1.0 NON-TECHNICAL SUMMARY

The Non-Technical Summary is a synopsis of the traffic and transportation assessment for the proposed 110kV electrical substation from the adjacent peaking power plant to the existing electricity transmission system. The proposed development sought by Greener Ideas Limited for the construction of a substation:

The proposed development, consisting of:

- EirGrid/ ESBN Control Room building
- Associated Internal 20kV Underground Cabling
- Installation of a 110/20kV Transformer (TRAFO) with associated equipment including:
 - Cable Sealing End
 - Surge Arrestor
 - Earth Disconnect
 - Current /Voltage Transformer
 - House Transformer
 - Circuit Breaker
 - Lightning Mast
- 110kV underground cable to Barnakyle 110kV substation 3 No Power Ducts and 2 No Telecoms Ducts.
- Diesel Generator
- Security Fencing and 2 no. Security Cameras and Poles
- Approximately 15 no. Lights
- Temporary Construction Compound

A scoping document was issued on the 20th of February 2023 to South Dublin County Council (SDCC) Roads Department. This document outlined the proposed approach that the Traffic and Transportation Assessment would take and identified the junctions which would be included in the analysis.

A COVID-19 adjustment check was undertaken on the traffic count data to determine if the traffic on the date of the traffic count survey is representative of the annual average traffic for the year. The traffic survey data was assessed for a COVID-19 adjustment and it was determined that on date of the survey traffic volume was below average compared to the historical annual average daily traffic (AADT) in the area. (Confirmed through historical and recent ATC counts carried out on the 24th of March 2021 and historically obtained data pre COVID, Jan 2018) and hence an adjustment factor of 1.21 was applied to the data.

Given that operational traffic for the proposed development (less than 5 vehicle movements per day), assessments were carried out on the Construction Phase traffic impact to the site rather than as per the TII Traffic and Transportation Assessment Guidelines.

The assessment has focused on the construction phase as per following:

- the beginning of construction 2023; and
- the finalising of construction 2024 (18months).

The traffic count data was forecasted using the TII Project Appraisal Guidelines Unit 5.3: Travel Demand Projections for high growth.

The assessments were undertaken using JUNCTION 10 ARCADY. The Ratio of Flow to Capacity (RFC) values are shown to be significantly lower than the maximum RFC of 0.85. The maximum RFC of 0.49 was shown at the New Nangor Road / R134 Roundabout Junction.

2.0 INTRODUCTION

2.1 INTRODUCTION

TOBIN Consulting Engineers Ltd have been appointed by Greener Ideas Limited, to prepare a Traffic and Transportation Assessment Report for a proposed 110kV electrical substation located in Kilcarbery Dublin 22. The existing site area is a green field site.

In preparing this report, TOBIN Consulting Engineers has referred to

- South Dublin County Development Plan 2022 – 2028.
- TII PE-PDV-02045 Traffic and Transport Assessment Guidelines (May 2014); and
- TII PE-PAG-02017 Project Appraisal Guidelines for National Roads Unit 5.3: Travel Demand Projections (October 2021)

2.2 OBJECTIVES

The objective of this report is to assess the impact the proposed development will have on the existing road network. This report will calculate the expected volume of traffic that will be generated by the proposed development and assess the impact that this traffic will have on the operational capacity of the road network in the vicinity of the development. The junctions to be analysed as part of this report are the following:

- Junction 1: The roundabout R134/profile Park/Kilcarbery Park.
- Junction 2: Internal Roundabout Profile Park
- Junction 3: Existing Site Access T-Junction

2.3 SCOPING

In order to ensure the scope of this report was to the satisfaction of South Dublin County Council, a scoping document was issued on the 20th of February 2023 to South Dublin County Council Roads Department. This document outlined the proposed approach that the Traffic and Transportation Assessment would take and identified the junctions which would be included in the analysis (Appendix A).

2.4 STRUCTURE OF THE REPORT

This report is divided into eight chapters:

- Chapter 1 is a Non-Technical Summary.
- Chapter 2 includes this introduction.
- Chapter 3 describes the proposed development, and its location.
- Chapter 4 provides an overview of the existing and proposed traffic conditions, explaining how this information was obtained.
- Chapter 5 outlines the assumptions that have been made in the calculation of traffic generated by the development and the factors used to forecast the future road network traffic.
- Chapter 6 explains the methodology used and the results of the analysis performed on the nominated junctions. An investigation into link capacity is also dealt with in this chapter.
- Chapter 7 addresses issues relating to road safety, parking provision, pedestrians & cyclists and access for people with disabilities.
- Chapter 8 concludes the report.

3.0 PROPOSED DEVELOPMENT

3.1 SITE LOCATION

The proposed development site is located at Profile Park Business Campus in the Kilcarbery area of Dublin 22. The site location is shown in Figure 3.1.

Profile Park comprises a 100 acre (40.5 Ha) fully enclosed, private business park strategically located on the outskirts of Dublin City the Park is easily accessible from the major arterial roads in the City including the M50, M7 and M4, and is served by public transport links also.

Profile Park is noted for the very heart of what is rapidly becoming “Ireland’s Data Centre Cluster” with Google, Microsoft, Digital Realty Trust and Telecity all located in the immediate vicinity.

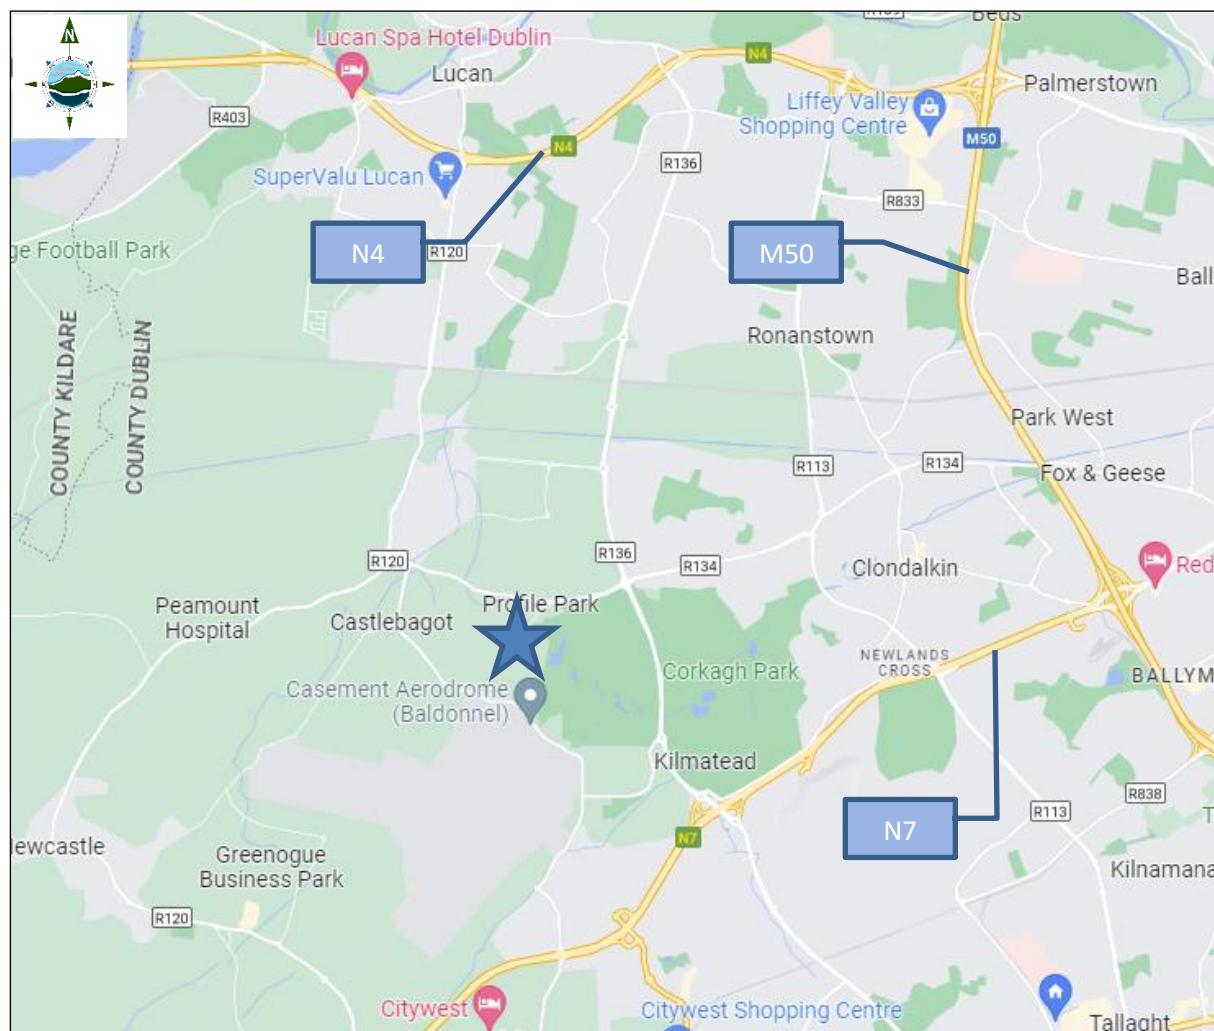

Figure 3.1: Site Location 0016021 © Ordnance Survey Ireland/Government of Ireland.

3.2 DESCRIPTION OF PROPOSED DEVELOPMENT

Planning permission is being sought by Greener Ideas Limited for proposed Baldonnel 110kV substation site measures approximately 87.78m long x 22.25m wide and will be bounded by a 2.6m high palisade fence.

3.3 JUNCTION LOCATIONS

Figure 3.2: Traffic Count Locations

3.4 CUMULATIVE IMPACTS

A planning search was carried out which revealed some committed development in the area over the period of 2017 to 2021. These other developments are primarily related to ongoing data centre construction and expansion works in the adjacent business parks. These developments are considered to be accounted for in the yearly growth figures, hence the use of the high sensitivity growth rates (TII PE-PAG-02017).

3.5 TRAFFIC SURVEY

In order to determine the magnitude of the existing traffic flows, the results of a manual classified junction turning count was carried out by Nationwide Data Collection on Tuesday 23rd March 2021 between the hours 07:00 and 19:00. As shown in Figure 3.3 the count information was obtained for the following junctions:

- Site 1: R134 New Nangor Road – Kilcarbery Park – Profile Park Roundabout
- Site 2: Profile Park Internal Roundabout

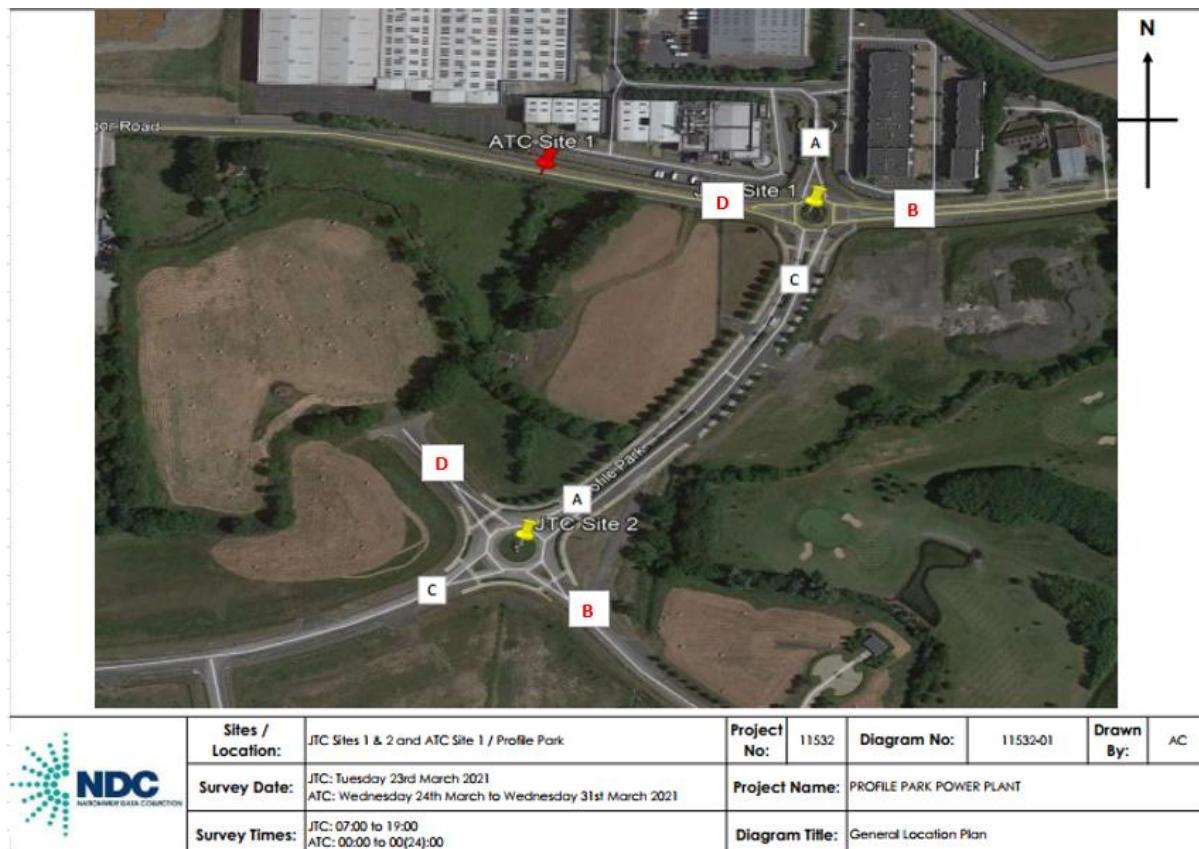

Figure 3.3: Traffic Count Locations

This survey distinguished between light good vehicles and heavy good vehicles. The traffic count data is included in Appendix C of this report. The results of this survey indicated that the peak traffic levels through these junctions occurred between the hours of 08:30 and 09:30, and between PM peak between 17:00 and 18:00.

Link-based growth rates (high sensitivity growth rates) were applied to the 2021 traffic flows to determine background traffic flows for the future assessment years.

In addition to the manual traffic counts, Nationwide Data Collection also carried out Automated Traffic Counts Eastbound and Westbound along the R134. In connection with historical traffic count data purchased from NDC Ltd on 28th January 2018 to 04th February 2018, TOBIN obtained this ATC data to generate COVID-19 adjusted traffic flows by establishing a base traffic flow and applying an adjustment factor accordingly.

3.6 EXISTING ROAD NETWORK

The proposed development is to be accessed from the R134 New Nangor Road. The proposed site access is situated within an 60km/h default urban speed zone. The R134 New Nangor Road has a carriageway width of approximately 7.3m in the vicinity of the access to Profile Park Business Park. The R134 also provides a fully segregated two-way cycle facility on the eastbound direction along 2.25m width footpath. Tactile paving crossing points and street lighting are present at the existing junction along with roadside bus stops.

3.7 PROPOSED NETWORK IMPROVEMENTS

Currently, there are no proposed improvements to the road network in the region.

3.8 PROPOSED SITE ACCESS JUNCTION

It is proposed to utilise the existing T-junction access from a main arteries route within Profile Park.

The Business Campus of Profile Park is located of a R134 Regional Road and is well services by regional roads such as the R120, R136 and R113 on its immediate surroundings. The park is situated approx. 5km away from the N4 and M50 to the North and East respectively and approx. 2.5km from the N7 to the South providing excellent access to some of the country's main infrastructural links. It is envisaged that the origin for all Construction Traffic and Deliveries will be facilitated by either one of these 3 major infrastructure routes with the Regional Roads providing the link right to the site boundary.

4.0 TRIP GENERATION AND DISTRIBUTION

4.1 COVID-19 ADJUSTMENT

In order to undertake an analysis of the key junctions in relation to this Traffic and Transport Assessment in the current climate of COVID-19 and with travel restrictions in place, it is necessary to apply a correction factor. This correction factor is to take the traffic count data recorded onsite and adjust the traffic flows to take account of the significant reduction in traffic volumes currently being experienced. A comparison was undertaken between historical traffic count data along the R134 New Nangor Road from Jan 2018 (Pre-COVID-19) and the TII traffic count information for the day of the survey in March 2021. An analysis of both data sets was carried out and as was expected, the traffic count on the day of the survey was significantly lower than the traffic count data from January 2018.

An adjustment factor was applied to the traffic count data by applying high sensitivity TII growth rates to the 2018 data and comparing the expected 5 day AADT for 2021 against the surveyed 5 day AADT.

4.2 OPENING AND FUTURE YEAR FLOWS AND ENVIRONMENT

The proposed development will be constructed in one phase with the development planned for opening in 2025. Given the Nature of the development as a Power Plant with minimal daily staff (less than 5 vehicle movements per day once operational), this Traffic Assessment has focused on the Construction elements and the traffic volumes associated over the course of the construction period (2023-2025). The opening year of Construction of 2023 was utilised for the purpose of the traffic assessment having been identified as a period of peak construction. In addition to the opening year, the close out and commissioning period of the construction works (2025) is being utilised for the traffic assessment to ensure that any impacts associated with the traffic element of the construction have adequately been assessed.

The link-based annual growth rates were updated in 2021 by the TII, with annual growth rates shown for each county. Those for Dublin are shown in Table 4.1. The derived growth factors were applied to 2021 traffic flows to determine background traffic flows for the assessment years. The assessment is split into light vehicles and heavy vehicles.

Table 4.1: Growth Factors for light vehicle (LV) and heavy vehicles (HV)

2016-2030	
LV	1.0211
HV	1.0348

4.3 TRIP GENERATION

The volume of traffic expected to be generated during the AM and PM peak hours for the construction phase of the proposed development were established from detailed information provided by the Client. These figures include details of peak construction staff numbers and mass haul movements to identify peak times of Construction activity.

4.3.1 TRIP GENERATION OF PROPOSED DEVELOPMENT

Trip Rates for the various uses within the development have been determined for weekdays, Monday to Friday, to coincide with the maximum levels of existing traffic on the adjacent road network. The volume of traffic expected to be generated by the proposed construction phase of the development during the AM and PM peak hours are shown below in Table 4.2 and Table 4.3.

It is expected a total of 59 no. vehicles per day during the peak construction period and 5 no. vehicles per day expected during the average construction period over the 18-month Construction programme.

Table 4.2: Expected Peak Trip Generation for Proposed Development for AM Peak Hour

EXPECTED TRIP GENERATION FOR PROPOSED DEVELOPMENT (AM PEAK HOUR)		
	Arrivals	Departures
Light Goods Vehicles (LGV)	10	
Daily Delivery Heavy Goods Vehicles (HGVs)	5	5
Total	15	5

Table 4.3: Expected Peak Trip Generation for Proposed Development for PM Peak Hour

EXPECTED TRIP GENERATION FOR PROPOSED DEVELOPMENT (AM PEAK HOUR)		
	Arrivals	Departures
Light Goods Vehicles (LGV)		10
Daily Delivery Heavy Goods Vehicles (HGVs)	5	5
Total	5	15

Table 4.2 and Table 4.3 show the expected total of vehicles during the busiest time of the construction phase. It is expected 10 no. people on site and 59 no. HVGs over the 12-hours construction time, which results in 10 LGVs and 5 HGVs arriving, and 5 HGVs departing in the AM peak. And, 10 LGVs and 5 HGVs departing, and 5 HGVs arriving in the PM peak.

4.3.2 TRIP DISTRIBUTION

4.3.3 TRIP DISTRIBUTION OF PROPOSED DEVELOPMENT

It was envisaged the proposed traffic distribution matches the existing traffic distribution at each of the junctions, with the exception of the site access, Junction 3. The passing traffic shall be utilised for the proposed traffic distribution at Junction 3 as the junction although constructed is not in use / occupied by a development generating traffic. The existing development trip distribution applied to the per peak hour are shown below.

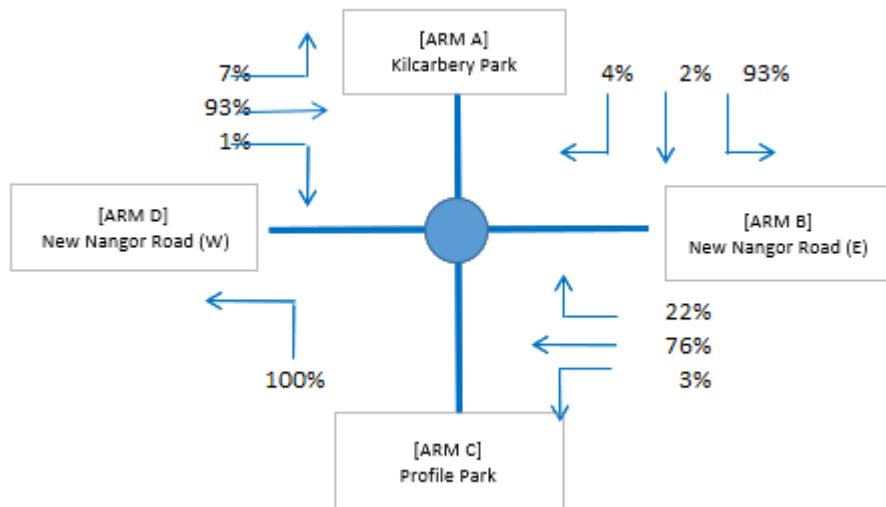

Figure 4.1: Traffic Distribution for AM Peak Hour at Junction 1

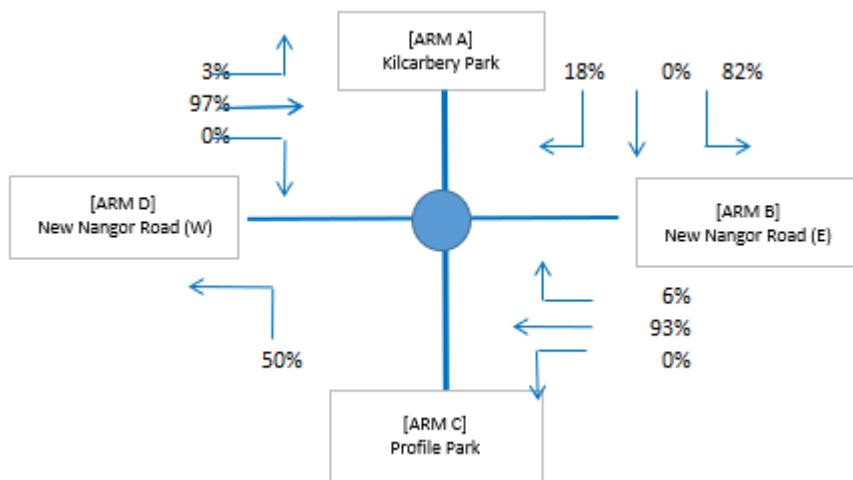

Figure 4.2: Traffic Distribution for PM Peak Hour at Junction 1

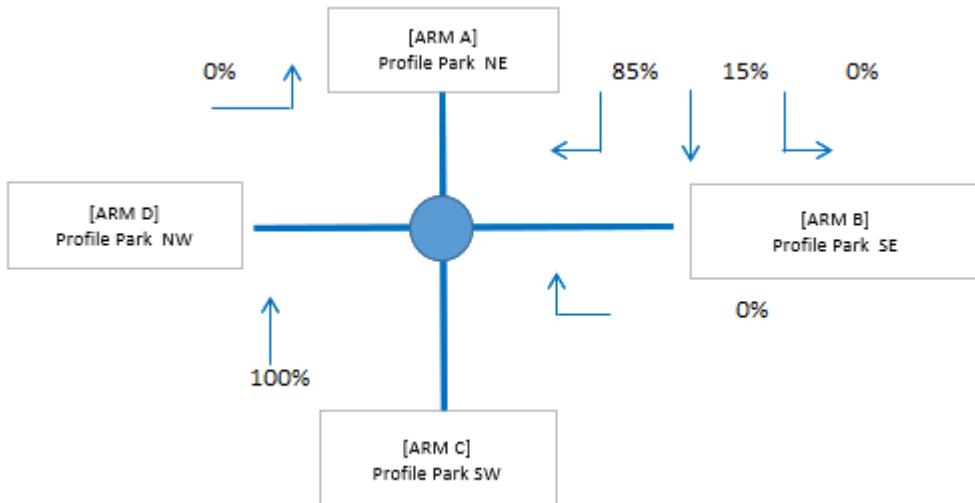

Figure 4.3: Traffic Distribution for AM Peak Hour at Junction 2

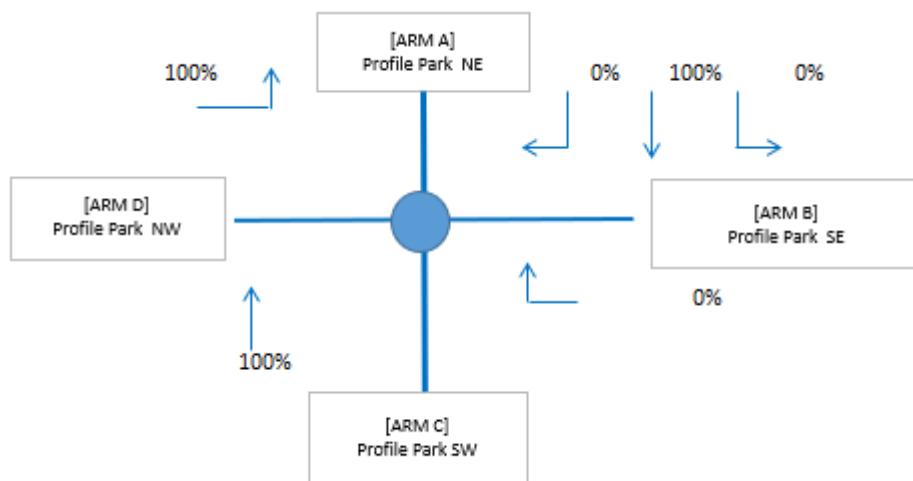

Figure 4.4: Traffic Distribution for PM Peak Hour at Junction 2

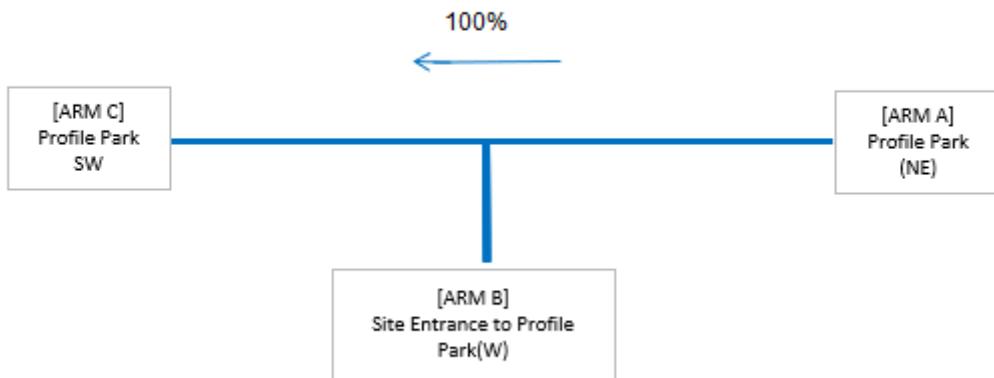

Figure 4.5: Traffic Distribution for AM Peak Hour at Junction 3 (Site Access)

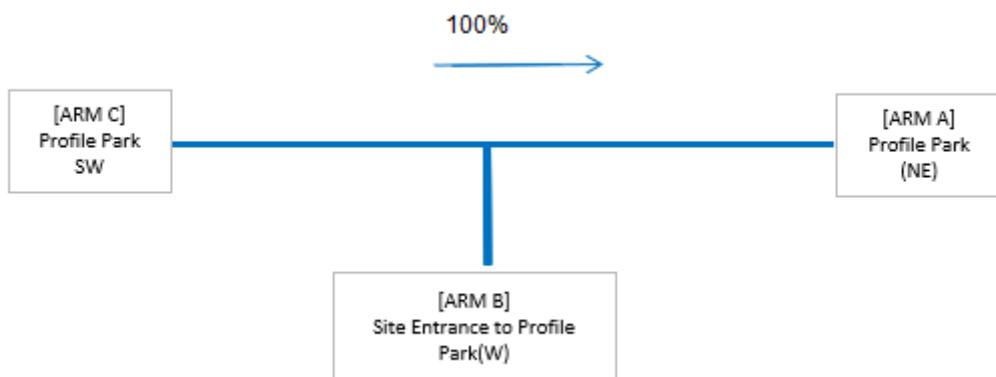

Figure 4.6: Traffic Distribution for PM Peak Hour at Junction 3 (Site Access)

4.4 TRIP DISTRIBUTION OF BASEFLOW PLUS GENERATED TRAFFIC

The baseline plus generated traffic for the year of opening of Construction 2023 and the Completion of Construction, 2025, for both the AM and PM peak hours are shown in the Figures below.

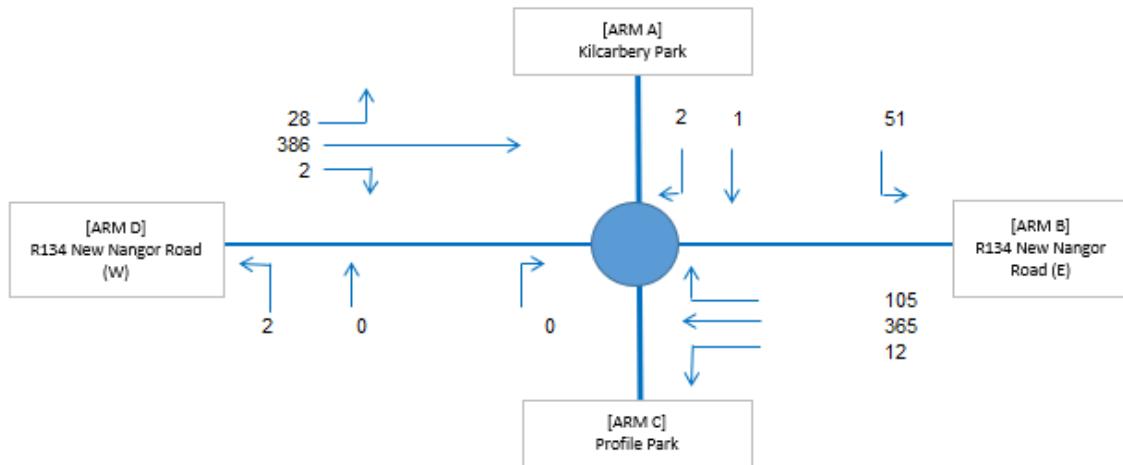

Figure 4.7: Baseflow Traffic 2021 AM Peak – Junction 1

5.0 TRAFFIC IMPACT

5.1 JUNCTION ANALYSIS

5.1.1 INTRODUCTION AND METHODOLOGY

The proposed site access T-junction (Junction 3), the internal Profile Park roundabout junction to the Northeast of the Proposed Site Access (Junction 2) and the R134 New Nangor Road / Kilcarbery Park / Profile Park Roundabout to the northeast of the proposed development (Junction 1) have been analysed using the Transport Research Laboratory (TRL) computer program JUNCTION 9 PICADY and ARCADY, widely accepted tools used for the analysis of priority junctions and roundabouts.

The key parameters examined in the results of the analysis are the Ratio of Flow to Capacity Value (RFC value – desirable value for PICADY and ARCADY should be no greater than 0.85 – values over 1.00 indicate the approach arm is over capacity), the maximum queue length on any approach to the junctions and the average delay for each vehicle passing through the junction during the modelled period.

PICADY and ARCADY requires the following input data:

- Basic modelling parameters (usually peak hour traffic counts synthesised over a 90-minute model period)
- Geometric parameters (including lane numbers & widths, visibility, storage provision etc)
- Traffic demand data (usually peak hour origin/destination table with composition of heavy goods vehicles input*)

*For the purpose of this report, the varying vehicle types have been segregated into light vehicles (LV) and Heavy Vehicles (HV) prior to input. Traffic volumes input into PICADY and ARCADY were in vehicles and, accordingly, commercial vehicle composition was set to the percentage of that arm.

The results of the PICADY and ARCADY analysis are presented in Section 5.1.3. The origin/destination traffic demand tables for all the different scenarios tested for the analysed junctions are provided in Appendix D.

5.1.2 ASSESSMENT TIME AND YEARS

The performance of the junction has been analysed for the critical AM peak and PM peak hours. This analysis was carried out for the year of construction commencing coinciding with peak construction volumes, 2023 and for the completion of the Construction Phase 2025

5.1.3 ANALYSIS RESULTS

5.1.3.1 Junction 1 – R134 New Nangor Road / Kilcarbery Park / Profile Park - Roundabout

A summary of the analysis results for the R134 New Nangor Road / Kilcarbery Park / Profile park Roundabout for the AM and PM peak hours are provided below in Table 5-1. Full outputs from JUNCTION 10 ARCADY are included in Appendix E.

Table 5.1: Junction 1 Results: R134 New Nangor Road / Kilcarbery Park / Profile Park AM & PM Peak Hours

Arm	AM				PM			
	Queue (Veh)	Delay (s)	RFC	Junction Delay (s)	Queue (Veh)	Delay (s)	RFC	Junction Delay (s)
2021 Baseflows								
1 - Kilcarbery Park	0.1	5.16	0.08	5.42	0.1	3.9	0.09	4.31
2 - New Nangor Road (W)	0.8	5.63	0.45		0.5	4.35	0.33	
3 - Profile Park	0	0	0		0	2.56	0.01

2023 No Construction								
1 - Kilcarbery Park	0.1	5.29	0.09	5.66	0.1	3.96	0.09	4.42
2 - New Nangor Road (W)	0.9	5.91	0.48		0.5	4.45	0.35	
3 - Profile Park	0	0	0		0	2.59	0.01	
4 - New Nangor Road (E)	0.7	5.42	0.42		0.6	4.53	0.36	
2023 With Construction								
1 - Kilcarbery Park	0.1	5.33	0.09	5.78	0.1	4.01	0.09	4.43
2 - New Nangor Road (W)	0.9	6.03	0.48		0.5	4.45	0.35	
3 - Profile Park	0	0	0		0	3.15	0.02	
4 - New Nangor Road (E)	0.8	5.57	0.43		0.6	4.59	0.36	
2024 No Construction								
1 - Kilcarbery Park	0.1	5.36	0.09	5.77	0.1	4.02	0.1	4.48
2 - New Nangor Road (W)	0.9	6.03	0.49		0.6	4.51	0.36	
3 - Profile Park	0	0	0		0	2.6	0.01	
4 - New Nangor Road (E)	0.7	5.52	0.43		0.6	4.59	0.37	
2024 With Construction								
1 - Kilcarbery Park	0.1	5.4	0.09	5.89	0.1	4.07	0.1	4.49
2 - New Nangor Road (W)	1	6.15	0.49		0.6	4.51	0.36	
3 - Profile Park	0	0	0		0	3.17	0.02	
4 - New Nangor Road (E)	0.8	5.68	0.44		0.6	4.66	0.37	

The above results indicate that the R134 New Nangor Road / Kilcarbery Park / Profile Park Roundabout will operate below the maximum desirable 0.85 RFC. The maximum RFC reaching 0.49 in the AM peak with the development. It is also noted the queue length does not exceed 1 vehicle and the maximum increase in delay is 6.03 seconds. Effects at this junction during construction are predicted to be short term, negative and not significant.

5.1.3.2 Junction 2 – Profile Park Internal - Roundabout

A summary of the analysis results for the Internal Profile Park Roundabout for the AM peak and PM peak hours during construction are provided below in Table 5-2. Full outputs from JUNCTION 10 ARCADY are included in Appendix F.

Table 5.2: Junction 2 Results – Internal Profile Park Roundabout AM & PM Peak Hours

4 - Profile Park (NW)	0	0	0		0	4.85	0.01	
2024 With Construction								
1 - Profile Park (NE) Profile Park (NE)	0.1	6.1	0.06	6.1	0	0	0	6.1
2 - Profile Park (SE)	0	0	0		0	0	0	
3 - Profile Park (SW)	0	0	0		0	6.55	0.03	
4 - Profile Park (NW)	0	0	0		0	4.92	0.01	

The above results indicate that the Profile Park Internal Roundabout will operate below the maximum desirable 0.85 RFC. The maximum RFC reaching 0.06 in the AM peak with the development. It is also noted the queue length does not exceed 1 vehicle and the maximum increase in delay is 6.1 seconds. Effects at this junction during construction are predicted to be short term, negative and not significant.

5.1.3.3 Junction 3 – Proposed Site Access - T Junction

A summary of the analysis results for the Proposed Site Access - T Junction for the AM peak and PM peak hours during construction is provided below in Table 5-3. Full outputs from JUNCTION 10 PICADY are included in Appendix G.

Table 5.3: Junction 3 Results – Proposed Site Access – T Junction, AM & PM Peak Hours

	AM					PM				
	Queue (Veh)	Delay (s)	RFC	LOS	Junction Delay (s)	Queue (Veh)	Delay (s)	RFC	LOS	Junction Delay (s)
2021 Baseflows										
Stream B-AC	0	0	0	A	0	0	0	0	A	0
Stream C-AB	0	0	0	A		0	0	0	A	
2023 No Construction										
Stream B-AC	0	0	0	A	0	0	0	0	A	0
Stream C-AB	0	0	0	A		0	0	0	A	
2023 With Construction										
Stream B-AC	0	11.43	0.02	B	3.48	0	7.79	0.04	A	5.15
Stream C-AB	0	0	0	A		0	0	0	A	
2024 No Construction										
Stream B-AC	0	0	0	A	0	0	0	0	A	0
Stream C-AB	0	0	0	A		0	0	0	A	
2024 With Construction										
Stream B-AC	0	11.43	0.02	B	3.48	0	7.71	0.03	A	4.97
Stream C-AB	0	0	0	A		0	0	0	A	

The above results indicate that the Proposed Site Access T-Junction will operate below the maximum desirable 0.85 RFC. The maximum RFC reaching 0.04 in the PM peak with the development. It is also noted the queue length does not exceed 1 vehicle and the maximum increase in delay is 11.43 seconds.

6.0 OTHER ROAD ISSUES

6.1 ROAD SAFETY

Entry to and from the proposed site within profile park does not raise any road safety concerns. Profile Park is well managed with no visibility restrictions and the entrance has been sited 50m away from the roundabout itself in accordance with TII standards with a 50m stagger provided between the proposed development and the next nearest site entry.

An investigation of road collision data from the Road Safety Authority website (source <https://www.rsa.ie/RSA/Road-Safety/RSA-Statistics/Collision-Statistics/Ireland-Road-Collisions/>) (see Figure 6.1 for map) indicates that there has been no serious collisions and seven minor collisions recorded in the vicinity between 2005 and 2016.

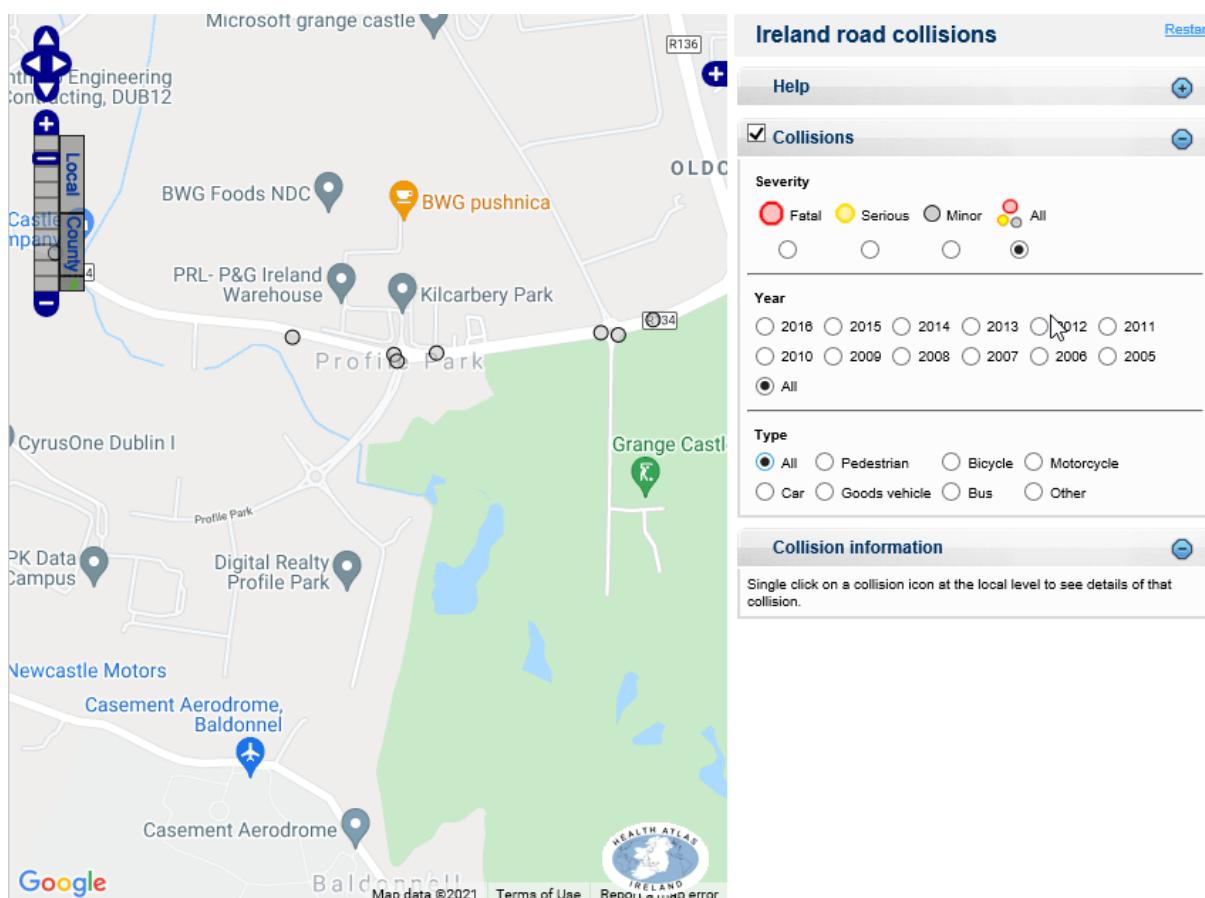

Figure 6.1: RSA Irish Road Collision Statistics

7.0 MOBILITY MANAGEMENT

7.1 PEDESTRIANS & CYCLISTS

Segregated Pedestrian and Cycle access routes are provided in the Profile Park development and along the R134 providing the main access route into Profile Park.

7.2 PUBLIC TRANSPORT

Dublin bus 68/a runs at regular intervals along the R134.

7.3 ACCESS FOR PEOPLE WITH DISABILITIES

As recommended dropped kerbing and tactile paving slabs will be installed at all crossing points, in accordance with "Guidance on the Use of Tactile Paving Slabs".

It is further recommended that disabled parking spaces, in accordance with the South Dublin Development Plan, be provided and located in accordance with the National Disability Authorities "Building for Everyone". 5% of the proposed parking provisions have been designated for disabled parking as per Building for Everyone.

8.0 CONCLUSIONS AND RECOMMENDATIONS

8.1 CONCLUSIONS

The junction assessments indicate that none of the junctions assessed are currently exceeding desirable capacity of 0.85. This will remain the case during the construction period. The maximum RFC of 0.49 was shown at the New Nangor Road / R134 Roundabout Junction of those assessed with a maximum RFC of 0.06 on the internal Profile Park Roundabout and 0.04 at the entrance to the proposed development. There will therefore be no significant residual effects associated with the construction, operational or decommissioning phases of the project.

The development is located in close proximity to public transport links on the R134 and the business park has well developed offline pedestrian and cycle facilities.

8.2 RECOMMENDATIONS

This report recommends that:

- Site access junction visibility splays should be kept free of all restrictions including signage.
- Pedestrian footway links with associated dropped kerbing and tactile paving to be provided at all pedestrian crossing points internally in the site

SCOPING STUDY FOR: Profile Park Power 110kV electrical substation,
Kilcarbery, Dublin 22

CLIENT: Greener Ideas Ltd

LOCAL AUTHORITY: South Dublin County Council

SCOPING FORM SENT TO: Mr. John Joe Hegarty, Senior Executive Engineer, South
Dublin County Council

SENT BY: Gabriela Iha **DATE:** 17.02.2023

Ref	Item	Requirements
1	Location, size, operating hours and nature of proposed description of proposal	The proposed 110kV electrical substation and associated grid connection are being developed to provide a connection from the adjacent peaking power plant (Reg. Ref.:SD21A/0167) to the existing electricity transmission system. It is envisaged that the Construction element will create the greatest traffic flows of up to 10 passenger vehicles and 5hgvs arriving per day in the morning peak and 10 passenger vehicles and 5 hgvs leaving in the evening peak
2	Is the development in line with National, County and Local Area Plan policy?	Yes – Industrial, enterprise & employment
3	Description of existing uses of land	Greenfield Site
4	Does the development involve the relocation of an existing use?	No
5	Is a new or modified highway access likely?	No. Access to the site has already been preconstructed within the Profile Park Business Campus
6	What existing / proposed provisions are there for Pedestrians, Cyclists, Public Transport, Disabled access, set down, loading areas? (Rational for no. of provisions)	Segregated Pedestrian and Cycle access routes are provided in the Profile Park development and along the R134 providing the main access route into Profile Park
7	What background data / information available? (i.e. staffing number, weighbridge data etc)	Previous Traffic Counts taken for the power plant application (Reg. Ref.: SD21A/0167)
8	Are traffic surveys of the existing conditions available or required?	Reg. Ref.:SD21A/0167 traffic data – IDASO data available on the R134 New Nangor Road
9	What will be the area of impact of the proposal, i.e. which adjacent local regional and National Road routes and junctions will	<ul style="list-style-type: none"> • Junction 1: R134/profile Park/Kilcarbery Park (Roundabout);

Ref	Item	Requirements
	be affected and require capacity calculations?	<ul style="list-style-type: none"> Junction 2: Internal Roundabout Profile Park
10	Are trip distribution and assignment models to be used? or Existing trip distribution?	Match existing distributions
11	Are additional traffic scenarios to be assessed? (e.g. rat running, stress tests etc)	No
12	What will be the trip generation for the proposals? (e.g. pro rata, TRICS, other)	Client Provided Information for Construction and Operation Phase
13	Are further traffic generation surveys required? (i.e. if traffic surveys to develop pro rata rates etc)	No
14	What seasonal adjustment is to be undertaken?	COVID-19 Adjustment to surveyed traffic volumes
15	Link based Growth Rates? (Low Sensitivity, Central, High Sensitivity)	TII Project Appraisal Guidelines for National Roads Unit 5.3 - Travel Demand Projections
16	When are the critical time periods for assessment? (i.e. AM, PM and Noon peak hours)	AM PM Peaks
17	When will the site become fully operational?	Construction to commence 2023 and finalise in 2024
18	What are the assessment years? (Base, opening & future (+5 years & +15 years of operation or any additional)	<p>Construction 2023-2024 Opening 2024</p> <p>Based on negligible impacts for operational traffic volumes (less than 5 pcu movements per day)</p>
19	Are there significant phases to the project?	The Construction Phase is estimated to produce the most significant traffic demand. It is envisaged that the Construction element will create traffic flows of up to 10 passenger vehicles and 5hgv arriving per day in the morning peak 8:00-9:00 and 10 passenger vehicles and 5 hgv leaving in the evening peak 18:00-19:00.
20	Will the site attract traffic from the other adjacent sites? (Pass-by Traffic)	No
21	Are there any significant committed developments? (Granted Planning within the past 5 years and not commenced)	<p>Developments within Profile Park Inc. Construction of a Distribution Warehouse</p> <p>Developments within Grange Castle Business Park South over the next 10years inc 3 2-storey data centres</p> <p>Profile Park Power Plant</p>

Ref	Item	Requirements
22	Details of any adjacent highway improvement proposals?	n/a
23	What capacity tests / traffic modelling software is to be used? (i.e. JUNCTION 9: PICADY/ ARCADY & OSCADY PRO)	ARCADY & PICADY
24	Will adjacent links become overloaded or significantly impacted? (Design Standards: Urban – UK DMRB TA 79/99 or Rural – TII DN-GEO-03031 (formerly TD9/12) Table 6/1 or alternative Rural to RT 180 when single carriageway width is less than 6.0m)	TBC
25	What are the sightlines / visibility splays requirements? Are they available? (DMURS, TII DN0-GEO-0343, Development Plan etc)	Site Access shall use the same site access approved by SDCC (Reg. Ref.:SD21A/0167) <ul style="list-style-type: none"> - Profile Park alignment appears to be have been designed and constructed to TII standards also with good visibility splays and siting distances between junctions and accesses
26	Are there ways to reduce car dependency? Is a workplace travel plan / statement required? (formerly mobility management plans)	Public Transport and Cycling links are present. None will be required given operational staff levels of less than 5 persons per day
27	What are the targets for mode share and how are they achieved?	TBC
28	What level of car parking provision is proposed? To what standard? (included disabled parking provisions)	TBC
29	Are special provisions required for cyclists? To what standard?	Site and surrounds are served with offline cycle facilities
30	Are special provisions required for pedestrians or disabled facilities? To what standard?	Site and Surrounds are served with fully accessible pedestrian and vulnerable road user facilities
31	Proposals (if necessary) for public transport facilities?	None additional proposed
32	Will the proposals have an impact on road safety?	N/A
33	Is a Road Safety Impact Assessment or Road Safety Audit required?	No, access to site has been previously developed
34	What Stage RSA?	N/A
35	Are there any other special circumstances relevant to this proposal?	N/A

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Junction LOS and Junction Delay are demand-weighted averages.

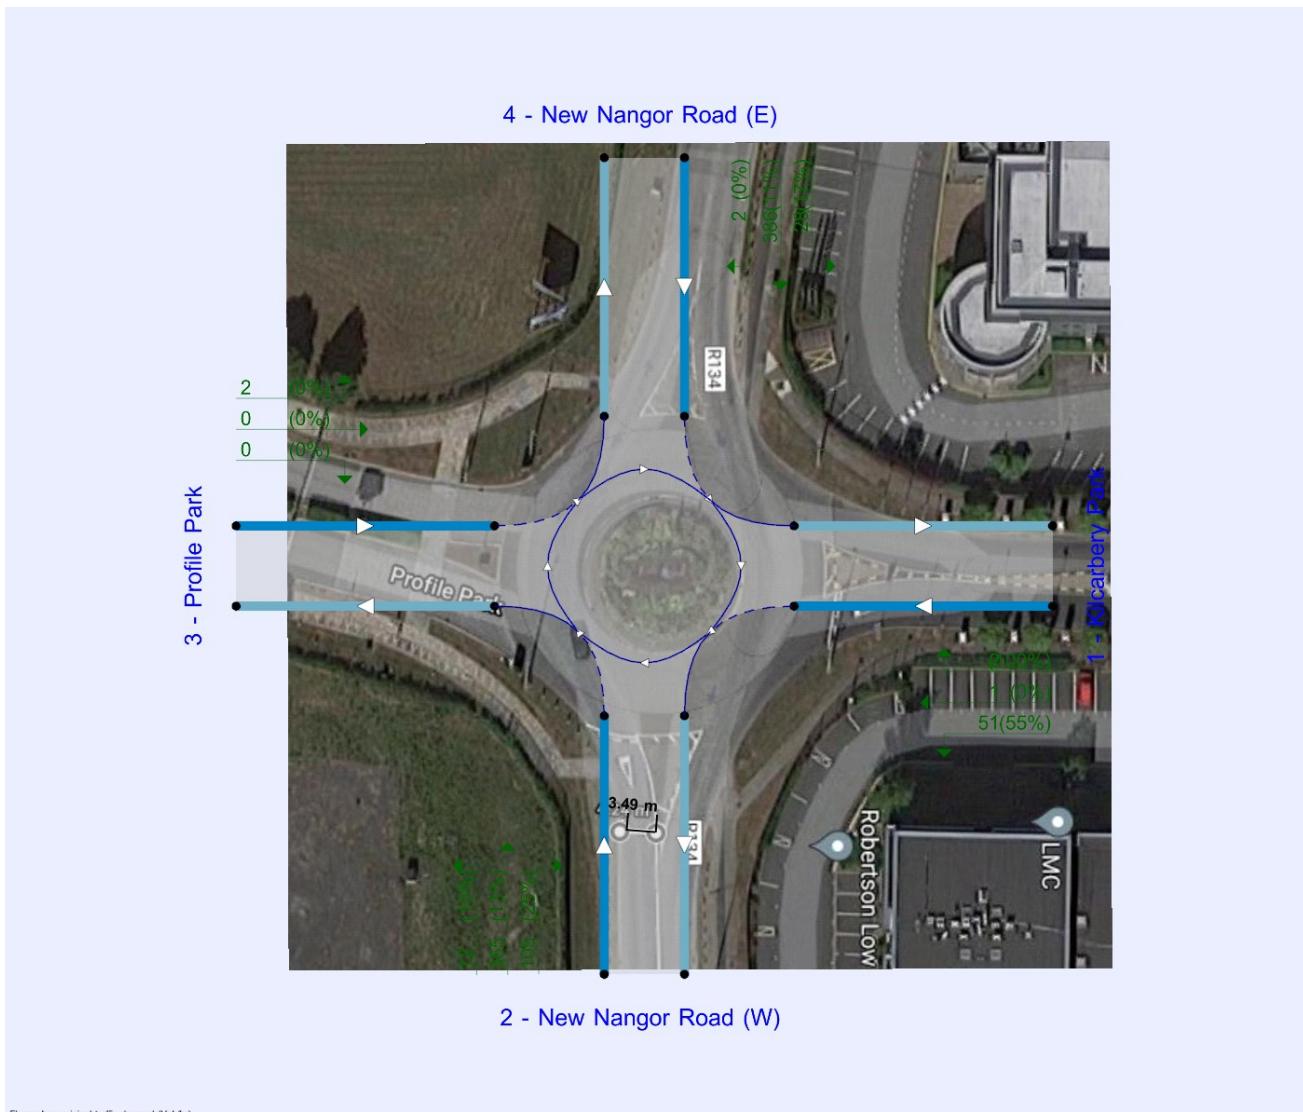

File summary

File Description

Title	Junction 1
Location	Grange Castle
Site number	
Date	30/04/2021
Version	
Status	(new file)
Identifier	
Client	11069
Jobnumber	
Enumerator	TOBIN\Maria Rooney
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perHour	s	-Min	perMin

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Show lane queues in feet / metres	Show all PICADY stream intercepts	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)	Use iterations with HCM roundabouts	Max number of iterations for roundabouts
5.75	✓					0.85	36.00	20.00		500

Demand Set Summary

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically
D1	2021 Baseflows	AM	ONE HOUR	08:15	09:45	15	✓

D4	2023 No Construction	PM	ONE HOUR	16:00	17:30	15	✓
D5	2023 With Construction	AM	ONE HOUR	08:15	09:45	15	✓
D6	2023 With Construction	PM	ONE HOUR	16:00	17:30	15	✓
D7	2024 No Construction	AM	ONE HOUR	08:15	09:45	15	✓
D8	2024 No Construction	PM	ONE HOUR	16:00	17:30	15	✓
D9	2024 With Construction	AM	ONE HOUR	08:15	09:45	15	✓
D10	2024 With Construction	PM	ONE HOUR	16:00	17:30	15	✓

Analysis Set Details

ID	Include in report	Network flow scaling factor (%)	Network capacity scaling factor (%)
A1	✓	100.000	100.000

2021 Baseflows , AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

Junction Network

Junctions

Junction	Name	Junction type	Use circulating lanes	Arm order	Junction Delay (s)	Junction LOS
1	untitled	Standard Roundabout		1, 2, 3, 4	5.42	A

Junction Network

Driving side	Lighting	Network delay (s)	Network LOS
Left	Normal/unknown	5.42	A

Arms

Arms

Arm	Name	Description	No give-way line
1	Kilcarbery Park		
2	New Nangor Road (W)		
3	Profile Park		
4	New Nangor Road (E)		

Roundabout Geometry

Arm	V - Approach road half-width (m)	E - Entry width (m)	I' - Effective flare length (m)	R - Entry radius (m)	D - Inscribed circle diameter (m)	PHI - Conflict (entry) angle (deg)	Entry only	Exit only
1 - Kilcarbery Park	5.06	5.98	9.1	3.0	13.0	0.0		
2 - New Nangor Road (W)	4.64	5.60	12.5	3.0	13.0	0.0		
3 - Profile Park	6.20	7.12	5.2	3.0	13.0	0.0		
4 - New Nangor Road (E)	4.85	7.02	2.5	3.0	13.0	0.0		

Slope / Intercept / Capacity

Roundabout Slope and Intercept used in model

Arm	Final slope	Final intercept (PCU/hr)
1 - Kilcarbery Park	0.559	1442
2 - New Nangor Road (W)	0.541	1356
3 - Profile Park	0.612	1700
4 - New Nangor Road (E)	0.541	1358

The slope and intercept shown above include any corrections and adjustments.

Traffic Demand

Demand Set Details

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Junction LOS and Junction Delay are demand-weighted averages.

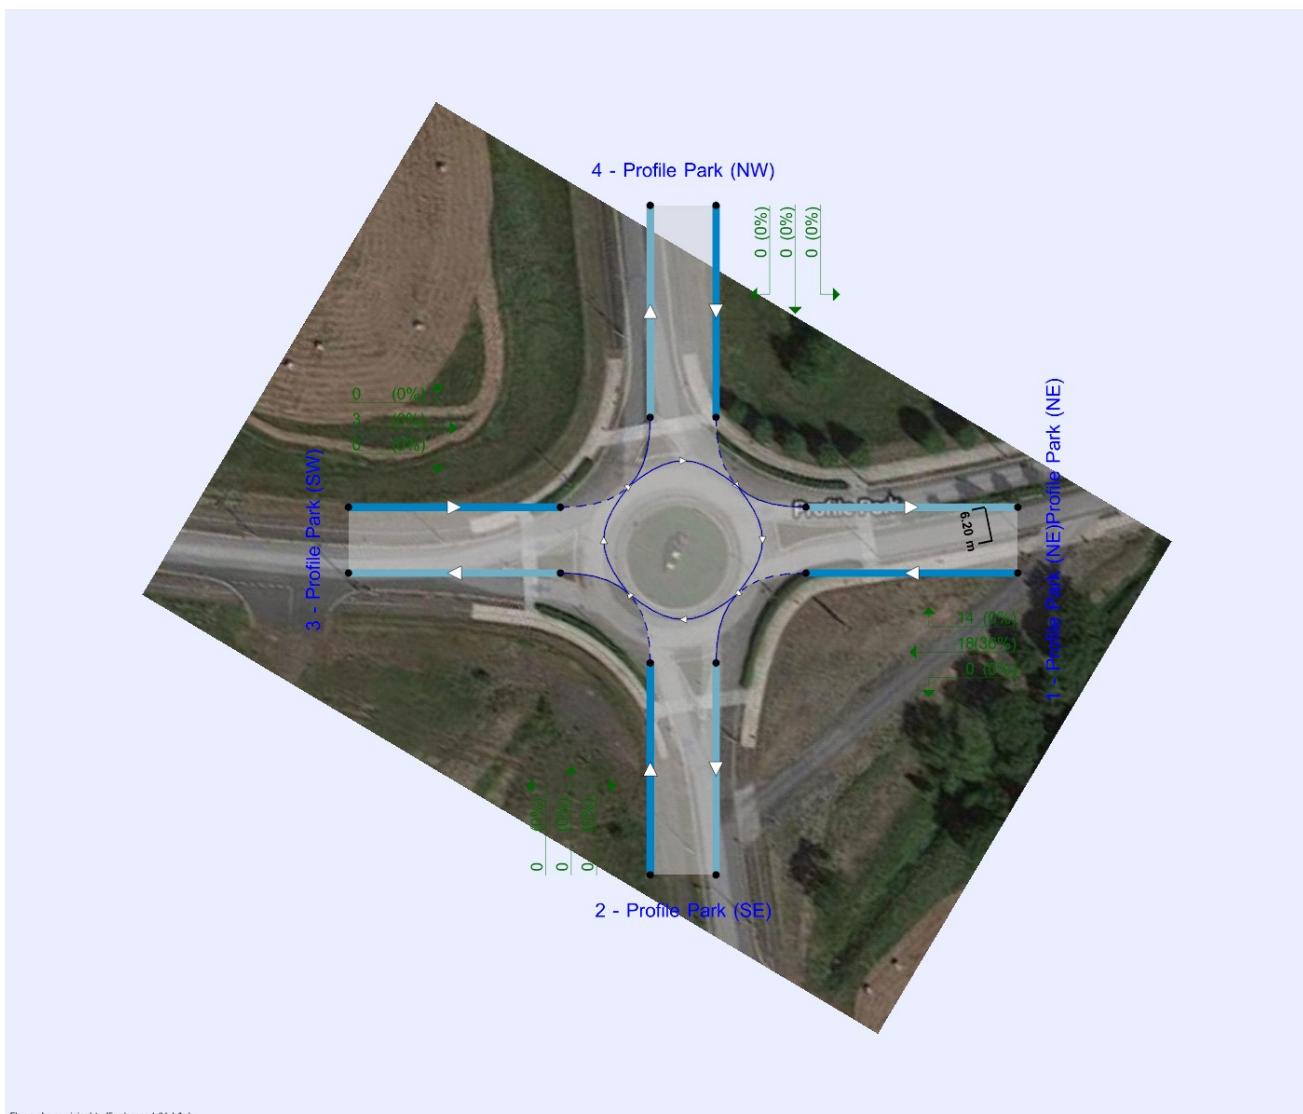

File summary

File Description

Title	Junction 2
Location	Grange Castle
Site number	
Date	30/04/2021
Version	
Status	(new file)
Identifier	
Client	11069
Jobnumber	
Enumerator	TOBIN\Maria Rooney
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perHour	s	-Min	perMin

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Show lane queues in feet / metres	Show all PICADY stream intercepts	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)	Use iterations with HCM roundabouts	Max number of iterations for roundabouts
5.75	✓					0.85	36.00	20.00		500

Demand Set Summary

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Junction LOS and Junction Delay are demand-weighted averages.

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perHour	s	-Min	perMin

Flows show original traffic demand (Veh/hr).
Streams (downstream end) show RFC ()

The junction diagram reflects the last run of Junctions.

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Show lane queues in feet / metres	Show all PICADY stream intercepts	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)	Use iterations with HCM roundabouts	Max number of iterations for roundabouts
5.75	✓					0.85	36.00	20.00		500

Demand Set Summary

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically

A1	✓	100.000	100.000

2021 Baseflows , AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

Junction Network

Junctions

Junction	Name	Junction type	Arm A Direction	Arm B Direction	Arm C Direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way	Two-way	Two-way		0.00	F

Junction Network

Driving side	Lighting	Network delay (s)	Network LOS
Left	Normal/unknown	0.00	F

Arms

Arms

Arm	Name	Description	Arm type
A	Profile Park (NE)		Major
B	Site Entrance		Minor
C	Profile Park (SW)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right-turn storage	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - Profile Park (SW)	8.13			65.0	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Site Entrance	One lane	5.00	100	53

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	644	0.106	0.269	0.169	0.384
B-C	789	0.110	0.277	-	-
C-B	612	0.215	0.215	-	-

The slopes and intercepts shown above include custom intercept adjustments only.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

2024 With Construction , PM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

Junction Network

Junctions

Junction	Name	Junction type	Arm A Direction	Arm B Direction	Arm C Direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way	Two-way	Two-way		4.97	A

Junction Network

Driving side	Lighting	Network delay (s)	Network LOS
Left	Normal/unknown	4.97	A

Traffic Demand

Demand Set Details

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically
D10	2024 With Construction	PM	ONE HOUR	16:00	17:30	15	✓

Vehicle mix varies over turn	Vehicle mix varies over entry	Vehicle mix source	PCU Factor for a HV (PCU)
✓	✓	HV Percentages	2.00

Demand overview (Traffic)

Arm	Linked arm	Profile type	Use O-D data	Average Demand (Veh/hr)	Scaling Factor (%)
A - Profile Park (NE)		ONE HOUR	✓	6	100.000
B - Site Entrance		ONE HOUR	✓	15	100.000
C - Profile Park (SW)		ONE HOUR	✓	1	100.000

Origin-Destination Data

Demand (Veh/hr)

From	To			
		A - Profile Park (NE)	B - Site Entrance	C - Profile Park (SW)
A - Profile Park (NE)	0	5	1	
B - Site Entrance	15	0	0	
C - Profile Park (SW)	1	0	0	

Vehicle Mix

Heavy Vehicle Percentages

From	To			
		A - Profile Park (NE)	B - Site Entrance	C - Profile Park (SW)
A - Profile Park (NE)	0	100	0	
B - Site Entrance	33	0	0	
C - Profile Park (SW)	0	0	0	

Results

Results Summary for whole modelled period

Stream	Max RFC	Max Delay (s)	Max Queue (Veh)	Max 95th percentile Queue (Veh)	Max LOS	Average Demand (Veh/hr)	Total Junction Arrivals (Veh)
B-AC	0.03	7.71	0.0	0.5	A	14	21
C-AB	0.00	0.00	0.0	~1	A	0	0
C-A						0	0
A-B						5	7
A-C						0.92	1

Main Results for each time segment

16:00 - 16:15

Stream	Total Demand (Veh/hr)	Junction Arrivals (Veh)	Capacity (Veh/hr)	RFC	Throughput (Veh/hr)	Start queue (Veh)	End queue (Veh)	Delay (s)	Unsignalised level of service
B-AC	11	3	483	0.023	11	0.0	0.0	7.620	A
