Meath County Council Viewing Purposes Only!

# 1 INTRODUCTION

## APPOINTMENT

O'Connor Sutton Cronin & Associates (OCSC) have been appointed by Sky Castle Ltd to carry out the design of the civil engineering services associated with the development of the proposed Maynooth Outer Orbital Road (MOOR) on lands at Moygaddy, Co. Meath, which is located northeast of the town of Maynooth, Co. Kildare.

## SETTING

Maynooth environs is a large growth area, category II Town status located in south County Meath, and is an economically vibrant area with high-quality transport links to larger towns/cities. The Meath Development Plan 2021-2027 outlines the social, economic, and planning context for the Maynooth environ lands, setting the framework for the plan's policies and objectives. It has a core strategic vision that seeks to ensure that future growth is based on principles of sustainable development that meet the needs of residents per National and Regional guidelines. The environs of Maynooth is a Core Economic Area included in the Gateway Core Economic Area located on the M4 corridor. The wider Maynooth Environs Lands proposed land-use zoning includes A2 – New Residential, E1 – Strategic Employment Zones, G1 – Community Infrastructure, D1 – Tourism and H1 – High Amenity.

The delivery of the Maynooth Outer Orbital Route (MOOR) is critical to facilitating residential, high-end employment, tourist, and leisure development in the Maynooth environ lands and fulfilling the transport infrastructure needs in proximity to Maynooth University and Maynooth town.

## ADMINISTRATIVE JURISDICTION

The proposed development is located primarily in the jurisdiction of Meath County Council (MCC), and therefore the Maynooth Outer Orbital Route design and the associated civil engineering services were carried out with reference to the following:

- Meath County Development Plan 2021-2027;
- Maynooth Environs Local Area Plan 2014 (incorporated into adopted MCDP);
- Regional Spatial and Economic Strategy for the Eastern and Midland Region (2019);

Even though Maynooth Environs is situated in the Meath County Council administrative area, the Maynooth Environs Local Area Plan contains an objective to liaise with Kildare County Council in the identification, design, reservation and delivery of the section of the Maynooth Outer Relief Road located within the administrative area of Meath County Council. The administrative area of Kildare County Council is located immediately adjacent to the LAP environs lands and some infrastructure improvements will be located within the Kildare County Council (KCC) administrative area. Therefore, the design will also be conducted with due regard to:

- Maynooth LAP
- Kildare County Development Plan
- Maynooth Traffic Management Plan

OCSC held discussions with Kildare County Council (KCC) and Meath County Council (MCC) on this scheme, as detailed below:

- OCSC met with MCC on 19 July 2021 to open preliminary discussions on the design of the MOOR. In attendance were Martin Murry (Director of Services for Infrastructure) and Nicholas Whyatt (Senior Engineer Transportation). Since this meeting, a Traffic Modelling Scoping Report has been issued to MCC. It should be noted that KCC specifically requested a Dynamically Assigned traffic model for this scheme. The Developer opted to request OCSC to utilise the PTV Vissim micro-

simulation software package to prepare the requested model, which could then be incorporated into the wider KCC transport study for Maynooth as a whole.

- As noted previously, although the scheme is planned within the MCC jurisdiction, a separate application will be made to KCC for infrastructure within the County. It is however noted that as the largest nearby urban centre is within KCC jurisdiction, they have been consulted as a stakeholder. OCSC met with KCC on 9 August 2021, and 23 September 2021. In attendance were Brigitte Rea, Daragh Conlan, George Willoughby, Jonathan Hennessy, and Lisa Kirwan, all from KCC. The same Traffic Modelling Scoping Report has also been issued to KCC.
- OCSC met with MCC on 20 June 2022. In attendance were Michael Costelloe, Joe McGarvey and Paul McNulty. This meeting aimed to establish the outstanding design requirements of the MOOR. Several comments were received, which were included in the design.

In addition, the following submissions were made as part of the proposed development:

- A submission was made on the Maynooth Transport Strategy as part of public consultation no. 1 on the 12<sup>th</sup> of November 2021. This submission outlines the proposed plans for the area and noted that it should be considered as part of the future Transport Strategy (Appended as Annexure D).
- A submission was made to BusConnects on the 15<sup>th</sup> of November 2021 noting the upcoming proposals as part of the MOOR that noted the BusConnects project should take cognisance of the upcoming works (Appended as Annexure E).

## STUDY AREA

The subject site is located on the southernmost extent of County Meath, as shown in Figure 1, aligning with the county boundary to Co. Kildare. It is approximately 1.5km north of the town of Maynooth, Co. Kildare, which forms part of a larger strategic landbank on zoned lands known as Maynooth Environs. The site is immediately bound by:

- R157 Maynooth – Dunboyne Road, to the east;

- Agricultural lands, to the north and west; and
- River Rye Water, to the south;

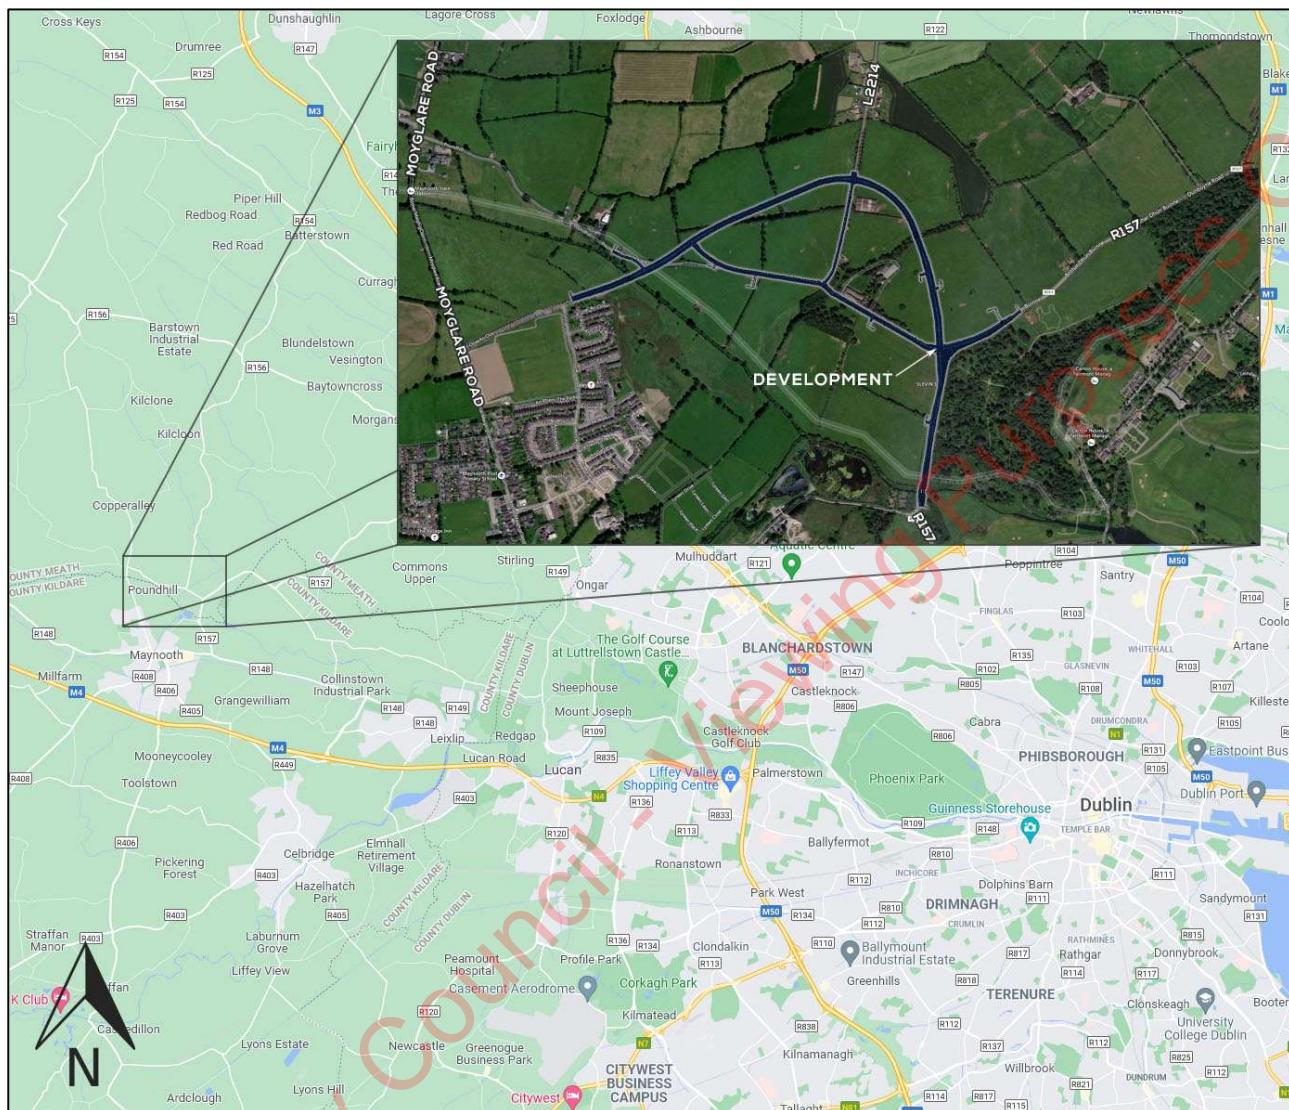

Figure 1: Development Locality Plan

## DEVELOPMENT DESCRIPTION

Planning Permission is sought by Sky Castle Ltd. for the development of the Maynooth Outer Orbital Road (MOOR) in the townland of Moygaddy, Maynooth Environs, Co. Meath.

The proposed road development will consist of the following:

1. Provision of approximately 1,700m of new distributor road (MOOR Arc) comprising of 7.0m carriageway with turning lane where required, footpaths, cycle tracks and grass verges. All associated utilities and public lighting including storm water drainage with SuDS treatment and attenuation.
2. Proposed road improvement and realignment works including:
  - (i) realignment of a section of the existing L6219 local road, which will entail the demolition of an existing section of the road which extends to circa 2,500 sqm.
  - (ii) Provision of pedestrian and cycle improvement measures along the L6219 and L22143 which abuts the boundary of Moygaddy House which is a Protected Structure (RPS ref 91558).
  - (iii) Provision of pedestrian and cycle improvement measures along the R157 which abuts the Carton Demense Wall which is a Protected Structure (RPS Ref 91556).
  - (iv) Realignment of a section of the existing L22143 local road and R157, which will entail the demolition of an existing section of the road which extends to circa 3,200 sqm.
  - (v) Provision of a new signalised junction at the realigned junction between the L22143 and R157.
  - (vi) Provision of a new signalised junction between the L2214 local road and the MOOR with right-turn lanes on approaches.
  - (vii) Reconfiguration of the L2214 section within the MOOR arc to a one-way from north to south with right-turn lanes, where applicable.
  - (viii) Reconfiguration of the northbound lane of the L2214 within the arc to a shared facility for use by pedestrians and cyclists.
  - (ix) Addition of chicanes on the L6219 and L22143 local road to reduce traffic flow and encourage utilisation of the MOOR.
3. Provision of 4 no. bridge structures comprising:
  - (i) an integral single span bridge at Moyglare Hall over the River Rye Water to connect with existing road infrastructure in County Kildare and associated floodplain works and embankments.
  - (ii) a new pedestrian and cyclist bridge at Kildare Bridge which will link the proposed site with the existing road network in County Kildare.

- (iii) a new pedestrian and cycle bridge across Blackhall Little Stream on the L22143 adjacent to the existing unnamed bridge.
- (iv) an integral single span bridge on the north-eastern section of the MOOR arc, over the Blackhall Little Stream, and associated floodplain works and embankments.
4. Provision of site landscaping, public lighting, site services and all associated site development works.
5. A Natura Impact Statement (NIS) and Environmental Impact Assessment Report (EIAR) has been included with this application.

The purpose of this report is to provide a detailed and conservative assessment of the development proposals and the potential traffic impact on the operation of the local road network. It should be noted that this report on the traffic & transportation analysis on this specific application has been prepared on the basis of an assessment which includes the full buildout of the MOOR by the base year, as well as the entire Masterplan area and all components of the development that are deliverable between the base year and 2030 (Opening Year + 5). Furthermore, an additional assessment was conducted on the strategic master planning for future phases that will be delivered from 2029 to 2040 (the Design Year).

In carrying out the above, this assessment has given due consideration to the relevant guidelines including:

- *Traffic & Transport Assessment Guidelines (2014)* as published by the former National Roads Authority (NRA) now Transport Infrastructure Ireland (TII);
- *Guidelines for Traffic Impact Assessment (1997)* as published by the Chartered Institute of Highways & Transportation;

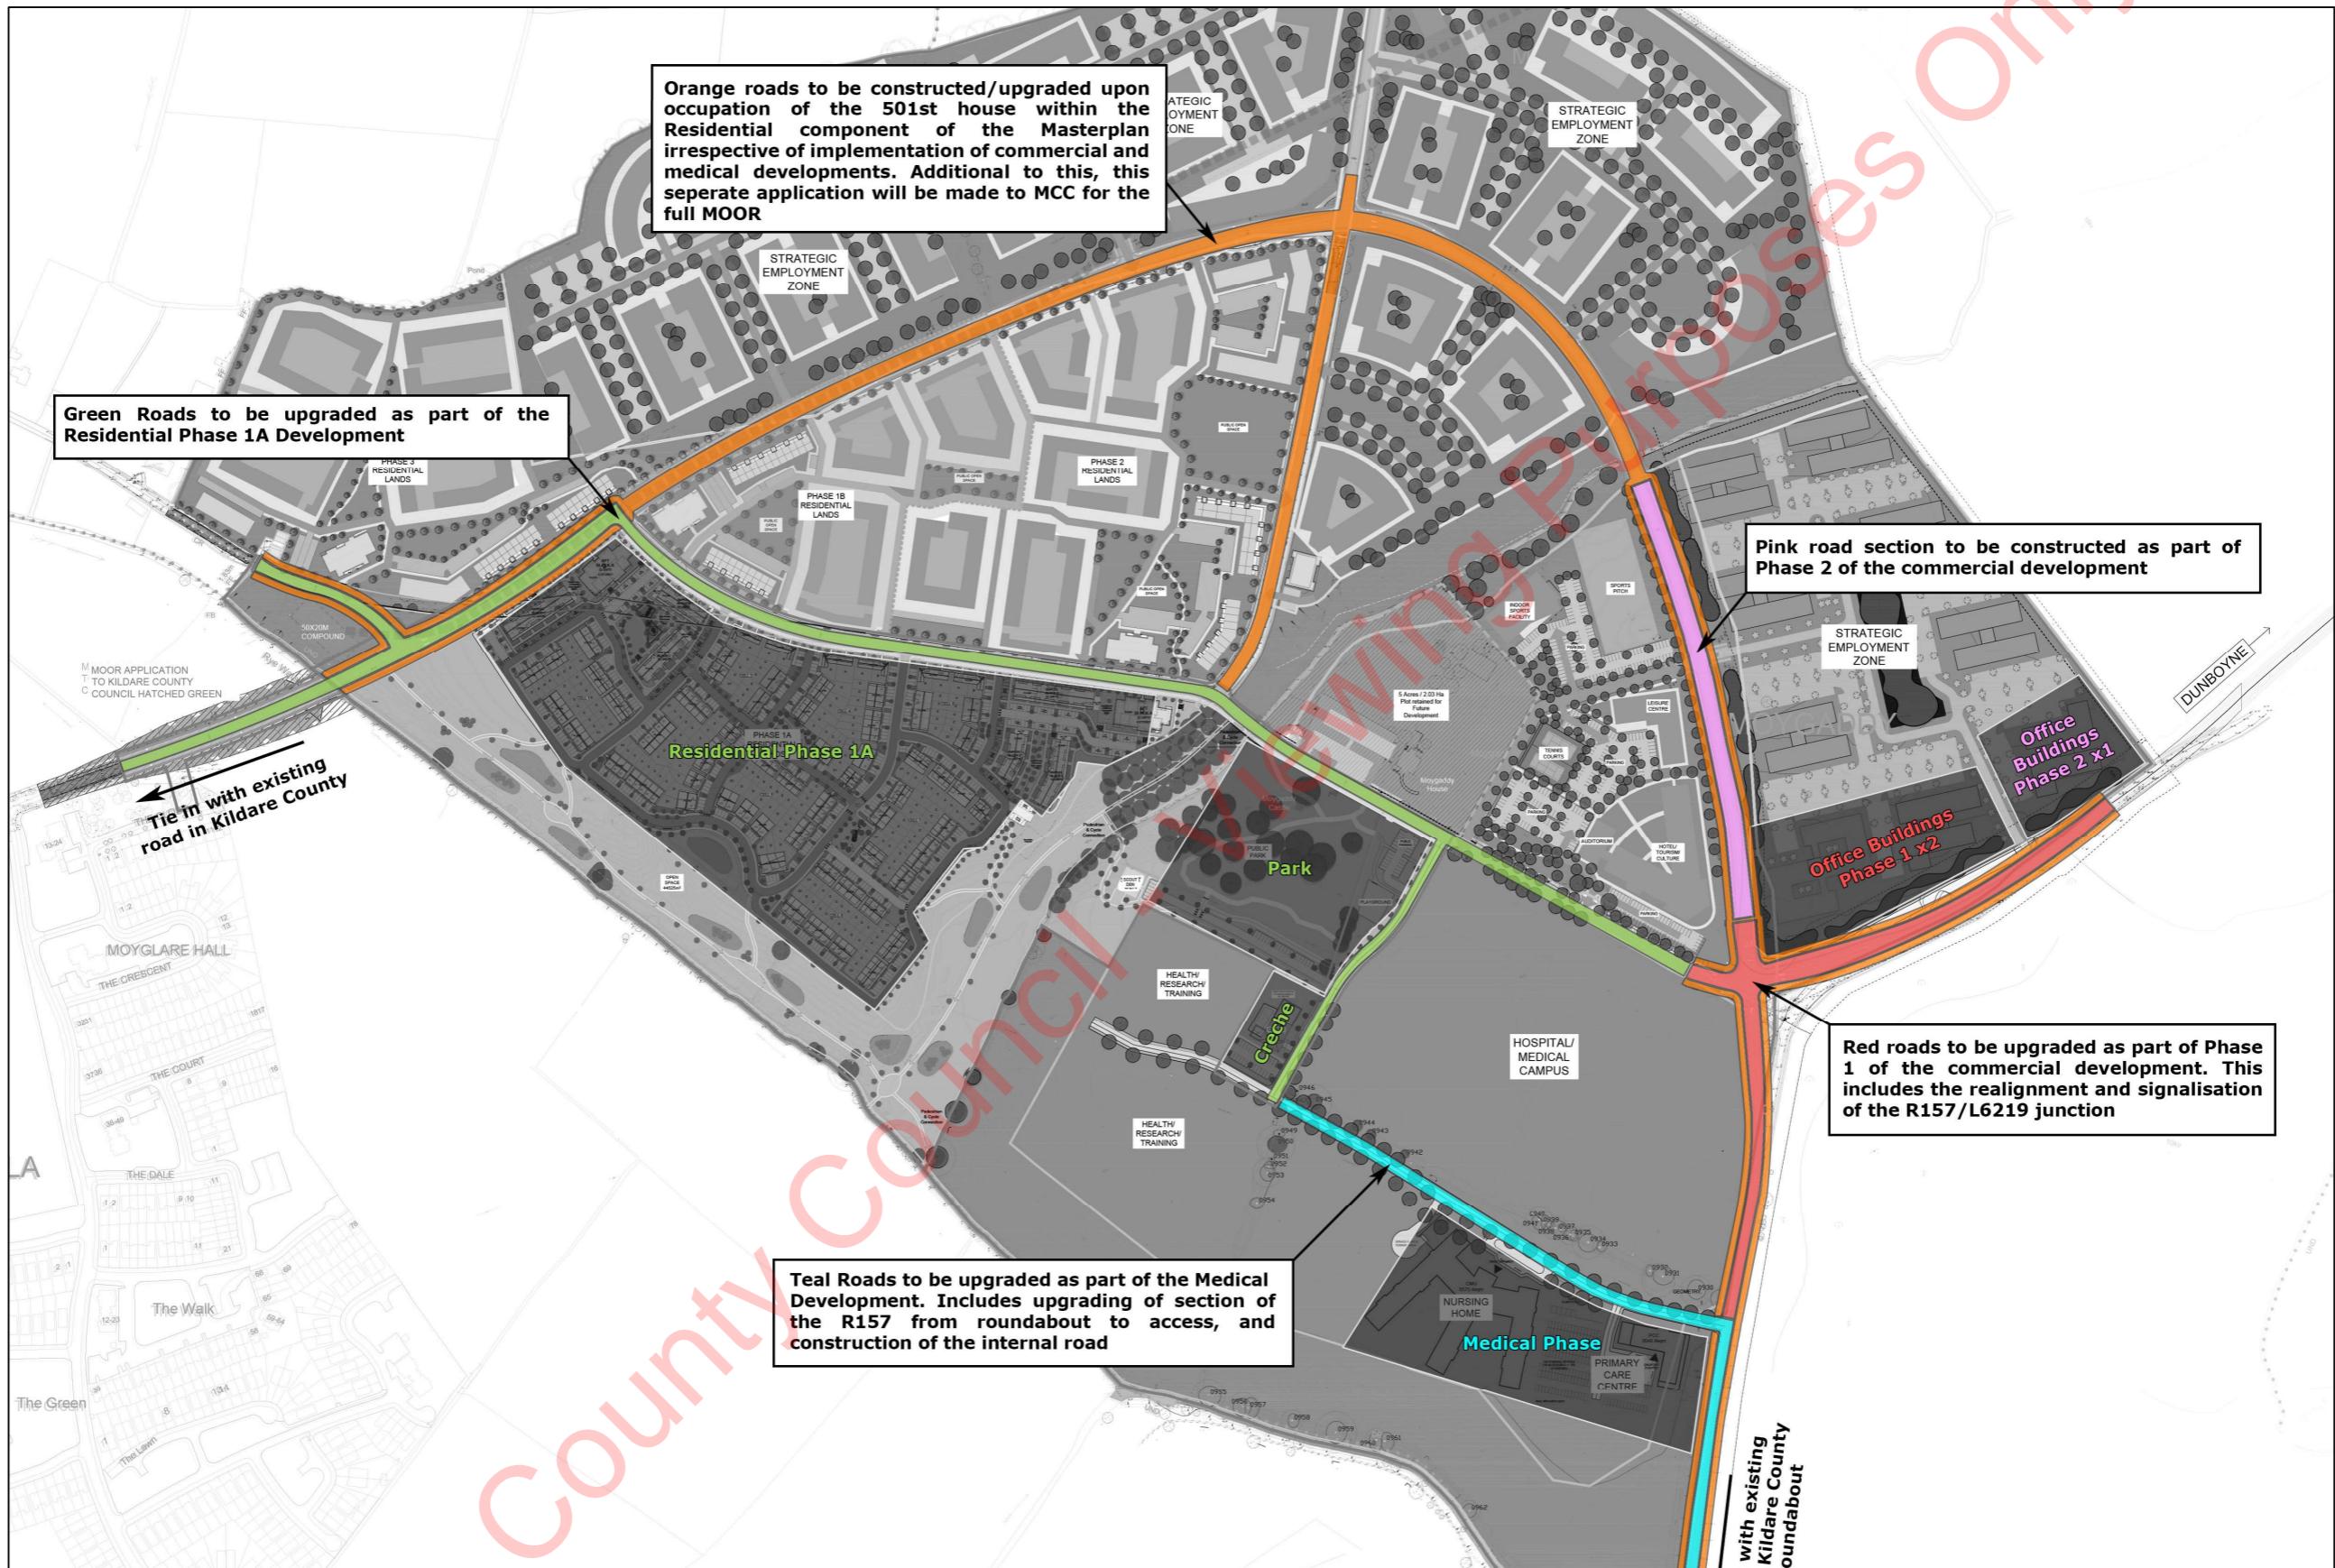

## MASTERPLAN PHASING

This application is submitted for the full MOOR to be delivered. The various masterplan development applications will be submitted on the basis that the MOOR will be delivered in phases, linked to individual planning applications which form part of the wider Masterplan for the Maynooth Environs/Moygaddy lands.

The colour of the first three columns links to the figure on the next page. Specific road infrastructure upgrades will be required depending on the timetable when each phase is constructed. The last column of the table indicates in which scenario year the trip generation of that section of the development will be relevant.

Item	Linked Road Infrastructure	Trip Generation Year
<b>Medical Phase</b>		
Primary Care Centre & Nursing Home	Upgrade the R157 from the roundabout in the south up to the access to medical facility	Opening Year (2025)
Medical Research Campus	Full MOOR already operational	Design Year (2040)
Public Hospital	Full MOOR already operational	Design Year (2040)
<b>Office Phase</b>		
Office Buildings Phase 1 x2	Upgrade the R157 north of medical facility access up to the junction between the R157 and the L6219	Opening Year (2025)
	Upgrade R157/L6219 junction to 3-leg signalised junction	Opening Year (2025)
	Upgrade R157 east of junction towards Dunboyne	Opening Year (2025)
Office Buildings Phase 2 x1	Construct the first section of the eastern leg of the MOOR (northern leg of junction) up to the stream	Opening Year (2025)
Office Buildings Phase 3 & 4 x6	Full MOOR already operational	Design Year (2040)
<b>Residential Phases</b>		
Residential Phase 1A, Park & Creche	Construct link road in the west and upgrade road up to junction with R157	Opening Year (2025)
Residential Phase 1B	Full MOOR already operational	Opening Year + 5 (2030)
Residential Phase 2	Full MOOR already operational	Design Year (2040)
Residential Phase 3	Full MOOR already operational	Design Year (2040)
<b>Other Phases</b>		
Tourism and Sports Campus	Full MOOR already operational	Opening Year + 5 (2030)
Hotel	Full MOOR already operational	Design Year (2040)

*Table 1: Moygaddy Masterplan Phasing*

## 2 BACKGROUND TRAFFIC VOLUMES

At the time of writing, the ongoing Covid 19 pandemic and associated restrictions have had a significant impact on traffic and travel patterns across the country. As a result, procurement of new survey data, which would be a true reflection of typical traffic levels, has not been possible. However, survey data is available from 2019. The use of this survey data combined with TII traffic growth factors to account for any background traffic increase in the interim is considered to give the most accurate representation possible of the typical traffic levels experienced within the study area.

Details of the junction surveys used for this development are shown in Table 2:

No	Junction	Source	Survey Date	Survey Times
1	Moyglare Road/L6219	Nationwide Data Collection	25/05/2019	07:00 to 19:00
2	Moyglare Road/Mariavilla	Nationwide Data Collection	25/05/2019	07:00 to 19:00
3	L6219/L2214	Nationwide Data Collection	25/05/2019	07:00 to 19:00
4	R157/L6219	Nationwide Data Collection	25/05/2019	07:00 to 19:00
5	R157/Dunboyne Road	Nationwide Data Collection	25/05/2019	07:00 to 19:00
6	R148/R157	Nationwide Data Collection	25/05/2019	07:00 to 19:00

*Table 2: Junction Survey Details*

A seven-fold classification system was used which recorded cars, taxis, light goods vehicles, heavy goods vehicles, public service vehicles, motorcycles, and bicycles.

The exact locations of these junctions are highlighted in Figure 2.

Figure 2: Traffic Survey Locations

The junction surveys also include queue length surveys which recorded the maximum queue lengths observed on a per lane basis at each approach of each junction over 15-minute intervals.

A full copy of the results of all traffic surveys can be found in *Appendix A*, attached to this report.

The recorded flows during the above peak hours, and across the course of an average day are shown in the following:

- Diagram 1: 2019 A.M. Peak Hour Base Flows (08:00 – 09:00);
- Diagram 2: 2019 P.M. Peak Hour Base Flows (17:00 – 18:00);
- Diagram 3: 2019 Annual Average Daily Traffic Base Flows.

These diagrams, and all others referenced in this text, can be found in *Appendix B*, attached to this report. Any apparent discrepancy in flows between sites may be attributed to vehicles exiting the survey zone either by accessing developments or via minor roads between surveyed junctions.

### 3 STUDY METHODOLOGY

The short-term traffic counts were expanded to Annual Average Daily Traffic (AADT) using expansion factors<sup>1</sup> from TII. The base year flows were then adjusted to the predicted Year of Opening for the development (2025), Year of Opening + 5 (2030) and the Design Year (2040) using medium-range TII growth factors<sup>2</sup>. This is conservative as traffic growth estimates are directly influenced by projections for economic activity which are now unlikely to be realised due to the impact of the global pandemic, while commuter patterns are also expected to be permanently impacted.

The traffic generation potential of masterplan sites was assessed using the Trics<sup>3</sup> planning database. This database contains information on thousands of sites in Ireland and the U.K. and can be used to predict the traffic that will be generated by numerous types of development.

#### VISSIM MICRO-SIMULATION SOFTWARE

For this project, a dynamic traffic model was built utilizing the Vissim software package, developed by PTV.

##### Dynamic Assignment

A model was developed for this project using dynamic assignment. The reason for this is due to the objectives of the study. Developing a static model would not yield the desired outcome, as the traffic redistribution due to the implementation of the MOOR would not be accounted for. A further redistribution is possible to other road links should the demand at some junctions exceed the capacity.

<sup>1</sup> Project Appraisal Guidelines for National Roads Unit 16.1 - Expansion Factors for Short Period Traffic Counts, TII (October 2016)

<sup>2</sup> Project Appraisal Guidelines for National Roads Unit 5.3 - Travel Demand Projections, TII (May 2019)

<sup>3</sup> Trip Rate Information Computer System

Dynamic assignment uses an origin-destination (O-D) matrix to distribute traffic throughout the network. This means that vehicles can dynamically choose their route, to a certain destination in the network.

A good summary of the benefit of dynamic assignment for a study such as this is given in Vissim's documentation:

*"In the static assignment, the vehicles follow routes in the road network which you have manually defined. Therefore, the drivers in the simulation have no choice which path to follow from their start point to their destination. For a lot of traffic flow simulation applications this is an appropriate way of modelling.*

*When the simulated road network grows, there are usually several options for the drivers can choose to go from one point in the road network to another. The simulated traffic must be realistically distributed among these alternatives. Using the traffic assignment, a given traffic demand is distributed among the various paths in the road network. Traffic assignment is one of the basic tasks in the transport planning process. It is essentially a path selection model of transport users, for example drivers of motorized and non-motorized vehicles.*

*For such a model, first a set of possible paths is determined. These alternatives must be assessed appropriately. A representation follows on how the drivers decide on the basis of this assessment. This path selection decision model is a special case of the general problem of decision based on discrete alternatives (discrete choice). A lot of theory behind traffic assignment models originates from the discrete decision theory. The most common assignment processes in transport planning belong to the class of static assignments. Static thereby means that neither the traffic demand, indicating how many trips should be made in the network, nor the road network changes. This does not correspond to reality. The traffic demand can vary significantly during the day. The road network can have time-dependent characteristics, such as when different signal programs run throughout the day at the signalized nodes and thus create time-dependent capacities for the individual flows. Dynamic assignment takes these temporal fluctuations into account.*

*The motivations to model the path selection in a Vissim simulation model:*

- *With the increasing size of the simulated road network, it will become more and more difficult to enter all paths from sources to destinations by hand, even if no alternative paths are considered.*
- *The path selection behaviour can itself be the subject of your investigation if the effects of measures are to be judged. This would also affect the path selection."*

### **Origin-Destination Matrix**

The O-D matrix was originally sourced from Kildare County Council's (KCC) existing 2016 macro model. However, the full study area comprised one zone within this model, with no zonal information available to the north. As the redistribution of northbound vehicles is an important outcome of this model, this lack of information required a different approach.

It was agreed with KCC & MCC that a different approach would be taken to obtain an O-D matrix. The approach which was agreed upon would be to use the junction surveys to develop an O-D matrix, with the assumption that all traffic travelling north on Moyglare Road and the L2214 would be destined for the R156. This would enable the model to determine a possible redistribution between these two roads, should the MOOR be constructed.

This approach led to the development of a 9x9 O-D matrix with the following zones:

- Zone 1: Moygaddy, south via Moyglare Road
- Zone 2: Moyglare Hall
- Zone 3: Moyglare Road West
- Zone 4: Moyglare Road North
- Zone 5: L2214/Kilcloon Road North
- Zone 6: R157 East
- Zone 7: Dunboyne Road
- Zone 8: Moygaddy, west via the R148
- Zone 9: R148 east

These zones are shown in the figure below:

*Figure 3: Model Zones*

## Road Network

The available capacity at certain junctions could potentially also lead to redistribution. Should capacity not be available along the L6219 or the MOOR, vehicles could reroute through Moygaddy itself. To determine this, the link between Zone 1 and Zone 8 was completed, providing an alternate route. However, in reality, the majority of road users will opt to use the MOOR as driving through town will increase the road user cost due to lower speeds, junctions, pedestrians, etc.

To simulate this increased cost, a reduced speed of 20km/h was added to the road section traversing the town. Combined with this, path pre-selection was also limited to rejecting any paths with a total cost higher than 50% as compared to the best path available.

## Calibration Criteria

To assess the accuracy of a model, calibration is necessary. Dynamic models utilise origin-destination matrices as inputs, which means that vehicles leave a certain area, and are destined for a different area. These vehicles are then free to choose their routing, usually based on travel time, congestion, etc.

Calibration assesses the volumes in the model and compares them to traffic counts to determine, within certain criteria, the accuracy. This is done per vehicle class used in the model. Changes to the routing of vehicles, the input matrix, or the network itself can then be made to improve accuracy.

For this process, a certain set of calibration criteria is used. Should these criteria be fulfilled, the model can be certified to be accurate and correct in terms of traffic volumes. The criteria assumed for calibration are taken from the U.K. Department for Transport, Transport Analysis Guidance (TAG) Unit M3 and are shown below.

Criteria and Measures	Acceptability Guidelines
Assigned Hourly flows compared with observed flows:	
Individual flows within 15% for flows 700 - 2 700 vph	> 85% of the cases
Individual flows within 100 vph for flows < 700 vph	> 85% of the cases
Individual flows within 400 vph for flow > 2 700 vph	> 85% of the cases
GEH statistic:	
Individual flows: GEH < 5	> 85% of the cases

*Table 3: TAG Unit M3.1 Criteria (<https://www.gov.uk/transport-analysis-guidance-tag>)*

The following section details the peak hour calibration results for each scenario, defined for the two vehicle classes used in the models, light vehicles, and heavy vehicles. A summary of the results is shown in the table below.

Summary of TAG Calibration Statistics – Light Vehicles		
Description	AM Model	PM Model
Individual flows within 15% for flows 700-2,700 vph	98.9%	96.8%
Individual flows within 100 vph for flows < 700 vph	No observations above 700 Vehicles	No observations above 700 Vehicles
Individual flows within 400 vph for flows > 2700 vph	No observations above 2 700 Vehicles	No observations above 2 700 Vehicles
Individual flows: GEH < 5	98.3%	98.3%

*Table 4: TAG Calibration Results - Light Vehicles*

Summary of WebTAG Calibration Statistics – Heavy Vehicles		
Description	AM Model	PM Model
Individual flows within 15% for flows 700-2,700 vph	100.0%	100.0%
Individual flows within 100 vph for flows < 700 vph	No observations above 700 Vehicles	No observations above 700 Vehicles
Individual flows within 400 vph for flows > 2700 vph	No observations above 2 700 Vehicles	No observations above 2 700 Vehicles
Individual flows: GEH < 5	100.0%	100.0%

*Table 5: TAG Calibration Results - Heavy Vehicles*

As can be seen from the above tables, all models are well within the calibration criteria. This confirms that no modelling errors are present.

## Extent of the Model

The extent of the modelled area can be seen in Figure 4. The rationale for extending the model north towards the R156 is related to the redistribution assessment and explained in further detail in the assessment chapter of this report.

Figure 4: Extent of the Model

## SCENARIOS

To assess the actual impact of the operational development on the local road network, three different scenarios have been analysed as follows:

- Base Year (2019) – The current performance of the local road network;
- Year of Opening (2025) – The performance of the local road network during the Year of Opening. It is anticipated that the full MOOR could potentially be in operation as early as 2025, which is why this was chosen as the Year of Opening;
- Year of Opening + 5 (2030) – The performance of the local road network during the Year of Opening with a 5-year horizon;
- Design Year (2040) – The performance of the local road network during the Design Year.

The future year assessments considered the following scenarios:

- Do Nothing: - This assessment allows for only normal background traffic growth, with no other developments in the area, aside from the Maynooth Community College on the corner of Moyglare Road and the L6219.
- Do Something: - This assessment allows for everything considered in the Do Nothing scenario, with the inclusion of the MOOR, as well as any trips generated by masterplan developments expected to be operational during each of the analysis years. Three developments are expected to be operational by the Year of Opening. These are:
  - Moygaddy Castle SHD, which is a 360 no. unit residential development with a creche on the western side of the development area;
  - A Primary Care Centre (PCC) and Nursing Home Unit to the west of R157, and south-east of the residential development;
  - Three office buildings on the eastern side of the development area, accessed off the R157.
- For the Year of Opening + 5, a further two developments are included. These are:
  - Residential phase 1B, which entails a total of 140 units located north of the R6219. This development is linked to the capped population allocations for the lands between 2022 and 2030. It is envisioned that the balance of residential lands will be brought on stream between 2030 and 2034 subject to additional population figures being allocated to the lands in the 2030 Meath Development Plan;

- Tourism and sports fields located north of the R6219, and east of the L2214, excluding the planned hotel development.
- Do Maximum: - This assessment allows for everything considered in the Do Something scenario, with the addition of trips generated by future developments which form part of the masterplan, that are planned to be implemented by the design year. These include:
  - Six office buildings on the eastern side of the development area;
  - A hospital located west of the R157, and south of the R6219;
  - The addition of a hotel to the tourism area located north of the R6219, and east of the L2214;
  - A medical research campus located west of the planned primary care centre, and will utilise the same access onto the road network;
  - Residential Phase 2 which includes a total of 296 residential units;
  - Residential Phase 3 which includes a total of 222 residential units.

As per the masterplan framework, there is a portion of land on the northern side of the MOOR, zoned for strategic employment. However, it is unrealistic to assume that these lands will be developed within the design year period. This will lead to an oversupply of employment opportunities without the associated demand being present.

As the masterplan development accounts for the majority of development in the area, no natural background traffic growth was applied to this Do Maximum scenario. Rather this scenario includes the full buildup of the masterplan, except for the previously mentioned strategic employment zones. Only natural background traffic growth is not included. The rationale behind this is that these developments will account for future traffic growth in the area. Applying background traffic growth in addition to the trips generated by these would lead to a significant overestimation of traffic in the area and indicate unrealistic capacity problems.

The addition of the background traffic growth to possible future developments outside of the design year has the potential to cause a large overestimation of vehicles from the development and will result in double, or even triple counts of some vehicles. In addition, the potential impact of the reduction of trips due to work-from-home changes

as a result of the covid19 pandemic has not been allowed. Furthermore, the developments assessed in this scenario include several trip generators (residential) and trip attractors (commercial). There will be a large element of internal and diverted trips within the development lands, which have not been accounted for in this assessment and no account has been taken of the modal shift that may arise from enhanced pedestrian & cycle connectivity. Given these facts, it is considered that the calculated traffic volumes used are conservative and wholly appropriate.

Should further trips be included, above what is already being considered, it will lead to an unrealistic view of future traffic. This in turn will lead to a requirement for unnecessarily extensive infrastructure, which will promote private car use and be to the detriment of the sustainable transport goals set out in the Development Plan.

In summary, the full scenario roadmap, which will be used as part of the assessment, is shown in Table 6:

Number	Peak	Year	Scenario
1		2019	Do Nothing
2		2025	Do Nothing
3		2025	Do Something
4	AM Peak	2030	Do Nothing
5		2030	Do Something
6		2040	Do Nothing
7		2040	Do Something
8		2040	Do Maximum
9		2019	Do Nothing
10		2025	Do Nothing
11		2025	Do Something
12	PM Peak	2030	Do Nothing
13		2030	Do Something
14		2040	Do Nothing
15		2040	Do Something
16		2040	Do Maximum

Table 6: Scenario Roadmap

## TRAFFIC GROWTH

To accurately assess the impact of the MOOR in the future, the base traffic flows for the local network in 2019 have been expanded to the Year of Opening, Year of Opening + 5, and the Design Year using the medium-range TII growth factors detailed in Table 7:

Year	Growth Rates	
	Light Vehicles	Heavy Vehicles
2019 - 2025	10.84%	24.00%
2019 - 2030	20.76%	48.34%
2019 - 2040	29.49%	78.36%

*Table 7: Background Traffic Growth Factors*

The growth factors are based on table 6.2 in the *Project Appraisal Guidelines for National Roads Unit 5.3 – Travel Demand Projections* document. The medium-range rates that were used for the calculation of the above growth rates are shown in the table below:

Region	Central Growth Rates					
	2016-2030		2030-2040		2040-2050	
	LV	HV	LV	HV	LV	HV
Meath	1.0173	1.0365	1.007	1.0186	1.0059	1.0207

*Table 8: Rates used for Growth Calculation (TII, May 2019)*

The application of the above growth factors should be further considered in the context of the Covid 19 pandemic and potential modal shift, which is expected to have a lasting impact on traffic growth potential and travel patterns over the coming years. Specifically, growth factors are generally developed using projections for economic growth. The global pandemic has had a significant impact in this regard which means such projections are now unlikely to be realised, meaning traffic growth is expected to be similarly over-estimated.

Furthermore, restrictions imposed because of the pandemic response have resulted in a significant portion of the population being forced to work from home. This has

highlighted the viability of this approach in industries where it was previously thought to be incompatible. The knock-on effect is expected to be that a percentage of workers continue to be based at home on a part- or full-time basis even after the pandemic restrictions are lifted. This in turn will have a knock-on effect on commuter and peak traffic levels. The National Transport Authority (NTA) has acknowledged this likelihood in a recently circulated note titled "Alternative Future Scenario for Travel Demand" dated November 2020 where it defines the Covid 19 pandemic as a "shock wave" that "can lead to an acceleration in the natural rate of change in society". The note concludes that the total number of daily trips could be up to 8% lower than previous projections.

Thus, considering the above, the applied growth factors are very conservative.

Additional to the normal traffic growth, the following have been considered for future Do Nothing scenarios and included as part of the background traffic:

- The trips generated by the Maynooth Community College, east of Moyglare Road and south of the L6219. This development was not yet operational during the survey period. For these volumes, the approved planning trip generation rates have been used and included, as per KCC's Online Planning Enquiry System;
- Other large developments in the area have also been investigated and considered where applicable.

## 4 THE RECEIVING ENVIRONMENT

The receiving environment is rural in nature. The existing primary artery through the study area is the R157, which is a southwest to northeast road connecting Maynooth to Dunboyne. The R157 acts as an important regional distributor road, connecting the M7, M4 and N3 national corridors. Branching off from this road is the L6219 which is a county road, and traverses the Moygaddy areas west to east. The study area is bisected by the existing north-south L2214, which intersects with the L6219. This road is known as the Kilcloon Road. It follows a north-south direction before travelling eastwards to connect to the R156, which link Killucan and Dunboyne.

The Masterplan will consist of trip generators and attractors and so it is expected that there will be an element of internal trips within the Masterplan. While there is substantial variation in the type of traffic travelling on the links locally, during the peak travel hours, they would primarily be expected to carry commuter traffic.

As noted earlier, base traffic levels have been surveyed on the local network in 2019. By combining these base flows with the traffic generation estimates for the proposed development, the following peaks were identified:

- A.M. Peak Hour: 08:00 – 09:00;
- P.M. Peak Hour: 17:00 – 18:00.

The proposed development will impact several existing County roads. Details of these roads are shown in the table below:

No	Street Name	Description	Design		Average Road Width (m)	Traffic Classification
1	Moyglare Road	This north-south road connects the western side of Maynooth in the south, to the R156 in the north	<b>Environment:</b>	Rural to urban	6.00	Rural Link Road
			<b>Layout:</b>	Two-lane undivided road west of the development		
			<b>Verge:</b>	Rural shoulders in the vicinity of the site		
			<b>NMT:</b>	No specific provision		
			<b>Illumination:</b>	None in the vicinity of the site		
2	L6219	This is a connecting road between Moyglare Road in the west and the R157 in the east	<b>Environment:</b>	Rural fringe	5.80	Rural Local Road
			<b>Layout:</b>	Two-lane undivided road central in the development		
			<b>Verge:</b>	Rural shoulders		
			<b>NMT:</b>	No specific provision		
			<b>Illumination:</b>	None in the vicinity of the site		
3	L2214 Kilcloon Road	This is a small connecting road, parallel to Moyglare Road. This road connects L6219 in the south to the R156, passing by Kilcloon	<b>Environment:</b>	Rural to rural fringe	5.00	Rural Local Road
			<b>Layout:</b>	Two-lane undivided road north of the development		
			<b>Verge:</b>	Narrow rural shoulders in the vicinity of the site		

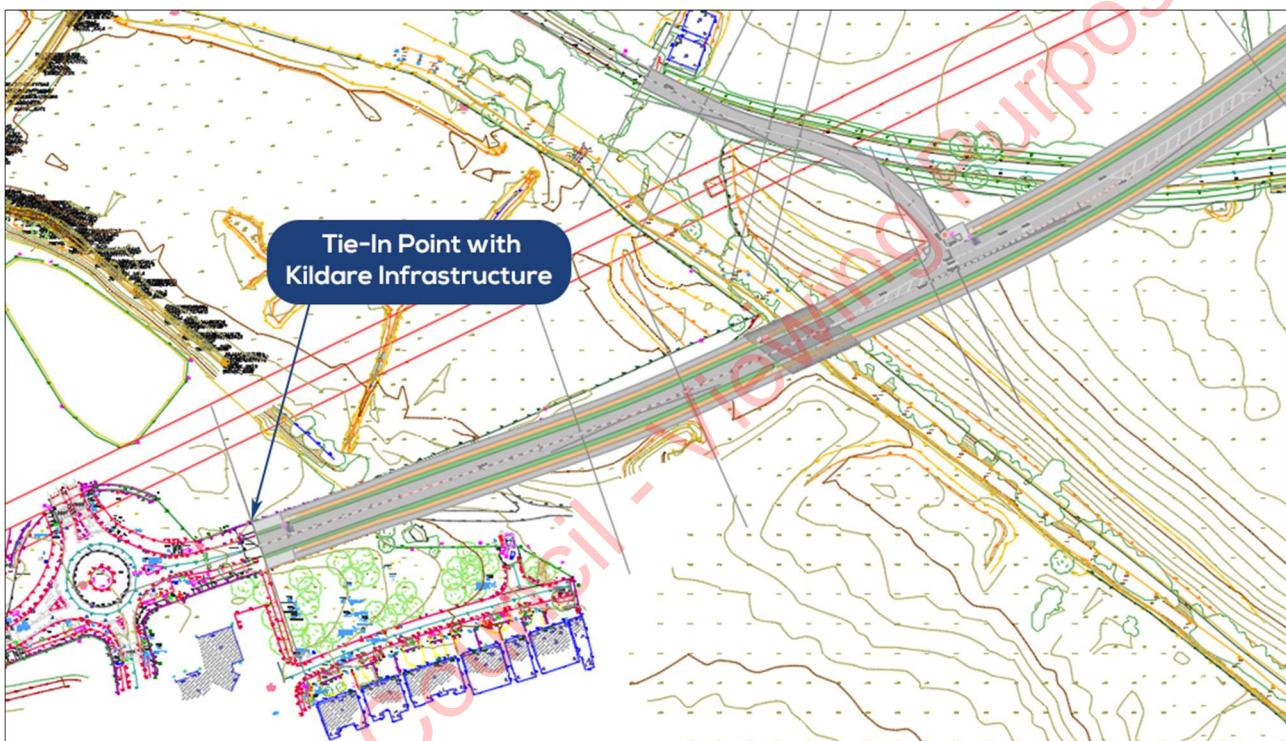

No	Street Name	Description	Design		Average Road Width (m)	Traffic Classification
4	R157	Road which links Maynooth in the south-west and Dunboyne in the north-east.	<b>NMT:</b>	No specific provision		
			<b>Illumination:</b>	None in the vicinity of the site		
			<b>Environment:</b>	Rural to urban		
			<b>Layout:</b>	Two-lane undivided road east of the development		
			<b>Verge:</b>	Rural shoulders in the vicinity of the site	7.00	Rural Distributor Road
			<b>NMT:</b>	Walkways from Maynooth up to River Rye Water. No provision in the vicinity of the site		
			<b>Illumination:</b>	None in the vicinity of the site		

Table 9: Base Year Road Network

## 5 CHARACTERISTICS OF THE DEVELOPMENT

### MAYNOOTH OUTER ORBITAL ROAD OVERVIEW

The MOOR will be a single carriageway road connecting the Maynooth environs between the east and west. A portion on the western side will be constructed in County Kildare and tie in with existing infrastructure by means of a new bridge and road section. This can be seen in the figure below.

*Figure 5: MOOR Western Kildare Tie-In*

On the eastern side, the road will again tie in in County Kildare, just north of the roundabout on the R157. A separate cycle and pedestrian bridge will be constructed alongside the existing bridge to allow for continuation of this infrastructure, tying in with existing infrastructure in County Kildare. The tie-in location has been agreed with Kildare and on review of planning compliance submission made by Cairn Homes. This can be seen in the figure below.

Figure 6: MOOR Eastern Kildare Tie-In

The rest of the MOOR will form an arc through the Maynooth Environs, connecting the western and eastern ends. A portion of the L6219 on the western side will be realigned to accommodate the arc. This section is shown in the figure below.

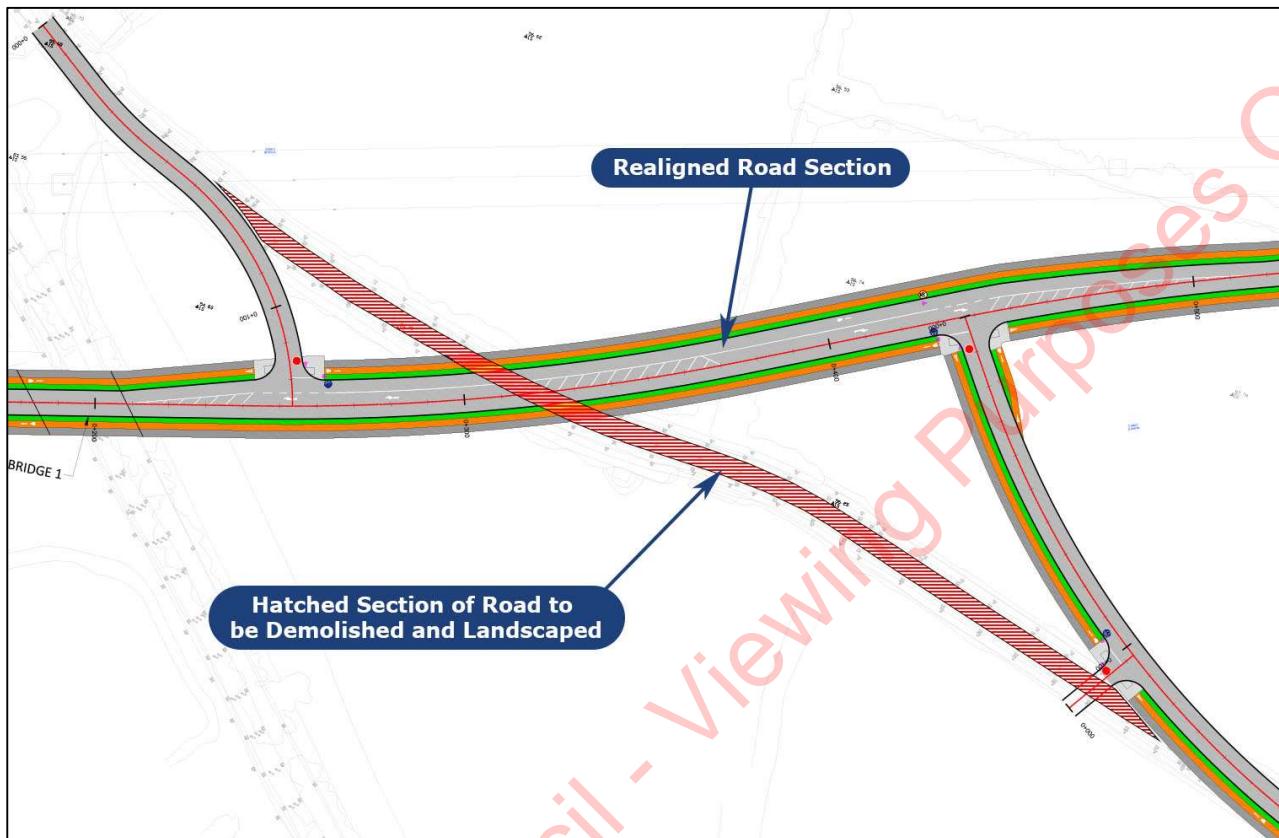

Figure 7: Road Section to be Realigned

The current L2214 (Kilcloon Road) will change to a north-to-south one-way road within the arc. The current south-to-north lane will be converted to a shared facility which can be used by pedestrians and cyclists. The new northern junction between the MOOR and the L2214 will be constructed as a signalised junction. This is shown in the figure below.

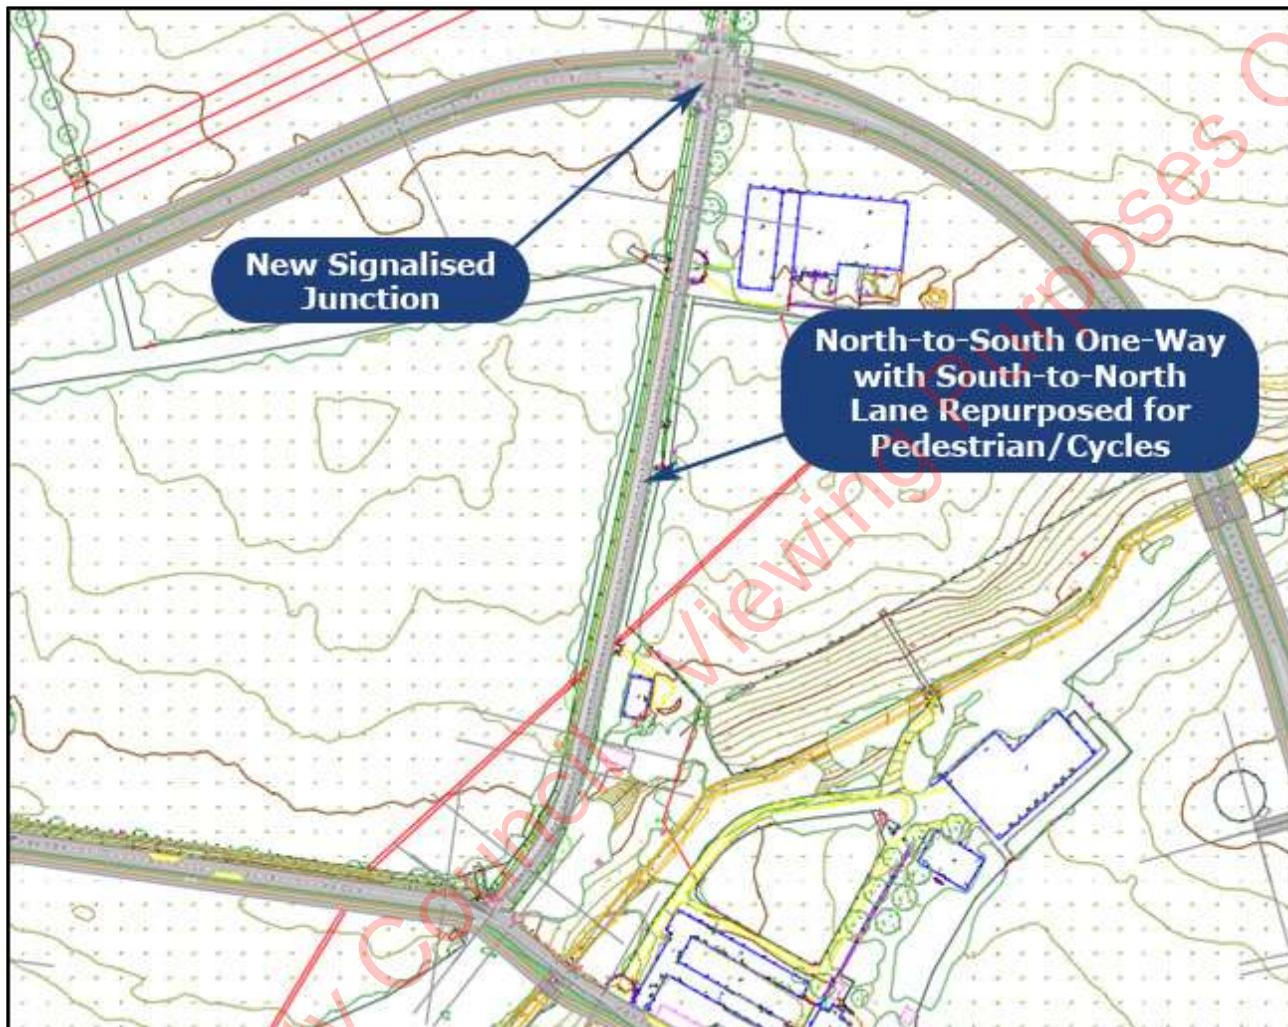

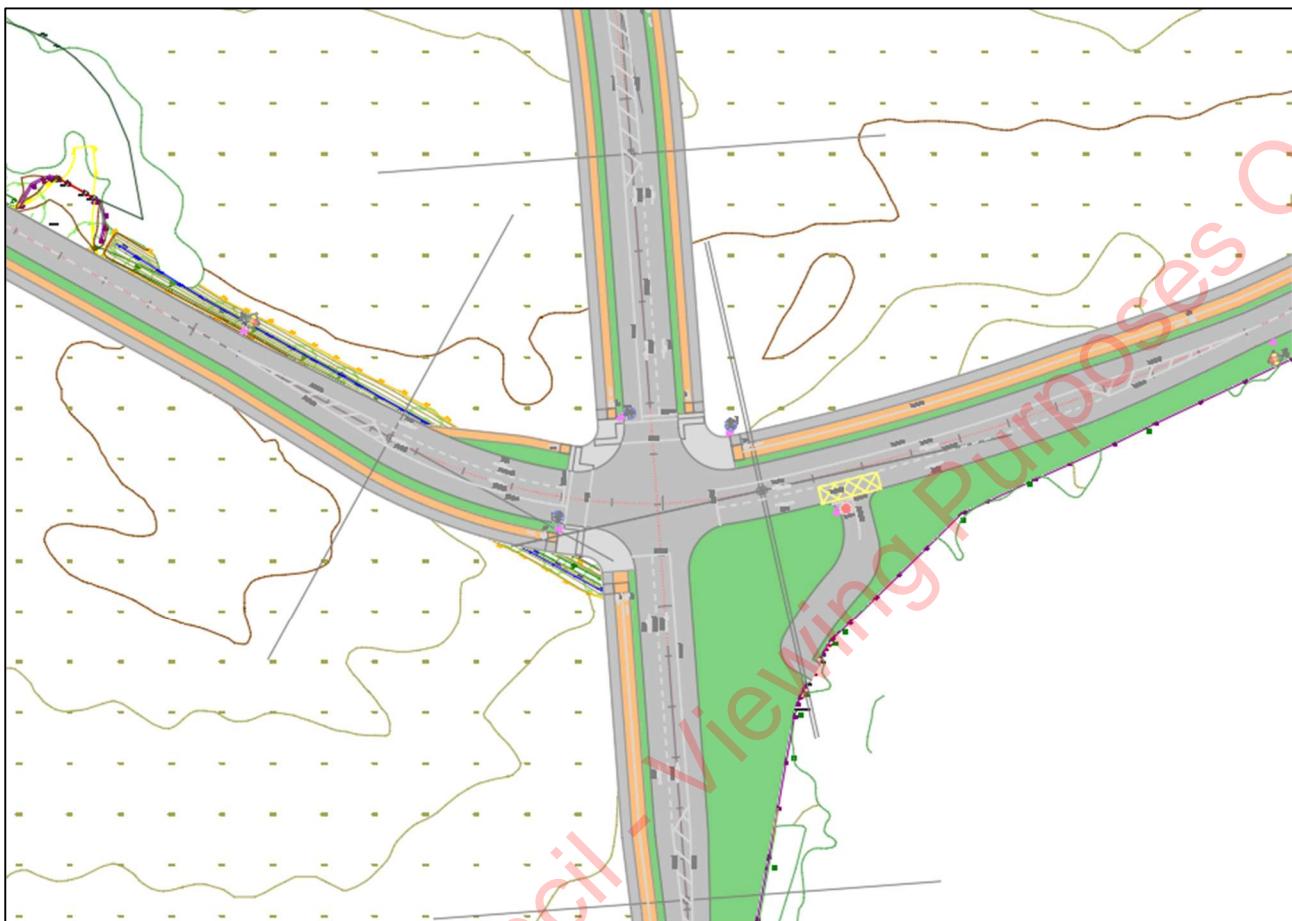

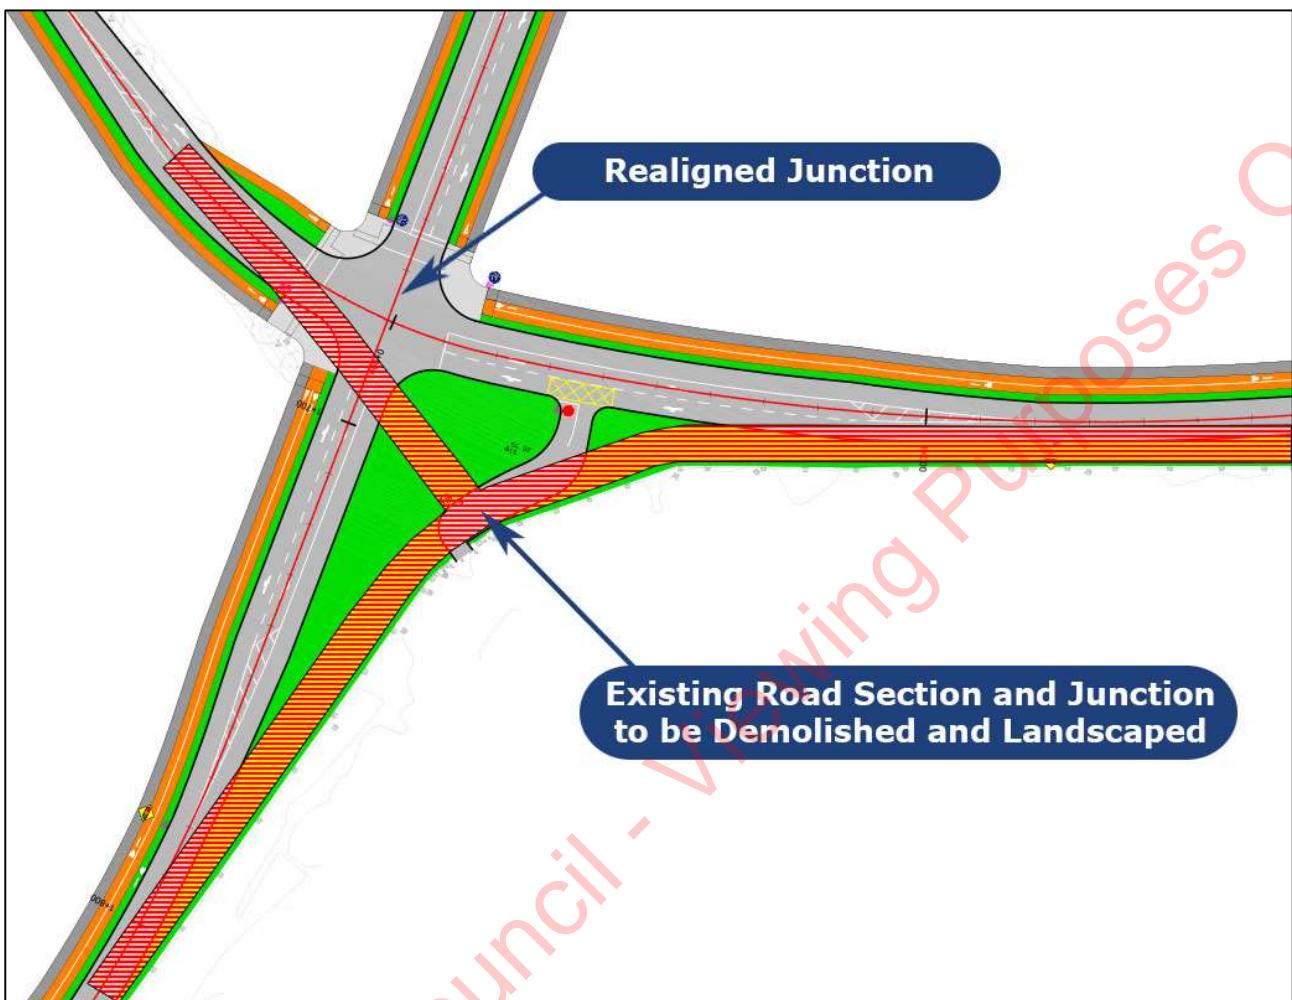

Figure 8: Center of Arc (L2214 - Kilcloon Road)

The junction between the R157, L6219, MOOR and Dunboyne Road on the eastern side of the arc will be realigned and constructed as 4-leg signalised junction, as shown below.

*Figure 9: Realigned Signalised Junction on Eastern*

For the construction of this junction, a portion of the existing R157 and Dunboyne Road will be realigned, as shown in the figure below.

*Figure 10: Existing R157/Dunboyne Road Realignment*

Four different bridges will be constructed as part of the MOOR. These are highlighted in the figure below.

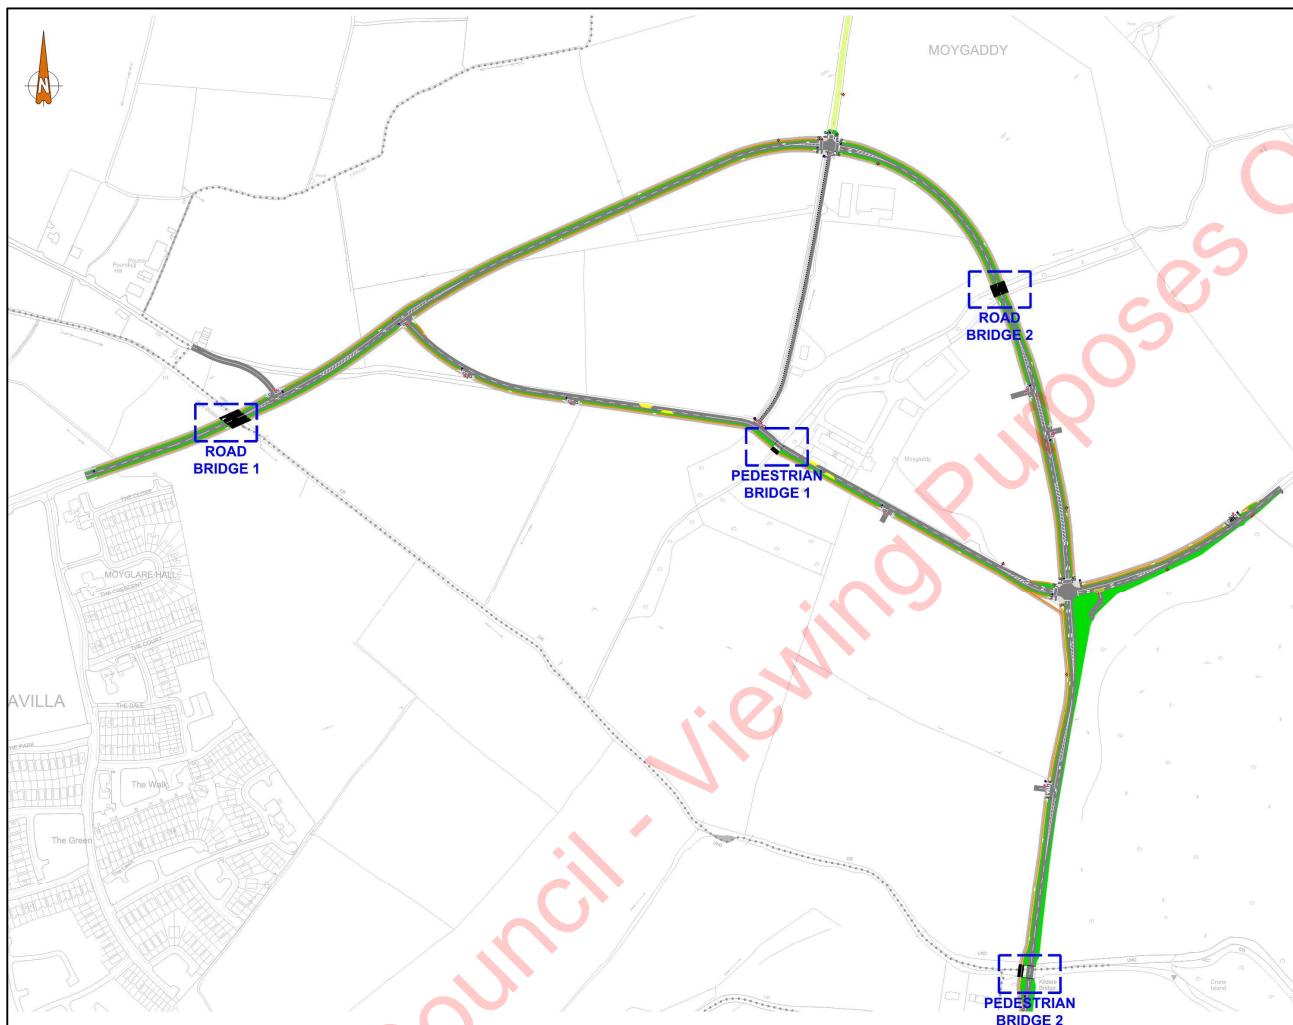

Figure 11: MOOR Bridges

Road bridges 1 and 2 will be new bridges which will be constructed as part of the MOOR. Pedestrian bridges 1 and 2 will be additional structures constructed adjacent to the existing bridge structures to accommodate pedestrian and cycle permeability. More information on these bridges is available in OCSC report "Bridge Options Report" submitted separately.

## TRIP GENERATION

The traffic generation potential of the developments, which are part of the Masterplan, for each analysis year has been estimated using the Trics software modelling database. This database contains records of surveys carried out at a range of development types across the UK and Ireland. It records a variety of details including the number and type of vehicles entering and exiting the site as well as several other site-specific factors.

It is noted that the potential additional trips generated by the developments are estimated to allow the maximum estimated trips included as part of this assessment which will ensure a comprehensive and conservative assessment. Cognisance should be taken of the fact that the trip generation makes no allowance for any internal or diverted trips. This masterplan contains mixed land-uses, including several trip generators and attractors in the area. This aspect has not been considered for the trip generation, further highlighting the conservative nature of this calculation.

When developing traffic generation estimates for any development, several surveys are selected from the database based on a range of factors including development type, size, location, public transport etc. The results are then used to establish trip rates for the development in question which is ultimately used to derive estimates for traffic generation.

### Opening Year Developments

The trip generation for the developments in the vicinity, anticipated to be operational by the Opening Year, as discussed in Chapter 3, are shown in the tables following:

Time Range	Apartments			Houses			SHD Development <i>Total</i>	
	166	units	<i>Total</i>	194	units	<i>Total</i>

Table 19: Estimated Future Trips Generated by the Hotel and Tourism Development

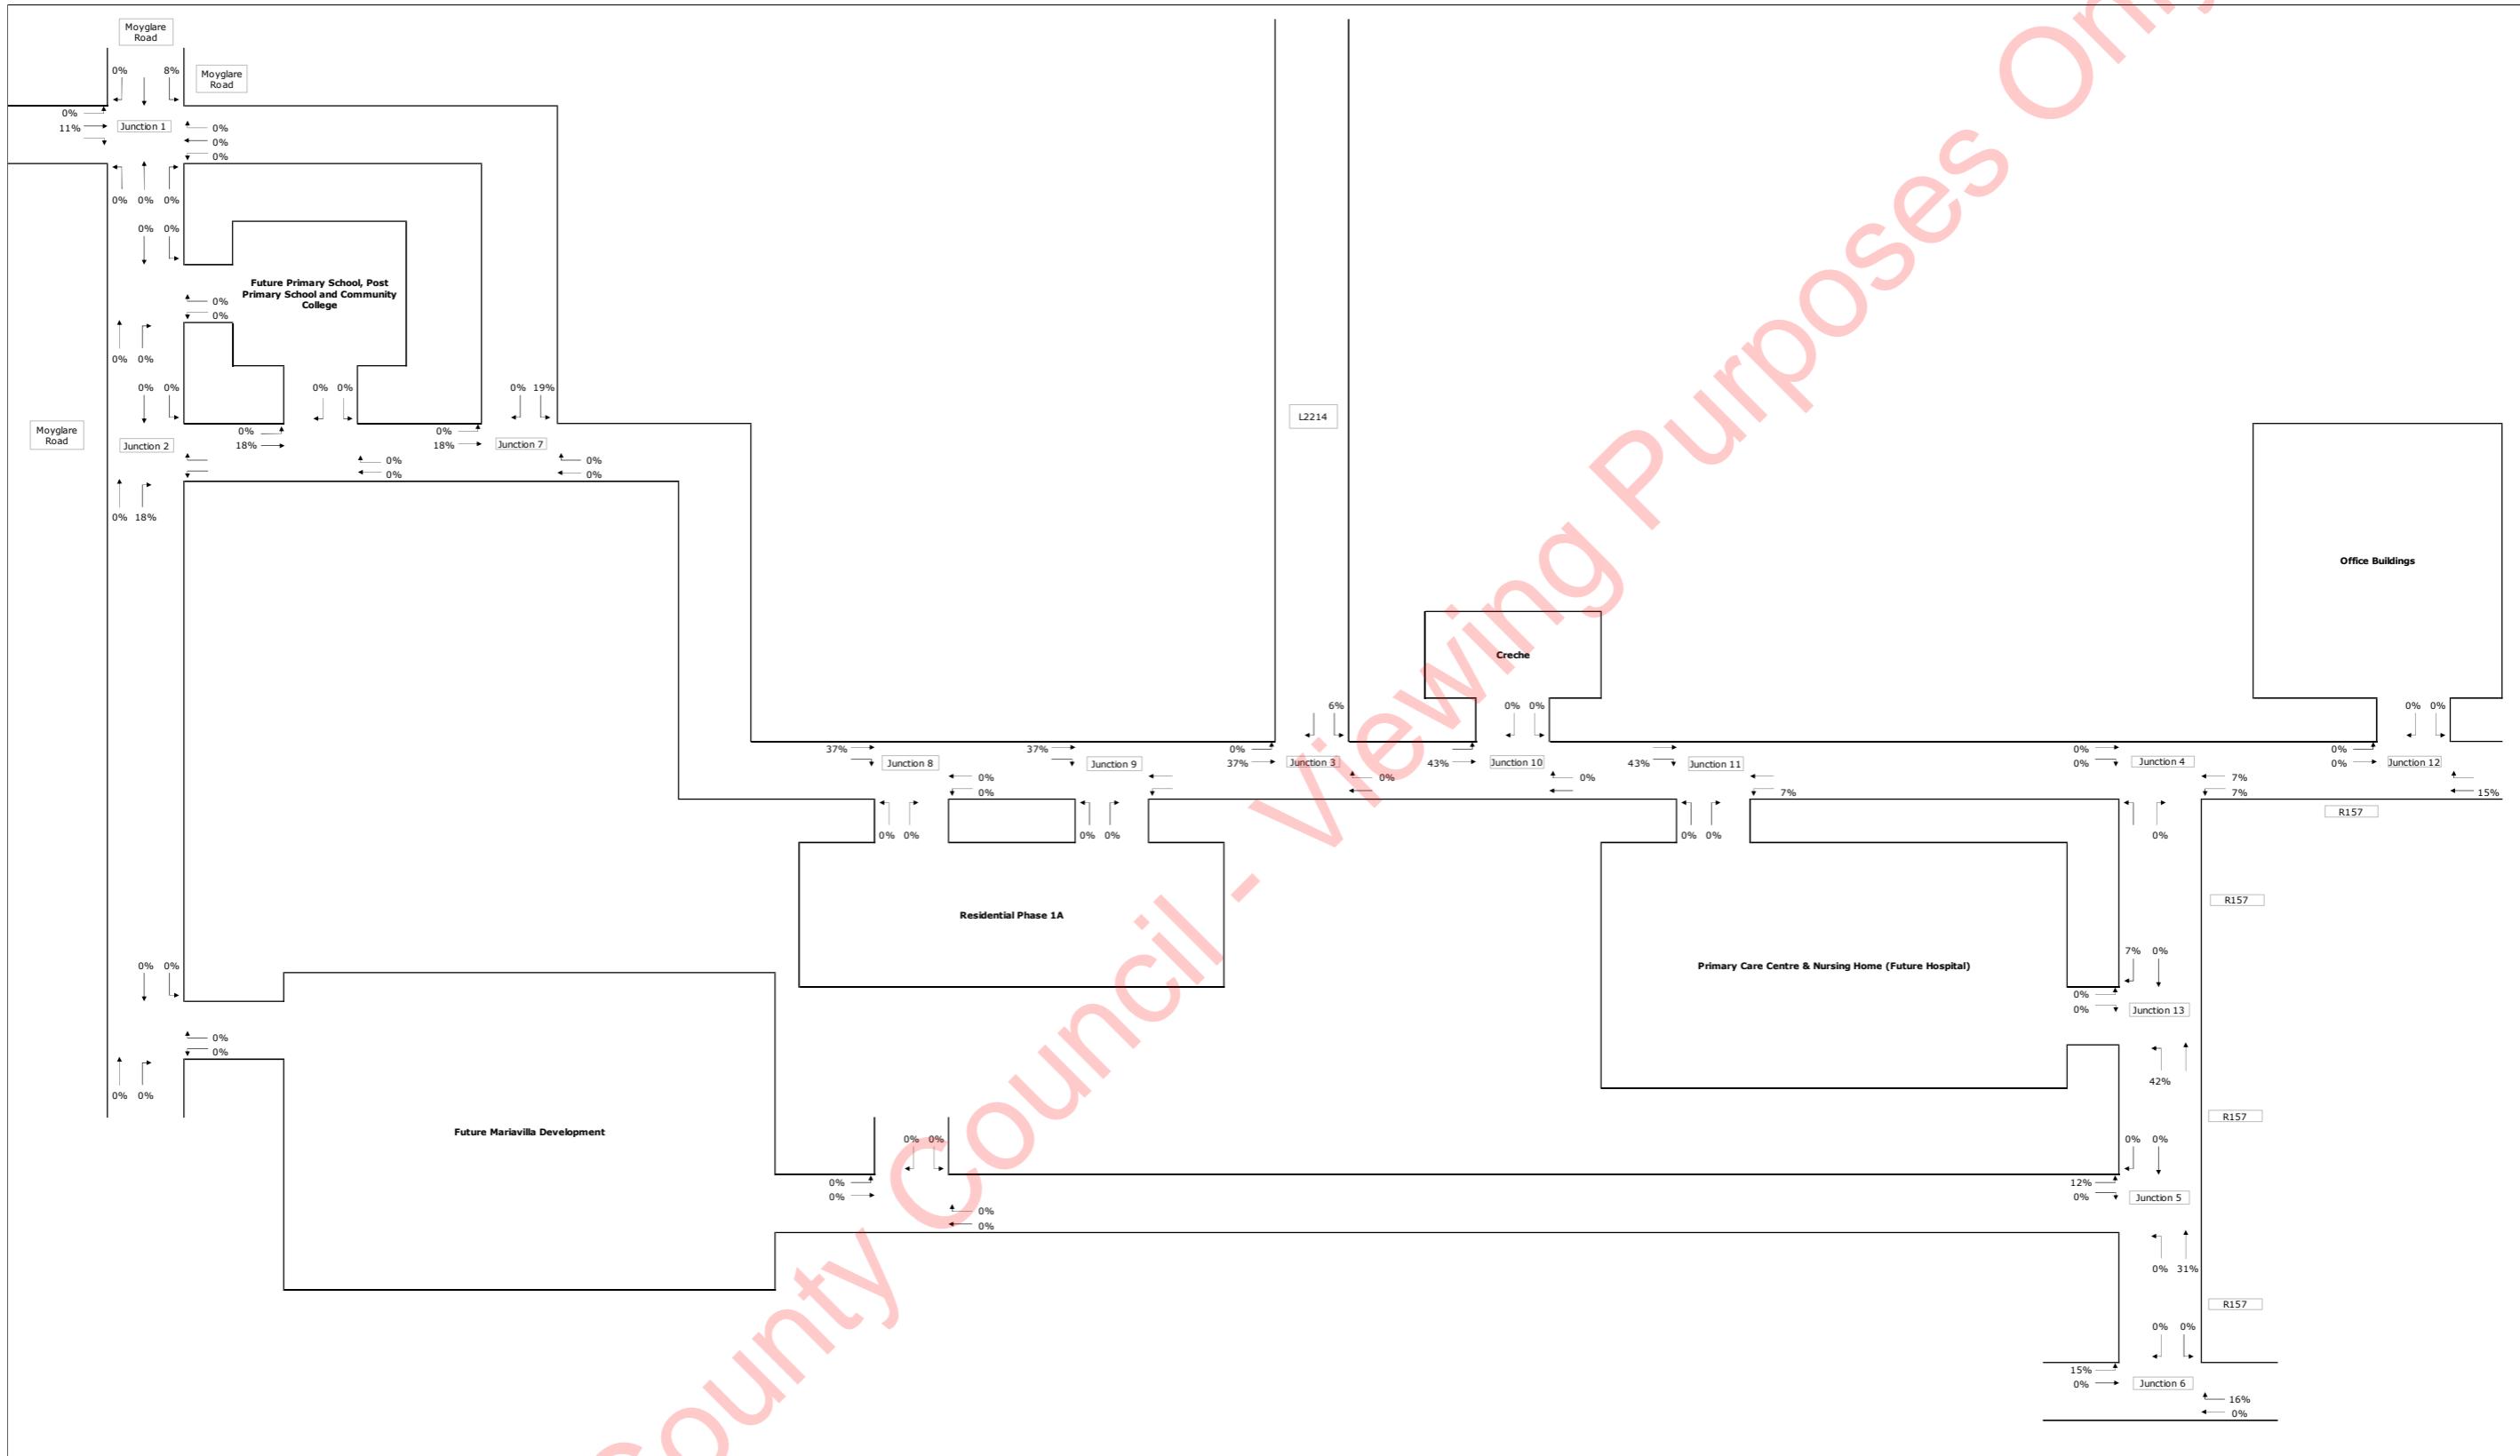

## TRIP DISTRIBUTION

Trip distribution was done through an origin-destination assessment, using the junction surveys. A percentage arrival/departure split was calculated according to the peak hour. These percentages are shown in the table below:

Origin/Destination	AM		PM		AADT	
	Arr	Dep	Arr	Dep	Arr	Dep
Moyglare Road (S)	8%	18%	14%	9%	12%	13%
Moyglare Road (N)	8%	2%	3%	8%	6%	5%
Moyglare Road (W)	11%	3%	3%	9%	6%	6%
Mariavilla	10%	3%	3%	6%	6%	5%
L2214	6%	3%	3%	6%	6%	5%
R157 (N)	15%	28%	24%	13%	18%	18%
Dunboyne Road	12%	7%	5%	11%	1%	8%
R148 (W)	15%	16%	23%	18%	23%	19%
R148 (E)	16%	20%	23%	20%	22%	21%
<b>Total</b>	<b>100%</b>	<b>100%</b>	<b>100%</b>	<b>100%</b>	<b>100%</b>	<b>100%</b>

*Table 20: Trip Distribution Percentages*

The origin and destination values for the additional zones included in the various models to represent the developments, as discussed in the *Trip Generation* section of this document, were distributed according to the above table. The percentage of arrivals and departures of this development are shown in the figures overleaf. In reality, the model uses the percentages as the origin-destination values. The distribution along the roads are estimated, with the model assigning these trips automatically.

*Figure 12: Development Trip Arrival Distribution – AM Peak*

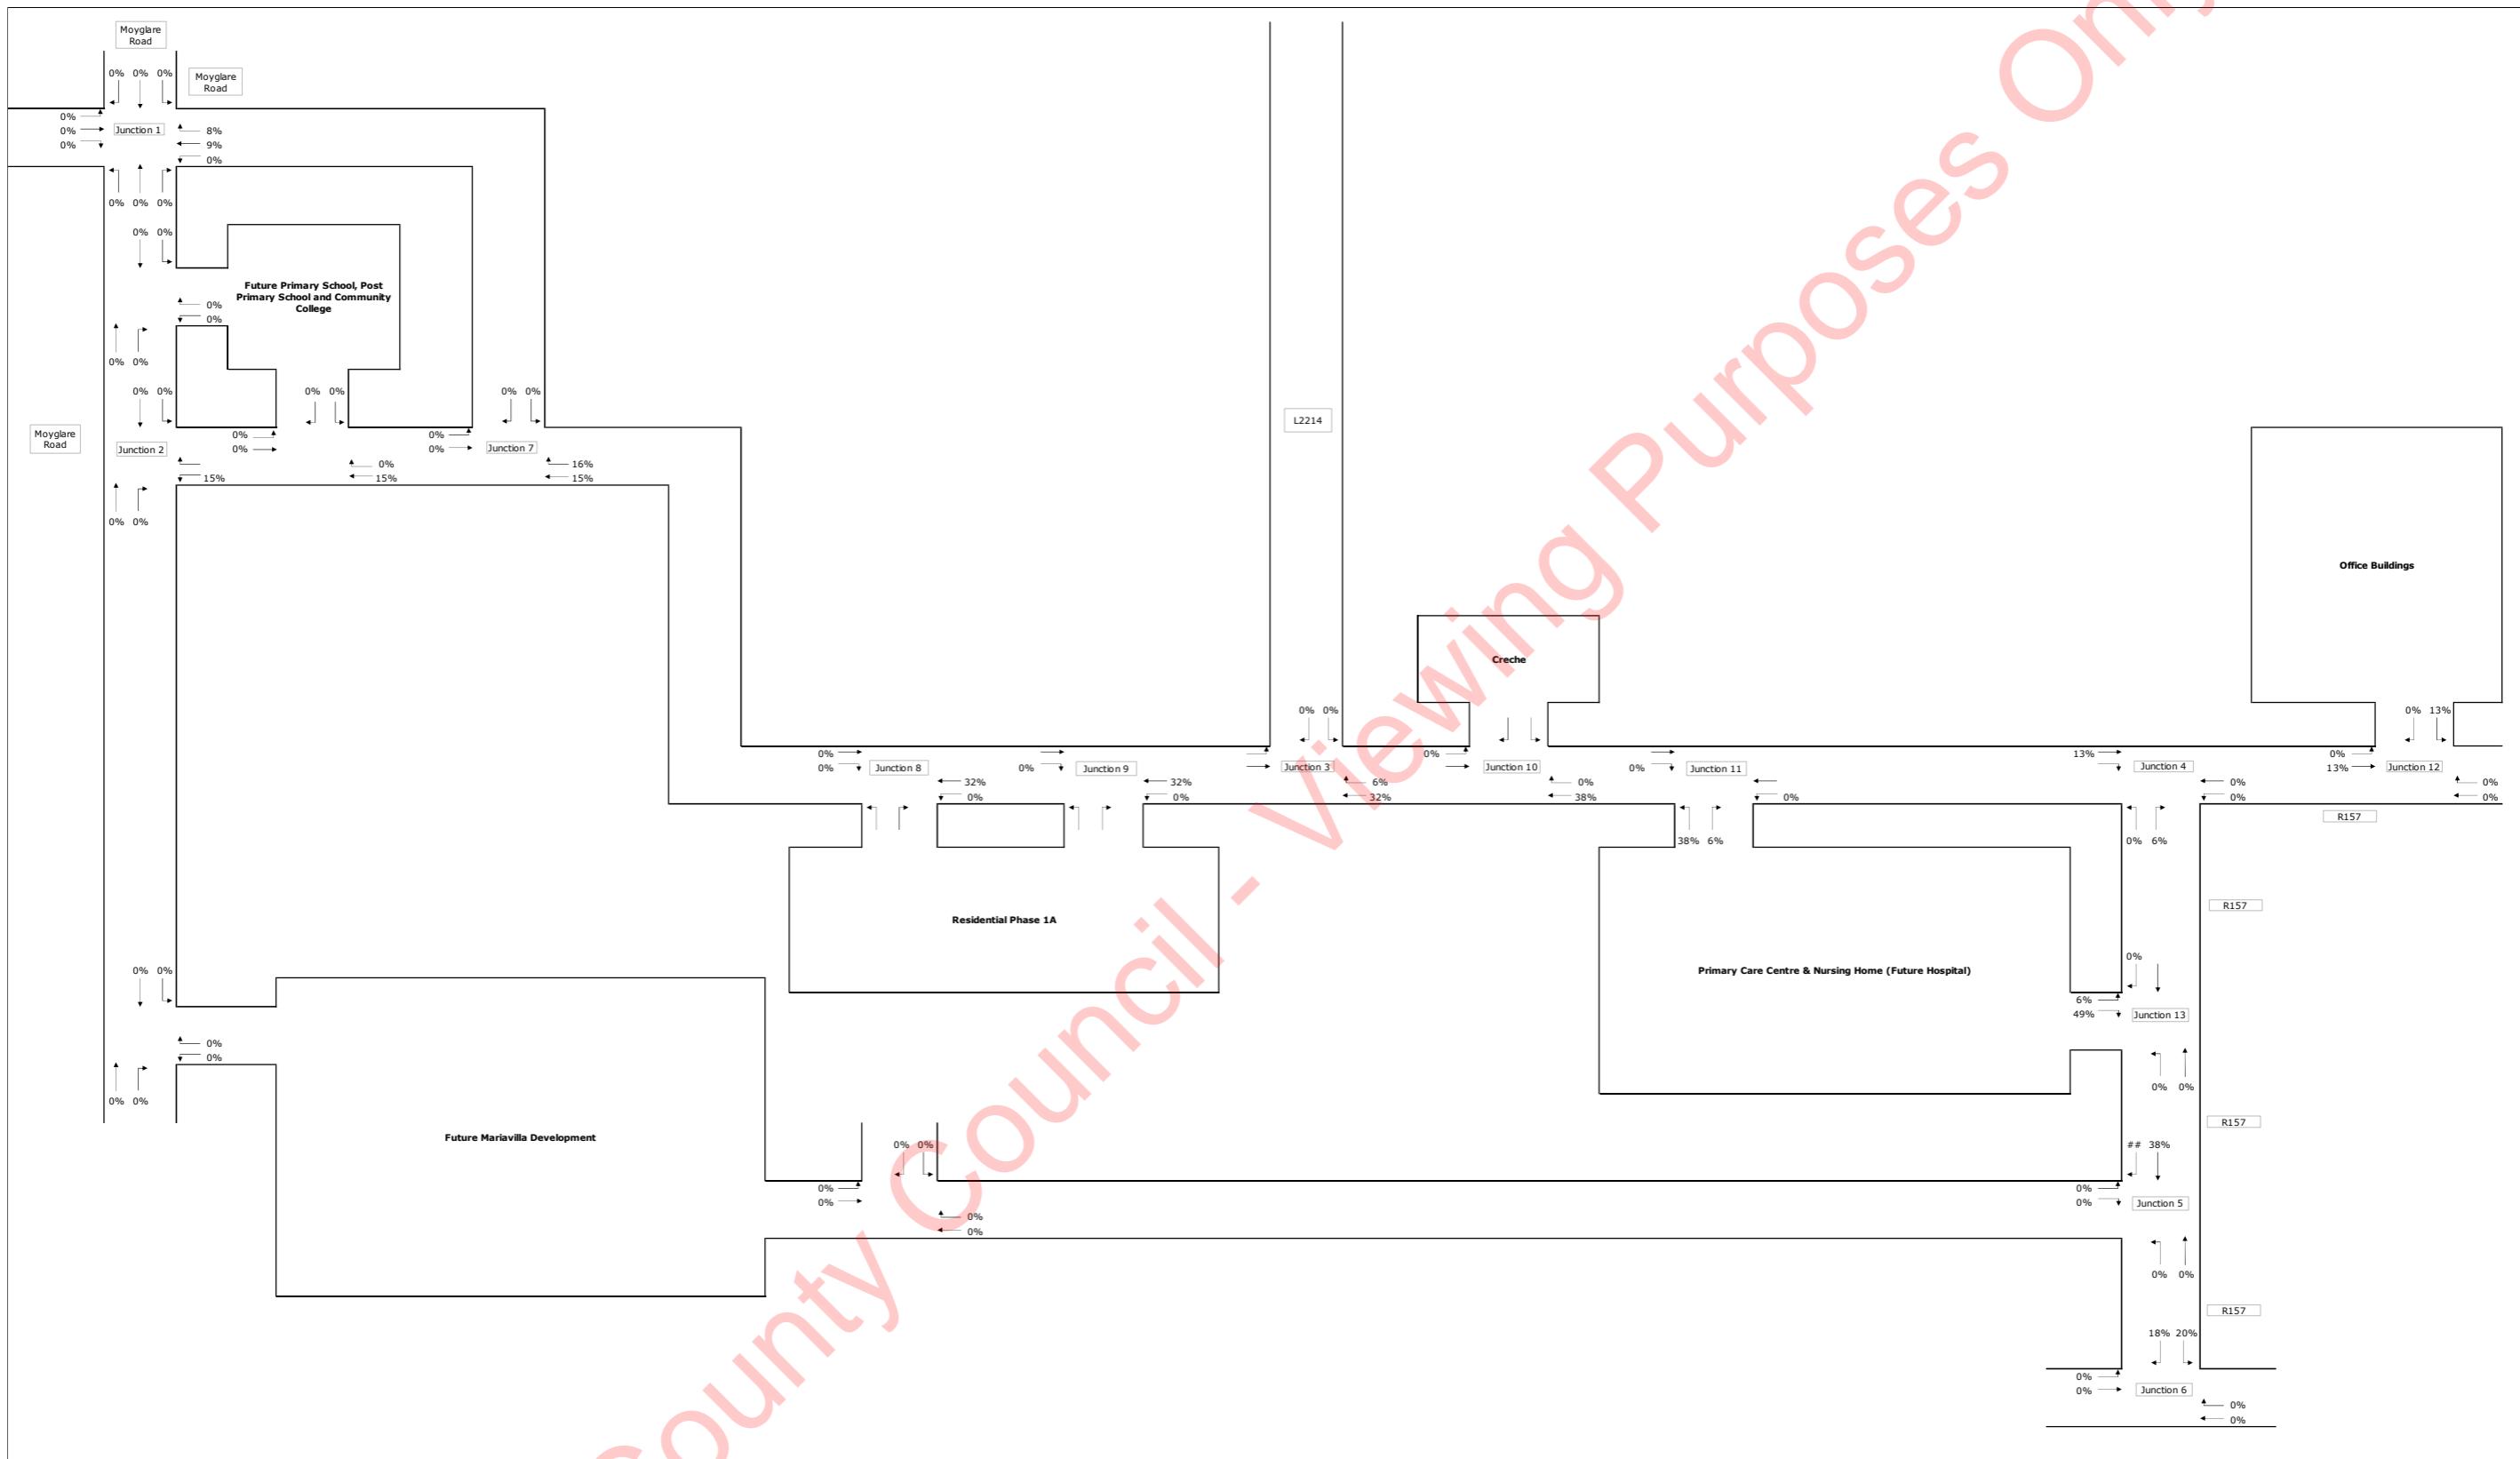

Figure 15: Development Trip Destination Distribution – PM Peak

## 6 POTENTIAL IMPACT OF DEVELOPMENT CONSTRUCTION

It is difficult to assess the exact quantum of traffic that will be generated during the construction period. However, to estimate the volume and rate of construction traffic, it is first necessary to estimate the amount of excavation and earthworks required on the site. Topsoil and subsoil/stones will be excavated to accommodate roads, footpaths, services, and construction. It is noted that for all areas of new construction (excluding green areas such as public open spaces and gardens) that the existing topsoil needs to be removed. As is good sustainable practice the topsoil excavated on the site will all be utilised on the site and added to the existing topsoil in areas such as gardens and open spaces. This will improve the depth of the growing medium in these areas and remove any requirement to transport topsoil from the site. The geotechnical investigations of the site suggest that there is generally 100mm of topsoil in the area for construction with some areas of 200mm of topsoil uncovered in the study area. There will be a requirement to remove topsoil from the site. Based on a 3d ground model of the existing site the expected volume of materials has been calculated. The following calculations have been made (see Table 2 over):

Item	Cut Volume (m <sup>3</sup> )		Fill Volume (m <sup>3</sup> )
Roads	34 750		17 250
Total Cut	Cut	Reuse	Export
	34 750 m <sup>3</sup>	17 250 m <sup>3</sup>	17 500 m <sup>3</sup>
Total Fill	Fill	Reuse	Import
	17 250 m <sup>3</sup>	17 250 m <sup>3</sup>	0 m <sup>3</sup>
<b>Total Haulage</b>	<b>c. 40 250 Tonnes</b>		

*Table 21: Development Cut & Fill Calculations*

The cited figures in the table above are overall cumulative cut and fill volumes and relate to all proposed works at the site. It should be noted that these numbers are approximated and will be subject to change depending on construction methodologies

and ambient weather conditions at the time of the works. It was assumed that the density of excavated material is approximately 2.3 tons/m<sup>3</sup>.

Based on this, and from the experience of similar construction projects, it is considered that there will be a maximum of twelve HGVs serving the site during any given daytime hour. This is based upon the knowledge that it takes on average 10 minutes to load a lorry with spoil but could be as short as 5 minutes. As such, the two-way HGV traffic is unlikely to be higher than 24 vehicles per hour at any point of the day. Based on an 8-hour day and a 22-working day month, 24 vehicles per hour equates to 4,224 vehicles per month.

It is worth noting however that the 40 250 tonnes of combined recycling & disposal equate to just over 2 015 truckloads based on 20 tonnes per load. It should be further noted that three other developments, an office development, Nursing Home & Primary Care Centre & SHD development, are earmarked for construction during a similar timeframe as this development, within the same area. It could be possible that excess cut volumes from these sites can be used for the shortfall of fill volume for this site, reducing the amount of material that needs to be imported.

Measures will be put in place to minimise the amount of construction traffic generated by the development. These measures will include the reuse of materials within the site for landscape purposes, or within adjacent sites for fill, to limit the amount of spoilage.

It will be an objective of this development to reuse as much material as possible and minimise the amount of material to be transported off-site. Furthermore, the possibility will be investigated of using excess cut material in other developments which form part of the wider masterplan, implemented within the same timeframe of this development. This will minimise the transportation distance, which will reduce the environmental impacts and cost of the development.

The contractor will maximise the use of precast materials or prefabricated materials wherever possible and economically viable. Adequate storage space will be provided on site for the storage of materials and a site strategy will be put in place to manage the

timing of deliveries to the site. Trips by construction workers will be limited by the provision of car-sharing and Travel to Work Scheme benefits. Construction workers will be encouraged to use public transport to the maximum possible extent. Adequate storage space will be provided on site for the storage of materials and a site strategy will be put in place to manage the timing of deliveries to the site.

It is not anticipated that the amount of construction traffic will exceed the amount of operational traffic.

Meath County Council - Viewing Purposes Only!

## 7 POTENTIAL IMPACT OF DEVELOPMENT OPERATION

### TRAFFIC REDISTRIBUTION

To assess the potential redistribution of traffic due to the implementation of the development, the dynamically assigned Vissim model was consulted. It should be noted that route choice was limited to reject paths with a total cost higher than 50% as compared to the best path, as road users will in general avoid long detours. Two potential redistribution implications are relevant to this area.

#### **Redistribution to Kilcloon Road (L2214)**

The first potential redistribution entails vehicles north- and southbound on Moyglare Road and Kilcloon Road (L2214), to and from the R156 in the north. With the inclusion of the MOOR, the Kilcloon residents have historically raised a concern that the route along Kilcloon is an easier access route than along Moyglare Road, towards the R156 in the north, which could lead to redistribution and an increase in traffic through the village of Kilcloon.

To assess this potential redistribution, an assumption was made that all surveyed vehicles travelling north and south, north of the junctions between Moyglare Road and the L6219, and between the L6219 and L2214, travel to and from the R156. Although this is unlikely, it does represent a worst-case scenario and is a very conservative and robust assumption.

For Vissim to accurately determine this redistribution, Moyglare Road and the L2214 were extended up to the R156, with all associated speed changes along the way. This is important as the average speed will affect route choice.

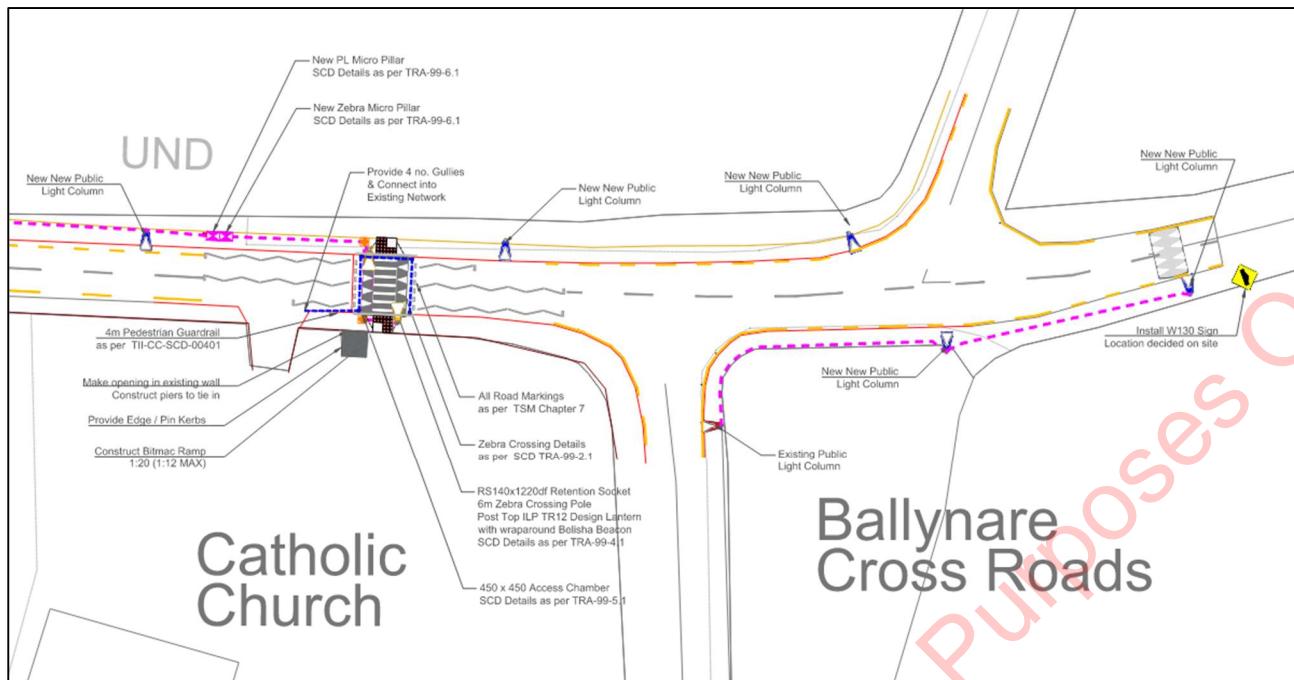

It should be noted that through discussions with Meath County Council, it was identified that they are planning on implementing various traffic calming measures at Kilcloon to

deter traffic from using this road. The Kilcloon Traffic Calming Scheme proposes traffic calming at two locations, shown in the figure below, extracted from drawing number TRA-04-012-04-99-DG3802 of the Kilcloon Traffic Calming Scheme:

Figure 16: Proposed Site Location of Kilcloon Traffic Calming Scheme

Of particular importance to this assessment is the traffic calming proposed at the Catholic Church. The extent of proposed works at this location is shown in the figure overleaf, extracted from drawing number TRA-04-012-04-99-DG3804 of the Kilcloon Traffic Calming Scheme. Whilst these traffic calming works are not part of this SHD application, due consideration has been given to the impact of the works proposed by MCC.

*Figure 17: Extent of Traffic Calming Proposed at Kilcloon Catholic Church*

Through discussions with MCC, it has been determined that these works are currently being tendered for, with tenders due from contractors on 11 August 2022. It is anticipated by MCC that all works will be completed by the end of November 2022, subject to receipt of a compliant tender.

In the interests of prudence, this traffic calming was not considered as part of the redistribution assessment so that a worst-case scenario could be assessed. The drawing pack for this scheme, as received from MCC, is included as *Appendix F* of this document.

The tables below show the vehicles travelling on these roads, as per the Vissim model, for all scenarios, and compare these volumes to the Do Nothing scenarios as a percentage increase/decrease:

Scenario	Year	Moyglare Road				L2214 – Kilcloon Road			
		North	%	South	%	North	%	South	%
Do Nothing	2019	50	-	131	-	54	-	116	-
	2023	64	-	174	-	59	-	145	-
	2028	70	-	186	-	59	-	155	-
	2038	67	-	188	-	75	-	162	-
Do Something	2023	59	-8%	166	-5%	69	17%	160	10%
	2028	72	3%	196	5%	72	22%	153	-1%
	2038	74	10%	204	9%	84	12%	178	10%
Do Max	2038	60	-10%	168	-11%	74	-1%	217	34%

Table 22: R156 Potential Traffic Redistribution - AM Peak

Scenario	Year	Moyglare Road				L2214 – Kilcloon Road			
		North	%	South	%	North	%	South	%
Do Nothing	2019	156	-	56	-	142	-	56	-
	2023	176	-	70	-	163	-	60	-
	2028	165	-	75	-	165	-	67	-
	2038	217	-	88	-	173	-	70	-
Do Something	2023	176	0%	74	6%	174	7%	66	10%
	2028	197	19%	77	3%	193	17%	76	13%
	2038	219	1%	87	-1%	198	14%	73	4%
Do Max	2038	215	-1%	75	-15%	182	5%	72	3%

Table 23: R156 Potential Traffic Redistribution - PM Peak

These results should be considered in the context of the link capacity. The table below indicates the available link capacity along Kilcloon Road, and the worst-case scenario volumes as per the scenarios shown in the table above.

Link	Width (m)	Link Capacity (veh/hr)	A.M. Peak (veh/hr)	RFC (%)	P.M. Peak (veh/hr)	RFC (%)
L2214 – Kilcloon Road – Do Nothing	5.00	1020	350	34%	158	15%
L2214 – Kilcloon Road – Do Maximum	5.00	1020	385	38%	160	16%

Table 24: Worst-Case Scenario (2040) Kilcloon Link Volumes

From the above tables, the following can be concluded:

- The volumes stay relatively consistent throughout the analysis years, as compared to the Do Nothing scenarios;
- An increase in the volumes of the Do Something and Do Maximum scenarios are to be expected as compared to the Do Nothing, as the development and masterplan trips are included;
- Compared to the Do Nothing scenarios within the same analysis years, the Do Something and Do Maximum scenarios have a negligible impact on Kilcloon Road;
- The table detailing link volumes shows that without specific development, just applying natural traffic growth as specific by TII will lead to a similar volume on this road as compared to the Do Maximum scenario;
- **The potential trip redistribution through Kilcloon due to the construction of the MOOR is negligible;**
- Furthermore, the expected impact will be further reduced with the inclusion of the Kilcloon Traffic Calming Scheme once it is implemented by MCC;

### **Redistribution to Maynooth**

The second potential redistribution entails vehicles travelling through Maynooth towards their destination. Since the traffic along the L6219 and the R157 will increase, specifically at the junction between these two roads, there is a possibility that vehicles will opt to travel through Maynooth should the distance or travel time between their origins and destinations be similar. To assess this, a link was included between Zone 1 and Zone 8, through Maynooth. To simulate the cost of travelling through town, the speed of this road section was reduced to 20km/h. This section starts just north of the Maynooth Boys' National School and ends just east of the Carton Retail Park access.

The tables below show the vehicles travelling on this road for all scenarios, and compare these volumes to the Do Nothing scenarios as a percentage increase/decrease. It should be noted that junction surveys were not conducted within the town. The traffic on this link was estimated from the junction surveys at Moyglare Road and Moyglare Hall

Estate, and the R157 and R148. Although this does not represent an accurate volume of vehicles through town, the redistribution through town should be evident.

Scenario	Year	Maynooth Town Road			
		Southeast	%	Northwest	%
Do Nothing	2019	16	-	31	-
	2023	192	-	26	-
	2028	227	-	27	-
	2038	255	-	43	-
Do Something	2023	47	-76%	13	-50%
	2028	86	-62%	9	-67%
	2038	164	-36%	36	-16%
Do Max	2038	330	29%	9	-79%

Table 25: Maynooth Potential Traffic Redistribution - AM Peak

During the morning peak period, a large volume of vehicles will redistribute through Maynooth in the future Do Nothing scenarios. This is due to the lack of capacity at the junction between the L6219 and the R157. It is evident that with the upgrade of this junction, as part of this development, the increased capacity will counteract this redistribution leading to much less traffic travelling through town. This emphasises the benefit of this development to the town of Maynooth in future.

Scenario	Year	Maynooth Town Road			
		Southeast	%	Northwest	%
Do Nothing	2019	1	-	14	-
	2023	10	-	35	-
	2028	9	-	69	-
	2038	22	-	79	-
Do Something	2023	14	40%	46	31%
	2028	11	22%	62	-10%
	2038	46	109%	67	-15%
Do Max	2038	32	45%	369	367%

Table 26: Maynooth Potential Traffic Redistribution - PM Peak

The results from the afternoon peak period differ slightly. The demand at the junction between the L6219 and the R157 is less during this peak as compared to the morning, which means sufficient capacity is available. When considering the Opening Year and Design Year scenarios, the situation is relatively similar with an increase in the southeast direction and a decrease in the northwest direction as compared to the Do Nothing scenarios. Even though the percentages seem significant, the actual difference isn't substantial for these scenarios.

## LINK CAPACITIES

For this study, and the context in which this area will transition from a more rural to a more urban setting due to the nature of the development, the links within the study area are assessed using an urban criterion.

TA 79/99 "Traffic Capacity of Urban Roads" from the DMRB provides information on the capacity of urban roads based on classification and width. Table 27 following shows the capacities of various road types based on this manual and using a 60:40 split in flow.

2 Way Single Carriageway – Busiest Direction of Flow (60/40 split)											
		Total Number of lanes									
		2		2-3		3		3-4		4	
Carriageway Width (m)		6.10	6.75	7.30	9.0	10.0		12.3	13.5		18.0
Road Type	UM	Not Applicable									
	UAP1	1020	1320	1590	1860	2010	2550	2800	3050	3300	
	UAP2	1020	1260	1470	1550	1650	1700	1900	2100	2700	
	UAP3	900	1110	1300	1530	1620	*	*	*	*	
	UAP4	750	900	1140	1320	1410	*	*	*	*	

Table 27: Urban Road Capacities

The local links have been classified based on the associated definitions in the DMRB. Using the previous table, link capacities have been calculated and current Ratio of Flow to Capacity (RFC) values have been assessed for the key links bordering the site. It should be noted that given the variation in width across the links in question, an average figure for each has been used which is rounded down to the nearest value shown in the above table, thus ensuring a conservative assessment of link capacity.

These values were extracted from the Vissim model. The base year values are calibrated according to the junction surveys, with all future year traffic free to redistribute throughout the network, as detailed previously in this chapter.

### Base Year (2019)

The Base Year RFC value for the links within the study area are shown in Table 28 below:

Link	Width (m)	Link Capacity (veh/hr)	A.M. Peak (veh/hr)	RFC (%)	P.M. Peak (veh/hr)	RFC (%)
Moyglare Road	6.00	1020	345	34%	339	33%
L6219	5.80	1020	429	42%	437	43%
L2214 – Kilcloon Road	5.00	1020	116	11%	142	14%
R157 – Dunboyne Road	7.00	1320	368	28%	587	45%

*Table 28: Base Year Link RFC Values for Local Network*

The link capacities during the base year are sufficient to accommodate the traffic with the highest ratio of flow to capacity occurring in the afternoon peak period on the L6219 and R157, with a value of 45%.

## Opening Year (2025)

The Opening Year Do Something scenario RFC value for the links within the study area are shown in Table 29 below:

Link	Width (m)	Link Capacity (veh/hr)	A.M. Peak (veh/hr)	RFC (%)	P.M. Peak (veh/hr)	RFC (%)
Moyglare Road	6	1260	920	73%	743	59%
L6219	7	1260	151	12%	222	18%
L2214 – Kilcloon Road	5	1020	223	22%	244	24%
R157 – Dunboyne Road	7	1320	931	71%	892	68%

*Table 29: Opening Year Do Something Link RFC Values for Local Network*

For the Opening Year, the full MOOR will be in operation. Flow on the L6219 will be restricted by means of chicanes. Furthermore, the section of the L2214 which traverses the Masterplan site area only, will be converted into a north-to-south one-way street with the adjacent lane converted into a pedestrian and cycling facility. The highest ratio of flow to capacity will occur on Moyglare Road during the morning peak with a value of 73%.

## Opening Year + 5 (2030)

The Opening Year + 5 Do Something scenario RFC value for the links within the study area are shown in Table 30 below:

Link	Width (m)	Link Capacity (veh/hr)	A.M. Peak (veh/hr)	RFC (%)	P.M. Peak (veh/hr)	RFC (%)
Moyglare Road	6.00	1260	945	75%	820	65%
L6219	7.00	1260	347	28%	284	23%
L2214 – Kilcloon Road	5.00	1020	225	22%	269	26%
R157 – Dunboyne Road	7.00	1320	1000	76%	1018	77%

*Table 30: Opening Year + 5 Do Something Link RFC Values for Local Network*

This scenario will utilise the same road infrastructure as the Opening Year scenario, with increased traffic due to additional masterplan developments. The highest ratio of flow to capacity will again be on the R157 during the afternoon peak with a value of 77%.

### Design Year (2040)

The Design Year Do Something scenario RFC value for the links within the study area are shown in Table 31 below:

Link	Width (m)	Link Capacity (veh/hr)	A.M. Peak (veh/hr)	RFC (%)	P.M. Peak (veh/hr)	RFC (%)
Moyglare Road	6.00	1260	1021	81%	887	70%
L6219	7.00	1260	281	22%	264	21%
L2214 – Kilcloon Road	5.00	1020	262	26%	271	27%
R157 – Dunboyne Road	7.00	1320	1060	80%	1008	76%

*Table 31: Design Year Do Something Link RFC Values for Local Network*

The road network will be identical to the Opening Year + 5 (2030) network, again with additional developments. The highest ratio of flow to capacity will again be on Moyglare Road during the morning peak, with a value of 81%.

The links around the development will thus provide sufficient capacity for all scenarios.

## JUNCTION CAPACITIES

The junction analysis was carried out using Vissim micro-simulation software as described earlier in this report. The scenarios in the table below correspond to the scenarios discussed in Chapter 3.

### Analysis Criteria

The results of the intersection analysis will be based on a Level of Service (LOS) measurement, which uses measured delay experienced by a vehicle at the intersection and compares it to a scale of values defining the LOS. According to the National Roads Network Indicators 2019, published by TII, LOS is a quality measure describing operational conditions within a traffic stream and is a recognised international standard. The Level of Service (LOS) is based on the below, which has been taken from the Highway Capacity Manual (HCM) 2010. The type of intersection affects the allowable delay in each LOS bracket resulting in different values for a traffic signal and non-signalized intersection. An acceptable LOS is on an intersection where a LOS D and above (A, B and C) is achieved. An unacceptable LOS is represented by an E and an F.

LOS	Signalized Intersection	Unsignalized Intersection
A	≤10 sec	≤10 sec
B	10–20 sec	10–15 sec
C	20–35 sec	15–25 sec
D	35–55 sec	25–35 sec
E	55–80 sec	35–50 sec
F	>80 sec	>50 sec

*Table 32: Level of Service (Exhibit 18-4, HCM 2010)*

Saturation flow measurements are not a built-in feature of Vissim, because, unlike statistical models, micro-simulation models are not validated by degree of saturation, but rather by delays and queue lengths.

## Junction 1 - Moyglare Road/L6219

This junction is currently operating as a priority-controlled staggered four-leg junction with the north-south movement (Moyglare Road) as the major road. The worst-performing movement at each approach, for each scenario, is shown in the table below.

Peak	Scenario	Year	Moyglare (N)		L6219 (E)		Moyglare (S)		Moyglare (W)		
			LOS	Queue	LOS	Queue	LOS	Queue	LOS	Queue	
AM	1	DN	2019	A	0.01	A	0.21	A	0.00	A	0.51
	2	DN	2025	A	0.00	B	1.85	A	0.64	A	0.87
	3	DS	2025	A	0.00	A	0.43	A	0.33	A	1.27
	4	DN	2030	A	0.00	C	5.04	A	0.67	A	0.96
	5	DS	2030	A	0.01	A	1.40	A	0.74	A	1.31
	6	DN	2040	A	0.02	B	3.87	A	0.81	A	1.49
	7	DS	2040	A	0.04	A	0.91	A	0.19	A	2.08
	8	DM	2040	A	0.05	A	0.89	A	1.49	A	1.40
Peak	Scenario	Year	Moyglare (N)		L6219 (E)		Moyglare (S)		Moyglare (W)		
			LOS	Queue	LOS	Queue	LOS	Queue	LOS	Queue	
PM	9	DN	2019	A	0.02	A	1.13	A	0.00	A	0.25
	10	DN	2025	A	0.05	A	3.47	A	0.04	A	0.27

	16	DM	2040	A	0.00	A	3.36	A	0.84	A	0.35

*Table 33: Junction 1 Analysis Results*

The following conclusions can be drawn from the scenarios:

- Do Nothing: This junction performs adequately for all the analysed scenarios for DN, with no significant delays.
- Do Something: This junction performs adequately for all the analysed scenarios for DS, with no significant delays.

- Do Maximum:** This junction performs adequately for the analysed scenarios of DM, with no significant delays.

### Junction 2 - Moyglare Road/Mariavilla

This junction is currently operating as a priority-controlled T-junction with the north-south movement (Moyglare Road) as the major road. The worst-performing movement at each approach, for each scenario, is shown in the table below.

Peak	Scenario	Year	Moyglare (N)		Mariavilla (E)		Moyglare (S)	
			LOS	Queue	LOS	Queue	LOS	Queue
AM	1	DN 2019	A	0.00	A	0.17	A	0.02
	2	DN 2025	A	0.00	B	4.67	A	0.82
	3	DS 2025	A	0.00	C	15.57	A	0.47
	4	DN 2030	A	0.00	B	7.52	A	0.56
	5	DS 2030	A	0.04	C	8.62	A	0.88
	6	DN 2040	A	0.00	B	6.37	A	0.66
	7	DS 2040	A	0.00	C	9.88	A	0.57
	8	DM 2040	A	0.00	B	8.03	A	0.45
PM	Scenario	Year	Moyglare (N)		Mariavilla (E)		Moyglare (S)	
			LOS	Queue	LOS	Queue	LOS	Queue
	9	DN 2019	A	0.00	A	0.11	A	0.10
	10	DN 2025	A	0.00	A	0.22	A	0.19
	11	DS 2025	A	0.00	A	0.25	A	0.13
	12	DN 2030	A	0.00	A	0.77	A	0.44
	13	DS 2030	A	0.00	B	0.53	A	0.15
	14	DN 2040	A	0.00	A	0.53	A	0.33
	15	DS 2040	A	0.00	A	0.69	A	0.22
	16	DM 2040	A	0.00	E	17.25	A	1.30

Table 34: Junction 2 Analysis Results

The following conclusions can be drawn from the scenarios:

- Do Nothing: This junction performs adequately for all the analysed scenarios for DN, with no significant delays.
- Do Something: This junction performs adequately for all the analysed scenarios for DS, with no significant delays.
- Do Maximum: There could be congestion at this junction during the afternoon peak on the eastern approach. This is mainly due to the majority of the masterplan trips being included in the analysis. However, as previously mentioned the traffic estimations for the masterplan is very conservative. It should be noted that this junction is earmarked to be upgraded as part of the extension of a section of the MOOR within County Kildare to the west, in future by Kildare County Council.

### Junction 3 - L6219/L2214

This junction is currently operating as a priority-controlled T-junction with the east-west movement (L6219) as the major road. The worst performing movement at each approach, for each scenario, is shown in the table overleaf.

Peak	Scenario	Year	L6219 (W)		L2214 (N)		L6219 (E)		
			LOS	Queue	LOS	Queue	LOS	Queue	
AM	1	DN	2019	A	0.00	A	0.22	A	0.06
	2	DN	2025	A	0.00	A	0.59	A	0.05
	3	DS	2025	A	0.00	A	0.0	A	0.0
	4	DN	2030	A	0.00	A	0.67	A	0.06
	5	DS	2030	A	1.23	C	0.97	A	0.00
	6	DN	2040	A	0.00	A	0.53	A	0.10
	7	DS	2040	A	1.23	C	0.97	A	0.00
	8	DM	2040	C	1.23	C	0.97	A	0.00
Peak	Scenario	Year	L6219 (W)		L2214 (N)		L6219 (E)		
			LOS	Queue	LOS	Queue	LOS	Queue	
PM	9	DN	2019	A	0.00	A	0.12	A	0.03
	10	DN	2025	A	0.00	A	0.11	A	0.28
	11	DS	2025	A	0.00	A	0.02	A	0.00
	12	DN	2030	A	0.00	A	0.18	A	0.14
	13	DS	2030	A	0.00	A	0.15	A	0.00
	14	DN	2040	A	0.00	A	0.11	A	0.64
	15	DS	2040	A	0.00	A	0.15	A	0.00
	16	DM	2040	A	0.00	A	0.15	A	0.00

Table 35: Junction 3 Analysis Results - DN & DS

- Do Nothing: This junction performs adequately for all the analysed scenarios for DN, with no significant delays.
- It should be noted that this junction will be modified for the Do Something scenarios, as well as the Do Maximum scenario. Flows will be reduced on the L6219 by means of chicanes as this area will change from a rural to a more urban area post development, and the section of the L2214 which traverses the wider Masterplan site will be changed to a north-to-south one-way road with the adjacent lane converted to a pedestrian and cyclist facility.
- Do Something: This junction performs adequately for all the analysed scenarios for DS, with no significant delays.

- Do Maximum:** This junction performs adequately for all the analysed scenarios for DM, with no significant delays.

### Junction 4 - R157/L6219

This junction is currently operating as a priority-controlled T-junction with the north-west movement (R157) as the major road. The worst-performing movement at each approach, for each scenario, is shown in the table below. **It should be noted that this junction is earmarked to be signalised (do something layout) as part of the phase 1 office development as well as this application.** This means that only the Do Nothing scenarios were analysed with the aforementioned geometry.

Peak	Scenario	Year	R157 (E)		R157 (S)		L6219 (W)		
			LOS	Queue	LOS	Queue	LOS	Queue	
AM	1	DN	2019	B	6.60	A	0.54	A	0.00
	2	DN	2025	C	13.46	A	1.34	A	0.00
	4	DN	2030	F	70.07	A	1.96	A	0.00
	6	DN	2040	F	151.12	A	4.00	A	0.00
PM	Scenario		Year	R157 (E)		R157 (S)		L6219 (W)	
				LOS	Queue	LOS	Queue	LOS	Queue
	9	DN	2019	B	0.80	A	1.41	A	0.00
	10	DN	2025	C	1.41	A	3.55	A	0.00
	12	DN	2030	D	3.99	A	4.97	A	0.00
	14	DN	2040	D	4.93	A	7.56	A	0.00

*Table 36: Junction 4 Analysis Results – DN*

As can be seen from the previous table, the junction performs within acceptable levels during the Base Year, with delays being experienced on the eastern approach for all future analysis years during the morning peak.

For the Opening Year Do Something scenario, this junction will be upgraded to a four-leg signalised junction. Upgrading this junction will improve the delays to within acceptable levels, with the addition of the Do Something traffic volumes. As can be seen, the delays are improved compared to the Do Nothing scenarios, which emphasise the benefit of the development to the local road network. The four-leg junction layout is shown in the figure following:

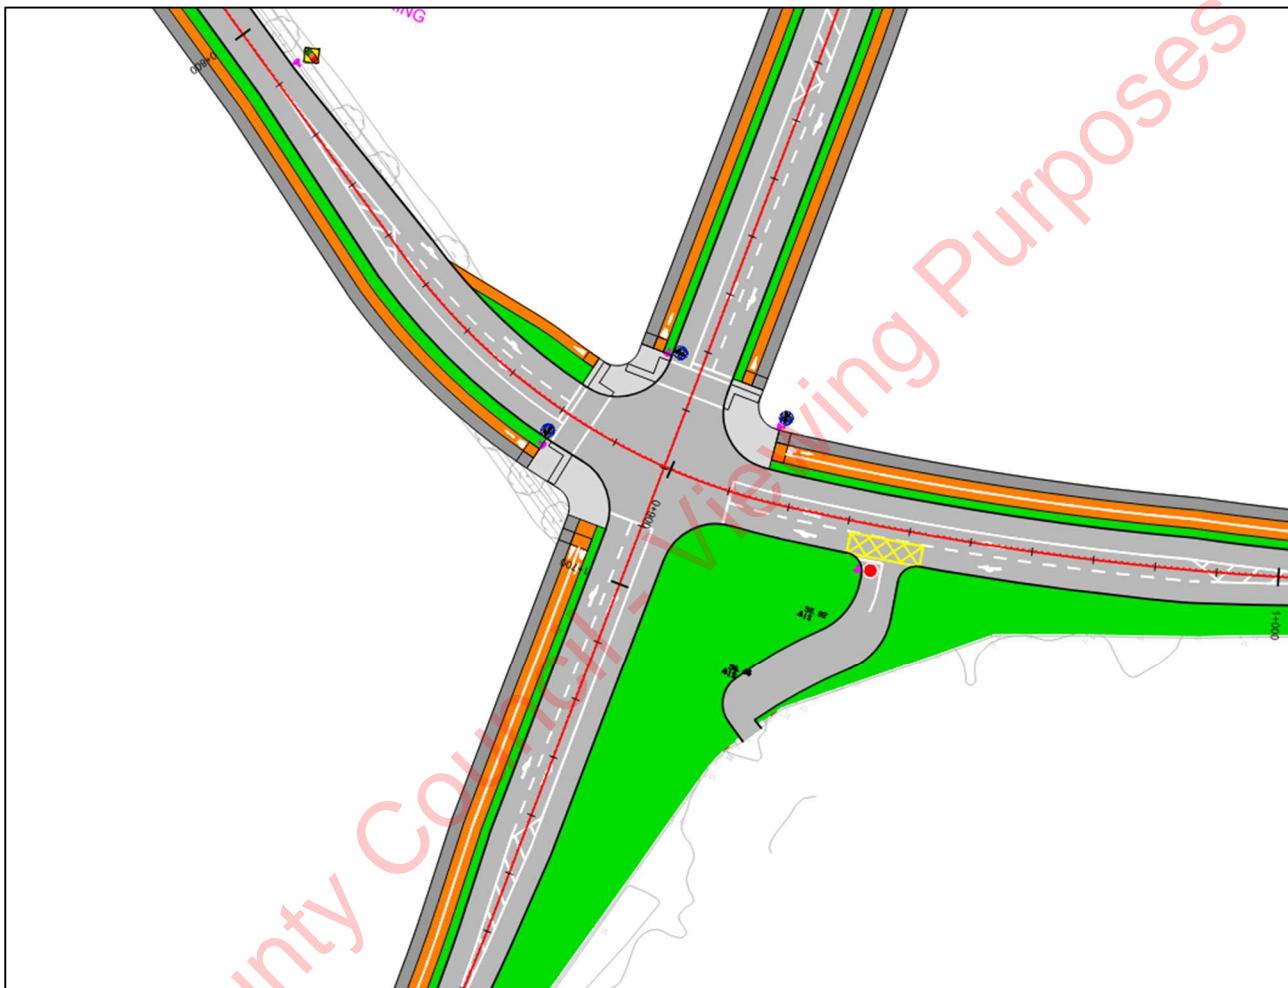

Figure 18: Junction 4 Do Something Layout

Peak	Scenario	Year	MOOR (N)		R157 (E)		R157 (S)		R6219 (W)		
			LOS	Queue	LOS	Queue	LOS	Queue	LOS	Queue	
AM	3	DS	2025	C	21.07	D	17.29	C	16.04	D	2.48
	5	DS	2030	C	13.31	D	17.44	C	13.34	D	14.21
	7	DS	2040	D	29.41	D	24.46	D	42.42	D	5.07
	8	DM	2040	D	19.35	D	14.09	C	21.15	D	8.53
PM	Peak	Scenario	Year	MOOR (N)		R157 (E)		R157 (S)		R6219 (W)	
				LOS	Queue	LOS	Queue	LOS	Queue	LOS	Queue
	9	DS	2025	C	3.91	C	22.44	C	14.24	C	3.60
	9	DS	2030	D	6.50	C	26.36	D	18.76	D	4.08
	13	DS	2040	C	5.83	C	31.38	C	16.69	C	4.99
	16	DM	2040	B	6.43	C	21.99	C	9.26	C	9.00

Table 37: Junction 4 Analysis Results – DM

The demand at this junction will be fairly high, due to the trips generated by additional developments within the masterplan. In addition, the traffic estimation for the Do Maximum scenario is very conservative as described previously in this document. To achieve acceptable levels of service at the junction during this scenario, an additional left-turning lane might be required on the northern approach, as well as an east-to-south (R157 to MOOR) left-turning slip lane.

According to the layout of the current development proposals, there will be sufficient space available to implement these infrastructural upgrades, should they be required in the future. However, each masterplan development will be applied for separately, and these further upgrades will be identified as part of those future applications, if required.

## Junction 5 - R157/Dunboyne Road

This junction is currently operating as a three-leg roundabout. The worst-performing movement at each approach, for each scenario, is shown in the table below.

Peak	Scenario	Year	R157 (N)		R157 (S)		Dunboyne Road (W)		
			LOS	Queue	LOS	Queue	LOS	Queue	
AM	1	DN	2019	A	0.44	A	0.20	A	0.82
	2	DN	2025	A	0.89	A	0.50	A	0.74
	3	DS	2025	A	2.40	A	0.54	A	1.08
	4	DN	2030	A	0.97	A	0.72	A	1.18
	5	DS	2030	A	3.56	A	1.16	A	1.26
	6	DN	2040	A	1.32	A	1.25	A	1.50
	7	DS	2040	C	14.50	A	3.20	A	2.75
	8	DM	2040	A	1.30	B	33.46	D	22.14
Peak	Scenario	Year	R157 (N)		R157 (S)		Dunboyne Road (W)		
			LOS	Queue	LOS	Queue	LOS	Queue	
PM	9	DN	2019	A	0.37	A	0.58	A	0.25
	10	DN	2025	A	0.44	A	1.48	A	0.31
	11	DS	2025	A	3.23	A	1.18	A	0.48
	12	DN	2030	A	0.66	A	1.17	A	0.44
	13	DS	2030	A	3.50	A	3.90	A	0.41
	14	DN	2040	A	1.22	A	1.77	A	0.41
	15	DS	2040	B	5.61	A	3.09	A	0.52
	16	DM	2040	A	2.76	A	1.76	A	0.29

*Meath County Council Only!*

Table 38: Junction 5 Analysis Results

The following conclusions can be drawn from the scenarios:

- Do Nothing: This junction performs adequately for all the analysed scenarios for DN, with no significant delays.

- Do Something:** This junction performs adequately for all the analysed scenarios for DS, with no significant delays.
- Do Maximum:** This junction performs adequately for the analysed scenarios of DM, with no significant delays.

### Junction 6 - R148/R157

This junction is currently operating as a priority-controlled T-junction with the east-west movement (R148) as the major road. The worst performing movement at each approach, for each scenario, is shown in the table overleaf.

Peak	Scenario	Year	R157 (N)		R148 (E)		R148 (W)		
			LOS	Queue	LOS	Queue	LOS	Queue	
AM	1	DN	2019	A	0.82	A	0.50	A	0.00
	2	DN	2025	C	4.28	A	3.00	A	0.00
	3	DS	2025	C	7.24	A	2.00	A	0.00
	4	DN	2030	C	6.14	A	2.40	A	0.00
	5	DS	2030	C	5.52	A	1.76	A	0.00
	6	DN	2040	C	5.90	A	3.76	A	0.00
	7	DS	2040	F	46.98	C	14.99	A	0.00
	8	DM	2040	D	13.42	C	20.20	A	0.00
Peak	Scenario	Year	R157 (N)		R148 (E)		R148 (W)		
			LOS	Queue	LOS	Queue	LOS	Queue	
PM	9	DN	2019	B	2.00	A	2.34	A	0.00
	10	DN	2025	D	5.70	B	10.91	A	0.00
	11	DS	2025	D	9.45	A	5.04	A	0.00
	12	DN	2030	E	14.56	B	16.58	A	0.00
	13	DS	2030	F	42.16	C	18.82	A	0.00
	14	DN	2040	F	24.45	C	26.91	A	0.00
	15	DS	2040	F	141.53	C	27.97	A	0.00
	16	DM	2040	F	115.77	A	4.82	A	0.00

*Meath County Council Viewing Purposes Only!*

Table 39: Junction 6 Analysis Results

The following conclusions can be drawn from the scenarios:

- Do Nothing: This junction performs adequately for all morning peak scenarios of the DN. During the afternoon peak, delays occur on the northern approach in 2030 and 2040.
- Do Something: The junction performs adequately during the morning peak period for all analysis years aside from the Design Year, during which some congestion is experienced on the northern approach. During the afternoon peak, congestion could be present on the northern approach for most of the analysed scenarios.
- Do Maximum: Delays will be present on the northern approach during the morning peak period.

It should be noted that this junction is earmarked for upgrading as part of Kildare County Council's proposal for the Maynooth Eastern Ring Road (MERR) scheme, which will increase the capacity. The junction is poised to be upgraded to a four-leg signalised junction.

This upgrade should address all the identified capacity problems.

## MOOR Junctions

The additional junctions to be constructed as part of the MOOR, not included in the previous analysis, are shown in the figure overleaf.

*Figure 19: Access Junctions*

### **Junction 7: L6219/Mariavilla Access Road**

This is a new junction that will be constructed with the extension of the Mariavilla Access Road to the R6219, as shown in Figure 19. The junction will operate as a priority-controlled T-junction with the east-west movement (Mariavilla Access Road/MOOR) as the major road. The worst performing movement at each approach, for each scenario, is shown in the table below.

Peak	Scenario	Year	L6219 (N)		MOOR (E)		Mariavilla (W)	
			DOS	Queue	DOS	Queue	DOS	Queue
AM	3	DS	2025	A	0.18	A	0.22	-
	5	DS	2030	A	0.75	A	0.25	-
	7	DS	2040	A	2.06	A	0.21	-
	8	DM	2040	A	0.53	A	0.18	-
PM	Scenario		Year	L6219 (N)		MOOR (E)		Mariavilla (W)
				DOS	Queue	DOS	Queue	DOS
	11	DS	2025	A	0.05	A	0.31	-
	13	DS	2030	A	0.17	A	0.13	-
	15	DS	2040	A	0.17	A	0.48	-
	16	DM	2040	B	93.00	A	1.26	-

*Table 40: Junction 7 – Worst DoS & Queue Results*

This junction will function adequately for all scenarios.

### Junction 14 – MOOR/R6219

This junction will be included as part of the build-out of the MOOR, as shown in Figure 19. The junction will operate as a priority-controlled T-junction with the east-west movement (MOOR) as the major road. The worst-performing movement at each approach is shown in the table below.

Peak	Scenario	Year	MOOR (E)		R6219 (S)		MOOR (W)	
			LOS	Queue	LOS	Queue	LOS	Queue
AM	3	DS	2025	-	-	A	0.18	A
	5	DS	2030	-	-	A	0.37	A
	7	DS	2040	-	-	A	0.32	A
	8	DM	2040	-	-	A	0.51	A
PM	Scenario		Year	MOOR (E)		R6219 (S)		MOOR (W)
				LOS	Queue	LOS	Queue	LOS
	11	DS	2025	-	-	A	0.12	A
	13	DS	2030	-	-	A	0.29	A
	15	DS	2040	-	-	A	0.66	A
	16	DM	2040	-	-	A	0.21	A

*Table 41: Junction 14 – Worst DoS & Queue Results*

This junction will function adequately for all scenarios.

## Junction 16 – MOOR/L2214

This junction will be included as part of the build-out of the MOOR, as shown in Figure 19. The junction will operate as a traffic signal controlled four-leg junction. The southern approach (L2214) will be a one-way exit road only. The worst-performing movement at each approach is shown in the table below.

Peak	Scenario	Year	L2214 (N)		MOOR (E)		L2214 (S)		MOOR (W)	
			LOS	Queue	LOS	Queue	LOS	Queue	LOS	Queue
AM	3	DS	2025	C	8.11	B	4.45	-	-	B 12.21
	5	DS	2030	D	8.70	B	7.34	-	-	B 12.94
	7	DS	2040	C	10.53	B	6.31	-	-	B 7.94
	8	DM	2040	D	10.50	B	6.48	-	-	B 14.16
Peak	Scenario	Year	L2214 (N)		MOOR (E)		L2214 (S)		MOOR (W)	
			LOS	Queue	LOS	Queue	LOS	Queue	LOS	Queue
PM	9	DS	2025	D	3.02	B	8.46	-	-	B 2.96
	9	DS	2030	D	3.68	B	13.29	-	-	B 4.36
	13	DS	2040	D	3.30	B	15.45	-	-	B 4.22
	16	DM	2040	C	2.90	B	19.63	-	-	B 7.47

*Table 42: Junction 14 – Worst DoS & Queue Results*

This junction will function adequately for all scenarios.

## 8 REMEDIAL/MITIGATION MEASURES

The previous chapter details the link and junction analysis. From this, it is evident that all links will have sufficient capacity for each analysis period. In terms of junctions, no remedial measures are required during the Opening Year (2025), aside from the upgrading of junction 4 (R157/L6219) which is already discussed in this report.

There could potentially be some congestion present at Junctions 2 and 6 in future, however, these junctions are already earmarked to be upgraded as part of other road projects.

Junction 2 will be upgraded as part of the extension of a section of the MOOR within County Kildare to the west, in future by Kildare County Council.

Junction 6 will be upgraded as part of Kildare County Council's proposal for the Maynooth Eastern Ring Road (MERR) scheme, which will increase the capacity.

## 9 VERIFICATION

This report was compiled and verified by:

*Wian Marais BE (US), BE (Hons) (UP), Professional Engineer (ECSA)*

*Civil Engineer*

This section displays the number of survey days per TRICS® sub-region in the selected set

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: No of Dwellings  
Actual Range: 14 to 84 (units: )  
Range Selected by User: 6 to 493 (units: )

Parking Spaces Range: All Surveys Included

Parking Spaces per Dwelling Range: All Surveys Included

Bedrooms per Dwelling Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/13 to 10/06/21

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	2 days
Tuesday	4 days
Wednesday	1 days
Thursday	1 days
Friday	3 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	11 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre)	6
Edge of Town	2
Neighbourhood Centre (PPS6 Local Centre)	3

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

C3	11 days
----	---------

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:

All Surveys Included

Population within 1 mile:

5,001 to 10,000	1 days
10,001 to 15,000	1 days
20,001 to 25,000	4 days
25,001 to 50,000	5 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

50,001 to 75,000	2 days
125,001 to 250,000	3 days
250,001 to 500,000	3 days
500,001 or More	3 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	2 days
0.6 to 1.0	5 days
1.1 to 1.5	4 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	2 days
No	9 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	10 days
2 Poor	1 days

This data displays the number of selected surveys with PTAL Ratings.

Total Rates:		1.193			1.287				2.480

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. The Company authorises those who possess a current TRICS licence to access the TRICS Database and copy the data contained within the TRICS Database for the licence holders' use only. ## Parameter summary

Trip rate parameter range selected:	14 - 84 (units: )
Survey date date range:	01/01/13 - 10/06/21
Number of weekdays (Monday-Friday):	11
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	27

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: No of Dwellings  
Actual Range: 21 to 197 (units: )  
Range Selected by User: 4 to 4334 (units: )

Parking Spaces Range: All Surveys Included

Parking Spaces per Dwelling Range: All Surveys Included

Bedrooms per Dwelling Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/13 to 16/06/21

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	4 days
Tuesday	1 days
Wednesday	2 days
Thursday	2 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	9 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre)	5
Edge of Town	2
Neighbourhood Centre (PPS6 Local Centre)	2

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Secondary Filtering selection:

Use Class:

C3	9 days
----	--------

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:

Parameter: Number of residents

Actual Range: 16 to 99 (units: )

Range Selected by User: 16 to 180 (units: )

Parking Spaces Range: All Surveys Included

**Public Transport Provision:**

Selection by: Include all surveys

Date Range: 01/01/13 to 02/05/19

*This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.***Selected survey days:**

Monday	2 days
Tuesday	2 days
Wednesday	1 days

*This data displays the number of selected surveys by day of the week.***Selected survey types:**

Manual count	5 days
Directional ATC Count	0 days

*This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.***Selected Locations:**

Suburban Area (PPS6 Out of Centre)	2
Edge of Town	3

*This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.***Selected Location Sub Categories:**

Residential Zone	4
No Sub Category	1

*This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.*

Secondary Filtering selection:

Use Class:

C2	5 days
----	--------

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:

All Surveys Included

Population within 1 mile:

5,001 to 10,000	4 days
10,001 to 15,000	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	1 days
25,001 to 50,000	3 days
250,001 to 500,000	1 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

1.1 to 1.5	5 days
------------	--------

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	1 days
No	4 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	5 days
-----------------	--------

This data displays the number of selected surveys with PTAL Ratings.

Total Rates:		1.823			1.826				3.649

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. The Company authorises those who possess a current TRICS licence to access the TRICS Database and copy the data contained within the TRICS Database for the licence holders' use only. Any resulting copy must retain all copyrights and other proprietary notices, and any disclaimer contained thereon.

The Company accepts no responsibility for loss which may arise from reliance on data contained in the TRICS Database. [No warranty of any kind, express or implied, is made as to the data contained in the TRICS Database.]

## Parameter summary

Trip rate parameter range selected:	16 - 99 (units: )
Survey date date range:	01/01/13 - 02/05/19
Number of weekdays (Monday-Friday):	5
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	10

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Calculation Reference: AUDIT-322901-210928-0901

Total Rates:		1.126			1.131			2.257	

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. #### Parameter summary

Trip rate parameter range selected:	60 - 750 (units: )
Survey date date range:	01/01/13 - 21/11/19
Number of weekdays (Monday-Friday):	9
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	4
Surveys manually removed from selection:	29

*This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.*

Meath County Council - Viewing Purposes Only!

Calculation Reference: AUDIT-322901-210705-0718

**TRIP RATE CALCULATION SELECTION PARAMETERS:**

Land Use : 07 - LEISURE  
 Category : W - THEATRE  
**TOTAL VEHICLES**

**Selected regions and areas:**

02	SOUTH EAST	1 days
	WS WEST SUSSEX	
12	CONNAUGHT	1 days
	CS SLIGO	

This section displays the number of survey days per TRICS® sub-region in the selected set

**Primary Filtering selection:**

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: Number of seats  
 Actual Range: 100 to 815 (units: )  
 Range Selected by User: 100 to 1915 (units: )

Parking Spaces Range: All Surveys Included

**Public Transport Provision:**

Selection by: Include all surveys

Date Range: 01/01/93 to 25/10/13

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

**Selected survey days:**

Wednesday	1 days
Friday	1 days

This data displays the number of selected surveys by day of the week.

**Selected survey types:**

Manual count	2 days
Directional ATC Count	0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

**Selected Locations:**

Town Centre	1
Edge of Town Centre	1

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

**Selected Location Sub Categories:**

Built-Up Zone	2
---------------	---

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

**Secondary Filtering selection:**

**Use Class:**  
 Sui Generis 2 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

**Population within 500m Range:**  
 All Surveys Included

## Secondary Filtering selection (Cont.):

Population within 1 mile:

Not Known	1 days
10,001 to 15,000	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

Not Known	1 days
5,001 to 25,000	1 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

1.1 to 1.5	2 days
------------	--------

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Not Known	1 days
No	1 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	2 days
-----------------	--------

This data displays the number of selected surveys with PTAL Ratings.

Meath County Council - Viewing Purposes Only!

Surveys automatically removed from selection:	1
Surveys manually removed from selection:	21

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Calculation Reference: AUDIT-322901-210705-0742

**TRIP RATE CALCULATION SELECTION PARAMETERS:**

Land Use : 06 - HOTEL, FOOD &amp; DRINK

Category : A - HOTELS

**TOTAL VEHICLES****Selected regions and areas:**

02	SOUTH EAST	
	HC HAMPSHIRE	2 days
	HF HERTFORDSHIRE	1 days
03	SOUTH WEST	
	WL WILTSHIRE	1 days
09	NORTH	
	DH DURHAM	1 days
11	SCOTLAND	
	AG ANGUS	1 days
	DU DUNDEE CITY	1 days
	HI HIGHLAND	1 days
12	CONNAUGHT	
	CS SLIGO	1 days
14	LEINSTER	
	KK KILKENNY	2 days

*This section displays the number of survey days per TRICS® sub-region in the selected set***Primary Filtering selection:***This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.*

Parameter: Number of bedrooms  
 Actual Range: 4 to 156 (units: )  
 Range Selected by User: 4 to 483 (units: )

Parking Spaces Range: All Surveys Included

**Public Transport Provision:**

Selection by: Include all surveys

Date Range: 01/01/00 to 26/11/20

*This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.***Selected survey days:**

Tuesday	3 days
Thursday	6 days
Friday	2 days

*This data displays the number of selected surveys by day of the week.***Selected survey types:**

Manual count	11 days
Directional ATC Count	0 days

*This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.***Selected Locations:**

Edge of Town Centre	3
Edge of Town	8

*This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.***Selected Location Sub Categories:**

Commercial Zone	1
Development Zone	1
Residential Zone	3
Built-Up Zone	1
No Sub Category	5

*This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.*

Secondary Filtering selection:

Use Class:

C1	11 days
----	---------

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order 2005 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:

All Surveys Included

Population within 1 mile:

1,001 to 5,000	2 days
5,001 to 10,000	4 days
10,001 to 15,000	1 days
15,001 to 20,000	4 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	2 days
25,001 to 50,000	2 days
75,001 to 100,000	3 days
100,001 to 125,000	1 days
125,001 to 250,000	1 days
250,001 to 500,000	2 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.5 or Less	1 days
0.6 to 1.0	3 days
1.1 to 1.5	7 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Not Known	1 days
No	10 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	11 days
-----------------	---------

This data displays the number of selected surveys with PTAL Ratings.

23:00 - 24:00	1	40	0.025	1	40	0.000	1	40	0.025
Total Rates:		2.582			2.676				5.258

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP\*FACT. Trip rates are then rounded to 3 decimal places.

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. The Company authorises those who possess a current TRICS licence to access the TRICS Database and copy the data contained within the TRICS Database for the licence holders' use only. Any resulting copy must retain all copyrights and other proprietary notices, and any disclaimer contained thereon.

The Company accepts no responsibility for loss which may arise from reliance on data contained in the TRICS Database. [No warranty of any kind, express or implied, is made as to the data contained in the TRICS Database.]

## Parameter summary

Trip rate parameter range selected:	4 - 156 (units: )
Survey date date range:	01/01/00 - 26/11/20
Number of weekdays (Monday-Friday):	12
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	7
Surveys manually removed from selection:	47

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

# 1 INTRODUCTION

O'Connor Sutton Cronin & Associates (OCSC) have been appointed by Sky Castle Ltd to prepare a submission on the current proposals for the developments at Moygaddy, Co. Meath, which forms part of the Maynooth environs and its potential impact, if any, on the Maynooth Transport Strategy (MTS).

The Maynooth Outer Orbital Route is located within the Sky Castle land holding and therefore the delivery of this strategic road infrastructure is a key consideration in the context of the MTS.

The Moygaddy Masterplan is a non-statutory plan that has been prepared by the developer to assist with the co-ordination and phased delivery of the project. Pre-planning discussions have been undertaken with Meath County Council and lodging of the full planning applications are imminent. The full Moygaddy Development consists of the following parts:

- Pre-planning applications:
  - Medical phase (Primary Care Centre and Nursing Home Unit)
  - Offices phase 1 (three office buildings, approximately 16,700 m<sup>2</sup>)
  - Residential phase 1A (360 no. residential units, 289m<sup>2</sup> creche, and public park)
- Future Applications:
  - Offices phase 2 & 3 (six office buildings, approximately 33,400 m<sup>2</sup>)
  - Future Residential phases
  - Public hospital
  - Hotel & leisure facilities

Included with these developments are a number of road infrastructure upgrades, which are described in full detail in Section 3 of this report.

The location of the Moygaddy Development can be seen in Figure 1 overleaf.

*Figure 1: Locality Plan*

The purpose of this report is to:

- Summarise the proposed developments within the wider Maynooth Environs;
- List the infrastructural upgrades planned as part of these developments;
- **Assess the impact of these infrastructural upgrades on the Maynooth Transport Strategy.**

## 2 OVERVIEW OF THE MAYNOOTH TRANSPORT STRATEGY

According to the Maynooth Transport Strategy document prepared on behalf of Kildare County Council (KCC), the MTS can be summarised as below:

- A transport strategy is being developed which will **propose** measures to improve walking, cycling, public transport, roads and parking in Maynooth and its environs
- The strategy will place particular focus on improving conditions for pedestrians, **cyclists**, and public transport users
- Measures from the transport strategy will be incorporated into the new Local Area Plan for Maynooth and its environs
- The document presents information based on Census 2016 to give an indication of the existing transport situation in the Maynooth. When developing the transport strategy, 2021 data will be used which is currently being collected.

The study area for the transport strategy is shown in the figure below, with the Moygaddy land holding highlighted in dark blue:

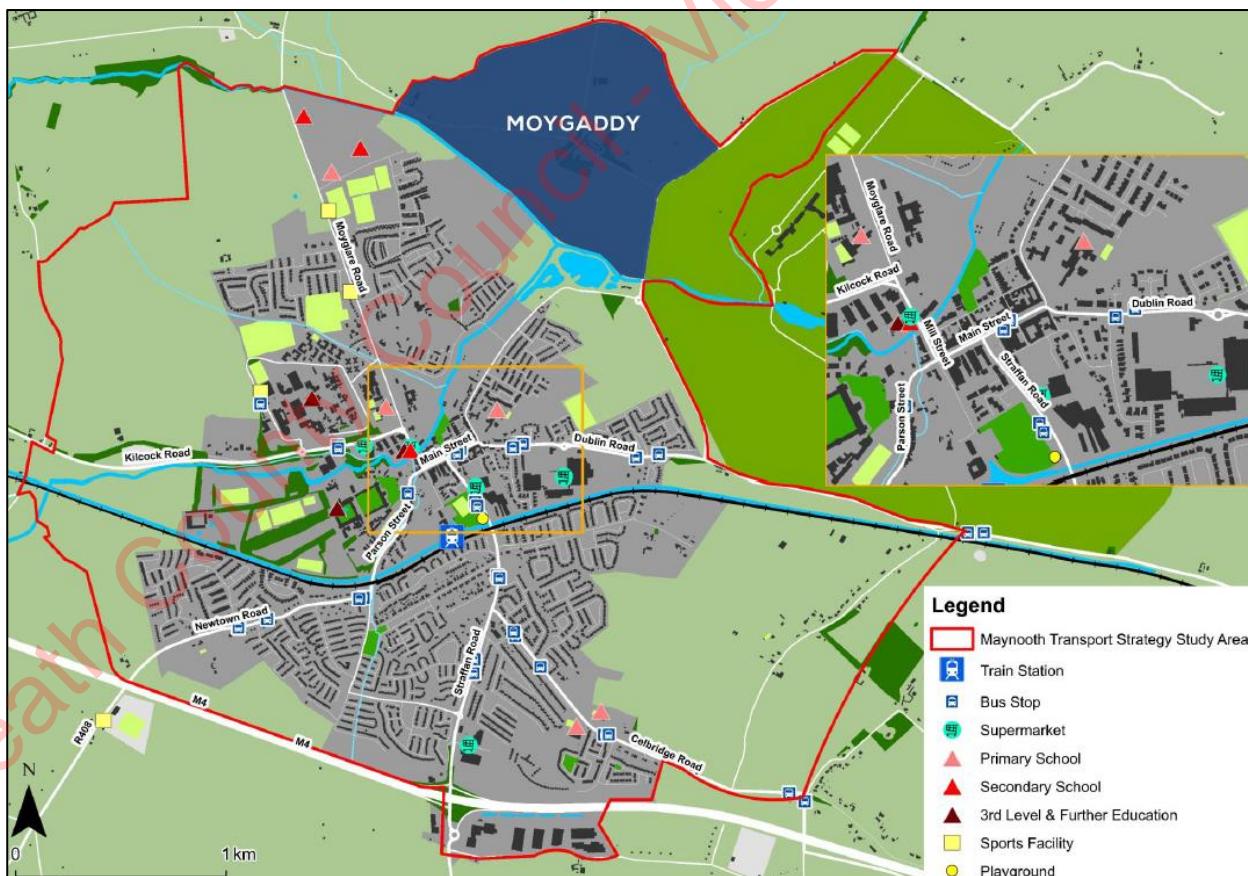

Figure 2: Transport Strategy Study Area

### 3 MOYGADDY INFRASTRUCTURAL UPGRADES

Several infrastructural upgrades are proposed as part of the development of the Moygaddy lands, which will have a direct impact on the town of Maynooth. These upgrades will be linked with the phasing plan discussed in Section 1 of this document.

The figure below indicates the road upgrades linked to specific phases of the development:

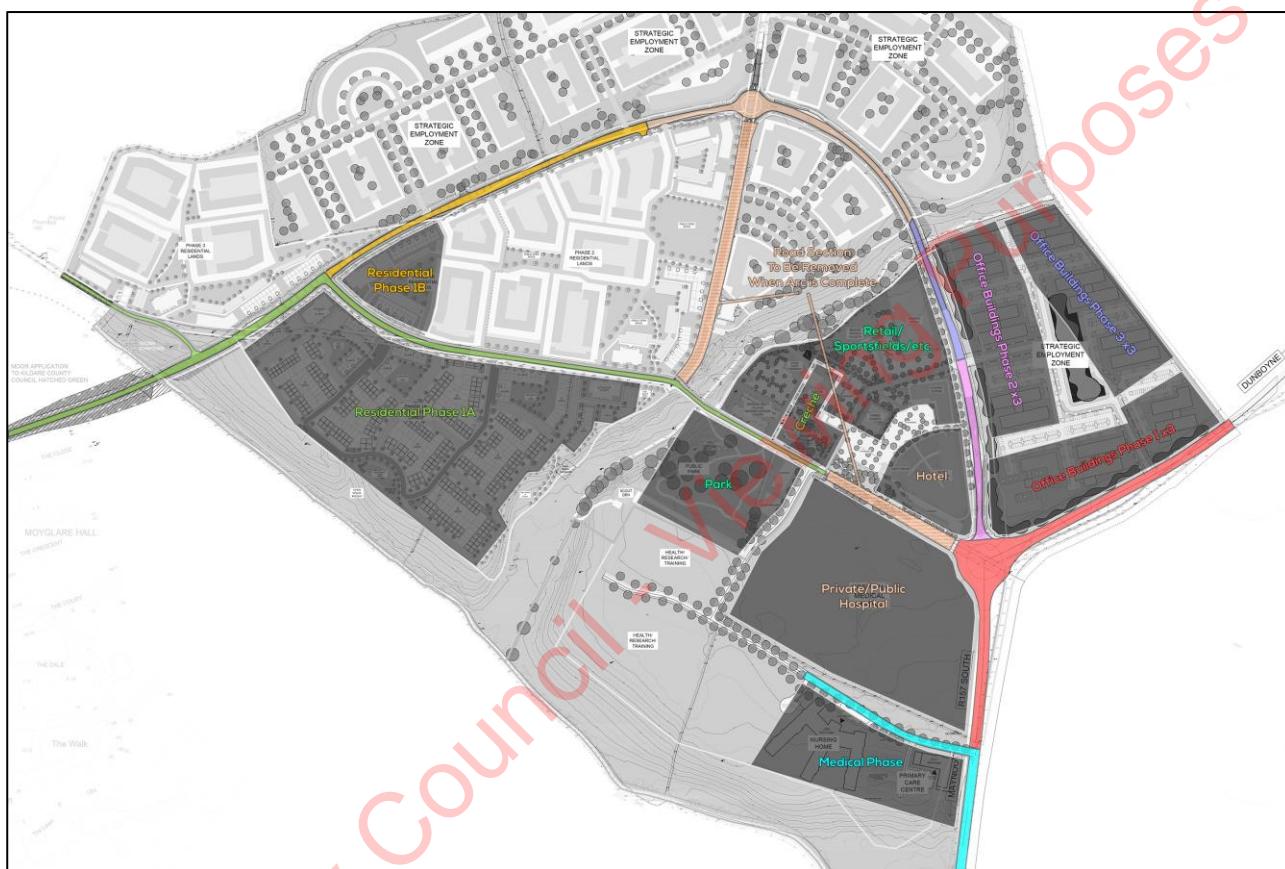

Figure 3: Moygaddy Development Phasing

As part of the proposed development, the following infrastructure upgrades will be introduced:

- Construction of the Maynooth Outer Orbital Route (MOOR) from **the existing section already constructed at Moyglare Hall, crossing the River Rye and Moyglare Stream and connecting to the R157 at the junction with the L6219 to include pedestrian and cycle facilities;**
- Upgrading of the R157/L6129 junction **to a signalised junction that includes pedestrian and cyclist crossings;**

- Upgrading of the L6219, **which will include pedestrian and cyclist infrastructure within the scheme area;**
- A new bridge section on a portion of the MOOR, over the adjacent River Rye that crosses into the jurisdiction of Kildare County Council at Moyglare;
- Segregated cyclist and pedestrian infrastructure along the MOOR;
- A shared pedestrian/cyclist path along the frontage of the SHD development along the L6219;
- A pedestrian and cycle bridge over the Moyglare Stream to link the residential SHD scheme with the new public park at Moygaddy Castle;
- A **new bridge crossing the Moyglare Stream as part of the MOOR that will accommodate vehicular, pedestrian and cyclist movements;**
- Dedicated crossing facilities that will accommodate pedestrians and cyclists at all junctions along the proposed MOOR;
- A new pedestrian and cycle bridge at the Kildare bridge which will link the Moygaddy lands with the network in County Kildare.

As part of the masterplan, a submission has been made to BusConnects, to advise them of the proposed development at Moygaddy and to request that due consideration be given to the expansion of the network to include the Maynooth Environ lands so that public transport services are extended to the new developments.

## 4 IMPACT ON THE MAYNOOTH TRANSPORT STRATEGY

The following benefits to the Maynooth Transport Strategy are expected as part of this development:

- Improvements to the connectivity in the area of the development;
- Increase in capacity of roads and junctions in the immediate vicinity;
- Provision of dedicated pedestrian and cycle infrastructure, enabling a strong modal shift towards sustainable transport;
- The upcoming proposals will also allow the BusConnects proposal to take account of the new infrastructure and further service the Maynooth area.

As part of the planning application for the this development, OCSC have been commissioned to prepare a Traffic Impact Assessment Report and associated traffic models. A copy of this report will be provided to both Meath County Council and Kildare County Council in ordinary course.

In summary, the infrastructural upgrades proposed as part of the Moygaddy development will have an overall positive impact on Maynooth and its environs.

## 5 VERIFICATION

This report was compiled and verified by:

W | [www.ocsc.ie](http://www.ocsc.ie)

We enclose a copy of the submission to the MTS for your information.

We would like to draw your attention to the opportunity to expand the public transport network to include Bus Connects as part of the strategic Residential and Employment lead developments proposed on our client's landholding at Moygaddy Co. Meath which forms part of the Maynooth Environs.

We would welcome the opportunity to speak with you about this initiative and we look forward to your feedback in early course

Yours sincerely

Shane McGivney
