Standard Specification for ESB 38kV

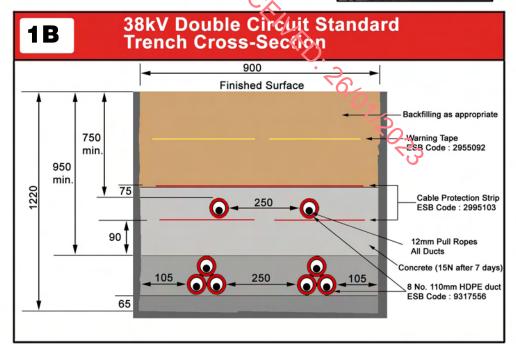

Networks Ducting/Cabling (Minimum Standards)

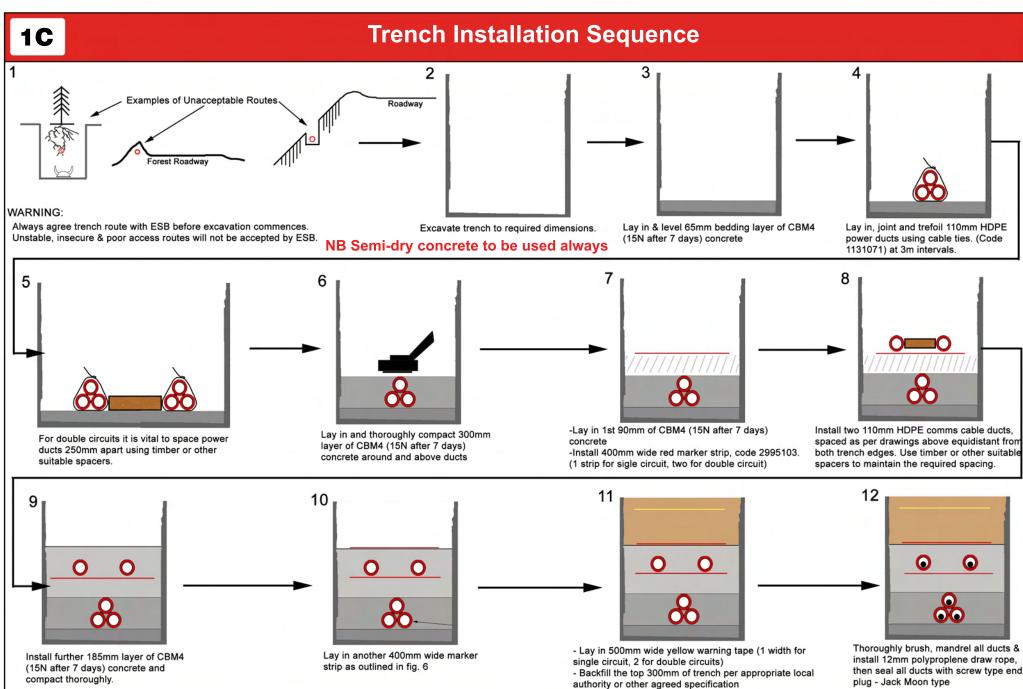

Note 1 : ESB Networks reserves the right not to accept ducting which does not conform to these standards and dimensions Note 2 : Refer to ESB Networks for Specific job Specification. These instructions do not apply to LV/MV/110kV/220kV cable

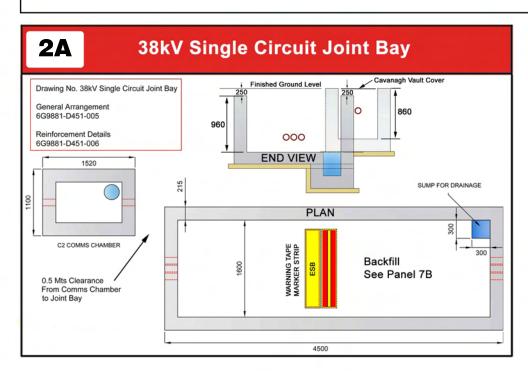

Note 2: Refer to ESB Networks for Specific job Specification. These instructions do not apply to LV/MV/110kV/220kV cable Note 3: All materials (ducts, marker tapes/strips, duct surrounds, mandrels and brushes) must be ESB approved materials

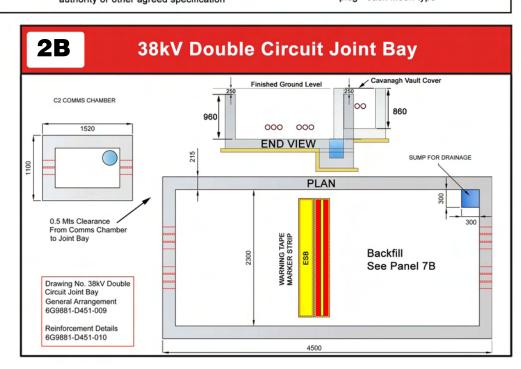

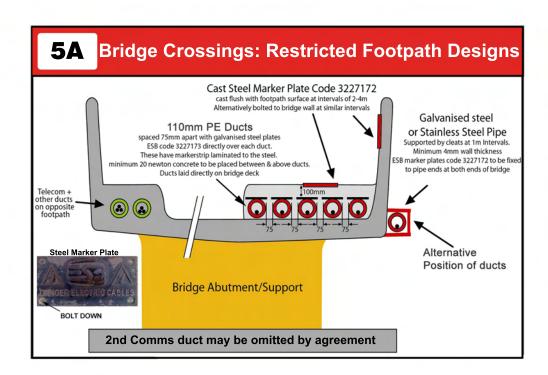

Standard Specification for ESB 38kV

Networks Ducting/Cabling (Minimum Standards)

Note 1: ESB Networks reserves the right not to accept ducting which does not conform to these standards and dimensions Note 2: Refer to ESB Networks for Specific job Specification. These instructions do not apply to LV/MV/110kV/220kV cable

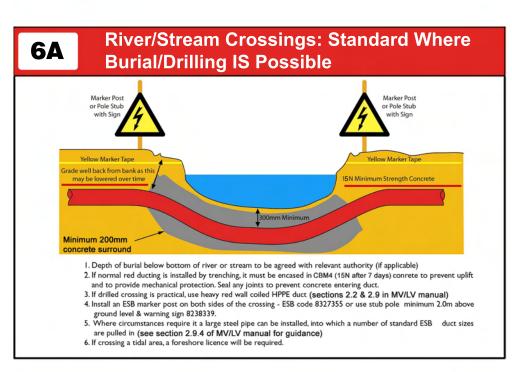

Note 3: All materials (ducts, marker tapes/strips, duct surrounds, mandrels and brushes) must be ESB approved materials

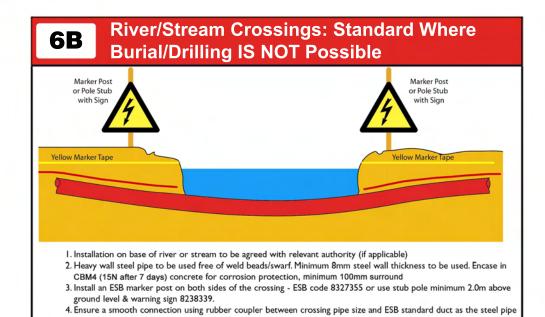

5B Bridge Crossings: Restricted Footpath Designs

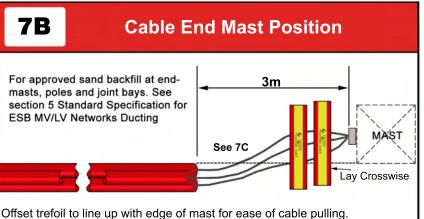

- 1. The design must be agreed with the bridge authority Position in footpath is preferred.
- 2. Minimum cover over ducts on footpath 100mm.
- 3. Where duct cover is > 300mm, marker strip & surface marker plates can be
- 4. Red ducting is not suitable for cable run external to bridges.
- 5. Where possible galvanised steel/stainless steel piping should be used, all joints must be free of weld burrs on inside. Alternatively heavy duty 10mm wall thickness black HDPE material with cast steel marker plates attached must be used to permanently warn of presence of electric cable.

size will usually differ from the standard ESB ducting. Alternatively run ESB ducting right through the steel pipe

Cable End Mast Position Warning Tape Marker Strip Never install ducting right up to mast or 3-pole base with long radius

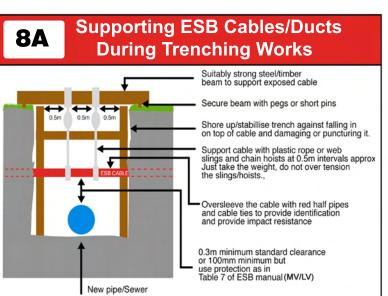

5. If crossing tidal area, a foreshore licence will be required

Marker Strip/Tape Cover cable between duct and pole with both Marker Strip and Warning Tape. Rock-Free Backfill Approved Sand

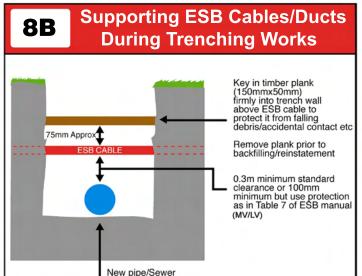

Cable End Mast -

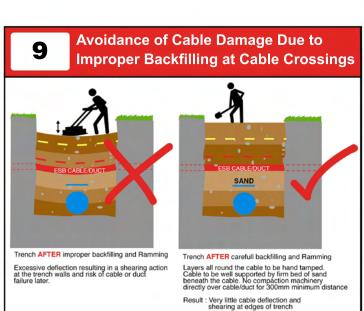

bend attached. Both marker strip and warning tape to be used between duct and mast (laying the marker strip crosswise as shown above).

Ensure that trench is deepened at this position and

cable is supported all round so that it does not tighten further during Backfilling

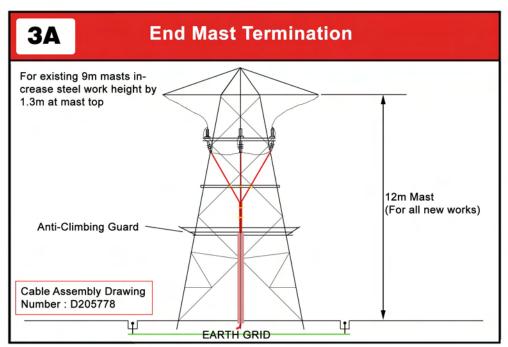

Standard Specification for ESB 38kV

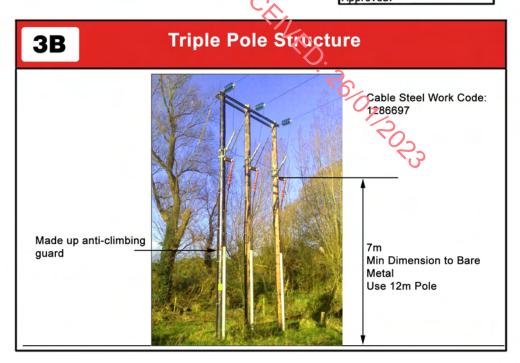

Networks Ducting/Cabling (Minimum Standards)

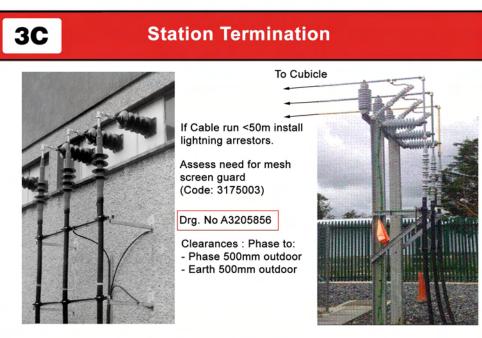

Note 1: ESB Networks reserves the right not to accept ducting which does not conform to these standards and dimensions

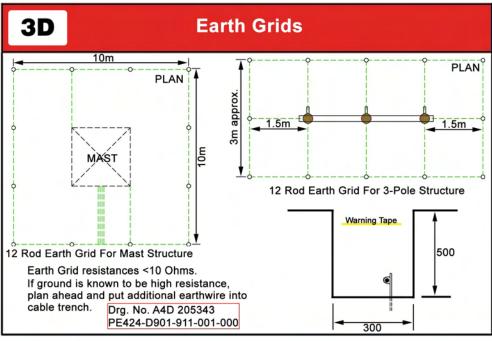

Note 2: Refer to ESB Networks for Specific job Specification. These instructions do not apply to LV/MV/110kV/220kV cable Note 3: All materials (ducts, marker tapes/strips, duct surrounds, mandrels and brushes) must be ESB approved materials

Obligation of Duct Installer to minimise the number and severity of duct bends

The duct installer must minimise the number and severity of preformed bends in ground with obstructions and other utility service crossings by opening ground 15m ahead of backfilled duct, wherever practical to do so. This safety obligation, which may require use of steel plating, allows the duct installer to pick the least bendy duct route through utility crossings and obstructions . Otherwise, numerous sharp unrecorded duct route deviations will be present making cable installation considerably more difficult and less safe for the cable installer.

Standard for Brushing, Mandrelling, Roping **4B** and End-Capping of 38kV ducts

All Ducts must be:

•Thoroughly brushed and mandrelled to prove ducts against debris /excessive deflection

- Roped using 12mm polyproplene rope with certified safe breaking load of 1.5 tons -- all rope joints to be properly spliced and PVC taped over. Approved Supplier Silver Strand Bunclana Donegal, ph (074) 9382503 500m drum lengths available to minimise splicing/coil handling
- Sealed using endcaps against grit and water getting into them

NB: Replace mandrels once mandrel wear indicators or grooves are worn down Replace brushes once brush diameter falls 5mm below dimensions in table below

Approved endcaps, both disposable and reusable types, are available from suppliers of approved ESB ducting

Approved ESB Mandrel and brush suppliers

Brandon Agencies, Rathnew, Co Wicklow: Phone 0404 20500 (Brushes & Mandrels) IS Varian, Greenhills industrial Estate, Walkinstown, Dublin 12 Phone: 01–4501150 (Brushes Only) Clydesdale UK Phone 086 172 6665 (Brushes & Mandrels)

Tynagh Network Systems, Loughrea, Co Galway. Phone: 091 842206 (Brushes & Mandrels)

4C Approved ESB Ducting for 38kV Cables

• Use only solid wall high impact resistance ESB approved HDPE red ducting to IS 370 colour standard and ESB specification 16113 (6.3mm minimum wall thickness) Discoloured or unidentified ducting not acceptable. All duct material must be approved by ESB Networks.

 Lightweight flexible corrugated twinwall ducting is not acceptable to ESB irrespective of manufacturer

Current approved HDPE Duct and duct bend manufacturers are: Lynplast (bend fittings only), Uponor-Radius Systems, Wavin, Quality Plastics

4D

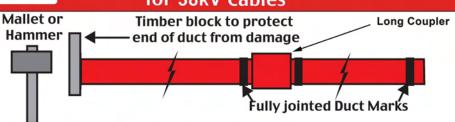

4E Repair of Existing Ducts

Use only approved slip couplers from approved manufacturers in section 4C

- Cut out damaged section of duct and ensure all cut surfaces are square
- and free from sharp edges Slide, position and centre the repair couplers on the centering marks

Specification for Duct Jointing for 38kV Cables

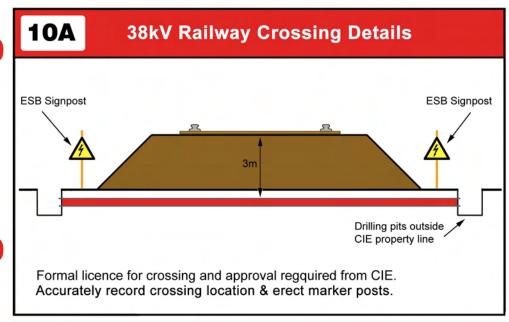

All ducts to be securely jointed by tapping against timber board on each duct until the black depth insertion mark is reached Always smear duct lubricant on coupler rubber ring

Sealing of Ducts 4F

All ducts to be permanently sealed at both ends of duct run Ducts to be temporarily sealed during installation using endcaps provided with each bale

Page 4 of 4

Directional Drill/Thrust Bore 10B **Duct Bore Details DESIGN 1** Minimum internal bore size = 325mm for 5 ducts =<u>290</u>mm Spacer for 4 ducts where approved by ESB 5 no. 110mm diameter HDPE ducts Alternatively use 2 x 37mm HDPE ducts for comms cables with C2 chamber on each side of the crossing to permit pulling along entire route. Completed interstitial space to be bentonited thoroughly to maintain cable rating. Accurately record crossing location & erect marker posts.

ALTERNATIVE DESIGN

Install 1 no. 200mm SDR 17.6 duct with 3 no. short length cables pulled into this pipe along with 2 x 37mm comms ducts.

Full cable joint bays are required on either side of crossing along with C2 chambers for this design.

This method is used where it is not not practical to install large diameter pipe -eg. risk of ground upheaval or presence of obstructions.

Completed interstitial space to be thoroughly bentonited to maintain cable

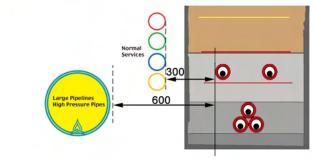

Accurately record crossing location & erect marker posts.

10D **Double Circuit Bore Crossing** -Both Bentonited Standard Design Separate drilling for each circuit crossing Alternative HDPE or steel thrust bore pipe С Diameter ID= 400mm

С

2 no. sets of 110mm HDPE ducts - 8 ducts in total. All crossings to be accurately recorded and signposts erected given impracticality of marker tape. If both circuits = 40MVA then use 630 Cu cable

Mininimum Standard Clearances to 12 Other Services

Clearances less than the above at pinch points and crossings requires placement of additional mechanical protection (concrete slab/brick) and agreement of ESB

ESB ducts must never be laid over other services on parallel runs, except with the written prior agreement of the other utilities and ESB

Other services must never be laid directly over ESB ducts on parallel runs

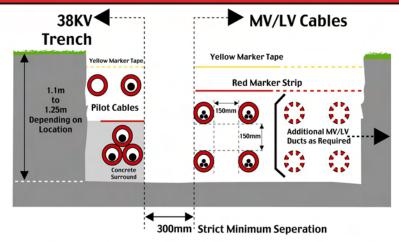

13

Bentonite⁻

Combined MV & 38kV Cable Runs

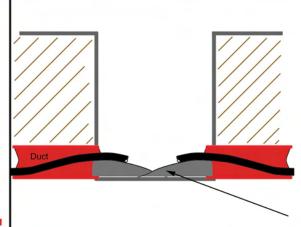

6 no. 110mm Power ducts

+ 2 no. 110mm comms ducts

Where it is impractical to avoid such trench runs, the seperation of 300mm should be strictly controlled and monitored to minimise derating (See MV/LV manual page 180)

Sealing and Protection of 38kV Cables 14 Once They Exit Ducts

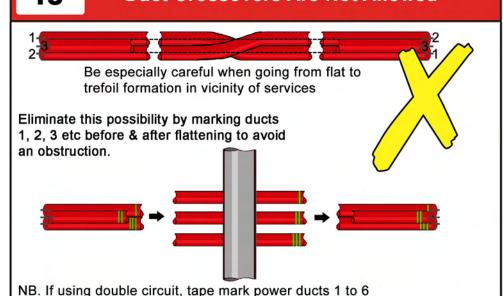

Ducts to be thoroughly using ESB approved water sealant and 4hr fire rating approved for firestop.

NB - All joint bay duct entries to be thoroughly sealed to prevent sand washout and subsidence.

Sandbags or other durable support for cable as it exits ducts to prevent damage to cable sheath

Duct Crossovers Are Not Allowed 15

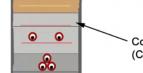

Crossing Dumps/Contaminated Ground

Thoroughly seal all joints with adhesive water-tight

NB. Avoid whenever possible due to: Subsidence, methane gas & severe thermal derating risks. Seek advice from ug networks section to ensure rating of cable is adequate (derating of 50% can occur) NB. Waste oils and chemicals can also seriously damage cables

Seal all duct joints with duct adhesive compound or use continuous duct lengths & seal all duct ends in joint bays. Alternatively weld pipes.

Concrete is continued up to 300mm of final surface to offset derating (CBM4 - 15N after 7 days)

duct jointing compound and pressure test for airtightness.

Gasketed couplers alone are inadequate.

16

Fusion welded couplers are also acceptable but require red over-taping.
