# 01 INTRODUCTION

# INTRODUCTION

Aramark Property were instructed by Homeland Silverpines Limited, to provide a Building Lifecycle Report for their proposed residential scheme at St Joseph's House and adjoining properties, Brewery Road and Leopardstown Road, Dublin 18.

The purpose of this report is to provide an initial assessment of long-term running and maintenance costs as they would apply on a per residential unit basis at the time of application, as well as demonstrating what measures have been specifically considered to effectively manage and reduce costs for the benefit of the residents. This is achieved by producing a Building Lifecycle Report.

This Building Lifecycle Report has been developed on foot of the revised guidelines for Sustainable Urban Housing: Design Standards for New Apartments - Guidelines for Planning Authorities issued under Section 28 of the Planning and Development Act 2000 (as amended) December 2020. Within the new guidelines, new guidance is being provided on residential schemes.

Section 6.13 of the Operation and Management of Apartment Development Guidelines (December 2020) requires that:

"planning applications for apartment development shall include a building lifecycle report which in turn includes an assessment of long-term running and maintenance costs as they would apply on a per residential unit basis at the time of application, as well as demonstrating what measures have been specifically considered by the proposer to effectively manage and reduce costs for the benefit of residents."

# 02 DESCRIPTION OF DEVELOPMENT

# **DESCRIPTION OF DEVELOPMENT**

The development will consist of a new residential and mixed-use scheme to include apartments, residential amenity space, a café and a childcare facility. A detailed description is now set out as follows:

The proposal provides for the demolition of 10 no. properties and associated outbuildings at 'Madona House' (single storey), 'Woodleigh' (2 storeys), 'Cloonagh' (2 storeys), 'Souk El Raab (2 storeys), 'Welbrook' (2 storeys), 'Calador' (2 storeys), 'Alhambra' (2 storeys), 'Dalwhinnie' (2 storeys), 'Annaghkeen' (2 storeys) and 'The Crossing' (single storey) (combined demolition approx. 2,291.3 sq m GFA).

The new development will provide for (a) the refurbishment, separation and material change of use of Saint Joseph's House (a Protected Structure, RPS No. 1548) from residential care facility to residential use and a childcare facility; and (b) the construction of a new build element to provide for an overall total of 463 no. residential units, residential amenity space and a café.

The overall development proposal shall provide for the following:

- Block A (5 storeys) comprising 49 no. apartments (13 no. 1 bed units, 33 no. 2 bed units and 3 no. 3 bed units);
- Block B (4 7 storeys) comprising 88 no. apartments (28 no. 1 bed units, 57 no. 2 bed units and 3 no. 3 bed units);
- Block C (5 7 storeys) comprising 115 no. apartments (26 no. studio units, 26 no. 1 bed units and 57 no. 2 bed units and 6 no. 3 bed units);
- Block D (5 10 storeys) comprising 157 no. apartments (36 no. studio unit, 40 no. 1 bed units and 81 no. 2 bed units), residential amenity areas of approx. 636 sq m and a café of approx. 49 sq m;
- Block E (St. Joseph's House) (2 storeys) comprising 9 no. apartments (8 no. 2 bed units and 1 no. 3 bed units) and a childcare facility of 282 sq m with associated outdoor play areas of approx. 130 sq m;
- Block F (3 6 storeys) comprising 45 no. apartments (23 no. studio units, 10 no. 1 bed units; and 12 no. 2 bed units);

Each new build residential unit (in Blocks A, B, C, D and F) has an associated area of private open space in the form of a terrace/balcony. Open Space proposals for St. Joseph's House (Block E) include a mixture of private terrace/balcony areas and communal open space areas.

The extent of works proposed to Saint Joseph's House (a Protected Structure) include:

- The demolition of a single storey office, conservatory, glazed link, external store, external enclosed escape stairs with associated canopies, toilet extension and 3 no. associated outbuildings to the west of St. Joseph's House (demolition total approx. 173.4 sq m GFA);
- The removal of external steel gates, all external steel escape stairs, canopies, existing disabled access ramps, concrete steps, an external wall and associated roof area;
- Relocation of external granite steps and the provision of a new raised entrance terrace, concrete steps and ramp areas;

- Replacement of existing rooflights, the addition of roof lights, part new roof / new zinc roof, new external wall and roof to the east of the structure;
- The provision of new door and window openings;
- Modifications to internal layout including the removal of walls and partitions and the addition of new dividing walls.

The Residential Amenity Areas of approx. 636 sq m proposed in Block D comprise a residential club house/multipurpose room, library/reading room, lounge area, concierge area, office area, post room, fitness club, all at ground floor level of Block D. A terrace lounge area is proposed at fifth floor level of Block D. 2 no. roof garden areas are also proposed at fifth floor level of Blocks C and D (approx. 400 sq m and 408 sq m respectively).

Open Space (approx. 9,885 sq m) is proposed in the form of (a) public open space areas (approx. 6,680 sq m) which include a public plaza/court area, a main area of public open space (including a play area and outdoor gym area) and woodland trail; and (b) all communal open space areas (approx. 3,205 sq m) which include areas adjacent to St. Joseph's House (Block E), Block D and Block F, a courtyard and play area located between Blocks A and B and roof terraces at fifth floor level of Blocks C and D. Visual amenity open space areas (approx. 1,000 sq m) are also proposed at various locations throughout the development.

Basement Level (approx. 9,445 sq m) is proposed with residential access from Blocks A, B, C, D and F. Bin Storage areas, water storage areas, and part attenuation are located at this level. 2 no. ESB Substations, 1 no. ESB Kiosk, 2 no. Switch Rooms, waste storage areas for Block E (St. Joseph's House, A Protected Structure) and bicycle storage areas are proposed at surface level.

A total of 259 no. car parking spaces (232 no. at basement level and 27 no. at surface level) are proposed. At basement level, a total of 30 no. electric vehicles and 202 no. standard parking spaces are provided for. A total of 968 no. bicycle spaces (816 no. at basement level and 152 no. at surface level), dedicated cycle lift and 10 no. motorcycle spaces (all at basement level) are also proposed.

Proposals for vehicular access comprise 1 no. existing vehicular access point via Silver Pines (an existing all movement junction onto Brewery Road) and 1 no. new vehicular access point at the general location of 'Annaghkeen' at Leopardstown Road (a new Left In / Left Out junction arrangement). The new access point along Leopardstown Road will replace 9 no. existing access points at 'Woodleigh', 'Cloonagh', 'Souk El Raab', 'Welbrook', 'Calador', 'Alhambra', 'Dalwhinnie', 'Annaghkeen' and 'The Crossing'. The internal permeability proposed will provide linkages for pedestrians and cyclists to Leopardstown Road and adjoining Greenway. Proposals also provide for the relocation of an existing bus stop along Leopardstown Road.

The associated site and infrastructural works include provision for water services; foul and surface water drainage and connections; attenuation proposals; permeable paving; all landscaping works including tree protection, tree removal and new tree planting; green roofs; boundary treatment; internal roads and footpaths; and electrical services.

# **EXECUTIVE SUMMARY – BUILDING LIFE CYCLE REPORT**

## Measures to effectively manage and reduce costs for the benefit of residents

The following document reviews the outline specification set out for the proposed residential scheme at St Joseph's House and adjoining properties, Brewery Road and Leopardstown Road, Dublin 18 and explores the practical implementation of the design and material principles which has informed design of building roofs, façades, internal layouts and detailing of the proposed development.

Building materials proposed for use on elevations and in the public realm achieve a durable standard of quality that will not need regular fabric replacement or maintenance outside general day to day care. The choice of high quality and long-lasting materials, as well as both soft and hardscape in the public, semi-public and private realm will contribute to lower maintenance costs for future residents and occupiers.

Please note that detailed specifications of building fabric and services have not been provided at this stage. This report reflects the outline material descriptions contained within O'Mahony Pike Architects' planning drawing pack received.

For any elements where information was not available, typical examples have been provided of building materials and services used for schemes of this nature and their associated lifespans and maintenance requirements. All information is therefore indicative subject to further information at detailed design stage.

As the building design develops this document will be updated and a schedule will be generated from the items below detailing maintenance and replacement costs over the lifespan of the materials and development constituent parts in a summary document. This will enable a robust schedule of building component repair and replacement costs which will be available to the property management company so that running, and maintenance costs of the development are kept within the agreed Annual operational budget, this will take the form of a Planned Preventative Maintenance Schedule (PPM)\* at operational commencement of the development.

\*PPM under separate instruction

# 04

# EXTERNAL BUILDING FABRIC SCHEDULE

# EXTERNAL BUILDING FABRIC SCHEDULE

# 4.1 Roofing

4.1.1	<b>Green Ro</b>	OfS (Manufacturer	/ Supplier TBC)
-------	-----------------	-------------------	-----------------

Location	All flat roof areas (maintenance access only)
Description	Extensive green roof system to engineer's specification.
Lifecycle	Average lifecycle of 35 years on most green roofs. As used across the
	industry nationally and in the UK, long lifecycle typically achieved by
	robust detailing to adjoining roof elements, regular inspection and
	maintenance regime to ensure the upkeep of roofing product /
	materials.
Required	Quarterly maintenance visits to include inspection of drainage layer and
maintenance	outlets and removal of any blockages to prevent ponding. Inspection of
	vegetation layer for fungus and decay. Carry out weeding as necessary.
	No irrigation necessary with sedum blankets.
Year	Quarterly
Priority	Medium
Selection	A green roof will add to the character of the overall scheme, as well as
process	providing attenuation to storm water run-off and less burden on
	rainwater goods, increased thermal and sound insulation to the building
	and increased biodiversity. Natural soft finishes can provide visual
	amenity for residents where roof areas are visible or accessible from
	within areas of the scheme. Sedum roofs are a popular and varied
	choice for green roofs requiring minimal maintenance.
Reference	O'Mahony Pike Architects' planning drawings & Design Statement.

# 4.1.2 Roof Terraces (Manufacturer / Supplier TBC)

Location	Communal Terrace
Description	Intensive green roof system to engineer's specification.
Lifecycle	Average lifecycle of 30 years. As used across the industry nationally and the UK, typically longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Quarterly maintenance visits to include inspection of drainage layer and
maintenance	outlets and removal of any blockages to prevent ponding. Inspection of
	vegetation layer for fungus and decay. Carry out weeding as necessary.
	No irrigation necessary with sedum blankets.
Year	Quarterly
Priority	Medium
Selection process	Intensive green roof planting will add to the character of the overall scheme and visual amenity for residents, providing a variety of size and species of planting. Green roofs provide attenuation to storm water run- off and less burden on rainwater goods, increased thermal and sound insulation to the building and increased biodiversity.
Reference	O'Mahony Pike Architects' planning drawings & Design Statement.

# 4.1.3 Pitched Roofs (Manufacturer / Supplier TBC)

Location	Block E (St. Joseph's House)
Description	Natural slate coverings
Lifecycle	Lifecycle of 80 -100 years for natural slate roofs. As used across the industry nationally and in the UK, long lifecycle typically achieved by regular inspection and maintenance regime to ensure the upkeep of roofing tiles.
Required	Annual inspection internally and externally for slipped/cracked slates
maintenance	and flashings, leaks etc. Carry out localised repairs as required.
Year	Annual
Priority	Medium
Selection	Natural slate is chosen for its aesthetic qualities and is a durable and
process	long-lasting material which few other roofing materials can achieve.
	Pitched roofs by design ensure run-off of rainwater and therefore less
	deterioration to roofing materials.
Reference	O'Mahony Pike Architects' planning drawings & Design Statement.

# 4.1.4 Fall Arrest System for Roof Maintenance Access (Manufacturer / Supplier TBC)

Location	Flat Roof Areas (maintenance access only)
Description	<ul> <li>Fall Protection System on approved anchorage device.</li> </ul>
	<ul> <li>Installation in accordance with BS 7883 by the system manufacturer</li> </ul>
	or a contractor approved by the system manufacturer.
Lifecycle	25-30 years dependent on quality of materials. Generally, steel finishes
	to skyward facing elements can be expected to maintain this life
	expectancy. As used across the industry nationally and the UK, long
	lifecycle is typically achieved by regular inspection and maintenance
	regime to ensure the upkeep of materials.
Required	Check and reset tension on the line as per manufacturer's
maintenance	specifications. Check all hardware components for wear (shackles, eye
	bolts, turn buckles). Check elements for signs of wear and/or
	weathering. Lubricate all moving parts. Check for structural damage or
	modifications.
Year	Annually
Priority	High
Selection	Fall protection systems are a standard life safety system, provided for
process	safe maintenance of roofs and balconies where there is not adequate
	parapet protection. Fall protection systems must comply with relevant
	quality standards.
Reference	N/A

#### 4.1.5 Roof Cowls (Manufacturer / Supplier TBC)

Location	Selected Flat Roof Areas
Description	Roof Cowl System to be supplied with weather apron for flat roofs.
Lifecycle	25-35 years. As used across the industry nationally and the UK, typically longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required maintenance	Check fixings annually, inspect for onset of leading-edge corrosion if epoxy powder coat finish and treat.
Year	Annually

Priority	Low
Selection	Standard fitting for roof termination of mechanical ventilation system.
process	
Reference	N/A

## 4.1.6 Flashings (Manufacturer / Supplier TBC)

Location	All flashing locations
Description	Lead to be used for all flashing and counter flashings.
Lifecycle	Typical life expectancy of 70 years recorded for lead flashings.
	Recessed joint sealing will require regular inspections. Longer lifecycle
	achieved by regular inspection and maintenance regime to ensure the
	upkeep of materials.
Required	Check joint fixings for lead flashing, ground survey annually and close-
maintenance	up inspection every 5 years. Re-secure as necessary.
Year	Ground level inspection annually and close-up inspection every 5 years
Priority	Medium
Selection	Lead has longest life expectancy of comparable materials such as
process	copper (60 years) and zinc (50 years). Lead is easily formed into the
	required shapes for effective weathering of building junctions according
	to Lead Sheet Association details.
Reference	N/A

# 4.2 Rainwater Drainage (Manufacturer / Supplier TBC)

Location	All buildings
Description	Rainwater outlets: Suitable for specified roof membranes
	Pipework: Cast aluminium downpipes/uPVC downpipes
	<ul> <li>Below ground drainage: To M&amp;E/ Structural Engineers design and specification</li> </ul>
	• <i>Disposal:</i> To surface water drainage to Structural Engineers design
	Controls: To M&E/ Structural Engineers design and specification
	Accessories: allow for outlet gradings, spigots, downspout nozzle, hopper heads, balcony and main roof outlets
Lifecycle	Metal gutters and downpipes have an expected life expectancy of 40
	years in rural and suburban conditions (25 years in industrial and
	marine conditions), this is comparable to cast iron of 50 years and
	plastic, less so at 30 years. As used across the industry nationally and
	the UK, typically longer lifecycle is achieved by regular inspection and
	maintenance regime to ensure the upkeep of materials.
Required	As with roofing systems routine inspection is key to preserving the
maintenance	lifecycle of rainwater systems. Regular cleaning and rainwater heads
	and gutters, checking joints and fixings and regularly cleaning polyester
	coated surfaces (no caustic or abrasive materials).
Year	Annually, cleaning bi-annually
Priority	High
Selection	As above, aluminium fittings compare well against cast iron (in terms
process	of cost) and plastic (in terms of lifespan and aesthetic).
Reference	N/A

#### 4.3 External Walls

#### 4.3.1 Brick (Manufacturer / Supplier TBC)

Location	Façades
Description	Facing brickwork infills to selected colour
Lifecycle	Selected colour bricks have a high embodied energy, they are an extremely durable material. Brickwork in this application is expected to have a lifespan of 50-80 years. The mortar pointing however has a shorter lifespan of 25-50 years. Longer lifecycle achieved by regular inspection and maintenance regime.
Required	In general, given their durability, brickwork finishes require little
maintenance	maintenance. Most maintenance is preventative: checking for hairline cracks, deterioration of mortar, plant growth on walls, or other factors
	that could signal problems or lead to eventual damage.
Year	Annual
Priority	Low
Selection	Aesthetic, lightweight, cost-efficient and low maintenance cladding
process	option, indistinguishable from traditional brick construction.
Reference	O'Mahony Pike Architects' planning drawings & Design Statement.

## 4.3.2 Metal Cladding (Manufacturer / Supplier TBC)

Location	Façades
Description	Zinc sheeted finish at Penthouse Level.
Lifecycle	Typical life expectancy of over 40 years. As used nationwide and in the UK, typically longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required maintenance	Selected cladding requires little maintenance and is resistant to corrosion. It can contribute to lower ongoing maintenance costs in comparison to exposed porous materials which may be liable to faster deterioration. Long term cleaning requirements should be taken into consideration.
Year	Inspection annually; cleaning 5 yearly
Priority	Low
Selection process	Selected cladding protects the building's structure from rainwater and weathering. Metal cladding systems are also chosen for their aesthetic impact, durability and weathering properties.
Reference	O'Mahony Pike Architects' planning drawings & Design Statement.

# 4.3.3 Render (Manufacturer / Supplier TBC)

Location	Façades
Description	<ul> <li>Acrylic render (Secondary Wing of Block B)</li> <li>Polished Plaster External (Secondary Buildings along Leopardstown Road)</li> </ul>
Lifecycle	Renders in general are expected to have a lifecycle of circa 25 years. Longer lifecycle achieved by regular inspection and maintenance regime.
Required maintenance	Regular inspections to check for cracking and de-bonding. Most maintenance is preventative. Coloured render requires less maintenance than traditional renders.
Year	Annually

Priority	Medium
Selection	Appropriate detailing will contribute to a long lifespan for this installation.
process	Acrylic render is a durable and low-maintenance finish with the added
	benefit of this product being BBA certified against other render systems.
	Polished plaster is a low maintenance, durable external render system
	that form a decorative weather resistant and vapour permeable layer.
Reference	O'Mahony Pike Architects' planning drawings & Design Statement.

# 4.3.4 Concrete (Manufacturer / Supplier TBC)

Location	Façades	
Description	Precast Concrete panels (Pergola and Entrances)	
Lifecycle	While concrete has a high embodied energy, it is an extremely durable material. As used nationwide and in the UK, typically longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.	
Required	In general concrete requires little maintenance. Most maintenance is	
maintenance	preventative: checking for hairline cracks, vegetation growth on facades, or other factors that could signal problems or lead to eventual damage.	
Year	Annual	
Priority	Low	
Selection	Concrete is a durable product which is chosen for its structural	
process	properties, aesthetic, cost efficiency and rapid construction.	
Reference	O'Mahony Pike Architects' planning drawings & Design Statement.	

# 4.4 External Windows & Doors (Manufacturer / Supplier TBC)

Location Description	Façades
Description	
Decemption	<ul> <li>Full height, clear glazed windows with aluminium spandrel flush panels.</li> <li>All units to be double glazed with thermally broken frames.</li> <li>All opening sections in windows to be fitted with suitable restrictors. Include for all necessary ironmongery; include for all pointing and mastic sealant as necessary; fixed using stainless steel metal straps screwed to masonry reveals; include for all bends, drips, flashings, thermal breaks etc.</li> </ul>
Lifecycle	Aluminium has a typical lifespan of 45-60 years in comparison to uPVC which has a typical lifespan of 30-40 years. As used nationwide and in the UK, typically longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Check surface of windows and doors regularly so that damage can be
maintenance	detected. Vertical mouldings can become worn and require more maintenance than other surface areas. Lubricate at least once a year. Ensure regular cleaning regime. Check for condensation on frame from window and ensure ventilation.
Year	Annual
Priority	Medium
Selection	Aluminium is durable and low maintenance with an average lifespan of
process	45-60 years, exceeding uPVC (30-40 years). Alu-clad timber windows
	compare favourably when compared to the above, extending timber windows typical lifespan of 35-50 years by 10-15 years.
Reference	O'Mahony Pike Architects' planning drawings & Design Statement.

## 4.5 Balconies

Location	Façades
Description	<ul> <li>Powder-coated steel frame balcony system to engineer's detail.</li> </ul>
	<ul> <li>Thermally broken connections to main structure of building.</li> </ul>
Lifecycle	Metal structure has a typical life expectancy of 70 years dependent on maintenance of components. As used across the industry nationally and the UK, longer lifecycle is achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Relatively low maintenance required. Check balcony system as per
maintenance	manufacturer's specifications. Check all hardware components for
	wear. Check elements for signs of wear and/or weathering. Check for
	structural damage or modifications.
Year	Annual
Priority	High
Selection	Engineered detail; designed for strength and safety.
process	
Reference	N/A

# 4.5.1 Structure (Manufacturer / Supplier TBC)

# 4.5.2 Balustrades and Handrails (Manufacturer / Supplier TBC)

Location	Balconies
Description	Clear glass infill (Penthouse Level).
	<ul> <li>Anthracite-Grey vertical balustrades and railings.</li> </ul>
	<ul> <li>Fixing in accordance with manufacturer's details.</li> </ul>
Lifecycle	General glass and metal items with a 25-45 year lifespan. Longer
	lifecycle is achieved by regular inspection and maintenance regime to
	ensure the upkeep of materials.
Required	Regular visual inspection of connection pieces for impact damage or
maintenance	alterations
Year	Annual
Priority	High
Selection	Long lifespan versus timber options
process	
Reference	N/A

# INTERNAL BUILDING FABRIC SCHEDULE

#### 4.6 Floors

# 4.6.1 Common Areas

Location	Entrance lobbies / Reception areas (Block D) / corridors	
Description	<ul> <li>Selected anti-slip porcelain or ceramic floor tile complete with inset matwell.</li> <li>Selected loop pile carpet tiles.</li> </ul>	
Lifecycle	<ul> <li>Lifespan expectation of 20-25 years in heavy wear areas, likely requirement to replace for modernisation within this period also.</li> <li>10-15 year lifespan for carpet. Likely requirement to replace for modernisation within this period also.</li> </ul>	
Required maintenance	Visual inspection, intermittent replacement of chipped / loose tiles	
Year	Annual	
Priority	Low	
Selection	Durable, low maintenance floor finish. Slip rating required at entrance	
process	lobby, few materials provide this and are as hard wearing.	
Reference	N/A	

Location	Stairwells, landings / half landings
Description	Selected carpet covering. Approved anodised aluminium nosings to
	stairs.
Lifecycle	• 10-15 year lifespan for carpet. Likely requirement to replace for
	modernisation within this period also.
	<ul> <li>20-year lifespan for aluminium nosings.</li> </ul>
Required	Visual inspection with regular cleaning.
maintenance	
Year	Quarterly inspection and cleaning as necessary.
Priority	Low
Selection	Using carpet allows flexibility to alter and change as fashions alter and
process	change providing enhanced flexibility.
Reference	N/A

Location	Lift Lobbies
Description	Carpet/vinyl and porcelain tiles to match adjacent apartment and lobbies.
Lifecycle	<ul> <li>Lifespan expectation of 20-30 years in heavy wear areas, likely requirement to replace for modernisation within this period also.</li> <li>10-15 year lifespan for carpet. Likely requirement to replace for modernisation within this period also.</li> </ul>
Required	Visual inspection, intermittent replacement of chipped / loose tiles.
maintenance	
Year	Annual
Priority	Low
Selection	Slip rating required for lifts, few materials provide this and are as hard
process	wearing.
Reference	N/A

4.6.2	Tenant	Amenity	Areas
-------	--------	---------	-------

Location	Resident's lounge, gymnasium & co-working space (Block D)
Description	Timber laminate / parquet flooring, or
	Carpet covering
	Provide for inset matwell
Lifecycle	<ul> <li>Laminated / parquet timber flooring has an expected life expectancy</li> </ul>
	of 25-35 years dependent on use
	<ul> <li>10-15 year lifespan for carpet. Likely requirement to replace for modernisation within this period also</li> </ul>
Required	Visual inspection. Sweep clean regularly ensuring to remove any dirt.
maintenance	Clean up spills immediately and use only recommended floor cleaners.
Year	Annual
Priority	Low
Selection	Materials chosen for aesthetics, durability and low maintenance.
process	
Reference	N/A
Location	All wet areas (e.g. Shared Kitchen, WCs)
Description	Selected anti-slip ceramic floor tile.
Lifecycle	Lifespan expectation of 20-25 years in heavy wear areas, likely
	requirement to replace for modernisation within this period also.
Required	Visual inspection, intermittent replacement of chipped / loose tiles.
maintenance	
Year	Annual
Priority	Low
Selection	Slip rating required at entrance lobby, few materials provide this and
process	are as hard wearing.

#### 4.7 Walls

Reference

## 4.7.1 Common Areas

N/A

Location	Entrance lobbies / Reception areas
Description	Selected paint finish with primer to skimmed plasterboard.
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required maintenance	Regular maintenance required and replacement when damaged
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish.
process	
Reference	N/A
Location	Lobbies / corridors / stairs
Description	Selected paint finish with primer to skimmed plasterboard
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.

Required maintenance	Regular maintenance required and replacement when damaged.
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish.
process	
Reference	N/A

# 4.7.2 Tenant Amenity Areas

Location	Resident's lounge, gymnasium & co-working space (Block D)
Description	Selected paint finish with primer to skimmed plasterboard.
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Regular maintenance required and replacement when damaged.
maintenance	
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish.
process	
Reference	N/A

1 (	
Location	Wet areas (e.g. Shared Kitchen & WCs)
Description	Selected ceramic wall tile to plasterboard (moisture board to wet areas).
Lifecycle	Typical life expectancy of 35-40 years, less in wet room areas to 20-25
_	years. Longer lifecycle achieved by regular inspection and maintenance
	regime to ensure the upkeep of materials.
Required	Bi-annual inspection to review damage, local repairs as necessary,
maintenance	particular detailed inspection in wet room areas.
Year	Annually
Priority	Medium
Selection	Wet room application requires moisture board and tiling.
process	
Reference	N/A

# 4.8 Ceilings

Location	Common areas & tenant amenity areas
Description	Selected paint finish with primer to skimmed plasterboard ceiling on M/F frame. Acoustic ceiling to lift core and apartment lobbies. Moisture board to wet areas.
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required maintenance	Regular maintenance required and replacement when damaged.
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish
process	
Reference	N/A

Location	Tenant amenity wet areas (e.g. Shared Kitchen & WCs)
Description	Selected paint finish with primer to skimmed moisture board ceiling.
Lifecycle	2-10 years for finishes; 40 years for plasterboard. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Regular maintenance required and replacement when damaged.
maintenance	
Year	Bi-annually
Priority	Low
Selection	Decorative and durable finish.
process	
Reference	N/A

# 4.9 Internal Handrails & Balustrades

Location	Stairs & landings
Description	Metal balustrade option
Lifecycle	25-30 years typical lifecycle. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	Regular inspections of holding down bolts and joints
maintenance	
Year	Annually
Priority	High
Selection	Hard-wearing long-life materials against timber options
process	
Reference	N/A

# 4.10 Carpentry & Joinery

## 4.10.1 Internal Doors and Frames

Location	All buildings
Description	<ul> <li>Selected white primed and painted/varnished solid internal doors, or hardwood veneered internal doors</li> <li>All fire rated doors and joinery items to be manufactured in accordance with B.S. 476. Timber saddle boards.</li> <li>Brushed aluminium door ironmongery or similar</li> </ul>
Lifecycle	30 years average expected lifespan. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	General maintenance in relation to impact damage and general wear
maintenance	and tear
Year	Annual
Priority	Low, unless fire door High
Selection	Industry standard
process	
Reference	N/A

# 4.10.2 Skirtings & Architraves

Location	All buildings
Description	Painted timber/MDF skirtings and architraves
Lifecycle	30 years average expected lifespan. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	General maintenance in relation to impact damage and general wear
maintenance	and tear
Year	Annual
Priority	Low
Selection	Industry standard

# 4.10.3 Window Boards

Location	Residential blocks
Description	Painted timber/MDF window boards
Lifecycle	30 years average expected lifespan. Longer lifecycle achieved by regular inspection and maintenance regime to ensure the upkeep of materials.
Required	General maintenance in relation to impact damage and general wear
maintenance	and tear
Year	Annual
Priority	Low
Selection	Industry standard
process	
Reference	N/A

# 05 BUILDING SERVICES

# **BUILDING SERVICES**

# 5.1 Mechanical Systems

# 5.1.1 Mechanical Plant

Location	Plant Rooms
Description	Water Heating plant is proposed to consist primarily of Exhaust Air Heat Pumps with back up heater. Full specification to be further details to be provided by the M&E Consultant at detailed design stage.
Lifecycle	<ul> <li>Annual Maintenance of Exhaust Air Heat Pumps</li> <li>Annual Maintenance / Inspection to Pumps.</li> <li>Annual Maintenance / Inspection to Water Tanks.</li> <li>Annual Maintenance / Inspection to Water Booster - sets.</li> <li>Annual Maintenance / Inspection to DHS Tanks.</li> <li>Cost for replacement equipment to be updated on completion of design matrix of equipment at detailed design stage.</li> <li>Replacement of equipment at (End of Life) EOL to be determined at detailed design stage.</li> </ul>
Required maintenance	Annual Service Inspections to be included as part of Development Planned Preventative Maintenance Programme
Year	Annually
Priority	Medium
Selection process	All equipment to be detailed as part of the detailed design section of the development. This equipment will be selected in conjunction with the design and management team to meet and exceed the CIBSE recommended lifecycles.
Reference	N/A

# 5.1.2 Soils and Wastes

Location	All Areas / kitchens Pods etc
Description	PVC Soils and Wastes Pipework
Lifecycle	Annual inspections required for all pipework within landlord areas.
	Cost for replacement equipment to be updated on completion of
	design matrix of equipment at detailed design stage.
Required	Annual Service Inspections to be included as part of Development
maintenance	Planned Preventative Maintenance Programme
Year	Annually
Priority	Medium
Selection	All equipment to be detailed as part of the detailed design section of the
process	development. This equipment will be selected in conjunction with the
	design and management team to meet and exceed the CIBSE
	recommended lifecycles.
Reference	N/A

#### 5.1.3 Water Services

Location	Apartments
Description	EAHP for domestic Hot Water with 200li Hot Water Storage Cylinder
	Copper Water Services Pipework and associated fittings and
	accessories.
Lifecycle	<ul> <li>Annual Inspection of EAHP and Copper Cylinder</li> </ul>
	• Annual inspections required for all pipework within landlord areas.
	Cost for replacement equipment to be updated on completion of
	design matrix of equipment at detailed design stage.
Required	Annual Inspections, including legionella testing to be included as part
maintenance	of Development Planned Preventative Maintenance Programme
Year	Annually
Priority	High
Selection	All equipment to be detailed as part of the detailed design section of
process	the development. This equipment will be selected in conjunction with
	the design and management team to meet and exceed the CIBSE
	recommended lifecycles.
Reference	N/A

#### 5.1.4 Ventilation Services

Location	Apartments				
Description	Mechanical Extract Ventilation System (MEV) Ducting & Grilles				
Lifecycle	<ul> <li>Annual inspection of MEV and grilles</li> <li>Annual Inspection of operation of fan and boost / setback facility.</li> <li>Cost for replacement equipment to be updated on completion of design matrix of equipment at detailed design stage.</li> </ul>				
Required	Annual Service Inspections to be included as part of Development				
maintenance	Planned Preventative Maintenance Programme				
Year	Annually				
Priority	Medium				
Selection	All equipment to be detailed as part of the detailed design section of the				
process	development. This equipment will be selected in conjunction with the				
	design and management team to meet and exceed the CIBSE				
	recommended lifecycles.				
Reference	N/A				

#### 5.2 Electrical / Protective Services

#### 5.2.1 Electrical Infrastructure

Location	Switch rooms / Risers					
Description	Maintenance of Electrical Switchgear					
Lifecycle	<ul> <li>Annual Inspection of Electrical Switchgear and switchboards.</li> <li>Thermographic imagining of switchgear 50% of MV Switchgear Annually and LV switchgear every 3 years.</li> <li>Cost for replacement equipment to be updated on completion of design matrix of equipment at detailed design stage.</li> </ul>					
Required	Annual / Every three years to be included as part of Development					
maintenance	Planned Preventative Maintenance Programme					
Year	Annually					
Priority	High					
Selection	All equipment to meet and exceed ESB, ETCI, CIBSE					
process	recommendations and be code compliant in all cases.					
Reference	N/A					

# 5.2.2 Lighting Services internal

Location	All Areas – Internal					
Description	Lighting – LED throughout with Presence detection in circulation areas and locally controlled in apartments.					
Lifecycle	Annual Inspection of All Luminaires					
	<ul> <li>Quarterly Inspection of Emergency Lighting.</li> </ul>					
	Cost for replacement equipment to be updated on completion of					
	design matrix of equipment at detailed design stage.					
Required	Annual / Quarterly Inspections certification as required per above					
maintenance	remedial works.					
Year	Annually / Quarterly					
Priority	High					
Selection	All equipment to meet requirements and be in accordance with the					
process	current IS3217, Part M and DAC Requirements.					
Reference	N/A					

# 5.2.3 Lighting Services External

Location	All Areas – Internal					
Description	Lighting – All LED with Vandal Resistant Diffusers where exposed.					
Lifecycle	Annual Inspection of All Luminaires					
	Quarterly Inspection of Emergency Lighting					
	• Cost for replacement equipment to be updated on completion of					
	design matrix of equipment at detailed design stage.					
Required	Annual / Quarterly Inspections certification as required as per the PPM					
maintenance	schedule.					
Year	Annually / Quarterly					
Priority	High					
Selection	All equipment to meet requirements and be in accordance with the					
process	current IS3217, Part M and DAC Requirements.					
Reference	N/A					

## 5.2.4 Protective Services – Fire Alarm

Location	All areas – Internal					
Description	Fire alarm					
Lifecycle	<ul> <li>Quarterly Inspection of panels and 25% testing of devices as per IS3218 requirements.</li> </ul>					
	<ul> <li>Cost for replacement equipment to be updated on completion of design matrix of equipment at detailed design stage.</li> </ul>					
Required	Annual / Quarterly Inspections certification as required as per the PPM					
maintenance	schedule.					
Year	Annually / Quarterly					
Priority	High					
Selection	All equipment to meet requirements and be in accordance with the					
process	current IS3218 and the Fire Cert					
Reference	N/A					

## 5.2.5 Protective Services – Fire Extinguishers

Location	All Areas – Internal			
Description	Fire Extinguishers and Fire Blankets			
Lifecycle	Annual Inspection			
Required maintenance	Annual with Replacement of all extinguishers at year 10			
Year	Annually			
Priority	Cost for replacement equipment to be updated on completion of design matrix of equipment at detailed design stage.			
Selection	All fire extinguishers must meet the requirements of I.S 291:2015			
process	Selection, commissioning, installation, inspection and maintenance of portable fire extinguishers.			
Reference	N/A			

# 5.2.6 Protective Services – Apartment Sprinkler System (Where Applicable by Fire Cert)

Location	Apartment			
Description	Apartment Sprinkler System			
Lifecycle	Weekly / Annual Inspection			
Required	Weekly Check of Sprinkler Pumps and plant and annual testing and			
maintenance	certification of plant by specialist.			
Year	All			
Priority	Cost for replacement equipment to be updated on completion of design matrix of equipment at detailed design stage.			
Selection	The Apartment sprinkler system shall be installed in accordance with			
process	BS 9251:2005 - Sprinkler Systems for Residential and Domestic			
	Occupancies – Code of Practice			
Reference	N/A			

Location	Common Area Cores
Description	Dry Risers
Lifecycle	Weekly / Annual Inspection
Required	Visual Weekly Checks of Pipework and Landing Valves with Annual
maintenance	testing and certification by specialist.
Year	
Priority	Cost for replacement equipment to be updated on completion of
	design matrix of equipment at detailed design stage.
Selection	The system shall be installed in accordance with BS 5041 & BS
process	9999
Reference	N/A

# 5.2.7 Protective Services – Dry Risers

# 5.2.8 Fire Fighting Lobby Ventilation (To Fire Consultants Design and Specification)

Location	Common Area Lobby's				
Description	Smoke Extract / Exhaust Systems				
Lifecycle	<ul> <li>Regular Tests of the system</li> <li>Annual inspection of Fans</li> <li>Annual inspection of automatic doors and AVOs</li> <li>All systems to be backed up by life safety systems.</li> </ul>				
Required	Annual Service Inspections to be included as part of Development				
maintenance	Planned Preventative Maintenance Programme				
Year	Weekly / Annually				
Priority	Medium				
Selection	All equipment to be detailed as part of the detailed design section of				
process	the development. This equipment will be selected in conjunction with the design and management team to meet and exceed the CIBSE recommended lifecycles.				
Reference	N/A				

# **CONCLUSION & CONTACT DETAILS**

Based on the information provided, Aramark Property have considered the schemes proposals. From our experience to date of similar schemes we manage, we have set out an overview of how we believe the overarching management of the scheme can be successfully managed in best practice for the benefit of the owners of this scheme, the future occupiers, and the wider community.
