INTRODUCTION

The EIA Directive includes a requirement to consider 'a cumulation of effects with other existing and/or approved projects, taking into account any existing environmental problems relating to areas of particular environmental importance likely to be affected or the use of natural resources.'

The potential cumulative effect of the Project combined with the potential effect of other projects or plans has been carried out with the purpose of identifying what influence the Project will have on the surrounding environment when considered collectively with draft and existing plans, approved and existing projects, projects pending a decision from the planning authority, and land-uses in the vicinity of the Project site location.

The Cumulative Impact Assessment (CIA) of projects has three principle aims:

- > To establish the range and nature of proposed and existing plans and projects within the cumulative impact study area of the Project.
- > To summarise the relevant plans and projects which have a potential to create cumulative impacts.
- To identify the plans and projects that hold the potential for cumulative interaction within the context of the Project and discard projects that will neither directly or indirectly contribute to cumulative impacts.

Assessment material for the CIA was compiled on the relevant plans and projects within the vicinity of or relevant to the Project. The material was gathered through a search of relevant online Planning Registers, reviews of relevant EIAR (or historical EIS) documents, planning application details and planning drawings, and served to identify past and future projects, their activities and their environmental impacts.

For the purposes of the cumulative assessment, the process was divided into onshore and offshore, the onshore CIA methodology is set out below, the offshore Cumulative Effect Assessment (CEA) is provided as Appendix 4-2 of the EIAR.

1.1 Establishing the Onshore Long List

To establish a long list of existing, permitted and proposed projects to be included in the CIA, cumulative study areas were established for each individual topic area in the EIAR. Following consultation with the EIAR team on each individual topic, the maximum geographical extent of each cumulative study area and justification for this extent was established and is presented in Table 1-1 below. Each cumulative study area was established with regard for the potential environmental receptors, potential impact pathways, topic specific guidance, best practice and professional judgement.

Individual Topic Whole Project (Maximum Extent of cumulative study area Chapters	Justification
Ch 6 Population & Human Health	Offshore Site Offshore Study Area for Population (Electoral Divisions) – EDs which are onshore	For the assessment of cumulative shadow flicker, any other existing, permitted or proposed wind farms are considered where their ten times rotor diameter shadow flicker study area are located within the Shadow Flicker Study Area of approx.2.92km (ten times the rotor diameter from

Table 1-1: Topic Specific Cumulative Study Areas and Justification

-							
	receptors to offshore		proposed WTG) for the Project. As there is no				
	infrastructure.		sensitive receptors within the Shadow Flicker Study				
	Onshore Site:		Area, there is no potential for cumulative shadow flicker to occur.				
	Onshore Study Area for Population (Electoral Divisio – EDs with which the Onsho Site goes through.		The Offshore Study Area for Population is identified in Section 6.1.2 in Chapter 6 as the Electoral Divisions which are potentially onshore receptors to offshore infrastructure, while the Onshore Study Area is the Electoral Divisions that the Onshore Site (Landfall, OGC, OCC) is located.				
			Both the Offshore and Onshore Study Areas for Population identified are considered for cumulative effects on Population and Human Health.				
Ch 30 Climate	The Climate assessment has been considered on a national basis and not confined to a specific study area.		The Climate assessment has considered the cumulative effects of the Project with other developments on a national basis under the relevant national Sectoral Emissions Ceilings.				
Ch 31	The Major Accidents and Natural Disasters assessment has been considered on a regional basis, due to the spatial extent of the Project, and not confined to a specific study area.		The MADS Cumulative Study Buffer is based on the MADS Zone Of Influence (ZOI), defined based on the spatial location of the Offshore and Onshore sites and their proximity to the nearest county and their associated Major Emergency Plan. The closest county to the Offshore site is Galway and therefore all elements of the Galway County Council Major Emergency Plan are fully considered. The Onshore Site is fully contained within Co. Clare and therefore all those elements within the Clare County Council Major Emergency Plan are fully considered. An overlapping and extended ZOI is defined for SEVESO sites. All SEVESO sites in counties Clare, Galway, Kerry and Limerick are considered as a precautionary measure. The ZOI is extended in this case due to the proximity of several SEVESO sites in counties Limerick and Kerry to the Shannon estuary and its potential utilisation during the construction and decommissioning of the Project.				
	0	nshore	e Chapters

Ch 20 Biodiversity	Terrestrial Biodiversity	Terre	estrial Biodiversity				
– Flora and	500m from the OGC	As h	abitat loss has been identified as a potential impact				
Fauna	3 km from the OCC	OCC	iodiversity, a 3 km buffer has been applied to the C to account for losses of foraging and commuting tat for protected species with other projects. This				
	Consideration for the Biodiversity cumulative extent is also given to the Bats, Birds and Water	accor Lesse forag Addi	unts for the foraging ranges of protected bats such as er horseshoe (NPWS & VWT, 2022) and the core ging ranges for relevant protected birds (SNH, 2016). itionally, a 500m buffer has been applied to the aning elements of the Onshore Site.				

	Cumulative geographical	
	boundaries.	As disturbance has been identified as a potential impact on biodiversity, a 200m buffer has been applied to the
	Aquatic Receptors	Onshore Site to assess cumulative impacts on protected fauna with other projects. This has been captured by the
	The Tonavoher_010 WFD	500m buffer above
	river sub-basins due to the location of the OCC within	Aquatic Receptors
	this sub-basin;	
	The area immediately around the OLL within the Doonbeg_050 WFD river sub-basin. There is no requirement to include this entire sub-basin as the OLL is situated in the northwestern corner of the sub-basin, whereby all drainage is directed to the north and into the sea; and, A 200m study buffer zone has been applied to the OGC. This is considered to	As potential for impact on aquatic receptors have been identified in this chapter via the deterioration of water quality, the cumulative hydrological study area has followed that of Chapter 23: Water of this EIAR.
	be an appropriate scale	
	given the nature of the proposed works and the	
	potential effects on the	
	hydrological environment.	
Ch 21 Biodiversity - Terrestrial Ornithology	 A search for planning applications within a 750m distance of the Onshore Site was conducted. The following resources were consulted: Clare County Council planning register. Maritime Area Consent Applications from the Maritime Area Regulatory Authority. The Arterial Drainage Scheme Channels Data Resources Map from the Office of Public Works. Forestry Licence 	The vast majority of the development footprint is located within the existing road carriageway and is a habitat of no ecological value. The only permanent habitat loss will be at the OCC, where the habitat itself is not unique to the Onshore Site/wider surroundings or rare locally. Activities associated with the construction phase have the greater potential to give rise to potentially significant effects. The cumulative assessment was undertaken at a scale appropriate to the level of impact identified and disturbance distances of key ornithological receptors reported from the literature (e.g. Goodship and Furness, 2022). Temporary disturbance to birds will occur during construction phase. The maximum disturbance distance for terrestrial wintering key ornithological receptor species in this assessment was 750m.
	Viewer from the Department of Agriculture, Food and the Marine.	

Ch 22 Land, Soils and Geology	EIAR Site Boundary	Due to the localised nature of the proposed construction works, there is no potential for significant cumulative effects in-combination with other local developments on the land, soils and geology environment outside of the EIAR Site Boundary. The only way the Onshore Site can have in combination effects with other off site projects and plans is via the drainage and off site surface water network, and this
Ch 23 Water	 The Tonavoher_010 WFD river sub-basins due to the location of the OCC within this sub-basin; The area immediately around the OLL within the Doonbeg_050 WFD river sub-basin. There is no requirement to include this entire sub-basin as the OLL is situated in the northwestern corner of the sub-basin, whereby all drainage is directed to the north and into the sea; and, A 200m study buffer zone has been applied to the OGC. This is considered to be an appropriate scale given the nature of the proposed works and the potential effects on the hydrological environment. 	hydrological pathway is assessed in Chapter 9: Water. The main likelihood of cumulative effects is assessed to be hydrological (surface water quality) rather than hydrogeological (groundwater). Due to the hydrogeological setting of the Onshore Site (i.e. low permeability soils and subsoils overlying locally important bedrock aquifers) and the near surface nature of construction activities, cumulative effects with regard to groundwater quality or quantity arising from the onshore elements of the Project are assessed as not likely.
Ch 24 Archaeology and Cultural Heritage	200m from the OGC and 3km of the OCC	Cumulative effects encompass the combined effects of multiple developments or activities on a range of receptors. In this case, the receptors are the archaeological monuments and architectural/cultural heritage sites in the vicinity of the Onshore Site. Developments located in proximity to archaeological monuments or other cultural heritage assets may have the potential to directly or indirectly affect such features.
Ch 25 Air Quality	500m from OGC.	Given dust particles do not generally travel greater than 500m from source (<i>Guidance on the Assessment of</i> <i>Mineral Dust Impacts for Planning</i> , IAQM 2016) the geographical boundary for the cumulative dust impact is 500m.

Ch 26 Onshore Noise & Vibration	200m from OGC	Due to the narrow nature of the underground electrical cabling route trench (~0.6m wide), a 200m buffer zone is an appropriate scale when considering potential cumulative noise effects.			
Ch 27 LVIA	3km from OCC and 200m from OGC	The Onshore Site LVIA Area is a 3km radius around the OCC and 500m either side of the OGC that should be checked for substantive cumulative projects, particularly if there is potential that the construction phases could overlap.			
Ch 28 Material Assets:	200m from Onshore Grid Connection underground electrical cabling route.	The geographical boundary for the telecoms cumulative assessment is defined by the potential for other wind farm projects to interfere with broadcast signals that interact with the Project. As the Onshore Site has no potential for interaction with other wind farms, the cumulative boundary has been set to 200m from the OGC			
Ch 29 Traffic & Transport	 25km buffer from Onshore Site for large infrastructural developments such as wind farms, energy and public transport developments. Following that, the proposed transport route for each project is considered. 200m from Grid Connection underground electrical cabling route. 	 Informed by traffic modelling scenario and the area of influence the Onshore Site has on changing traffic volumes. The potential cumulative traffic effects with the Project are assessed on the following criteria; Project status (proposed to operational) Degree of overlap with the Project delivery highway network (low to high) Traffic volumes (low to high) The geographical boundary for the traffic & transport cumulative assessment is defined by the potential for other projects to overlap with the Project delivery highway network, and so a 200m buffer from the proposed OGC route is deemed appropriate to capture other plans and projects with the potential for cumulative effects with the Project. Please refer to Chapter 29 Traffic and Transportation for further details on the cumulative assessment methodology. 			

Once the cumulative study areas were identified and justified, a search was conducted across various platforms and databases in order to compile a list of projects and ongoing activities in the area. The sources used to establish the CIA long list are provided in Table 1-2 below. The data was first compiled spatially through a Geographic Information System (GIS). The spatialised data was then exported into a list for further scrutiny and review. This formed the basis of the CIA long list provided in Section 2 below.

A total of 13 searches (referred to as cumulative search buffers) were run using GIS software to capture the relevant plans and projects within each EIAR chapter's cumulative study area. The maximum extent of each cumulative search buffer was specific to one or multiple onshore EIAR chapters, as shown in Table 1-3 below. All chapters did not use the maximum extent of the relevant buffer. In instances where a specific chapter's cumulative study area was smaller than the cumulative search buffer's maximum extent, the cumulative search buffer's associated list of plans and projects was filtered by distance to infrastructure, creating a chapter specific long list unique to each cumulative study area set out in Table 1-1 above.

Some EIAR chapters cumulative study areas included plans and projects onshore and offshore, these are referred to as Project buffers and relate to the CIA undertaken for the EIAR's wider project chapters (Ch. 1-6). The maximum extent cumulative search buffers relevant to the onshore CIA are outlined in Table 1-3 below and are mapped in Figure 1-1.

Cumulative Search Buffer	Elements Assessed	Buffer Name and Maximum Extent	Individual Chapters within Maximum Extent of Buffer
Buffer 3	Onshore	Electoral Divisions (Offshore)	Ch 6
Buffer 6	Onshore	Hydrological Buffer	Ch 20, 21, 23, 24
Buffer 7	Onshore	500m from OGC	Ch 20, 22, 23, 25, 26, 27, 29
Buffer 8	Onshore	3km from OCC	Ch 20, 24, 27
Buffer 9	Onshore	Electoral Divisions (Onshore)	Ch 6
Buffer 13	Onshore	25km from Onshore Site	Ch 29

Table 1-3 Onshore Cumulative Search Buffers used for CIA

After compiling a list of proposed and existing plans and projects, additional desk research was conducted to refine the onshore long list to those plans and projects deemed relevant to the Project. Expired planning applications were excluded from the long list as it is considered that such development has either been constructed and therefore forms part of the existing baseline or they have not been constructed and the planning permission has expired. Invalid or refused planning applications were also excluded from the long list. Planning applications (including Local Authority and ABP cases) were then categorised by development description into the following development categories and any large-scale developments were highlighted.

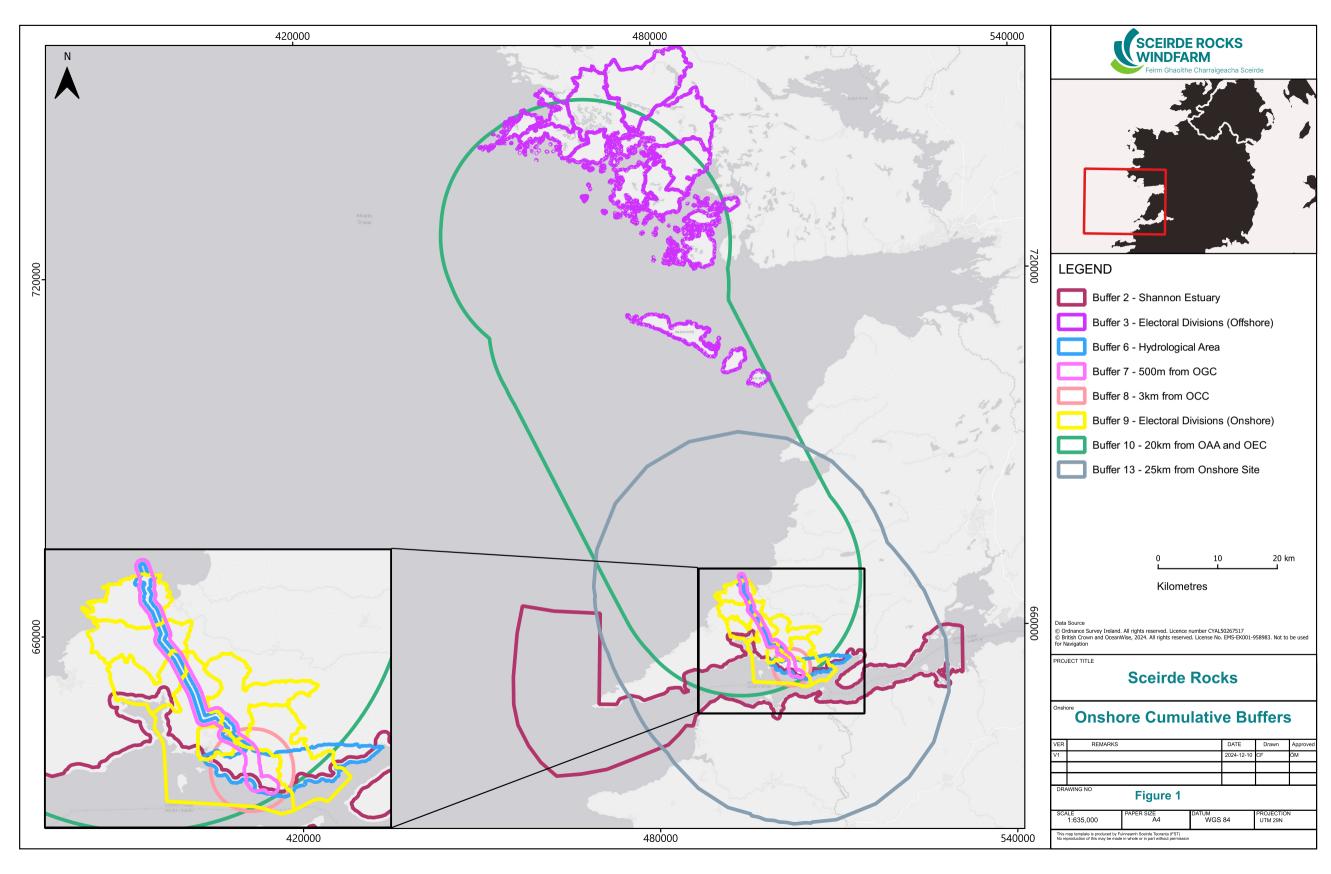

- Residential
- Commercial
- Industrial
- Agriculture
- **Energy Industry**
- Extractive Industry
- Public Infrastructure
- Waste

> Miscellaneous

Onshore plans and project lists were created for each of the onshore cumulative study areas below. The onshore long list, as shown in Section 2 below, is a long list of all plans and projects within all of the onshore cumulative study areas.

To allow sufficient time for the CIA to be undertaken for each topic, the compilation of the cumulative plans and projects list was carried out in May 2024. Therefore, plans and projects that were applied for after May of 2024 are not considered in the CIA.

MKÔ> 🗙 XODUS

1.2 **Onshore Assessment Methodology**

To gather a comprehensive view of potential cumulative impacts within the Onshore cumulative study areas each relevant chapter within the EIAR addresses the potential for cumulative effects where appropriate and within the context of their identified cumulative study area. Each of the impact assessment chapters in this EIAR has assessed the relevant projects within the respective cumulative study areas in line with Table 1-1 above. The cumulative impact assessments carried out in each of the subsequent chapters of this EIAR consider all potential significant cumulative effects arising from relevant projects, plans and land uses within the cumulative study area as relevant to each chapter.

		works to facilitate an expansion of the disposal capacity at the existing Bauxite Residue Disposal Area (BRDA). The works will generally							
		consist of the construction of rock fill embankments at the perimeter of the BRDA, offset internally and founded on the previously							
		deposited and farmed bauxite residue, in 2 m high vertical lifts. The proposed development will result in the footprint of the BRDA							
		decreasing as it increases in height. The proposed development will result in a c.12m increase in height (over that previously permitted under Limerick County Council Ref. 05/1836; An Bord Pleanála Ref. PL13.217976) to a maximum height of c.44m OD upon closure. The							
		proposed expansion of the BRDA will provide for the deposition of an additional c. 8.0 million m3 bauxite residue over the lifetime of the							
		development. The proposed development also provides for an expansion of the existing capacity of the Salt Cake Disposal Cell (SCDC),							
		which is located within the BRDA through a vertical extension of the exiting perimeter wall and associated cell lining resulting in a c.2.25m							
		crest height increase of the existing cell to c.31.25m OD and a maximum overall height of c.35.50m OD upon closure. The increase in							
		capacity of the SCDC will provide for the storage of an additional c. 22,500 m3 of salt cake. Additional works include a c.3.9ha expansion							
		of the permitted borrow pit (Limerick City and County Council Ref. 17/714; An Bord Pleanála Ref. ABP-301011- 18) to the east of the BRDA							
		resulting in a total borrow pit area of c.8.4ha with a maximum depth of c. 8.5 m O.D and providing for an additional 380,000m3of rockfill							
		with blasting and crushing of rock to occur between April and September each year. Further works include upgrades to the water							
		management infrastructure to accommodate the BRDA development; the continued use of a stockpile area for rock and top-soil storage							
		to the south east of the BRDA; use of top-soil and rock materials for the landscaped restoration and closure of the BRDA (including SCDC);							
		restoration of the extended borrow pit extraction area; lighting; spillway ramps (drainage channels); revised boundary treatments and	Accelerate Alexandra Lincles d
