I am lodging an objection to the proposed road running directly behind my property

I have a list of concerns /objections regarding the building process and location

- Dust migration / Dust trespassing general damage to house property
- Traffic
- Blasting damages to house and property
- Damage to garden wild life
- Noise pollution
- Water table levels
- Effects to percolation and water treatment system
- Services in area effected, water electricity
- Access/egress to the property

General effects of 3-year construction to the aesthesis of the house

Above is the picture in the N6  
submission photomontage 12.3  
Below is actual picture from my  
back garden 42 metres from my  
property

My property first two story  
house on Parkmore road  
H91x79x

The 5 surrounding points of  
construction cut road, tunnel & over  
bridges

While I fully appreciate the need for the bypass in Galway, the traffic is horrendous on the Parkmore road outside my house for 6.00am in the morning to nearly 7.00pm Monday to Friday. A significant number of factories have been built in the area with little or no change to the surrounding infrastructure

The N6 build significantly nearer to my property than I originally thought. There are 5 separate simultaneous projects running, the nearest of which is 42 metres from my property as shown in the photo above

## **DUST**

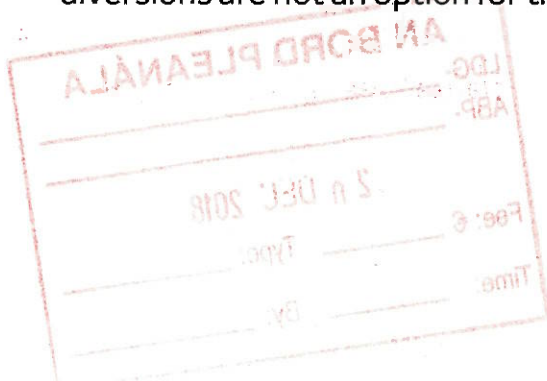

I have had 3 rounds of sinus surgery in 2012,2014,2018 for the removal of polyps. I can provide consultants reports to verify this.

Dust is serious concern to me. I do not wish it on my property, garden or house as it affects my condition greatly. The house as per pictures above is situated in the epicentre of the construction.

I have read the links to construction plans which include covering of trucks for prevention of migration of dust, water sprinkling system to contain the dust, however given the property location it will be virtually impossible to contain all this dust

## **Traffic**

The traffic is already horrendous with currently only a left and right exit out of the industrial estate, how is the traffic from the construction going to be managed, if diversions are put in place. There are days here where the whole road can become gridlocked and Parkmore road impassable. I cannot get in or out of my house, my elderly parents are next door and long diversions are not an option for them

## Blasting

Arup have confirmed there will be blasting. What occurs if there are damages to my property from blasting, I would like an engineer report on my property to confirm its current condition and any damage that occurred during works is this provide, or do I need to get an independent one for this

- Damage to garden wild life

This is my garden

I have rabbits' birds, foxes & hedgehogs several mature trees fruit trees and numerous shrubs flowers & plants

How is this to be protected?

What happen if this is damaged and the plants/trees are covered in dust and die

## Noise pollution

How will the noise be contained for night works? I see noise boards are to be put in place, will this reduce all the night noise levels, what measures will be in place for trucks diggers dumpers machinery etc.... how will all of this be contained

- Water table levels
- Effects to percolation and water treatment system

I have a treatment system in my garden if the drainage in the garden is affected by the road in the back where will the over flow go will I lose the percolation to the area has any soil sample been collected to measure the current percolate of the area

- Services in area effected, water electricity

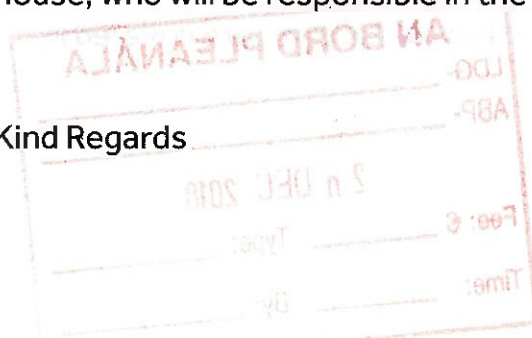

How will this be managed we had road works at the end of the road which resulted in loss of water for 3 evenings in a row. There are plans for the removal of overhead ESB cables and relocation of water service s

- Access/egress to the property

Can permits be giving to householders on the road to access the house from the proper route rather than inconveniencing them with long and lengthy diversions. I wish the same access to my property during construction.

General effects of 3-year construction to the aesthesis /damage to the house, who will be responsible in the event of my property being damaged.

Kind Regards

Sarah P Silke
