

Ref. No.	Reference Location	Monitoring Measure	Frequency	Reporting Period	Responsibility
MD2	EIAR Chapter 7	<p>Monitoring measures are proposed as industry best practice rather than in response to any identified impacts associated with the Proposed Development.</p> <p>Decommissioning monitoring surveys will be undertaken prior to the commencement of works associated with decommissioning at the Site. Additionally, if works are to continue into the breeding season, surveys will be required monthly from April to July. The survey will include a thorough walkover survey to a 500m radius of the development footprint and all works areas, where access allows. If winter roosting or breeding activity of birds of high conservation concern is identified during the decommissioning phase, no works shall be undertaken within a species-specific disturbance buffer (e.g. Forestry Commission Scotland, 2006; Ruddock and Whitfield, 2007) in line with industry best practice. No works shall be permitted within the buffer until it can be demonstrated that the roost/nest is no longer occupied.</p>
