Abbreviations

Abbreviation	Term in Full
ABP	An Bord Pleanála
AQUAMIS	Aquaculture Information Management System
CIA	Cumulative Impact Assessment
CEA	Cumulative Effects Assessment
CWP	Codling Wind Park
CWPL	Codling Wind Park Limited
DECC	Department of the Environment, Climate and Communications
EC	European Commission
EDF Renewables	Électricité de France Renewables
EEZ	Exclusive Economic Zone
EIA	Environmental Impact Assessment
EIAR	Environmental Impact Assessment Report
EIS	Environmental Impact Statement (terminology formerly used to describe EIAR)
EMODnet	European Marine Observation and Data Network
EPA	Environmental Protection Agency
EU	European Union
FOS	Fred Olsen Seawind
GIS	Geographic Information System
IAC	Inter-array cable
IFI	Inland Fisheries Ireland
IGI	Institute of Geologists Ireland
JNCC	Joint Nature Conservation Committee
km	Kilometre
MAC	Maritime Area Consent
MHW	Mean High Water
MSP	Marine spatial planning
NIS	Natura Impact Statement
NMPF	National Marine Planning Framework
NPF	National Planning Framework
NSIP	Nationally Significant Infrastructure Project
OECC	Offshore Export Cable Corridor

Abbreviation	Term in Full
ORE	Offshore Renewable Energy
OREDPII	Offshore Renewable Energy Development Plan II
OSS	Offshore substation structure
OTI	Onshore Transmission Infrastructure
OWF	Offshore wind farm
PINS	Planning Inspectorate (UK)
SID	Strategic Infrastructure Development
SSC	Suspended sediment concentration
UK	United Kingdom
WTG	Wind turbine generator
Zol	Zone of influence
ZTV	Zone of theoretical visibility

Definitions

Glossary	Meaning
the Applicant	The developer, Codling Wind Park Limited (CWPL).
array site	The area within which the wind turbine generators (WTGs), inter-array cables (IACs) and the offshore substation structures (OSSs) are proposed.
Codling Wind Park (CWP) Project	The proposed development as a whole is referred to as the Codling Wind Park (CWP) Project, comprising of the offshore Infrastructure, the onshore infrastructure and any associated temporary works.
Codling Wind Park Limited	A joint venture between Fred Olsen Seawind (FOS) and Électricité de France (EDF) Renewables, established to develop the CWP Project.
Environmental Impact Assessment	A systematic means of assessing the likely significant effects of a proposed project, undertaken in accordance with the EIA Directive and the relevant Irish legislation.
Environmental Impact Assessment Report (EIAR)	The report prepared by the Applicant to describe the findings of the EIA for the CWP Project.
EIA Scoping	<p>The process of deciding what information should be contained in an EIAR and what methods should be used to gather and assess that information. This may take the form of either:</p> <p>An informal scoping report, prepared by the developer and circulated amongst consultees for feedback; or</p> <p>A formal scoping request made to the competent authority, typically in the form of a scoping report prepared by the developer.</p>
Future Framework Project	The Future Framework is the long-term model for offshore renewable energy in Ireland. As with Phase 2 Projects, Future Framework Projects will be plan led and located in DMAPs. The Future Framework Projects will deliver 20GW of offshore wind by 2040 and at least 37GW in total by 2050.
Maritime Area Consent (MAC)	<p>A Maritime Area Consent (MAC) provides State authorisation for a prospective developer to undertake a maritime usage and occupy a specified part of the maritime area.</p> <p>A MAC is required to be in place before planning consent can be sought.</p>
offshore development area	The entire footprint of the offshore infrastructure and associated temporary works that will form the offshore boundary for the development consent application.
offshore export cable corridor (OECC)	The area between the array site and the landfall, within which the offshore export cables cable will be installed along with cable protection and other temporary works for construction.
Offshore Renewable Energy Development Plan II (ORED II) (In draft form)	A sectoral spatial plan for Offshore Renewable Energy (ORE) in accordance with the NMPF, encompasses the maritime area covering all of Ireland's Exclusive Economic Zone (EEZ), which reaches up to 200 nautical miles or 370 km off the coast.

Glossary	Meaning
onshore development area	The entire footprint of the OTI and associated temporary works that will form the onshore boundary for the planning application.
onshore substation	Site containing electrical equipment to enable connection to the national grid.
onshore transmission infrastructure (OTI)	The onshore transmission assets comprising the TJBs, onshore export cables and the onshore substation. The EIAR considers both permanent and temporary works associated with the OTI.
Phase 1 Project	Under the special transition provisions in the Maritime Area Planning Act 2021, as amended (the MAP Act), the Minister for the Department of Environment, Climate and Communications (DECC) has responsibility for assessing and granting a Maritime Area Consent (MAC) for a first phase of offshore wind projects in Ireland. The Phase 1 Projects include Oriel Wind Park, Arklow Bank II, Dublin Array, North Irish Sea Array, Codling Wind Park and Skerd Rocks. A MAC has since been granted by DECC for each of the Phase 1 Projects.
Phase 2 Project	Phase 2 aims to procure the remainder of Ireland's five GW capacity target by 2030 through further competitive auctions, with Phase 2 Projects to be plan led and located within marine zones designated as suitable for offshore wind development, known as Designated Maritime Area Plans, or DMAPs.
planning application boundary	The area subject to the application for development consent, including all permanent and temporary works for the CWP Project.
RenewableUK	RenewableUK is the UK's leading renewable energy trade association.
Strategic Infrastructure Development (SID)	A development which is of strategic economic or social importance to the state, a region or local areas.
study area	Study areas are defined for each receptor based on the relevant characteristics of the receptor (e.g. mobility/range), some receptors may have different study areas defined at different scales (e.g. local, regional, management unit level etc.)
zone of influence (Zol)	Spatial extent of potential impacts resulting from the project.

APPENDIX 5.1 CUMULATIVE EFFECTS ASSESSMENT METHODOLOGY

1 Introduction

1. Codling Wind Park Limited (hereafter 'the Applicant') is proposing to develop the Codling Wind Park (CWP) Project, which is located in the Irish sea approximately 13 - 22 km off the east coast of Ireland, at County Wicklow.
2. This Appendix forms part of the Environmental Impact Assessment Report (EIAR) for the CWP Project. The purpose of the EIAR is to provide the decision-maker, stakeholders and all interested parties with the environmental information required to develop an informed view of any likely significant effects resulting from the CWP Project, as required by the European Union (EU) Directive 2011/92/EU (as amended by Directive 2014/52/EU) (the EIA Directive). These provisions are transposed into Irish legislation in Part X of the Planning and Development Act 2000, as amended, and in Part 10 of the Planning and Development Regulations 2001, as amended.
3. A fundamental component of the EIA is to consider and assess the potential for cumulative effects of the project with other projects, plans and activities (hereafter referred to as 'other development').
4. The Environmental Protection Agency (EPA) Guidelines on the information to be contained in Environmental Impact Assessment Reports (EPA, 2022) defines cumulative effects as:

"The addition of many minor or insignificant effects, including effects of other projects, to create larger, more significant effects.

While a single activity may itself result in a minor impact, it may, when combined with other impacts (minor or insignificant), result in a cumulative impact that is collectively significant. For example, effects on traffic due to an individual industrial project may be acceptable; however, it may be necessary to assess the cumulative effects taking account of traffic generated by other permitted or planned projects."
5. The objective of this document is to provide details on the proposed methodology for the CWP Project Cumulative Effects Assessment (CEA), which is provided for in the EIAR topic chapters (**Chapters 6 - 32**), and which covers the construction, operation and maintenance of the CWP Project. The detail and scope of the decommissioning works for the CWP Project will be determined by the relevant legislation and guidance at the time of decommissioning. Project alone impacts during the decommissioning phase of the CWP Project are assessed in EIA topic chapters (EIAR **Chapters 6 – 32**). It is anticipated that the impacts will be no greater than those identified for the construction phase, and therefore no separate assessment of cumulative impacts during the decommissioning phase is presented within the CEA.
6. In summary, this document:
 - Identifies the key legislation, policy and guidance relevant to cumulative assessment, with reference to the latest updates in guidance and approaches;
 - Details relevant consultation that has informed the scope of and approach to the CEA; and
 - Explains the stages of the CEA process, including the approach to compiling the long and short list of other development that have been considered within the CEA as presented in **Annex I** to this Appendix.
7. It should be noted that an in-combination assessment has been undertaken as part of the **Appropriate Assessment Screening** and **Natura Impact Statement (NIS)**, comprising the examination of possible effects on Natura 2000 sites from the CWP Project alone and in-combination with other plans and projects. There are elements of the approach to CEA that are mirrored by the in-combination

assessment for the NIS process, but there are also some differences, including the screening impact ranges that are applied for certain receptors.

8. The **Natura Impact Statement (NIS Volume 6, Assessment of the project in-combination)** sets out in detail the methodology that has been applied for the in-combination assessment.

2 Legislation, Policy and Guidance

2.1 Legislation and Policy

9. The EIAR has been prepared to comply with the requirements of the EIA Directive. In relation to the assessment of cumulative effects, Annex IV of the EIA Directive specifies that a description of the likely significant effects of a project on the environment should be provided, including an assessment of:

“the cumulation of effects with other existing and/or approved projects, taking into account any existing environmental problems relating to areas of particular environmental importance likely to be affected or the use of natural resources;”

10. The assessment of cumulative effects between projects is a key consideration that is referenced within each of the key national policy documents relevant to the CWP Project. This includes the National Planning Framework (NPF) (Government of Ireland, 2018),¹ the National Marine Planning Framework (NMPF) (Government of Ireland, 2021) and the Offshore Renewable Energy Development Plan (DECC, 2014).
11. For example, in relation to air quality, the NMPF states that proposals ‘must demonstrate that they have considered the interaction between sectors, particularly in relation to indirect and cumulative consequences on air pollution’.
12. Further detail where relevant is provided in EIAR, **Chapter 2 Policy and Legislative Context** and within each of the topic specific EIAR chapters.

2.2 Guidance

13. The Guidance on EIS and NIS Preparation for Offshore Renewable Energy Projects (DCCAE and SEAI, 2017) references a number of principles to evaluate cumulative effects, which are taken from the Guiding Principles for Cumulative Impact Assessments in Offshore Wind Farms, (Renewable UK, 2013). These principles are presented in **Table 1** with a description on how these have been considered in the CEA methodology for the CWP Project.

Table 1 Principles for the CEA (Renewable UK, 2013)

Principles of Cumulative Effects Assessment	How these principles have been addressed
A clear and transparent collaborative approach should be established between stakeholders.	Each EIAR topic chapter (Chapters 6 – 32) provides a summary of the key issues raised and responded to

¹ On 20 June 2023, Government gave approval to commence the process of undertaking the First Revision of the NPF. This revision process is ongoing with consultation expected in summer 2024.

Principles of Cumulative Effects Assessment	How these principles have been addressed
	during the stakeholder consultation process relevant to the CEA.
Clearly identified spatial and temporal boundaries should be linked to the baseline.	<p>Topic-specific screening ranges have been applied in the CEA (see Table 5), which correspond to the maximum extent of effects for a given topic / receptor.</p> <p>These screening ranges have been applied to establish a shortlist of other development for each topic to ensure that the CEA is proportionate.</p> <p>The CEA methodology (see Section 4 of this Appendix) also considers the potential for temporal overlap between effects.</p>
A realistic project design envelope should be used.	<p>The project design approach for the CWP Project is described in EIAR Chapter 4 Project Description.</p> <p>Publicly available project design information associated with other development has also been used to inform each stage of the CEA (see Table 2).</p>
Other plans (e.g. development plans, local area plans, marine spatial planning (MSP) plans, grid plans) or projects (e.g. those with consent) on which there is sufficient information should be referenced.	The approach to establishing the relevant other development(s) is set out within Section 4 of this Appendix.
Share information between projects.	The Applicant has undertaken extensive engagement with other projects to better understand the potential for cumulative effects. More detail on this engagement is provided within relevant EIAR topic chapters (Chapters 6 - 32)
Assessments should be proportionate to risks; they should focus on key effects and receptors, and/or sensitive pressures emanating from the project (e.g. pressure/effect linkages with birds, European sites and visual/landscape effects)	<p>A proportionate approach has been adopted whereby project/plan screening is undertaken using precautionary effect-receptor pathways to identify projects/plans that may result in cumulative impacts on the same receptor(s). Projects/plans are then considered in a manner which is proportionate to the level of confidence in the given project/plan – where certainty and available information is robust a full assessment is carried out, where certainty that the project/plan may come forward is low a proportionate level of assessment is undertaken.</p> <p>The CEA for each EIA topic is presented in EIAR Chapters 6-32.</p> <p>The first step in the CEA for each topic is the identification of which residual impacts assessed for the CWP Project alone have the potential for a cumulative impact with other development.</p>

Principles of Cumulative Effects Assessment	How these principles have been addressed
Mitigation and monitoring plans should be informed by the assessment of cumulative effects.	<p>The CEA for each EIA topic is presented in EIAR Chapters 6-32.</p> <p>Mitigation and monitoring requirements for each topic are also presented, taking into account the significance of any cumulative effects.</p>

14. The principal guidance document that has informed the approach to the CWP CEA is the Planning Inspectorate (PINS) for England 'Advice Note 17: Cumulative Effects Assessment' (PINS, 2019), which provides guidance on a staged process that can be used for CEAs for Nationally Significant Infrastructure Projects (NSIPs), as defined by the UK Planning Act 2008.
15. This guidance has been applied for a number of both OWF and non-OWF projects in the UK, and provides developer with a structured approach to assessing cumulative effects. The guidance is also regularly applied in Ireland for large scale projects, noting that there is no single, industry standard approach to CEA in Ireland which often varies between projects. In adopting this approach, it allows a comparable cross jurisdictional approach from which to understand better the potential cumulative effects.
16. In developing the CEA methodology, the EPA Guidelines on the information to be contained in Environmental Impact Assessment Reports (EPA, 2022) and Guidelines for the Assessment of Indirect and Cumulative Impacts as well as Impact Interactions (European Commission, 1999) have also been considered.

3 Consultation

17. Consultation with statutory and non-statutory organisations is a key part of the EIA process. A summary of consultation is presented in the **Schedule of Pre-Application Consultations** (see **Planning Documents**). The key elements to date have included EIA scoping, consultation events and ongoing topic specific meetings with key stakeholders.
18. The CEA for each EIAR topic chapter provides a summary of the topic specific issues raised during the consultation process relevant to the CEA and details how these issues have been considered in the production of the CEA.

4 CEA methodology

4.1 Overview

19. The EPA Guidelines on the information to be contained in Environmental Impact Assessment Reports (EPA, 2022) defines cumulative effects as “The addition of many minor or insignificant effects, including effects of other projects, to create larger, more significant effects” and specifies the need to consider cumulative effects within the EIAR. However, the guidance document does not provide a process for identifying other development which may lead to cumulative effects.
20. To support the identification of developments, PINS Advice Note 17 has therefore been used as it details a four-step process for the identification of other relevant projects and the assessment of cumulative effects. **Table 2** summarises the stages and activities involved in the CEA process based on Advice Note 17.

Table 2 Stages and activities involved in the CEA process (adapted from PINS Advice Note 17 (PINS, 2019))

CEA Stage	Description
Stage 1: Establishing the long list of other development	<p>In order to establish the relevant other development(s) the applicant should determine a precautionary Zone of Influence (Zol) for each environmental aspect considered within the EIAR. The Zol analysis is documented (i.e. table of topics and Zols), with supporting Geographic Information System (GIS).</p> <p>The long list of other developments is established from a desk study of relevant data sources, including local planning authority websites, development plan documents and other relevant online sources to identify other developments within the Zol.</p> <p>The availability of information necessary to conduct the CEA will depend on the current status of the other development. The applicant should clearly state any assumptions or limitations in relation to the data collected. It is recommended that tiers are used to assign a level of certainty to the other development, reflecting the availability of detail and information available for the assessment.</p>
Stage 2: Establish the topic specific short lists of other development	<p>Following Stage 1, applicants should apply threshold criteria to the long list, in order to establish a shortlist of other development and to ensure that the CEA is proportionate.</p> <p>The criteria should ensure that only other development which is likely to result in a significant cumulative effect is taken forward to the assessment stage.</p>
Stage 3: Information gathering	<p>Stage 3 of the CEA process requires the applicant to gather information on each of the 'other development' shortlisted at Stage 2. The information captured should include but not be limited to:</p> <ul style="list-style-type: none"> • Proposed design and location information; • Proposed programme of construction, operation and decommissioning; and • Environmental assessments that set out baseline data and effects arising from the other development.
Stage 4: Assessment	<p>The applicant should assess the cumulative effects of the proposed project with the other development identified in Stages 1-3 of the process outlined above.</p> <p>The assessment should be undertaken to an appropriate level of detail, commensurate with the information available at the time of assessment. Information on some proposals may be limited and such gaps should be acknowledged within the assessment. The assessment will move from a more qualitative to a more quantitative assessment as the availability and/or certainty of information increases. Any uncertainty in the assessments should be clearly documented.</p>

21. The following sections set out the CWP Project approach to completing Stages 1 to 3 of the PINS Advice Note 17, including the development of the long list, tiering of projects and the development of the topic-specific short lists. These short lists have been considered in detail for each EIA topic chapter (EIAR **Chapters 6 - 32**).

4.2 Stage 1: Establishing the long list of other development

22. The following section defines the search area extents that have been applied in developing the longlist of other development.
23. The long list of other developments was established from a desk study of relevant data sources, including local planning authority websites, development plan documents and other relevant online sources to identify other developments within the Zone of Influence (Zol) for each environmental aspect considered within the EIAR. A rationale for the long list search area extents applied for offshore and onshore developments is provided in **Section 4.2.1** and **Section 4.2.2** of this Appendix, respectively.
24. Planning consents granted within the last five years, or applications that have been made and have yet to be determined have been considered. Relevant unimplemented developments with permissions greater than ten years have also been considered.
25. The criteria for other offshore development (below Mean High Water (MHW)) and other onshore development (above MHW) are defined separately. This relates to the potential for much wider impact ranges in the marine environment, however it is important to note that for each EIA topic (EIAR **Chapters 6 - 32**) the CEA will consider the potential for cumulative effects with all other development included in the long list, above and below MHW. This is to ensure that potential cumulative effects from other onshore development to offshore receptors (such as ornithological receptors) are identified and assessed. Likewise, onshore receptors (such as residential receptors) potentially effected by onshore infrastructure may also experience effects from other offshore development (i.e. visual effects from other offshore renewable energy developments).
26. The CEA long list for other development(s) both onshore and offshore other development is presented in **Annex I** of this Appendix.

4.2.1 Offshore development

27. For other development seaward of MHW, the long list has been produced based on the extent of the International Council for the Exploration of the Sea (ICES) Celtic Sea and Greater North Sea ecoregions (see **Plate 1**).
28. Ecoregions are used to provide regional advice, steer regional integrated approaches and are the primary geographical units for ICES to develop science, new techniques and monitoring programmes. They provide the broad-scale spatial framework for the knowledge base to address management challenges and monitor the changing ecology of the North East Atlantic.

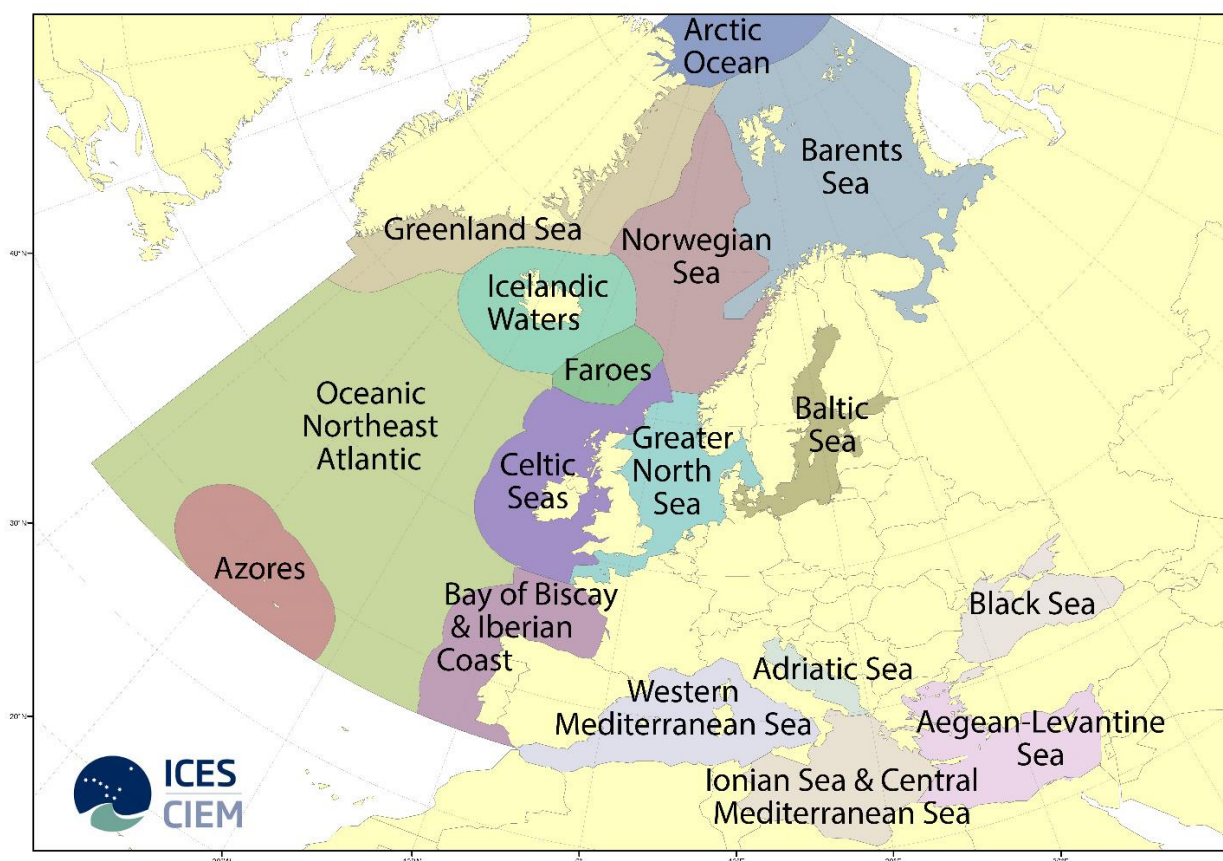

Plate 1 ICES ecoregions

29. This Celtic Sea and Greater North Sea ecoregion represents a conservative search extent for the offshore CEA long list, which exceeds the predicted maximum ZOI as defined in **Table 5** for each EIA topic. It also broadly aligns with the JNCC Celtic & Greater North Seas Marine Mammal Management Unit which provides a relevant spatial scale for the identification of other developments with the potential to introduce cumulative impact pathways on marine mammals species.
30. Individual topics use refined ranges depending on topic-specific criteria at Stage 2 of the CEA, as set out in PINs Advice Note 17.
31. Other development within the search area defined above have been identified through a desktop study using the following data sources:
 - EIA Portal;
 - Foreshore Licensing Portal;
 - Maritime Area Regulatory Authority (MARA) website;
 - Marine Atlas;
 - An Bord Pleanála Planning Portal;
 - AQUAMIS: Aquaculture Information Management System;
 - Seabed Licences portal;
 - EMODnet;
 - Developer and project proponent websites;
 - Oil and Gas UK website;

- Oil & gas by DECC;
- Offshore 4c (including Northern Ireland);
- PINS website;
- Wales Marine Planning Portal; and
- Marine Scotland Data Portal.

32. It is important to note that although these criteria have been applied across the EIA topics, certain topics may employ their own bespoke criteria where specific receptors have the potential to be affected by more distant projects. Likewise, additional other development may be screened into the longlist from greater distances if required as part of the ongoing consultation process.

4.2.2 Onshore development

33. For other development landward of HWM, the long list has been produced based on a 5 km buffer from the onshore development area, which corresponds to the maximum anticipated ZOI for the onshore transmission infrastructure (OTI). This ZOI relates to the maximum distance over which the onshore substation may theoretically be visible with other developments, and therefore the distance over which cumulative effects could occur.

34. This 5km buffer has been applied to identify other onshore development with the potential to produce cumulative effects with the CWP Project across the full range of EIA topics. Individual topics use refined ranges depending on topic-specific criteria at Stage 2.

35. Other development within the 5 km search area have been identified through a desktop study using the following data sources:

- Dublin City Council Planning Portal;
- An Bord Pleanála Planning Portal;
- EIA Portal²;
- National Planning Application Database; and
- Developer and project proponent websites.

36. In addition to the 5km search area for the OTI, a desk study has been undertaken to identify other onshore development within 50km of the array site. This buffer corresponds to the maximum distance over which the wind turbine generators (WTGs) would be visible and the distance over which visual cumulative effects could occur with other onshore development.

37. Additional, other development within the 50 km search area have been identified through a desktop study using the following data sources:

- Fingal County Council Planning Portal;
- Dún Laoghaire–Rathdown County Council Planning Portal; and
- Wicklow County Council Planning Portal.

38. The type of other development considered for each of the above-mentioned search areas are defined in **Table 3** below.

² The EIA Portal is an online map-based website that provides users with access to applications for development consent accompanied by an Environmental Impact Assessment Report made since 16 May 2017

<https://housinggov.ie/maps.arcgis.com/apps/webappviewer/index.html?id=d7d5a3d48f104ecbb206e7e5f84b71f1>

Table 3 Search area extents applied to onshore projects, plans and programmes based on type of project or activity in order to establish a long list for CEA

Type of project or activity	Screening range	Rationale
Onshore energy generation infrastructure	Up to 5 km from the CWP Project onshore development area. Any other energy generation infrastructure projects outside of the above area, but within 50 km of the array site.	5 km – Considered to be the maximum distance over which the onshore substation would be visible and the distance over which cumulative effects could occur.
Waste development	Up to 5 km from the CWP Project onshore development area. Any waste development projects outside of the above area, but within 50 km of the array site.	50 km – Considered to be the maximum distance over which the WTGs would be visible and the distance over which cumulative effects could occur.
Building and/or housing developments, where the number of houses to be provided is ten or more, including all development of multi-storey apartment blocks.	Up to 5 km from the CWP Project onshore development area. Any building and/or housing development projects outside of the above area, but within 50 km of the array site.	
Other development, including the provision of a building or buildings where the floor space to be created by the development is 1,000 m ² or more.	Up to 5 km from the CWP Project onshore development area. Any development projects, including the provision of a building or buildings where the floor space to be created by the development is 1,000 m ² or more outside of the above area, but within 50 km of the array site.	
Installation or upgrade of roads and / or railways.	Up to 5 km from the CWP Project onshore development area. Any other installation or upgrade of roads and / or railways projects outside of the above area, but within 50 km of the array site.	
Installation or upgrade of cables and pipelines (onshore)	Up to 5 km from the CWP Project onshore development area.	5 km – Considered to be the maximum distance over which the onshore substation would be visible and the distance over which cumulative effects could occur

4.2.3 Tiered Approach

39. In accordance with PINS Advice Note 17, each development in the long list of projects has been assigned to a tier, reflecting their current status in the planning and development process.
40. The tiering structure is described in **Table 4**. The tiers are listed in descending order of level of detail available (and, correspondingly, certainty of effects arising).
41. It was established early in the CEA process that there are a number of other proposed OWF projects in the Irish Sea that are being developed on similar timescales to the CWP Project (Phase 1 Projects). Whilst there may be a paucity of robust information available in the public domain, there is reasonable confidence in the understanding that these other Phase 1 Projects are expected to submit planning consent applications at a similar time to the CWP Project, and it is assumed that the construction and operational phases of these projects will overlap.
42. The tiered approach set out in PINS Advice Note 17 would preclude detailed assessment of other Phase 1 Projects due to paucity of robust project information, however for the purposes of the CWP Project CEA the approach has been adapted to take account of the Phase 1 Projects by redefining the criteria for Tier 2 development. This ensures that other Phase 1 Projects are considered by reference to the best available information in the CEA. This includes, where possible, a quantitative assessment of cumulative effects associated with the other Phase 1 Projects with the CWP Project.
43. In line with PINS Advice Note 17, an assessment is provided for all Tier 1 and Tier 2 (subdivided in to 2a and 2b) other development, where sufficient information exists within the public domain to undertake a meaningful assessment. The distinction between Tier 2a and Tier 2b developments relates to the level of certainty associated with the implementation of the developments under consideration, noting that Phase 1 Projects without an Offshore Renewable Electricity Support Scheme (ORESS) carry a greater scope for change in comparison to other Phase 1 Projects with an ORESS contract. There is therefore less certainty that non ORESS projects will be developed in line with the currently available information. This approach is frequently adopted in other jurisdictions, in particular where there exists an ability to substantively vary and reduce the project design between the point of consent and the point of final investment decision for the development without financial penalty.
44. Notwithstanding this distinction, for other development falling into Tier 2a and 2b the Applicant has undertaken quantitative assessment where possible and a semi-quantitative/qualitative assessment where adequate information to undertake a meaningful quantitative assessment is not available. For other development falling into Tier 3, the Applicant has undertaken a qualitative assessment where sufficient information exists, although this is inherently at a very high level due to the uncertainty in the proposed development and the likely low confidence in the information available.

Table 4 Tiered structure for developments considered for CEA (modified from PINS, 2019)

Tier	Description
Tier 1	<ul style="list-style-type: none"> Constructed projects with a continuing effect* Under construction. Permitted applications, but not yet implemented. Offshore applications submitted six months or more in advance of the CWP Project planning application, but not yet determined. Onshore applications submitted six months or more in advance of the CWP Project planning application, but not yet determined.
Tier 2a	<ul style="list-style-type: none"> Offshore projects in receipt of a Maritime Area Consent (MAC) and an ORESS contract.

Tier 2b	<ul style="list-style-type: none"> Offshore projects in receipt of a Maritime Area Consent (MAC). Offshore projects in the public domain where an EIA scoping report has been issued. Onshore projects in the public domain where an EIA scoping report has been issued.
Tier 3	<ul style="list-style-type: none"> Projects in the public domain where an EIA scoping report has not been issued. Projects that have been identified in the relevant development plans and programmes, which set the framework for future development consents / approvals, where such development is reasonably likely to come forward.

** In line with best practice relevant to Chapter 10 Ornithology and Chapter 15 Seascape and Landscape Visual Impact Assessment only as OWF projects result in ongoing effects at the point the CWP baseline was drafted. For other receptors- existing projects form part of the baseline characterisation of the receiving environment.*

4.3 Stage 2: Establishing the short list

45. As set out in PINS (2019) Advice Note 17, the criteria used to determine whether to include or exclude development from further assessment should address the following:
- Temporal scope: The applicant may wish to consider the relative construction, operation and decommissioning programmes of the development identified in the long list, together with the relevant project programme, to establish whether there is overlap and any potential for interaction.
 - Location, scale and nature of development: The applicant may wish to consider whether the scale and nature of the development identified in the long list are likely to interact with the proposed project.
 - Other factors: The applicant should consider whether there are any other factors, such as the nature and/ or capacity of the receiving environment that would make a significant cumulative effect with more or less likely and may consider utilising a source-pathway receptor approach to inform the assessment.
46. It is important to note that professional judgement may also be used to supplement the threshold criteria in order to include or exclude development from the short list, as is commonly applied to major developments in Ireland and in the UK.
47. Taking the above guidance into consideration, the following steps of the source-pathway receptor approach (adapted from GoBe, 2022) were applied to identify a short list of development for each EIA topic:

4.3.1 Step 1 - Is the other development part of the existing baseline environment?

- Yes – screened out.
 - No – proceed to Step 2.
48. It should be noted that development with ongoing effects that are not considered as part of the baseline shall be taken forwards to Step 2.

4.3.2 Step 2 – Is there sufficient data available to undertake a meaningful assessment, either quantitatively or qualitatively?

- No – Very limited data are available for the project in question but on the basis of the data available no likely potential for significant cumulative effects (screened out).

- No - Project in question is at an early stage and will be subject to detailed future assessment that will take account of the CWP Project (screened out).
- Yes – proceed to Step 3.

49. In line with the RenewableUK Cumulative Impact Assessment (CIA) Guidelines for offshore wind farms (RenewableUK 2013), the approach to the CEA attempts to incorporate an appropriate level of pragmatism. Only projects which are well described and sufficiently advanced, with sufficient detail available with which to undertake a meaningful and robust assessment, have been included in the CEA.

4.3.3 Step 3 – Is there potential for physical overlap between effects?

- No – Screened out.
- Yes – proceed to Step 4.

50. To inform this step, the topic-specific screening ranges presented in **Table 5** have been applied to the long list of projects.

Table 5 Topic-specific screening ranges applied to the long list of projects

EIA Topic	Screening range	Rationale
Marine Geology, Sediments and Coastal Processes	30 km from the array site and offshore export cable corridor (OECC).	Based on the tidal excursion distance during the spring tidal phase, which is 15 km. This distance is derived from the analysis of data which has been produced by the modelling performed to date. This value is doubled to establish a screening range to identify other developments to be screened into the CEA short list.
Marine Water Quality	40 km from the array site and OECC.	Increases in suspended sediment concentration (SSC) has the largest Zol for potential impacts from the array site and OECC, which has been determined by physical processes assessment presented in the Marine Geology, Sediments and Coastal Processes (MGSCP) Chapter of the EIAR. Maximum extent of effect for MGSCP has been identified through site specific modelling and reference to other project modelling to establish a screening range to identify other developments to be screened into the CEA shortlist.
Subtidal and Intertidal Ecology	48 km from the array site and OECC.	Increases in SSC has the largest Zol for potential impacts from the array site and OECC, which has

EIA Topic	Screening range	Rationale
		<p>been determined by the physical processes assessment.</p> <p>Maximum extent of effect for MGSCP has been identified through site specific modelling and reference to other project modelling to establish a screening range to identify other developments to be screened into the CEA shortlist.</p>
Fish, Shellfish and Turtle Ecology	54 km from the array site, or for piling induced underwater noise impacts, all other projects which may undertake piling within the National Study Area (ICES division 27.7.a).	Noise from pile driving has the largest zone of effect of the potential impacts from the array site on fish, shellfish and turtle ecology from OWFs.
	30 km from the array site and OECC.	<p>Increases in SSC has the largest ZOI for potential impacts from the array site and OECC, which has been determined by physical processes modelling.</p> <p>Maximum extent of effect for MGSCP is defined as one tidal excursion ellipse (15 km), doubled to establish a screening range to identify other developments to be screened into the CEA shortlist.</p>
Ornithology	<p>For offshore ornithological receptors 509 km from the array site.</p> <p>For intertidal receptors within the South Dublin Bay Area the ZOI was defined as within the South Dublin Bay part of the South Dublin Bay and River Tolka Estuary SPA.</p> <p>For the terrestrial and estuarine / Liffey receptors, maximum disturbance distance of 300 m</p>	<p>The offshore ornithological receptors the ZOI was defined as the area encompassed by the maximum of the mean-max foraging range (plus one standard deviation) of all receptors considered within CEA. For the key offshore ornithology receptors considered in CEA gannet has the largest foraging range at 509 km (Woodward et al., 2019) and thus this distance was used to define the ZOI for all receptors.</p> <p>For the terrestrial and estuarine / Liffey receptors, the ZOI was defined based on a precautionary maximum disturbance distance of 300 m as outlined by Cutts et al. (2013)</p>

EIA Topic	Screening range	Rationale
Marine Mammals	Offshore wind farms: Entire species management unit. All other offshore projects: OSPAR Region III: Celtic Seas	Noise from pile driving has the largest Zol for potential impacts on marine mammals from OWFs. The Zol has been identified through site specific modelling and reference to other project modelling, and reference to 26 km which is the recommended effective deterrence range for pile driving (monopiles; JNCC, 2020). Due to the mobile nature of marine mammals, and in order to take a precautionary approach to assessment, other development has been considered at a management unit scale which ensures all potential contemporary sources of noise at a management unit level are considered.
Commercial Fisheries	181 km from the array site and 190 km from the OECC.	Dependent on the receptor in question (whelks and crab & lobster fisheries), in line with the minimum distance from the furthest landing port (Helvick) in the Irish Sea area.
Offshore Bats	All offshore windfarms between Ireland and Wales Other developments within 10 km of the CWP Project development (including cable route)	While all offshore windfarms between Ireland and Wales have been included within the assessment, other developments have only been included within 10 km of the CWP Project development (including cable route) due to the low potential for impacts on offshore bat species (this includes all aquaculture proposals).
Marine Archaeology & Cultural Heritage	2 km based on expert opinion	Screening range will be dependent on the archaeological receptor in question. Assessment work ongoing to establish maximum extent of effect.
Seascape, Landscape and Visual Impacts	50 km from the array site	Based on the maximum extent of the array site Zone of theoretical visibility (ZTV).
Shipping and Navigation	50 nautical miles (nm)	Local routing is currently largely defined by the shallow banks within the 10nm study area defined for the Navigation Risk Assessment. However, a wider threshold is necessary for cumulative routing impacts noting that offshore

EIA Topic	Screening range	Rationale
		structures further afield could result in vessels shifting where they transit relative to the local area and its navigational features. The 50 NM radius fulfils this, noting it is a standard value for cumulative shipping and navigation assessment screening.
Aviation, Military and Radar	N/A	Any potential effects to aviation and radar receptors are considered to be localised to within the footprint of the CWP Project array site.
Material Assets: Marine Infrastructure	30 km from the array site and OECC.	Increases in SSC has the largest ZoI for potential impacts from the array site and OECC, which has been determined by physical processes modelling. Maximum extent of effect for MGSCP is defined as one tidal excursion ellipse (15 km), doubled to establish a screening range to identify other developments to be screened into the CEA shortlist.
Land Soils and Geology	2 km from the onshore development area boundary	Screening range aligned with Institute of Geologists Ireland (IGI) guidelines (IGI 2013) & relates to consideration of baseline conditions & appropriate study areas.
Hydrology and Hydrogeology	2 km from the onshore development area boundary	Screening range aligned with IGI guidelines & relates to consideration of baseline conditions & appropriate study areas.
Onshore Biodiversity	350 m from the onshore development area boundary	Based on the impact range for air quality effects.
Onshore Archaeological, Architectural and Cultural Heritage	500 m from the onshore development area boundary	Screening range aligned with study area for the onshore assessment. At distances beyond 500 m from the OTI works, no significant cumulative effects are expected to occur.
Landscape and Visual Impacts	5 km from the onshore development area boundary	Based on the maximum extent of the onshore substation ZTV.
Noise and Vibration	250 m from the onshore development area boundary	At distances beyond 250 m from the OTI works, construction noise levels are expected to be in line with or below ambient noise levels. Therefore no significant cumulative

EIA Topic	Screening range	Rationale
		effects are expected to occur beyond this distance.
Air Quality	350 m from the onshore development area boundary	It is considered that any effects from the CWP Project beyond this distance would be imperceptible and therefore no significant cumulative effects are expected to occur beyond this distance.
Material Assets - Built Services	50 m from the onshore development area boundary	Any potential effects to material assets are considered to be localised to within the footprint of the CWP Project and would only act cumulatively with other development in close proximity (i.e. <50 m from the OTI works)
Traffic and Transport	2 km from the onshore development area boundary	Based on the traffic and transport study area and the proposed access routes identified within this.
Climate	N/A	The greenhouse gas assessment is inherently cumulative as it compares anticipated project emissions to national targets.
Population and Human Health	OTI impacts: 500 m from the onshore development area boundary	For the OTI, the potential effects on population relate to how the local community and local population may be affected. It is considered that any negative effects would be limited to the closest human receptors (i.e. <500 m from the OTI works).
	Array site impacts: 500 m + elevated viewing points/walking trails which are within the ZTV but further than 500m from the coastline.	For offshore infrastructure, it is considered that impacts on local population could only be felt where the communities could visually see the WTGs. The ZTV defines this area, however the CEA screening range is refined further to 500m from the coastline as it is considered that any views of the WTGs beyond this distance are unlikely to affect a person's enjoyment of an amenity or tourist attraction. The exception would be elevated viewing points or walking trails where a person's view of the seascape could be affected by the WTGs.

EIA Topic	Screening range	Rationale
Waste & Resource Management	N/A	The assessment will be informed with regional data on waste. The applicable region is the Eastern Midlands Waste Region (EMWR).

51. It should be noted that the topic specific screening ranges presented in **Table 5** represent the maximum extent of effects for the CWP Project, which does not account for differences in effect ranges for different environmental receptors. This is considered within the CEA for each EIA topic (EIAR **Chapters 6 - 32**).

4.3.4 Step 4 – Is there potential for temporal overlap between effects?

- No – Screened out; and
- Yes – Screened into topic specific short list.

4.3.5 Stages 3 and 4: Information Gathering and Assessment

52. Following on from Stage 2 of the CEA, information gathering (Stage 3) has been undertaken for other development screened into the CEA.
53. This information has been used to inform the CEA for each topic (Stage 4), presented in EIAR **Chapters 6 – 32**. These assessments have been undertaken by the technical specialists responsible for the primary assessment of the CWP Project.

4.4 Consideration of Irish Phase 2 and Future Framework OWF Projects

4.4.1 Overview

54. In March 2023 DECC confirmed that all development beyond Phase 1 will be plan-led whereby the State will designate ORE development areas via the Designated Maritime Area Plan (DMAP) process (DECC, 2023). The next phase of OWF development, Phase 2, aims to procure the remainder of Ireland's 5GW capacity target through further competitive ORESS auctions.
55. The first of these Phase 2 projects will be located off the south east coast, procured via an auction referred to as ORESS 2.1/ Tonn Nua. In the event of attrition, a second Phase 2 auction may be required to achieve Ireland's 5GW target. However, this is highly dependent on the outcomes of Phase 1 (both ORESS and non-ORESS projects) and the ORESS 2.1 project.
56. Following Phase 2 auctions, the next phase of ORE deployment is the Future Framework, with a target of 20 GW of ORE installed by 2040. At a minimum Ireland has committed, at the North Sea Energy Ministerial in November 2023, to procure over 11.5 GW additional offshore wind capacity by end-decade.. This will comprise 2 GW non-grid-limited connected capacity (previously known as Phase 3) and at least 9.5GW of capacity to be procured via the successor to ORESS, all of which will be through a competitive process by 2030 with construction by 2040. Based on the roadmap to 2040 provided in

the North Sea Energy Cooperation (NSEC) this will likely comprise two projects for the non-grid aspect and a further five projects,³ however the location and timing of these is highly uncertain.

4.4.2 South Coast Designated Maritime Area Plan for Offshore Renewable Energy

57. The development area for ORESS 2.1 is currently being determined via the South Coast DMAP process. A draft South Coast Designated Maritime Area Plan for Offshore Renewable Energy (SC-DMAP) was issued for consultation in May 2024, which identifies four Maritime Areas for proposed future deployments of both grid connected and non-grid connected offshore renewable energy; Maritime Area A: Tonn Nua, Maritime Area B: Lí Ban, Maritime Area C: Manannán and Maritime Area D: Danu.
58. Maritime Area A has been identified as the area which will contain the first development of fixed offshore wind within the SC DMAP. The project will have an intended installed capacity of approximately 900 MW, to be developed by the winner of the ORESS 2.1 auction, which aims to deploy by 2030, or as soon as feasible thereafter.
59. Based on current information from DECC, the draft SC-DMAP, will be finalised in July 2024, at the earliest, followed by an auction in Q4 2024 at the earliest.
60. Further programmes of deployment will take place within Maritime Areas B, C and D, however the scale, scope and timing of development within these areas is unknown. It is considered most likely that deployment will be under the Future Framework.

4.4.3 CEA Approach

61. As part of Stage 1 of the CEA process, potential Phase 2 and Future Framework Irish OWF projects have been identified and included in the long list of other development. These projects feature in the CEA long list as either Tier 2b or Tier 3 developments, depending on whether an EIA Scoping report has been issued.
62. For certain topics, the ORESS 2.1 project to be located within Maritime Area A of the SC DMAP has been screened into the CEA at Stage 2 of the process, as described in **Section 4.3** above.
63. While the SC DMAP identifies Maritime Areas B, C and D for future deployment, there is currently considerable uncertainty around the extent, scale and timing of any potential Phase 2 project post ORESS 2.1 and Future Framework projects. Furthermore, in addition to the requirement that projects must be located within DMAP Maritime Areas, the volume of prospective projects equates to a considerably larger capacity than Ireland's commitments and many overlap or are in close proximity to each other. It is, therefore, likely that the vast majority of these projects will not go ahead at all.
64. Uncertainty regarding the future of these projects is combined with a lack of publicly available information upon which to base a robust and meaningful assessment of potential cumulative effects with the CWP Project. As a result, all potential subsequent projects following on from the ORESS 2.1 project in Maritime Area A of the SC DMAP have been screened out of the CEA at Stage 2 of the process.

³ This is based on information contained in the North Seas Energy Cooperation NSEC tender planning – November 2023 document, available at: https://energy.ec.europa.eu/system/files/2023-11/231117%20NSEC%20tender%20planning%20-%20November%202023_0.pdf

65. It is assumed that these future projects, once further developed, will complete their own CEAs as part of the EIA process and this will include the consideration of cumulative effects with the CWP Project and other Phase 1 OWF projects.
