Subject: FW: Proposed galvanising plant

Good Morning Val,

I hope you are well.

I was asked by Niamh Murray of Boylan Engineering to issue a letter regarding the company's potential COMAH status. I wouldn't be able to issue a letter, however I can confirm that I reviewed the expected chemical inventory for the company and based on this the quantities of chemicals likely to be present on site were below COMAH tier 1 and 2 threshold levels. However the company would be regarded as a site that meets the criteria of a process industries site and would be subject to inspection by the Chemical, COMAH, Production and Storage unit.

Kind Regards,
Tara Horigan.

Inspector CCPS
