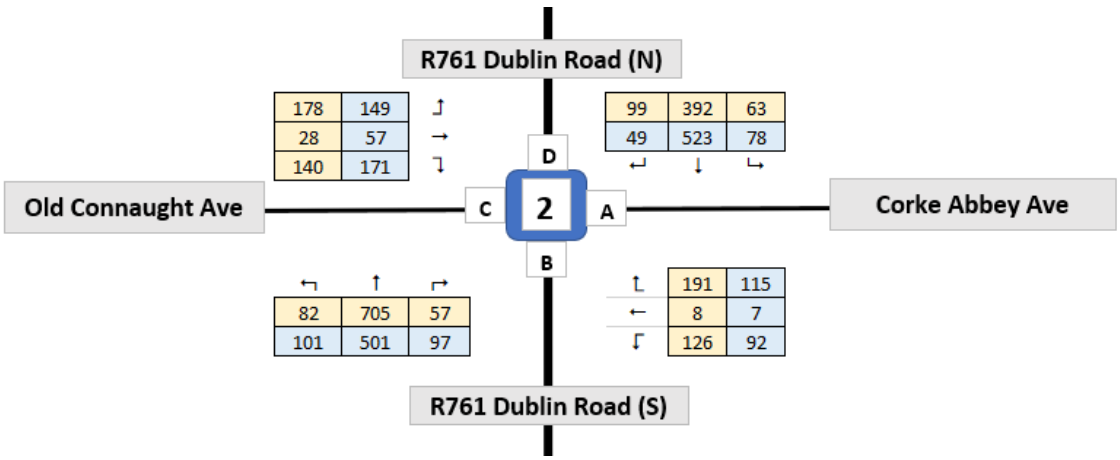

Table 10-2 Junction 2 Base Year & Opening Year +15 Assessment

Scenario	Arm / Lane	Description	AM			PM		
			Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)	Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)
Base Year	A (1/1+1/2)	Corke Abbey Ave	258.7	105.3%	33.9	110.2	80.7%	12.9
	B (2/1+2/2)	Dublin Rd (S)	209.6	106.9%	75.2	39.9	82.3%	22.8
	C (3/1+3/2)	Old Connaught Ave	57.3	68.1%	10.2	54.0	75.7%	9.7
	D (4/1+4/2)	Dublin Rd (N)	40.0	68.8%	15.3	25.7	40.8%	14.6
Opening Year +15	A (1/1+1/2)	Corke Abbey Ave	383.2	113.1%	44.7	121.0	88.7%	13.1
	B (2/1+2/2)	Dublin Rd (S)	342.5	115.0%	118.8	47.1	88.7%	26.3
	C (3/1+3/2)	Old Connaught Ave	56.1	70.9%	9.6	54.1	76.6%	9.7
	D (4/1+4/2)	Dublin Rd (N)	36.0	68.8%	12.8	26.2	42.5%	14.9

The junction operates within capacity except for the Corke Abbey Avenue and Dublin Road south approaches in the morning peak. The junction is operating over capacity in the base year and the addition of the development traffic increases delays and queues on these approaches. This is acceptable in an urban location but with increased choices in the Bray area for travel by public transport, on foot and bicycle and to travel off peak such levels of congestion would be unlikely to occur.

10.1.1.2. Junction 3 R761 Dublin Road & Northern Development Access Road

Figure 10-2 Junction 3 Diagram

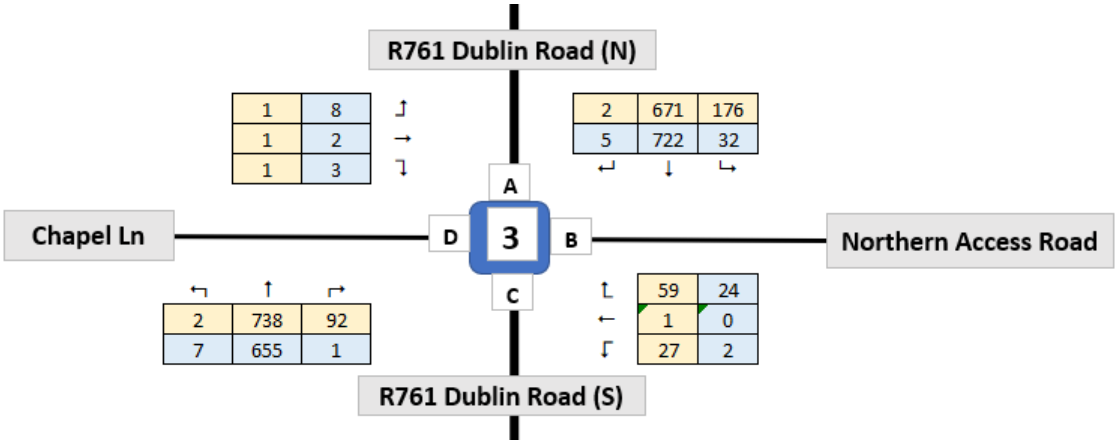

Table 10-3 – Junction 3 Base Year & Opening Year +15 Assessment

Scenario	Arm/Stream	AM			PM		
		Max Queue (PCU)	Average Delay (S)	RFC	Max Queue (PCU)	Average Delay (S)	RFC
Base Year	Stream B-CD	0.1	8.63	0.07	0.0	7.42	0.00

	Stream C-B	0.3	11.49	0.24	0.0	8.32	0.00

This junction operates well within capacity in terms of both the base year and the Opening Year +15 scenarios.

10.1.1.3. Junction 4 R761 Castle Street & Upper Dargle Road

Figure 10-3 Junction 4 Diagram

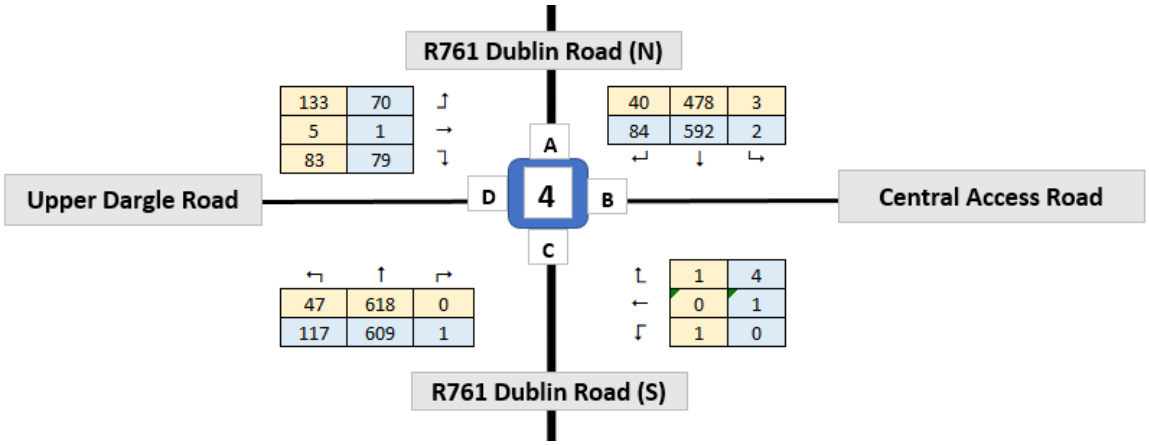

Table 10-4 Junction 4 Base Year & Opening Year +15 Assessment

Scenario	Arm / Lane	Description	AM			PM		
			Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)	Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)
Base Year	A (1/1+1/2)	Dublin Rd (N)	24.2	52.7%	13.2	23.2	62.1%	17.6
	B (2/1+2/2)	Central Access	50.9	0.6%	0.0	56.3	2.5%	0.1
	C (3/1+3/2)	Dublin Rd (S)	27.8	66.8%	19.7	24.1	66.8%	20.8
	D (4/1+4/2)	Upper Dargle Rd	62.5	66.9%	5.4	65.8	58.5%	3.0
Opening Year +15	A (1/1+1/2)	Dublin Rd (N)	25.7	54.0%	13.3	25.4	64.4%	18.1
	B (2/1+2/2)	Central Access	71.4	76.1%	7.1	76.8	70.8%	4.9
	C (3/1+3/2)	Dublin Rd (S)	32.1	77.9%	24.6	27.1	72.5%	22.9
	D (4/1+4/2)	Upper Dargle Rd	74.3	78.0%	7.5	69.3	64.3%	4.3

The junction operates within capacity on all arms including for the completion of the central access arm to serve the full Harbour Point development.

10.1.1.4. Junction 5 R761 Castle Street, Lower Dargle Road & Ravenswell Road

Figure 10-4 Junction 5 Diagram

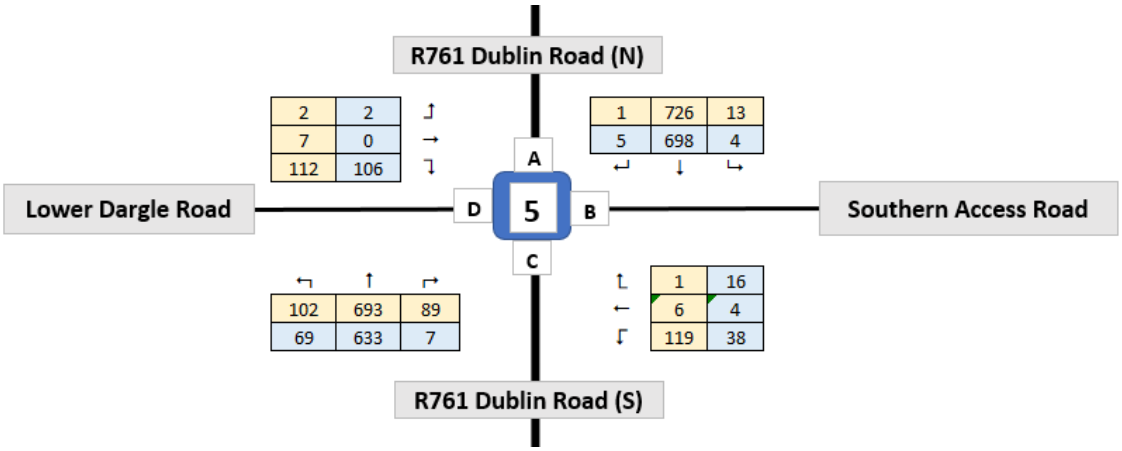

Table 10-5 Junction 5 Base Year & Opening Year +15 Assessment

Scenario	Arm / Streams	AM			PM		
		Max Queue (PCU)	Average Delay (S)	RFC	Max Queue (PCU)	Average Delay (S)	RFC
Base Year	Stream B-ACD	0.5	12.40	0.32	0.2	12.80	0.19
	Stream A-BCD	0.0	4.18	0.01	0.0	4.19	0.02
	Stream D-ABC	3.4	100.94	0.82	1.0	32.55	0.52
	Stream C-ABD	2.3	6.28	0.47	0.0	4.22	0.03
Opening Year +15	Stream B-ACD	0.0	0.00	0.00	0.0	0.00	0.00
	Stream A-BCD	0.0	3.81	0.01	0.0	4.00	0.03
	Stream D-ABC	2.9	91.30	0.78	1.2	36.73	0.55
	Stream C-ABD	0.0	0.00	0.00	0.0	0.00	0.00

This junction continues to operate within capacity on all arms in the Opening Year + 15 scenario.

10.2. Mode Share Sensitivity Scenario Assessment

Similar to the Coastal Quarter, this sensitivity analysis assessed the scenario of a reduced work from home percentage of 10%, compared to the 20% target set in the National Remote Work Strategy. The mode share for this scenario is detailed in Figure 9-1 Below

10.2.1.1. Base Year & Opening Year +15 Assessment

10.2.1.2. Junction 2

Table 10-6 Junction 2 Base Year & Opening Year +5 Junction Sensitivity Analysis

Scenario	Arm / Lane	Description	AM			PM		
			Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)	Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)
Base Year	A (1/1+1/2)	Corke Abbey Ave	258.7	105.3%	33.9	110.2	80.7%	12.9
	B (2/1+2/2)	Dublin Rd (S)	209.6	106.9%	75.2	39.9	82.3%	22.8
	C (3/1+3/2)	Old Connaught Ave	57.3	68.1%	10.2	54.0	75.7%	9.7
	D (4/1+4/2)	Dublin Rd (N)	40.0	68.8%	15.3	25.7	40.8%	14.6
Opening Year +15	A (1/1+1/2)	Corke Abbey Ave	414.6	117.3%	45.2	103.0	89.2%	10.8
	B (2/1+2/2)	Dublin Rd (S)	415.7	119.7%	135.5	48.9	89.7%	28.4
	C (3/1+3/2)	Old Connaught Ave	48.4	70.0%	8.0	54.1	76.7%	9.7
	D (4/1+4/2)	Dublin Rd (N)	35.8	68.8%	13.2	26.5	43.0%	16.0

In this worst case scenario all arms of the junction operate within capacity except for the Cork Abbey and Dublin Road South approaches in the morning peak hour. Within urban locations it is acceptable that junctions operate over capacity during some periods of the day. In reality further transfers to public transport coupled with increased opportunities for workers to travel off peak and indeed work from home will result in this scenario not being realised.

10.2.1.3. Junction 3 R761 Dublin Road & Northern Development Access Road

Table 10-7 Junction 3 Base Year & Opening Year +5 Junction Sensitivity Analysis

Scenario	Arm/Stream	AM			PM		
		Max Queue (PCU)	Average Delay (S)	RFC	Max Queue (PCU)	Average Delay (S)	RFC
Base Year	Stream B-CD	0.1	8.63	0.07	0.0	7.42	0.00
	Stream B-AD	0.4	22.89	0.29	0.1	15.12	0.10
	Stream A-BCD	0.0	8.56	0.01	0.0	7.66	0.01
	Stream D-ABC	0.0	0.00	0.00	0.0	10.65	0.04
	Stream C-B	0.3	11.19	0.24	0.0	8.14	0.00
Opening Year +15	Stream B-CD	0.1	8.87	0.07	0.0	7.60	0.00
	Stream B-AD	0.5	25.27	0.35	0.2	16.31	0.15
	Stream A-BCD	0.0	8.56	0.01	0.0	7.65	0.01
	Stream D-ABC	0.0	0.00	0.00	0.0	10.75	0.04
	Stream C-B	0.3	11.52	0.24	0.0	8.38	0.00

This junction operates well within capacity on all arms in both peak hours in the Opening Year + 15.

10.2.1.4. Junction 4 R761 Castle Street & Upper Dargle Road

Table 10-8 Junction 4 Base Year & Opening Year +5 Junction Sensitivity Analysis

Scenario	Arm / Lane	Description	AM			PM		
			Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)	Delay (S/PCU)	Deg Sat	Mean Max Queue (PCU)
Base Year	A (1/1+1/2)	Dublin Rd (N)	24.2	52.7%	13.2	23.2	62.1%	17.6
	B (2/1+2/2)	Central Access	50.9	0.6%	0.0	56.3	2.5%	0.1
	C (3/1+3/2)	Dublin Rd (S)	27.8	66.8%	19.7	24.1	66.8%	20.8
	D (4/1+4/2)	Upper Dargle Rd	62.5	66.9%	5.4	65.8	58.5%	3.0
Opening Year +15	A (1/1+1/2)	Dublin Rd (N)	26.8	55.3%	13.2	26.0	64.9%	18.3
	B (2/1+2/2)	Central Access	70.7	78.6%	7.7	76.7	71.7%	5.5
	C (3/1+3/2)	Dublin Rd (S)	34.2	80.2%	24.5	28.1	74.0%	23.7
	D (4/1+4/2)	Upper Dargle Rd	68.0	73.6%	7.1	70.1	65.9%	4.9

The junction operates within capacity on all arms in both the morning and evening peak hour in the Opening Year +15 scenario.

10.2.1.5. Junction 5 R761 Castle Street, Lower Dargle Road & Ravenswell Road

Table 10-9 Junction 5 Base Year & Opening Year +5 Junction Sensitivity Analysis

Scenario	Arm / Streams	AM			PM		
		Max Queue (PCU)	Average Delay (S)	RFC	Max Queue (PCU)	Average Delay (S)	RFC
Base Year	Stream B-ACD	0.5	12.40	0.32	0.2	12.80	0.19
	Stream A-BCD	0.0	4.18	0.01	0.0	4.19	0.02
	Stream D-ABC	3.4	100.94	0.82	1.0	32.55	0.52
	Stream C-ABD	2.3	6.28	0.47	0.0	4.22	0.03
Opening Year +15	Stream B-ACD	0.0	0.00	0.00	0.0	0.00	0.00
	Stream A-BCD	0.0	3.77	0.01	0.0	3.99	0.03
	Stream D-ABC	3.1	98.48	0.80	1.2	38.53	0.56
	Stream C-ABD	0.0	0.00	0.00	0.0	0.00	0.00

The junction operates well within capacity in both peak hours in the Opening Year +15 scenario.

10.3. Other Committed Development

The no growth scenario considered as part of the traffic impact relates solely to car trips. In terms of overall trips, it is considered that these will grow in line with population and development expansions associated with planned and committed developments but that the capacity to accommodate these will be served by public transport and other sustainable transport options.

The proposed development is thus planned in the context of the existing and committed wider transport strategy being planned and implemented by the NTA for Bray and the surrounding area. This includes the planned BusConnects initiatives, including the bus corridor project from Bray to UCD and the improved Bus Network and the Bray Area Cycle Network Plan.

10.4. Conclusion

In order to appropriately assess the traffic impact of the full Harbour Point development, the required modelling scenarios to be tested are similar to the Coastal Quarter and based in the first instance on the assumption of growth in background traffic and in the second instance on the assumed period for the full build out of the full development.

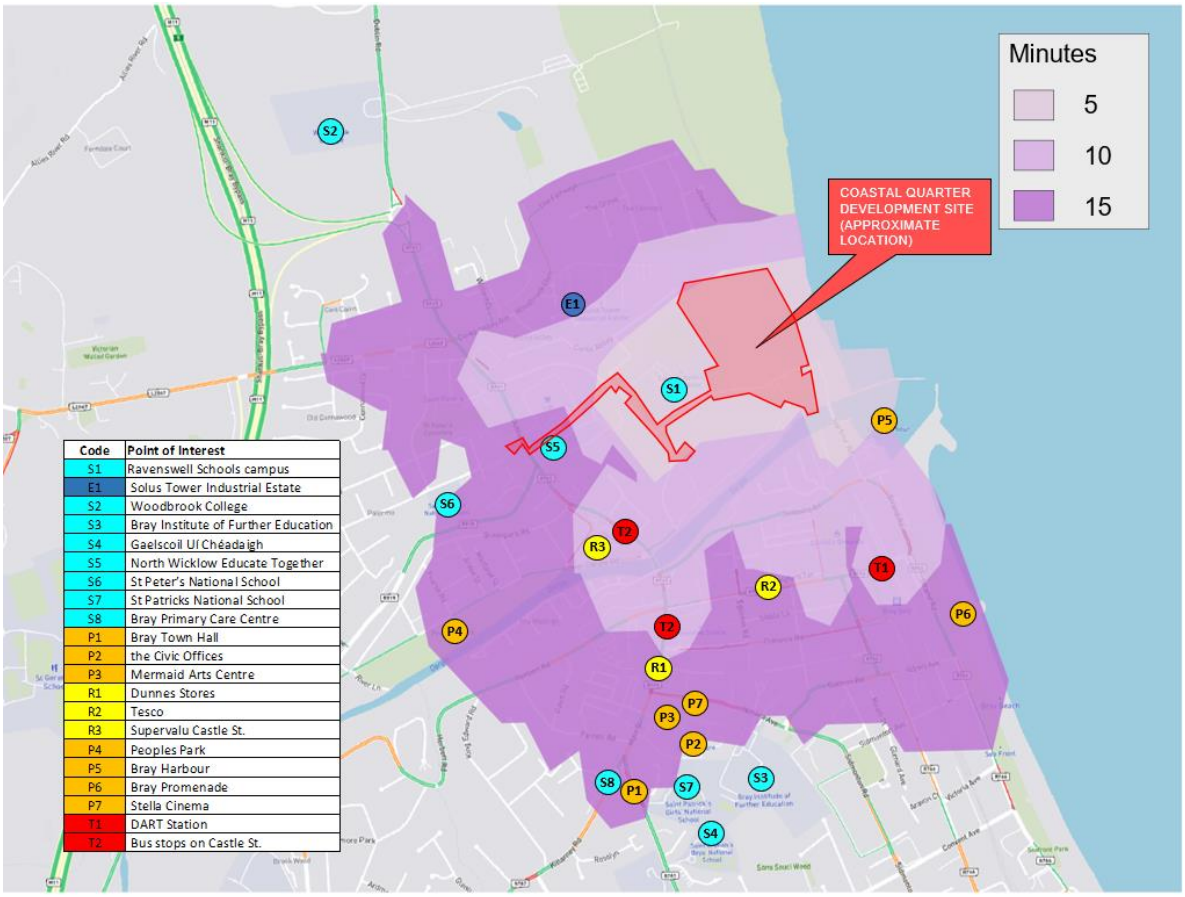
This assessment has been carried out with development and existing traffic utilising both the Northern Development Road Assess Junction (Northern Access Junction) onto the R761 Dublin Road and the upgraded Upper Dargle Road Signalised Junction (Central Access Junction) onto the Dublin Road. The Ravenswell Road Access Junction onto the R761 Castle Street (Southern Access Junction) is assumed to be closed to through traffic and will cater to only a minor volume of development traffic

All junctions operate well within capacity with the exception of Junction 2. In the worst case scenario, where mode share for working remotely is reduced to 10%, all arms of the junction operate within capacity except for the Cork Abbey and Dublin Road South approaches in the morning peak hour. Within urban locations it is acceptable that junctions operate over capacity during some periods of the day. In reality further transfers to public transport coupled with increased opportunities for workers to travel off peak and indeed work from home will result in this scenario not being realised.

11. Conclusion

11.1. Receiving Environment

The proposed development embraces the 15 Minute City concept, minimising the need for private transport. While the development proposal includes a childcare facility, café, convenience store, gym and juice bar, retail and recreational facilities within the scheme in addition to houses and apartments, all other essential services are within a 15-minute walk (1.5km) of the subject site. The following figure represents the 5, 10 and 15 minute walking isochrones relative to the Coastal Quarter.



Code	Point of Interest
S1	Ravenswell Schools campus
E1	Solus Tower Industrial Estate
S2	Woodbrook College
S3	Bray Institute of Further Education
S4	Gaelscoil Uí Chéadaigh
S5	North Wicklow Educate Together
S6	St Peter's National School
S7	St Patricks National School
S8	Bray Primary Care Centre
P1	Bray Town Hall
P2	the Civic Offices
P3	Mermaid Arts Centre
R1	Dunnes Stores
R2	Tesco
R3	Supervalu Castle St.
P4	Peoples Park
P5	Bray Harbour
P6	Bray Promenade
P7	Stella Cinema
T1	DART Station
T2	Bus stops on Castle St.

The site is exceptionally well served by existing public transport with Bray DART station 700m to the south and Bray-Dublin Bus routes (bus stops 4131 and 106331) 600m to the west of the subject lands.

Connectivity will be further enhanced in the coming years through the realisation of the following projects;

- Bus Connects: Bray to UCD and onwards to Dublin City Centre Due for completion between 2022 – 2027;
- Wicklow County Council (WCC) is undertaking Part 8 approval procedures to carry out the design and construction of the Bray Sustainable Transport Bridge (Ref. PRR 21/869). Part 8 planning has been granted and is currently under judicial review;
- Luas extension to Bray: post 2035; and
- National Cycle Network Route 5 (Dundalk to Wexford): this route will pass immediately to the east of the site and link the site to the north to Shankill and beyond to Dublin.

11.2. Operational Traffic Impact

Given that the growth in background traffic has been estimated to be a 'no growth' scenario, the base year traffic was also used for all future scenarios which considered the "without development" scenario. Similarly, since the background traffic is not expected to grow – only the Opening Year + 5 assessment was required to be assessed (based on development completion in 2027).

The assessment has been subject to sensitivity testing. The sensitivity testing scenarios were as follows:

- The existing Southern Access junction onto Castle Street was assumed to be closed to vehicular traffic; and
- To assess the traffic impact if the working from home mode share was adjusted from the estimated 20% to a lower value of 10%.

TII's Traffic and Transport Assessment Guidelines (May 2014) were used to determine thresholds for junction assessment based on the traffic data collected. It was found that 4 no. of the total 8 no. junctions required assessment. The junctions which required assessment were as follows:

- Junction 2: R761 Dublin Road, Old Connaught Avenue & Corke Abbey Avenue;
- Junction 3: R761 Dublin Road & Northern Development Access Road;
- Junction 4: R761 Castle Street & Upper Dargle Road; and
- Junction 5: R761 Castle Street, Lower Dargle Road & Ravenswell Road.

The junctions 3, 4 & 5 are expected to perform well within capacity for all future scenarios/sensitivity analyses while junction 2 is expected to operate over capacity during the AM peak hour. It was found that the AM peak hour is the more critical of the two peak periods.
Although junctions 2 is expected to operate over capacity, the Opening Year + 5 "Do Something" scenario indicates that the that the maximum degree of saturation increases on the arms is only 5% above that of the existing traffic scenario. This indicates a marginal impact on the junction due to the proposed development.

11.3. Cumulative Traffic Impact

In order to appropriately assess the traffic impact of the full Harbour Point development, the required modelling scenarios to be tested are similar to the Coastal Quarter and based in the first instance on the assumption of growth in background traffic and in the second instance on the assumed period for the full build out of the full development.

This assessment has been carried out with development and existing traffic utilising both the Northern Development Road Assess Junction (Northern Access Junction) onto the R761 Dublin Road and the upgraded Upper Dargle Road Signalised Junction (Central Access Junction) onto the Dublin Road. The Ravenswell Road Access Junction onto the R761 Castle Street (Southern Access Junction) is assumed to be closed to through traffic and will cater to only a minor volume of development traffic

All junctions operate well within capacity with the exception of Junction 2. In the worst case scenario, where mode share for working remotely is reduced to 10%, all arms of the junction operate within capacity except for the Cork Abbey and Dublin Road South approaches in the morning peak hour. Within urban locations it is acceptable that junctions operate over capacity during some periods of the day. In reality further transfers to public transport coupled with increased opportunities for workers to travel off peak and indeed work from home will result in this scenario not being realised.

11.4. Conclusion

The site is exceptionally well served by existing public transport with Bray DART station 700m to the south and Bray-Dublin Bus routes (bus stops 4131 and 106331) 600m to the west of the subject lands. Connectivity will be further enhanced in the coming years through the realisation of the following projects;

- Bus Connects: Bray to UCD and onwards to Dublin City Centre Due for completion between 2022 – 2027;
- Wicklow County Council (WCC) is undertaking Part 8 approval procedures to carry out the design and construction of the Bray Sustainable Transport Bridge (Ref. PRR 21/869). Part 8 planning has been granted and is currently under judicial review;
- Luas extension to Bray: post 2035; and
- National Cycle Network Route 5 (Dundalk to Wexford): this route will pass immediately to the east of the site and link the site to the north to Shankill and beyond to Dublin.

Thus, it is expected that car ownership will be well below traditional suburban residential development rates. In anticipation of this, it is proposed to provide parking spaces to serve the housing units at an overall rate of 0.82 / unit (not including commercial or visitor parking), significantly below traditional development plan standards. A car club parking spaces is also provided so as to further reduce the need for car ownership.

In contrast to car parking provision, bicycle parking is proposed at a rate of 2 spaces per house and 1 space per apartment bedroom, in line with the National Cycle Manual Standards and that of the Design Standards for New Apartments. All bike parking is secure and easily accessible.

In January 2021, the National Remote Work Strategy was published by the Department of Enterprise Trade and Employment which lays out the long-term strategy to promote home and remote working for public sector and private sector employees. The strategy mandates that 20% of the public sector workforce move to home and remote working in 2021. Furthermore, the strategy notes that more than 25% of the private sector workers in Ireland are capable of working remotely.

Therefore, in addition to the significant opportunities to travel to work by active travel and public transport modes, residents of the Harbour Point development may avail of the home and remote working opportunities, including flexible working opportunities, as promoted by the National Remote Work Strategy. This change in work practice will reduce overall work trips and optimise flexible working opportunities that will enable residents to avoid travel to work and to also facilitate residents to commute to their place of employment outside of the peak traffic and travel periods.

In overall terms, the Harbour Point development will be fully consistent with the National Planning Framework objective of compact growth in a location that will optimise the residents opportunities to travel by active travel and public transport modes, fully consistent with the overall objectives of the NTA Greater Dublin Area Transport Strategy.

The development therefore presents as an exemplar of integrated land use and transportation planning that is fully consistent with the ‘Avoid - Shift -Improve Model’ as set out in the Draft Dun Laoghaire Rathdown Development Plan. This approach, which is based on avoiding or reducing the need to travel, shifting to more environmentally friendly modes and improving the efficiency of motorised transport modes, is echoed in the transport objectives of the current and draft Wicklow County Development Plan, the Bray Municipal District Local Area Plan and the Bray and Environs Transport Study.

In this context, and in the more general context of rapidly changing lifestyles and work patterns it is anticipated that the impact of the proposed development on the existing road network will be modest and well within the carrying capacity of existing infrastructure.

1.1. Introduction

This scoping report has been prepared by Atkins on behalf of the client Shankill Property Investments Ltd., with reference to the proposed Coastal Quarter Residential Developemnt. This report is being submitted to Dún Laoghaire–Rathdown County Council and Wicklow county council following formal pre-application meetings wherein details of the proposed site layout were presented to the County Council. Therefore, this document should be read in conjunction with the scheme booklets submitted to the Council prior to these meetings.

The scoping report is an important part of the traffic and transport assessment process. It is precursor to the preparation of a Traffic and Transport Assessment (TTA). With this in mind, Atkins have designed this scoping study to:

Inform and guide the initial contact between the client and the transport department of the planning authority;

To put into context the importance of traffic and transport implications as an integral element of the development proposal;

To emphasise the role of transport access to the development by all modes;

To facilitate the planning authority in its review process at an early stage of scheme development.

The TTA will be accompanied by a number of supporting documents including:

- Mobility Management Plan
- Road Safety Audit (Stage 1)
- DMURS Street Design Audit
- Design Stage Traffic Management Plan.

1.2. Thresholds

With reference to Section 2.1 ‘Thresholds’ of TII’s Traffic and Transport Assessment Guidelines May 2014, the proposed development is determined to require a traffic and transport assessment on the basis that it is a residential development exceeding 200 no. dwellings.

1.3. Scoping Details

The following table has been developed in line with Section 2.3 ‘Scoping’ of TII’s Traffic and Transport Assessment Guidelines May 2014 and outlines the key development details and relevant areas of interest.

Table 1-1 – Scoping Details

Ref	Item	Requirements
1	Location, size and nature of development.	The Site is located on the northern side of Bray town centre on the Dublin Road, Bray, Co. Wicklow. The site is bounded by an existing development road to the South, Colaiste Raithin school to the West, Corke Abbey residential development and Woodbrook Glen to the North and DART line and coast to the East. The site location is shown in Appendix A. The subject planning application of the Coastal Quarter will be the first phase of the overall Bray Golf

		Course Lands Masterplan development. This first phase comprises of below: • 588 residential units and • 700 sqm Creche Unit • 275 sqm Commercial Unit • 350 sqm Convivence Store • 180 sqm Café This first phase of development will be served off the existing development roads and access junctions (northern access junction and southern access junction at Ravenswell Road) onto the R761 road to the east. No amendment is proposed to the layout of these existing junctions.
2	Is the development in line with National, County and LAP policy?	The proposed development is consistent within zoning objectives of the Dún Laoghaire Rathdown County Development Plan 2016-2022 and the Wicklow County Development Plan 2016-2022.
3	The existing use(s) of the land.	The existing land use is predominantly a greenfield site.
4	Does the development involve relocation of an existing use?	No relocation of an existing use is proposed.
5	Are there any special circumstances relevant to this proposal?	In accordance with the Planning and Development (Housing) and Residential Tenancies Act 2016 the proposed development constitutes Strategic Housing Development on the basis that it is a housing development of more than 100 residential units and thus the associated planning application is to be made directly to An Bord Pleanála. In addition, the site is split between two local authorities and therefore the requirements have been considered for both the Wicklow County Council & Dún Laoghaire-Rathdown County Council Development Plan requirements.
6	What provisions are there for pedestrians/cyclists/public transport/disabled access?	The street layout of the proposed development is being developed in accordance with DMURS and thus the appropriate measures are being considered which will facilitate an accessible, permeable, connected and socially inclusive street network for pedestrian and cyclist movement in line with the design ethos contained therein. The existing public transport includes Howth/Malahide to Greystones DART Service, Dublin to Dublin to Rosslare Commuter Service and Dublin Bus Routes (45A, 45B,84, 84N, 145, 155 & 184). Future proposals for Public Transport include Bus Connects - Core Corridor 13 Scheme (Public Consultation Stage) and Luas Green Line Extension to Bray (Concept Stage).

		The site layout shown in Appendix B provides for high level of permeability for pedestrians and cyclists. The existing pedestrian & cyclist connections are noted below: • Existing connection to Bray Dart Station and Bray Promenade via Dart Underpass • Existing connection to Bray Town Centre via Riverwalk along Dargle River and via Development Roads • Existing provision along the R761 Dublin Road The future pedestrian & cyclist connections are noted below: • Development connection to the north into Existing Park Lands & Adjacent Development to be provided as part of development • Connection to Bray Dart Station via proposed Public Transport Bridge to be provided as a WCC Part 8 Scheme proceeding to planning in 2020 • Proposed Pedestrian & Cyclist Improvements on Castle Street Bridge, provision of pedestrian and cycle footbridges either side of the existing bridge, to be provided as a WCC Part 8 Scheme proceeding to planning in 2021 • Improved pedestrian and cyclist facilities along the R761 Dublin Road provided as part of BusConnects - Core Corridor 13 Scheme • East Coast Greenway Scheme Greater Dublin Cycle Network route N5 – incorporated within WCC and DLRCC development plans • Completion of Strand Road Cycle Scheme at Marine Terrace under the NTA Stimulus Programme 2020
8	What data sources, guidance is available?	CSO Census 2016, MyPlan.ie, TII Project Appraisal Guidelines, TII Traffic Count Data, TII Publications Website, UK DMRB TA 79/99.
9	Are traffic surveys of the existing traffic conditions required?	Traffic survey data recorded in 2019 for the N11 Upgrade Model will be utilised for the Traffic Impact Assessment as agreed with WCC and the NTA. The 2019 traffic count data will be supported with 2020 traffic counts at the both development road access junctions. These 2020 counts will include

		ATC counts at corresponding locations to the 2019 data in order to determine any adjustment required in relation to Covid19 traffic impacts. These junction turning counts and ATCs will provide 'normalised' base year traffic flow data. The JTC and ATC counts locations are as shown in Appendix A.
10	Potential trip/traffic generation from the site. Initial estimates from existing similar development in the locality.	Whilst the application that the TTA will support is for the proposed Coastal Quarter development, it is considered appropriate to include the impacts of traffic generated by the entire Bray Golf Course Lands Masterplan development. A combination of the TRICS database people trip rates for similar sites and CSO 2016 mode share data for adjacent existing developments will be utilised to determine the appropriate residential traffic generation for the residential elements of the Coastal Quarter development and the entire Bray Golf Course Lands Masterplan development. An assessment scenario will be included allowing for a reduced residential traffic generation due to the implementation of working from home policies post Covid19, this reduction will be based on ongoing survey research and will be based on the most up to date survey data available. TRICS database vehicle trip rates for similar locations as the subject site will used for the traffic generation of the non- residential elements of the Coastal Quarter development and the entire Bray Golf Course Lands Masterplan development.
11	What are the targets for mode share and how are they to be achieved?	Targets for mode share will be developed with reference to Smarter Travel – A Sustainable Transport future 2009 – 2020, Dun Laoghaire Rathdown and Wicklow County Development Plan, in tandem with a review of those currently being achieved by adjacent existing developments utilised for the trip generation noted above. Measures to achieve targets will be incorporated in the Mobility Management Plan (MMP) which will be submitted as part of the application. The MMP will promote and support the use of more sustainable transport modes such as walking, cycling and public transport.
12	Are trip distribution and assignment models to be used?	Residential traffic distribution at the development access junctions onto the R761 will be based on the traffic counts carried out at adjacent residential developments, namely Woodbrook Downs and Corke Abbey. Trip assignment at the other junctions will be based on existing turning proportions obtained from the junction turning counts.

13	Are further traffic generation surveys required or can the TRICS database be used to estimate trip rates?	The TRICS database is to be utilised.
14	What is the rate of traffic growth locally?	Based on a review of Unit 5.3 'Travel Demand Projections' of TII's Project Appraisal Guidelines, the 'Low Growth' rate associated with the 'Wicklow' region is considered appropriate as a maximum estimate of potential growth in background traffic given the existing bus and DART services and future arrival of BusConnects and limited potential for significant development in the area. For the period of 2016 to 2030 the 'Low Growth' rate is 1.0140 for LV's and 1.0361 for HV's. For the period beyond 2030 the 'Low Growth' rate is 1.0033 for LV's and 1.0153 for HV's.
15	When is the critical time period of assessment? i.e. consider the peak hour for development traffic and also the peak hour for the network.	Based on traffic count data the peak hours of development and local road traffic occur during the 08:00 to 09:00 and 17:00 to 18:00 time periods. Assessments will be undertaken for the base year, opening year, opening year +5 and opening year +15.
16	When will the site become fully operational? Are there significant phases to the project?	The Coastal Quarter development site subject of this TTA scoping study is currently envisaged, allowing for planning, detailed design and construction, to be operational by 2022.
17	Are there ways to reduce car dependency? Is a mobility management plan required?	Please refer to Item 6 and Item 11. An MMP Mobility is proposed to be submitted as part of the Coastal Quarter Planning Application covering proposals to reduce car dependency including but not limited to: • Provision of pedestrian lines to Bray Town centre and Public Transport Services (Dublin Bus Services and DART services) • Appropriate car parking provision in context of proximity to town Bray centre and public transport provision below the maximum requirement of the development plan. • Provision of cycle parking provision in line with the minimum requirement of the development plan.
18	Will the site attract traffic from other adjacent sites?	The site will attract minimal volumes of traffic from adjacent sites. Attracted traffic will be generally be in the form of residential visitors and occur outside of the peak times.
19	Are there any adjacent developments committed or proposed that will have significant trip / traffic implications?	Planning Application Ref: ABP30584419 consisting of 685 no. residential units and 1 no. childcare facility located at Townland of Corke Little, Woodbrook, Shankill, Co. Dublin has been granted permission. This proposed development is located to the north of the proposed development. The traffic generation from the above development on the existing road network will be considered in the traffic analysis for the proposed development.

20	What is the cumulative impact of the development within the area?	Cumulative impacts for the full development of the entire Bray Golf Course Masterplan will be considered in the TTA.
21	What will be the area of impact of the proposal, i.e. adjacent local regional, National Road routes and junctions	The area of anticipated material impact and impacted junctions are as shown in Appendix A. In addition, an assessment of the impacts the N11 / M11 mainline flows will be carried out in order to determine the percentage level of traffic impact on the strategic road network.
22	Will adjacent links or junctions become overloaded or be impacted significantly? Is a new or modified road access likely?	The impact on the adjacent junctions as shown in Appendix A, will be assessed as part of the TTA process. The impact of the traffic generation of the Coastal Quarter development on the adjacent junctions is not expected to require amendment to those junctions. As noted by Wicklow County Council the current development access junction at Ravenswell Road (southern access junction) is planned to be closed to traffic in the future. The Coastal Quarter development will be served by the two existing development road access junctions, Northern Access Junction and Southern Access Junction (at Ravenswell Road). An assessment scenario will be included for the Coastal Quarter development traffic and existing development traffic (i.e. school traffic) accessing only via the northern access junction. To facilitate the future phases of the Bray Golf Course Masterplan an upgraded signalised junction between the Upper Dargle Road and R761 will be required to accommodate a 4th arm for a future development access road into the masterplan lands. This proposed junction will be analysed as part of assessing the traffic impacts of the entire Bray Golf Course Masterplan. In line with the Coastal Quarter a similar scenario with the Ravenswell Road (southern access junction) being closed to traffic will be carried out for the Bray Golf Course Masterplan traffic assessment, however given that the masterplan includes development adjacent the southern access junction an allowance for local traffic at this junction will be included.
23	What level of car and bicycle parking provision is proposed?	In relation to the apartment units the requirements set out in the Design Standards for New Apartments will be applied in relation to both car and cycle parking. In terms of the car parking for the housing units, the site is split between two local authorities and therefore the requirements will be considered in terms of both the Wicklow County Council & Dún Laoghaire-Rathdown County Council Development Plan requirements, it is noted that in both development plans car parking is a maximum provision. A

		consistent cycle parking provision will be applied to the housing units. In terms of the cycle parking for the housing units, the site is split between two local authorities and therefore the requirements will be considered in terms of both the Wicklow County Council & Dún Laoghaire-Rathdown Standards for Cycle Parking requirements, it is noted that in both development plans cycle parking is a minimum provision. A consistent cycle parking provision will be applied to the housing units. Car and cycle parking provision for the non-residential elements of the development will be in accordance with the Wicklow County Council Development plan requirements.
24	What sightlines/ visibility splays are available at the proposed development accesses?	Visibility splays / sightline requirements will be incorporated within the proposed development design.
25	Do they comply with the requirements of the appropriate standard? i.e TII 'Geometric Design of Junctions' or DMURS	DMURS design standard is the appropriate standard to apply to the development junctions.
26	Are there any road safety implications?	None anticipated; see Item 27.
27	Is a Road Safety Impact Assessment or Road Safety Audit required? Refer to TII standards.	A Road Safety Audit of the access junction and internal development street network will be undertaken. In accordance with Section 5.4 of DMURS a Quality Audit is recommended to be undertaken. The Quality Audit will include the Stage 1 Road Safety Audit and DMURS Street Design Audit.
28	What type of transport analysis is most suitable? i.e. isolated junction models or local area models?	Isolated junction models are the most appropriate type of modelling software for use. Traffic signals will be modelled with JCT's LINSIG V3, roundabout junctions will be modelled with ARCADY module of TRL's 'Junctions 9' and priority- controlled junctions will be modelled with PICADY module of TRL's 'Junctions 9'.

	TY	TYRONE	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: No of Dwellings
Actual Range: 6 to 1817 (units:)
Range Selected by User: 4 to 1817 (units:)

Parking Spaces Range: All Surveys Included

Parking Spaces per Dwelling Range: All Surveys Included

Bedrooms per Dwelling Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/12 to 19/11/19

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	26 days
Tuesday	25 days
Wednesday	21 days
Thursday	23 days
Friday	14 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	109 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Edge of Town Centre	12
Suburban Area (PPS6 Out of Centre)	33
Edge of Town	48
Neighbourhood Centre (PPS6 Local Centre)	15
Free Standing (PPS6 Out of Town)	1

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Industrial Zone	1
Residential Zone	86
Village	10
Out of Town	1
High Street	1
No Sub Category	10

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

C3	109 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:
All Surveys Included

Secondary Filtering selection (Cont.):

Population within 1 mile:

1,000 or Less	5 days
1,001 to 5,000	20 days
5,001 to 10,000	23 days
10,001 to 15,000	26 days
15,001 to 20,000	14 days
20,001 to 25,000	9 days
25,001 to 50,000	9 days
50,001 to 100,000	3 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,000 or Less	4 days
5,001 to 25,000	23 days
25,001 to 50,000	11 days
50,001 to 75,000	13 days
75,001 to 100,000	18 days
100,001 to 125,000	3 days
125,001 to 250,000	22 days
250,001 to 500,000	11 days
500,001 or More	4 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	1 days
0.6 to 1.0	29 days
1.1 to 1.5	71 days
1.6 to 2.0	8 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	20 days
No	89 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	105 days
2 Poor	1 days
3 Moderate	1 days
4 Good	1 days
5 Very Good	1 days

This data displays the number of selected surveys with PTAL Ratings.

LIST OF SITES relevant to selection parameters

Site(1):	AG-03-A-01	Site area:	0.68 hect

Total Rates:			2.659			2.539			5.198

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	6 - 1817 (units:)
Survey date date range:	01/01/12 - 19/11/19
Number of weekdays (Monday-Friday):	109
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	8
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: No of Dwellings
Actual Range: 6 to 493 (units:)
Range Selected by User: 6 to 493 (units:)

Parking Spaces Range: All Surveys Included

Parking Spaces per Dwelling Range: All Surveys Included

Bedrooms per Dwelling Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/12 to 14/11/19

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	7 days
Tuesday	19 days
Wednesday	17 days
Thursday	9 days
Friday	8 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	60 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Edge of Town Centre	26
Suburban Area (PPS6 Out of Centre)	22
Edge of Town	5
Neighbourhood Centre (PPS6 Local Centre)	7

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Industrial Zone	1
Development Zone	7
Residential Zone	34
Built-Up Zone	9
No Sub Category	9

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

C3	60 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:
All Surveys Included

Secondary Filtering selection (Cont.):

Population within 1 mile:

1,001 to 5,000	3 days
5,001 to 10,000	3 days
10,001 to 15,000	10 days
15,001 to 20,000	5 days
20,001 to 25,000	5 days
25,001 to 50,000	22 days
50,001 to 100,000	7 days
100,001 or More	5 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	2 days
25,001 to 50,000	4 days
50,001 to 75,000	10 days
75,001 to 100,000	2 days
125,001 to 250,000	8 days
250,001 to 500,000	8 days
500,001 or More	26 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	5 days
0.6 to 1.0	27 days
1.1 to 1.5	28 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	10 days
No	50 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	36 days
1a (Low) Very poor	2 days
1b Very poor	1 days
2 Poor	4 days
3 Moderate	4 days
4 Good	1 days
5 Very Good	4 days
6a Excellent	5 days
6b (High) Excellent	3 days

This data displays the number of selected surveys with PTAL Ratings.

Total Rates:			1.023			1.017			2.040

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	6 - 493 (units:)
Survey date date range:	01/01/12 - 14/11/19
Number of weekdays (Monday-Friday):	60
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	3
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 04 - EDUCATION
Category : D - NURSERY
MULTI-MODAL TOTAL VEHICLES

Selected regions and areas:

02	SOUTH EAST		
	ES	EAST SUSSEX	1 days
04	EAST ANGLIA		
	CA	CAMBRIDGESHIRE	1 days
	SF	SUFFOLK	1 days
05	EAST MIDLANDS		
	LN	LINCOLNSHIRE	1 days
08	NORTH WEST		
	CH	CHESHIRE	1 days
09	NORTH		
	TW	TYNE & WEAR	2 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Gross floor area
Actual Range: 185 to 750 (units: sqm)
Range Selected by User: 176 to 2350 (units: sqm)

Parking Spaces Range: All Surveys Included

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/12 to 21/05/19

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	1 days
Tuesday	3 days
Wednesday	2 days
Friday	1 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	7 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Edge of Town Centre	2
Suburban Area (PPS6 Out of Centre)	4
Neighbourhood Centre (PPS6 Local Centre)	1

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	6
No Sub Category	1

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

E(f)	7 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:

All Surveys Included

Population within 1 mile:

15,001 to 20,000	3 days
25,001 to 50,000	3 days
50,001 to 100,000	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

75,001 to 100,000	2 days
125,001 to 250,000	2 days
250,001 to 500,000	3 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	1 days
0.6 to 1.0	2 days
1.1 to 1.5	3 days
2.1 to 2.5	1 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

No	7 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	7 days

This data displays the number of selected surveys with PTAL Ratings.

Total Rates:			10.328			10.300			20.628

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	185 - 750 (units: sqm)
Survey date date range:	01/01/12 - 21/05/19
Number of weekdays (Monday-Friday):	7
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	1
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Total Rates:			0.163			0.163			0.326

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Total Rates:			1.284			1.367			2.651

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Analysis Set Details

ID	Network flow scaling factor (%)
A1	100.000

Base, AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Northern Access Junction	Crossroads	Two-way		1.50	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Dublin Rd North	Along R761	Major
B	Access Junction	Northern Access Junction from Development	Minor
C	Dublin Rd South	Along R761	Major
D	Chapel Ln	Opposite to access junction	Minor

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Width for right turn (m)	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
A	9.00		✓	2.50	42.0	✓	1.00
C	9.00		✓	2.50	42.0		-

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Lane Width (Left) (m)	Lane Width (Right) (m)	Visibility to left (m)	Visibility to right (m)
B	Two lanes		3.50	3.50	50	48
D	One lane	3.00			20	20

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for A-D	Slope for B-A	Slope for B-C	Slope for B-D	Slope for C-A	Slope for C-B	Slope for C-D	Slope for D-A	Slope for D-B	Slope for D-C

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Main St and Southern Access Junction	Crossroads	Two-way		8.59	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Main St North	Along R761	Major
B	Ravenswell Rd	Southern Access Junction from Development	Minor
C	Main St South	Along R761	Major
D	Lower Dargle Rd	Opposite to access junction	Minor

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
A	6.50			52.0	✓	0.00
C	6.50			46.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B	One lane	3.50	50	32
D	One lane	3.50	30	48

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for A-D	Slope for B-A	Slope for B-C	Slope for B-D	Slope for C-A	Slope for C-B	Slope for C-D	Slope for D-A	Slope for D-B	Slope for D-C

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Northern Access Junction	Crossroads	Two-way		1.50	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Dublin Rd North	Along R761	Major
B	Access Junction	Northern Access Junction from Development	Minor
C	Dublin Rd South	Along R761	Major
D	Chapel Ln	Opposite to access junction	Minor

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Width for right turn (m)	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
A	9.00		✓	2.50	42.0	✓	1.00
C	9.00		✓	2.50	42.0		-

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Lane Width (Left) (m)	Lane Width (Right) (m)	Visibility to left (m)	Visibility to right (m)
B	Two lanes		3.50	3.50	50	48
D	One lane	3.00			20	20

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Base, AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Main St and Southern Access Junction	Crossroads	Two-way		8.59	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Main St North	Along R761	Major
B	Ravenswell Rd	Southern Access Junction from Development	Minor
C	Main St South	Along R761	Major
D	Lower Dargle Rd	Opposite to access junction	Minor

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
A	6.50			52.0	✓	0.00
C	6.50			46.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B	One lane	3.50	50	32
D	One lane	3.50	30	48

Slope / Intercept / Capacity

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Base, AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	Northern Access Junction	Crossroads	Two-way		1.50	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Dublin Rd North	Along R761	Major
B	Access Junction	Northern Access Junction from Development	Minor
C	Dublin Rd South	Along R761	Major
D	Chapel Ln	Opposite to access junction	Minor

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Width for right turn (m)	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
A	9.00		✓	2.50	42.0	✓	1.00
C	9.00		✓	2.50	42.0		-

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Lane Width (Left) (m)	Lane Width (Right) (m)	Visibility to left (m)	Visibility to right (m)
B	Two lanes		3.50	3.50	50	48
D	One lane	3.00			20	20

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Appendix F. Record of Consultation

The responses to the comments received from ABP, DLRCC and WCC outlined in the table below are in respect to the pre-application consultation ref ABP-308291-20 on part of the subject site for the permitted development for 234 no. residential units, a childcare facility, café and retail unit ref ABP-311181-21. These responses in respect to this new planning application remain relevant and have been fully addressed as part of this planning submission comprising of 586 no. residential units in a mix of apartments, duplexes and houses within the same site boundary

Responses to Traffic and Transportation Items Raised by ABP, WCC and DLRCC at Pre-Planning

Ref	Opinion ABP 308291-20	Ref	Reports on ABP 308291-20 (including Inspectors, WCC and DLRCC Reports)	Ref	Record of Meeting ABP-308291-20	Comment
7	Further consideration of the documents as they related to access and emergency access to the site. Clarity is to be provided concerning who is to deliver the proposed road network; the status of any planning and other consents required to deliver the infrastructure; the timelines involved in the delivery of the required infrastructure in the context of the proposed strategic housing development. Further consideration of the concerns raised in the report of Dun Laoghaire	**6.1**	Clarification of the existing access to the site and legal right of way / ownership of the surrounding road network.	**ABP 6.1**	Clarification of the proposed access to the site, when the road was constructed, its intended purpose and the ownership of the private road.	Existing access configuration to the site is to be retained for the coastal quarter. All legal right of way to be retained as per existing road alignments. Roads are in the ownership of the Applicant. Refer to TTA section 4.1.1, 4.1.2 and 4.1.3.
		6.2	Clarification on the operation of the pedestrian / cycle link via the underpass to the east of the site.	**ABP 2.8 & ABP 6.5**	The linkages within and through the site are noted, in particular the underpass to the east of the site, which provides a link to Bray Harbour Clarify if the underpass is for pedestrian / cyclist movements only.	The underpass will be exclusively for pedestrians and cyclists. The proposed development roads terminate before reaching the underpass in the proposed plans. Further information regarding operation and license agreements is contained with Section 2.1 of this TTA.

	Rathdown County Councils Transportation Planning Section dated 13th October 2020 and concerns raised in the report of Wicklow County Councils Roads Section dated 15th October 2020.	**6.3**	Consideration of future public transport infrastructure within the vicinity of the site and ensure that the proposed development does not impede development.	**ABP 6.4**	The proposed development should facilitate and not impinge of the proposed public transport bridge and the potential future Luas Line	The proposed development does not impede the public transport bridge or any future Luas alignment. Close consultation with Wicklow County Council has taken place so as to ensure that the proposed development facilitates the public transport bridge over the River Dargle. This is the only fixed point planned in terms of any future Luas alignment. Beyond this point the alignment of the Luas line is unknown and is subject to future studies. The masterplan of the proposed development will accommodate any future planned Luas alignment and infrastructure.
		6.4	Consideration of the impact of traffic generated by the development on the surrounding road network and ensure the information provided in the traffic assessment is robust.	**ABP 6.3**	Further details are required regarding the impact of the development on the junctions with Dublin Road	A traffic assessment has been undertaken on all relevant junctions on Dublin Road (including both existing & future development access junctions). The assessment includes a sensitivity analysis for varying modal distribution as well as the closure of the Ravenswell Rd access (if required). All junctions are expected to perform at an acceptable LOS for all future scenarios. Refer to Chapter 9 within this TTA for further detailed information.

		6.5	Consideration of the objectives outlined in the Bray and Environs Transport Study			The assessment includes all objectives outlined in the transport study. Please refer to Section 1.4.3 within this TTA.
		6.6	Consideration of the cumulative impact of the proposed development and the overall masterplan area.			The cumulative impact of the overall Harbour Point Masterplan is included in the assessment. This assessment includes the ultimate roads configuration which includes the new link road as well as the closure of Ravenswell Road. Refer to chapter 10 within this TTA for further detailed information.
		6.7	Consideration of access for emergency vehicles			Emergency access routes are provided for within the proposed development which includes proposed internal routes as well as the access routes. Refer to Section 7.1 within this TTA for further detailed information.
		6.8	Rationale for the proposed level of car parking having regard to the proximity to existing and proposed public transport infrastructure and the potential negative impact of surface level car parking on the public realm, in particular the surface car park proposed at 'The Orchard' along the southern site boundary	**ABP 6.6**	A car parking strategy is required to justify the proposed level of car parking	The car parking proposal is below the maximum requirements of both the DLRCC and Wicklow Development Plans and the 'Design Standards for New Apartments' guidelines. The requirements are in accordance with both councils' policies to promote the reduction of car use in new developments in close proximity to public transport services and proximity to Town Centre. Refer to Chapter 5 within

						this TTA for further detailed information. Information on the Orchard car park can be obtained within Section 5.3. The design of the site layout has been undertaken by a multi-disciplinary design team in a holistic manner in line with the principles of DMURS. Refer to architects design report regarding surface level car parking impact on public realm.
9	Submission of a Traffic and Transport Assessment, including a quality audit of the junctions and road network between the proposed entrance and Castle Street / Dublin Road. The audit should include details of the capacity of the surrounding road network and the impact of the proposed development, details of available sightlines, pedestrian and cycle facilities and recommendations for potential improvements to the public road, if require	**WCC 4**	Objective R09 seeks to provide a greenway along the northern side of the River Dargle, linking to the Harbour via an underpass. This is provided for within the scheme.	**ABP 6.2**	A detailed and robust Traffic Assessment is required to fully assess the impact of the proposed development on the capacity of the surrounding road network.	The proposed development is maintaining the existing greenway route along the River Dargle which links through the broader masterplan lands.
		WCC 5	The impact of the development on junctions and capacity of the road network needs consideration. The assessment should include the overall masterplan area and indicate how the scheme is consistent with the measures outlined in the Bray Transport Plan.			A traffic assessment has been undertaken on all relevant junctions on Dublin Road (including both existing & future development access junctions). The assessment includes a sensitivity analysis for varying modal distribution as well as the closure of the Ravenswell Rd access (if required). All junctions are expected to perform at an acceptable LOS for all future scenarios. Refer to Chapter 9 within this TTA for further detailed information.

						The cumulative impact of the overall Harbour Point Masterplan is included in the assessment. This assessment includes the ultimate roads configuration which includes the new link road as well as the closure of Ravenswell Road. Refer to chapter 10 within this TTA for further detailed information.
		WCC 6	The vehicular access from Ravensdale Road was considered temporary at the time that permission was granted for the schools (adjoining site). It was not envisioned that this road would serve a major development.			The Ravensdale Road access is only to be retained for the first phase of development. The access is to be closed with the subsequent full buildout of the overall Harbour Point Masterplan. There are no proposed upgrade works to this junction.
		WCC 8	Car parking proposals are not in accordance with development plan standards. It is noted that the plan does allow for relaxation of standards at locations where public transport and parking restrictions are available.			The car parking proposal is below the maximum requirements of both the DLRCC and Wicklow Development Plans and the 'Design Standards for New Apartments' guidelines. The requirements are in accordance with both councils' policies to promote the reduction of car use in new developments in close proximity to public transport services and proximity to Town Centre. Refer to Chapter 5 within this TTA for further detailed information.

		WCC 12	Transportation: There are a number of issues of concern, including car parking provision; EV infrastructure; bicycle provision and typology; capacity of surrounding road network; provisions of the Bray Transportation Study; pedestrian and cycle links; road alignment with reference to DMURS; refuse vehicular movements; mobility management; and construction management details. The applicant is advised to review the contents of the Transportation Planning and that details of all finished surface of all routes should be provided.			All of these issues have been addressed in the comprehensive Coastal Quarter TTA & associated engineering drawings.
