Electronically signed:

**Sound Level Meter : IEC 61672-3:2013**

**Instrument information**

Manufacturer:      Cirrus Research plc  
Model:              CR:171B  
Serial number:      G071199  
Class:                1  
Firmware version:   3.2.3197

Notes:

**Test summary**

Date of calibration:    04 October 2022

The calibration was performed respecting the requirements of ISO/IEC 17025:2017.

Periodic tests were performed in accordance with procedures from IEC 61672-3:2013.

**The sound level meter submitted for testing successfully completed the class 1 periodic tests of IEC 61672-3:2013, for the environmental conditions under which the tests were performed.**

However, no general statement or conclusion can be made about conformance of the sound level meter to the full specifications of IEC 61672-1:2013 because (a) evidence was not publicly available, from an independent testing organisation responsible for pattern approvals, to determine that the model of sound level meter fully conformed to the class 1 specifications in IEC 61672-1:2013 or correction data for acoustical test of frequency weighting were not provided in the Instruction Manual and (b) because the periodic tests of IEC 61672-3:2013 cover only a limited subset of the specifications in IEC 61672-1:2013.

**Notes**

This certificate provides traceability of measurement to the SI system of units and/or to units of measurement realised at the National Physical Laboratory or other recognised national metrology institutes. This certificate may not be reproduced other than in full, except with the prior written approval of the issuing laboratory. The results within this certificate relate only to the items calibrated. The reported expanded uncertainty is based on a standard uncertainty multiplied by a coverage factor  $k=2$ , providing a coverage probability of approximately 95%.

**Test summary**

Date of calibration:    09 August 2023

The calibration was performed respecting the requirements of ISO/IEC 17025:2017.

Periodic tests were performed in accordance with procedures from IEC 61672-3:2006.

**The sound level meter submitted for testing has successfully completed the class 1 periodic tests of IEC 61672-3:2006, for the environmental conditions under which the tests were performed.**

However, no general statement or conclusion can be made about conformance of the sound level meter to the full requirements of IEC 61672-1:2002 because evidence was not publicly available, from an independent testing organisation responsible for pattern approvals, to demonstrate that the model of sound level meter fully conformed to the requirements in IEC 61672-1:2002 and because the periodic tests of IEC 61672-3:2006 cover only a limited subset of the specifications in IEC 61672-1:2002.

**Notes**

This certificate provides traceability of measurement to the SI system of units and/or to units of measurement realised at the National Physical Laboratory or other recognised national metrology institutes. This certificate may not be reproduced other than in full, except with the prior written approval of the issuing laboratory. The results within this certificate relate only to the items calibrated. The reported expanded uncertainty is based on a standard uncertainty multiplied by a coverage factor  $k=2$ , providing a coverage probability of approximately 95%.

### Microphone

#### Microphone capsule

Manufacturer: Cirrus Research plc

Model: MK:224

Serial Number: 216368A

#### Calibration procedure

Open circuit: 51.1 mV/Pa

Sensitivity at 1 kHz: -25.8 dB rel 1 V/Pa

The microphone capsule detailed above has been calibrated to the published data as described in the operating manual of the associated sound level meter (where applicable).

The frequency response was measured using an electrostatic actuator in accordance with BS EN 61094-6:2005 with the free-field response derived via standard correction data traceable to a National Measurement Institute.

The absolute sensitivity at 1 kHz was measured using an acoustic calibrator conforming to IEC 60942:2003 Class 1.

#### Environmental conditions

Pressure: 101.20 kPa

Temperature: 21.0 °C

Humidity: 54.0 %

**Sound Calibrator : IEC 60942:2003**

**Instrument information**

**Manufacturer:**   Cirrus Research plc

**Notes:**

**Model:**           CR:515

**Serial number:**   54060

**Class:**             1

**Test summary**

**Date of calibration:**   09 August 2023

The sound calibrator detailed above has been calibrated to the published data as described in the operating manual and in the half-inch configuration. The procedures and techniques used are as described in IEC60942\_2003 Annex B – Periodic Tests and three determinations of the sound pressure level, frequency and total distortion were made.

The sound pressure level was measured using a WS2F condenser microphone type MK:224 manufactured by Cirrus Research plc.

The results have been corrected to the reference pressure of 101.33 kPa using the manufacturer's data.

As public evidence was available, from a testing organisation responsible for approving the results of pattern evaluation tests, to demonstrate that the model of sound calibrator fully conformed to the requirements for pattern evaluation described in Annex A of IEC 60942:2003, the sound calibrator tested is considered to conform to all the Class 1 requirements of IEC 60942:2003.

The manufacturer's product information indicates that this model of sound calibrator has been formally pattern approved to IEC60942\_2003 Annex A to Class 1. This has been confirmed by Laboratoire National d'Essais (LNE), APPLUS (APPLUS) and Physikalisch-Technische Bundesanstalt (PTB).

**Notes:**

# ENVIRONMENTAL IMPACT ASSESSMENT REPORT

## TULLEKA TRADING UNLIMITED, GRAIGUE, BALLINAKILL, CO. LAOIS

### Predictive Noise – Construction Phase

In order to determine the potential impact of noise from the proposed development during the construction phase, the resultant noise levels at the three defined noise sensitive receptors have been calculated, based on distance from the NSR to the closest area with the potential to contain construction plant operations.

A source noise level of 102 dB has been utilized to represent *Phases 2* of construction, as outlined in Section 6.3.1 above.

| Receptor         |                |                | Construction Source |                |                |                     | Divergence |                       | LAeq (dB) |
|------------------|----------------|----------------|---------------------|----------------|----------------|---------------------|------------|-----------------------|-----------|
| Ref <sub>R</sub> | X <sub>R</sub> | Y <sub>R</sub> | Refs                | X <sub>S</sub> | Y <sub>S</sub> | L <sub>S</sub> (dB) | Dist (m)   | A <sub>div</sub> (dB) |           |

**TULLEKA TRADING UNLIMITED, GRAIGUE, BALLINAKILL, CO. LAOIS**

**Predictive Noise – Operational Phase**

In order to determine the potential impact of noise from the proposed development during the operational phase, the resultant noise levels at the three defined noise sensitive receptors have been calculated, based on distance from the NSR's to each of the 125 individual noise sources in the form of rooftop vents and an individual level of 77 dB as per Section 6.3.2. Table 7.7 outlines this calculation for NSR1 only

| Operational Noise Attenuation Calculation – NSR1 |                |                |                     |                |                |            |                       |                     |
