# My observation

**Re Proposed**

**Windfarm at Knockshanvo**

**October 29th 2024**

A/ The amount of Construction traffic needed, to build these. It will severely damage roads and cause traffic mayhem from Limerick City to all of the surrounding network of roads leading to the proposed Site.

B/The project will have lasting damage to the environment, damage to drinking water, damage to protected species, ie The Hen Harrier, The noise and the Flicker effects on inhabitants young and old.

C/ The Turbines will impact very negatively on the natural beauty and recreational area around the area around Knockshanvo and the surrounding area.

D/ There was little effective consultation with the local communities, on the size and scope of this Knockshanvo windfarm project, other than a facility to travel outside the region for a company briefing to a hotel, when a local Hall and school were readily available.

E/ There will be wide spread sterilisation of land if permission is granted for this project.

F/ There has been no realistic research into alternate means of producing environmental friendly electricity.
