

ZTV indicating the cumulative theoretical visibility of the proposed Letter Wind Farm in combination with all other wind farms in the study area

Proposed Turbines

Existing Turbines

Permitted Turbines

In-Planning Turbines

Wind Farm Visibility

Visibility of existing, permitted or In-Planning turbines only

Visibility of proposed turbines as well as existing, permitted or In-Planning turbines

Visibility of proposed turbines only

16.7% of the entire study area to 20km will not have any view of the turbine blades of the proposed Wind Farm or that of any existing, permitted or In-Planning wind farms

20km Extent

This ZTV map has been calculated such that a turbine registers as been theoretically visible to observers in the surrounding landscape once there is an unobstructed line of sight to its blade tip.

Observer Height assumed: 2m to eye-level height
Blade Tip Heights: Variable

Note: This ZTV map is calculated for landform screening only and does not take account of the significant screening effects of vegetation (hedgerows, trees) and buildings inherent across the study area.
